

## **Financial Management**

### **Product Summary**

**March 12, 2025**

# Contents

<b>Financial Management.....</b>	<b>26</b>
<b>Common Financial Components.....</b>	<b>26</b>
Multicurrency.....	26
Concept: Multicurrency.....	26
Concept: Company Currency.....	28
Concept: Rates, Rate Types, and Conversion.....	28
Concept: Transaction Currency.....	29
Intercompany.....	29
On-Behalf-of Intercompany Transactions.....	29
Direct Intercompany Transactions.....	39
Concept: Intercompany Transactions.....	51
Custom Validations.....	52
Steps: Set Up Custom Validations.....	52
Set Up Custom Validation Severity and Conditions.....	53
Configure Custom Validation Messages.....	54
Concept: Transaction Revalidation.....	55
<b>Financial Accounting.....</b>	<b>55</b>
Financial Accounting Structure.....	55
Steps: Set Up Financial Accounting Structure.....	55
Steps: Set Up Companies.....	58
Set Up Company Contact Information.....	59
Steps: Set Up Fiscal Schedules and Years.....	60
Steps: Set Up Accounting Categories.....	62
Steps: Set Up and Update Journal Sources.....	63
Assign Company Accounting Details.....	64
Create Ledgers.....	68
Convert Active Ledger Types.....	69
Steps: Create and Open Ledger Years and Periods.....	70
Alternate Ledger Currency.....	71
Setup Considerations: Alternate Ledger Currencies.....	71
Steps: Set Up Alternate Ledger Currency.....	77
Steps: Set Up Ledger Currency Mappings.....	79
Steps: Create Accounting Journal Reversals in Alternate Ledger Currency.....	80
Concept: Open Transactions Processing with Alternate Ledger Currency.....	80
Ledger Accounts.....	81
Steps: Create and Organize Ledger Accounts.....	81
Create Ledger Account Types.....	82
Set Up Account Sets.....	82
Set Up Account Posting Rules.....	84
Create Account Control Rules.....	87
Steps: Maintain Access to Ledger Accounts.....	88
Steps: Manage Ledger Account Summaries.....	90
Steps: Set Up Alternate Accounts.....	91
Create Alternate Account Set Mappings.....	92
Configure Alternate Account Set Mapping Rules.....	93

Concept: Ledger Accounts.....	95
Reference: Account Posting Rules.....	96
FAQ: Alternate Account Set Mappings.....	100
FAQ: Can I retire ledger accounts?.....	101
Book Codes and Books.....	101
Steps: Create Book Codes and Books.....	101
Concept: Book Codes and Books.....	102
Cash Basis Accounting.....	104
Steps: Set Up Cash Basis Accounting.....	104
Create Cash Basis Accounting.....	106
Concept: Cash Basis Accounting.....	107
Journals.....	108
Create Journal Sources.....	108
Steps: Process Accounting Journals.....	109
Create Accounting Journals.....	110
Steps: Create Recurring Accounting Journals.....	115
Create Translation Adjustment Journals.....	117
Attach Files on Associated Intercompany Journals.....	119
Steps: Upload Journals.....	120
Steps: Configure Suspense Account Rules.....	121
Steps: Set Up Financial Accounting Adjustments.....	122
Create Financial Accounting Adjustments.....	123
Example: Set Up Suspense Accounting.....	125
Example: Route Journals to Different Approvers Based on Ledger Accounts.....	126
Concept: Accounting and Operational Journals.....	128
Concept: Journal Processing.....	129
Concept: Currency in Accounting Journals.....	130
Concept: Valid Company and Cost Center Combinations.....	131
FAQ: Journal Errors.....	132
Troubleshooting: Financial Journals.....	132
Journal Sequencing.....	137
Setup Considerations: Journal Sequencing.....	137
Steps: Set Up Journal Sequencing.....	142
Configure Journal Sequence Generator Rules.....	143
Enable Journal Sequencing for a Company.....	147
Create Journal Sequence Generators.....	148
Concept: Journal Sequencing.....	149
FAQ: Journal Sequencing.....	150
Journal Insights.....	150
Steps: Set Up Journal Insights.....	150
Confirm and Dismiss Journal Line Anomalies.....	152
Statistics.....	155
Steps: Upload Statistics.....	155
Steps: Set Up Statistic Ledger Accounts.....	155
Define Statistic Types.....	157
Enter Statistic Values.....	158
Concept: Statistic Ledger Accounts.....	160
Reference: Statistic Ledger Accounts and Statistic Definitions Comparison.....	161
Allocations.....	163
Setup Considerations: Allocations.....	163
Steps: Set Up Allocations.....	166
Create Allocation Definitions.....	167
Group Allocation Definitions.....	174
Test Allocations.....	175
Steps: Process Allocations.....	177
Schedule Allocation Runs.....	178

Finalize Allocations.....	179
Concept: Allocations.....	180
Alternate Ledger Currency in Allocations.....	182
Example: Set Up the Journal Lines by Allocation Report.....	185
Reference: Source Types.....	188
Reference: Allocation Methods.....	189
Reference: Basis Types delete.....	189
Allocation Pools.....	192
Steps: Set Up Allocation Pools.....	192
Create Allocation Pools.....	193
Create Allocation Pool Hierarchies.....	193
Revaluation.....	194
Setup Considerations: Revaluation.....	194
Steps: Automate Revaluation.....	197
Define Revaluation Rules.....	198
Group Revaluation Rules.....	201
Run Revaluation.....	202
Review Foreign Currency Revaluation.....	203
Reference: Frequency Combinations for Revaluation Rules.....	205
Currency Translation.....	206
Steps: Set Up Currency Translations.....	206
Set Up Currency Translation Methods.....	206
Create Rules for Translating Ledger Accounts.....	209
Steps: Enter Translated Beginning Balances for Financial Reporting.....	210
Enter Translated Beginning Balance Amounts for Primary Ledger Accounts.....	211
Steps: Enter Translated Beginning Balance Amounts for Alternate Ledgers at Year-End.....	212
Steps: Enter Translated Beginning Balance Amounts for Alternate Ledgers Midyear.....	213
Concept: Currency Translation.....	214
Consolidation Data Capture.....	215
Concept: Consolidation Data Capture.....	215
Steps: Set Up Consolidation Data Capture.....	216
Create Source Systems.....	217
Create Consolidation Data Mapping Table Definitions.....	217
Create Consolidation Data Mapping Tables.....	219
Concept: Consolidation Data - Inbound Integration.....	221
Steps: Create Consolidation Data Capture Integration.....	222
Map Source Systems to Integration Systems.....	224
Load Consolidation Data into Workday.....	225
Correct Consolidation Data.....	229
Concept: Period Close Activity Group of Consolidation Data Capture.....	232
Reference: Consolidation Data - Inbound Integration CSV File Format.....	233
Supplemental Schedules.....	236
Concept: Supplemental Schedules.....	236
Concept: Workday Worksheets.....	236
Concept: Custom Validations for Supplemental Data.....	237
Create Supplemental Data Templates.....	237
Create Supplemental Data Text List.....	240
Maintain Supplemental Data Templates.....	241
Create Supplemental Data.....	242
Maintain Supplemental Data Translation Amounts.....	244
Create Consolidated Supplemental Data.....	245
Concept: Supplemental Data Hub.....	246
Create Multiple Supplemental Data Workbooks.....	247
Create Custom Reports for Supplemental Schedules.....	248
Concept: Calculated Fields in Supplemental Schedules.....	250
Steps: Roll Forward Setup and Configuration.....	250

Mass Roll Forward Multiple Supplemental Data Workbooks.....	254
Reference: Supplemental Data Statuses.....	254
Consolidations and Eliminations.....	255
Setup Considerations: Consolidations and Eliminations.....	255
Steps: Set Up Consolidations.....	262
Steps: Set Up Alternate Fiscal Year Consolidations.....	263
Set Up Company Ownership Details.....	264
Set Up Intercompany and Interworktag Elimination Rules.....	266
Example: Set Up Proportional Consolidation.....	269
Equity Pickup.....	272
Noncontrolling Interest.....	280
Troubleshooting: Reconcile Currency Translation Adjustment Accounts.....	286
Alternate Ledger Currency in Consolidations.....	287
Deriving Eliminations.....	290
Period and Year Close.....	296
Steps: Set Up Close Process.....	296
Set Up Period Close Activity Groups.....	297
Define Rules for Processing Year-End Close.....	298
Change the Status of Ledger Periods.....	299
Close Ledger Periods.....	302
Set Up Worktag Types for Roll Forward.....	303
Roll Year-End Balances Forward.....	304
Roll Translated Beginning Balances Forward.....	306
Close a Ledger Year.....	308
Start a Close Process.....	309
Process: Procure to Pay Period Close.....	310
Process: Order to Cash Period Close.....	314
Concept: Journal Statuses and Pending Transactions.....	318
Concept: Ledger Close Activity Groups.....	321
Concept: Close.....	322
Reference: Period Statuses and Permitted Transactions.....	323
Reference: Period Close Work Area.....	324
Period Close Management.....	325
Close and Consolidation Hub.....	352
Steps: Set Up Close and Consolidation Hub.....	352
Steps: Replace Default Overview Cards on the Close and Consolidation Hub with Custom Reports.....	353
Reference: Close and Consolidation Hub Sections.....	355
Reference: Close and Consolidation Hub Cards.....	357
Journal Balancing by Worktag.....	359
Steps: Configure Worktag Balancing for Journals.....	359
Define Worktag Balancing Rules for Financial Transactions.....	361
Define Worktag Balancing Rules for Payroll Accrual.....	363
Define Worktag Balancing Rules for Fringe Benefit Actuals Transactions.....	364
Define Cash Balancing Rules for Cash Transactions.....	365
Define Intercompany Balancing Rules for Balancing Worktags.....	368
Configure Worktag Balancing Rule Sets for Transaction Journals.....	370
Configure Worktag Balancing for the Tenant.....	373
Configure Optional Worktag Balancing for the Tenant.....	374
Associate a Balancing Worktag with Procurement Card Transactions.....	375
Concept: How Transactions Get Balancing Worktags.....	376
Average Daily Balance.....	378
Setup Considerations: Average Daily Balances.....	378
Steps: Process Average Daily Balance.....	381
Create Average Daily Balance Rule.....	382
Calculate Average Daily Balances.....	383

FAQ: How do I change an average daily balance rule?	384
<b>Financial Reporting.....</b>	<b>384</b>
Steps: Create and Schedule Groups of Financial Reports.....	384
Create Reporting Time Periods.....	385
Create Trial Balance Reports.....	388
Concept: Financial Reporting.....	389
Reference: Workday-Delivered Reports for Financial Close.....	389
Reference: Additional Options Prompt on Journal Lines for Financial Reporting RDS.....	396
Example: Composite Income Statement Report.....	397
Example: Map Aliases to Ledger Account Summaries.....	403
<b>Financial Reporting with OfficeConnect.....</b>	<b>406</b>
Steps: Set Up Your Tenant for OfficeConnect for Financial Management.....	406
Enable OfficeConnect for Workday Financial Management.....	407
Set Up the Financial Reporting Data Model.....	407
Average Daily Balance Reporting with OfficeConnect.....	410
Concept: Time Context with Average Daily Balance.....	412
Concept: OfficeConnect and Reporting on the Financial Modeled Data Source.....	412
Concept: The Financial Reporting Data Model.....	413
Concept: Differences Between OfficeConnect and Report Writer.....	416
<b>Financial Analytics.....</b>	<b>417</b>
Configure Manager Metrics Reporting.....	417
Configure Financial Metrics Reporting.....	418
Concept: Financial Executive Scorecard.....	419
Concept: Report Administrator Dashboard.....	421
Reference: Metric Calculations for Financials.....	422
Example: Set Up a Custom Financial Scorecard.....	423
Example: Set Up a Financial Executive Scorecard.....	433
<b>External Financing Sources.....</b>	<b>437</b>
Steps: Maintain Access to Investors.....	437
Define Investors.....	438
Set Up Loan Information.....	439
<b>Multiple Funding Sources.....</b>	<b>441</b>
Setup Considerations: Multiple Funding Sources.....	441
Steps: Set Up Multiple Funding Sources.....	445
Create Spend Restrictions.....	446
Create Default Funding Sources.....	447
Create Funding Sources.....	448
Create Funding Source Rules.....	450
Process Funding Sources.....	451
Reprocess Funding Sources.....	452
Concept: Reclassification Journals and Lines.....	453
Concept: Financial Accounting.....	455

## **Budgets.....** **458**

<b>Budgets and Plans.....</b>	<b>458</b>
Setup Considerations: Budget Check.....	458
Steps: Set Up Plans or Budgets.....	461
Define Plan Structures.....	464
Create Plans or Budgets.....	468
Maintain Budget.....	471
Edit Plan Templates.....	473
Submit a Plan or Budget for Approval.....	474
Amend Plans or Budgets.....	475
Steps: Set Up Budgetary Roll Forward and Close.....	477
Define Rules to Roll Budgets Forward and Close.....	478

Roll Budgetary Year-End Balances Forward.....	480
Steps: Create a Pooled Budget.....	481
Steps: Set Up Revenue Driven Budget Rules.....	482
Steps: Set Up Floors and Ceilings for Revenue Driven Budgets.....	484
Concept: Plan Structures.....	485
Concept: Inactive Financial Plans.....	486
Concept: Convert Spend to Currencies on Company Hierarchy Plan Lines.....	487
Reference: Budget Reports.....	487
Example: Create Financial Plan to Actuals Composite Reports with Eliminations.....	488
Plan Hierarchies.....	490
Setup Considerations: Plan Hierarchies.....	490
Steps: Create Plan Hierarchies.....	493
Create or Link True Child Plan Structures.....	494
Link Virtual Child Plan Structures.....	495
Concept: Hierarchies in Plans and Budgets.....	496
Concept: Amendments to Plan Hierarchies.....	497
Reference: Valid True Plan Hierarchy Relationships.....	499
Reference: Virtual Plan Hierarchy Relationships.....	500
Reference: Plan Hierarchy Reports.....	501
Appropriations.....	502
Steps: Set Up Appropriations.....	502
Create Appropriation Hierarchies.....	503
Position Control.....	504
Setup Considerations: Position Budgets.....	504
Steps: Set Up Position Control.....	508
Steps: Use Position Control.....	508
Steps: Set Up Job Requisitions for Commitments and Obligations.....	509
Position Budgets.....	510
Position Budget Checking.....	519
Commitment Accounting for Position Control.....	524
Position Control Reporting.....	525
Concept: Position Control.....	528
Reference: Position Control Terminology.....	529
Reference: Position Control Transactions.....	530
FAQ: Position Control.....	532
Spend Control.....	534
Commitment Accounting for Spend Transactions.....	534
Spend Budget Checking.....	537

## **Accounting Center.....** **548**

Setup Considerations: Accounting Center.....	548
Data Management.....	559
Create Prism Analytics Table.....	559
Data Enrichment.....	560
Concept: Enrichment.....	560
Steps: Create Instance Mapping.....	561
Create Mapping Table Definition.....	561
Create Mapping Table.....	562
Edit an Enrichment Dataset.....	564
Include Mapping in a Dataset.....	565
Create Workday Instances with Prism Join.....	566
Create Validation Stages for Enrichment.....	569
Accounting Generation.....	571
Concept: Accounting Source.....	571
Create Accounting Source.....	571

Edit Accounting Source.....	575
Inactivate Accounting Source.....	583
Create Custom Dimensions and Custom Account Posting Rule Types.....	585
Concept: Custom Validations for Detailed Accounting.....	586
Reference: Accounting Source Datasets and Tables.....	586
Batch and Error Management.....	590
Edit Accounting Center Process Configuration.....	590
Approve Accounting Center Batch Journals.....	592
Create Accounting Center Batches from Source Systems.....	594
Configure Detailed Journal Additional Attributes.....	598
Create Manual Accounting Center Detailed Journals.....	600
Cancel Accounting Center Batches.....	605
Review Details of Batches, Stages, and Runs.....	606
Stop Accounting Center Business Process Event.....	611
Custom Dismiss Transactions.....	612
View, Resolve, and Reprocess Errors.....	616
View and Resolve Errors in Error Manager.....	621
Edit Ingested Errors in Error Manager With In-Line Edits.....	625
Manage Accounting Center Maintenance Window.....	628
Example: Custom Dismiss Zero Amount Transactions.....	628
Reference: Results for New and Reprocessed Transactions in a Canceled Batch.....	631
Reporting.....	634
View Detailed Accounting Results.....	634
View Summarized Journals.....	636
Publish Prism Datasets.....	636
Concept: Period Close Activity Group for Accounting Center.....	638
Reference: Guidelines for Reporting on Accounting Center Datasets.....	638
Concept: Accounting Center.....	639

## **Financial Transaction Taxes.....** 640

Transaction Taxes.....	640
Setup Considerations: Transaction Taxes.....	640
Steps: Set Up Transaction Taxes.....	644
Set Up Tax Authorities.....	645
Set Up Tax Categories.....	646
Set Up Transaction Tax Rates.....	647
Set Up Transaction Tax Codes.....	648
Set Up Tax Recoverabilities for Financial Transactions.....	648
Set Up Tax Applicability for Financial Transactions.....	649
Set Up Company Tax IDs for Financial Transactions.....	650
Steps: Set Up Address-Level Tax Information.....	651
View Transaction Tax Liability for Companies.....	653
Concept: Self-Assessed Tax.....	653
Concept: Tax ID Groupings.....	655
Concept: Automatic Assignment of Transaction Tax IDs on Invoices.....	655
Reference: Tax Options.....	656
Reference: Transaction Tax Business Objects.....	658
FAQ: Why do 2 identical invoice lines have different tax amounts?.....	659
Transaction Tax Rules.....	660
Setup Considerations: Transaction Tax Rules.....	660
Steps: Configure Transaction Tax Rules.....	663
Configure Transaction Tax Rules for Items.....	665
Configure Transaction Tax Rules for Countries.....	666
Configure Transaction Tax Rules for Worktags.....	669
Configure Transaction Tax Rule Exceptions.....	670

Configure Transaction Tax ID Exceptions.....	671
Withholding Taxes.....	673
Steps: Set Up Withholding Taxes.....	673
Set Up Tax Rates for Withholding Tax.....	674
Steps: Configure Withholding Tax Rules.....	677
Configure Withholding Tax Rules for Countries.....	678
Configure Withholding Tax Rules for Items.....	679
Configure Withholding Tax Rules for Worktags.....	680
Example: Calculate Withholding Tax Using Progressive Rates.....	681
Tax Accounting.....	682
Concept: Transaction Tax Account Posting Rules.....	682
Concept: Withholding Tax Accounting.....	683
Tax Declarations.....	685
Setup Considerations: E-Filing VAT Returns (UK).....	685
Steps: Create Tax Declarations.....	689
Create Tax Declaration Components.....	689
Create Tax Declaration Definitions.....	692
Create Tax Declarations.....	693
Steps: E-File VAT Returns (UK).....	694
Troubleshooting: E-Filed VAT Return Fails to Submit (UK).....	695
Tax Reporting.....	697
Setup Considerations: SAF-T.....	697
Steps: Set Up SAF-T.....	701
Steps: Assign Standard Account IDs to Ledger Accounts (Norway).....	702
Concept: Tax Master Records.....	703
1099 Reporting.....	704
Setup Considerations: 1099 Reporting.....	704
Setup Considerations: Combined Federal/State Filing Program.....	709
Steps: Set Up 1099 Reporting.....	711
Map 1099 Categories to Spend Categories and Hierarchies.....	713
Map a Tax Authority to 1099 Federal or State Withholding.....	714
Set Up Company Tax Details for 1099 Reporting.....	715
Set Up 1099 Payees.....	715
Steps: Preview 1099 Payment Details.....	717
Create 1099 Adjustments.....	719
Steps: Process 1099 Returns.....	720
Create 1099 Runs.....	721
Print 1099 and 1096 Forms.....	722
Generate 1099 Electronic Files.....	724
Create Corrected 1099 Runs.....	725
Concept: 1099 Runs.....	726
Concept: 1099 Report.....	727
Concept: 1099 Work Area.....	728
Example: Set Up a Contingent Worker as a 1099 Payee.....	729
Troubleshooting: 1099 Reporting Problems.....	730
1042-S Reporting.....	731
Steps: Perform 1042-S Reporting.....	731
Create 1042-S Income Codes.....	731
Assign a Tax Authority Form Type to Contingent Workers.....	732
Third-Party Tax Service Integrations.....	733
Steps: Set Up Third-Party Tax Service Integrations.....	733
Concept: Third-Party Tax Service Integrations.....	734
Example: Set Up Third-Party Tax for Customer Invoices.....	735
Entity Activity Codes.....	738
Steps: Set Up Entity Activity Codes.....	738
Create Entity Activity Code Types.....	738

Create Entity Activity Codes.....	739
Concept: Entity Activity Codes.....	740
Concept: Effective Dating for Transaction and Withholding Tax Rates.....	741
<b>Customer Accounts.....</b>	<b>741</b>
Setup Considerations: Customer Accounts.....	741
Customers.....	747
Steps: Set Up and Manage Customer Information.....	747
Create Customers.....	748
Steps: Configure Customers.....	750
Set Up Customer Overview.....	751
Upload Customer Logos.....	755
Set Up Customer Contacts and Addresses.....	756
Create Custom Fields for Customer Information.....	758
Mass Assign Worker Roles to Multiple Customers.....	759
Configure Receivables Aging Worklets.....	760
Configure the Customer Profile.....	761
Set Up Bill-To Contacts.....	762
Set Up Shipping Connection Map.....	763
Steps: Maintain Access to Customer Information.....	764
Example: Create a Condition Rule to Prevent Creating Duplicate Customers.....	766
Concept: Customers.....	766
Concept: Create Basic Customers.....	768
Concept: Purge Customer Data.....	768
Reference: Customer Status Results.....	769
Customer Invoices.....	770
Invoicing.....	770
Invoice Netting.....	816
Customer Payments.....	828
Record Customer Payments.....	828
Steps: Apply Customer Payments.....	830
Reapply an Unapplied Customer Payment.....	834
Cancel Customer Payments.....	835
Steps: Return Customer Payments.....	835
Steps: Set Up VAT on Customer Payments.....	836
Concept: Customer Payments.....	837
Concept: Foreign Currency Customer Payments.....	841
Reference: Customer Payment Process Flows and Account Posting Rules.....	844
Troubleshooting: Unable to Edit Customer Payment After Searching for Invoices.....	845
FAQ: Customer Payments.....	845
Auto Apply Customer Payments.....	847
Customer Payment from Bank Statement Lines.....	861
Customer Payment Matching.....	866
Direct Debit Mandate Payments.....	872
Customer Overpayments.....	875
Setup Considerations: Overpayments.....	875
Steps: Record Customer Overpayments.....	880
Steps: Set Up Machine Learning Recommendations for Customer Overpayments.....	881
Credit Card Payments.....	883
Steps: Set Up Cybersource Credit Card Payment Processing.....	883
Set Up Bank Account for Credit Card Payments.....	884
Establish a Merchant Account.....	885
Concept: Customer Credit Card Profiles.....	885
Concept: Credit Card Payments.....	886
Customer Refunds.....	887

Steps: Create a Customer Refund.....	887
Steps: Create Customer Refund Payments in Settlement Runs.....	888
Concept: Customer Refunds.....	889
Cash Sales.....	891
Record Cash Sales.....	891
Manage Cash Sales.....	892
Deposits.....	893
Steps: Deposit Customer Payments.....	893
Cancel Customer Deposits.....	896
Customer Collections.....	896
Collections Dashboard.....	896
Dunning and Customer Statements.....	903
Interest and Late Fees.....	904
Steps: Write Off Receivables.....	920
FAQ: How can I populate balancing worktags on write-off lines?.....	922
Customer Portal.....	922
Steps: Set Up the Customer Portal.....	922
Create Workday Accounts for Customer Contacts.....	923
Concept: Customer Portal Dashboard.....	924
Example: Configure Customer Portal Dashboard.....	925
Customer Portal Payments.....	928
Document Printing and Emailing.....	934
Concept: Customer Document Delivery.....	934
Reference: Repeat-On Instances for Customer Document Business Process Events.....	935
Troubleshooting: Unable to Email Customer Documents.....	936
Troubleshooting: Unable to Print Customer Documents.....	937
Print and Email Invoices.....	937
Print and Email Customer Statements.....	951
Print and Email Dunning Letters.....	958
Reference: Invoicing and Receivables Reports.....	962
Reference: Separate Ledger Accounts for Account Posting Rules.....	965

## **Services CPQ.....** **972**

Setup Considerations: Services CPQ.....	972
Set Up Quote.....	977
Steps: Set Up Quote.....	977
Configure Services CPQ Tenant.....	978
Steps: Configure Projects and Contracts Objects.....	982
Set Up Spreadsheet.....	985
Steps: Create Custom Objects for Quotes.....	985
Services Catalog.....	987
Create Services Catalog.....	987
Steps: Create Snippets in Service Catalog.....	988
Document Generator.....	990
Create and Publish Document Template.....	990
Edit Document Template.....	991
Print Quote Document.....	991
Design Document Layout.....	992
Create Quote.....	995
Steps: Create Quote.....	995
Add Custom Service Manually.....	998
Add Phases and Tasks from Work Breakdown.....	1009
Add Services from Services Catalog.....	1011
Add Services from Spreadsheets.....	1012
Concept: Opportunity in Quotes.....	1013

Concept: Calculations for Set Target Discount and Price.....	1014
Reference: Quote Line to Contract Line Mapping.....	1015
<b>Revenue.....</b>	<b>1016</b>
Sales Items.....	1016
Steps: Manage Revenue Categories.....	1016
Steps: Set Up Taxes for Revenue Transactions.....	1018
Create Sales Items.....	1018
Create Sales Item Price Lists.....	1020
Concept: Sales Items.....	1021
Concept: Sales Item Currencies.....	1023
Example: Create Professional Services Sales Items.....	1023
Customer Contracts.....	1024
Steps: Configure Customer Contracts.....	1024
Steps: Upload Customer Contracts.....	1026
Steps: Amortize Customer Contract Costs.....	1027
Steps: Create Intercompany Contracts.....	1028
Steps: Create Customer Contract Templates.....	1029
Steps: Set Up Customer Contract Checklist Templates.....	1030
Steps: Link Customer Contracts for Revenue Allocation.....	1030
Steps: Manage Billable Projects on Usage-Based Transactions.....	1031
Review Intercompany Billable Transactions.....	1033
Create Customer Contracts.....	1034
Copy Customer Contracts.....	1039
Amend Customer Contracts.....	1040
Change Customer Contracts.....	1042
Create Deferred Cost Schedules.....	1043
Create and Edit Usage Billing Rates.....	1044
Example: Reset Usage Billing Rates.....	1046
Example: Route a Contract Rate Sheet for Approvals.....	1047
Concept: Customer Contracts.....	1048
Concept: Customer Contract Renewals.....	1050
Concept: Foreign Currency Customer Contracts.....	1051
Concept: Usage-Based Contract Pricing.....	1053
Reference: Contract Line Types for Customer Contracts.....	1054
FAQ: Customer Contracts.....	1057
Troubleshooting: Unable to Create Custom Validations for Taggable Type Report Fields.	1058
Multiple-Element Revenue Allocation.....	1059
Setup Considerations: Multiple-Element Revenue Allocation.....	1059
Steps: Create Multiple-Element Revenue Allocation.....	1064
Create Fair Value Price Lists.....	1065
Set Up Revenue Allocation Configurations.....	1067
Example: Create Fair Value Price List for Bundled and Unbundled Sales Items.....	1068
Example: Create a Custom Report for Fair Value Price Lists with Sales Item Bundle Allocations.....	1069
Customer Contracts Billing.....	1071
Setup Considerations: Prepaid Billing Using Consolidated Billing Schedules.....	1071
Steps: Set Up Prepaid Billing Using Consolidated Billing Schedules.....	1074
Steps: Set Up Prepaid Billing Using Installment Billing Schedules.....	1076
Steps: Create Customer Contracts for Minimum Commitments.....	1077
Steps: Create Retention for Customer Invoices.....	1077
Create Billing Schedule Templates for Customer Contracts.....	1078
Create Consolidated Billing Schedule Templates for Customer Contracts.....	1079
Create Consolidated Billing Schedules for Customer Contracts.....	1080
Create Installment or Transaction Billing Schedules for Customer Contracts.....	1085

Maintain Project Invoice Summary Definitions.....	1088
Concept: Billing Schedule Templates for Customer Contracts.....	1089
Concept: Billing.....	1090
Customer Contracts Invoicing.....	1092
Steps: Create Credit and Rebill Customer Invoices for Customer Contracts.....	1092
Steps: Manage Customer Invoice Proposals.....	1094
Create Customer Invoices for Billing Installments.....	1097
Create Customer Invoices from Contracts.....	1099
Create Customer Invoice Proposals.....	1101
Concept: Customer Invoice Proposal Workspace.....	1102
Customer Contracts Revenue Recognition.....	1103
Setup Considerations: Revenue Recognition Schedules.....	1103
Setup Considerations: Cumulative Catch-Up Revenue Installments.....	1107
Steps: Create Multiperiod Revenue Recognition Schedules.....	1109
Create Revenue Recognition Schedules for Customer Contracts.....	1110
Create Ledger Currency Adjustment Installment.....	1114
Create Revenue Recognition Schedules for Customer Invoices.....	1115
Create Revenue Installments for Billable Transactions.....	1116
Concept: Revenue Recognition.....	1118
Reference: Revenue Recognition Methods.....	1120
Reference: Revenue Recognition Currency Conversion Rates for Foreign Currency Customer Contracts.....	1122
Example: Create Accounting Using Blended Rates for Foreign Currency Customer Contracts.....	1130
Period End Revenue Accounting.....	1134
Setup Considerations: Period End Revenue Accounting.....	1134
Steps: Reclassify Customer Contract Assets and Liabilities.....	1141
Steps: Configure Derivation Rules for Billable Supplier Invoices.....	1144
Concept: Revenue Recognition Accounting.....	1145
Reference: Period End Revenue Accounting Reclassification Calculations.....	1146

# Financial Management

---

Welcome to the Financial Management book, where you can learn how to:

- Manage and automate finance processes from record to report and contract to cash.
- Process transactions, create multidimensional reporting and analysis, and consolidate companies, all with a consistent user experience.
- Configure processes and schedules to help your organization manage revenue according to today's best practices and adapt to comply with changing rules and guidelines.
- Use the period close business process to automate tasks, route approvals and send reports.
- Consolidate financial results in any currency with real-time eliminations and translations.
- Achieve greater insight, improve financial consolidation, and reduce time to close.
- Instill internal control and auditability and achieve consistency across global operations.

To learn more about how to use our documentation, [click here](#) or [watch the video](#).

## Common Financial Components

---

### Multicurrency

#### Concept: Multicurrency

Workday provides multicurrency capabilities to meet your money management needs. These capabilities enable you to record and process business transactions that occur in a currency other than the base currency of the recording company.

Example: A USD-based company can record a sale to a French customer with a EUR denominated invoice.

Workday also factors in the impact that multiple currencies have on all appropriate gain or loss calculations and accounting for your transactions and open items.

**Company's Currency:** A company's currency, also known as the ledger currency is the base currency that each company within your Workday tenant uses to generate and perform its accounting. Example: You may have companies in the U.S., Germany, and Canada, each with their own currency of USD, EUR, and CAD respectively. Since you can enter financial transactions in multiple different currencies, the company currency is essential to the accounting because Workday converts all transaction currencies into one common company or ledger currency. See [Concept: Company Currency](#) on page 28.

**Transaction Currency:** The currency of a submitted transaction is the transaction currency. This currency persists throughout the lifecycle of the transaction. Although Workday uses the company currency to generate accounting for transactions, you can assign foreign currencies to transactions. This might be the currency of the customer, supplier, or another currency. In most cases, the currency for an invoice and its payment will match. If it doesn't, Workday will, as part of the settlement automatically book the realized gain and loss based on the foreign exchange difference.

When you approve an operational transaction, Workday generates accounting entries in the company or ledger currency. If the transaction and company currencies differ, Workday automatically converts the transaction's foreign currency into the company currency. You must therefore maintain currency conversion rates between the company currency and other currencies in which you transact. See [Concept: Transaction Currency](#) on page 29.

**Bank Account Currency:** Bank accounts also have their own currency in which to store funds. You store funds in the bank account and convert funds that you transfer into the bank account using the account

currency. You can also specify which currencies a bank account accepts. When necessary, Workday and banks convert currencies for deposited and transferred funds into the account.

Example: Your U.S. company has a local bank account in USD, and a bank account based in Ireland in EUR. You perform a wire transfer of 100,000 USD from the U.S. account to the Irish account, which accepts USD. The bank gives you a currency exchange rate of 85,000 EUR equal to 100,000 USD. Workday transfers 100,000 USD out of the US bank account and deposits 85,000 EUR into the Irish bank account.

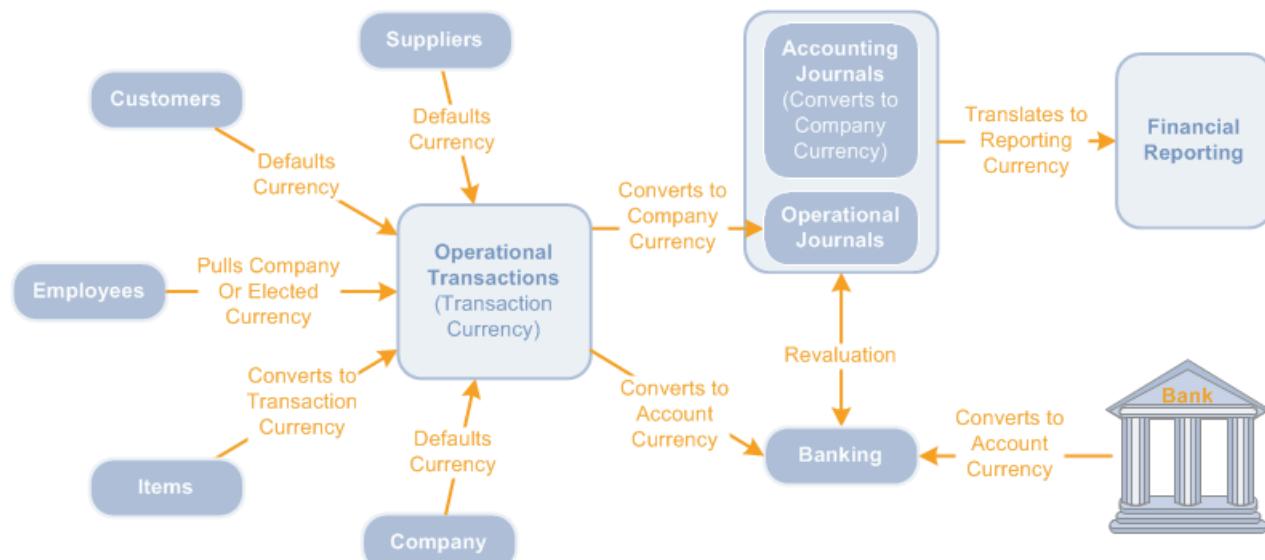

**Item Currency:** The sales items, purchase items, and expense items that are configured can have their own currencies that define the value of the item. If the item and transaction currencies differ, Workday automatically converts the item's currency into the transaction currency. This occurs with requisitions, purchase orders, invoices, invoice adjustments, and expense reports.

**Customer and Supplier Currency:** For each customer and supplier that you define in Workday, you can assign:

- A default currency which is their preferred currency for transactions.
- Accepted currencies which are currencies that they accept.

Whenever you create a transaction (such as an invoice), in a transaction currency different than the ledger currency, you can override the default currency with any accepted currency based on your currency rate configuration. The selected currency becomes the transaction currency. You can use numerous tasks within Workday to create these transactions.

This diagram displays the flow of currencies through Workday Financial Management, as Workday converts them.

Currency flows into operational transactions from various sources, depending on the transaction. As customers and suppliers have their own currency, Workday automatically populates the currency to customer and supplier transactions. For expense reports, Workday uses the company currency of the employee or the payment election currency of the employee (if the currencies differ). When used in transactions, Workday converts items to the transaction currency. Other transactions use the company currency as the default.

### From Entering Transactions to Reporting

Key steps in converting transaction currencies into reporting currencies are:

1. You create transactions in different transaction currencies.
2. When Workday generates operational journals from transactions, the journals are created in both the transaction currency and the ledger currency.

3. At the end of the month you perform revaluation to recalculate foreign currency amounts in your ledger currency, enabling you to get more accurate ledger currency amounts. You can then use an adjustment entry to record the gains and losses caused by fluctuating exchange rates since the transaction date. See [Setup Considerations: Revaluation](#) on page 194.
4. When reporting, you can report in another currency known as the reporting or translated currency. Workday uses translation rules that you define to determine conversion rates, then uses these rates in real time to translate the ledger currency into a reporting currency. See [Concept: Currency Translation](#) on page 214.

#### **Related Information**

##### **Concepts**

[Concept: Currency Translation](#) on page 214

[Concept: Item Currency](#)

[Concept: Sales Item Currencies](#) on page 1023

##### **Tasks**

[Review Foreign Currency Revaluation](#) on page 203

[Steps: Set Up Currencies](#)

## **Concept: Company Currency**

A *company currency* is the base currency that each company within your Workday tenant uses to generate and perform its accounting. It's also known as the ledger currency.

Example: You have companies in the U.S., Germany, and Canada, each with their own currency.

Since you can use multiple currencies for financial transactions in Workday, the company currency is essential to bookkeeping. To set the currency for a company, use the **Create Company** task.

Once you create a journal or have accounting activity in the company, you can't change the company currency. This ensures a single currency for accounting.

#### **Related Information**

##### **Concepts**

[Concept: Currency Conversion](#)

[Setup Considerations: Alternate Ledger Currencies](#) on page 71

##### **Tasks**

[Steps: Set Up Companies](#) on page 58

## **Concept: Rates, Rate Types, and Conversion**

A rate type is a way to identify the source and purpose of a set of rates.

Example: A rate type of current is the current market rate on any given day. A rate type of average is the average of rates over a period. A rate type of historic is a blended rate that, when applied, results in the proper historic valuation of an account.

Depending on the type of conversion, Workday uses different rate types to determine the rate. For conversion from:

- Transaction currency to bank account currency. Workday uses the default rate type, but you can override the rate.
- Transaction or bank account currency to the company currency. Workday always uses the default rate type.
- The company currency to the reporting currency. Workday uses the rate type that you specify in the translation rules.

To obtain the target currency amount for all currency conversions, Workday multiplies the source currency amount by the rate.

**Note:** Workday supports 12 decimal precision for currency exchange rates that you enter or upload. When calculating exchange rates, such as currency cross rates or inverse rates, Workday rounds the calculated rate to 12 decimal precision. When you calculate a rate with more than 18 digits, Workday truncates display of the rate to 18 digits.

Workday enables you to:

- Define rate types using the **Maintain Currency Rate Types** task.
- Define the default currency rate type for the tenant using **Default Values** section of the **Tenant Setup** task. You can define the default currency rate type using the **Currency Rate Type Override** on the **Edit Company Accounting Details** task.
- Define or modify the exchange rates using the **Maintain Currency Conversion Rates** task.
- Use the **Currency Rates as of Date** report and the **Historic Currency Rates** report to view rates.

### Related Information

#### Tasks

[Maintain Currency Conversion Rates](#)

[Steps: Set Up Currencies](#)

[Steps: Upload Currency Conversion Rates](#)

## Concept: Transaction Currency

The *transaction currency* is the currency that you associate with a transaction when you create or edit it. Depending on the type of transaction, Workday defaults the currency of the company, the customer, the supplier, or the employee.

Although Workday uses the company currency to generate accounting for transactions, you can assign foreign currencies to transactions for a customer, supplier, or another currency. The transaction currency persists throughout the lifecycle of the transaction. Thus, the currency for an invoice and its payment must match.

You can use many tasks within Workday to create operational transactions. It is important that you maintain currency conversion rates between the company currency and other currencies in which you transact. Upon transaction approval, Workday generates accounting entries in the company currency. If the transaction and company currencies differ, Workday automatically converts the transaction currency to the company currency.

## Intercompany

---

### On-Behalf-of Intercompany Transactions

#### Setup Considerations: On-Behalf-of Intercompany Activities

You can use this topic to help make decisions when planning your configuration and use of on-behalf-of intercompany. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

On-behalf-of Intercompany is a financial accounting structure that enables transactions between different entities within an organization. In on-behalf-of intercompany, an entity in the organization purchases a good or service and another entity in the organization pays for it.

## Business Benefits

When you set up your tenant to record direct intercompany activities, your organization can generate these activities on behalf of another entity:

- Debts
- Payables
- Receivables

## Use Cases

You might need to record an accounting transaction that occurs between at least 2 subsidiary or multinational companies within your organization.

Intercompany enables you to record those transactions on:

- Accounting journals.
- Ad hoc bank transactions.
- Allocations.
- Asset accounting.
- Customer contracts, invoices, and invoice adjustments.
- Intercompany payments.
- Payments on behalf of.
- Payroll accounting.
- Supplier invoices and invoice adjustments.

## Questions to Consider

Questions	Considerations
Do you have subsidiary companies, or operate multinationally?	Consider configuring intercompany profiles. Intercompany profiles enable you to record and process those intercompany transactions.
Do you need to provide source documents for statutory requirements?	Transactions between companies in different countries frequently require source documents for statutory reporting requirements. On-behalf-of transactions don't generate source documents. Before you configure intercompany transactions, consider whether you need to set up direct intercompany.
What kind of transactions do your subsidiary companies normally perform with each other?	The transactions that companies within an organization perform with each other determine whether you need to structure Workday for direct or on-behalf intercompany. When you need to represent transactions where the companies conduct business like a supplier and a customer, configure direct intercompany.

Questions	Considerations
	<p>You can configure a company as both a customer and a supplier to another company.</p> <p>When a company processes the payments and invoices in place of the company that provides the goods and services to customers, configure on-behalf intercompany.</p> <p>When both intercompany relationships apply to you, configure both.</p>
How do your companies use your account sets?	<p>You can only create intercompany relationships between companies when those companies use the same account set. Before you configure your intercompany profiles, ensure that the companies use the correct account sets.</p>
How do you process and settle your intercompany transactions?	<p>To settle your intercompany transactions, you must configure these options on the <b>Edit Intercompany Profile</b> task:</p> <ul style="list-style-type: none"> <li>• <b>Default Payment Types</b></li> <li>• <b>Initiate Allowed</b></li> <li>• <b>Payment Types</b></li> </ul> <p>If you want to record intercompany receipts automatically, select the <b>Record Intercompany Receipts</b> check box.</p> <p>Workday only creates receipts for intercompany payments matched to an intercompany receivable. Workday doesn't consider unmatched accounting journals when automatically creating receipts.</p> <p>When you don't automatically record receipts, you must create manual receipts to use in your settlement runs using the <b>Record Intercompany Receipts</b> task.</p>
How do you configure your security role assignments?	<p>Workday uses the security configuration of the initiating company when determining who can view the intercompany transaction. Example: The company that creates the accounting journal determines the security requirements to access and process the intercompany transaction.</p> <p>When your company operates as the supplier, Workday uses the security configuration of the customer on the original transaction to determine who can view the intercompany transaction.</p> <p>Consider setting up your company hierarchy role assignments to meet your security requirements if any users need to access both sides of the intercompany transaction.</p>

## Recommendations

Functionality	Considerations
Account posting rules	<p>Configure separate rules for the <i>Intercompany Payables</i> and <i>Intercompany Receivables</i> account posting rules if you want to settle intercompany transactions. Separate posting rules enable Workday to create the payables and receivables necessary for you to run the settlement process.</p> <p>When you don't configure separate account posting rules, you might have trouble finding unmatched on-behalf-of intercompany transactions when you want to close your ledger periods.</p> <p>If you configure both direct and on-behalf-of intercompany, we recommend you add a <i>Direct Intercompany</i> dimension on both the <i>Intercompany Payables</i> and <i>Intercompany Receivables</i> account posting rules. The dimension enables you to split up the account posting rules you use for on-behalf-of and direct intercompany transactions.</p> <p>Depending on the transaction types you use, you also need to configure additional account posting rules. Common posting rules include:</p> <ul style="list-style-type: none"> <li>• <i>Cash</i></li> <li>• <i>Spend</i></li> <li>• <i>Revenue</i></li> <li>• <i>Transaction Tax</i></li> </ul> <p>If you don't want to post intercompany transactions to <i>Cash</i>, you can instead configure a temporary bank account to record the costs. Consider configuring the temporary bank account when you want to reroute settlement transactions from the temporary account to a different ledger account.</p>
Fiscal schedules	<p>Use a shared fiscal schedule for companies configured for intercompany transactions. The shared fiscal schedule can be an alternate or primary schedule.</p> <p>Sharing a fiscal schedule reduces the potential for creating erroneous transactions that you need to eliminate using a consolidation.</p>
Intercompany affiliate worktags	<p>Enable intercompany affiliate worktags on intercompany transactions you need. We further recommend that you create custom validations that require users to add the affiliate worktags on the associated transaction lines.</p> <p>Intercompany affiliate worktags help identify due-to and due-from companies on intercompany transactions. Identifying these worktags enables Workday to eliminate entries on consolidated financial statements.</p>

Functionality	Considerations
	Workday also recommends that you configure your account posting rules to use the appropriate intercompany affiliate worktags as resulting worktags. Ensure that your configuration doesn't result in a company creating intercompany transactions with itself.

## Requirements

Before you can create intercompany transactions, you must:

- Add an *Initiate Intercompany Event* step on all business processes you want to use for intercompany activities.
- Create intercompany profiles for all your intercompany affiliates on the **Edit Company Intercompany Profiles** task.
- Configure account posting rules for intercompany payables and intercompany receivables.

## Limitations

Before you configure intercompany, consider these limitations:

- If you post intercompany activities to book codes that are outside the common book code, you can't settle those activities. To remove the intercompany balance, perform an elimination.
- If you can't add an *Intercompany Event* step to a business process, Workday might not support intercompany transactions for that activity.

## Tenant Setup

You can configure these tenant options on the **Edit Tenant Setup - Financials** task:

Options	Considerations
<b>No Intercompany Payable/Receivable Lines when Journals Self Balance by Company</b>	When you select this check box, Workday doesn't generate intercompany payable and receivable lines on journals balanced by each line company.
<b>Group Intercompany Payable/Receivable Lines</b>	<p>Reduces the number of lines generated on the journal and only displays payable and receivable lines for the transactions. Groups payable and receivable intercompany line amounts with the same:</p> <ul style="list-style-type: none"> <li>• Affiliate company.</li> <li>• Balancing worktags.</li> <li>• Ledger account.</li> </ul> <p>Workday doesn't net payables and receivables on the summary line.</p>
<b>Unrestricted Intercompany Affiliate Selection</b>	Enables any company to add companies with valid intercompany profiles as intercompany affiliates on journal lines.
<b>Copy Attachments to Intercompany Accounting Journals</b>	Grant other companies access to attachments you add on intercompany parent journals. The other companies can view your attachments from their intercompany child journals. You can only

Options	Considerations
	view attachments of companies with a configured intercompany relationship.

## Security

To create intercompany activities for another company, you must configure security roles for the activity on the other company. Example: If you're with Company A and you want to create an intercompany activity for Company B, you must have a security role that enables you to also create the activity for Company B.

Domains	Considerations
<i>Set Up: Company Accounting</i> in the Common Financial Management functional area.	Set up intercompany profiles. You need intercompany profiles to create intercompany transactions.
<i>Set Up: Accounting Rules</i> in the Common Financial Management functional area.	Set up account posting rules. You need separate account posting rules for your intercompany payables and receivables when you want to settle intercompany balances.

## Business Processes

Configure the *Accounting Journal Event* business process. Add the *Initiate Accounting Journal Intercompany Event* business process step, which enables you to create accounting journals for on-behalf-of intercompany transactions.

If your company needs to process and settle on-behalf-of intercompany transactions, configure the *Settlement Run Event* business process.

## Reporting

Reports or Dashboards	Considerations
<b>Intercompany Out of Balance Report</b>	Identify and resolve intercompany out of balance issues.
<b>Intercompany Elimination Out of Balance Report</b>	Use this report to reconcile: <ul style="list-style-type: none"> <li>• Intercompany accounts in an Elimination rule.</li> <li>• Differences with the Suspense account in the Consolidated Trial Balance report.</li> </ul> The report by default runs for all Elimination rules, but you can select to run it for a specific rule.
<b>Intercompany Payables and Receivables Reconciliation</b>	Find and review out-of-balance amounts from posted journal lines on intercompany affiliate ledgers that remain at the end of the period. Enables you to identify and reconcile all intercompany items for each intercompany affiliate, including both matched and unmatched transactions.
<b>Intercompany Work Area</b>	Review intercompany activities between companies with intercompany payment history, including in-progress journal lines, unrecorded receipts, and

Reports or Dashboards	Considerations
	settlement runs. Enables you to find outstanding amounts due to or from an intercompany affiliate.
<b>Outstanding Intercompany Transactions</b>	Find and review detailed information about outstanding intercompany transactions.

## Integrations

Web Services	Considerations
<i>Get Account Posting Rule Sets</i>	Retrieves detailed information about configured account posting rule sets.
<i>Get Intercompany Profiles</i>	Retrieves detailed information about configured intercompany profiles. Enables you to view detailed information across multiple intercompany profiles.
<i>Put Account Posting Rule Set</i>	Creates or configures account posting rule sets. Enables you to set up many account posting rule sets at once.
<i>Put Intercompany Profile</i>	Creates intercompany profiles. Enables you to set up many intercompany profiles at once.

## Connections and Touchpoints

You can use on-behalf-of intercompany with many activities in Workday. Intercompany expands existing functionality by enabling you to generate activities on the accounts of other companies. The intercompany profile you configure enables many intercompany activities across Workday.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Concepts

[Concept: Intercompany Transactions](#) on page 51

[Setup Considerations: Payroll Intercompany Accounting](#)

#### Tasks

[Steps: Set Up On-Behalf Intercompany Transactions](#) on page 35

#### Reference

[Reference: Edit Tenant Setup - Financials](#)

[The Next Level: On Behalf Of Intercompany](#)

### Steps: Set Up On-Behalf Intercompany Transactions

#### Prerequisites

Security: [Set Up Company Accounting](#) in the Common Financial Management functional area.

#### Context

On-behalf intercompany enables you to process payments and invoices in place of the company that provides the goods and services. When you configure your intercompany profiles and relationships, you can record, initiate, and settle on-behalf intercompany activities.

For a use case related to this topic, see [../..../use-case-library/use-case--set-up-on-behalf-intercompany-transactions.dita](#) in the Use Case Library.

## Steps

**1. Define Bank Accounts** on page 1925.

Configure bank accounts for all affiliated companies that use intercompany transactions. We use these accounts for both intercompany settlements and receipts. You need bank accounts for all participants on an intercompany transaction to create intercompany receipts.

**2. Define Intercompany Profiles** on page 36.

**3. Set Up Account Posting Rules** on page 84.

Configure these account posting rules:

- *Intercompany Payables*
- *Intercompany Receivables*

Workday also recommends you configure additional account posting rules based on the transaction types you need. Common posting rules include:

- *Cash*
- *Spend*
- *Revenue*
- *Transaction Tax*

**4. (Optional) Create Customer Payment Application Rule** on page 853.

You can use customer payment application rules to change how Workday processes payments. By default, Workday uses the customer payment application rules associated with the company receiving the payment.

When you need to write off the balances on customer invoices, we use the rules of the company on the customer invoice.

**5. (Optional) Edit Business Processes.**

Workday uses intercompany business process steps when you add a company on the line of the transaction that differs from the header company. We recommend that you add these business process steps:

- *Initiate Accounting Journal Intercompany Event* step to Accounting Journal Event.
- *Initiate Customer Invoice Intercompany Event* step to Customer Invoice Event.
- *Initiate Supplier Invoice Intercompany Event* step to Supplier Invoice Event.

Configure these additional business processes:

- Record Intercompany Receipt Event
- Settlement Run Event

## Result

You can create on-behalf intercompany transactions.

## Related Information

### Concepts

[Setup Considerations: Direct Intercompany Activities](#) on page 39

[Concept: Intercompany Transactions](#) on page 51

## Define Intercompany Profiles

### Prerequisites

Security: *Set Up: Company Accounting* domain in the Common Financial Management functional area.

## Context

You set up intercompany profiles to establish the relationship between companies if 1 or more of these requirements exist:

- You need to settle Intercompany transactions.
- You need to create On-Behalf-Of or Indirect Intercompany transactions.
- You need to record automatically Intercompany Receipts.

## Steps

1. Access the **Edit Company Intercompany Profile** task.
2. As you complete the task, consider:

Option	Description
<b>Initiate Allowed</b>	<p>Select to enable your company to initiate intercompany transactions with the company on the <b>To</b> column.</p> <p>You don't need to select <b>Initiate Allowed</b> for a company to initiate a Direct Intercompany transaction. You select it to enable the Intercompany worktag as a valid combination. This check box also allows the line company on an invoice to differ from the header company for On-Behalf-Of transactions.</p> <p><b>Note:</b> If you don't select <b>Initiate Allowed</b>, you must select the <b>Settle Only</b> check box to enable Direct Intercompany Invoices settlement.</p>
<b>Settle Only</b>	<p>Select to enable your company to settle intercompany transactions with the company on the <b>To</b> column. The company can't initiate intercompany transactions.</p>
<b>Payment Types</b>	<p>Select the allowed payment types in which the current company can settle with the <b>To</b> company.</p>
<b>Default Payment Types</b>	<p>Select the default payment type in which the current company can settle with the <b>To</b> company.</p>
<b>Bank Account</b>	<p>(Electronic payments only) Select the bank account of the <b>To</b> company that you want the current company to use when you settle with the <b>To</b> company.</p> <p>Workday will default the bank account for the <b>To</b> company in the settlement process. The <b>From</b> company, the one initiating the payment, will use the bank account from the bank routing rules.</p> <p>Workday doesn't require that the <b>To</b> company use this bank account when they record the intercompany receipt for the transaction.</p>
<b>Transfer Asset as Original</b>	<p>Select to enable transfer of assets between companies. When a company receives the asset, we generate the asset with the same:</p> <ul style="list-style-type: none"> <li>• Accumulated depreciation.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• In-service date.</li> <li>• Total asset cost.</li> </ul> <p>When you don't enable this option, the receiving company generates the asset with a:</p> <ul style="list-style-type: none"> <li>• Total asset cost equal to the net book value.</li> <li>• An in-service date specific to the receiving company.</li> </ul>
<b>Record Intercompany Receipt</b>	<p>Select to generate intercompany receipts automatically after the current company settles an intercompany transaction from the <b>To</b> company.</p> <p>Workday splits the intercompany transaction if the current company:</p> <ul style="list-style-type: none"> <li>• Enables <b>Record Intercompany Receipt</b>.</li> <li>• Receives an intercompany transaction from the <b>To</b> company with both matched and unmatched transactions.</li> </ul> <p>On split intercompany transactions, Workday only generates the receipt for the matched transaction. You need to record the intercompany payment manually for the unmatched intercompany transaction.</p>
<b>Bank Account for Intercompany Receipt</b>	<p>Select an active bank account. When you configure <b>Record Intercompany Receipt</b>, Workday records those automatic receipts with the listed company using the bank account you select.</p> <p>Workday doesn't automatically select this bank account when you manually create intercompany receipts.</p>

## Result

You can now create or settle intercompany transactions with affiliated companies.

## Next Steps

Configure your **Intercompany Payables** and **Intercompany Receivables** account posting rules.

### Related Information

#### Concepts

[Setup Considerations: Direct Intercompany Activities](#) on page 39

[Concept: Intercompany Transactions](#) on page 51

#### Tasks

[Steps: Set Up Customers and Suppliers for Direct Intercompany Transactions](#) on page 46

#### **Steps: Create On-Behalf-of Intercompany Accounting**

### Prerequisites

Define intercompany profiles.

## Context

You can create an on-behalf-of intercompany journal to manually record an intercompany transaction.

## Steps

- [Create Accounting Journals](#) on page 110.

Change the **Company** on at least 1 journal line to differ from the company on the journal header.

Workday only displays companies on the **Company** prompt that have a defined intercompany relationship.

- [Create Manual Settlement Runs](#) on page 2160.

- Select **Include Payments on Behalf of Other Companies**.
- Click **Add** and then select *Intercompany Items* to find the on-behalf-of transactions you want to pay.

3. (Optional) Access the **Record Intercompany Receipt** task.

- Select *On Behalf Of* on the **Intercompany Invoice Type** prompt.
- Select the bank account used for the settlement of the intercompany transaction. This bank account can differ from the **Bank Account** defined on the **Edit Company Intercompany Profile** task.

When you record the receipt:

- Overpayments post to an account.
- You can write off short payments.
- Invoices account for short pay and overpay when an invoice has a different currency than the company currency.
- You can manage balancing worktag differences to improve reconciling of intercompany payables and receivables. The intercompany receipt posts correctly if a customer invoice has multiple lines using different balancing worktags.

You can also configure your intercompany profiles to automatically record intercompany receipts when you settle an intercompany payment.

Security: *Record Intercompany Receipt Event* business process on the Financial Accounting domain.

## Result

Workday displays an additional **Intercompany** tab on the **View Journal** report with the details of associated intercompany journals.

#### Reference

[The Next Level: On Behalf Of Intercompany](#)

## Direct Intercompany Transactions

### Setup Considerations: Direct Intercompany Activities

You can use this topic to help make decisions when planning your configuration and use of direct intercompany activities . It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

Direct intercompany is a financial accounting structure that enables transactions between different entities within an organization.

Direct Intercompany functionality automatically generates:

- Supplier invoices from customers.
- Intercompany receipts to settle customer invoices when you settle supplier invoices.

## Business Benefits

When you set up your tenant to record direct intercompany activities, your organization can automatically generate these activities with another entity:

- Debts
- Payables
- Receivables

## Use Cases

Use direct Intercompany transactions when source documents must meet [legal or] statutory requirements.

Examples: You enter transactions for a company in another country, or where there are tax reporting requirements.

Use direct intercompany to:

- Record accounting transactions that occur between at least 2 subsidiary or multinational companies within your organization.
- Purchase goods or services from another company within your organization.
- 

Use direct intercompany to record transactions on activities like:

- Customer invoices.
- Customer invoice adjustments.
- Supplier invoices.
- Supplier invoice adjustments.
- Intercompany payment.

## Questions to Consider

Questions	Considerations
How do you want to handle subsidiary or multinational companies?	If you have subsidiary companies or multinational branches that perform transactions with each other, consider configuring intercompany profiles. Intercompany profiles enable you to record and process those intercompany transactions.
Do you need to provide source documents for statutory requirements?	On-behalf-of transactions don't generate source documents. Before you configure intercompany transactions, consider whether you need to set up direct intercompany.
What kind of transactions do your subsidiary companies normally perform with each other?	The transactions that companies within an organization perform with each other determine whether you need to structure Workday for direct or on-behalf intercompany.

Questions	Considerations
	<p>When you need to represent transactions where the companies conduct business like a supplier and a customer, configure direct intercompany.</p> <p>When a company processes the payments and invoices in place of the company that provides the goods and services to customers, configure on-behalf intercompany.</p> <p>When both intercompany relationships apply to you, configure both.</p>
How do your companies use your account sets?	<p>You can only create an intercompany relationship between 2 companies when those companies use the same account set. Before you configure your intercompany profiles, ensure that the companies use the correct account sets.</p>
How do you process and settle your intercompany transactions?	<p>To settle your intercompany transactions, you must configure these options on the <b>Edit Company Intercompany Profile</b> task:</p> <ul style="list-style-type: none"> <li>• <b>Default Payment Types</b></li> <li>• <b>Initiate Allowed</b></li> <li>• <b>Payment Types</b></li> </ul> <p>If you want to record intercompany receipts automatically, select the <b>Record Intercompany Receipts</b> check box.</p> <p>When you don't automatically record receipts, you must create manual receipts to use in your settlement runs using the <b>Record Intercompany Receipts</b> task.</p>
How do you configure your security role assignments?	<p>Workday uses the security configuration of the initiating company when determining who can view the intercompany transaction. Example: The company that creates the customer invoice determines the security requirements to access and process the intercompany transaction.</p> <p>When your company operates as the supplier, Workday instead uses the security configuration of the customer on the original transaction to determine who can view the intercompany transaction.</p> <p>Consider setting up your company hierarchy role assignments to meet your security requirements if any users need to access both sides of the intercompany transaction.</p>
Have you enabled company or cost center partitioning?	<p>Ensure that there are no issues with the combinations as you enter transactions between the companies. Also, ensure that worktags flow from 1 company to another company.</p>

Questions	Considerations
	If there are some cost centers on the customer side, but not on the supplier side, you can enable a Review step on the supplier invoice to identify and correct the issue.
How many sales and purchase items will you use when mapping revenue and spend categories?	<p>Consider these points:</p> <ul style="list-style-type: none"> <li>The amount of maintenance required when using sales and purchase items.</li> <li>How mapping items in various combinations using different default worktags on supplier and customer invoices will affect performance.</li> </ul>
Do you have multiple intercompany spend categories mapped to a single intercompany revenue category, or multiple revenue categories mapped to a single spend category?	<p>Perform 1 of these actions:</p> <p>Expand the number of intercompany revenue categories or spend categories to create a 1 to 1 relationship. Create multiple sales items that map to the single intercompany revenue category. Then, map each of the sales items to a purchase item in a 1 to 1 relationship. Each purchase item then maps to the appropriate spend category.</p>

## Recommendations

Functionality	Considerations
Account posting rules	<p>Configure separate <i>Intercompany Payables</i> and <i>Intercompany Receivables</i> account posting rules if you want to settle intercompany transactions. Separate posting rules enable Workday to create the payables and receivables necessary for you to run the settlement process.</p> <p>If you configure both direct and on-behalf-of intercompany, consider configuring a <i>Direct Intercompany</i> dimension on both the <i>Intercompany Payables</i> and <i>Intercompany Receivables</i> account posting rules. Adding the dimension enables you to split up the account posting rules you use for on-behalf-of and direct intercompany transactions.</p> <p>Depending on the transaction types you use, you also need to configure additional account posting rules. Common posting rules include:</p> <ul style="list-style-type: none"> <li><i>Cash</i></li> <li><i>Spend</i></li> <li><i>Revenue</i></li> <li><i>Transaction Tax</i></li> </ul> <p>If you don't want to post intercompany transactions to <i>Cash</i>, you can instead configure a temporary bank account to record the costs. Consider configuring the temporary bank account when you</p>

Functionality	Considerations
	want to reroute settlement transactions from the pseudo account to a different ledger account.
Fiscal schedules	<p>Use a shared fiscal schedule for companies configured for intercompany transactions. The shared fiscal schedule can be an alternate or primary schedule.</p> <p>Sharing a fiscal schedule reduces the potential for creating erroneous transactions that you need to eliminate using a consolidation.</p>
Intercompany affiliate worktags	<p>Enable intercompany affiliate worktags on customer and supplier invoices, to help identify due-to and due-from companies on intercompany transactions. Identifying these worktags enables Workday to eliminate entries on consolidated financial statements.</p> <p>Workday also recommends that you configure your account posting rules to use the appropriate intercompany affiliate worktags as resulting worktags. Ensure that your configuration doesn't result in a company creating intercompany transactions with itself.</p>
Automate direct intercompany	<p>Automate parts of the invoice processing for direct intercompany transactions.</p> <p>You can configure the <i>Customer Invoice Event</i> business process to generate supplier invoices automatically from customer invoices upon business process approval.</p> <p>You can also enable automatic adding of these invoice items when you configure your customer and supplier relationships on the <b>Maintain Companies as Customers or Suppliers</b> task. Automatically adding invoice items reduces manual input and improves documentation.</p> <p>When you automate parts of the invoice processing, add a <i>Review Supplier Invoice</i> step to your <i>Supplier Invoice Event</i> business process. The review step enables you to ensure the accuracy of automatic processing.</p>
Custom validations	<p>Create custom validations to guide the creation and processing of direct intercompany transactions. Some validations we recommend:</p> <ul style="list-style-type: none"> <li>• Require that worktags are included on both customer and supplier invoices.</li> <li>• Verify that the user added intercompany affiliates on invoice lines for elimination rules.</li> </ul>

Functionality	Considerations
	<ul style="list-style-type: none"> <li>Confirm that intercompany affiliate populates according to the Company as Customer or Supplier of the transaction.</li> <li>Require tax applicability, tax codes, and tax options on customer and supplier invoices.</li> <li>Add restrictions on the intercompany transactions based on the intercompany profile settings.</li> </ul>

## Requirements

Before you can create intercompany transactions, you must:  
Create intercompany profiles for all your intercompany affiliates on the **Edit Company Intercompany Profiles** task. Configure account posting rules for intercompany payables and intercompany receivables. Create customers and suppliers based on the companies in your organization. These customers and suppliers should reflect the intercompany relationships within your organization for initiating and processing direct intercompany transactions.

Configure 1-to-1 mapping for:

- Purchase items to sales items.
- Revenue and spend categories.
- You can only select mapped configurations (either revenue categories to spend categories or sales items to purchase items) in an intercompany transaction.

## Limitations

Before you configure direct intercompany, consider that you can only automatically process adjustments to direct intercompany invoices.

You can't manually create a supplier invoice adjustment on a customer invoice adjustment.

## Tenant Setup

No impact. The intercompany configurations on the **Edit Tenant Setup - Financials** task apply specifically to on-behalf-of intercompany.

## Security

To create intercompany activities for another company, you must configure security roles for the activity on the other company. Example: If you're with Company A and you want to create an intercompany activity for Company B, you must have a security role that enables you to also create the activity for Company B.

Domains	Considerations
<i>Set Up: Company Accounting</i> in the Common Financial Management functional area.	Set up intercompany profiles. You need intercompany profiles to create intercompany transactions.
<i>Set Up: Accounting Rules</i> in the Common Financial Management functional area.	Set up account posting rules. You need separate account posting rules for your intercompany payables and receivables when you want to settle intercompany balances.

## Business Processes

When you need to initiate direct intercompany transactions, configure the *Customer Invoice Event* and *Supplier Invoice Event* business processes. These enable you to create direct intercompany transactions

on customer and supplier invoices. Add the *Initiate Supplier Invoice or Adjustment Creation* service on the *Customer Invoice Event* business process if you want to automatically create supplier invoices from customer invoices.

If your company needs to process and settle direct intercompany transactions, configure the *Settlement Run Event* business process.

## Reporting

Reports or Dashboards	Considerations
<b>Intercompany Out of Balance Report</b>	Identify and resolve intercompany out of balance issues.
<b>Intercompany Elimination Out of Balance Report</b>	<p>Use this report to reconcile:</p> <ul style="list-style-type: none"> <li>• Intercompany accounts in an Elimination rule.</li> <li>• Differences with the Suspense account in the Consolidated Trial Balance report.</li> </ul> <p>The report by default runs for all Elimination rules, but you can select to run it for a specific rule.</p>
<b>Intercompany Payables and Receivables Reconciliation</b>	Find and review out-of-balance amounts from posted journal lines on intercompany affiliate ledgers that remain at the end of the period. Enables you to identify and reconcile all intercompany items for each intercompany affiliate, including both matched and unmatched transactions.
<b>Intercompany Work Area</b>	Review intercompany activities, including in-progress journal lines, unrecorded receipts, and settlement runs. Enables you to find outstanding amounts due to or from an intercompany affiliate.
<b>Outstanding Intercompany Transactions</b>	Find and review detailed information about outstanding intercompany transactions.

## Integrations

Web Services	Considerations
<i>Get Account Posting Rule Sets</i>	Retrieves detailed information about configured account posting rule sets.
<i>Get Intercompany Profiles</i>	Retrieves detailed information about configured intercompany profiles. Enables you to view detailed information across multiple intercompany profiles.
<i>Put Account Posting Rule Set</i>	Creates or configures account posting rule sets. Enables you to set up many account posting rule sets at once.
<i>Put Intercompany Profile</i>	Creates intercompany profiles. Enables you to set up many intercompany profiles at once.

## Connections and Touchpoints

You can use direct intercompany with customer and supplier invoices in Workday. Intercompany expands existing functionality by enabling you to generate activities on the accounts of other companies. The intercompany profile that you configure enables many intercompany activities across Workday.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Reference: Edit Tenant Setup - Financials](#)

[The Next Level: Direct Intercompany](#)

## Steps: Set Up Customers and Suppliers for Direct Intercompany Transactions

### Prerequisites

- Create customers and suppliers representing your affiliate companies using the [Create Customer](#) and [Create Supplier](#) tasks.
- Security: *Set Up: Company Accounting* in the Common Financial Management functional area.

### Context

With direct intercompany transactions, you can produce the Accounts Payable and Accounts Receivable documents you need for your global organization. You can also define the relationships between affiliate companies in greater detail, and automate the generation and delivery of intercompany documentation. For a use case related to this topic, see [../../../../use-case-library/set-up-customers-and-suppliers-for-direct-intercompany-transactions.dita](#) in the Use Case Library.

### Steps

1. [Define Intercompany Profiles](#) on page 36

Configure any affiliate companies with which you want to enable intercompany transactions

2. (Optional) Add the *Direct Intercompany* dimension to your **Intercompany Payables** and **Intercompany Receivables** account posting rules.

See [Set Up Account Posting Rules](#) on page 84.

3. [Maintain Companies as Customers or Suppliers](#) on page 48.

You can associate affiliate companies with one another as customers or suppliers.

4. Review custom validations. See [Recommended Validations](#).

5. Map purchase items to sales items.

To associate purchase items and sales items with each other, you can use the:

- **Purchase Item Mapping** field on the [Create Sales Item](#) task.
- **Sales Item Mapping** field on the [Create Purchase Item](#) task.

See [Create Sales Items](#) on page 1018 and [Steps: Set Up Purchase Items for Procurement](#).

## 6. Map revenue and spend categories.

To associate spend categories and revenue categories with each other, you can use the:

- **Revenue Category Mapping** field on the **Maintain Spend Categories** task.
- **Spend Category Mapping** field on the **Create Revenue Category** task.

See [Create Spend Categories](#) and [Steps: Manage Revenue Categories](#) on page 1016.

## 7. (Optional) Automatically create supplier invoices.

To automate the creation of supplier invoices, add the *Initiate Supplier Invoice or Adjustment Creation* step to your *Customer Invoice Event* business process. See [Edit Business Processes](#).

If you add this step to your business process, Workday recommends that you also:

- Add the *Review Supplier Invoice* step to your *Supplier Invoice Event* business process.
- Assign this step to your Accounts Payable Data Entry Specialist.

## Result

You can create direct intercompany customer and supplier invoices.

## Next Steps

Create a direct intercompany customer invoice.

### Related Information

#### Concepts

[Concept: Invoices for Direct Intercompany Transactions](#) on page 50

#### Reference

[The Next Level: Direct Intercompany Invoicing](#)

## Steps: Create Invoices for Direct Intercompany Transactions

### Prerequisites

- Set up customers and suppliers for direct intercompany transactions.
- Security: *Set Up: Company Accounting* in the Common Financial Management functional area.

### Context

Direct intercompany customer and supplier invoices provide the Accounts Payable and Accounts Receivable documents you need for your global organization. For a use case related to this topic, see [../../use-case-library/use-case--create-invoices-for-direct-intercompany-transactions.dita](#) in the Use Case Library.

### Steps

#### 1. [Create Customer Invoices](#) on page 780.

In the **Customer** field, select *Companies as Customers*.

#### 2. [Create Supplier Invoices](#) on page 1618.

If you didn't automate supplier invoices on the Customer Invoice Event business process:

- Access the **Supplier Invoice Workbench**.
- Select *Companies as Suppliers* in the **Supplier** field.
- Click **Customer Invoices**.
- Select the customer invoices you want to include on the supplier invoice.

3. [Create Manual Settlement Runs](#) on page 2160.
  - Click **Add** and then select *Intercompany Items* to find the direct intercompany supplier invoices you want to pay.
  - To limit your search results to direct intercompany transactions, select *Direct* in the **Intercompany Invoice Type** field.
4. Access the **Record Intercompany Receipt** task.

Select *Direct* in the **Intercompany Invoice Type** field. You can only record receipt for 1 intercompany payment at a time.

**Note:** The recording of the intercompany receipt acts as payment of the customer invoice for direct intercompany transactions. You won't use the **Record Customer Payment** or **Apply Customer Payment** tasks when you process intercompany payments.

When you record an intercompany receipt:

- Overpayments post to an account.
- You can write off short payments.
- Invoices account for short pay and overpay when an invoice has a different currency than the company currency.
- You can manage balancing worktag differences to improve reconciling of intercompany payables and receivables. The intercompany receipt posts correctly if a customer invoice has multiple lines using different balancing worktags.

## Result

- The intercompany customer invoice includes the corresponding supplier invoice number.
- The intercompany supplier invoice includes the corresponding customer invoice number.
- The intercompany receipt displays on the customer invoice **Activity** tab.

## Next Steps

Check the payment status on the header of the direct intercompany customer invoice to verify that the transaction is complete.

### Related Information

#### Examples

[Example: Settle Direct Intercompany Transactions](#) on page 2180

## Maintain Companies as Customers or Suppliers

### Prerequisites

Security: *Set Up: Company Accounting* domain in the Common Financial Management functional area.

### Context

You can configure your companies to operate as customers, suppliers, or both, enabling them to do business with each other through direct intercompany transactions. This arrangement eliminates the need to create separate customer and supplier invoices, saving you time and improving your data integrity.

### Steps

1. Access the **Maintain Companies as Customers or Suppliers** task.

2. As you complete the task, consider:

<b>Option</b>	<b>Description</b>
<b>Operates as Customer</b> <b>Operates as Supplier</b>	<p>Select an existing company to operate as an existing customer or supplier. Companies must:</p> <ul style="list-style-type: none"> <li>• Be part of the same organization or legal entity.</li> <li>• Transact in Workday.</li> </ul> <p>Intercompany transactions can occur based on the mapping of the company as either the customer or supplier:</p> <ul style="list-style-type: none"> <li>• Between 2 companies</li> <li>• Between 2 subsidiaries</li> <li>• A parent company and a subsidiary</li> </ul>
<b>Copy Worktags</b>	<p>For companies that operate as customers, select the <b>Copy Worktags</b> check box to transfer valid supplier invoice worktags from customer invoice lines to supplier invoice lines.</p> <p>Copying worktags improves the accuracy of intercompany receipts for invoices that have multiple lines with different balancing worktags.</p>
<b>Copy Tax Fields</b>	<p>Workday selects the <b>Copy Tax Fields</b> check box for companies that operate as customers or both suppliers and customers. Selecting this check box transfers tax codes and withholding tax codes from customer invoice lines to supplier invoice lines. Workday also populates the supplier invoices with the purchase item and spend category tax applicability.</p> <p>If you clear this check box, Workday populates the supplier invoice with:</p> <ul style="list-style-type: none"> <li>• All tax codes and withholding tax codes from your advanced tax defaulting rules by country.</li> <li>• The tax applicability from the purchase item and spend category or your configured override rules, in that order of priority.</li> </ul>
<b>Copy Attachments</b>	<p>Select the <b>Copy Attachments</b> check box to transfer files from your customer invoices to your supplier invoices.</p>
<b>Default Affiliate</b>	<p>Select the <b>Default Affiliate</b> check box to have Workday populate intercompany affiliate worktags on:</p> <ul style="list-style-type: none"> <li>• Customer invoice transactions for companies that operate as suppliers.</li> <li>• Supplier invoice transactions for companies that operate as customers.</li> <li>• Revenue journal entries for customer invoices.</li> <li>• Spend journal entries for supplier invoices.</li> </ul>

Option	Description
	After you create intercompany invoices, you can override the value of the default intercompany affiliate worktag directly on the supplier invoice or customer invoice.
<b>Enable Netting</b>	<p>Select the <b>Enable Netting</b> checkbox to have Workday calculate a single net balance payable or receivable for companies that are both a customer and a supplier.</p> <p>This process eliminates the workaround of calculating the differences between supplier invoice and customer invoice amounts, simplifies settlement, reduces operation costs, and improves collections risk.</p> <p>See <a href="#">Steps: Set Up Netting</a> on page 821.</p>

## Result

Intercompany supplier invoices use the company ship-to address on the header and lines of the supplier invoice to support tax defaulting at the line level.

### Concept: Invoices for Direct Intercompany Transactions

#### Direct Intercompany Transactions

You can generate customer or supplier invoices in Workday for direct intercompany transactions. After you configure companies as customers, suppliers, or both, you can view the related customer or supplier invoice and process direct intercompany payments. These actions enable you to comply with legal requirements in countries that require additional invoicing documents for direct intercompany transactions.

You can use the **Maintain Companies as Customers or Suppliers** task to designate companies as customers, suppliers, or both, for direct intercompany transactions.

#### Customer Invoice for Transactions with Affiliate Company

You can send a customer invoice to the affiliate company just like you would do for any other customer. Workday automatically adds the supplier reference number from the customer invoice to the resulting supplier invoice.

#### Supplier Invoices

The accounts payable specialist of the affiliate company reviews the supplier invoice. You can use the **Supplier Invoice Workbench** to create a supplier invoice for multiple customer invoices. On the **Customer Invoices** tab of the **Supplier Invoice Workbench**, you can search for customer invoice lines that aren't:

- Canceled.
- Denied.
- Fully Invoiced.

#### Supplier Invoice Adjustments

When you create a customer invoice adjustment for a direct intercompany invoice, Workday automatically creates the supplier invoice adjustment. The **Reference Invoice** prompt on a supplier invoice adjustment includes direct intercompany invoices.

## Concept: Intercompany Transactions

Intercompany transactions arise when 1 unit of a single legal entity does business with another unit of the same entity. Intercompany transactions can occur between 2 divisions, 2 subsidiaries, or a parent company and a subsidiary. These transactions improve the flow of finances and assets between the companies.

In Workday, you can perform direct intercompany transactions and on-behalf-of intercompany transactions.

### Direct Intercompany Transactions

Direct intercompany transactions occur when 2 units within the same legal entity conduct business with each other as a customer and a supplier.

Example: Global Modern Services (GMS) USA and Global Modern Services (GMS) France are affiliate companies. GMS USA manufactures and sells office furniture. It also supplies the furniture to its affiliate companies. In this case:

- GMS USA operates as a supplier and generates a customer invoice to record the sale to GMS France.
- GMS France operates as a customer and generates a supplier invoice to record the purchase from GMS USA.
- GMS France pays GMS USA through a settlement run.
- GMS USA records an intercompany receipt to accept the payment from GMS France.

To process direct intercompany transactions, you must:

- Configure intercompany profiles.
- Set up the customer and supplier relationships between your companies.
- Map sales items to purchase items.
- Configure revenue category and spend category.
- Create transfer pricing rate sheets for your intercompany project workers to apply to the intercompany contract.
- Configure account posting rules to record intercompany receivables and payables.
- Configure business processes to record intercompany receipt.
- Define elimination rules for intercompany balances remaining at a period close to avoid dual accounting when you create consolidated financial reports.

### On-Behalf-Of Intercompany Transactions

On-behalf-of intercompany transactions arise when 1 unit of a legal entity process the invoices and payments on behalf of the unit that supplies good and services.

Example: GMS USA and Green Planet Solutions are affiliate companies. In this case, when Green Planet Solutions provides goods and services to its customers:

- Green Planet Solutions invoices the customer.
- The customer sends the payment to the GMS USA.
- GMS USA records the payment, creates a deposit, and applies the payment on behalf of Green Planet Solutions.
- After payment application, GMS USA sends an intercompany payment to Green Planet Solutions through a settlement run.
- Green Planet Solutions confirms receiving the payment by recording an intercompany receipt.

To process on-behalf-of intercompany transactions, you must:

- Configure intercompany profiles.
- Create bank routing rules.

## Indirect Intercompany Transactions

Indirect intercompany arises when 1 unit of the legal entity doesn't fully transact in Workday and only books 1 side of the transaction. Therefore:

- Indirect intercompany transactions create only 1-sided journals in Workday.
- Workday won't create the additional **Intercompany** tab on the **View Journal** report.
- Set up external entity as a company in Workday to be able to tag the transactions with the *Intercompany Affiliate* worktag.

For these transactions you might also need to:

- Provide source documents for statutory requirements.
- Define account posting rules for those customers and suppliers.
- Create workarounds for fully settling indirect intercompany transactions.

## Intercompany Receipts

Intercompany receipts act as an acknowledgment of a payment on the books of the company that paid for the intercompany transaction.

On receipt creation, whether manual or automatic, Workday generates a:

- Debit on the *Cash* ledger account.
- Credit on the *Intercompany Receivables* ledger account.

## Custom Validations

### Steps: Set Up Custom Validations

#### Prerequisites

Security: *Business Process Administration* domain in the System functional area.

#### Context

You can use custom validations to help workers identify transaction issues. The custom validations you can create varies by transaction type. Create custom validations to:

- Alert transaction approvers to conditions that need more careful review.
- Display warning or error messages when workers create a transaction that meets the conditions for the validation.
- Prevent workers from submitting invalid transactions until they resolve an error.

## Steps

1. (Optional) Access the **Maintain Condition Rule Categories** task.  
To organize your custom validation rules, define the condition rule categories by selecting the *Custom Validation Rule* option.
2. [Set Up Custom Validation Severity and Conditions](#) on page 53.
3. [Configure Custom Validation Messages](#) on page 54.

## Next Steps

You can use Object Transporter (OX) to migrate custom validations from 1 tenant to another. Example: You can test custom validations in your Sandbox tenant, then migrate them to your Production tenant.

### Related Information

#### Concepts

[Concept: Object Transporter 2.0](#)

## Set Up Custom Validation Severity and Conditions

### Prerequisites

Security: *Set Up: Custom Validations* domain in the Common Financial Management functional area.

### Context

Create condition rules to have Workday generate errors or warnings during transaction validation.

## Steps

1. Access the **Maintain Custom Validations** report.
2. Select the type of transaction.
3. Click **New Validation**.

As you select the **Severity** level, consider:

Option	Description
<b>Critical</b>	Prevents workers from submitting an invalid transaction.
<b>Warning</b>	Alerts workers but doesn't prevent transaction submission and approval.

4. As you complete the task, consider:

Option	Description
<b>Description</b>	The message Workday displays to workers when you don't configure a validation message.
<b>Category</b>	Assigning a category makes the validation rule easier to find later. You can create <i>Custom Validation Rule</i> categories using the <b>Maintain Condition Rule Categories</b> task.
<b>Derived Logic</b>	The statement that you've defined through the rule conditions. The field displays: <ul style="list-style-type: none"> <li>• Existing statements.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• New statements after you define and save them.</li> </ul>
<b>Copy Condition from Rule</b>	You can copy and modify an existing validation rule to create a new 1.

5. As you complete the **Rule Conditions**, consider:

Option	Description
<b>And / Or</b>	When 2 or more statements exist in the expression, set this condition to control how the statements relate to each other.
( )	Use parentheses for 3 or more statements and a combination of <i>And</i> and <i>Or</i> conditions. Example: (A and B) or C.
<b>Source External Field or Condition Rule</b>	The field or condition rule you select as the source determines which other options are available.
<b>Relational Operator</b>	These options depend on the data type.
<b>Comparison Value</b>	Based on the <b>Comparison Type</b> , select a comparison field or enter a value to compare to the source.

6. (Optional) Select **Test Validations** to test the custom validation performance.

Specify an existing transaction to test the validation on.

**Note:** Workday doesn't support testing for the benefits transactions types.

### Next Steps

Write custom validation messages.

## Configure Custom Validation Messages

### Prerequisites

- Define custom validations by transaction type.
- Security: *Set Up: Custom Validations* domain in the Common Financial Management functional area.

### Context

Create custom validation messages to display to workers when Workday triggers a transaction validation. If you don't create a custom message, Workday displays the description of the custom validation instead.

### Steps

1. Access the **Maintain Custom Validations** report.
2. Select the type of transaction.
3. From the related action on a validation, select **Validation > Configure Validation Message**.
4. Enter a custom validation message.

Your message can include static **Text** as well as dynamic **External Field** values from report fields and calculated fields.

## Result

When workers create transactions that meet the conditions you configure for the validations, Workday displays the error or warning message.

### Example

For the **Expense Report** transaction type, you configure a message for the *Airfare Exceeds \$600 (USD)* validation:

Field	Value
Text	<i>Airfare exceeds \$600 (USD) for</i>
Extended Field	<i>Expense Report</i>

The resulting error message is *Airfare exceeds \$600 for Expense Report: EXP-00004471*.

## Concept: Transaction Revalidation

When you view certain transactions that use custom validations, Workday carries forward any custom validation errors and warnings from the last time you saved the transaction. Because Workday isn't validating every time, you can view transactions quickly, which is useful if you have many custom validations and transactions lines. Use the **View Exceptions** button on the view report for the transaction to verify whether errors and warnings still apply. Workday displays exceptions on the **Errors & Warnings** tab.

Transaction revalidation applies to:

- Accounting journals
- Ad hoc bank transactions
- Ad hoc bank transaction templates
- Ad hoc payments
- Asset registration
- Expense reports
- Ledger accounts
- Payment elections
- Spend authorizations

Workday always checks transactions against the latest custom validations whenever you create, edit, submit, or approve the transactions. If you view a previously valid transaction and take a related action on it, Workday ensures that it's still valid and has no exceptions.

# Financial Accounting

---

## Financial Accounting Structure

---

### Steps: Set Up Financial Accounting Structure

#### Prerequisites

Before you set up Workday Financial Management, you must also set up these core Workday areas:

- Tenant
- Security
- Organizations

## Context

Set up the basic financial components of Workday Financial Management so you can post a journal. Operational transactions on accounting journals can result in journals that you post.

## Steps

1. Set up the companies for which you want to:

- Record business transactions.
- Produce financial statements.
- Create other statutory reports.

See [Steps: Set Up Companies](#) on page 58.

2. (Optional) Set up journal sequencing for a company.

Workday assigns unique, sequential, and gapless journal sequence numbers to accounting and operational journals for the Actuals Ledger Type.

See [Steps: Set Up Journal Sequencing](#) on page 142.

3. Establish the calendar of financial periods that control accounting and reporting for your companies.

See [Steps: Set Up Fiscal Schedules and Years](#) on page 60.

4. Logically group similar account-related objects or people for posting, searching, and reporting purposes.

See [Steps: Set Up Accounting Categories](#) on page 62.

5. Define journal sources and then map the journal sources to transactions.

See [Steps: Set Up and Update Journal Sources](#) on page 63.

6. Establish your chart of accounts and an aggregate of accounts.

See [Steps: Create and Organize Ledger Accounts](#) on page 81.

See [Steps: Manage Ledger Account Summaries](#) on page 90.

7. Establish your default currency, preferred currency values, currency rate types, and currency conversion rates.

Workday automatically displays your tenant default and preferred currencies in all applicable fields.

Use these currency conversion rates in:

- Financial transactions such as expense reports.
- Translations from base currencies into reporting currencies.

See [Steps: Set Up Currencies](#).

8. Identify where you want to post each type of transaction.

See [Set Up Account Posting Rules](#) on page 84.

9. Configure a set of account control rules to manage basic approval thresholds at the account level for your companies.

See [Create Account Control Rules](#) on page 87.

10. Configure alternate or statutory account set mapping to your preferred account set.

See [Steps: Set Up Alternate Accounts](#) on page 91.

11. Assign Company Accounting Details on page 64.

Perform accounting and assign the necessary financial components to a company.

12. [Create Ledgers](#) on page 68.

13. Establish ledger years and ledger periods for each of your companies so that you can record journal entries to their ledgers.

See [Steps: Create and Open Ledger Years and Periods](#) on page 70.

#### 14.(Optional) [Create Custom Labels](#).

Customize all instances of these labels across your tenant:

- Budget
- Budget information
- Budget lines
- Budget structure
- Budget template
- Entry type
- Entry types
- Plan
- Plan/budget
- Plans
- Statistic
- Total budget
- View structure

#### **Result**

You can post journals for a company.

#### **Next Steps**

Set up these additional financial components of Workday Financial Management:

- Allocations
- Budgets
- Consolidation companies
- Journal processing
- Period-end close
- Taxes
- Translations
- Worktags
- Year-end close

#### **Related Information**

##### **Concepts**

##### **Reference**

[Reference: Organization Types and Subtypes](#)

## Steps: Set Up Companies

### Prerequisites

Security: *Create: Company* domain in the Organizations and Roles functional area. See [..../..../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

Set up the companies for which you want to:

- Record business transactions.
- Produce financial statements.
- Create other statutory reports.

Companies are organizations within Workday that represent the internal business entities within your enterprise. In Workday Financial Management, companies are the primary organization for all business processes.

### Steps

1. **[Set Up Nonsupervisory Organizations](#)**.

Access the **Create Company** task to set up your Workday company.

**Note:** Workday recommends that you create a company for every internal entity that has a separate tax ID.

2. (Optional for USA companies only) [..../..../payroll/company-relationships-usa-/single-legal-entity/son1394126853637.dita](#).

Set up a company relationship where multiple companies roll up to a single managing company that serves as the reporting legal entity.

3. (Optional) [Add Organizations to Hierarchies](#).

4. Add contact information for the company.

See [Set Up Company Contact Information](#) on page 59 .

5. Set up company tax information.

See [Steps: Set Up Payroll Taxes \(USA\)](#).

See [Steps: Set Up Payroll Taxes \(CAN\)](#).

See [Steps: Set Up Payroll Statutory Contributions \(FRA\)](#).

See [Steps: Set Up Payroll Taxes \(UK\)](#).

6. **[Create ID Definitions and Sequence Generators](#)**

Specify how Workday constructs and formats IDs that it automatically generates in sequence for various financial transactions, transaction documents, and processes task.

7. Specify sequence generator ID definitions for various transactions, transaction documents, and processes throughout the tenant.

See [Reference: Edit Tenant Setup - Financials](#).

8. Access the **Edit Company ID Definitions** task.

To help you determine what to override, Workday displays the tenant settings for reference. Enter sequence generator ID definitions that are specific to the company rather than the default tenant settings.

### Next Steps

Define the fiscal schedule for your company.

## Set Up Company Contact Information

### Prerequisites

- Create a company.
- Security: Set Up: *Company General* domain in the Common Financial Management functional area. See [../../../../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

You can set up company contact information to mail company documents and notifications to the correct addresses. Once you set up contacts for your company, you can:

- Mail various documents to more than 1 address at once.
- Identify a primary address and other addresses. The primary address that you select will by default display on selected documents that you create after the effective date. Example: invoices, statements, and remit to.

### Steps

1. Access the **Edit Company Contact Information** task.
2. As you enter company contact information, consider:

Option	Description
<b>Phone</b>	<p>Enter customer phone information, such as country phone code, phone number, phone device. Select the <b>Usage</b> type to specify the reason you'll use the contact for.</p> <p>Select <b>Primary</b> to set the phone number as the primary phone number to populate on selected documents.</p> <p><b>Note:</b> You can only have 1 primary phone number.</p> <p>In the <b>Use For</b> field, select the documents on which you want to display the primary phone number.</p> <p>Set the <b>Visibility</b> field to <i>Public</i> to make the phone information public.</p>
<b>Address</b>	<p>Enter an <b>Effective Date</b> from when you want the address to take effect.</p> <p>Enter address of the company.</p> <p>Select the <b>Usage</b> type to specify the reason you'll use the address for.</p> <p>Select <b>Primary</b> if you want to set the address as the primary address.</p> <p><b>Note:</b> You can only have 1 primary address.</p> <p>In the <b>Use For</b> field, select the documents on which you want to display the primary address of the company. Some of the choices are:</p>

Option	Description
	<ul style="list-style-type: none"> <li>• Billing</li> <li>• Mailing</li> <li>• Procurement</li> <li>• Remit To</li> <li>• Shipping</li> <li>• Payroll Tax Form</li> </ul> <p>Set the <b>Visibility</b> field to <i>Public</i> to make the primary address public.</p>

## Steps: Set Up Fiscal Schedules and Years

### Context

You can build and maintain fiscal schedules and fiscal years for your businesses to use and share for financial accounting and reporting purposes.

Fiscal schedules are distinct from your calendar years, though the two might coincide. A fiscal schedule consists of posting intervals, the chronological periods into which you divide the calendar. Fiscal schedules don't contain specific years. To create fiscal years and their periods, use fiscal schedules as the building blocks.

The fiscal years you create in the fiscal schedule sequentially follow the prior fiscal year, and you can't duplicate them. Workday uses the ending date of 1 fiscal year to help derive the start date of the following fiscal year. If you need to represent the same year differently, even for historic general ledger conversions, consider using an alternate fiscal schedule.

Example: You report on both a year end in December and a year end in March. Instead of creating 2 fiscal years in the same schedule, create a separate schedule for the year end in December and a separate schedule for the year end in March.

If required, you can add the fiscal schedule as an alternate fiscal schedule on the **Edit Company Accounting Details** task. See [Assign Company Accounting Details](#) on page 64.

You can use the alternate fiscal schedule for financial reporting. See [Steps: Set Up Alternate Fiscal Year Consolidations](#) on page 263.

### Steps

#### 1. Access the **Create Fiscal Schedule** task.

Enter a unique name for the schedule. You can share this 1 across your businesses, or create more as needed.

To automatically populate the fiscal period end date for each posting interval based on the prior fiscal year, select the **Auto Populate Fiscal Periods** check box. Clear the check box to enter the dates manually.

Security:

- *Set Up: Fiscal Schedule* in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* in the Core Payroll functional area.

See: [../../../../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

#### 2. Access the **Maintain Fiscal Schedule Posting Intervals** task.

Define the posting intervals to apply to any fiscal year that you create for the fiscal schedule. During reporting, you can include or exclude adjusting accounting journals in the financial results. You can

decide to no longer include a separate period in your schedule in which to post adjustments, even if you've historically done so.

Add a row for each posting interval that you want to use as a period within a fiscal year. After you create the initial fiscal year, you can't add, delete, or change the order of the intervals, but you can rename them.

Security:

- *Set Up: Fiscal Schedule* in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* in the Core Payroll functional area.

### 3. Access the **Create Fiscal Summary Schedule** task.

Define summary intervals to roll up posting intervals to broader reporting periods, such as quarters or half-years.

Add a row for each group of **Fiscal Posting Intervals** that you want to combine into a summary reporting period for the fiscal year. Example: Group January, February, and March into Q1 to gain insight into your quarter-to-date financial status.

You can add, change, or delete summary intervals anytime.

Security: *Set Up: Fiscal Schedule* in the Common Financial Management functional area.

### 4. Access the **Create Initial Fiscal Year** task.

Create the initial fiscal year for which to perform accounting and financial reporting.

### 5. As you complete the task, consider:

Option	Description
<b>Fiscal Schedule</b>	Displays only the fiscal schedules with posting intervals, but no fiscal years are available.
<b>Fiscal Year Number</b>	Assign a unique number to identify the year within the fiscal schedule. Example: Enter the calendar year number associated with the first fiscal period.
<b>Fiscal Year Name</b>	Uniquely identify the fiscal year to differentiate from other years within the same fiscal schedule.  Example: Your fiscal year runs from July through June, so you mention both calendar years that it crosses.
<b>Fiscal Year Start Date</b>	The first day of the first period within the fiscal year.
<b>Fiscal Posting Interval</b>	The periods that make up the fiscal year, as set on the <b>Maintain Fiscal Schedule Posting Intervals</b> task.
<b>Fiscal Period End Date</b>	Select the last day of each period.  Workday sets the <b>Fiscal Year End Date</b> to the last end date.

### 6. Create previous and next fiscal years as needed. Before you create a ledger year and periods for a fiscal year, you can use the **Edit Fiscal Year** task to edit the name and period end dates.

a) (Optional) Access the **Create Previous Fiscal Year** task.

b) (Optional) Access the **Create Next Fiscal Year** task.

- Fiscal Year Number: For the previous fiscal year, Workday subtracts 1 from the earliest existing fiscal year; for the next fiscal year, Workday adds 1 to the latest.
- Fiscal Year Start Date: For the next fiscal year, Workday sets this date to the first day after the end date of the preceding fiscal year.

## Result

Because financial transactions and events have an associated date, you can use your fiscal schedule and fiscal years to control accounting and reporting. You can combine several posting intervals into consolidated reporting units, such as a quarters or half years, or fiscal summary schedules.

## Next Steps

Associate the fiscal schedule as the primary or the alternate fiscal schedule with your companies using the **Edit Company Accounting Details** task. Then use the fiscal years to build a specific ledger year and its ledger periods for the company using the **Create Ledger Year and Ledger Periods** task.

For a list of related reports and their descriptions, access the **Workday Standard Reports** report and select the *Set Up Fiscal Schedule* report category.

## Related Information

### Tasks

[Steps: Set Up Financial Accounting Structure](#) on page 55

## Steps: Set Up Accounting Categories

### Context

You can logically group similar accounting objects for posting, searching, and reporting purposes. You can establish accounting categories for:

- Business assets
- Customers
- Receivable write offs
- Revenue
- Spend
- Suppliers

Workday requires that you assign a category to every customer, supplier, item, business asset, and writeoff.

### Steps

1. [../../../../spend-management/procurement/catalogs-and-items/item-identifiers-and-spend-categories/dan1370796836430.dita](#).

Create categories to classify the types of spend categories you want to report on. Examples: Assets, Expense Items.

2. Access the **Maintain Customer Categories** task.

Create categories to classify the types of customers you have. Examples: Hospitality, Technology.

Security: *Set Up: Customer Categories* domain in the Common Financial Management functional area. See [../../../../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

3. Access the **Maintain Supplier Categories** task.

Create categories to classify the types of supplies you want to account for. Examples: Office supplies, Utilities.

Security: *Set Up: Supplier Categories* in the Common Financial Management functional area. See [../../../../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

4. Add categories to classify the types of revenue you need to track and report. Examples: Product Sales, Interest Income.

[Steps: Manage Revenue Categories](#) on page 1016.

## 5. Access the **Maintain Receivable Write off Reasons** task.

Create reasons to describe the receivables you want to write off. Examples: Bad Debt, Standard Write off.

Security: *Set Up: Receivable Write-off Categories* in the Common Financial Management functional area.

### **Result**

For all category types, you can use accounting categories to assign as characteristics to accounting objects and people. You can then:

- Report on everything assigned to a specific category.
- Route transactions to the appropriate ledger accounts by using categories as conditions in account posting rules.
- Search for and find groups of objects or people according to a specific category.

For spend and revenue categories you can:

- Use the categories as worktags. Example: When you create a journal, tag it with a spend or revenue category.
- Write transactions against a category without having to specify items. Example: When you create an invoice, write a line and its amount to a general category instead of a specific item.

### **Related Information**

#### **Tasks**

[Steps: Set Up Financial Accounting Structure](#) on page 55

[Steps: Set Up Asset Accounting](#) on page 1488

## **Steps: Set Up and Update Journal Sources**

### **Context**

You can indicate where or why you created your journals by defining journal sources. You can then use journal source definitions to report on and analyze journals.

### **Steps**

1. [Create Journal Sources](#) on page 108.

2. Access the **Maintain Journal Source Mapping to Operational Transactions** task.

Workday automatically creates operational journals for transactions.

To specify which journal source Workday assigns to operational journals:

- Define the journal source by transaction type.
- Remap the journal source that Workday applies to journal entries for all new transactions that you process.

Security:

- *Set Up: Journal Source* domain in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

See [../../../../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### 3. Access the **Mass Update Journal Source** task.

Update the journal source on existing transactions by transaction type. Workday recommends that you remap the journal source for all new transactions of the given type. Update all existing operational journals for that transaction type.

**Security:** *Set Up: Journal Source* domain in the Common Financial Management functional area.

### Result

You can assign journal sources to accounting journals. Workday automatically assigns a journal source to operational transactions as you enter them.

### Related Information

#### Concepts

[Concept: Accounting and Operational Journals](#) on page 128

#### Tasks

[Steps: Set Up Financial Accounting Structure](#) on page 55

## Assign Company Accounting Details

### Prerequisites

- Define each financial component to associate with the company. Examples: Account Posting Rule Set, Account Set, Fiscal Schedule, Currency.
  - Security:
    - *Set up: Company Accounting* in the Common Financial Management functional area.
    - *Set Up: Payroll - Company Specific (Accounting)* in the Core Payroll functional area.
- See [..../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

To perform accounting-related actions and record all relevant transactions for a company, assign the necessary company financial components. Example:

- Account Set
- Currency
- Default Reporting Book
- Fiscal Schedule
- Translation Currency

### Steps

#### 1. Access the **Edit Company Accounting Details** task.

#### 2. As you complete the task, consider:

Option	Description
<b>Currency</b>	<p>Workday uses the base currency for all financial transactions within the company, such as:</p> <ul style="list-style-type: none"> <li>• Supplier Invoices</li> <li>• Customer Invoices</li> <li>• Expense Reports</li> </ul> <p>When you have configured conversion rates, Workday converts foreign currency</p>

Option	Description
	transactions to the base currency of the company for accounting purposes.
<b>Currency Rate Type Override</b>	Select the default currency rate type for the company. Leave blank to use the default currency rate type for the tenant.
<b>Fiscal Schedule</b>	<p>Displays your default fiscal schedule. Configure the fiscal years for the company to create ledger years or periods and plans based on the fiscal schedule.</p> <p>Once you enter journals or plan details for the company, you can no longer change the fiscal schedule. When you only create ledger years and periods or plans, you can't change the fiscal schedule until you delete them.</p>
<b>Alternate Fiscal Schedule</b>	<p>Select to associate 1 or more alternate fiscal schedules for the company to generate financial statements for either the primary or 1 or more alternate fiscal schedules. When you run consolidated financial statements, Workday uses the schedule defined on the <b>Edit Consolidation Details</b> task.</p> <p>The alternate fiscal schedule can't be the same as the primary fiscal schedule. Once you create beginning balances, you can't change the alternate fiscal schedule.</p>
<b>Alternate Ledger Currency</b>	Select the alternate currency to use in addition to the primary currency for your actuals ledger.
<b>Alternate Ledger Currency Rate Type Override</b>	Select the alternate currency rate type override for the alternate ledger. Leave blank to use the default currency rate type for the tenant.
<b>Alternate Ledger Currency Fiscal Start Year</b>	<p>Select the fiscal year in which to begin using the alternate ledger. Workday:</p> <ul style="list-style-type: none"> <li>Automatically generates the first alternate ledger currency ledger year and ledger periods.</li> <li>Processes journals in the primary ledger only when you select a start date in the future.</li> </ul>
<b>Account Set</b>	Displays your default account set for the chart of account. Once you create ledger years and periods, you can't change the account set.
<b>Alternate Account Set</b>	Select an additional account set for the company to generate reports that map alternate or statutory account sets to your preferred account set. Once you create or post journals, you can't change the alternate account set.

Option	Description
<b>Default Account Set</b>	<p>Workday displays this account set when you create:</p> <ul style="list-style-type: none"> <li>• Journals.</li> <li>• Ad hoc bank transactions.</li> <li>• Ad hoc bank transaction templates.</li> <li>• Recurring journal templates.</li> </ul>
<b>Account Control Rule Set</b>	<p>Set approval thresholds for company accounts based on the specified account set.</p>
<b>Account Posting Rule Set</b>	<p>Identify rules about how journal entries post to accounts for this company based on the specified account set.</p>
<b>Account Translation Rule Set</b>	<p>Select a rule set to automatically populate for the translation when you run translated financial reporting for the company.</p>
<b>Average Daily Balance Rule</b>	<p>Select a rule that uses the same Account Set the company uses.</p>
<b>Average Daily Balance Start Date</b>	<p>Select the effective date of the <b>Average Daily Balance Rule</b> and the earliest date that you can select when processing average daily balances. Workday:</p> <ul style="list-style-type: none"> <li>• Calculates ending balances for journals with an accounting date on or after this date.</li> <li>• Tags the journal lines with the average daily balance date.</li> </ul>
<b>Default Reporting Book</b>	<p>Displays the default reporting <b>Book</b> on reports where you select the book as a parameter. You can change the default book by selecting the <b>Tenant Default</b> check box on the <b>Maintain Books</b> task. When you configure a default book for a company hierarchy or company, it overrides the tenant-level default.</p> <p><b>Note:</b> If you define more than 1 book and don't set a default book, you must select a <b>Book</b> when you run a financial report. Otherwise, the report returns results for all books and you risk double-counting.</p>
<b>Procurement Tax Option</b>	<p>Select a default tax option for these purchase transactions:</p> <ul style="list-style-type: none"> <li>• Ad hoc payments.</li> <li>• Supplier invoices and supplier invoice adjustments.</li> <li>• Purchase orders.</li> </ul>
<b>Translation Currency</b>	<p>Select 1 or more default translation currencies that you want to use when rolling translated beginning balances forward.</p>

Option	Description
<b>Allow Accounting by Approval Date</b>	Select an invoice option to use the approval date instead of the invoice date for accounting / as the accounting date.
<b>Allow Accounting in Arrears</b>	<p>Select to view:</p> <ul style="list-style-type: none"> <li>The <b>Accounting Date</b> when you create, edit, or view an invoice.</li> </ul> <p>You can enter an accounting date that differs from the invoice date for customer or supplier invoices and invoice adjustments.</p> <ul style="list-style-type: none"> <li><i>In Progress</i> operational journals when you update ledger period statuses.</li> </ul>
<b>Accounting Date Requirement</b>	Select to establish whether an accounting date is required or optional on customer invoices.
<b>Enable Automatic Journal Line Numbering</b>	<p>Select to automatically number activity lines of all journals. Workday assigns the line number when you post the journal.</p> <p>Workday doesn't assign line numbers:</p> <ul style="list-style-type: none"> <li>To retained earnings lines.</li> <li>On copied journals.</li> <li>In a sorted order.</li> </ul>
<b>Disallow Change to Operational Transactions in Closed Periods</b>	Select to prevent users from making changes to approved operational transactions in closed periods. This configuration provides a better audit trail when you reconcile ledger balances to operational transactions.
<b>Reverse Debit/Credit</b> <b>Keep Debit/Credit and Reverse Sign</b>	You can change your selection at any time. Your changes take effect going forward; changes don't take effect retroactively.

## Result

For a given company you can:

- Create ledger years and periods.
- Route journals that exceed account thresholds to approvers.
- Post journal entries to specific accounts according to posting rules.
- View beginning balances in default translation currencies.
- Translate financial reports from base currency to a reporting currency.
- Process average daily balances.
- Generate reports in both the corporate and alternate account sets.

## Related Information Concepts

[Concept: Company Currency](#) on page 28

[Concept: Multicurrency](#) on page 26

## Tasks

[Steps: Set Up Financial Accounting Structure](#) on page 55

## Reference

[Reference: Tax Options](#) on page 656

# Create Ledgers

## Prerequisites

- Set up alternate ledger currency to create 2 actuals ledgers. See [Steps: Set Up Alternate Ledger Currency](#).
- [Create Ledger Account Types](#). Name the actuals ledger type and optionally the commitment and obligation ledger types using the **Maintain Ledger Types** task.
- Security: *Set Up: Ledger and Book* domain in the Common Financial Management functional area. See [Steps: Set Up Security Permissions](#).

## Context

You can create actuals, commitment, and obligation ledgers for each of your companies. For commitment and obligation ledger types, you can enable the creation of commitments and obligations for payroll transactions (payroll and fringe benefits) and procurement transactions.

For state and local governments:

- The commitment ledger type is commonly known as pre-encumbrance.
- The obligations ledger type is commonly known as encumbrance.

You can name the commitment and obligations ledger types based on your needs.

You can:

- Have 2 actuals ledger types per company. You can only create a second actuals ledger if you configure alternate ledger currency for your company.
- Create and use payroll commitment and obligation ledgers only if your company has selected USD or CAD as its default currency.

## Steps

1. Access the **Create Ledger** task.
2. Select the **Company** for which you want to create ledgers.
3. Select which **Actuals Ledger Type** to use for the company ledgers.

Workday appends the ledger type name and currency code to the actuals, commitment, and obligation ledgers of the company. You can't change the actuals ledger type once there are journal entries for the company.

4. To provide budget date visibility on all applicable journal lines, select the **View Budget Date** check box. When you select **View Budget Date**, Workday uses your **Budget Options** configuration on the **Edit Tenant Setup - Financials** task to determine the default budget date for the transaction.

When you have a commitment or obligation ledger, Workday requires the budget date and automatically selects this check box. When you have an actuals ledger only and control budget for actuals transactions only, you can select or clear it.

**5.** To enable commitments or obligations for spend and payroll transactions, select the check boxes.

For payroll transactions, you can create commitments and obligations for **Payroll** and **Fringe Benefits** when the company currency is in USD and CAD.

For spend transactions, select:

- Obligations for Procurement to create obligations for purchase orders and certain supplier contract types.
- Both commitments and obligations for Procurement to create commitments for requisitions and obligations for purchase orders and certain supplier contract types.
- Expenses to create commitments for spend authorizations.

**6.** Select the **Roll Journals Forward for Procurement** check box to have Workday:

- Automatically roll forward the accounting date to the first date of the next open period upon budget approval.
- Post the commitment or obligation journals that you rolled forward to the new period.

## Result

You can use the company ledger to store accounting results from your original journal entries.

## Next Steps

Create and open a ledger year and ledger periods for your company ledgers.

### Related Information

#### Tasks

[Change the Status of Ledger Periods](#) on page 299

[Steps: Create and Open Ledger Years and Periods](#) on page 70

[Steps: Set Up Financial Accounting Structure](#) on page 55

[Steps: Maintain Access to Ledger Accounts](#) on page 88

## Convert Active Ledger Types

### Prerequisites

- Close all ledger periods for the ledger type that you want to convert.
- Resolve all operational journals in *Error* status in the **Fix Operational Journals with Errors** task.
- Security: *Process: Historic Ledger Types* the Common Financial Management functional area.

See [Steps: Set Up Security Permissions](#).

### Context

If you're an existing Workday customer who is implementing Workday Financials, you can convert existing active ledger types to historic types. Converting existing active ledger types to historic types enables you to retain existing ledger types for reporting and use active ledger types to enter new transactions.

**Note:** Workday doesn't convert any journal sequencing configurations from historical ledgers to active ledgers.

You can create and report on journals in active ledger types, but you can only report on historic ledger types.

### Steps

**1.** Access the **Convert Ledger Types** task.

2. Select the **Ledger Type Group** that you want to convert.  
Only active ledgers are available for selection.
3. Enter names for the historical actual, commitment, and obligation ledger types.  
Workday automatically adds the Historic prefix to the names.
4. Name the new actuals ledger type and optionally the commitment and obligation ledger types.
5. Click **OK**.
6. Review the names of the historical and new ledger types and select **Confirm**.

### Result

Workday converts the active ledger types to historic ledger types and creates new active ledger types.

### Next Steps

- Create new ledgers using the new ledger types for your existing company.
- Load beginning balances into the new ledgers.
- If you used journal sequencing on the historical ledgers, reconfigure your journal sequencing rules for the new active ledgers.

## Steps: Create and Open Ledger Years and Periods

### Prerequisites

- Establish the fiscal year on which to base the ledger year and its periods.
- [Steps: Set Up Fiscal Schedules and Years](#) on page 60. Create a fiscal schedule using the **Create Fiscal Schedule** task.
- [Assign Company Accounting Details](#) on page 64. Associate the fiscal schedule with the company using the **Edit Company Accounting Details** task.
- [Create Ledgers](#).

### Context

Establish ledger years and ledger periods for each of your companies so that you can record journal entries to their ledgers to track financial performance.

### Steps

1. Access the **Create Ledger Year and Ledger Periods** task.

You can select any fiscal year available for the selected company ledger that doesn't already have a ledger year and periods.

When you select a fiscal year for a company with alternate ledger currency(ALC) configured, Workday automatically generates the ALC ledger year and period.

*Security: Set Up: Ledger and Book* domain in the Common Financial Management Functional area.

2. Access the **Update Ledger Period Status** task.

Change the Status of the ledger period to **Open** for periods within the ledger year.

If you have enabled journal sequencing for the company, then you must create sequence ID generators before you can open the ledger period.

*Security: Process: Period End* domain in the Common Financial Management Functional area.

### Result

## Next Steps

Record journal entries to your company ledgers in the open ledger periods.

### Related Information

#### Tasks

[Change the Status of Ledger Periods](#) on page 299

[Create Ledgers](#) on page 68

[Steps: Set Up Financial Accounting Structure](#) on page 55

## Alternate Ledger Currency

---

### Setup Considerations: Alternate Ledger Currencies

You can use this topic to help make decisions when planning your configuration and use of alternate ledger currencies. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Alternate ledger currency (ALC) enables you to comply with ASC 830 and IAS 21 accounting standards, where you must generate financial statements for your company in both the local currency under local reporting requirements, and functional currency. Each company can now support 2 actuals ledgers with unique currencies, where the:

- Primary ledger can serve as the functional currency.
- Alternate ledger can serve as the local currency.

Workday can post operational journals to both ledgers, and accounting journals to 1 or both ledgers.

#### Business Benefits

You can:

- Distinguish between functional and local currencies.
- Generate reports in real time for both functional and local currencies simultaneously.
- Maintain historical exchange rates on prepaid, fixed assets, and deferred revenue during recognition and subsequent adjustments.

#### Use Cases

- Record all operational journals and accounting journals in both primary and ALC actuals ledgers.

Example: A Japan marketing company that doesn't generate any revenue and receives monthly funding from the USA parent in USD. Record the primary ledger journal in functional USD currency and the ALC journal in local JPY currency.

- Companies in high inflationary countries can report in a functional currency that's different from the high inflation currency.

Example: An Argentinian entity uses ARS as the functional currency. Due to the high inflation economic environment, they reassessed the functional currency to the functional currency of the parent company,

USD. To comply with reporting requirements, the Argentinian entity now reports financials in ARS and USD.

### Questions to Consider

Questions	Considerations
When should you configure ALC?	<p>You can configure ALC during the current or at the start of the fiscal year or period. The <b>Alternate ledger Currency Fiscal Start Year</b> you select during ALC configuration is what constitutes as the ALC start date. At configuration, Workday:</p> <ul style="list-style-type: none"> <li>Generates the first ALC ledger year and ledger periods.</li> <li>Assigns the status of primary ledger periods to alternate ledger periods, ensuring the primary and alternate ledger period statuses are always in sync.</li> </ul> <p>For configurations starting the new fiscal year:</p> <ul style="list-style-type: none"> <li>When closing the prior fiscal year, Workday continues to reflect newly posted accounting in the primary ledger only for the prior fiscal year</li> <li>Workday posts ALC journals in the first fiscal year once you start posting transactions and accounting journals.</li> </ul> <p>For configurations starting mid fiscal year:</p> <ul style="list-style-type: none"> <li>When you're closing a period, Workday generates newly posted accounting in both the primary and ALC ledger.</li> </ul> <p>Example: You simultaneously configure ALC on April 1, 2024 and close March 2024. The operational journals and accounting journals posted after configuring ALC reflect in both the primary and alternate ledgers in March.</p> <ul style="list-style-type: none"> <li>Workday posts ALC journals once you start posting transactions and accounting journals in all open periods.</li> </ul>
Do you use recurring journal templates?	Once you configure ALC, Workday immediately converts all existing recurring journal templates for a company to all ledger templates. This conversion takes place even if the ALC fiscal start year is in the future. When you configure ALC to start in a future period, the template only generates journals for the primary ledger until the ALC fiscal start year.
Do you have documents that amortize over a period of time or transactions that have down-stream impacts in future periods?	Consider the historical conversion rates between the transaction currency and ALC. These exchange rates help Workday to generate accurate accounting for your future ALC periods.

### Recommendations

Workday recommends setting up the:

- Primary ledger currency as the functional currency.
- Alternate ledger currency as the local currency.

## Requirements

Obtain and import:

- ALC beginning balances based on the time of implementation for the fiscal year.
- ALC general ledger activity based on the time of implementation for the fiscal year.
- Currency conversion rates for ALC and respective transactions currencies.

Before configuring ALC, you must uptake:

- Persisting noncontrolling interest to ensure accurate primary ledger accounting.
- Multibook asset accounting.
- The redesigned retained earnings reporting feature.

To configure ALC company accounting details:

- Post all transactions and manual journals in *Draft*, *Created*, *In Progress*, and *Reserved* status.
- Finalize or cancel all allocation results in *Open* or *Pro Forma* status.
- Disable reversing allocations in the month before you configure ALC, ensuring Workday doesn't create reversals only for the primary ledger.
- Correct any journals in error.
- Withhold from entering future dated manual journals.

When you use custom validations, review the accounting journals validations to determine whether to exclude alternate ledgers. By default, Workday applies the existing validation to both primary and alternate ledgers.

## Limitations

Workday doesn't support ALC accounting for:

- Accounting adjustments for purchasing cards.
- Adaptive Planning.
- Alternate contracts for revenue recognition.
- Budgets.
- Cash balance check and cash balancing rules.
- The cash to bank reconciliation report.
- Carve in/carve out adjustment journals.
- Commitment and obligation accounting.
- Customer contract asset and liability reclassification journals.
- Customer contract foreign currency adjustment journals.
- Endowments.
- Equity pickup.
- Grants.
- Inventory transactions.
- Multiple funding sources.
- Noncontrolling interest.
- Payroll transactions.
- Purchasing card transactions.
- Student financials.
- Translation adjustments.
- Transaction matching and account certifications.

You can't:

- Configure ALC for companies that use inventory or cash balance check functionality. Additionally, you can't use the functionality in companies with ALC configured.
- Use the *Submit Accounting Journal* web service or the recurring journal template web services to create ALC journals. Workday only generates primary ledger journals only.

### Tenant Setup

In the **Intercompany Accounting Journals Option** section on the **Edit Tenant Setup - Financials** task, you can select **Ignore Alternate Ledger Currency Indirect Intercompany Journals in Settlement** to help bring in activity balance for intercompany amounts into an ALC ledger during implementation. Workday doesn't include journals recorded with this option enabled in intercompany events, such as intercompany settlement or receipt.

**Note:** This option is only for during ALC configuration. Don't use this option for intercompany journals recorded after you configure ALC.

### Security

Domains	Considerations
<i>Process: Journals – Core</i>	Enables you to access and edit core accounting journals.
<i>Reports: Alternate Ledger Currency</i>	Enables you to report on primary and alternate journals when you configure ledger currency mapping.
<i>Set Up: Alternate Ledger Currency</i>	Enables you to access and edit ledger currency mapping.

### Business Processes

Workday only displays the primary ledger journal when you access the Review, Revise, and Approve business process steps of an All Ledger journal in these business process events:

- Accounting Journal Event*
- Accounting Journal Unpost-Reversal Event*

When you:

- Make changes to the primary ledger journal, Workday applies the changes to the ALC journal to ensure the journals are always in sync.
- Access the ALC journal from the primary ledger journal review or action business process step, Workday takes you outside of the business process to view the journal.

### Reporting

Reports	Considerations
Company Accounting Details	Displays company accounting details so you can identify ALC details.
Ledger	Displays all the ledgers for a company.
Ledger Year	Displays each ledger period and its status for the ledger year.
Find Journals	Displays accounting journals of all status so you can identify journals that require action.

You can create custom reports using report data sources to view single ledger primary, single ledger ALC, and all ledger journal details:

- **Journal**
- **Journal Line**
- **Journal Lines for Financial Reporting**

For any custom or standard report using these report data sources, you can include the **Ledger Currency Mapping** report field to report on primary and alternate ledger currency journals.

## Integrations

Use the latest web service version for optimum performance and stability.

Web Services	Consideration
<i>Import Accounting Journal</i>	Use to import accounting journals. Enables you to: <ul style="list-style-type: none"> <li>• Bring in establish ALC activity balances.</li> <li>• Upload primary and ALC accounting journals.</li> </ul>
<i>Import Beginning Balances</i> <i>Put Beginning Balances</i>	Use to import beginning balances to bring in ALC beginning balance data.
<i>Get Company Accounting Details</i> <i>Put Company Accounting Details</i>	Create and view ALC configurations for a company.
<i>Get Ledgers</i> <i>Put Ledger</i>	Create or update the company primary and alternate actuals ledgers.
<i>Get Ledger Year and Ledger Periods</i> <i>Put Ledger Year and Ledger Periods</i>	Create or update primary and ALC ledger years or ledger periods for companies.

You can also use the Accounting Journal Connector to import accounting journals.

## Connections and Touchpoints

Features	Considerations
Multiple Book Asset Accounting	You can associate asset books with a ledger currency when you add an asset book to a company with ALC enabled. This functionality enables you to: <ul style="list-style-type: none"> <li>• Add asset books to a company in your local and in your functional currencies.</li> <li>• Select different depreciation methods for the same asset in each currency.</li> <li>• Register and track your assets independently in each ledger currency.</li> </ul>
Lease Accounting	You can map your lease book codes to the specific ALC assets book code for these lease types: <ul style="list-style-type: none"> <li>• Finance Lease</li> <li>• Operating Lease (ROU Asset Depreciation Expense)</li> </ul>

Features	Considerations
Consolidations	You can use consolidations for the primary and alternate ledgers.
Retained Earnings	You can use retained earnings related reports for both primary and ALC ledgers.
Alternate Account Set and Alternate Fiscal Schedule	You can use ALC ledgers for companies that use alternate account sets and alternate fiscal schedules. When you configure an alternate fiscal schedule and alternate account set, it applies to both primary and ALC ledgers.
Journal Sequencing	You can configure sequence generator rules and sequencing start periods by individual ledgers. Workday sequences ledgers independently and the ledgers don't share strings. You can enable journal sequencing for primary ledger only, alternate ledger only, or both.
Accounting Center	<p>With accounting center batch processing, you can:</p> <ul style="list-style-type: none"> <li>Generate ALC detailed journal lines.</li> <li>Post the summarized journal lines in the primary and ALC ledger.</li> </ul> <p>You can also update map prompts for the drill-to link to pass <i>ledger_currency</i> in all reports that:</p> <ul style="list-style-type: none"> <li>Are configured with a Drill-to option to a Prism table, and</li> <li>Contain Accounting Center processed journal lines.</li> </ul>
Period End Close	When you update the primary period status, Workday updates both the primary and ALC period statuses to ensure they're in sync.
Year End Close	<p>Workday rolls forward both the primary and ALC balances when you roll forward year-end balances.</p> <p>Workday recommends that you run the rollforward year-end balances for the primary schedule before the alternate fiscal schedule.</p> <p>You can roll forward the balances for primary and alternate ledgers independently, or both.</p>
Customer Invoice	You can configure ALC currency rate overrides on customer invoice documents.
Supplier Invoice	You can configure ALC currency rate overrides on supplier invoice documents.
Revenue Recognition	<p>You can include:</p> <ul style="list-style-type: none"> <li>Recognition adjustments in ALC when you create base currency adjustment installments.</li> <li>Primary or alternate ledger currencies and conversion rates as currency rate options on revenue recognition schedule headers.</li> </ul>

Features	Considerations
	<ul style="list-style-type: none"> <li>Primary or alternate ledger currencies, conversion rates, and override amounts on revenue recognition installment lines.</li> </ul>
Revaluations	<p>When you run revaluations with ALC configured, Workday returns 2 different and independent results for the revaluation process, 1 for each ledger and their respective currencies.</p>
Allocations	<p>When you run allocations with ALC configured, Workday:</p> <ul style="list-style-type: none"> <li>Creates either a single or multisource allocation. Your allocation definitions determine which type Workday creates.</li> <li>Finalizes and cancels allocations using the allocation result in the primary currency.</li> <li>Updates the status of both allocations when an error occurs on the primary or alternate allocation result, or any associated journal.</li> </ul>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Examples

[Next Level: Alternate Ledger Currency](#)

## Steps: Set Up Alternate Ledger Currency

### Prerequisites

- Review the setup considerations for alternate ledger currency. See [Setup Considerations: Alternate Ledger Currencies](#).

- Configure asset accounting and enable multibook asset accounting. See [Steps: Set Up Asset Accounting](#) on page 1488.
- Set up persisting noncontrolling interest to ensure accurate primary ledger accounting. See [Steps: Set Up for Persisting Noncontrolling Interest](#).
- Opt into the redesigned retained earnings reporting feature. See [Upcoming Changes for Redesigned Retained Earnings Reporting](#).
- Prepare your allocations configuration and existing allocations for alternate ledger currency. See [Concept: Alternate Ledger Currency in Allocations](#) on page 182.
- Find and post all transactions and manual journals in *Draft*, *Created*, *In Progress*, or *Reserved* status.
- Calculate your beginning balances.
- Correct any journals in error.

## Context

You can configure an actuals ledger in an alternate ledger currency (ALC) for your company. ALC enables you to have 2 ledgers that you can use to generate financial statements in your local and functional currency. You can post operational and accounting journals to the appropriate ledgers in the respective ledger currency.

## Steps

### 1. Assign Company Accounting Details.

Configure the **Alternate Ledger Currency Setup** section.

### 2. Upload the currency conversion rates for ALC and respective transaction currencies to use for the first ALC period.

For recorded transactions that have downstream impacts in future periods, upload the currency conversion rates between transaction currency and ALC in the prior periods. Workday requires these exchange rates to generate accounting in ALC accurately.

Example: A supplier invoice posts in March 8, 2024. You configure ALC to start April 1, 2024. You pay the supplier invoice on April 15, 2024. To calculate realized FX gain/loss on the payment, Workday requires the rate on March 8th, 2024 between transaction currency and ALC.

See [Steps: Upload Currency Conversion Rates](#).

### 3. Set up multibook asset accounting to register and track your assets independently in each ledger currency.

See [Steps: Set Up Asset Accounting for Multiple Books](#).

### 4. Set up ledger currency mapping to report on primary and alternate ledger journals.

See [Steps: Set Up Ledger Currency Mappings](#) on page 79.

### 5. (Optional) Edit existing accounting journal custom validations to evaluate for only a specific ledger.

Include either the **Primary Ledger Journal** or **Alternate Ledger Journal** report field as the **Source External Field or Condition Rule** in the validation rule. When you don't include either report field in the validation rule, Workday applies the validation to both primary and alternate ledgers.

See [Steps: Set Up Custom Validations](#).

### 6. (Optional) Enable Journal Sequencing for a Company.

Configure journal sequencing for the alternate ledger to sequence your ledgers independently.

### 7. (Optional) Create reversals in ALC for automatic accounting journal reversals that are posted or in *Created* status and not posted to a primary ledger.

See [Steps: Create Accounting Journal Reversals in Alternate Ledger Currency](#).

## Result

Workday creates an additional ledger denominated in the configured ledger currency beginning the respective fiscal year. The ALC journals post in the first open period.

## Next Steps

Create and post:

- Operational journals to both primary and alternate ledgers.
- Accounting journals to a single primary ledger or alternate ledger, or both ledgers. See [Steps: Process Accounting Journals](#).

## Related Information

### Concepts

[Concept: Alternate Ledger Currency in Assets](#) on page 1514

[Concept: Open Transactions Processing with Alternate Ledger Currency](#) on page 80

[Concept: Alternate Ledger Currency in Consolidated Financial Reporting](#) on page 287

[Concept: Alternate Ledger Currency in Allocations](#) on page 182

### Examples

[Next Level: Alternate Ledger Currency](#)

## Steps: Set Up Ledger Currency Mappings

### Prerequisites

- Configure alternate ledger currencies for your companies. See [Steps: Set Up Alternate Ledger Currency](#) on page 77.
- Security: configure these domains in the Financial Accounting functional area:
  - [Set Up: Alternate Ledger Currency](#)
  - [Reports: Alternate Ledger Currency](#)

### Context

When you enable alternate ledger currencies for your companies, you can use ledger currency mappings to define the ledger currencies to use for specific reporting requirements. You can then add a prompt to custom reports and select the mapping, enabling you to view a report in the required primary or alternate currency. Example: You need to generate financial reports in a local currency that differs from your functional currency.

### Steps

1. Access the **Create Ledger Currency Mapping** task and configure a mapping for a company to either a primary or alternate ledger.

You can include more than 1 row in a mapping, but only include a company once per mapping.

**Note:** For consolidated financial reporting, Workday recommends you configure all companies in a single mapping with multiple rows, rather than separate mappings for each company. See [Concept: Alternate Ledger Currency in Consolidated Financial Reporting](#) on page 287.

2. Enable the **Ledger Currency Mapping** prompt on custom reports or copies of Workday delivered reports. See [Copy Reports](#).

Configure the report to include a data source filter that supports ledger currency mappings. Navigate to the **Prompts** tab, add a row for *Ledger Currency Mapping* to the **Prompts Default** grid, and clear the **Do Not Prompt at Runtime** check box.

#### Note:

When you enable the prompt on all subreports of a report, the *Ledger Currency Mapping* field displays in the **Subreport Prompts (Not Prompted)** grid as:

- Multiple rows for a composite report, 1 for each subreport.
- A single row for a matrix report.

## Next Steps

When you run a report, select a mapping in the **Ledger Currency Mapping** prompt. When you don't select a mapping, Workday displays the report in the primary currency for your company.

Workday recommends you copy the **Trial Balance - Composite** report and configure a **Ledger Currency Mapping** report field to view general ledger details. The **Trial Balance** report doesn't support ledger currency mappings.

## Related Information

### Examples

[2024R1 What's New Post: Alternate Ledger Currency in Financial Reporting and Consolidated Reporting](#)  
[Example: Enable Alternate Ledger Currency on the Consolidated Trial Balance Report on page 288](#)

## Steps: Create Accounting Journal Reversals in Alternate Ledger Currency

### Prerequisites

- Set up alternate ledger currency (ALC) for your company.
- Security: The *Process: Journals - Core* domain in the Financial Accounting functional area.

### Context

When you use automatic reversals for accounting journals and configure ALC, Workday requires reversals in the respective alternate ledger for automatic reversals:

- In *Created* status and not posted to a primary ledger.
- Posted to a primary ledger.

You can create accounting journal reversals and enable Workday to correctly generate automatic reversals in both primary and alternate ledgers.

### Steps

#### 1. Access the **Mass Post Reversal Journals** task.

For automatic reversals in *Created* status and not posted to a primary ledger, generate reversals in the primary ledger.

#### 2. Access the **Mass Generate Alternate Ledger Reversal Journals** task.

Generate the respective reversals in the alternate ledger.

**Note:** Only use this task during ALC setup.

#### 3. Access the **Mass Post Reversal Journals** task.

Post the automatic reversals in all ledger currencies for journals created and posted after you configured ALC.

## Concept: Open Transactions Processing with Alternate Ledger Currency

Based on when you configure alternate ledger currency (ALC), you can have open transactions. Open transactions are:

- Manual journals and operational transactions with accounting posted prior to configuring ALC and processed later in ALC periods.
- Operational transactions that are in progress prior to configuring ALC and post in ALC periods.

Here are examples of how Workday processes open transactions with ALC:

A supplier invoice posts on March 8, 2024 and Workday generates accounting in the primary ledger. You enable ALC on April 1, 2024. The supplier invoice is paid on April 16, 2024. Workday then generates the primary and ALC operational journals for the supplier invoice payment.

A customer invoice posts on March 11, 2024 and Workday generates the accounting in the primary ledger. You enable ALC on April 1, 2024. You cancel the customer invoice on April 16, 2024. Workday then generates the primary and ALC operational reversal journal for the customer invoice.

A supplier invoice for prepaid insurance posts on January 1, 2024. You enable ALC on April 1, 2024. Workday calculates the amortization amount in the ALC ledger posted on April 30, 2024 by using the provided exchange rate on January 1, 2024 between the transaction currency and ALC.

You have an allocation journal in *Pro Forma* status when you enable ALC on March 1, 2024. After you enable ALC, you finalize the *Pro Forma* allocation. Workday doesn't generate the corresponding journal in the alternate ledger unless you rerun the allocation. We recommend that you finalize or cancel all allocation results in *Open* or *Pro Forma* status before you enable ALC.

You finalize an allocation that creates reversals on February 12, 2024. This generates accounting for March. When you enable ALC on March 1, 2024, Workday doesn't generate alternate allocation results for the reversal journals. We recommend that you disable reversing allocations in the month before you configure ALC, to avoid having reversals in the primary ledger only.

##### **Concepts**

[Concept: Accounting and Operational Journals](#) on page 128

[Concept: Journal Processing](#) on page 129

---

## **Ledger Accounts**

### **Steps: Create and Organize Ledger Accounts**

#### **Context**

Build your ledger accounts and their hierarchical relationship to establish your chart of accounts as well as an aggregate of accounts. You can then use your ledger accounts and chart of accounts for financial reporting.

#### **Steps**

1. [Create Ledger Account Types](#) on page 82.
2. [Set Up Account Sets](#) on page 82.
3. [Set Up Account Posting Rules](#) on page 84.
4. (Optional) Set up approval amounts for each account.  
See [Create Account Control Rules](#) on page 87.
5. Establish hierarchical relationships between ledger accounts.  
See [Steps: Manage Ledger Account Summaries](#) on page 90.
6. (Optional) Restrict ledger accounts to members of security groups.  
See [Steps: Maintain Access to Ledger Accounts](#) on page 88.

#### **Next Steps**

View ledger accounts with standard reports. For a list, access **Workday Standard Reports** and select the *Set Up Financial Ledgers and Accounts* category.

#### **Related Information**

##### **Concepts**

[Concept: Ledger Accounts](#) on page 95

##### **Tasks**

[Steps: Set Up Financial Accounting Structure](#) on page 55

## Create Ledger Account Types

### Prerequisites

Security: Set Up: Accounts domain in the Common Financial Management functional area. See [..../..../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

You can configure the types of ledger accounts to use on balance sheets and income statements. Account types enable you to group similar accounts within your account sets. After you create a balance sheet or income statement for a company, you can select accounts from the types you create. Example: For balance sheets, you can define assets and liabilities and for income statements, you can define income and expenses.

### Steps

1. Access the **Maintain Ledger Account Types** task.
2. As you complete the task, consider:

Option	Description
<b>Account Type Name</b>	At a minimum, define assets, liabilities, and equity for balance sheets, and income versus expense for income statements. Or you can define these basic components to be as granular as you want, such as short term versus long term.
<b>Normal Debit Balance</b>	Select when accounts are normally debits and you want to display them in the debit column. Clear to display in the credit column.
<b>Expense Source</b>	Select to: <ul style="list-style-type: none"> <li>• Calculate facilities and administration and revenue recognition for manual journal lines.</li> <li>• Identify an expense account for spend.</li> </ul>

## Set Up Account Sets

### Prerequisites

- Create ledger account types.
- Security: Set Up: Accounts domain in the Common Financial Management functional area. See [..../..../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

An account set is a group of ledger account numbers that you can use to track financial activities. To establish the chart of accounts for a company, set up your account sets and ledger accounts.

### Steps

1. Access the **Create Account Set** task.

**2.** As you complete the task, consider:

<b>Option</b>	<b>Description</b>
<b>Chart of Accounts</b>	<p>You can enable a parent or child account set as your chart of accounts. You can then associate the account set with a specific company using the <b>Edit Company Accounting Details</b> task.</p> <p>After you enter transactions for an account, you can't clear this check box.</p>
<b>Include Account Set</b>	<p>If you want to include one or more account sets as a subset of the parent account set, select or create child account sets.</p> <p>Create as many layers of account sets as needed. Workday displays a complete list of accounts from the parent and child account sets in reports.</p> <p>Workday recommends assigning ledger accounts to child account sets and then assigning the child account set to a parent. We don't recommend assigning ledger accounts directly to parent account sets.</p> <p>Example: You have 2 companies where some accounts are specific to each company and other accounts that you share across the companies. You can create 3 account sets: one for each company and one for the shared accounts. In the accounts for each company, you can link to the shared account set.</p>
<b>Identifier</b>	<p>Identifies account number. Example: 1000. You can revise anytime.</p>
<b>Ledger Account Type</b>	<p>You can change the account type for accounts without transactions.</p> <p>For accounts with activity, you can only change to a type within the same account type group.</p> <p>When you create balance sheets and income statements, you can select from accounts appropriate for the report.</p>
<b>Restricted To Companies (Optional)</b>	<p>Select the companies to which you want to restrict the ledger account. When you enter transactions, Workday validates that the ledger account is available for use with the selected company. Leave blank if you want the ledger account to be available for use with all companies.</p>
<b>Retired</b>	<p>Select when you want to deactivate the account, but have used it with transactions. The account still displays in reports. For historical purposes, you can't delete accounts that you've used.</p> <p>If you have specified guidelines in the account, then you can't retire or delete the account.</p>

Option	Description
	<p>Example: year-end rules, posting rules, or elimination rules for variance accounts.</p> <p>If you've used the account to report on accumulation, then you can retire the account, but you can't delete it. Example: financial statement definition, definition of an allocation source, elimination rules for used-by accounts.</p> <p>You can't retire an account when it's used on an active allocation pool that:</p> <ul style="list-style-type: none"> <li>• Has the version status <i>Active</i> or <i>Pending</i>.</li> <li>• Has an effective date of the current or a future date.</li> <li>• Is on an active allocation plan.</li> </ul>

## Next Steps

Manage ledger account summaries.

## Set Up Account Posting Rules

### Prerequisites

- Set up account sets.
- Security: *Set Up: Accounting Rules* domain in the Common Financial Management functional area. See [../../../../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

You can configure account posting rule sets that you can associate with a company and use to direct where operational transaction journals post in company ledger accounts. Each account posting rule set is for a specific operational transaction. Workday also uses account posting rule sets for manual accounting journals that have:

- Facilities and Administration manual journal entries.
- Intercompany manual journal entries.
- Worktag balancing enabled.

### Steps

1. Access the **Create Account Posting Rule Set** task.
2. Assign a **Name** and specify the **Account Set** you want to apply the posting rules to.
3. Select a posting rule and click **Edit Posting Rule** to add posting rules.
4. As you complete the header section, consider:

Option	Description
<b>Enable Control Account Warning</b>	<p>Select the check box to designate that the specified ledger accounts in this posting rule are control accounts.</p> <p>A control account is a ledger account that includes operational journals from operational transactions only. When you create an accounting</p>

Option	Description
	journal and select a control ledger account, Workday issues a warning. You can save the journal line to the control account.
<b>Default Ledger Account</b>	<p>Select a default ledger account for any or all account posting types.</p> <p>Workday uses default accounts for transactions that don't match any conditions on an account posting rule. When a transaction doesn't meet any conditions, Workday assigns the:</p> <ul style="list-style-type: none"> <li>• Transaction to the default ledger account.</li> <li>• Default resulting worktags to the journal line.</li> </ul> <p>When you edit the posting rule, you can change this default ledger account for any individual posting rule.</p> <p>If you don't select a default ledger account, Workday flags transactions that don't match any account posting rules. To flag transactions that don't match any account posting rules as errors, leave the default ledger account blank. This configuration makes it easier for you to find and fix invoice or rule errors for nonmatching transactions (using the <b>Fix Operational Journals with Errors</b> task).</p>
<b>Default Resulting Worktags</b>	<p>Select 1 or more default resulting worktags for the account posting rule.</p> <p>Workday applies the default resulting worktags when transactions post to the default ledger account.</p>

5. As you complete the **Posting Rule Conditions** grid, consider:

Option	Description
<b>Evaluation Order</b>	<p>Order conditions from most to least restrictive using Evaluation Order. If there are 100 or more conditions, you can prioritize each line by entering an alphanumeric string. If 2 or more conditions have the same string, Workday prioritizes those conditions at random.</p> <p>High-volume processes impact performance when processing account posting rules. To optimize performance, prioritize frequently used account posting rules when they don't include overlapping values.</p>
<b>Resulting Ledger Account</b>	<p>Select a ledger account to have Workday evaluate and post journals for transactions to specific ledger accounts based on whether the transaction meets select criteria.</p>

Option	Description
<b>Resulting Worktags</b>	<ul style="list-style-type: none"> <li>You can't select Resulting Worktags that are already in use as primary or optional balancing worktags.</li> <li>When you select <i>Resulting Worktags</i> values, Workday doesn't override current worktags on the operational journal line.</li> </ul> <p>Example: You configure these worktags:</p> <ul style="list-style-type: none"> <li>Worker Defaults - Cost Center 1, Fund1.</li> <li>Costing Override - Location 1.</li> <li>Resulting Worktags - Region 1, Location 2</li> </ul> <p>Workday applies only <i>Region 1</i> as the Resulting Worktag and not <i>Location 2</i>. Since you've defined <i>Location 1</i> as a costing override.</p>
<b>Condition</b>	<p>For each condition, select from a predefined list of dimensions that make sense for the transaction type. For certain dimensions, such as various groups and accounting categories, you can select from a list of values that you defined. If you select <i>Company</i> as a dimension in the account posting rules, Workday validates that the ledger account is valid for use with the company or company hierarchy.</p> <p>Workday evaluates conditions from the top down, posting the journal for the transaction to the resulting ledger account of the first Dimensions and Values that match the rule.</p> <p><b>Note:</b> Workday doesn't support condition rules on derived lines.</p> <p>Example: You post to Account A based on company and cost center. You post to Account B based on the same company, the same cost center, and a region. Place the latter, more restrictive condition first. Otherwise, Workday posts journals for matching transactions to Account A, which is the first match it finds.</p> <p><b>Note:</b> Workday includes all dimensions for the resulting ledger account and any value in each dimension before Workday matches the rule.</p>

- Click the **Test Posting Rule** button to test that transactions post to the correct accounts.
- To test 1 or more available dimensions of the posting rule, select values that a transaction should contain.

Based on the posting rule conditions, Workday displays the ledger account and worktag to which transactions would post with the entered values.

Example: In the *Revenue* posting rule, you create a rule condition that requires any transaction with revenue category of *Product* to post to the *Product Revenue* account.

## Result

Workday uses accounting post rule to determine:

- The default ledger account to post the journals.
- The default resulting worktag to post on the journal line for specific operational transactions.

Workday uses the accounting post rule conditions to determine which:

- Resulting ledger accounts to post for debits and credits.
- Resulting worktags apply to the journal line entry.

For optimized performance, when you exceed 100 resulting ledger accounts on a single account posting rule, Workday:

- Displays the **Add condition** button, enabling you to add a single condition at a time.
- Enables you to edit and delete posting condition rules individually.

## Example

You create a *Spend* account posting rule to record the value of the purchase of an item. You also create a *Payable* account posting rule to track the value of accounts payable.

When you submit a supplier invoice, Workday processes the account posting rules to debit the *Spend* rule and credit the *Payable* rule.

## Next Steps

(Optional) To update a rule set, access the **View Account Posting Rule Set** report. For a selected rule set, you can:

- Edit the account posting rule set name.
- Edit the default ledger account.
- Edit the posting rule.
- Test the edited posting rule.

### Tasks

[Steps: Set Up Financial Accounting Structure](#) on page 55

### Reference

[The Next Level: Direct Intercompany Invoicing](#)

[2021R1 What's New Post: Redesigned Retained Earnings Reporting](#)

## Create Account Control Rules

### Prerequisites

- Create ledger account sets.
- Configure the *Accounting Journal Event* business process and security policy in the Financial Accounting functional area. See [../..../manage-workday/business-processes/customize-business-processes/dan1370797385122.dita](#).
- Security: *Set Up: Accounting Rules* domain in the Common Financial Management functional area. See [../..../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

You can set up the account control rules that enable you to manage basic approval thresholds at the account level for your companies. When a line in an accounting journal exceeds an account threshold, you

can route the journal for approval. You can add account control rule set to add thresholds for each new account you add so that you don't have to modify your business process definitions.

## Steps

1. Access the **Create Account Control Rule Set** task.
2. As you complete the task, consider:

Option	Description
<b>Currency</b>	Select the currency that you want to associate with the approval threshold amounts for the accounts.
<b>General Threshold</b>	<p>Set the largest journal line amount that users can enter for all ledger accounts, without requiring approval.</p> <p>When the amount exceeds its threshold, Workday routes the journal for approval according to the <i>Accounting Journal Event</i> business process definition.</p>

3. In the **Ledger Account Approval Thresholds** grid, set thresholds for specific ledger accounts. Add a row for each **Ledger Account** from the selected account set for which you want to define a lower **Approval Threshold**, and enter that amount.

Workday prioritizes approval thresholds on ledger accounts over the general threshold.

4. (Optional) Access the **Edit Account Control Rule Set** task to edit the rule set.

When editing a rule set, you can change currency only if there are no companies using the rule set.

## Next Steps

Add a conditional rule to the *Accounting Journal Event* business process definition to route journals that exceed thresholds to one or more approvers.

Edit the company accounting details to associate your account control rule sets to one or more companies.

#### Tasks

[Steps: Set Up Financial Accounting Structure](#) on page 55

[Assign Company Accounting Details](#) on page 64

## Steps: Maintain Access to Ledger Accounts

### Prerequisites

- Understand segment-based security groups and segmented security.
- Determine how you want to control access to ledger account for groups of workers.
- Security: *Set Up: Ledger Account Security Segments* domain within the *Segmented Setup* folder in the System functional area. See [../../../../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

You can configure segment-based security to restrict availability of ledger accounts to members of designated security groups.

Workers see only the ledger accounts to which they have access when:

- Performing accounting journal transactions (except recurring journals).

- Running ledger account, trial balance, journal, financial metrics, and manager metrics reports.

Once you enable ledger account segmentation, a ledger account will only be visible if associated to a ledger account segment.

## Steps

### 1. Access the **Create Ledger Account Security Segment** task.

Select the ledger accounts to include in the segment. You can include:

- Individual Ledger Accounts.
- All accounts in a Ledger Account Summary.
- All accounts of a Ledger Type.

Create enough segments to cover each unique security access requirement. Included values can cross multiple segments or be mutually exclusive. Workday recommends that you build segments from least to most restrictive.

*Security: Set Up: Ledger Account Security Segments* domain within the *Segmented Setup* folder in the System functional area.

### 2. (Optional) Access the **Create Security Group** task.

Create the security groups to associate with the security segments if existing security groups don't meet your business requirements.

### 3. Access the **Create Security Group** task.

- Select *Segment-Based Security Group* for **Type of Tenanted Security Group** and enter a name for the security group.
- Under the **Group Criteria** section, select the desired security group.
- Under the **Access to Segments** section, add the ledger account security segment that you created in Step 1.

See also [Create Segment-Based Security Groups](#).

### 4. [Edit Domain Security Policies](#).

To enforce your ledger account segment security policy in transactions and reporting:

- Access the **Domain Security Policies for Functional Area** report.
- Select the *Common Financial Management Functional Area*.
- Select the *Access Ledger Account (Segmented)* security policy from the hierarchy.
- Remove the *All Users* default security group.
- Add the desired security groups.

You can include your ledger account segment-based security groups to restrict its members to the values included in their security segments.

### 5. [Activate Pending Security Policy Changes](#).

### 6. Test the security policy changes.

For each security segment, sign in as a user of the associated segment-based security group. Then verify that you can only access the ledger accounts for that segment.

## Result

Workers can:

- Create journals with only the ledger accounts that they have access to.
- Edit journals only if they have access to all the ledger accounts in the journal.

- View journals as long as they have access to one of the ledger accounts in the journal lines. If a journal has lines for ledger accounts they don't have access to, they can view the whole journal, but can't take any actions against it.
- Run journal line and ledger account reports for only the ledger accounts that they have access to.
- Run custom and standard financial reports that include journal lines only for the ledger accounts they have access to.

### Example

Restrict expense accountants to see the ledger accounts for expense reports that are payable to a worker but not a supplier.

#### Concepts

[Concept: Security Groups](#)

## Steps: Manage Ledger Account Summaries

### Prerequisites

Create ledger accounts and account sets.

Security: Set Up: Accounts domain in the Common Financial Management functional area. See [..../..../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

You can establish hierarchical relationships between ledger accounts. You can also group ledger accounts by a range of values. Create multiple snapshots of ledger account summaries by assigning ledger accounts, account ranges, and account summaries with separate effective dates on a single ledger account summary. Change the hierarchy levels for different effective dates and track historical changes by rerunning financial statements.

### Steps

1. Access the **Create Ledger Account Summary As Of** task.

2. As you complete the task, consider:

Option	Description
<b>Effective Date</b>	Workday automatically populates this field with the current date. You can select a retroactive or future date instead.
<b>Account Set</b>	You can only select account sets that are in a chart of accounts. You can't change the account set while editing a summary.
<b>Hierarchy Level</b>	Configure the summary location of the ledger account within the hierarchy. When you view ledger account summaries, you can navigate to the subordinate and superior nodes.

3. Select **Ledger Account Summary > Assign Ledger Accounts and Account Ranges** from the related actions menu of the ledger account summary.

Enter an effective date. You can enter a retroactive or future date instead of the default effective date.

Enter 1 or more identifier values for ledger accounts you want to include in the summary. Identifier values can't overlap. Example: Enter 1 or more values that don't overlap for ledger account identifiers

you want to include in this summary. Example: Row 1 has a From Value = 1000 and a To Value = 1100. Row 2 has a From Value = 1150 and a To Value = 1199.

You can select 1 or more ledger accounts in the **Ledger Accounts** field to include additional ledger accounts in the ledger account summary.

4. Select **Ledger Account Summary > Assign Included Ledger Account Summaries** from the related actions menu of the ledger account summary.

Enter an effective date. You can enter a retroactive or future date instead of the default effective date.

Add and arrange the ledger account summaries in the order you want Workday to access them.

5. Select **Hierarchy Structure > Create** from the related actions menu of the top-level node of the ledger account summary.

Configure the hierarchy structure, levels, and enforcement for the ledger account summary.

## Result

You can use the ledger account summary to report on data such as:

- Hierarchy level.
- Hierarchy name.
- Included ledger accounts.

## Next Steps

Create segmented security for all ledger accounts included in the ledger account summary or all ledger accounts of an account type by accessing the **Create Ledger Account Security Segment** task.

(Optional) Edit the ledger account summary name and hierarchy level as of an effective date by selecting **Ledger Account Summary > Edit** from the related actions menu of the summary.

#### Tasks

[Set Up Account Posting Rules](#) on page 84

[Create Ledgers](#) on page 68

## Steps: Set Up Alternate Accounts

### Prerequisites

- Set up account posting rules for the corporate account set. See [Set Up Account Posting Rules](#) on page 84.
- Define alternate account sets.

### Context

Configure alternate account sets and alternate account set mapping rules to map the statutory or regulatory account set to the corporate account set. You can then:

- Enter ledger accounts in either the corporate or the alternate account set for the same company.
- Create financial reports and record transactions in your preferred account set.
- Drill down to see detailed information for a selected account set.

### Steps

1. [Create Alternate Account Set Mappings](#) on page 92.
2. [Configure Alternate Account Set Mapping Rules](#) on page 93.
3. [Assign Company Accounting Details](#) on page 64.

Specify an alternate account set and default account set for the company.

## Example

Global Modern Services USA is a global company based in the USA that has a branch office in France. It has 2 companies:

- Global Modern Services USA.
- Global Modern Services FRANCE.

When posting journals to ledger accounts, the accountants use these account sets:

- USA - Corporate account set.
- FRANCE - French Statutory account set.

For the accountant in the USA, Workday uses the Corporate mapping rules for alternate account to derive the French Statutory ledger accounts. For the accountant in France, Workday uses the French mapping rules for alternate account to derive the Corporate ledger accounts.

## Next Steps

Create individual or combined reports using the alternate and corporate account sets to review financial transactions.

### Related Information

[FAQ: Alternate Account Set Mappings](#) on page 100

## Create Alternate Account Set Mappings

### Prerequisites

- Set up account posting rules for the corporate account set.
- Define alternate account sets.
- Security: *Set Up: Accounts* domain in the Common Financial Management functional area. See [../..../authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

You can create alternate account set mapping to:

- Name your forward and reversal alternate account set mapping.
- Select the preferred input and output account sets.
- Use the preferred input and output accounts to configuring mapping rule conditions for your alternate account set mapping rules.

### Steps

1. Access the **Create Alternate Account Set Mapping** task.
2. As you complete the task, consider:

Option	Description
<b>Name</b>	Name your forward and reversal alternate account set mapping.
<b>Reversal Mapping Name</b>	When you create mapping rules, Workday derives the reversal mapping from the alternate account set mapping rule conditions and switches the

Option	Description
	<b>Input Account Set and Output Account Set</b> selections.
<b>Input Account Set</b> <b>Output Account Set</b>	Select the preferred input and output account sets.  When you configure mapping rules, select input accounts and output accounts. Workday uses these account sets to derive the alternate account set data.  For the reversal account set mapping, Workday switches the input and output account sets. You can only use an input and output account set mapping combination once.  Example: You have Account Set 1 (AS1), Account Set 2 (AS2) and Account Set 3 (AS3). You map AS1 to AS3. <ul style="list-style-type: none"> <li>• You can't create another account set map combination for AS1 to AS3 nor AS3 to AS1.</li> <li>• You can create an account set mapping combination for AS1 to AS2.</li> </ul>

## Next Steps

Configure rule conditions or condition values in your alternate account set mapping rules.

#### Reference

[FAQ: Alternate Account Set Mappings](#) on page 100

## Configure Alternate Account Set Mapping Rules

### Prerequisites

- Create alternate account set mappings.
- Security: *Set Up: Accounts* domain in the Common Financial Management functional area. See [..../..../authentication-and-security/configurable-security/configurable-security-basics/kqj1577400592841.dita](#).

### Context

Add mapping rule conditions to your forward and reverse alternate account sets mapping rules for a ledger account type or a ledger account.

### Steps

1. Access the **View Alternate Account Set Mapping** report.
2. Select an **Alternate Account Set Mapping** and a ledger account or ledger account type.
3. As you add rule conditions, consider:

Option	Description
<b>Edit Default Ledger Account</b>	In the <b>Include Specific Ledger Accounts</b> or <b>Include All from Ledger Account Types</b> fields, select 1 or more ledger accounts or ledger account types. Workday displays a list of the

Option	Description
	<p>ledger accounts for the selected alternate account set mapping.</p> <p>For each row, select a related <b>Default Ledger Account</b>, as needed.</p> <p><b>Note:</b> You can only use a ledger account as a default once per mapping rule</p> <p>Workday post journals to the default ledger account when transactions don't match any of the alternate account set mapping rule conditions.</p>
<b>Edit Mapping Name</b>	Change an existing mapping name.
<b>View Specific Mapping Rules</b>	Filter mapping rules to display a smaller range for selected ledger accounts and ledger account types for either forward or reverse alternate account set mapping.
<b>Sort Specific Mapping Rules</b>	<p>Manually order a selected subset of mapping rule conditions.</p> <p>Order conditions from most to least restrictive. Workday evaluates alternate account set condition rules from the top down.</p>
<b>Add New Mapping Rules</b>	<p>Add mapping rule conditions to your mapping rules. You can only use a ledger account once per mapping rule. When defining mapping rule conditions:</p> <p>Enter 1 or more condition values or resulting values.</p> <p>You can select either a condition value or a resulting value for mapping rules, but not both.</p> <p><b>Note:</b> Use unique mapping <b>Condition Values</b> for each line of a forward or reversal mapping rule.</p> <p>Workday derives the reverse mapping rules based on the rules you define.</p>
<b>Edit Mapping Rule</b>	<p>Modify mapping rule conditions.</p> <p>When you retire ledger accounts, update any relevant mapping rules as soon as the account set changes. The alternate account set mapping rules won't have condition rules that resolve to the retired accounts.</p>
<b>Test Mapping Rule</b>	<p>The test displays the conditions a selected account set mapping rule meets. You can test the values for existing alternate account set mapping rules for a selected ledger account to view:</p> <ul style="list-style-type: none"> <li>• <b>Condition Values</b></li> <li>• <b>Ledger Account Returned</b></li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Resulting Values</li> </ul>

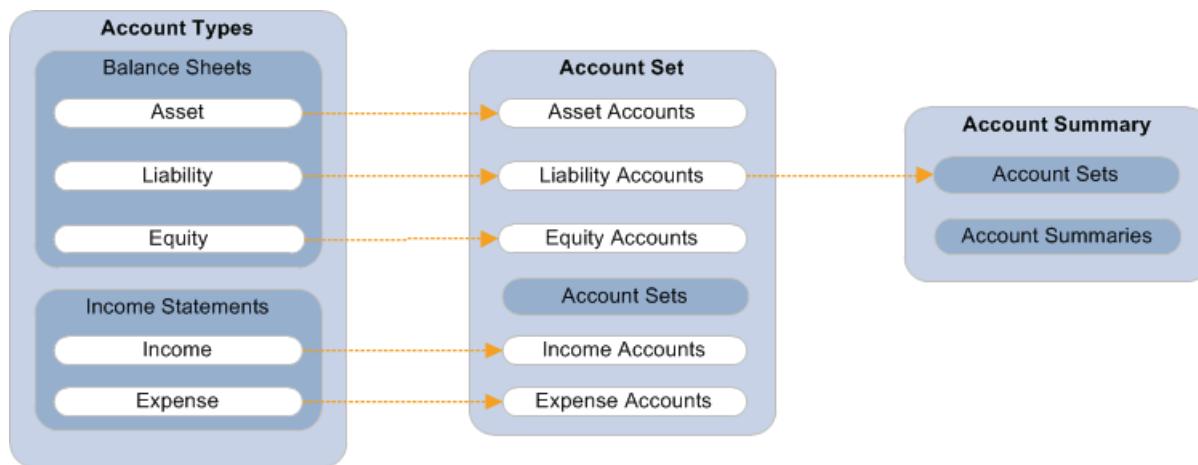

## Result

Workday creates the forward mapping rules with condition dimensions and dimension values that have reverse mapping rules with:

- Resulting ledger accounts.
- Resulting dimensions.
- Resulting dimension values.
- Worktags.

## Concept: Ledger Accounts

There are 4 main components to building ledger accounts: account types, account sets, accounts, and account summaries.

*Account types* define the types of accounts that are available for financial statements. You can define unique types for balance sheets and for income statements. When you build account sets, you associate an account type with every account. You can also use account types to build financial statement conditional rules for use in financial statement definitions.

*Account sets* define a group of *accounts* for a company. When you set up company accounting details, you associate the *chart of accounts* account set with a specific company. Within an account set, you can include accounts directly or link the account set to another set. You can also restrict the use of ledger accounts within the account set to specific companies or company hierarchies.

Example: You have a corporate account set that contains a standard set of accounts that all of your business entities use. Each of these business entities also has their own unique accounts. You can:

- Share the corporate account set across companies, combining that set with the unique accounts to create the chart of accounts for each company.
- Restrict ledger accounts to companies that are part of the consolidation so they can define their own chart of accounts.

*Account summaries* roll up select accounts from a given account set into a group for financial statement reporting. You can also embed account summaries within other account summaries, creating more levels of hierarchy. Create any number of account summaries to aggregate accounts into a single line on a balance sheet or income statement when you define them. You can also use account summaries in allocations to group accounts when defining a source or basis.

You can assign ledger accounts, account ranges, and account summaries and hierarchies as of an effective date to create multiple snapshots of a ledger account summary and run restatements.

Use ledger account segment security to enable workers to access only those ledger accounts to which they have security permissions. For only the specified ledger accounts, workers can:

- View journals when the worker has permission to at least 1 ledger account used in the journal.
- Create and edit journals when the worker has permission to all ledger accounts used in the journal.
- Create reports.
  - Run journal line and ledger account reports for the specified ledger accounts.
  - Run custom and standard financial reports that include journal lines for the specified ledger accounts.

- [Expense](#) on page 97
- [Intercompany](#) on page 98
- [Projects](#) on page 98
- [Spend](#) on page 98
- [Revenue](#) on page 99

### Business Asset

This table includes the common account posting rules used in business asset transactions and their basic accounting use cases.

Rule	Account Type	Use Case	Debit	Credit
<i>Accumulated Depreciation</i>	Asset	Record the depreciation amortization expense for an asset over time.	<i>Depreciation Expense</i>	<i>Accumulated Depreciation</i>
<i>Business Asset Disposal Donation</i>	Expense	Record the donation loss from depreciated assets you dispose.	<ul style="list-style-type: none"> <li>• <i>Business Asset Disposal Donation</i></li> <li>• <i>Business Asset Disposal Loss</i></li> </ul>	Asset account
<i>Business Asset Disposal Gain</i>	Income	Record the sales gain from fully depreciated assets you dispose.	<ul style="list-style-type: none"> <li>• <i>Accumulated Depreciation</i></li> <li>• <i>Business Asset Disposal Sale</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>Business Asset Disposal Gain</i></li> <li>• Asset account</li> </ul>
<i>Business Asset Disposal Loss</i>	Expense	Record the loss from depreciated assets you dispose of by discarding.	<ul style="list-style-type: none"> <li>• <i>Business Asset Disposal Loss</i></li> </ul>	Asset account

Rule	Account Type	Use Case	Debit	Credit
			<ul style="list-style-type: none"> <li>• <i>Accumulated Depreciation</i></li> </ul>	
<i>Business Asset Disposal Sale</i>	Asset	Record the loss for a sales asset that you dispose of once there's an agreement between parties.	<ul style="list-style-type: none"> <li>• <i>Business Asset Disposal Sale</i></li> <li>• <i>Accumulated Depreciation</i></li> <li>• <i>Business Asset Disposal Loss</i></li> </ul>	Asset account
<i>Depreciation Expense</i>	Expense	Record the depreciation and amortization of an expense.	<i>Depreciation Expense</i>	<i>Accumulated Depreciation</i>

## Expense

This table includes the common account posting rules used in expense transactions and their basic accounting use cases.

Rule	Account Type	Use Case	Debit	Credit
<i>Credit Card Payable</i>	Liability	Record the liability of costs workers incur on a company credit card as workers submit the transactions on expense reports.	Spend	<i>Credit Card Payable</i>
<i>Expenses Advance</i>	Asset	Record the cash advance amount provided to an employee.	<i>Expense Advance</i>	<i>Cash</i>
<i>Expenses Payable</i>	Liability	Record the amount owed to an employee based on the expense report that they submit for reimbursement.	Spend	<i>Expense Payable</i>
<i>Expense Payee Receivable</i>	Asset	Record the amount of an employee receivable, where an employee submits an expense report with a personal credit card expense that they need to repay to the company.	<i>Expense Payee Receivable</i>	<i>Credit Card Payable</i>

## Intercompany

This table includes the common account posting rules used in intercompany transactions and their basic accounting use cases.

Rule	Account Type	Use Case	Debit	Credit
<i>Intercompany Payables</i>	Liability	Record the value of payables due between companies on a direct intercompany supplier invoice.	<i>Spend</i>	<i>Intercompany Payables</i>
<i>Intercompany Receivables</i>	Asset	Record the value of receivables between companies on a direct intercompany customer invoice.	<i>Intercompany Receivables</i>	<i>Revenue</i>

## Projects

This table includes the common account posting rules used in project transactions and their basic accounting use cases.

Rule	Account Type	Use Case	Debit	Credit
<i>Project Labor Cost</i>	Expense	Record the value of project labor costs.	Expense Account	<ul style="list-style-type: none"> <li><i>Project Labor Cost Recovery</i></li> <li><i>Work In Progress</i></li> </ul>
<i>Project Labor Cost Recovery</i>	Contra-Expense	Record the recovery of project labor costs.	<ul style="list-style-type: none"> <li><i>Project Labor Cost</i></li> <li><i>Work In Progress</i></li> </ul>	<i>Project Labor Cost Recovery</i>
<i>Work In Progress</i>	Asset	Record the costs of in progress projects.	<i>Work In Progress</i>	<ul style="list-style-type: none"> <li><i>Accounts Payable</i></li> <li><i>Project Labor Cost Recovery</i></li> </ul>

## Spend

This table includes the common account posting rules used in spend transactions and their basic accounting use cases.

Rule	Account Type	Use Case	Debit	Credit
<i>Payables</i>	Liability	Record the value of accounts payables generated from supplier invoices or miscellaneous payments.	<i>Spend</i>	<i>Payables</i>

Rule	Account Type	Use Case	Debit	Credit
<i>Receipt Accrual</i>	Liability	Record the value of received goods or services or completed work not yet invoiced by suppliers.	<i>Spend</i>	<i>Receipt Accrual</i>
<i>Retention Payable</i>	Liability	Record the value of the supplier invoice retention due from a supplier contract with retention enabled.	<i>Retention Payable</i>	<i>Payables</i>
<i>Spend</i>	Either: <ul style="list-style-type: none"><li>• Asset</li><li>• Expense</li></ul>	Record the value for a purchased item in a supplier invoice.	<i>Spend</i>	<i>Payables</i>
<i>Transaction Tax</i>	Either: <ul style="list-style-type: none"><li>• Asset</li><li>• Expense</li><li>• Liability</li></ul>	Record the value of tax on purchase transactions, such as a supplier invoice where the tax is nonrecoverable.	<ul style="list-style-type: none"><li>• <i>Transaction Tax</i></li><li>• <i>Spend</i></li></ul>	<i>Payables</i>

## Revenue

This table includes the common account posting rules used in revenue transactions and their basic accounting use cases.

Rule	Account Type	Use Case	Debit	Credit
<i>Deferred Revenue</i>	Liability	Record the accumulated deferred revenue so that you can recognize the revenue in the next period.	<i>Receivables</i>	<i>Deferred Revenue</i>
<i>Receivables</i>	Asset	Record the value of receivables due from customers in a customer payment.	<i>Cash</i>	<i>Receivables</i>
<i>Receivables Overpayment</i>	Income	Record the value of a customer payment with a record of overpayment.	<i>Unapplied On-Account Payments</i>	<i>Receivables Overpayment</i>
<i>Receivable Writeoff</i>	Expense	Record the value of customer invoice write-off	<i>Receivable Writeoff</i>	<i>Receivables</i>

Rule	Account Type	Use Case	Debit	Credit
		for unrecoverable balances.		
<i>Revenue</i>	Income	Record the sale value of an item in a customer invoice.	<i>Receivables</i>	<i>Revenue</i>
<i>Transaction Tax</i>	Either: • Asset • Liability	Record the value of tax on sales transactions in a customer invoice.	<i>Receivables</i>	• <i>Transaction Tax</i> • <i>Revenue</i>
<i>Unapplied On-Account Payments</i>	Liability	Record the value of customer payments deposited but not applied to a customer invoice.	<i>Cash</i>	<i>Unapplied On-Account Payments</i>
<i>Unapplied Recorded Payments</i>	Liability	Record the value of customer payments deposited but unapplied so it doesn't display as part of the customer balance.	<i>Cash</i>	<i>Unapplied Recorded Payments</i>
<i>Unbilled Receivables</i>	Asset	Record the value of receivables not yet billed from an accrued customer contract.	<i>Receivables</i>	<i>Unbilled Receivables</i>
<i>Undeposited Payments</i>	Asset	Record the value of an on-account customer payment not yet deposited into a bank account.	<i>Undeposited Payments</i>	<i>Unapplied On-Account Payments</i>

## FAQ: Alternate Account Set Mappings

### How do I correct alternate account set mappings?

1. Access the **Alternate Account Set Mapping Exceptions** report.
2. Click **View Rules with no Conditions or Defaults** to edit the mapping rules for the listed ledger accounts.

## How do I associate manually added unmapped ledger accounts to existing alternate account set mappings?

1. Access the **Alternate Account Set Mapping Exceptions** report.
2. Click **Add Rules for Unmapped Ledger Accounts** to add mapping rules to accounts you manually added.

Security: *Set Up: Accounts* in the Common Financial Management functional area.

## How do I select ledger accounts from an alternate account set for the line company when my header and line companies differ on the Create Journal task?

You can only select ledger accounts that are on the account set of the journal header company. When you submit the intercompany journal, Workday processes the intercompany journals for both the header and line companies according to the alternate account set from each company. However, when you view the as-entered journal lines, Workday only displays ledger accounts from the alternate account set of the header company.

## What dimensions can I use for my alternate account set mappings?

The dimensions you can use for alternate account set mappings depend on the dimensions available on the account posting rule of a transaction type. You can map your account set to more dimensions if your account uses multiple account posting rules across different transaction types. However, Workday only uses dimensions applicable to the transaction type when we derive the alternate ledger account.

## FAQ: Can I retire ledger accounts?

### Can I retire ledger accounts that I no longer want to use for future transactions?

You can retire ledger accounts on the **Edit Account Set** report if you aren't using the ledger account in:

- An account posting rule or as a default account in an account posting rule.
- An account translation rule.
- An allocation dimension.
- An active allocation definition for Source or Target.
- An ad hoc bank transaction template.
- An elimination rule or it's an account to which the elimination rule posts.
- A year-end close rule.
- A recurring journal template.
- A manual journal with a status of *In Progress*.
- An active allocation pool that:
  - Has the version status *Active* or *Pending*.
  - Has an effective date of the current or a future date.
  - Is on an active allocation plan.

To find where ledger accounts are in use, access the **Ledger Account Usage** report.

---

## Book Codes and Books

### Steps: Create Book Codes and Books

#### Prerequisites

Security: *Set Up: Ledger and Book* in the Common Financial Management functional area.

#### Context

You can create book codes and books to record and report on transactions.

In Workday, all accounting entries are tied to a book code. You can use book codes to define where transactions are accounted for in the general ledger and name book codes based on your reporting requirement. Example:

- IFRS Adjustments - For companies required to report in IFRS.
- US GAAP - For companies required to report in U.S. GAAP.

You can then create books to use in reports and group book codes together into books for financial reporting.

A book can include multiple book codes and a specific book code can belong to multiple books. A book rolls up activity from 1 or more book codes and might include a blank book code.

## Steps

### 1. Create Book Codes.

- a) Access the **Maintain Book Codes** task.
- b) Add a new row to the grid.
- c) Enter a **Name** and **Description** for the book code.

### 2. Create Books.

- a) Access the **Maintain Books** task.
- b) Add a new row to the grid.
- c) Enter a **Name** and **Description** for the book.
- d) As you complete the task, consider:

Option	Description
<b>Includes Book Codes</b>	Select the book codes to include in the book.
<b>Includes Blank Book Code</b>	Select to include all transactions posted to the blank book code in the selected book.
<b>Tenant Default</b>	Select a book to be the tenant default. When you run certain XpressO reports, such as a Trial Balance, Workday selects the default book in the <b>Book</b> prompt, unless you configure the report differently.  <b>Note:</b> If you leave the <b>Book</b> prompt blank, Workday returns all data from all books.

## Example

Watch the video: 1m 27s

## Concept: Book Codes and Books

Many companies that are under different jurisdictions require accounting and reporting of results according to different accounting principles. The different methods of reporting usually contain the same transactions but with some transactions having different accounting treatment and adjustments. Examples:

- Accounting Authority – U.S. GAAP by Financial Accounting Standards Board (FASB).
- International Financial Reporting Standards (IFRS).
- Regulatory Agencies – Department of Education (DOE), Federal Energy Regulatory Commission (FERC).

## Book Codes

Transactions use book codes. In Workday, all accounting entries are tied to a book code. Book codes defines where transactions are accounted for inside the general ledger. Workday associates all accounting transactions to a book code. You can define book codes for your financial transactions based on your reporting requirements. Example: You can define:

- A Generally Accepted Accounting Principles (GAAP) book code to record current year GAAP adjustments.
- An International Financial Reporting Standards (IFRS) book code to record International IFRS adjustments.
- A Tax Adjustment book code to record tax adjustments.
- Period End Adjustment book code to record period end adjustments.
- Management Restatements book code to record adjustments for management reporting. This book code won't affect external reporting.

Workday provides book codes and books to record and segregate the transactions for financial reporting.

You can also create additional book codes to meet specific needs for your reporting requirements.

Example: You can define source and target book codes for revaluation, equity pickup, and allocations.

You can create a Year End Adjustments book code to record year end adjustments and combine it with the Blank book code to form the Reporting book.

Operational transactions post directly to the Blank book code or Common book, except for:

- Asset-related transactions when Multibook Asset Accounting is enabled. Those transactions will post to the specific book code associated with the Asset book.
- Supplier Lease contract related transactions when **Lease Contract Book Code Configuration** has been completed. Instead, it will post to a specific book code for lease contract based on your configuration.
- Special journal entries.
- Special operational journal entries such as revaluation, equity pickup, allocations and noncontrolling interest.

The Blank book code or the Common book is displayed in both the Management and External reporting book.

## Book

Next you create books. You can group book codes together into books for financial reporting. A book rolls up activity from one or more book codes, including the Blank book code. Example:

- IFRS Book = Blank book code + IFRS book code
- Tax Book = Blank book code + Tax Adjustment book code

## Common Book

In Workday, most transactions are recorded in the Blank book code or the Common book. The Common book includes accounting transactions, which are primarily operational journals within Workday Financials. Operational journals don't include a specific book code value, so the book code value is blank (Blank book code). Therefore, the resulting ledger balances are implicitly a part of a Common book.

This table provides an example of how you can define books and book codes in Workday:

**Note:** Names of book codes and books are specific to your Workday tenant and might be different from the values suggested here.

Book Name	Includes Book Codes	Includes Blank Book Code	Tenant Default	Description
All Adjustments	IFRS Adjustments Local GAAP Adjustments Tax Adjustments	No	No	Includes the 3 book codes specified. Won't include the Blank book code.
Common Book	GAAP	Yes	Yes	<p>Includes:</p> <ul style="list-style-type: none"> <li>• All transactions with a Blank book code (all operational transactions and manual journals with a Blank book code).</li> <li>• All journal transactions that have a GAAP book code.</li> </ul>
IFRS Book	IFRS IFRS Adjustments	Yes	No	<p>Includes:</p> <ul style="list-style-type: none"> <li>• All entries with a Blank book code (all the operational transactions and manual journals with a Blank book code).</li> <li>• All journal entries that have the IFRS or IFRS Adjustments book codes.</li> </ul>

## Cash Basis Accounting

---

### Steps: Set Up Cash Basis Accounting

#### Context

You can supplement the full accrual financial accounting method in Workday with cash basis accounting, enabling you to record multiple basis of accounting for supported customer invoices and supplier invoices.

## Steps

**1.** Set up accrual and cash basis books and book codes.

For any books that use the blank book code as part of your journal sequencing configuration, add the accrual book code in the **Includes Book Codes** prompt.

See [Steps: Create Books and Book Codes](#).

**2.** Access the **Edit Tenant Setup - Financials** report.

In the **Cash Basis Accounting** section, select a book code for both:

- **Book Code for Cash Basis Accounting**
- **Book Code for Accrual Accounting**

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

**3.** Access the **Maintain Journal Source Mapping to Operational Transactions** task.

Map these journal sources to their operational transaction:

- **Cash Basis for Supplier Journal Entry Source to Cash Basis Accounting for Supplier**.
- **Cash Basis for Customer Journal Entry Source to Cash Basis for Customer**.

Security: *Set Up: Journal Source* domain in the Common Financial Management functional area.

**4.** [Set Up Period Close Activity Groups](#) on page 297.

Create a new group or edit an existing group to add **Cash Basis Transaction** as a **Valid Operational Transaction Types for Period Close**.

**5.** [Edit Business Processes](#).

Configure the *Cash Basis Accounting Event* business process and security policy in the Financial Accounting functional area.

**Note:** Workday doesn't support the *Action* step on the *Cash Basis Accounting Event* business process.

**6.** Create an inbound EIB based on the *Import Accounting Journal* web service operation to establish balances in the cash basis accounting book code.

See [../../../../integrations/enterprise-interface-builder-eib-/inbound-eibs/dan1370797963228.dita](#).

Configure the *Accounting Journal Event* business process and security policy in the Financial Accounting Functional area.

**7.** [Create Trial Balance Reports](#) on page 388.

Create a trial balance report using the blank book code to identify balances that you need to reclassify.

**8.** Create an inbound EIB based on the *Import Accounting Journal* web service operation to reclassify balances from the blank book code to the accrual accounting book code.

See [../../../../integrations/enterprise-interface-builder-eib-/inbound-eibs/dan1370797963228.dita](#).

Configure the *Accounting Journal Event* business process and security policy in the Financial Accounting Functional area.

**9.** (Optional) [Define Plan Structures](#) on page 464.

When you use book codes in budget plan structures, ensure your plan structure doesn't include the cash basis accounting book code.

## Result

You can generate cash basis and modified accrual basis financial statements.

## Next Steps

To change the configured **Book Code for Accrual Accounting**, you must first settle and record receipt for all open intercompany items.

## Related Information

### Examples

[2024R2 Feature Release Note: Cash Basis Accounting](#)

## Create Cash Basis Accounting

### Prerequisites

- Set up cash basis accounting.
- Create and pay supplier invoices.
- Create and pay customer invoices.

### Context

You can:

- Create cash basis accounting to recognize revenue and expenses for paid customer and supplier invoices.
- Schedule cash basis accounting generation to occur at a specific frequency.

### Steps

1. (Optional) Access the **Create Cash Basis Accounting** task.

Configure the *Cash Basis Accounting Event* business process and security policy in the Financial Accounting functional area.

2. As you complete the task, consider:

Option	Description
<b>Period</b>	Select a period to determine which transactions to create cash basis accounting for.  Workday posts the operational journal for the cash basis accounting to the last date of the period that you select.
<b>Do Not Display Cash Basis Accounting Preview</b>	Select to remove the preview grid that you can use to review the included documents for each supplier or customer.

3. Access the **Schedule Cash Basis Accounting** task to determine how frequently Workday generates the cash basis accounting.

Workday recommends using this task instead of the **Create Cash Basis Accounting** task for improved performance.

Security: The *Process: Cash Basis Accounting* domain in the Financial Accounting functional area.

### Result

Workday:

- Creates a cash basis accounting result, a grouping of cash basis transactions by supplier or customer.
- Generates a cash basis journal in the cash basis book code for each grouping.
- Posts the accounting for approved customer and supplier invoices and down-stream accounting to the accrual book code.

### Next Steps

For the cash basis accounting result:

- Drill into the transactions to see all the associated documents for the supplier or customer.
- View the operational journal.

View all cash basis accounting results on the **Find Cash Basis Accounting Result** report.

## Related Information

### Examples

[2024R2 Feature Release Note: Cash Basis Accounting](#)

## Concept: Cash Basis Accounting

There are 3 ways to create cash basis accounting for financial documents and their transactions:

- **Create Cash Basis Accounting** task.
- **Schedule Cash Basis Accounting** task.
- *Cash Basis Accounting Event* business process.

Workday doesn't support cash basis accounting for:

- Partially paid customer and supplier invoices.
- On-behalf of intercompany supplier and customer invoices and payments.
- Customer and supplier invoices with multicurrency transactions or payments.
- Customer and supplier invoices with netting activity.
- Customer and supplier invoices with recoverable tax, withholding tax, or tax point dates of payment date.
- Lease related and down payment related supplier invoices.
- Supplier invoice adjustments paid through a supplier refund.
- Customer invoice payment overpayments, payment returns, and payments deposited without application.
- Customer invoices with unbilled receivables, retention, or deferred revenue.
- Customer invoice refunds.
- Customer invoice documents with customer invoice adjustment applications.
- Supplier invoice payment cancellations where the payment accounting date is in a closed period and the cancel accounting date is in another.
- Customer invoice payment or deposit cancellations where the payment or deposit accounting date is in a closed period and the cancel accounting date is in another.
- Sponsor invoices for Grants Billing or student sponsor invoices.

Additionally, Workday doesn't consider self-assessed tax amounts on supplier invoices.

## Cash Basis Processing

When you create the cash basis accounting, Workday gathers all the eligible transactions for the period and company that you specify. Workday then creates a cash basis accounting result that contains all the transactions grouped by supplier or customer. For each grouping, Workday generates 1 cash basis operational journal for all the included documents and aggregates the journal lines. The journal posts to the:

- Last day of the configured period.
- Cash basis book code you configured on the **Edit Tenant Setup - Financials** task.

**Note:** Workday doesn't support budget check on cash basis transactions.

In a single period, you can create accounting for a specific company and period more than once to both:

- Resolve ineligible documents.
- Include newly eligible documents.

When you generate accounting more than once in a period, Workday:

- Cancels the previously generated cash basis accounting result and associated journals.
- Creates a new result with the updated groupings and new journals.

For a given period, you can only have 1 cash basis accounting result per company. This process enables you to report on cash basis journals from the period level.

## Journals

---

### Create Journal Sources

#### Prerequisites

- Identify the relevant journal sources to create on the **Journal Source Mapping to Operational Transactions** report.
- Security:
  - Set Up: Journal Source* domain in the Common Financial Management functional area.
  - Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

#### Context

Create sources for journal entries in your accounting and operational journals. You can create separate journal sources for accounting and operational journals or use the same for both.

#### Steps

- Access the **Maintain Journal Sources** task.
- As you complete the task, consider:

Option	Description
<b>Accounting Source</b>	Select to make the journal source available on the <b>Create Journal</b> task.
<b>Process Award Costs</b>	For manual journals with spend on a grant, select the check box to calculate: <ul style="list-style-type: none"> <li>Facilities and administration.</li> <li>Revenue recognition.</li> </ul>
<b>Ad Hoc Bank Transaction Source</b>	Select to authorize the journal source to be an override option when you create ad hoc bank transactions.
<b>Enable Suspense Processing for Web Service</b>	Available for use only with accounting journal sources. Select to use suspense processing when you run the <i>Import Accounting Journal</i> web service.
<b>Suspense Threshold Percent</b>	Enter a suspense threshold percent equal to or greater than 1%, expressed as a whole number, to run suspense processing. Workday uses suspense processing when the journal lines in error are equal to or less than the percentage you enter.  When you leave the <b>Suspense Threshold Percent</b> blank, Workday doesn't use suspense processing.

Option	Description
<b>Workday Source</b>	Select to indicate that the journal source is for journals that Workday creates for operational transactions. Examples: Customer invoices, supplier invoices, and expense reports.

#### Related Information

##### Tasks

[Steps: Set Up and Update Journal Sources](#) on page 63

## Steps: Process Accounting Journals

#### Prerequisites

- Set up financial accounting structure. See [Steps: Set Up Financial Accounting Structure](#).
- Control access to ledger accounts for groups of workers. See [Steps: Maintain Access to Ledger Accounts](#).
- Create journal sources.

#### Context

You can create and edit accounting journals and post them to these ledger types to maintain a detailed record of financial transactions:

- Actuals
- Commitment
- Obligation

#### Steps

1. [Create Accounting Journals](#) on page 110.
2. Create journals based on recurring journal templates.

See [Steps: Create Recurring Accounting Journals](#) on page 115.

3. Access the **Mass Post Reversal Journals** task.

Once the reversal journal period opens, you can post the reversal journals.

You can post intercompany reversal journals only if all companies in the journal have the period open.

Security: *Process: Journals - Core* domain in the Common Financial Management functional area.

4. (Optional) [Create Translation Adjustment Journals](#) on page 117.

5. (Optional) Access the **Revise Journal** task from **My Tasks**.

Change the accounting date, correct the journal, and resubmit for approval.

Security: *Process: Journals - Core* domain in the Common Financial Management functional area.

6. (Optional) Enable suspense processing for accounting journal sources.

- a) [Create Journal Sources](#).

Enter a suspense threshold percent for each journal source that you want to enable suspense processing for.

- b) [Steps: Configure Suspense Account Rules](#) on page 121.

Enable suspense processing and configure suspense account rules for the *Import Accounting Journal* web service.

**7.** (Optional) Upload journal data into Workday from a spreadsheet.

When you enable suspense processing, Workday applies the suspense processing rules when you run the *Import Accounting Journal* web service.

See [Steps: Upload Journals](#) on page 120.

**8.** [Attach Files on Associated Intercompany Journals](#) on page 119.

In the **Intercompany Accounting Journal Options** section, select the **Copy Attachments to Intercompany Accounting Journals** check box to copy file attachments from intercompany accounting journals to associated child journals.

**9.** (Optional) From the related actions menu for a manual journal, select 1 of these options:

- **Journal > Add Attachment**
- **Journal > Add/Change Attachment**

You can add and edit attachments for accounting journals with a status of:

- *Created*
- *In Progress*
- *Posted*
- *Unposted*

Security: These domains in the Common Financial Management functional area:

- *Process: Journals - Add Attachment*
- *Process: Journals - Add/Change Attachment*

## Next Steps

Review journal and recurring journal details.

Use the:

- **Find Journals** report to view journals to which you have access to.
- **Find Journal Lines** report to view reversal journals with a status of *Created*.

## Related Information

### Concepts

[Concept: Journal Processing](#) on page 129

[Concept: Currency in Accounting Journals](#) on page 130

### Tasks

[Configure Worktags for Transactions](#)

## Create Accounting Journals

### Prerequisites

- Set up financial accounting structure. See [Steps: Set Up Financial Accounting Structure](#).
- Configure alternate ledger currency to create journals in an alternate ledger. See [Steps: Set Up Alternate Ledger Currency](#).
- Control access to ledger accounts for groups of workers. See [Steps: Maintain Access to Ledger Accounts](#).
- [Create Journal Sources](#).
- Configure the *Accounting Journal Event* business process and security policy in the Financial Accounting functional area.

### Context

You can create journals that you post to ledger accounts to record:

- Accrued liability for purchase items that you receive but haven't paid for.
- Depreciation.
- Month-end adjustments.
- Translation adjustments.

## Steps

1. Access the **Create Journal** task.
2. As you complete the journal details, consider:

Option	Description
<b>Ledger</b>	<p>Select a company that includes 1 of these ledgers:</p> <ul style="list-style-type: none"> <li>• Actuals</li> <li>• Commitment</li> <li>• Obligation</li> </ul> <p>You can also use the <b>Ledgers by Company Hierarchy</b> prompt category to navigate a company hierarchy and then select the company ledger.</p>
<b>Single Ledger</b>	<p>Select to indicate that the journal is a single ledger journal. Workday:</p> <ul style="list-style-type: none"> <li>• Only displays this check box if you select a ledger company configured with alternate ledger currency.</li> <li>• Automatically selects this check box when you select an alternate currency ledger.</li> </ul>
<b>Currency</b>	<p>The company currency used on financial transactions. Workday populates the field based on the <b>Ledger</b> that you select.</p>
<b>Balancing [worktag type]</b>	<p>Select the worktag that you want to use for balancing the journal. Workday dynamically displays the balancing worktag type. Example: When <i>Region</i> is the balancing worktag type, Workday displays the option name as <b>Balancing Region</b>.</p>
<b>Optional Balancing Worktags</b>	<p>Select 1 or more optional balancing worktag types.</p> <p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul>
<b>Currency Rate Type</b>	<p>Displays when you select the <b>Enable Multicurrency</b> check box. If you don't specify a</p>

Option	Description
	type, Workday uses the <b>Currency Rate Type Override</b> on the <b>Edit Company Accounting Details</b> task.
<b>Alternate Ledger Currency Rate Type</b>	Displays when you select the <b>Enable Multicurrency</b> check box. If you don't specify a type, Workday uses the <b>Alternate Currency Rate Type Override</b> on the <b>Edit Company Accounting Details</b> task.
<b>Book Code</b>	Leave blank to post to the blank book code.
<b>Reset Currency Rate</b>	Displays when you select <b>Enable Multicurrency</b> . Enables you to recalculate ledger amounts in accounting journals when you save or submit the journal. Workday recalculates the amount based on the journal accounting date and currency rate type.
<b>External Reference ID</b>	Enter the reference ID from the original journal source to track imported journals for auditing purposes.  You can also enter an external reference ID on the journal line.
<b>Record Quantity</b>	Select to enable quantities and units of measure on journal lines.
<b>Enable Multicurrency</b>	Select to enable the <b>Currency Rate Type</b> prompt to specify a rate type other than the default.  Workday selects the <b>Enable Multicurrency</b> check box based on the last journal submitted.
<b>Include Tax Lines</b>	Select to post, view, and edit transaction or withholding tax details on journal lines with taxable transactions.
<b>Disable Optional Worktag Balancing</b>	Select to create adjusting journal entries for unbalanced transactions. Example: You enable optional worktag balancing. In the process transactions are unbalanced by worktags. You suspend optional worktag balancing when you want to create adjusting journal entries for unbalanced transactions.
<b>Adjustment Journal</b>	Select to mark the journal as an adjustment. You can only post adjusting journals to the period in which they apply.
<b>Reversal Date</b>	Displays when you select the <b>Create Reversal</b> check box. Select a date that you want to have the journal entries reversed. The default is the next open period.  When you configure a reversal for an intercompany accounting journal, you can't

Option	Description
	perform a settlement run. Workday doesn't display the intercompany journal as a settlement run option because the journal and reversal cancel each other out.
<b>Total Ledger Debits</b> <b>Total Ledger Credits</b>	These fields must balance, as Workday doesn't post unbalanced journals.
<b>Document Link</b>	<p>Select the <i>Accounting Journal Document Link</i> option and enter a valid uniform resource identifier (URI) patterns from the <b>Maintain External Link Validation</b> task. This configuration enables you to link external documents to accounting journals.</p> <p>If you store supporting documents or images in an external repository, then enter the URL to that location. Once you save the transaction, Workday displays the URL as a live hyperlink to the image. Approvers can reference this document before approving the transaction.</p> <p>Workday validates the link to ensure that it has a valid Uniform Resource Identifier (URI) pattern, as defined by your security administrator. This process provides additional security to help avoid malicious content in external links.</p>

3. As you complete the **Journal Entry Lines** tab, consider:

Option	Description
<b>Ledger Account</b>	Displays the ledger accounts for the company based on the restricted-to companies that you configure on the <b>Create Account Set</b> task.
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p> <p>When you add a new line, Workday populates the new line with the worktags from the previously edited line.</p>
<b>Exclude from Spend Report</b>	Select to exclude spend accounting lines from budget checking and spend reports.
<b>Tax Details</b>	<p>When you select the <b>Include Tax Lines</b> check box, enter tax details:</p> <ul style="list-style-type: none"> <li>• <b>Transaction Date</b> Specify a transaction date for the journal line.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>Taxable Amount</b> Enter the taxable amount for tax reporting purposes. Workday doesn't validate taxable amounts when you submit the journal.</li> <li>• <b>Tax Code</b> Select a transaction or withholding tax code.</li> <li>• <b>Tax Rate</b> Select an available tax rate based on the transaction or withholding tax code.</li> </ul> <p>For transaction tax, also select:</p> <ul style="list-style-type: none"> <li>• <b>Tax Applicability</b> Indicates whether the line is taxable and the specified default tax recoverability.</li> <li>• <b>Tax Recoverability</b> When you specify the tax recoverability, Workday applies the recoverable percentage and the allocation method to the tax amount for tax rates within a tax code.</li> <li>• <b>Tax Recoverability Type</b> Indicates whether the line is fully recoverable or nonrecoverable.</li> <li>• <b>Tax Point Date Type</b> Displays when you enable tax point date configuration for transaction taxes for the tenant. Select the tax point date type for the specified transaction date on the journal line. Workday populates the tax point date type with the <b>Transaction Date</b>.</li> </ul> <p>When you select a supplier or customer that doesn't have business details in Workday, enter business entity details for this journal.</p>

## Result

When you configure the *Accounting Journal Event* business process to budget check, Workday checks that the entered amount is within the budget when you click **Submit**. If the amount is within the budget, Workday routes the journal for approval.

## Related Information

### Concepts

[Concept: Journal Processing](#) on page 129

### Tasks

[Configure Worktags for Transactions](#)

[Steps: Configure Business Process Definitions](#)

[Attach Files on Associated Intercompany Journals](#) on page 119

## Steps: Create Recurring Accounting Journals

### Prerequisites

- Configure alternate ledger currency to create journals in an alternate ledger. See [Steps: Set Up Alternate Ledger Currency](#).
- Security: *Process: Journals - Core* domain in the Common Financial Management functional area.

### Context

You can create recurring journal templates to generate recurring journals for transactions that you repeat every accounting period.

Examples:

- Accruals.
- Depreciation charges.
- Allocations.

Recurring journals have the same journal lines for the same accounts and amounts. You can apply the same custom validations you create for the accounting journal.

Workday doesn't apply account segment security to recurring journal templates or recurring journals that you generate.

### Steps

1. Access the **Create Recurring Journal Template** task.

2. As you complete the task, consider:

Option	Description
<b>Ledger</b>	Select a company that includes 1 of these ledgers: <ul style="list-style-type: none"> <li>Actuals</li> <li>Commitment</li> <li>Obligation</li> </ul>
<b>Single Ledger</b>	Select to indicate that the journal is a single ledger journal template. Workday: <ul style="list-style-type: none"> <li>Only displays this check box if you select a ledger company configured with alternate ledger currency.</li> <li>Automatically selects this check box when you select an alternate currency ledger.</li> </ul>
<b>Enable Multicurrency</b>	Select to enable the: <ul style="list-style-type: none"> <li><b>Currency Rate Type</b> template prompt.</li> <li><b>Reset Currency Rate at Journal Generation</b> check box.</li> <li><b>Currency</b> and <b>Currency Rate</b> columns in the <b>Journal Entry Lines</b> grid.</li> </ul>
<b>Template Start Date</b> <b>Template End Date</b>	You can enter a start date that is in the future. The recurring journal template acquires a status of <b>Available</b> on the <b>Template Start</b>

Option	Description
	<p><b>Date.</b> After the <b>Template End Date</b>, you can't select the template.</p> <p>You can create future-dated recurring reversal journals before a reversal period opens. Workday assigns a status of <i>Created</i> to future-dated reversal journals.</p>
<b>Journal Source</b>	<p>Displays journal sources that you set as an <b>Accounting Source</b> on the <b>Maintain Journal Sources</b> task.</p>
<b>Currency Rate Type</b>	<p>Workday uses the currency rate type override that you select on the <b>Edit Company Accounting Details</b> task. When you don't specify a default currency rate type for the company, Workday uses the default currency rate type for the tenant.</p>
<b>Optional Balancing Worktags</b>	<p>Select 1 or more optional balancing worktag types when you use worktag balancing.</p> <p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul>
<b>Reset Currency Rate at Journal Generation</b>	<p>Select to have Workday reset to the default currency rate.</p>
<b>Document Link</b>	<p>Add the <i>Accounting Journal Document Link</i> type and valid uniform resource identifier (URI) patterns on the <b>Maintain External Link Validation</b> task. This configuration enables you to link external documents to accounting journals.</p> <p>If you store supporting documents or images in an external repository, then enter the URL to that location. Once you save the transaction, Workday displays the URL as a live hyperlink to the image. Approvers can reference this document before approving the transaction.</p> <p>Workday validates the link to ensure that it has a valid Uniform Resource Identifier (URI) pattern, as defined by your security administrator. This process provides additional security to help avoid malicious content in external links.</p>
<b>Create Reversal</b>	<p>Select to create a reversal journal with the recurring journal template.</p>

Option	Description
	the default <b>Reversal Date</b> is the first day of the next period.
<b>Ledger Account</b>	<p>Select a ledger account.</p> <p>Displays the ledger accounts that are available for use with the company you select. Based on the restricted-to companies you enter on the <b>Create Account Set</b> or <b>Edit Account Set</b> tasks.</p>
<b>Worktag</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p>

### 3. Access the **Recurring Journal Generation** task.

Create journals based on recurring journal templates. You can create future-dated reversal journals before a reversal period opens. Workday assigns a status of *Created* to future-dated reversal journals.

### 4. Access the **Mass Post Reversal Journals** task.

Post the reversal journals when the reversal period opens.

## Result

Workday verifies any custom journal validations by creating a canceled journal when you submit your recurring journal template. The canceled journal doesn't affect your general ledger.

## Related Information

### Tasks

[Configure Worktags for Transactions](#)

[Attach Files on Associated Intercompany Journals](#) on page 119

## Create Translation Adjustment Journals

### Prerequisites

- Run a **Trial Balance - Composite** report to identify accounts requiring translation adjustments.
- [Roll Year-End Balances Forward](#).
- [Roll Translated Beginning Balances Forward](#).
- Security: *Process: Journals - Translation Adjustment* domain in the Financial Accounting functional area.

### Context

You can create translation adjustment journals to eliminate differences in Equity accounts between the ledger (Base) currency and the translation (Reporting) currency for a company. The differences can occur due to currency rate fluctuations when posting journals on different dates.

### Steps

#### 1. Access the **Create Translation Adjustment** task.

**2.** As you complete the task, consider:

<b>Option</b>	<b>Description</b>
<b>Accounting Date</b>	Workday retrieves beginning balances and journal transactions entered as of the accounting date you select.
<b>Translation Currency</b>	Select the currency into which you want to generate an adjustment to the translated balances.
<b>Ledger Accounts</b>	<p>Select accounts requiring translation adjustments. The prompt only displays accounts translated with the <i>Historic Equity</i> rate type.</p> <p>Leave this field blank to retrieve all accounts translated with the <i>Historic Equity</i> rate type.</p> <p>Workday only displays journal lines on the grid for both beginning balance journals and journal entries that match for each combination of ledger account and worktags.</p>
<b>Create Manual Translation Adjustment</b>	<p>Select to create 1 or more translation adjustments using any combination of allowed worktags for:</p> <ul style="list-style-type: none"> <li>• Accounts using historic currency translation rule sets.</li> <li>• Balance sheet accounts with or without beginning balance journals.</li> <li>• Income statement accounts with beginning balance journals.</li> <li>• Income statement accounts without beginning balance journals when you opt into the redesigned retained earnings reporting feature. See: <a href="#">2021R1 What's New Post: Redesigned Retained Earnings Reporting</a>.</li> </ul> <p>(Optional) Access the <b>Opt-In to Roll Forward with Balance Sheet Ledger Account</b> task to confirm whether you opted in or complete the opt-in process.</p>

**3.** Review the journal lines for the beginning balance and journal entries, and then enter an offsetting amount to adjust the difference in each account.

Example: You have a beginning balance for an Equity account. During the year, you post various offsetting journals with different currency rates into that account. At the end of the year, you find that though the ledger balance in the Equity account is zero the translated amount has a credit balance of 300. The difference is due to the different currency rates of the posted journals.

To adjust the translated balance, you enter a translation adjustment of 300 in the **Translated Debit Adjustment** column of the Equity account.

### Result

Workday displays:

- The translated balance in the Equity account as zero.
- Amount of 300 as translation gain or lost in the Balance Sheet.

## Next Steps

Run a **Trial Balance - Composite** report in the translated currency to confirm that the ending balance in each account you corrected is zero. You can drill down on the zero balance to review the journal activity.

## Attach Files on Associated Intercompany Journals

### Prerequisites

- Set up financial accounting structure.
- Set up journal sources.

### Context

You can attach files on intercompany accounting journals so that Workday can copy them to any associated child intercompany accounting journal. Displaying the attached files on the child journals provides associated companies:

- A strong audit trail.
- Increased accountability.

You can also restrict access to the attached files on the child intercompany journals and prevent users in companies from accessing the attached files.

### Steps

1. Access the **Edit Tenant Setup - Financials** task.

In the **Intercompany Accounting Journal Options** section, select the **Copy Attachments to Intercompany Accounting Journals** check box.

Security: The *Set Up: Tenant Setup - Financials* domain in the System functional area.

2. Access 1 of these tasks to create an intercompany accounting journal:

- **Create Journal**

Configure the *Accounting Journal Event* business process and security policy in the Financial Accounting functional area.

- **Create Recurring Journal Template**

Security: The *Process: Journals - Core* domain in the Financial Accounting functional area.

3. On at least 1 of your **Journal Entry Lines**, select a company that differs from your header company.

The companies you select are available on the **Companies Without Access** prompt.

4. Add a file on the **Attachments** tab.

5. (Optional) Select the companies you don't want to have access on the **Companies Without Access** prompt.

### Result

Users in companies on associated intercompany accounting journals can view the attached files. You can't view an attachment if your company is included in **Companies Without Access**.

## Related Information

### Tasks

[Create Accounting Journals](#) on page 110

[Steps: Create Recurring Accounting Journals](#) on page 115

## Steps: Upload Journals

### Context

Use Enterprise Interface Builder (EIB) to upload accounting journal data from a spreadsheet. When successfully completed, the upload automatically triggers the *Accounting Journal Event* business process. Select the **Automatically Complete** option when you prepare the spreadsheet to have Workday:

- Complete approvals automatically.
- Bypass reviews and *To Do* tasks.
- Skip Notifications in the *Accounting Journal* event business process.

After you successfully upload journals into Workday, you can view the journals by accessing the **Find Journals** report.

### Steps

**1. Set Up Inbound EIB.**

Enter *Import Accounting Journal* at the **Template from Web Service Operation** prompt.

**2. From the related actions menu of the integration system for the upload, select **Template Model > Generate Spreadsheet Template**.**

To maintain the correct spreadsheet format, don't change the .xml file extension.

Security: These domains in the Integration functional area:

- *Integrations: EIBs*
- *Integration Configure*
- *Integration Event*

**3. Customize EIB Spreadsheet Template.**

To customize the template, edit the template model of the EIB.

**4. Set Up EIB Spreadsheet.**

Enter business data into the spreadsheet.

**5. Launch EIB Spreadsheet Upload.**

Confirm that you are in a security group that has these permissions:

- Access to the *Import Accounting Journal* web service initiating action in the *Accounting Journal Event* business process.
- Modify permission on the *Integrations: EIBs* domain and either the *Integration Build* or *Integration Event* domain.

If you have enabled suspense processing, Workday applies the suspense processing rules when you run the *Import Accounting Journal* web service.

## Related Information

### Concepts

[Concept: Enterprise Interface Builder](#)

## Steps: Configure Suspense Account Rules

### Context

You can configure suspense account rules to suspend processing for accounting journals with the *Import Accounting Journal* web service.

### Steps

- [Create Journal Sources](#) on page 108.

Select **Enable Suspense Processing for Web Services** and enter the **Suspense Threshold Percent** for accounting journal sources.

- Access the **Create Suspense Account Rule** task.

As you complete the task, consider:

Option	Description
<b>Account Set</b>	You can only use 1 suspense account rule for an account set.
<b>Ledger Account</b>	The default ledger account that you want to post the suspense amount to.  Workday recommends that you don't use ledger accounts that are restricted to a company.
<b>Balancing Worktag</b>	The default required balancing worktag type that you want to use on journal entries. Configure the required balancing worktag type on the <b>Maintain Worktag Balancing Configuration</b> task.
<b>Optional Balancing Worktags</b>	The default optional balancing worktag types that you want to use on suspense journal entries. Configure up to 5 optional balancing worktag types on the <b>Maintain Worktag Balancing Configuration</b> task.  If you no longer use an optional balancing worktag type, you must remove it from the suspense account rule.
<b>Required Worktags</b>	Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.  Select 1 or more default <b>Required Worktags</b> that are different from the <b>Balancing Worktag</b> and <b>Optional Balancing Worktags</b> .  Example: <i>Cost Center</i> is the default required worktag. You can't select <i>Cost Center</i> as the <b>Balancing Worktag</b> or <b>Optional Balancing Worktag</b> .

Option	Description
	If you no longer use a required worktag type, you must remove it from the suspense account rule.

Security: *Set Up: Accounting Rules* domain in the Common Financial Management functional area.

### Result

When you click **Submit**, Workday validates that the worktags you selected for the suspense accounting rule are allowed or required, based on your worktag configuration.

When you run the *Import Accounting Journal* web service, Workday posts journal entries to the suspense account when they are:

- Unbalanced.
- Missing ledger accounts.
- Missing worktags.

Workday creates new journal lines for entries that meet the suspense rule criteria. On the **View Journal** report, the **Suspended Journal Line** column displays the number of suspended lines in the journal that don't meet the suspense account rules. Click the number to review details for each suspended line.

Use the **View Suspense Account Rule** report to find and update suspense account rules.

### Next Steps

#### Related Information

#### Examples

[Example: Set Up Suspense Accounting](#) on page 125

## Steps: Set Up Financial Accounting Adjustments

### Context

You can set up accounting adjustments to help you reclassify and transfer transaction spend for these settled financial transactions:

- Expense reports.
- Procurement card transactions.
- Fully or partially paid supplier invoices, excluding supplier invoices for lease-type supplier contracts.
- Supplier invoice adjustments.

You can also adjust the accounting on billable project worktags and project transfers for these transactions:

- Expense reports.
- Supplier invoices.
- Supplier invoice adjustments.

Accounting adjustments enable you to process reclassifications without needing to create manual accounting journals.

### Steps

#### 1. (Optional) [Configure Questionnaires and Questions](#).

Configure a questionnaire to capture supporting information about the adjustment.

## 2. Edit Business Processes.

Configure the *Accounting Adjustment Event* business process in the Financial Accounting functional area.

If you configure a questionnaire, add the *Complete Questionnaire* step to the *Accounting Adjustment Event* business process. Workday recommends that you attach only 1 questionnaire.

## 3. Edit Business Process Security Policies.

Configure security policies for the *Accounting Adjustment Event* business process in the Financial Accounting functional area.

## 4. Create Journal Sources on page 108.

## 5. Access the **Maintain Journal Source Mapping to Operational Transactions** task.

Map the *Accounting Adjustment* journal source to the accounting adjustment journal entry source.

Security: *Set Up: Journal Source* domain in the Common Financial Management functional area.

## 6. Access the **Maintain Accounting Adjustment Change Reason Codes** task.

Create change reasons.

Security: *Set Up: Accounting Adjustment Change Reason Code* domain in the Financial Accounting functional area.

### Related Information

#### Tasks

[Create Amortization Schedules and Installments for Prepaid Supplier Invoices from Accounting Adjustments](#) on page 1602

## Create Financial Accounting Adjustments

### Prerequisites

- Set up financial accounting adjustments.
- Security: These domains in the Financial Accounting functional area:
  - *Manager Reports: Accounting Adjustment*
  - *Process: Accounting Adjustment*

### Context

You can create an accounting adjustment to reclassify costs on these settled financial transactions:

- Expense reports.
- Procurement card transactions.
- Fully or partially paid supplier invoices, excluding supplier invoices for lease-type supplier contracts.
- Supplier invoice adjustments.

You can also create accounting adjustments on billable project worktags and project transfers for these transactions:

- Expense reports.
- Supplier invoices.
- Supplier invoice adjustments.

Once you create an accounting adjustment, you can't edit it.

### Steps

#### 1. Select **Accounting > Adjust Accounting** from the related actions menu on the transaction.

Workday disables the **Prepaid** check box when you create an accounting adjustment on a billable project worktag transaction or adjustment from a project transfer.

**2.** As you complete the task, consider:

<b>Option</b>	<b>Description</b>
<b>Proposed Budget Date</b>	Select to change the budget date of the transaction.
<b>Proposed Spend Category</b>	<p>Select to reclassify a spend category on a transaction.</p> <p>You can't reclassify the spend category when the spend category is associated with a purchase item or expense item.</p>
<b>Proposed Adjustment Worktags</b>	Select the worktags that you wish to use to adjust the transaction.
<b>Prepaid</b>	<p>Select to reclassify supplier invoices to prepaid. When you reclassify a prepaid supplier invoice, you can't create another accounting adjustment for that transaction line.</p> <p>You also can't create new accounting adjustments for an invoice line when you reclassify a supplier invoice line to prepaid.</p>
<b>Billable</b>	<p>Select to charge spend transactions back to a customer. You can't reclassify:</p> <ul style="list-style-type: none"> <li>• A procurement card transaction to a billable project.</li> <li>• A transaction that's both billable and prepaid.</li> </ul>
<b>Prepaid Amortization Type</b>	<p>Select a prepaid amortization type of <b>Manual</b> or <b>Schedule</b> when you reclassify a prepaid supplier invoice.</p> <p>Workday populates the prepaid amortization type options from existing supplier invoice lines.</p>

### Result

When you approve the adjustment transaction, Workday:

- Records the accounting adjustment date.
- Links to the accounting adjustment and identifies the adjusted lines on the **Accounting Adjustment** tab of the original transaction.

### Next Steps

Cancel an *In Progress* accounting adjustment by selecting **Accounting Adjustment > Cancel** from the related actions menu on the accounting adjustment. You can't cancel approved accounting adjustments, however, you can cancel a settlement run for an operational transaction to cancel all related accounting adjustments.

### Related Information

#### Tasks

[Create Amortization Schedules and Installments for Prepaid Supplier Invoices from Accounting Adjustments](#) on page 1602

## Example: Set Up Suspense Accounting

This example illustrates how to set up suspense accounting for accounting journals.

### Context

You set up suspense accounting for accounting journal sources so that when more than 50% of the journal lines are in error, Workday posts the journal entries to the suspense account.

### Prerequisites

- Set up financial accounting structure.
- Security: These domains in the Common Financial Management functional area:
  - Set Up: Accounting Rules*
  - Set Up: Journal Source*

### Steps

- Access the **Maintain Journal Sources** task.
- Specify these details for the journal sources:

Journal Source	Enable Suspense Processing for Web Service	Suspense Threshold Percent
Accrual Journal	Yes	50
Intercompany Journal	Yes	50

- Click **OK and Done**.
- Access the **Create Suspense Account Rule** task.
- Enter these values:

Option	Description
Rule Name	<i>IRE-Suspense Account Rule</i>
Account Set	<i>Corporate</i>
Ledger Account	<i>1100:Suspense</i>
Balancing Worktag	<i>Cost Center</i>

- Click **OK and Done**.

### Result

When you run the *Import Accounting Journal* web service, Workday applies the suspense accounting rules:

- Suspense processing completes if up to 50% of the journal lines are in error. When journal line errors exceeded 50%, then suspense processing stops. For the *Intercompany* journal source, 51% of the journal lines are in error. Only 20% of the journal lines for the *Accrual Journal* journal source are in error.
- For the journal lines that are in error, Workday posts the suspended amount to the *1100:Suspense Ledger Account*.

### Related Information

## Example: Route Journals to Different Approvers Based on Ledger Accounts

This example illustrates how to configure the *Accounting Journal Event* business process to route journals to different approvers based on the ledger. Workday evaluates every journal line for this configuration which can degrade performance for larger journals.

### Context

Your company wants to route journals with the *2050:Accrued Liabilities* ledger account to Accounting Manager Steve Serrano for approval and all other journals to Accountant Morgan Reynolds.

### Prerequisites

- Set up financial accounting structure.
- Security: These domains in the System functional area:
  - *Business Process Administration*
  - *Custom Field Management*
  - *Manage: Business Process Definitions*

### Steps

1. Access the **Create Calculated Field** task.
2. Enter these details for the calculated field:

Option	Description
<b>Field Name</b>	<i>CF - TF Ledger Account is 2050</i>
<b>Business Object</b>	<i>Journal Line</i>
<b>Function</b>	<i>True/False Condition</i>

3. Click **OK**.
4. In the **Calculation** tab, select:

Option	Description
<b>And/Or</b>	<i>And</i>
<b>Field</b>	<i>Ledger Account</i>
<b>Operator</b>	<i>in the selection list</i>
<b>Comparison Type</b>	<i>Value specified in this filter</i>
<b>Comparison Value</b>	<i>2050:Accrued Liabilities</i>

5. Click **OK**.
6. Click the **Create Another Calculation** button.
7. Enter these details for the calculated field:

Option	Description
<b>Field Name</b>	<i>CF - CRI Ledger Account from Journal Line</i>
<b>Business Object</b>	<i>Journal Entry</i>
<b>Function</b>	<i>Count Related Instances</i>

8. Click **OK**.

9. In the **Calculation** tab, select:

Option	Description
<b>Related Field</b>	<i>Journal Line</i>
<b>Count</b>	<i>Instances where condition is true</i>
<b>Instances where condition is true</b>	<i>CF - TF Ledger Account is 2050</i>

10. Click **OK** and **Done**.

11. From the related actions menu of the *Accounting Journal Event* business process, select **Business Process > View Definition**.

12. Click **OK**.

13. From the related actions menu of a step on the **Business Process Step** tab, select **Business Process > Create Condition Rule**.

14. Specify these condition rule details:

Option	Description
<b>Description</b>	<i>Journal contains Account 2050</i>
<b>And/Or</b>	<i>And</i>
<b>Source External Field or Condition Rule</b>	<i>CF - CRI Ledger Account from Journal Line</i>
<b>Relational Operator</b>	<i>greater than</i>
<b>Comparison Type</b>	<i>Value specified in this filter</i>
<b>Comparison Value</b>	<i>0</i>

15. Click **OK**.

16. From the related actions menu of the *Accounting Journal Event* business process, select **Business Process > View Definition**.

17. Click **OK**.

18. From the related actions menu of a step on the **Business Process Step** tab, select **Business Process > Create Condition Rule**.

19. Specify these condition rule details:

Option	Description
<b>Description</b>	<i>Journal does not contain Account 2050</i>
<b>And/Or</b>	<i>And</i>
<b>Source External Field or Condition Rule</b>	<i>CF - CRI Ledger Account from Journal Line</i>
<b>Relational Operator</b>	<i>equal to</i>
<b>Comparison Type</b>	<i>Value specified in this filter</i>
<b>Comparison Value</b>	<i>0</i>

20. Click **OK**.

21. From the related actions menu of the *Accounting Journal Event* business process, select **Business Process > Edit Definition**.

22. Click **OK**.

**23.**In the **Business Process** tab, add these business process steps:

Order	Type	Group
c1	Approval	Accountant
c2	Approval	Accounting Manager

**24.**Click **OK**.

**25.**From the related actions menu of step c1 on the **Business Process Step** tab, select **Business Process > Maintain Step Conditions**.

**26.**Add an entry condition row.

**27.**Enter the **Rule Journal contains Account 2050**.

**28.**Click **OK**.

**29.**From the related actions menu of step c2 on the **Business Process Step** tab, select **Business Process > Maintain Step Conditions**.

**30.**Add a entry condition row.

**31.**Enter the **Rule Journal does not contain Account 2050**.

**32.**Click **OK** and **Done**.

#### Related Information

##### Tasks

[Steps: Set Up Financial Accounting Structure](#) on page 55

## Concept: Accounting and Operational Journals

There are 2 types of journals in Workday:

- *Accounting journals*: The journals that accountants create manually for accounting purposes. Workday doesn't automatically tie these journals to transactions.
- *Operational journals*: The journals that Workday creates automatically for operational transactions that you enter through the various Workday transaction tasks.

### Reversals

You can generate reversal journals in Workday when you change or cancel an approved operational transaction or when you reverse a posted accounting journal. The reversal journals provide a complete audit trail of the journal entries. They enable you to comply with legal requirements in countries where you can't modify or cancel a posted journal.

Workday creates reversals of accounting or operational journals when you select 1 of these options at the tenant level on the **Edit Tenant Setup - Financials** task:

- **Always Reverse Accounting and Accounting Center Summary Journals**
- **Always Reverse Operational and Noncontrolling Interest Journals**

When you enable the reversal of accounting journals, Workday displays the **Reverse** option on the related actions menu of posted accounting journals. Otherwise, Workday displays the **Unpost** option.

Workday provides a **Reverse Journals** task that you can use to reverse a journal not marked for automatic reversals.

Example: You forgot to select the **Create Reversal** check box when creating a journal. You access the **Reverse Journal** task to reverse the missed journal.

**Note:** Workday strongly recommends using the **Reverse** option on the related actions menu of posted accounting journals for all other journal reversal needs to ensure data integrity as the **Reverse Journal** task bypasses approvals.

## Related Information

### Tasks

[Steps: Process Accounting Journals](#) on page 109

[Steps: Set Up and Update Journal Sources](#) on page 63

## Concept: Journal Processing

Workday Financial Management automates the accounting resulting from business operations. Based on accounting policies and rules defined by your accounting and control team, Workday automatically generates accounting for:

- Commercial transactions
- Intercompany
- Allocation
- Depreciation
- Accruals
- Reversals

Through an intuitive journal entry facility, Workday also accepts accounting generated in third-party systems or spreadsheet uploads.

Journal processing provides the framework for flexible maintenance of manual accounting activity and period adjustments.

### Journal

You must have the appropriate security permissions to the ledger account on the accounting journal. You can enter journals manually or upload them. You can enter journals for month end adjustments, depreciation, translation adjustments, or to record accrued liability for purchase items that you receive but not paid. You can automatically reverse journal entries for accruals.

For commitment or obligation journals, you can have Workday roll forward the accounting date to the first date of the next open period upon plan approval. Select the **Roll Journal Forward for Procurement** check box on the **Create Ledger** task.

You can create reversal journals on or after the accounting date. If the accounting period isn't open, Workday creates a journal in *Created* status. When the reversal period opens, use the **Mass Post Reversal Journals** task to post the reversal journals. You can only post intercompany reversal journals if all companies in the journal have the period open.

You can select **Edit** from the related actions menu of a journal that hasn't posted to correct errors.

You can select **Delete** from the related actions menu of a journal that you've created but not posted or submitted for approval.

**Note:** You can't delete a journal in *Created* status if it was copied from another journal.

You can select **Correct** from the related actions menu of the business process event to correct a posted journal. The option to correct a posted journal isn't available when you enable the reversal of accounting journals.

Workday creates journals behind the scenes for operational transactions and uses posting rules to interpret the business events into debits, credits, and accounts.

Workday posts journal entries to a ledger defined for each company.

### Budget Check for Accounting Journals

To configure an accounting journal for budget check, you configure the *Accounting Journal Event* business process with the *Check Budget (Financial)* business process. Workday budget checks the journal at the initiation step, approval step, or both to ensure that the amount is within the budget.

Once configured, Workday performs a budget check when you:

- **Submit** an accounting journal for approval. If the journal doesn't pass the budget check, modify the amount or request an override from the budget manager.
- **Approve** an accounting journal.

If the journal doesn't pass the budget check, you can take one of these actions:

- Send the request back.
- Modify the amount.
- Request an override from the budget manager.

Workday also automatically validates worktags during the budget check.

### **Journal Statuses**

This table lists permitted activities during each journal status:

Activity	Journal Available for Posting	Journal Posted	Journal Canceled
Create Journal	No	No	No
Edit Journal	Yes	No	No
Post Journal	Yes	No	No
Unpost Journal	No	Yes	No
Cancel Journal	Yes	No	No
Copy Journal	Yes	Yes	Yes

### **Recurring Journals**

Recurring journals are journals you create on a regular basis. They have the same journal lines for the same accounts and amounts. You can create future-dated recurring reversal journals. When the reversal period opens, use the **Mass Post Reversal Journals** task to post the reversal journals.

### **Journal Reports**

Workday provides a number of standard reports to help you manage journals. For a list, access **Workday Standard Reports** and select the **Financial Accounting** category.

#### **Related Information**

##### **Tasks**

- Steps: [Process Accounting Journals](#) on page 109
- Steps: [Upload Journals](#) on page 120
- Steps: [Configure Budget Checking for Spend Transactions](#) on page 537

### **Concept: Currency in Accounting Journals**

Workday provides multicurrency capabilities for accounting journals. Accounting journals enable you to record accounting data not associated with operational transactions manually. When you create accounting journals, you can:

- Use the company currency only.
- Use the company primary or alternate ledger currency, when you have alternate ledger currency configured.

- Use foreign currencies for the journal lines.

You also have the same capabilities when you set up journal templates for use when creating accounting journals.

When you use the **Create Journal** task to enter foreign currency accounting journals, Workday converts the journal lines to the company currency to create the ledger currency amount. You can override the exchange rate and ledger currency amounts, as necessary. If there are rounding differences in the ledger currency, adjust the ledger amounts.

For intercompany journals where the companies have different ledger currencies, you must have all journal lines in the same transaction currency. However, you can submit intercompany journals that contain multiple transaction currencies and multiple line companies with different ledger currencies when:

- The journal line amounts self balance by company.
- You have the **No Intercompany Payable/Receivable Lines when Journals Self Balance by Company** check box configured on the **Edit Tenant Setup - Financials** task.

For alternate ledger currency, you can't submit intercompany single ledger journals in alternate ledger currency.

#### **Related Information**

##### **Concepts**

[Concept: Multicurrency](#) on page 26

##### **Tasks**

[Steps: Process Accounting Journals](#) on page 109

## **Concept: Valid Company and Cost Center Combinations**

You can restrict cost centers to specific companies on the **Create Cost Center** task. When you restrict cost centers, Workday only displays cost centers associated with the company you select on the **Worktags** prompt. This prompt behavior applies to these tasks:

- **Edit Journal**
- **Create Journal**
- **Create Recurring Journal Template**

Workday also supports valid company and cost center combinations at the line and header level on operational journals. Workday puts the journal in *Error* status when it meets these 3 conditions:

- The journal contains invalid company and cost center combinations.
- The cost center is the primary or optional balancing worktag.
- The transaction is an intercompany transaction.

Use the **Fix Operational Journals with Errors** task to review and correct the journals to post them.

[FAQ: Journal Errors](#) on page 132

## FAQ: Journal Errors

**How do I correct an unposted journal?**

Select **Edit** from the related actions menu of the journal.

**How do I cancel an unposted journal that I created in error?**

Select **Cancel** from the related actions menu of the unposted journal.

**How do I correct a posted journal?**

Select **Correct** from the related actions menu of the business process event. The option to correct a posted journal isn't available when you enable the reversal of accounting journals.

**Can I correct a posted journal with a journal sequence number?**

Yes, but keep these guidelines in consideration:

- You can't change the **Journal Source**.
- You can't change the journal amount.
- You can only change the accounting date to a date within the period on the journal.

**How do I cancel a posted journal in an open ledger period?**

Select **Unpost** from the related actions menu of the posted journal to unpost and then cancel.

**How do I cancel a posted journal in a closed ledger period?**

Leave the original journal posted and create a reversing journal in the next open ledger period.

**How do I view errors for a journal?**

Select **Journal Entry > Fix Operational Journal Errors** from the related actions menu of the journal.

**How do I view and edit custom validation errors on journal lines?**

Select **Journal Entry > Edit Journal (Errors Only)** from the related actions menu of the journal.

## Troubleshooting: Financial Journals

This topic provides strategies for diagnosing and resolving these accounting journal problems:

- [No available ledger periods to post upcoming operational journals.](#) on page 132
- [No account posting rule set associated with company.](#) on page 133
- [Journal line missing ledger account.](#) on page 134
- [Journal line assigned invalid ledger account.](#) on page 135
- [Unable to post created journals.](#) on page 136
- [Journal copied when not submitted or saved for later.](#) on page 136

### No available ledger periods to post upcoming operational journals.

You're generating operational journals for an upcoming date, but no ledger period exists to post for that date.

Cause	Solution
Ledger period isn't open or not created for the operational journal.	<p>1. Access the <b>Create Ledger Year and Ledger Periods</b> task.  Create ledger periods for the applicable ledger and fiscal year selected.  Security: <i>Set Up: Ledger and Book</i> domain in the Common Financial Management functional area.</p> <p>2. Access the <b>Update Ledger Period Status</b> task for the applicable ledger period for the company.  Set the <b>Status</b> of the period of the posting date to <i>Open</i>.  Security: <i>Process: Period End</i> domain in the Common Financial Management functional area.</p> <p>3. Access the <b>Fix Operational Journals With Errors</b> task.  Select the operational journals with errors that you want to post.  Security: <i>Process: Audits and Corrections</i> domain in the Financial Accounting functional area.</p>
The fiscal period isn't available or not created for that date.	<p>1. Access the <b>Update Ledger Period Status</b> task for the applicable ledger period for the company.  Set the <b>Status</b> of the period of the posting date to <i>Open</i>.  Security: <i>Process: Period End</i> domain in the Common Financial Management functional area.</p> <p>2. Access the <b>Fix Operational Journals With Errors</b> task.  Select the operational journals with errors that you want to post.  Security: <i>Process: Audits and Corrections</i> domain in the Financial Accounting functional area.</p>

#### No account posting rule set associated with company.

No account posting rule sets display when you try to post a journal.

Cause	Solution
No <b>Account Posting Rule Set</b> assigned to the company.	<p>1. Access the <b>Edit Company Accounting Details</b> task for the company. Assign an <b>Account Posting Rule Set</b> to the company. Security: <i>Set Up: Company Accounting</i> domain in the Common Financial Management functional area.</p> <p>2. Access the <b>Fix Operational Journals With Errors</b> task. Select the operational journals with errors that you want to post. Security: <i>Process: Audits and Corrections</i> domain in the Financial Accounting functional area.</p>
No default ledger account associated with the account posting rule types on the account posting rule set assigned to the company.	<p>1. Access the <b>View Account Posting Rule Set</b> report. Select the account posting rule set assigned to the company. Security: <i>Set Up: Accounting Rules</i> domain in the Common Financial Management functional area.</p> <p>2. Click <b>Edit Default Ledger Accounts</b>. For each account posting rule, assign the correct default ledger account.</p> <p>3. Access the <b>Fix Operational Journals With Errors</b> task. Select the operational journals with errors that you want to post. Security: <i>Process: Audits and Corrections</i> domain in the Financial Accounting functional area.</p>

#### Journal line missing ledger account.

At least 1 of the lines on a journal you posted is missing a ledger account.

Cause	Solution
The operational transaction doesn't match any of the condition rules for the account posting rules, and you haven't assigned a default ledger account.	<p>1. Access the <b>View Account Posting Rule Set</b> report. Select the account posting rule set assigned to the company. Security: <i>Set Up: Accounting Rules</i> domain in the Common Financial Management functional area.</p>

Cause	Solution
	<p>2. Click <b>Edit Default Ledger Accounts</b>. Assign the correct default ledger account.</p> <p>3. Select the account posting rule type and click <b>Edit Posting Rule</b>. Add the missing condition rule.</p> <p>4. Access the <b>Fix Operational Journals With Errors</b> task. Select the operational journals with errors that you want to post.</p> <p>Security: <i>Process: Audits and Corrections</i> domain in the Financial Accounting functional area.</p>
You haven't assigned an account posting type to the <b>Retained Earnings</b> account posting rule.	<p>1. Access the <b>View Account Posting Rule Set</b> report. Select the account posting rule set assigned to the company.</p> <p>Security: <i>Set Up: Accounting Rules</i> domain in the Common Financial Management functional area.</p> <p>2. Click <b>Edit Default Ledger Accounts</b>. Assign the correct default ledger account to the <b>Retained Earnings</b> account posting rule type.</p> <p>3. Edit the <b>Retained Earnings</b> account posting rule type. Add the missing condition rule.</p> <p>4. Access the <b>Fix Operational Journals With Errors</b> task. Select the operational journals with errors that you want to post.</p> <p>Security: <i>Process: Audits and Corrections</i> domain in the Financial Accounting functional area.</p>

#### **Journal line assigned invalid ledger account.**

At least 1 journal line has a ledger account that isn't valid for use with the selected company.

**Cause:** The selected company doesn't have a configured ledger account.

**Solution:** Assign a valid ledger account to the company.

#### **Steps**

1. Access the **View Account Posting Rule** report.

Select a ledger account that's available for use with the company.

*Set Up: Accounting Rules*

**2. Access the Fix Operational Journals With Errors task.**

Select the operational journals with errors that you want to post.

Security: *Process: Audits and Corrections* domain in the Financial Accounting functional area.

**Solution:** Configure the ledger account to accept the company.

#### Steps

**1. Access the Edit Account Set task.**

Add the selected company to the **Restricted To Companies** for the ledger account.

Security: *Set Up: Accounts* domain in the Common Financial Management functional area.

**2. Access the Fix Operational Journals With Errors task.**

Select the operational journals with errors that you want to post.

Security: *Process: Audits and Corrections* domain in the Financial Accounting functional area.

#### Unable to post created journals.

Can't post journals that are in *Created* status. Only available action is copy.

Cause	Solution
You saved the journal for later and need to submit for approval.	<ol style="list-style-type: none"> <li>Configure the <i>Process: Journals - Core</i> domain in the Financial Accounting functional area.</li> <li>Access the <b>Find Journals</b> report to find the journal in <i>Created</i> status.</li> <li>Submit the created journal to start the business process and receive approval.</li> <li>When the reversal period opens, use the <b>Mass Post Reversal Journals</b> task to post the reversal journals you created with a future date.</li> </ol>
You've created a reversal journal on or after the accounting date.	<p>During the close process you must decide on 1 of these options for the reversal journal:</p> <ul style="list-style-type: none"> <li>Cancel.</li> <li>Delete.</li> <li>Leave in <i>Created</i> status.</li> </ul>

#### Journal copied when not submitted or saved for later.

**Cause:** You select **Journal > Copy** from the related actions menu of the journal, enter the header details, and select **Cancel** after you progress to the **Edit Journal** task. Workday creates the journal in *Created* status when you enter header information and click **OK**.

**Solution:**

#### Steps

**1. Access the Find Journals report to find the journal in *Created* status.**

Security: *Process: Journals - Reporting* domain in the Financial Accounting functional area.

**2. From the related actions menu of the journal, select **Journal > Delete Journal**.**

Security: *Process: Journals - Core* domain in the Financial Accounting functional area.

## Journal Sequencing

---

### Setup Considerations: Journal Sequencing

You can use this topic to help make decisions when planning your configuration and use of journal sequencing. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Journal sequencing enables you to provide gapless, sequential identifiers to journals in 1 or more ledger year or ledger period. Journal sequencing uses sequence generator rule configurations to create sequence generators. Workday then generates and assigns sequence numbers to accounting journals using those sequence generators.

#### Business Benefits

Journal sequencing helps you meet statutory reporting requirements for numbered, unique identifiers on accounting journals. Countries with statutory reporting requirements, such as SAF-T, require these journal line numbers to assist with auditing the financial accounts of their organizations.

#### Use Cases

You might want to configure journal sequencing when you operate in countries that require sequential line numbers for your journals. Journal sequencing enables you to assign sequence numbers to your journals by accounting date or posting date.

When you set up your sequence generators, you can configure it to sequence journals across these time frames:

- Ledger period
- Ledger year
- Continuously over many ledger periods and years.

You can also configure sequence generators to help you organize or differentiate your journals by including details like transaction types or fiscal periods with the sequence format string.

#### Questions to Consider

Questions	Considerations
Do you operate in a country with statutory reporting requirements that require regular audits?	Various countries have statutory requirements that mandate journal numbering to assist with audit trails around financial accounting. Workday helps you meet those requirements through journal sequencing.
Do you anticipate a need to reset your journal line number back to the beginning?	Continuous sequence generators don't reset the sequence number to the initial value. If you foresee a need to reset your journal line number regularly,

Questions	Considerations
	consider sequencing by ledger year or ledger period.
Do you need to unpost journals?	<p>When you sequence by posting date, the journal retains its sequence number even if you unpost and repost. Workday doesn't resequence this journal under any circumstances.</p> <p>When you sequence by accounting date, the journal retains its sequence number when you unpost the journal. However, Workday sorts and resequences the period when you repost the journal. Resequencing assigns a new journal number to reposted journals if you cancel or add journals in the date range the sequence generator covers.</p>
Do you need to sequence intercompany journals?	<p>Workday assigns sequence numbers to intercompany journals if the respective companies enable sequencing. Workday doesn't use the same sequence generator for those companies. You can, however, create sequence generators using the same sequence generator rule configuration.</p> <p>Example: The header company on the journal enables journal sequencing. The line company doesn't. Workday sequences the journal for the header company, but not the line company. If the header and line companies both enable journal sequencing, Workday sequences the journal for both companies. However, because the sequence generator differs for the line company, Workday sequences journals of the line company using a different sequence format string.</p>
Do you need to sequence consolidation elimination journals?	<p>Workday assigns sequence numbers to consolidation elimination journals if the companies you're calculating noncontrolling interest (NCI) for, enable sequencing.</p> <p>If you don't want journal sequencing, you can create a separate sequence generator for consolidation elimination journals by creating a sequence generator condition rule for the <b>Noncontrolling Interest Transaction Type</b>.</p>
Do you need a sequence generator that only sequences specific books?	<p>The <b>Book</b> prompt on your sequence generator rule configuration determines the journals Workday sequences. Workday sequences journals that share a book code with the book you select. If you don't specify a book, Workday sequences all journals in the company.</p>
Do you need to change or alter the lifespan or rule configuration of your sequence generator after use?	<p>If you want to alter the lifespan or rule configuration of your sequence generator, you must create and configure a new sequence generator for the next fiscal year. Changes you make to the rule</p>

Questions	Considerations
	configuration only apply to new generators. You can't have posted journals for that year and all ledger periods can't be open.
Do you need to implement journal sequencing in the middle of a fiscal year?	<p>You can implement journal sequencing for a company after the start of a fiscal year under these circumstances:</p> <ul style="list-style-type: none"> <li>• Your company has never configured journal sequencing.</li> <li>• The ledger periods of the fiscal year aren't open.</li> <li>• You haven't posted journals that are on or after the sequencing start period.</li> <li>• No sequence generators exist for the company.</li> </ul> <p>You can also configure your sequence generator to begin from a specific sequence start number. If you use the rule configuration for another generator, that generator also begins at that start number. Workday therefore doesn't recommend that you specify a start number if you want to use the rule configuration on a ledger year or period basis.</p>
How do I create sequence numbers for consolidation journals?	<p>Workday automatically assigns sequence numbers to consolidation elimination journals if the companies you're calculating NCI for support sequencing.</p> <p>You can create a separate sequence generator for consolidation journals by adding a sequence generator condition rule for the <b>Noncontrolling Interest</b> transaction type.</p>

## Recommendations

Functionality	Considerations
Sequencing by accounting date or posting date	<p>The sequencing method you select determines when and how Workday assigns sequence numbers to your journal. You can't change the sequencing method of a sequence generator after creation. Workday recommends that you consider which sequencing method best applies to your statutory requirements and audit structure.</p> <p>If you want to sequence by accounting date, consider that Workday:</p> <ul style="list-style-type: none"> <li>• Assigns sequence numbers to journals and reversal journals when you close your ledger period.</li> <li>• Resequences the journals in the current and subsequent closed periods when you cancel, post, and unpost.</li> </ul> <p>If you want to sequence by posting date, consider that Workday:</p>

Functionality	Considerations
	<ul style="list-style-type: none"> <li>Assigns sequence numbers when you post the journal.</li> <li>Doesn't resequence the journal under any circumstances.</li> <li>Assigns the next available sequence number to reversal journals.</li> </ul>
Disabling journal sequencing	<p>Workday recommends that you don't enable journal sequencing if you don't anticipate using it in later years. You can only disable journal sequencing for a company if:</p> <ul style="list-style-type: none"> <li>You haven't used sequence ID generators to assign a sequence number to any journals.</li> <li>You've deleted all sequence ID generators.</li> </ul>
Replacing or deleting sequence generators	<p>Carefully review your sequence generator rule configurations before you submit. You can only replace sequence generators that aren't currently in use. You can only delete sequence generators that are completely unused. If you want to replace or delete a generator, the associated ledger years or periods must also have 1 of these statuses:</p> <ul style="list-style-type: none"> <li><i>Closed</i></li> <li><i>Created</i></li> <li><i>Not Available</i></li> </ul>
Sequence format strings	<p>The sequence number Workday assigns to a sequenced journal can include any additional information you want to convey, such as the:</p> <ul style="list-style-type: none"> <li>Transaction type.</li> <li>Fiscal year or fiscal period.</li> </ul> <p>Workday recommends that you avoid duplicate sequence numbers by providing additional details on the sequence format, such as the fiscal year or period.</p>

## Requirements

Enable the Common Financial Management functional area.

Ensure that the ledger periods you want to sequence are in these statuses:

- Closed*
- Created*
- Not Available*

Opt in to journal sequencing by selecting the **Enable Journal Sequencing** check box on the **Edit Company ID Definitions** task.

## Limitations

Workday supports journal sequencing for actuals ledger types and not commitment and obligation ledger types.

## Tenant Setup

No impact.

## Security

Configure these domains for journal sequencing:

Domains	Considerations
<i>Set Up: Company General</i>	Users secured to this domain can configure sequence generator rules and create sequencing groups that apply a code to sequenced journals. You also need this domain to opt in to journal sequencing and create or delete the journal sequence generators.
<i>Set Up: Ledger and Book</i>	Users secured to this domain can create ledger years and periods. You can only apply a sequence generator after you create and then open ledger years or ledger periods.
<i>Process: Period End</i>	Users secured to this domain can open and close ledger periods. You can only apply a sequence generator to ledger years or periods with an open status.

## Business Processes

No impact.

## Reporting

Workday doesn't deliver standard reports that display the journal sequence number. If you want to display the journal sequence number, add **Journal Sequence Number** to a report from the **Journal Entry** business object.

## Integrations

You can use these Workday Web Services for journal sequencing:

Web Services	Considerations
<i>Get Accounting Journal</i>	Retrieves all information associated with your accounting journals, including assigned sequence numbers.
<i>Get Sequence Generator Rule Configuration</i>	Retrieves all information associated with your sequence generator rules. Enables you to view the configurations on your sequence generators, such as format strings and sequencing method.
<i>Put Company</i>	You can update company details and enable journal sequencing using this web service.
<i>Put Sequence Generator Rule Configuration</i>	Creates sequence generator rule configurations. Enables you to create many configurations at once.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Other Impacts

No impact.

### Related Information

#### Concepts

[Concept: Journal Processing](#) on page 129

#### Tasks

[Steps: Set Up Journal Sequencing](#) on page 142

[Configure Journal Sequence Generator Rules](#) on page 143

[Enable Journal Sequencing for a Company](#) on page 147

[Create Journal Sequence Generators](#) on page 148

## Steps: Set Up Journal Sequencing

### Prerequisites

- [Create Ledgers](#). Set up ledgers for the companies you want to use journal sequencing.
- Configure alternate ledger currency for your company to sequence an alternate ledger. See [Steps: Set Up Alternate Ledger Currency](#).
- Security: *Set up: Company General* domain in Common Financial Management functional area. See [Steps: Set Up Security Permissions](#).

### Context

You can configure Workday to assign unique journal sequence numbers to accounting and operational journals for the primary and alternate actuals ledgers independently. Workday can apply journal sequence numbers in ledger period, ledger year, or continuous intervals based on accounting date or posting date. You can use journal sequence generators to help you comply with global auditing standards.

### Steps

1. (Optional) Access the **Maintain Journal Sequencing Groups** task.

You can create journal sequencing groups in your local language to organize, filter, and report on journals.

You can set a unique **Journal Group Code** to identify a type of journal or transaction that you want Workday to group. Example: If you want to sort supplier invoices in your journal sequencing report, you can create a SUPINV journal group code to represent supplier invoice journals.

2. [Configure Journal Sequence Generator Rules](#) on page 143.

Configure default and condition rules for generating sequence ID generators.

3. Create, but don't open the ledger years and periods for the company.

To enable journal sequencing, the journal sequence **Start Period** and all subsequent periods must:

- Be in *Created, Closed, or Not Available* ledger period status.
- Have no posted journals in or after the specified start period.

See: [Steps: Create and Open Ledger Years and Periods](#) on page 70.

4. [Enable Journal Sequencing for a Company](#) on page 147.

**5. Create Journal Sequence Generators** on page 148.

Create unique sequence ID generators for companies based on the:

- Rules and conditions you configured on the **Create Journal Sequence Generator Rule Configuration** task.
- Ledger years, periods, or continuous configuration you selected.

### Result

When you post journals, Workday automatically assigns a journal sequence number to each journal according to your journal sequence generator rule configuration. This number displays in the **Journal Sequence Number** field when you view journals.

When you use a SUPINV journal group code to sequence supplier invoice journals on a separate string, Workday assigns these journal sequence numbers:

Journal Entry Order	Journal Source	Journal Sequence Number
1	Customer Invoice	2015-Apr-0001
2	Manual Journal	2015-Apr-0002
3	Supplier Invoice	SupInv-2015-Apr-001
4	Supplier Invoice	SupInv-2015-Apr-002
5	Manual Journal	2015-Apr-0003

### Next Steps

Process accounting journals.

#### Related Information

##### Concepts

[Concept: Journal Processing](#) on page 129

##### Tasks

[Create Ledgers](#) on page 68

## Configure Journal Sequence Generator Rules

### Prerequisites

- [Create Ledgers](#). Set up ledgers for the companies you want to use journal sequencing.
- [Create Journal Sources](#).
- Security: *Set up: Company General* domain in Common Financial Management functional area.

### Context

You can assign numbers to journals through journal sequencing, enabling you to comply with global auditing standards. Workday assigns these numbers based on rules you configure for sequence generators.

### Steps

1. Access the **Create Journal Sequence Generator Rule Configuration** task.

2. As you complete the header, consider:

Option	Description
<b>Sequence By</b>	<p>Select the sequencing method you want to use. Your selection determines when Workday sequences your journals, and in what order.</p> <ul style="list-style-type: none"> <li>• <i>Accounting Date</i>: Sequences your posted journals based on the accounting date. Workday initiates sequencing when you close your ledger period. Workday only sequences a ledger period again if you make changes after reopening the period, as when you unpost or cancel a ledger period.</li> <li>• <i>Posting Date</i>: Sequences your posted journals based on the posting date. Workday assigns a sequence when you post your journal.</li> </ul>
<b>Sequence Generator Lifespan</b>	<p>Select the time period you want Workday to use for journal sequencing numbers.</p> <p><i>Continuous</i> enables Workday to provide continuous journal sequencing. Continuous sequencing uses the same sequence ID generator and format string across many ledger years.</p> <p>For <i>Ledger Period</i> and <i>Ledger Year</i>, Workday restarts the sequence at the end of the sequence generator lifespan.</p> <p>Once a sequencing generator assigns a sequence number to a journal, you can't:</p> <ul style="list-style-type: none"> <li>• Disable journal sequencing for the company.</li> <li>• Change the sequencing configuration options. You can still edit the format strings.</li> </ul> <p>You can only change the sequence ID generator for future years if:</p> <ul style="list-style-type: none"> <li>• There are no posted journals.</li> <li>• Periods aren't in <i>Open</i> status.</li> </ul>
<b>Book</b>	<p>Leave the <b>Book</b> prompt blank to apply the sequence rules to all journals in the company. Select a book on the prompt to apply the sequence rules to all journals with book codes in the selected book.</p>

3. As you complete the **Default Sequence Generator Rule** section, consider:

Option	Description
<b>Transaction Type</b>	<p>Workday populates all operational and accounting journals. You can enter <b>Sequence Generator Rule Conditions</b> to configure unique sequence format strings for specific transaction types.</p>
<b>Journal Group Code</b>	<p>(Optional) Select a journal sequencing group that you created on the <b>Maintain Journal Sequencing Groups</b> task.</p>

Option	Description
	You can use journal sequencing groups to more easily organize and report on journals.
<b>Sequence Start Number</b>	Enter the number you want to begin sequencing with. Use this field if you used a different ID generation system and want to continue from where the ID ended.
<b>Sequence Padding</b>	<p>Enter the minimum number of digits you want to use in journal sequence numbers. You can use padding to help Workday sort journal sequences when you generate reports.</p> <p>Example: When you enter a <b>Sequence Padding</b> value of 3:</p> <ul style="list-style-type: none"> <li>• Sequence number 1 displays as 001.</li> <li>• Sequence number 4321 displays as is.</li> <li>• Workday sorts the numbers 1, 2, and 10 as 01, 02, 10 instead of 1, 10, 2.</li> </ul>
<b>Sequence Format String</b>	<p>Enter any text you want Workday to include with the sequence number. You can also enter these bracketed string constant patterns to have Workday automatically insert text:</p> <ul style="list-style-type: none"> <li>• <code>[f]</code> inserts the fiscal year number.</li> <li>• <code>[ff]</code> inserts the fiscal year name.</li> <li>• <code>[pp]</code> inserts the fiscal period name.</li> <li>• <code>[seq]</code> inserts the next sequence number.</li> </ul> <p>Include <code>[seq]</code> in the format string for any configuration.</p> <p>When you select <i>Ledger Year</i> as the sequence generator lifespan, the format string can include:</p> <ul style="list-style-type: none"> <li>• <code>[f]</code></li> <li>• <code>[ff]</code></li> </ul> <p>When you select <i>Ledger Period</i> as the sequence generator lifespan, the format string can include:</p> <ul style="list-style-type: none"> <li>• <code>[f]</code></li> <li>• <code>[ff]</code></li> <li>• <code>[pp]</code></li> </ul> <p>When you select <i>Continuous</i> as the sequence generator lifespan, the format string can only include <code>[seq]</code>.</p> <p>You can configure sequence format strings to ensure that Workday doesn't duplicate sequence numbers across multiple generator lifespans.</p> <p>Example: You set the sequence generator lifespan to <i>Ledger Period</i> and enter the sequence format string <code>JRNL-[f]-[pp]-[seq]</code>. By including the period name, you avoid duplicate</p>

Option	Description
	sequence numbers, such as 2 journals numbered JRLN-2019-1.

4. (Optional) Enter the condition rules that refine the default sequence ID generator rule. As you complete the **Sequence Generator Rule Conditions** section, consider:

Option	Description
<b>Transaction Type</b>	If you select more than 1 operational transaction for the rule condition, Workday generates 1 ID generator for multiple transaction sources.
<b>Accounting Journal Source</b>	Displays when you select <i>Accounting Journal</i> as the <b>Transaction Type</b> . Leave blank to select all accounting journal sources.  If you select transaction types and an accounting journal for the same rule, Workday uses all accounting journal sources.
<b>Sequence Start Number</b> <b>Sequence Increment</b> <b>Sequence Padding</b> <b>Sequence Format String</b>	Refine the <b>Default Sequence Generator Rule</b> for each condition rule.  Example: To have Workday use a different sequence generator ID for customer invoices, you must: <ul style="list-style-type: none"> <li>• Enter a condition rule with a <b>Sequence Format String</b> that uses the <i>CustInv</i> prefix for supplier invoices.</li> <li>• Enter a <b>Sequence Start Number</b> of 300 for customer invoices.</li> </ul>

## Result

You can now enable journal sequencing for a company so that you can create journal sequence generators.

You can edit your rule configuration to add or delete conditions.

## Example

This example illustrates how you can configure the **Create Journal Sequence Generator Rule Configuration** task. For the 2015-Apr ledger period:

### Default Sequence Generator Rule Values

Field	Value
<b>Sequence Start Number</b>	1
<b>Sequence Padding</b>	4
<b>Sequence Format String</b>	<i>[f]-[pp]-[seq]</i>

### Sequence Generator Rule Conditions

Field	Value
<b>Transaction Type</b>	<i>Supplier Invoice</i>

Field	Value
Journal Group Code	SUPINV
Sequence Start Number	1
Sequence Padding	3
Sequence Format String	[f]-[pp]-[seq]

## Next Steps

Select **Journal Sequence Generator Rule Configuration > Copy** from the related actions menu of the journal sequence generator rule configuration to apply the rules to other ledgers. To avoid duplicate journal sequence numbers, Workday recommends modifying the copied sequencing generator rule configuration before applying it to other ledgers. Example: To apply the rule of a primary ledger to an alternate ledger, append the alternate ledger currency code to the sequence string configuration.

## Related Information

### Tasks

[Steps: Create and Open Ledger Years and Periods](#) on page 70

## Enable Journal Sequencing for a Company

### Prerequisites

- Set up the company for which you want to create sequence ID generators.
- Set ledger periods you want to sequence to *Available*, *Created*, or *Closed* status.
- Security: *Set up: Company General*/domain in Common Financial Management functional area.

### Context

- Enable a company to use journal sequencing and sequence actuals ledgers independently.
- Apply or define sequence ID generator rules and conditions.

### Steps

- Access the **Journal Sequence Settings** tab on the **Edit Company ID Definitions** task for your company.
- As you complete the tab, consider:

Option	Description
<b>Enable Journal Sequencing</b>	Select to enable the <b>Journal Sequence Generator Rule Configuration</b> and the <b>Sequence Start Period</b> fields.  Once you post a journal that uses a sequencing number, you can no longer disable journal sequencing for the company.
<b>Sequence Generator Rule Configuration</b>	Select or create a sequence ID generator rule. Access the <b>Create Journal Sequence Generator Rule Configuration</b> task to define sequence ID generator rules and conditions.
<b>Sequencing Start Period</b>	Select the current or a subsequent ledger period. Workday creates ID generators for all periods from the selected period.

Option	Description
	<ul style="list-style-type: none"> <li>The sequencing start period and all ledger periods after the sequencing start period can't have posted journals and must be in 1 of these statuses:           <ul style="list-style-type: none"> <li><i>Closed</i></li> <li><i>Not Available</i></li> <li><i>Created</i></li> </ul> </li> </ul>
<b>Create Sequence ID Generators with New Ledger Years</b>	Select to have Workday generate ID generators when you create ledger years or periods.

Once you enable journal sequencing for the company, you can only disable it if:

- You haven't used any ID generators.
- You've deleted all ID generators.

Access the **Mass Delete Journal Sequencing Generators** task to delete all unused ID generators. You can only delete generators when you haven't used a generator to add journal sequence numbers within a fiscal year.

## Next Steps

Create journal sequence ID generators.

### Related Information

#### Tasks

[Steps: Set Up Companies](#) on page 58

## Create Journal Sequence Generators

### Prerequisites

- Enable journal sequencing for your company or company hierarchy.
- Security: *Set Up: Company General* in the Common Financial Management functional area.

### Context

You can create journal sequence ID generators to assign a unique journal sequence number to posted journals for the actuals ledger. Journal sequence IDs enable you to comply with global auditing standards.

### Steps

- Access the **Create Journal Sequence Generators** task.
- As you complete the task, consider:

Option	Description
<b>Companies or Company Hierarchies</b>	For company hierarchies, Workday only generates journal sequence numbers for the companies within the hierarchy that you've enabled journal sequencing for.
<b>Replace Unused Generators</b>	Select to have Workday replace the existing sequence ID generators for ledger years that haven't used sequence ID generators. Workday then creates a new sequence ID generator.

Option	Description
	You can't replace a sequence ID generator that is or was in use.
<b>Create Continuous Sequence Generator</b>	<p>Select to create or replace a continuous sequence generator. You can replace a continuous sequence generator if the ledger periods or ledger years:</p> <ul style="list-style-type: none"> <li>• Aren't open.</li> <li>• Don't have a posted journal.</li> </ul>

## Result

Workday uses the sequence ID generators to assign sequences to journals based on the configured sequencing rules.

## Next Steps

Process accounting journals and create operational journals.

### Related Information

#### Concepts

[Concept: Journal Processing](#) on page 129

#### Tasks

[Steps: Process Accounting Journals](#) on page 109

## Concept: Journal Sequencing

You can enable journal sequencing for a company and define the sequence generator rules. Workday uses the sequence generator rules to create sequence ID generators for unique, sequential, and gapless journal sequence numbers. Workday derives the sequence ID generators based on the source and accounting period of the journal.

You can sequence journals by **Accounting Date** or **Posting Date**. This sequencing method determines when Workday sequences your journals, and in what order.

**Accounting Date** sequences your journals when you close a ledger period and sequences them based on the accounting date. For journals with an accounting date on the same day, Workday sequences the journals based on the business document sequence IDs, and then the transaction type.

Example: You create 3 journals with an accounting date of 11/06/2017. Workday sequences the journals based on the business document sequence IDs:

- SUPINV-001
- SUPINV-002
- SUPINV-003

If the business document sequence IDs are undefined, Workday sequences by transaction type:

- Customer Contracts
- Payroll

**Posting Date** sequences your journals when you post the journals based on the posting date.

To enable journal sequencing, the journal sequence **Start Period** and all subsequent periods:

- Must be in *Created*, *Closed*, or *Not Available* ledger period status.
- Have no posted journals from the specified **Start Period**.

You can only disable journal sequencing for a company if:

- You haven't used sequence ID generators to assign a sequence number to any journals.
- You've deleted all sequence ID generators.

## FAQ: Journal Sequencing

### What happens to reversal journals when I change my journal sequencing method?

Workday uses the new sequencing method to sequence the reversal journal when you change your sequencing method.

## Journal Insights

---

### Steps: Set Up Journal Insights

#### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.
- At least 12 months of historic journal line data must exist on your tenant.
- Configure these security policies for the Innovation Services functional area:
  - *Manage: Innovation Services*
  - *View: Innovation Services*

#### Context

Journal Insights enables you to close accounting periods with greater efficiency and confidence. The innovation service uses machine learning to identify these errors and anomalies and recommend alternatives:

- Missing or unusual combinations of worktags.
- Amount anomalies.
- Ledger account errors.
- Line company errors.

## Steps

- [../../../../manage-workday/tenant-configuration/Machine-Learning-and-Innovation-Services/enable-innovation-services-feature-and-data-contribution.dita](#).

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

- In the **Innovation Service Opt-In** tab, under **Available Services > Financials**, select the **Financials: Financial Management Machine Learning GA Features** service check box.
  - In the **Maintain Innovation Services Data Selection Opt-In** tab, under **Financials: Financial Management Machine Learning GA Features**, select the **Opt In** check box for the **Journal Line Data** category to contribute data for Machine Learning.
- After setting up the task, it can take up to 2 weeks to view the machine learning feature functionality in your tenant.
- In the **Summary** tab, you can verify the innovation services available and opted into. You can also view the data contribution opt-in for various categories.

Security: *Manage: Innovation Services* domain in the Innovation Services functional area.

**Note:** Journal Insights model is not set up and doesn't currently analyze journal lines posted in Implementation tenants as these often contain test data or non-production like data that would not train the model correctly.

Workday therefore recommends you test in Production, Sandbox or Preview tenants where the Journal Insights models are deployed.

- Access the **Edit Tenant Setup - Machine Learning** task. Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

- Edit Domain Security Policies.**

Set up these security domains in the Financial Accounting functional area:

- *Process: Journal Insights*
- *Reports: Journal Insights*

- Access the **Create Business Process Definition (Default Definition)** task and set up the new *Journal Insights Feedback Event* business process.

- Configure security group permissions for Journal Insights actions:

- Access the *Journal Insights Feedback Event* business process.
- From the related actions of the business process, select **Business Process Policy > Edit**.
- Configure security group permissions for these actions:

- *Dismiss Journal Line Anomalies*
- *Report Errors To Journal Insights*
- *Confirm Journal Line Anomalies*
- *Confirm/Dismiss Similar Journal Line Anomalies*

See:

- [../../../../manage-workday/business-processes/customize-business-processes/dan1370797385122.dita](#).
- [../../../../authentication-and-security/configurable-security/security-policies/dan1370796362110.dita](#).

## Related Information

### Tasks

[Create Accounting Journals](#) on page 110

### Reference

[The Next Level: Journal Insights: Journal Anomaly Detection for a Faster, More Accurate Period Close](#)

## Confirm and Dismiss Journal Line Anomalies

### Prerequisites

- Set up Journal Insights.
- Configure security group permissions to dismiss and confirm journal line anomalies:
  1. Access the *Journal Insights Feedback Event* business process.
  2. From the related actions of the business process, select **Business Process Policy > Edit** and configure security group permissions for these actions:
    - Dismiss Journal Line Anomalies
    - Confirm Journal Line Anomalies

### Context

The **Journal Insights** report enables you to:

- Review detected journal line anomalies.
- Use the **Anomaly Reasons** prompt to filter journal line anomalies by the specific reason that Journal Insights believe a journal line is anomalous. Filtering by Anomaly Reason, gives you increased visibility as to why Journal Insights believes a journal line is anomalous. You can then make a more informed decision to correct, confirm, or dismiss the anomaly.
- Create any journals that you need to correct or adjust the worktags on the journal line.

You can also use the **Journal Insights** report to provide feedback on Journal Insights by confirming and dismissing journal line anomalies as errors.

Workday recommends that you use the prompt filters on the Journal Insights report to filter out general ledger accounts or time periods that seem less relevant to you.

### Steps

1. Access the **Journal Insights** report.
2. As you select the prompts, consider:

Option	Description
<b>Worktags</b>	Select 1 or more Worktags to filter by specific Worktags.  Journal Insights will retrieve all journal lines with the selected Worktags.  <b>Note:</b> If you select more than 1 Worktag, each journal line must have all the Worktags that you specify.
<b>Anomaly Reasons</b>	Select a specific reason to filter all anomalies: <ul style="list-style-type: none"> <li>• <b>All Reasons:</b> Select by:           <ul style="list-style-type: none"> <li>• Custom organizations</li> <li>• Ledger account</li> <li>• Line company</li> <li>• Specific worktags, including custom worktags</li> </ul> </li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>Reason by Category:</b> Select to filter journal lines by either:           <ul style="list-style-type: none"> <li>• Credit Amount</li> <li>• Debit Amount</li> </ul>           Journal Insights will flag debit and credit amounts as anomalous if they're significantly higher or less than journal lines with similar attribute. You can either select a credit amount or debit amount or both.         </li> <li>• Ledger Account</li> <li>• Line Company</li> </ul> <p>You can select either an incorrect ledger account or line company or both.</p> <ul style="list-style-type: none"> <li>• Worktags: Select a single worktag or multiple worktags.</li> </ul> <p>When you don't select any option in the prompt, Workday retrieves all journal line anomalies.</p> <p>Example: You select <b>Business Unit - 100</b> for the <b>Worktags</b> prompt and select <b>Cost Center</b> for the <b>Anomalies Reason</b> prompt. Journal Insights will retrieve all journal lines that it thinks has an anomalous cost center whenever the Business Unit -100 worktag is used on a journal line.</p>

3. Click **OK**.

The **Priority** tab displays journal line anomalies that Workday believes are most relevant for you to take action. Workday recommends that you regularly review the journal lines on the **All** tab to help improve the accuracy of journal line anomalies.

4. Access the ledger account you want to review.

5. To act upon anomalies, select the journal line anomalies.

The **Priority** column indicates whether the anomaly is a priority. If the column is blank, the anomaly isn't a priority.

The **Anomaly Reason** column displays the anomaly reason for each journal line. You can filter and sort the column by anomaly reason. Filtering and sorting on the column enables you to refine your search further.

The **Recommendation** column provides recommendations for anomalous Worktags, debit and credit amounts, and ledger account on a journal line.

Sometimes, the **Recommendation** column might be left blank. This is because Journal Insights might not have a recommendation as what makes a journal line anomalous.

The **Current Worktags** column:

- Displays all current Worktags that currently exists on the journal line.
- Highlights the 1 Worktag that Journal Insights believes is causing the Journal Line to be anomalous.

6. (Optional) Select **Similar Lines Feedback** to view feedback you have historically given on similar journal line anomalies. This feedback:
  - Gives you visibility of similar journal lines that you've confirmed or dismissed as anomalies.
  - Provides you guidance on how you can classify the particular journal line.

**Note:** If you haven't provided any previous feedback for the journal line, Workday won't display the **Similar Lines Feedback** button.

The **Similarity Criteria** section displays the criteria Workday uses to identify a similar journal line based on the journal line you're viewing.

You can click **Close** to go back to the **Correct and Dismiss Journal Line Anomalies** task.

7. (Optional) Create a reclassification journal that corrects or adjusts those journal lines.

The reclassification journal that you create with the **Create Journal** button reverses the anomalous journal line and posts a new journal line with the correct worktags.

Creating the reclassification journal from the **Journal Insights** report also links the correcting journal and the corrected journal. Workday doesn't create this link when you create a reclassification journal outside the **Journal Insights** report.

8. Confirm or dismiss the journal line anomaly as an error.
9. Click **Submit**.

#### 10.(Optional) Click **Confirm/Dismiss Similar Journal Line Anomalies**.

The **Confirm/Dismiss Similar Journal Line Anomalies** task displays similar journal lines to the one you confirmed or dismissed.

- 11.( Optional) To confirm or dismiss the journal lines, review the journal lines, and either select all or select individual journal lines.

You can review journal line anomalies that you correct, confirm, or dismiss on the **Journal Line Anomalies By Ledger Account** report.

## Result

When you confirm, correct, or dismiss a journal line anomaly, we remove the journal line from the **Journal Insights** report.

We also retain the feedback that you provide to Workday to train and improve the Journal Insights machine learning model:

- When you confirm or correct a journal line anomaly, Journal Insights will in the future, detect, and display more of the same or similar journal line anomalies.
- When you dismiss a journal line anomaly, Journal Insights will in the future, display less of the same or similar journal line anomalies.

## Related Information

# Statistics

---

## Steps: Upload Statistics

### Context

Use the Enterprise Interface Builder (EIB) to load statistics into Workday from a spreadsheet. The upload enables you to add new statistics or update existing statistics. You can use statistics as the basis for allocations, as well as for reporting based on:

- Statistics
- Statistic Lines report data sources

After you successfully upload statistics into Workday, you can view them by accessing the **View Statistic** report.

Instead of delivering a predefined spreadsheet template for uploading statistics, Workday enables you to generate and customize a spreadsheet template based on the *Put Statistic* web service operation. To bring statistics into Workday, use these steps to set up the EIB interface, generate the spreadsheet, and launch an upload.

### Steps

1. Set up the EIB upload process.  
See [Set Up Inbound EIB](#).
2. Generate and modify a spreadsheet template for the upload.  
See [Customize EIB Spreadsheet Template](#).
3. Launch the upload and verify the results.  
See [Launch EIB Spreadsheet Upload](#).

### Related Information

#### Concepts

[Concept: EIB Template Models and Spreadsheet Templates](#)

#### Reference

[The Next Level: Statistic Ledger Accounts vs Statistic Definitions](#)

## Steps: Set Up Statistic Ledger Accounts

### Prerequisites

Security: *Set Up: Accounts* domain in the Common Financial Management functional area.

Review [Concept: Statistic Ledger Accounts](#).

### Context

Setting up a statistic ledger account enables you to:

- Access statistics from the journal or plan lines data source.
- Use custom validations or business processes for both actuals and budgeted data.
- Control entries based on period status.
- Create ledger account summaries for reporting
- Use a workflow and prepare entries for statistics.
- Have a plan amendment process for statistical data.
- Upload statistics by accounting date instead of accounting period. Example: You can upload statistics daily rather than monthly.

## Steps

### 1. Create Ledger Account Types.

Create a balance sheet account type specifically for statistics.

### 2. Set Up Account Sets.

- a. Create a statistic ledger account in the account sets. Use a separate child account set for statistics accounts that you want to add to the parent chart of account set.

- b. Determine whether you need a clearing account or if it should post to the same ledger account to create balanced entries.

Include numberings for ledger account summaries to support reporting. Example: 99999s.

- c. Restrict ledger accounts to companies if applicable.

### 3. (Optional) Create Journal Sources.

You can create a journal source specifically for statistics.

### 4. (Optional) Create a book code for statistics.

See: [Steps: Create Book Codes and Books](#)

### 5. (Optional) Configure Custom Validation Messages.

Workday recommends creating custom validations for statistic ledger accounts to ensure that you:

- Use 1 account type to avoid generating retained earnings.
- Use the book code and journal source effectively when using statistic accounts. Example: Don't use a blank book for statistic accounts.
- Use required worktags that are specific to certain statistic accounts.
- Don't use intercompany with statistic accounts. This prevents generation of additional intercompany payables and receivables.

### 6. (Optional) Create Business Process Condition Rules.

You can create condition rules for the statistic ledger account, book code, or journal source for additional approvals.

### 7. Create Accounting Journals.

Create an accounting journal for the statistic ledger account.

As part of the journal entry, you can use quantity with the statistic ledger account and amount. You can use quantity in reports but not in an allocation definition. Example: Number of shares with equity.

### 8. Set Up Currency Translation Methods.

- a. Create a new translation rate type specifically for statistic ledger accounts. Load in a 1:1 translation for this new rate type to ensure there are no translation issues when doing multicurrency reporting. You only need to load once for all applicable currencies.

- b. Create a new translation method specifically for statistic ledger accounts. This can be similar to the current translation method but will reference the rate type you created.

- c. Update any existing translation rule sets to include a mapping of the statistic ledger account and ledger account summaries to the new translation method.

## Example

Your company wants to keep track of statistics at the company level only. Example: Number of shares outstanding; volumes; assets owned; assets under management. You can use a statistic ledger account to keep track of these statistics at the company and ledger account level. You can also restrict these ledger accounts so that only certain companies can use them. This enables you to enter the statistics and doesn't require you to use an unnecessary worktag.

## Next Steps

You can report on statistic ledger accounts using the **Journal Lines** or **Plan Lines** report data sources. You can filter lines based on the ledger account.

To exclude statistics from reporting, you can either record them to their own book code or exclude the ledger account type from reporting.

## Define Statistic Types

### Prerequisites

- Create accounting ledgers.
- Create plan structures.
- Security: *Set Up: Statistics* domain in Common Financial Management functional area.

### Context

Statistic definitions establish the statistic types, business dimensions, and ledgers or plan structures to base statistics upon. Dimensions could include regions, cost centers, or custom dimensions such as stores.

### Steps

1. Access the **Create Statistic Definition**.
2. As you complete the task, consider:

Option	Description
<b>Statistic Type</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Activity</i> for statistics that change from period to period, such as number of customers or number of units sold. The statistic amount is either the period activity or the activity for multiple periods.</li> <li>• <i>Balance</i> for statistics that don't often change, such as facility square footage or number of campuses. Workday uses the period end balance as the statistical amount and uses the last period with a balance for basis calculations.</li> <li>• <i>Percent</i> for fixed percentages that include allocated charges or marketing plans. Workday uses the period end balance as the statistical amount.</li> </ul>
<b>Required Dimensions</b>	<p>Select 1 or more worktags.</p> <p>Workday automatically populates worktags identified by administrators as required on the <b>Maintain Worktag Usage</b> task. Primary worktag types display as standalone columns on the <b>Create Statistic</b> task.</p> <p>These rules apply for required worktag dimensions. You can't:</p> <ul style="list-style-type: none"> <li>• Remove worktags that are required on the <b>Maintain Worktag Usage</b> task.</li> <li>• Remove worktags that are in use by a statistic.</li> <li>• Reclassify <b>Required Dimensions</b> as <b>Optional Dimensions</b>.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Delete a required dimension after you've added it to a statistic definition.</li> </ul>
<b>Optional Dimensions</b>	<p>(Optional) Select 1 or more worktags that aren't in use as a required dimension. You can configure <b>Optional Dimensions</b> that:</p> <ul style="list-style-type: none"> <li>Use worktags.</li> <li>Are blank.</li> </ul> <p>You can reclassify <b>Optional Dimensions</b> as <b>Required Dimensions</b>.</p>
<b>Ledger/Plan Structure</b>	Associate the statistical values with either 1 or more ledger types or 1 or more plan structures, but not a combination of both.
<b>Include Company</b>	Sets the company as a required field on the statistic. Example: When you want to specify companies on statistics for intercompany allocations.
<b>Used by Allocations</b>	Click the number to view details on the allocations using the statistic definition.

## Result

Use the statistic definitions to create statistics. Workday applies the dimensions and statistics when processing allocations and financial reports.

## Next Steps

Specify values for the statistics using the **Create Statistic** task.

## Enter Statistic Values

### Prerequisites

- Create a statistic definition.
- Security: *Process: Statistics* domain in the Common Financial Management functional area.

### Context

Use the statistic type definitions to define the period and company or worktag combinations from which to draw statistic values.

### Steps

- Access the **Create Statistic** task.
- As you complete the task, consider:

Option	Description
<b>Statistic Definition</b>	Select the statistic definition with the statistic type and dimensions that are required for the statistic.
<b>Ledger/Plan Structure</b>	You can associate the statistical values to 1 or more ledger types or plan structures. If you

Option	Description
	<p>selected ledger types and plan structures on the statistic definition, you can select values for either a ledger (actuals) or plan.</p> <p>Only the plan structures with matching worktag dimensions are available for selection.</p> <p>Select ledger types to include statistics for actuals in financial, custom, or composite reports. Select plan structures for plan statistics in custom or composite reports.</p>
<b>Period</b>	Lists fiscal periods that don't have a statistic.
<b>Required Dimensions</b> <b>Optional Dimensions</b>	<p>Displays worktags for the dimensions you entered on the statistic definition. You define which worktags display as stand-alone columns or within the <b>Additional Worktags</b> column on the <b>Maintain Worktag Usage</b> task.</p>
<b>Values Total</b>	<p>Financial reports display actual or plan statistic line values by selected period. You can also use statistic line values as an allocation basis.</p>

3. Enter dimension values in the **Statistic Values** grid.

The fields that display in the grid are determined by the worktag types administrators set up on the **Maintain Worktag Usage** task. Primary worktag types display as standalone columns in this grid.

Option	Description
<b>Company</b>	<p>If you selected the <b>Include Company</b> check box on the statistic definition, you must enter a company for each statistical value row.</p>
<b>Plan Name</b>	<p>For custom plan structures, you can specify a plan name on each statistic line. Unique plan names enable you to enter different statistical values for each plan using the custom plan structure.</p>
<b>Additional Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p> <p>Select from the list of additional worktags for the optional and required dimensions you entered on the statistic definition. Select 1 worktag for each required dimension. You can only use a worktag as an optional dimension or a required dimension, but not both.</p> <p>When you restrict cost center or supplier to specific companies, Workday displays only the</p>

Option	Description
	cost centers and suppliers associated with the company.

## Result

- Allocations: Workday allocates source amounts based on the statistic values across the dimensions.

Example: You can allocate costs to each store based on sales by division (dimension).

Workday allocates source funds and prorated amounts to a target account and worktag combination based on the statistical values. You can:

- Report on statistics, such as plans versus actuals, across the various dimensions in financial reports.
- Report key performance indicators (KPIs) for your business, such as customer attrition by store or region.
- Record statistics in ledgers to enhance reporting or use them in allocations.
  - Set up allocations using an allocation definition that specifies a statistic definition.
  - Create an actuals versus plans report including statistic values or calculations with statistics.
  - Create a financial statement with the statistic definition as part of the financial statement definition.

To add new statistics or update existing statistics in Workday, use the Enterprise Interface Builder (EIB).

## Related Information

### Concepts

[Concept: Allocations](#) on page 180

## Concept: Statistic Ledger Accounts

You can use statistic ledger accounts to record and track quantitative or qualitative data for management and reporting purposes. Statistic ledger accounts don't have a direct impact on financial statements or the general ledger. OfficeConnect and Adaptive Planning support statistic ledger accounts.

Example 1: Your company is a hotel and you want to keep track of the number of filled and vacant rooms throughout the year. Instead of viewing this data by period, you want to view the specific days for reporting purposes. You can create a statistic ledger account to track the activity of the rooms. You can load the number of vacant and filled rooms each day or at the end of the month. Additional worktags can help break down the additional details, such as location.

Example 2: As part of the statistic loading process you want controls in place, such as business process approvals and custom validations, to ensure that you create accurate statistics. When you load the amounts into the statistic ledger accounts, it uses the **Accounting Journal Event** business process and custom validations. You can create condition rules to validate the entries before submission using the custom validations. You can also add condition rules to the business process for routing of approvals.

### Recommendations

If you need to keep track of balances or activities, you can:

- Roll forward balance sheet accounts to the next year.
- Use the year-end closing rules to ensure that the rolled forward balance goes to zero for the account and the rolled amount goes to a clearing statistic account.
- Decide on the ledger account booking (debits and credits) and how you'll use and report on the statistics.

- Determine whether you need a clearing account or if statistics should post to the same ledger account to create balanced entries.
- If you use a clearing account:
  - Ensure there's a clearing account per balance sheet or income statement ledger account type. This helps you avoid generating retained earnings.
  - Filter to report on the relevant statistic accounts and exclude the clearing account.
  - If posting to the same ledger account, consider how you'd like the worktags to display on the debit and credit.
  - If reporting on the debit side, determine whether the credit side should have no worktags or have the same worktags.
  - Same worktags: Enables the line to report as a net zero when looking at debit minus credit. This can be useful for reporting on only 1 side, but can cause issues if you pull data into allocations.
  - No worktags: Enables you to differentiate between the lines for statistics and for clearing. We don't recommend it if you plan to have statistic lines with no worktag values. Example: Only company and ledger account statistic.

**Note:** Ensure that you don't generate retained with the statistic journals. Even if the total balances net to zero, both the [Redesigned Retained Earnings](#) feature and the [Included Worktag Types](#) option for retained earnings in the [Edit Tenant Setup - Financials](#) task can still result in generating or rolling forward retained earnings with unintended worktag combinations. Note: For this reason, Workday doesn't recommend income statement accounts.

## Related Information

### Tasks

[Steps: Set Up Statistic Ledger Accounts](#) on page 155

### Reference

[The Next level: Statistic Ledger Accounts vs Statistic Definitions](#)

## Reference: Statistic Ledger Accounts and Statistic Definitions Comparison

When using statistics as the basis for allocations or for reporting purposes, Workday supports 2 types of methods: statistic ledger accounts and statistic definitions. Workday recommends using statistic ledger accounts over statistic definitions when possible because statistic ledger accounts provide better reporting performance. If you have performance issues with the statistics definitions framework, we recommend that you use the statistic ledger accounts method instead. Compare the 2 methods:

	<b>Statistic Ledger Accounts</b>	<b>Statistic Definitions</b>
Ability to enter and view statistics by accounting date?	Yes.	No. You can only enter and view statistics by period.
Requires dimensions?	No. You only need a company and ledger account combination.	Yes.
Ability to restrict ledger accounts to companies?	Yes.	No.
Supports custom objects?	Yes.	No.
Ability to control entries based on period status?	Yes.	No.
Ability to use ledger account summaries for reporting?	Yes.	No.
Ability to make incremental additions or changes to amounts?	Yes.	No.
Efficient report performance?	Yes.	Slower reporting performance for large volumes.
Supported by OfficeConnect?	Yes.	No.
Requires you to expand the chart of accounts?	Yes.	No.
Supports custom validations and business processes?	Yes. You must set up validations to ensure there's no impact to financial statements.	No.
Supports high-volume data extracts?	Yes.	No.
Supports Adaptive Planning?	Yes.	Yes but requires additional configuration.
Supports reporting use cases?	Yes.	Yes but requires additional data sources that aren't as efficient.
Overlaps with actuals and ledger data?	Yes.	No.
Separate worktag usage from accounting journals?	No.	Yes.
Uses the percent statistic type?	No.	Yes.
Ability to replace all when loading statistics?	No.	Yes.
Separate reporting data source from journal or plan lines?	No.	Yes.
Separate web services from journal or plan lines?	No.	Yes. Uses web services specific to statistic definitions.
Requires you to balance entries?	Yes.	No.
Requires additional currency rate type for translated results?	Yes.	No.

	<b>Statistic Ledger Accounts</b>	<b>Statistic Definitions</b>
Displays in delivered reports for journal lines unless filtered?	Yes.	No.

**Related Information****Reference**

[The Next level: Statistic Ledger Accounts vs Statistic Definitions](#)

## Allocations

---

### Setup Considerations: Allocations

You can use this topic to help make decisions when planning your configuration and use of allocations. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Allocations is a financial process that enables you to:

- Distribute ledger activity from 1 organization to another.
- Assign costs within the same company or across companies.

When you process allocations, Workday creates operational journals to record the allocations on the ledgers.

### Business Benefits

You can:

- Maintain more flexibility and greater control over accounting results.
- Perform complex allocations automatically by defining arithmetic calculations, reducing time and manual effort.
- Apply reusable filter conditions to your source or basis ledger transactions, to improve configuration and allocation performance.

### Use Cases

An account manager or financial analyst can:

- Distribute IT costs over all cost centers based on headcount.
- Group allocations by worktag, reducing the number of allocation definitions you need to configure. This saves you time when you manage large amounts of data during close.
- Allocate marketing expenses to regions based on revenue per region.

## Questions to Consider

Questions	Considerations
What can you do in Workday if your basis, such as headcount, is a statistic?	Create a statistic definition so you don't have to create 1 retrospectively when you're creating your allocation definition.
What kinds of sources do you have? Are there any you want to exclude from the allocations?	You can filter your allocation definitions so that you only include the sources and basis that you need. You can specify: <ul style="list-style-type: none"> <li>• Fixed rate amounts.</li> <li>• Fixed source amounts.</li> <li>• Ledgers.</li> <li>• Plan structures (for budgets).</li> </ul>
What kind of basis types do you have?	You can calculate proration for: <ul style="list-style-type: none"> <li>• Headcount, using percentages.</li> <li>• Ledger accounts.</li> <li>• Statistic values.</li> </ul>
How do alternate ledger currencies affect allocations?	<p>When you run an allocation for a company that has an alternate ledger currency configured, Workday creates either a single-source allocation or a multisource allocation.</p> <p>Workday generates different accounting for each type of allocation. The configuration of the allocation definition determines which type is created.</p> <p>See <a href="#">Concept: Alternate Ledger Currency in Allocations</a> on page 182.</p>

## Recommendations

To process allocations faster:

- Create a statistics definition with a value of 100% and use that as your basis so that Workday can bypass searching every combination of ledger account.
- Display no more than 50,000 result lines to reduce the number of allocation calculations.
- Map only the worktags that you need to the target and offset to save yourself manual effort, in addition to reducing processing time.

## Requirements

If you want to select a:

- Headcount basis type, create a headcount definition.
- Fixed percent pro rata basis type, create a statistic definition with a statistic type of *Percent*.

## Limitations

You can only:

- Allocate from budget plan structures when the budgets are approved and no longer in a draft state.
- View up to 10,000 lines on a statistic without needing to export it.

- Configure up to 53 allocation downstream dependencies when you schedule or mass finalize allocations unless you configure group sets to be dependent on each other.

## Tenant Setup

You can group allocations by the fiscal periods on budget dates.

## Security

In the Financial Accounting functional area:

Domains	Considerations
<i>Process: Allocations</i>	Users can process allocations.
<i>Set Up: Allocations</i>	Users can create allocation definitions that specify the: <ul style="list-style-type: none"> <li>Basis.</li> <li>Offsets.</li> <li>Sources.</li> <li>Targets.</li> </ul>

## Business Processes

Business Process	Considerations
<i>Allocation Run Event</i> in the Financial Accounting functional area.	Enables you to run allocations across a company. Workday sets the allocation status to <b>Pro Forma</b> . For allocations that result in a journal, the event also creates a pro forma journal.
<i>Allocation Run Intercompany Event</i> in the Financial Accounting functional area.	Enables you to run allocations across multiple companies. The event creates a pro forma intercompany journal for each company.
<i>Budget Amendment Event</i> and its security policy in the Budgets functional area.	Enables you to create draft budget amendments for allocations.

## Reporting

- The **Find Allocations** report displays allocation results.
- The **Allocation Work Area** report provides detailed information for month end processing.

## Integrations

Web Services	Considerations
<i>Get Allocation Definitions</i>	Enables you to fetch allocation definitions or allocation group sets.
<i>Get Allocation Group Sets</i>	
<i>Get Financial Condition Rules</i>	Retrieves existing financial condition rules.
<i>Put Allocation Definition</i>	You can:
<i>Put Allocation Group Set</i>	<ul style="list-style-type: none"> <li>Export data to XML files and reconfigure allocation definitions and allocation group sets before resubmitting the web services.</li> </ul>

Web Services	Considerations
	<ul style="list-style-type: none"> <li>• Use a unique reference ID to either overwrite existing allocation definitions or allocation group sets or create new allocation definitions or group sets.</li> </ul>
<i>Put Financial Condition Rule</i>	<p>You can:</p> <ul style="list-style-type: none"> <li>• Export data to XML files and reconfigure financial condition rules before resubmitting the web service.</li> <li>• Use a unique reference ID to either overwrite existing financial condition rules or create new rules.</li> </ul>

## Connections and Touchpoints

Workday amends your budgets to reflect your allocations.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Concepts

[Concept: Allocations](#) on page 180

#### Reference

[What's New in Workday: Alternate Ledger Currency in Allocations](#)

[The Next Level: Statistic Ledger Accounts vs Statistic Definitions](#)

#### Examples

[Example: Set Up the Journal Lines by Allocation Report](#) on page 185

## Steps: Set Up Allocations

### Prerequisites

- Review setup considerations for allocations.
- [Define Statistic Types](#).

You can use statistics as the basis for allocations in allocation definitions by defining statistic types and entering statistic values.

- Security: *Set Up: Allocations* and *Process: Allocations* domains in the Financial Accounting functional area.
- Configure the *Allocation Run Event* and *Allocation Run Intercompany Event* business processes and security policies in the Financial Accounting functional area.
- Configure the *Allocation Finalize Event* and *Allocation Finalize Intercompany Event* business processes and security policies in the Financial Accounting functional area.

- For allocations resulting in a budget amendment:
  - Add the *Initiate Budget Amendment Event* service step to the *Allocation Finalize Event* business process.
  - Configure the *Budget Amendment Event* business process and security policy in the Budgets functional area.

## Context

Set up allocations for an organization to automate the distribution of costs or other ledger amounts for either actuals or budgets.

## Steps

1. (Optional) Access the **Edit Tenant Setup - Financials** task and select the **Group Allocations by Budget Date** check box in **Budget Options**.

You can opt in to group allocations by the fiscal periods on budget dates. When you select this check box, Workday displays a budget date column in these tabs on the allocation results:

- **Offset**
- **Source**
- **Target**

See [Reference: Edit Tenant Setup - Financials](#).

2. [Create Allocation Definitions](#) on page 167.
3. [Group Allocation Definitions](#) on page 174.
4. After you save allocation group sets, select **Update Dependencies** from the related actions menu of the allocation group set to access the **Update Allocation Group Set Dependencies** task.
5. [Test Allocations](#) on page 175.

## Result

For a list of allocations-related reports, access **Workday Standard Reports** and select the *Set Up Financial Accounting* category.

## Create Allocation Definitions

### Prerequisites

Security: *Set Up: Allocations* domain in the Financial Accounting functional area.

## Context

Allocation definitions specify the source, basis, target, and offset of allocations. For faster processing, group related allocation definitions into allocation group sets.

To display worktag types, ensure that you've defined them for accounting journal transactions in the **Maintain Worktag Usage** report.

**Note:** Workday doesn't automatically assign related worktags. Select where your worktags are from in the **Target** section.

## Steps

1. Access the **Create Allocation Definition** task.

As you complete the sections, consider:

Option	Description
<b>Currency Rate Type</b>	<p>Select the rate type to use for translating multicurrency allocations between companies. This selection overrides any currency rate type set at the company or tenant level.</p> <p>When you don't select a currency rate type here, Workday uses the <b>Default Currency Rate Type Override</b> set for the company on the <b>Edit Company Accounting Details</b> task. When you haven't set a currency rate type override for the company, Workday uses the default currency rate type configured on the <b>Maintain Currency Rate Types</b> task.</p>
<b>Account Set</b> <b>Fiscal Schedule</b>	<p>Select the ledger accounts and business calendar for the allocation definition.</p>
<b>Used By</b>	<p>Select the source companies for this allocation. Use the allocation definition across companies that share account sets and fiscal schedules. The allocation process generates separate results for each company that uses the allocation definition.</p>
<b>Create Reversal</b>	<p>Select to create reversal journal entries on the first day of the next period. Workday creates reversing entries after you initiate the <b>Run Mass Finalize for Allocations</b> task. Before you run the allocations process, you can change the reversal date to a date after the run date in the next fiscal period. Workday posts the reversal journal when the ledger period for the selected date opens.</p> <p>You can't create reversal journal entries for budget amendments.</p> <p>When you rerun allocations with reversals, Workday doesn't reuse existing reversal journals, but creates new ones.</p>
<b>Used in Group Set</b>	<p>Displays after you add the definition to a group set.</p>
<b>Optional Balancing Worktag</b>	<p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p>

Option	Description
	<ul style="list-style-type: none"> <li>Inherit optional balancing worktags based on the worktag types selected.</li> <li>Generate due to and due from entries to balance transactions.</li> </ul>
<b>Inactive</b>	Select when the allocation definition isn't ready for use or to discontinue use. The definition can't be part of an allocation group set or have unfinalized or uncanceled allocation results.

2. In the **Source** section, specify the source amounts to allocate.

As you complete the section, consider:

Option	Description
<b>Source Type</b>	See <a href="#">Reference: Source Types</a> on page 188.
<b>Allocation Percent</b>	Select what percentage of the ledger amounts from the source journal lines to allocate. Workday automatically populates 100 for all source types. For <i>Fixed Rate Amount</i> or <i>Fixed Source Amount</i> , Workday restricts the allocation percent to 100.
<b>Fixed Amount</b>	Enabled only when you select <i>Fixed Source Amount</i> or <i>Fixed Rate Amount</i> . For: <ul style="list-style-type: none"> <li><i>Fixed Source Amount</i>, enter the total amount you want to allocate.</li> <li><i>Fixed Rate Amount</i>, enter the rate you want to apply to a specified fixed charge.</li> </ul>
<b>Ledger/Plan Structure</b>	Select whether to allocate amounts from actuals or a financial plan. You can select from financial plan structure types that enable amendments. You can group budget dates from actuals, but not from financial plans.
<b>Book Code</b>	Filter the source journal lines used in the allocation by a specific book code. You can't filter plans by book code. If you don't select a book code, Workday returns only transactions with blank book codes.
<b>Ledger Account / Ledger Account Summary</b>	You can select retired accounts as the source, but not for your target and offset allocation components. The allocation process takes activity only, whether you select a balance sheet or income statement account. It also summarizes activity when the group set that contains the allocation definition is for a summary period. When the source type is a plan structure, you can filter only on source ledger summaries if the

Option	Description
	<p>related plan structure contains a ledger summary hierarchy level.</p> <p>Workday only groups budget dates if the <b>Source Filter Conditions</b> grid displays values.</p>
<b>Worktags</b>	<p>The allocation process treats worktags of:</p> <ul style="list-style-type: none"> <li>Different types as an AND condition. Example: Cost center and region.</li> <li>The same type as an OR condition. Example: Western region or eastern region.</li> </ul>
<b>Financial Condition Rule</b>	<p>You can select a financial condition rule for ledger or plan structure source types, enhancing your filtering capabilities.</p>

3. In the **Basis** section, define how to distribute the source amounts.

As you complete the section, consider:

Option	Description
<b>Ledger/Plan Structure</b>	<p>Select whether to distribute the source amounts based on actuals or a financial plan. You can select from financial plan structure types that enable amendments.</p>
<b>Allocation Method</b>	<p>Select a methodology for distributing allocated amounts.</p> <p>See <a href="#">Reference: Allocation Methods</a> on page 189.</p>
<b>Basis Type</b>	<p>See <a href="#">Reference: Basis Types delete</a> on page 189.</p>
<b>Dimension</b>	<p>Select the worktag or value used to calculate the basis percentages. Example: Calculate proration by cost center, region, or any other worktag or worktag combination. You can only map worktags specified as dimensions in the target from basis.</p> <p>We support up to 3 dimensions when using the <b>Spread Even</b> allocation method. Don't specify more than 3, as additional dimensions can result in unexpected results.</p>
<b>Group By</b>	<p>Select up to 5 worktag types to group the allocation definition.</p> <p>You can't select a worktag type if you've already selected 1 on the <b>Dimension</b> field.</p> <p>If you specify a worktag type, it must be the same as the worktag type you select on the <b>Target</b> field.</p>
<b>Company</b>	<p>When the <b>Allocation Method</b> is <i>Pro Rata</i> and the <b>Basis Type</b> is <i>Headcount</i> or <i>Statistic Values</i>, you can filter the basis by company.</p>

Option	Description
	<p>When you don't specify company as a basis filter condition, Workday evaluates the basis based on the source company for the allocation. When you do filter by company, Workday evaluates the basis based on the combined results for the companies specified in the basis filter.</p> <p>When the <b>Allocation Method</b> is <i>Pro Rata</i> and the <b>Basis Type</b> is <i>Ledger Accounts (Multiple Companies)</i>, Workday requires a company on the basis filter condition when you select a ledger account or ledger account summary.</p>
<b>Ledger Account / Ledger Account Summary</b>	<p>When the <b>Allocation Method</b> is <i>Pro Rata</i> and the <b>Basis Type</b> is <i>Ledger Accounts</i> or <i>Ledger Accounts (Multiple Companies)</i>, you can filter the basis by ledger account or ledger account summary.</p>
<b>Worktags</b>	<p>When the <b>Allocation Method</b> is <i>Spread Even</i>, or when the <b>Allocation Method</b> is <i>Pro Rata</i> and the <b>Basis Type</b> is <i>Headcount</i> or <i>Statistic Values</i>, you can filter the basis by worktags.</p>
<b>Financial Condition Rule</b>	<p>When the <b>Basis Type</b> is <i>Ledger Account</i> or <i>Ledger Accounts (Multiple Companies)</i>, you can also select a financial condition rule to add more filter criteria to the basis calculation.</p> <p>A condition rule is a method of checking specified values with logical comparison operators and consists of 1 or more logical statements, separated by the logical operators AND or OR.</p>
<b>Translation Currency</b>	<p>Select the account translation currency Workday will use for prorating multiple actuals ledger accounts. Select a translation currency if you're prorating more than 1 actuals ledger accounts.</p>
<b>Account Translation Rule Set</b>	<p>Select the currency translation rule set that Workday will use during proration of multiple actuals ledger accounts.</p>

4. In the **Target** section, define where to record the journal entry or budget amendment for the allocated amounts.

As you complete the section, consider:

Option	Description
<b>Ledger/Plan Structure</b>	<p>Select whether to allocate to actuals or plan. You can select from financial plan structure types that enable amendments. Selection of a plan structure limits target account and worktag mapping to its allowable accounts, account summaries, and worktags. The plan structure for the offset is automatically the same as the target.</p> <p>You can group budget dates from actuals only.</p>

Option	Description
<b>Budget Amendment Type</b>	Select the type of amendment to create, such as original or allocation amendment, to help you identify the budget amendment later on for reporting.
<b>Company is from</b>	<p>The company where you want to record the target journal entry. You can only create a budget amendment for the source company.</p> <ul style="list-style-type: none"> <li><b>Source:</b> Records to the same company that you specified in the <b>Source</b> section of the allocation definition. The source of any allocation can come only from a single company. If more than 1 company uses the allocation definition and the target <b>Company is from</b> is the same as the source, Workday allocates the costs within each company.</li> <li><b>Basis:</b> For proration, this option enables you to set basis companies as the target using the values from the <b>Company</b> column on the <b>Basis Filter Conditions</b> grid.</li> <li><b>User Specified:</b> Select to specify the target company in the <b>Company</b> field. You can select from the companies that you've defined as intercompany affiliates to the source company.</li> </ul> <p><b>Note:</b> If the target company isn't from the source, the allocation process generates an intercompany accounting journal.</p>
<b>Ledger Account is from</b>	<p>The accounts where you want to record the target journal entry or budget amendment.</p> <ul style="list-style-type: none"> <li><b>Source:</b> Record to the same ledger accounts that you specified in the <b>Source</b> section of the allocation definition.</li> <li><b>User Specified:</b> Summarize the allocated amounts and record to a single ledger account that you specify in the <b>Ledger Account</b> field.</li> </ul>
<b>Ledger Account</b>	<p>If you select <b>Source</b> or <b>User Specified</b> from the <b>Company is from</b> and <b>Ledger Account is from</b> fields, the <b>Ledger Account</b> field displays ledger accounts that are valid for the specified companies.</p> <p>When you restrict ledger accounts to specific companies, Workday only validates the company and ledger account combinations when you select <b>OK</b> to submit the allocation definition.</p>
<b>Book Code</b>	To redistribute and account for activity in a particular book code, select the book code to post the journal lines resulting from the allocation to. You can use a different book code than the

Option	Description
	ones in your allocation source and basis. Book code isn't available for budget amendment.
<b>Worktag Mapping</b>	<p>Use to include 1 or more worktags in the target journal entry or budget amendment for the allocation. For each <b>Worktag Type</b> that you include, specify whether you want to use:</p> <ul style="list-style-type: none"> <li>The same worktag values as the <i>Source</i> section.</li> <li>The same worktag values as the <i>Basis</i> section.</li> <li>A <i>User Specified</i> worktag value that you select in the <b>User Entered Value</b> field.</li> </ul> <p>When you restrict cost center or supplier to specific companies, Workday only validates the company and cost center or supplier combinations when you click <b>OK</b> to submit the allocation definition.</p> <p>If you can't find a worktag, ensure that the worktag type is defined for usage with Accounting Journal in the <b>Maintain Worktag Usage</b> report.</p>

5. In the **Offset** section, define the balancing side of the allocation accounting to relieve the source of the amounts allocated.

For the offsetting journal entry and budget amendment, the allocation process can use either the same company as the source (set in the **Used By** field) or you can select an alternative company, which reduces the number of intercompany journal lines that you produce and eliminates the need to maintain multistep intercompany allocations.

As you complete the section, consider:

Option	Description
<b>Company is from</b>	<p>The company where you want to record the offset journal entry or budget amendment.</p> <ul style="list-style-type: none"> <li><i>Source:</i> Records to the same company that you specified in the <b>Used By</b> section of the allocation definition. The source of any allocation can come only from a single company. If more than 1 company uses the allocation definition and the offset <b>Company is from</b> is the same as the source, Workday allocates the offset within each company.</li> <li><i>User Specified:</i> Select to specify the offset company in the <b>Company</b> field.</li> </ul> <p><b>Note:</b> You can only select a company that has the same currency as your source company.</p>
<b>Ledger Account is from</b>	<p>The accounts where you want to record the offset journal entry or budget amendment.</p> <ul style="list-style-type: none"> <li><i>Source:</i> Record to the same ledger accounts that you specified on the <b>Source Filter Conditions</b> grid.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li><i>User Specified:</i> Summarize the allocated amounts and record to a single ledger account that you specify in the <b>Ledger Account</b> field.</li> </ul>
<b>Ledger Account</b>	In the <b>Ledger Account is from</b> field, if you select <i>User Specified</i> , you can select a specific ledger account for the company.
<b>Worktag Mapping</b>	<p>Use to include 1 or more worktags in the offset journal entry or budget amendment of the allocation. For each <b>Worktag Type</b> that you include, specify whether you want to use the same worktag values as the <i>Source</i> section or a <i>User Specified</i> worktag value that you select in the <b>User Entered Value</b> field.</p> <p>When you restrict cost center or supplier to specific companies, Workday only validates the company and cost center or supplier combinations when you click <b>OK</b>.</p>

## Result

Use the new allocation definitions in an allocation group set. Revised allocation definitions produce updated results when run.

If your allocation definition produces more than 50,000 journal lines, Workday recommends that you split the allocation definition.

## Next Steps

Group allocation definitions into sets for processing and to establish interdependencies.

## Group Allocation Definitions

### Prerequisites

- [Create Allocation Definitions](#).
- Security: *Set Up: Allocations* domain in the Financial Accounting functional area.

### Context

By grouping allocation definitions, you can:

- Run allocations for a particular company and time frame (monthly, quarterly, annually).
- Set interdependencies between allocations within and between groups so that they run in order.
- Monitor allocation processing in an organized manner.

You can't change the details of an allocation group set that has pending allocations. Cancel or finalize pending allocations before changing these settings.

## Steps

1. Access the **Create Allocation Group Set** task.
2. As you complete the **Details** section, consider:

Option	Description
<b>Time Frame</b>	<p>Workday uses your selection to determine the time frames available for processing allocation definitions in a group set.</p> <p>When you run your allocation group set:</p> <ul style="list-style-type: none"> <li>• Workday aggregates source amounts across the periods in the selected time frame.</li> <li>• The basis behavior can change. Example: When you use ledger accounts, Workday aggregates those ledgers across the selected time frame.</li> <li>• Workday uses the last valid period in the selected time frame for statistics.</li> </ul>
<b>Ledger/Plan Structure</b>	<p>You can select 1 or more plan structures that you specified as targets in your allocation definitions.</p>
<b>Inactive</b>	<p>Workday limits you to 1 active allocation group set for each allocation definition.</p>
<b>Allocation Definitions Included in Group</b>	<p>If your allocation group set is active, you can only select an allocation definition that isn't already in use by another allocation group or group set for the same company.</p>

## Example

You want to include facilities costs as part of your marketing costs before allocating those marketing costs to sales. Create an allocation group set, and make the *Marketing Cost to Sales* allocation definition dependent upon the *Facilities* allocation definition.

## Next Steps

Test allocations.

### Related Information

#### Tasks

[Schedule Allocation Runs](#) on page 178

## Test Allocations

### Prerequisites

- Ensure your allocation definitions are in allocation group sets. See [Group Allocation Definitions](#).
- Security: *Process: Allocations* domain in the Financial Accounting functional area.

## Context

You can test your allocation definitions to ensure that your allocation methodologies produce the expected results.

**Note:** When you test your allocation definitions, you won't post any journals to the ledger.

## Steps

1. Access the **View Allocation Definition** report.
2. From the related actions menu of an allocation definition, select **Allocation Definition > Test Allocation**.
3. As you complete the task, consider:

Option	Description
<b>Company</b>	Select from the companies that use this allocation definition.
<b>Ledger Period</b>	Select the time range for which you want to test the allocation definition. For the selected company, available options depend on the time frame of the allocation group set that contains the selected allocation definition.
<b>Ledger Year</b>	
<b>Summary Interval</b>	

4. After the process completes, click the **Allocation** magnifying glass in the **Allocations to be Processed** grid to view the allocation results.
5. As you review the report, verify:

Option	Description
<b>Source Details</b>	Click to view the source transaction that the allocation process used for its allocation calculation. You can also view the total amount and percent that the process allocated to the target journal lines or budget amendment.
<b>Basis Details</b>	To see how the allocation processes allocated amounts, click to view the basis settings. You can also see the amounts used in the basis calculation.
<b>Target</b>	The resulting journal lines or plan lines created by the allocation. Displays the debit or credit amounts by target ledger account and worktags that the allocation process redistributes from the source amounts.
<b>Offset</b>	The journal line or plan line debit or credit amounts by ledger account and worktags, which offset the amounts from the target.
<b>Source</b>	<p>Displays the debit and credit amounts that the allocation process allocates to the target journal lines. It displays by source ledger account and worktags.</p> <p>The source transaction journal lines or plan lines that the allocation process used as the pool for its allocation calculation.</p>

Option	Description
<b>Basis</b>	The amounts the allocation process used in its basis calculation, grouped by ledger account and worktag combination.

## Result

Workday saves the allocation results as *Draft* and doesn't generate a journal or budget amendment.

## Next Steps

- Edit allocation definitions and group sets as needed. Repeat allocation definition testing until you determine that the settings produce the expected results.
- Run the allocation at period end as part of your close process.

## Related Information

### Reference

[Reference: Source Types](#) on page 188

[Reference: Basis Types delete](#) on page 189

## Steps: Process Allocations

### Prerequisites

- Set up allocations. See [Steps: Set Up Allocations](#).
- Configure the *Allocation Finalize Event* and *Allocation Finalize Intercompany Event* business processes and security policy in the Financial Accounting functional area to include approval steps.

### Context

After you define your allocation methodologies, you can run allocations as part of your period close process.

### Steps

1. [Schedule Allocation Runs](#) on page 178.
2. Access the **Find Allocations** report.

Review the:

- Allocation results of any status to verify the success of the allocation run.
- Processing warnings and errors on the report.

(Optional) From the related action menu of allocations on the report, select:

- **View Accounting** to review the operational journal of an allocation, including journal status and journal lines. You can access this related action only if the allocation uses a plan structure as the source ledger. If the allocation has an actuals ledger, you can select the related action **View Accounting** on the allocation.
- **View Budget Amendment** to review the budget amendment for the allocation, including status and entries.

3. [Finalize Allocations](#) on page 179.

Finalize each allocation so that you move its journal from *Pro Forma* to *Posted* or budget amendment from *Draft* to *Available*.

#### 4. (Optional) Open the action item in **My Tasks**.

Verify and approve the final allocation results before posting the allocation journal or making the budget amendment available.

#### **Result**

You can use the finalized allocation results on financial statement reports.

#### **Related Information**

##### **Concepts**

[Concept: Allocations](#) on page 180

## Schedule Allocation Runs

#### **Prerequisites**

- Group your allocation definitions.
- [Define Intercompany Profiles](#).  
For intercompany allocations, set up intercompany profiles for each company.
- Configure the *Allocation Run Event* and *Allocation Run Intercompany Event* business processes and security policies in the Financial Accounting functional area. Workday only applies the *Allocation Run Intercompany Event* business process to allocations resulting in a journal.
- For budget allocations, configure the *Budget Amendment Event* business process and security policy in the Budgets functional area.
- Security: Process: *Allocations* domain in the Financial Accounting functional area.

#### **Context**

You can schedule an allocation run to create pro forma journals or draft budget amendments for allocations.

When you schedule an allocation run, you can process allocations for:

- A single allocation definition.
- Multiple allocation definitions.
- An allocation group set.

You can access the related actions menu of allocation definitions to process single allocations.

If your operational journals have more than 100,000 journal lines after you run allocations, consider splitting your allocation definitions to avoid performance degradation.

#### **Steps**

1. Access the **Schedule Allocation Run** task.
2. As you complete the task, consider:

Option	Description
<b>Disable Allocations Preview</b>	For faster processing, select to run but not display the allocations included in this run.
<b>Period</b>	Workday uses the time frame you select for the allocation group that includes the allocation definition.
<b>Year</b>	
<b>Summary</b>	

Option	Description
<b>Process Dependencies</b>	When you select this check box, Workday processes dependent allocations first.
<b>Dependent Allocations to Reprocess</b>	When you select the <b>Process Dependencies</b> check box, Workday automatically reruns dependent allocations. You can also rerun them manually.

3. (Optional) If you need to cancel an allocation, select **Allocation > Cancel** from the related actions menu.

You can cancel allocations with a status of *Draft*, *Pro Forma*, or *Final*.

Workday:

- Sets the status of the allocation and its journal or budget amendment to *Canceled*.
- Resets the status of any dependent allocations affected by the cancellation to *Requires Rerun*.

## Related Information

### Tasks

[Create Allocation Definitions](#) on page 167

[Group Allocation Definitions](#) on page 174

## Finalize Allocations

### Prerequisites

- Run allocations and review the pro forma allocation results. Complete any approval steps.  
**Note:** If you have an allocation result that continues to have a status of pro forma, remove all the dependencies from the allocation group set and rerun the allocation.
- Configure the *Allocation Finalize Event* and *Allocation Finalize Intercompany Event* business processes and security policies in the Financial Accounting functional area. Workday applies intercompany only to allocations resulting in a journal.
- For allocations resulting in budget amendments, add the *Initiate Budget Amendment Event* service step to the *Allocation Finalize Event* business process and configure the *Budget Amendment Event* business process and security policy in the Budgets functional area.
- Security: *Process: Allocations* domain in the Financial Accounting functional area.

### Context

By finalizing allocations, you can move:

- Journals from pro forma to posted.
- Budget amendments from draft to available.

**Note:** You can rerun finalized allocations. When you rerun a finalized allocation Workday cancels the allocation and resets the status to **Pro Forma**.

When an allocation includes dependencies, finalize the dependencies first.

You can finalize a single allocation using the **Allocation Work Area** report.

### Steps

1. Access the **Run Mass Finalize for Allocations** task.

2. As you complete the task, consider:

Option	Description
<b>Override Reversal Date</b>	Leave blank if you want to reverse allocations on the first day of the next fiscal period. Otherwise, select another date from the next fiscal period. You can't select a date from the current fiscal period.
<b>Finalize All Dependents</b>	When you select this check box, you can select <b>Show Dependent Allocations</b> and view the dependent allocations that are ready to be finalized.
<b>Allocations Available for Finalization</b>	You can only finalize allocations after Workday fully processes the allocation definition.
<b>Show Dependent Allocations</b>	Select to view upstream calculations that require approval.

### Next Steps

Run your financial statements.

## Concept: Allocations

In Workday financial accounting, you can use allocations to distribute ledger amounts, usually costs, from 1 organization to another based on a preconfigured definition. You can allocate the costs either within the same company or across companies to generate intercompany allocations. When you process allocations, Workday calculates and distributes the allocation amounts to each target. It then creates the operational journals to record the allocations in the ledger.

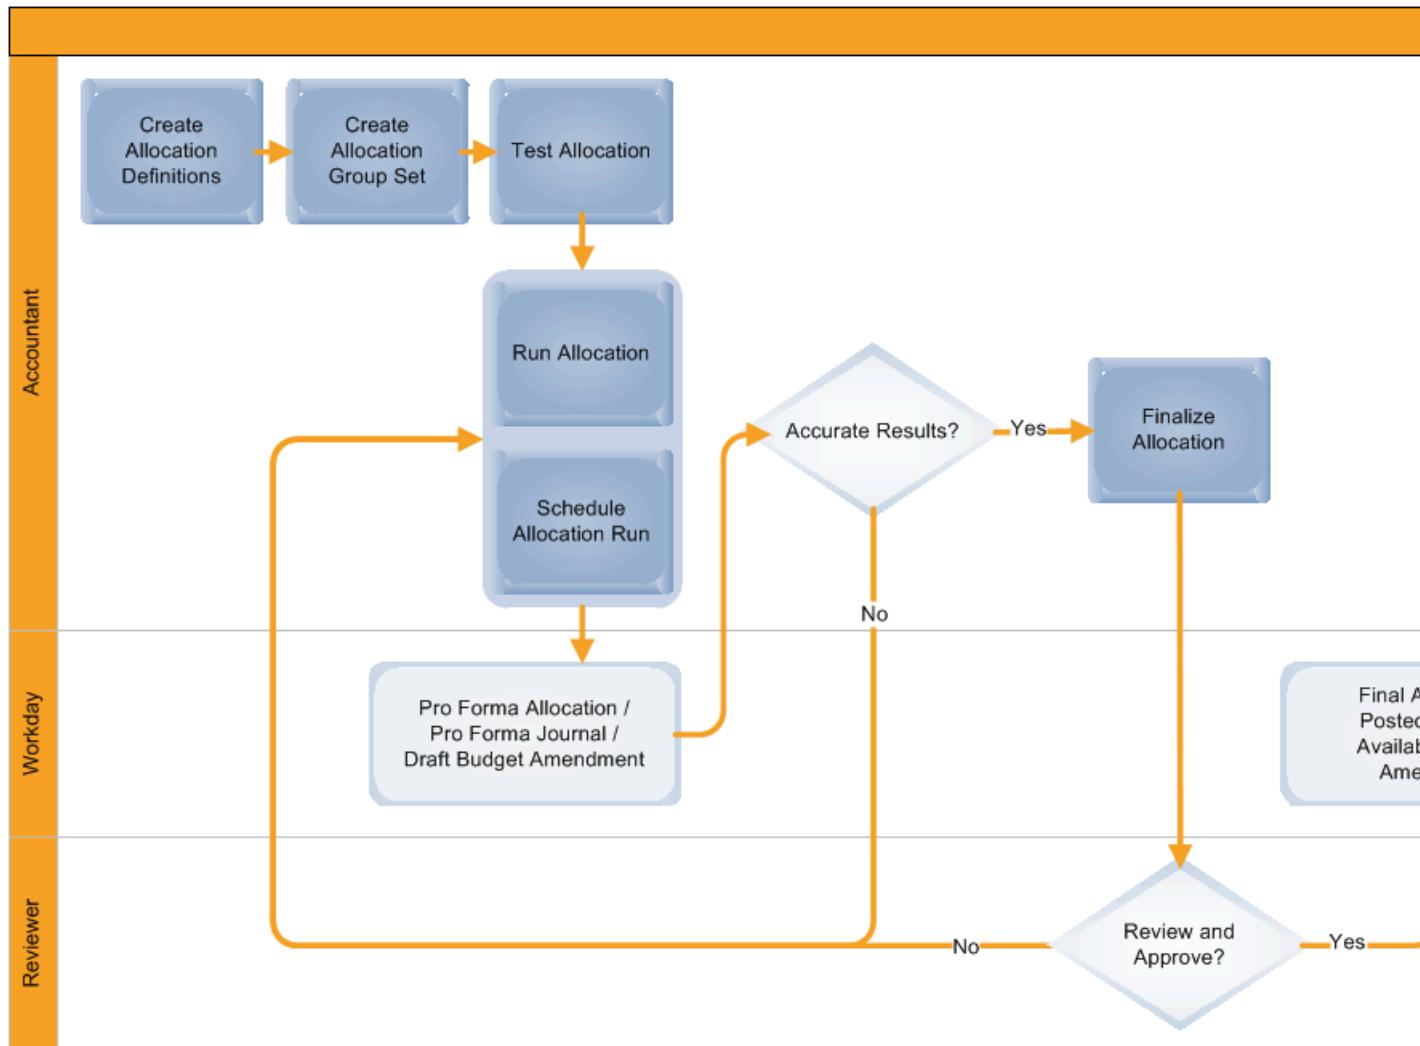

You can also use your plan data in your allocations, helping you automate month-end journals. Or you can allocate to a target plan, creating budget amendments to help ensure that your plan data replicates your actuals.

Examples:

- A company distributes *Facilities* expenses (such as building maintenance and staff salaries) over all cost centers that use the provided space and services. Using a square footage allocation basis methodology (created as a statistic), each cost center shares the facilities operating expenses.
- A company distributes IT costs over all cost centers based on headcount in those cost centers. This includes those costs recorded through an allocation, such as facilities expenses.
- A company allocates marketing expenses to regions based on revenue per region. The company allocates in actuals and plan for consistent reporting.

### Allocations Workflow

The diagram illustrates how allocations work:

As an accountant, when you define and process allocations, you work with:

- *Allocation definitions:* Represent each step of an allocation and define:
  - What amounts to allocate.
  - How to allocate these amounts.
  - Where to post the allocation results.
- *Allocation group sets:* A grouping of allocation definitions and their interdependencies to help you organize allocation definitions for processing.
- *Testing:* After defining allocation definitions and group sets, you can test them to ensure that they produce the expected results.
- *Allocation runs:* Generate pro forma journals or draft budget amendments of the allocations. You can manually run the allocation process or schedule Workday to run it at a specific day and time.
- *Allocation results:* The results of allocation processing provide support for the amounts allocated.
- *Finalization:* The process of finalizing your pro forma allocation and posting its operational journal or making its budget amendment available.
- *Final approval:* An optional business process step to verify the final allocation results before posting the allocation journal or making the budget amendment available.

When you leave allocations in *Pro Forma* status, the transactions will display on period close tasks when you close periods. The allocations remain in *Pro Forma* status until you take further action.

## Allocation Work Area

Use the **Allocation Work Area** to:

- Monitor your allocations for a fiscal period.
- Track progress toward completion.
- Easily identify allocations that are available for finalization.

The work area, which arranges information by company and allocation group set, includes:

- A **Summary** of the allocation processing, including:
  - **Allocations to Run:** The total number of allocations in the group set.
  - **Draft:** The number of allocations you have saved but not yet run.
  - **Requires Rerun:** The number of dependent allocations that you need to rerun due to a change in the allocation it's dependent upon.
  - **Pro Forma:** The number of allocations that you have run that are in pro forma status (not yet finalized).
  - **Error:** The number of allocations that you can't post because there's an error in the allocation results.
- **Processing Exceptions** to help you troubleshoot issues.
- A list of **Allocations Not Finalized** with a button to finalize each allocation.
- **Allocation Details** for each allocation in a group set, including whether the allocation is for actuals or a plan.

## Alternate Ledger Currency in Allocations

### Concept: Alternate Ledger Currency in Allocations

When you run an allocation for a company that has an alternate ledger currency (ALC) configured, Workday creates either a single-source allocation or a multisource allocation. Workday generates different accounting for each type of allocation. The configuration of the allocation definition determines which type is created.

Intercompany allocations always generate single-source allocations. Nonintercompany allocations, where the target company is the same as the offset company, can generate either single- or multisource allocations.

### Single-Source Allocations

Single-source allocations derive from 1 of these sources:

- A fixed rate amount.
- A fixed source amount.
- A single plan structure.
- The primary ledger of the **Used By** company, in the context of intercompany allocations.

Workday also generates a single-source allocation when either the target company or offset company is mapped from the basis, even if the source isn't one of the above.

All intercompany allocations are single source because Workday only evaluates the primary ledger.

Single-source allocations generate:

- An allocation result based on the primary currency of the **Used By** company.
- An operational journal in the primary ledger.
- An operational journal in the alternate ledger.

On the header of each operational journal, Workday displays a link to the other journal.

When generating the alternate operational journal, Workday ignores any **Currency Rate Type** configured on the allocation definition. Instead, Workday uses the **Alternate Ledger Currency Rate Type Override** set for the company on the **Edit Company Accounting Details** task. When you haven't set an ALC rate type override for the company, Workday uses the default currency rate type configured on the **Maintain Currency Rate Types** task.

### Multisource Allocations

Multisource allocations derive from two sources: the primary and alternate ledgers of the source company in a non-intercompany allocation.

Workday generates multisource allocations when all of these conditions apply:

- ALC is enabled for all source companies.
- The source on the allocation definition is the Actuals ledger.
- The target company and offset company are the same as the source company.

When either the target company or offset company is mapped from the basis, Workday generates a single-source allocation even when the conditions for a multisource allocation apply.

Multisource allocations generate:

- An allocation result for the primary ledger, with the source, target, offset, and associated operational journal in the primary currency.
- Another allocation result for the alternate ledger, with the source, target, offset, and associated operational journal in the alternate currency.

On the header of each allocation result, Workday displays a link to the other allocation result. For multisource allocations, Workday doesn't display a link between the operational journals.

Note:

- Workday doesn't support retroactive allocations when you enable ALC midyear.
- If you change your ALC start date after you generate allocations for the alternate ledger, you can't rerun those allocations. If this occurs, we recommend that you create new allocation definitions.

### Preparing for Alternate Ledger Currency

Before you enable alternate ledger currency for your companies:

- Finalize or cancel all allocation results in *Open* or *Pro Forma* status.
- Disable reversing allocations in the month before you enable alternate ledger currency, to avoid having reversals only for the primary ledger.

### Updating Allocation Definitions

When you update an allocation definition, it can change the resulting allocations from single-source to multisource or the other way around. Workday accounts for this change when you rerun allocations that you generated from the previous version of allocation definition.

### Allocation Basis

Allocation basis amounts can be used for both the primary and alternate ledger.

When the **Allocation Method** is *Spread Even*, Workday uses the selected dimensions for both the primary and alternate allocations.

When the **Basis Type** is:

- *Ledger Accounts*, Workday can generate amounts from both primary and alternate ledgers independently.
- *Ledger Accounts (Multiple Companies)*, Workday generates 1 basis using the ledger values from the primary ledger for all of the **Used By** companies. The allocation process doesn't evaluate whether all companies have an alternate ledger, so the primary ledger is used even for multisource allocations.

When the basis is a statistic, Workday uses the same statistic for both primary and alternate allocations, regardless of the statistic type.

## Finalizing Allocations

When you've configured an ALC for a company, Workday finalizes allocations using the allocation result in the primary currency. For allocations that don't have ALCs, the finalization process is unchanged.

When you finalize a single-source allocation, Workday updates all journals associated with the primary and alternate ledgers.

When you finalize multisource allocations through the **Run Mass Finalize for Allocations** task, Workday displays primary allocation results only. Once you complete the task, Workday updates alternate allocation results and their associated journals to keep them in sync.

When you want to finalize a multisource allocation through the related actions menu, you can only access the **Finalize Allocation** task from the primary allocation result.

## Canceling Allocations

When you've configured ALC for a company, Workday cancels allocations using the allocation result in the primary currency.

When you cancel a single-source allocation result, Workday updates the allocation result and its associated journals on both the primary and alternate ledger.

You can only cancel a multisource allocation from the primary allocation result. When you cancel the primary allocation result, Workday also cancels the alternate allocation result and all associated operational journals on both the primary and alternate ledgers.

When you've enabled reversals, canceling an allocation changes the status of the reversal journals to *Canceled* on both the primary and alternate ledgers.

## Reporting on Alternate Ledger Allocations

You can use the **Alternate Ledger Allocations** report field on the Allocation business object (secured to the *Public Reporting Items* domain) to report on any alternate allocation results related to an allocation. Workday doesn't include alternate ledger allocations in any delivered reports. To include links to alternate allocations in any delivered reports, update the reports manually.

## Error Handling

To ensure that allocations on both the primary and alternate ledger remain in sync, Workday updates the status of both allocations when an error occurs on:

- The primary allocation result.
- The alternate allocation result.
- Any associated journals.

When an allocation results in a critical exception, Workday also updates the status of the associated operational journals to *Error*.

You can use the **A Problem Exists With** column on the error grid of the **View Allocation** report to identify whether an error occurred on a primary or alternate allocation.

**Related Information****Tasks**

[Steps: Set Up Alternate Ledger Currency](#) on page 77

**Examples**

[2024R1 What's New Post: Alternate Ledger Currency in Journals](#)

[2024R1 What's New Post: Alternate Ledger Currency in Allocations](#)

**Troubleshooting: Single-Source Allocations Don't Clear Down Fully**

When you run a single-source (intercompany) allocation, the intended allocation amount doesn't clear down fully.

**Cause:** For single-source allocations, Workday translates the source amount from the primary ledger currency to the alternate ledger currency rather than allocating the source amount from the alternate ledger in parallel. Because of currency fluctuations, there might be a small difference between the source amount in the alternate ledger and the amount actually allocated.

**Solution:** To fully allocate the amount, you can:

- Send the allocation to 1 ledger account in the target company.
- Create a unique revaluation rule and currency rate type for this allocation.
- Update the currency rate type monthly to reflect the rate that will clear down the allocation amount fully.

**Steps**

1. Run your allocation.

2. Access the **Maintain Currency Rate Types** task.

Add a row. Example: *Alternate Ledger Currency USD to GBP*.

Security: *Set Up: Currency Rates* domain in the Common Financial Management functional area.

3. Access the **Create Revaluation Rule** task.

In the grid, select the ledger account for the allocation and your currency rate type.

Security: *Set Up: Revaluation* domain in the Financial Accounting functional area.

4. Access the **Maintain Currency Conversion Rates** task.

Each month, update the currency rate to reflect the rate needed to have the allocation amount in the primary ledger currency match the amount in the alternate ledger currency.

Typically, the source is the primary currency and the ledger is the alternate currency.

Security: *Set Up: Currency Rates* domain in the Common Financial Management functional area.

5. Access the **Run Revaluation** task.

Select your revaluation rule.

Security: Configure the *Revaluation Run Event* business process and security policy.

[Maintain Currency Conversion Rates](#)

[Define Revaluation Rules](#) on page 198

[Run Revaluation](#) on page 202

**Example: Set Up the Journal Lines by Allocation Report**

This example illustrates how to set up a custom report to identify which allocations produce the most result lines.

## Context

When you submit the **Run Mass Finalize for Allocations** task, the process takes longer than usual. The reduced performance might be a result of 1 or more allocations exceeding the Workday-recommended limit of 50,000 result lines. You create a custom report to list allocations by the number of result lines so that you can split them if necessary.

## Prerequisites

- [Steps: Set Up Allocations](#) on page 166
- [Steps: Process Allocations](#) on page 177
- Security: These domains in the System functional area:
  - *Custom Field Management*
  - *Custom Report Creation*

## Steps

### 1. Access the **Create Calculated Field** task.

- a) Enter these values:

Option	Description
<b>Field Name</b>	<i>RPT LRV Journal Line Allocation Definition to Line</i>
<b>Business Object</b>	<i>Journal Line</i>
<b>Function</b>	<i>Lookup Related Value</i>

- b) Click **OK**.

- c) Enter these values:

Option	Description
<b>Lookup Field</b>	<i>Journal</i>
<b>Return Value</b>	<i>Allocation Definition</i>

- d) Click **OK and Done**.

### 2. Access the **Create Custom Report** task.

- a) Enter these values:

Option	Description
<b>Report Name</b>	<i>Journal Lines by Allocation</i>
<b>Report Type</b>	<i>Matrix</i>

Option	Description
Data Source	<i>Journal Lines for Financial Reporting</i>

- b) Click **OK**.  
 c) In the **Row Grouping** section on the **Matrix** tab, add a row to the grid and enter these values:

Group by Field	Label Override	Sort Rows	Options
<i>RPT LRV Journal Line Allocation Definition to Line</i>	<i>Allocation Definition</i>	<i>Alphabetical - Ascending</i>	Leave blank.

- d) In the **Maximum Number of Rows** field, enter *12000*.  
 e) In the **Column Grouping (Optional)** section, add a row to the grid and enter these values:

Group By Field	Label Override	Sort Columns	Options
<i>Company</i>	Leave blank	<i>Alphabetical - Ascending</i>	Leave blank.

- f) In the **Maximum Number of Columns** field, enter *200*.  
 g) In the **Define the Field(s) to Summarize** section, add 3 rows to the grid and enter these values:

Summarization Type	Summarization Field
<i>Count</i>	None.
<i>Sum</i>	<i>Translated Debit Amount</i>
<i>Sum</i>	<i>Translated Credit Amount</i>

- h) Access the **Drill Down** tab.  
 i) In the **Detail Data** section, add 8 rows to the **Columns** grid and select these fields:

- *Journal*
- *Company*
- *Ledger Account*
- *Accounting Date*
- *Translation Currency*
- *Translated Debit Amount*
- *Translated Credit Amount*
- *Worktags*

- j) Access the **Filter** tab.  
 k) In the **Filter on Instances** section, add a row to the grid and enter these values:

And/Or	Field	Operator	Comparison Type	Comparison Value
<i>And</i>	<i>Journal Source</i>	<i>in the selection list</i>	<i>Value specified in this filter</i>	<i>Allocation</i>

- l) Access the **Prompts** tab.  
 m) In the **Prompt Defaults** grid, add 8 rows and enter these values:

Field	Default Type	Default Value
<i>Company</i>	<i>No default value</i>	Leave blank.
<i>Amount Type</i>	<i>Specify default value</i>	<i>Activity</i>
<i>Ledger</i>	<i>No default value</i>	Leave blank.

Field	Default Type	Default Value
Period	No default value	Leave blank.
Time Period	Specify default value	Current Period
Translation Currency	No default value	Leave blank.
Account Translation Rule Set	No default value	Leave blank.
Balancing Worktags	No default value	Leave blank.

- n) After you add the fields, select the **Populate Undefined Prompt Defaults** check box.
- o) Access the **Share** tab.
- p) Select **Share with all authorized users**.
- q) Click **OK**.

## Result

You can run your **Journal Lines by Allocation** custom report by company or company hierarchy. The report displays:

- Allocation definitions for each company.
- Result line counts.
- Translated debit and credit amounts.
- Totals for each company and allocation definition.

## Next Steps

Update your allocation definitions to split any allocations that produce more than 50,000 result lines.

### Related Information

#### Concepts

[Setup Considerations: Allocations](#) on page 163

## Reference: Source Types

You can only select *Fixed Source Amount* or *Fixed Rate Amount* if the source companies have the same company currency.

You can group budget dates for *Ledger/Plan Structure* source types only.

Option	Description
<i>Ledger/Plan Structure</i>	Allocates ledger or plan amounts.
<i>Fixed Source Amount</i>	Allocates a fixed amount. Example: Allocate the total amount of worker insurance premium based on head count.
<i>Fixed Rate Amount</i>	Allocates a fixed rate based on a calculated fixed charge.  Example: Allocate a fixed rate for facilities based on square footage.

### Related Information

#### Tasks

[Create Allocation Definitions](#) on page 167

## Reference: Allocation Methods

Select an **Allocation Method** on the **Create Allocation Definition** task to distribute allocated amounts:

Option	Description
<i>Fixed Percent</i>	<p>Allocate the source amount based on statistical values that you've predefined. Also select:</p> <ul style="list-style-type: none"> <li>The percent-type statistic <b>Definition</b>, which stores the percentages as a statistic that sums to 100%. To define a percent type statistic that stores precalculated percentages by dimension, use the <b>Create Statistic Definition</b> task. To store the statistics to use in allocations, use the <b>Create Statistic</b> task. Example: Square footage percentages by cost center.</li> <li>Required and optional worktags or business <b>Dimension</b> to use from the statistic definition. Example: Cost center, region, worktag, or a combination.</li> </ul>
<i>Pro-rata</i>	<p>Use headcount, ledger accounts, or statistic values (the <b>Basis Type</b>) and a <b>Dimension</b> (cost center) to calculate the percentage basis. The allocation process calculates a percentage of the total for each dimension and uses these percentages to prorate the source amount.</p>
<i>Spread Even</i>	<p>The allocation process calculates and distributes the source ledger amounts evenly over a business <b>Dimension</b> or multiple dimensions. Example: Allocate facilities cost to various cost centers, giving them equal weight so they receive an equal portion of the allocation.</p>
<i>Arithmetic Calculation</i>	<p>Multiply the headcount, ledger accounts, or statistic values (the <b>Basis Type</b>) with the <b>Fixed Rate Amount</b> to calculate the target amount.</p> <p>Only available when you select <i>Fixed Rate Amount</i> as the <b>Source Type</b>.</p>

### Related Information Tasks

[Create Allocation Definitions](#) on page 167

## Reference: Basis Types delete

For the:

- Pro Rata Allocation Method**, select the type of data you want to use in the percentage basis calculation.
- Arithmetic Calculation Allocation Method**, select the type of data you want to multiply by the fixed rate amount.

Option	Pro Rata Allocation Method	Arithmetic Calculation Allocation Method
<i>Headcount</i>	<p>Calculates proration percentages. Select:</p> <ul style="list-style-type: none"> <li>• A financial headcount <b>Definition</b> that can include any combination of active employees, inactive employees, and contingent workers. To define it, use the <b>Create Financial Headcount Definition</b> task.</li> <li>• A worktag or business <b>Dimension</b> to use for calculating the proration percentage (such as cost center, region, or a combination).</li> <li>• <b>Basis Filter Conditions</b> to include headcount for specific companies and worktags in the proration only.</li> </ul>	Can include any combination of active employees, inactive employees, and contingent workers.
<i>Ledger Accounts</i>	<p>Calculates proration using ledger accounts. Select whether to use:</p> <ul style="list-style-type: none"> <li>• The <b>Balance or Activity</b> of the ledger accounts. <ul style="list-style-type: none"> <li>• <i>Activity</i> prorates the period or summary period activity (as defined in the allocation group set that contains the allocation definition) of the account only.</li> <li>• <i>Balance</i> prorates based on both the beginning balance and activity.</li> </ul> </li> <li>• A worktag or business <b>Dimension</b> to use for calculating the proration percentage (such as cost center, region, worktag, or combination).</li> <li>• A <b>Book Code</b> to filter the basis data used in the allocation by a specific book code.</li> <li>• <b>Basis Filter Conditions</b> to include specific ledger accounts and worktags in the proration only. The company for the ledger account comes from source.</li> </ul>	Can include <i>Balance</i> or <i>Activity</i> of the ledger accounts.

Option	Pro Rata Allocation Method	Arithmetic Calculation Allocation Method
<i>Ledger Accounts (Multiple Companies)</i>	<p>Calculates proration using the ledger accounts of 1 or more companies.</p> <p>Define the <b>Translation Currency</b> that Workday will use to prorate the balances of the actuals ledger accounts. If the translation currency and the currency of any of the companies you specify in the filter condition are different, you must specify an <b>Account Translation Rule Set</b>.</p> <p><b>Translation Currency and Account Translation Rule Set</b> display only if you select <b>Ledger Accounts (Multiple Companies)</b>.</p>	Can include the <i>Balance</i> or <i>Activity</i> of the ledger accounts.
<i>Statistic Values</i>	<p>Calculates proration using statistics. Select:</p> <ul style="list-style-type: none"> <li>• A statistic <b>Definition</b>, which stores the statistical values that the allocation process uses to calculate the proration percentages. You can define activity, balance, and percent statistic types using the <b>Create Statistic Definition</b> task.</li> </ul> <p><i>Activity</i> statistic types store statistics that change from period to period such as new customers or number of units produced. The allocation process uses period or summary period activity (as defined in the allocation group set that contains the allocation definition). The process treats statistics with no value in a period as a zero amount.</p> <p><i>Balance</i> statistic types store statistics that are less variable, such as square footage. The allocation process uses the period end balance for statistical amounts, and the last period with a balance for basis calculations.</p> <ul style="list-style-type: none"> <li>• Required and optional worktags or business</li> </ul>	Can include any activity and balance statistic types.

Option	Pro Rata Allocation Method	Arithmetic Calculation Allocation Method
	<p><b>Dimension</b> from the statistic definition to use for calculating the proration percentage. Example: cost center, region, or worktag combination.</p> <ul style="list-style-type: none"> <li>• <b>Basis Filter Conditions</b> to include statistics for specific companies and worktags in the proration only.</li> </ul>

[Create Allocation Definitions](#) on page 167

## Allocation Pools

---

### Steps: Set Up Allocation Pools

#### Context

**Note:** We recommend you delay creating allocation pools at this time. We plan to deliver additional functionality in a future release.

You can create and manage allocation pools to track distribution of revenue or cost. You can also set up the allocation pool worktag usage.

#### Steps

1. [Create Allocation Pools](#) on page 193.
2. (Optional) [Create Allocation Pool Hierarchies](#) on page 193.  
Create allocation pool hierarchies and configure role-based security for the hierarchy.
3. [Configure Worktags for Transactions](#).  
Configure the worktag usage for the *Allocation Pool* taggable. Add *Allocation Pool* as a worktag type for other taggables as needed.
4. [Configure Related Worktags](#).  
Configure the *Allocation Pool* worktag type.

#### Next Steps

Include allocation pools and allocation pool hierarchies on:

- Account posting rules as condition dimensions.
- Business process definitions as a condition rule.

Include the allocation pool worktag and related worktag on transactions.

Access the **Inactivate** task from the related action menu of an allocation pool or allocation pool hierarchy to discontinue its use.

## Create Allocation Pools

### Prerequisites

Security: Set Up: *Allocation Pool* domain in the Financial Accounting functional area.

### Context

**Note:** We recommend you delay creating allocation pools at this time. We plan to deliver additional functionality in a future release.

You can create allocation pools to track the distribution of costs or revenue.

### Steps

1. Access the **Create Allocation Pool** task.
2. As you complete the task, consider:

Option	Description
<b>Allocation Pool ID</b>	When you don't enter an ID, Workday creates it when you save the allocation pool.  When you submit the allocation pool, the allocation pool ID becomes the reference ID for integration purposes. Only an administrator can change the allocation pool ID and reference ID.
<b>Include Allocation Pool ID in Name</b>	Select to add the allocation pool name to the allocation pool ID. Workday uses the allocation pool ID to create a unique name, enabling you to use a name multiple times.
<b>Assign Roles</b>	You can create or assign a role to associate with the allocation pool. Example: Configure an Allocation Pool Manager role.

## Create Allocation Pool Hierarchies

### Prerequisites

- Create allocation pools.
- Security: Set Up: *Allocation Pool Hierarchy* domain in the Financial Accounting functional area.

### Context

**Note:** We recommend you delay creating allocation pools at this time. We plan to deliver additional functionality in a future release.

You can create a hierarchical structure to group allocation pools for more enhanced reporting. You can also assign roles to each hierarchy and enable role-based security.

### Steps

1. Access the **Create Allocation Pool Hierarchy** task.
2. As you complete the task, consider:

Option	Description
<b>Allocation Pool Hierarchy ID</b>	When you don't enter an ID, Workday creates one when you save the allocation pool hierarchy.

Option	Description
	When you submit the allocation pool hierarchy, the allocation pool hierarchy ID becomes the reference ID for integration purposes. Only an administrator can change the allocation pool hierarchy ID and reference ID.
<b>Include Allocation Pool Hierarchy ID in Name</b>	Select to add the allocation pool hierarchy name to the allocation pool hierarchy ID. Workday uses the allocation pool hierarchy ID to create a unique name, enabling you to use a name multiple times.
<b>Superior</b>	<p>Configure to use a multilevel hierarchy. When you define a superior, users with assigned roles and security access on the superior can manage the child hierarchies and allocation pools.</p> <p>Workday recommends creating the highest level hierarchy first.</p>
<b>Includes</b>	Select the allocation pools that belong to the allocation pool hierarchy. You can't have the same allocation pool in more than 1 level of a hierarchy.
<b>Assign Roles</b>	You can create or assign a role to associate with the allocation pool hierarchy. Example: Configure an Allocation Pool Hierarchy Administrator role.

## Revaluation

---

### Setup Considerations: Revaluation

You can use this topic to help make decisions when planning your configuration and use of revaluation. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Revaluation is the process of calculating currency fluctuations over time, usually the difference between when you enter transactions during the period and the period end date. You can create revaluation rules to identify:

- Accounts that require revaluation.
- Currency rate type to revalue the foreign currency balances at period end.

### Business Benefits

- Record the gains and losses caused by fluctuating exchange rates since the transaction date.

- Recalculate foreign currency amounts in your company ledger at period end enabling you to analyze your currency exposure.

## Use Cases

On a daily basis, you might receive and pay supplier invoices that are in another currency. Since rates change daily, you might enter different exchange rates when entering and paying an invoice. As per U.S. Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS) you must account for realized and unrealized gain and loss due to fluctuating exchange rates. To revalue your accounts at period end, you create a revaluation rule to record period end revaluations on foreign currency balances in specified ledger accounts.

## Questions to Consider

Before creating revaluations, consider these questions:

Questions	Considerations
Do you want to automate the creation of the revaluation journal?	If yes, create a revaluation rule that will automatically create a revaluation journal when you run the revaluation process.
Do you want to run some rules separately or concurrently?	If concurrently, create revaluation group sets to group the revaluation rules you want to run concurrently.

## Recommendations

When configuring the revaluation rules on the **Create Revaluation Rule** task, consider these recommendations:

Option	Recommendations
Company	If you select more than 1 company or company hierarchy, ensure that all of them share the same account set and fiscal schedule.
Book Code	You can define separate rules for each book code. If you leave this field blank, Workday revalues all results for the Blank book code.
Balance or Activity	For revaluing balance sheet accounts, select <b>Balance</b> . For revaluing income statement accounts, select <b>Activity</b> .
Create Reversal	When you don't check it, Workday includes only incremental changes each period.
Revaluation Currency Rate Type	Revalue revenues and expenses at the average period rate. Revalue cash, account receivables, and account payables and other current assets and liabilities at the period end rate. Revalue certain investment accounts at the historic rate.

Option	Recommendations
Worktags to Retain on Target	<p>Workday automatically defaults the primary balancing worktag. Add optional balancing worktags as needed.</p> <p>Workday recommends selecting:</p> <ul style="list-style-type: none"> <li>• Bank account for cash accounts because reconciliation reports are by bank account.</li> <li>• Supplier for accounts payable accounts.</li> <li>• Customer for accounts receivable accounts.</li> </ul>

### Requirements

- Configure revaluation rules if you want to create the revaluation journal automatically. Use these rules when you run revaluation during the close process to record period end revaluations.
- Run the revaluation as the final task before closing the period to ensure that Workday properly remeasures the allocated foreign transactions.

### Limitations

- Workday revalues all accounts that have a balance. If you close an account, ensure that the account has zero balance for all worktag combinations in both the ledger currency and the transaction currency.
- Workday doesn't post revaluation results to a specific book code unless you define the book code in each Revaluation rule.

### Tenant Setup

No impact.

### Security

Domains	Considerations
<i>Set Up:</i> Revaluation domain in the Financial Accounting functional area.	Can configure and group revaluation rules.
<i>Process:</i> Revaluation domain in the Financial Accounting functional area.	Can run revaluations.
<i>Reports:</i> Financial Accounting in the Common Financial Management functional area.	Can view revaluation results.

### Business Processes

Configure the *Revaluation Run Event* business process to run, process, and approve revaluation results.

### Reporting

Use the **Foreign Currency Revaluation** report to review:

- Revalued amount in accounts that have unpaid invoices with gains or losses due to currency fluctuations.
- Balance sheet account with a balance in a foreign currency.

## Integrations

No Impact.

## Connections and Touchpoints

Revaluations interact with these other areas in Workday:

Features	Considerations
Banking and Settlement	Revalues monetary balances that are in foreign currency.
Customer Accounts	Revalues uncollected receivables that are in foreign currency.
Supplier Accounts	Revalues unpaid payables that are in foreign currency.
Worktag Balancing	If balancing your books by worktag, include the balancing worktag type when you define your revaluation rules.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Tasks

[Define Revaluation Rules](#) on page 198

[Review Foreign Currency Revaluation](#) on page 203

### Reference

[Reference: Frequency Combinations for Revaluation Rules](#) on page 205

[The Next Level: Mastering Revaluation in Workday](#)

## Steps: Automate Revaluation

### Prerequisites

- Security: *Set Up: Revaluation* and *Process: Revaluation domains* in the Financial Accounting functional area.
- Configure the *Revaluation Run Event* business process and security policy.

### Context

Automate posting of the revaluation journal to:

- Recalculate foreign currency amounts in your company ledger at period end.
- Record the gains and losses caused by fluctuating exchange rates since the transaction date.

### Steps

1. [Define Revaluation Rules](#) on page 198.
2. [Run Revaluation](#) on page 202.

### 3. Access the **Find Revaluations** report.

Locate and review revaluation results from the process. To access the **View Revaluation Result** report, click **Revaluation Result**. The report displays:

- The accounting date.
- Details about the revaluation rule.
- Debit and credit revaluation amounts in the target and offset ledger accounts.
- Process history.

### 4. [Review Foreign Currency Revaluation](#) on page 203.

To ensure that you created revaluations correctly, review the **Foreign Currency Revaluation** report.

As you review the results, keep these guidelines in consideration:

- Rerun the report until the *Exchange Gain/(Loss)* column displays zero amounts.
- To determine foreign currency transactions, drill into the amounts on the *Recorded Base Amount* column, and filter by source and period.

## Define Revaluation Rules

### Prerequisites

Security: Set Up: *Revaluation* domain in the Financial Accounting functional area.

### Context

Create and update rules to automate the revaluation journal. You assign revaluation rules to companies. Use these rules when you run revaluation during the close process to record period end revaluations on foreign currency balances in specified ledger accounts.

When creating a rule, you can select 1 or multiple source book codes and a blank book code as the source and post the resulting revaluation journal to a selected target book code. This enables you to create rules to process revaluations for specific target book codes that use different rule sets for reporting. Example: You can have 2 target reporting books that use different rules to process revaluation. You can create a rule that books revaluation to each reporting book by specifying a different target book code.

**Note:** Workday revalues all accounts that have a balance. If you close an account, ensure that the account has zero balance for all worktag combinations in both the ledger currency and the transaction currency.

### Steps

#### 1. Access the **Create Revaluation Rule** task.

#### 2. Define high-level details about the rule.

As you complete the **Details** section, consider:

Option	Description
<b>Company</b>	Select 1 or more companies and company hierarchies that use the rule. They must share account set and fiscal schedule.
<b>Source Book Code</b>	<p>You can assign 1 or more source book code to a revaluation rule.</p> <p>You can only select 1 target book code, and that book code must be in the source book code list.</p> <p>You can define different rules for each book code.</p>

Option	Description
	If you leave this field blank, Workday revalues all results for the blank book code only.
<b>Blank Source Book Code</b>	<p>In addition to the source book code, you can also select the blank book code as a source to journal lines posted to the blank book code.</p> <p>When you don't specify a target book code, Workday selects the blank book code as the source book code. Therefore enable the blank source book code.</p>
<b>Target Book Code</b>	<p>Select a target book code that you want to post the revaluation journal to.</p> <p>When you don't select a target book code Workday will post the revaluation journals to the blank book code.</p>
<b>Inactive</b>	Select when the revaluation rule isn't ready for use or to discontinue use. You can deactivate a rule if it's not included in a group.

3. As you complete the **Frequency** section, consider:

Option	Description
<b>Time Frame</b>	<p>Select how frequently to run the rule, such as every period or summary period. Before you close a period, you can see pending revaluations for the time period on these tasks that update ledger period status:</p> <ul style="list-style-type: none"> <li>• Update Ledger Period Status</li> <li>• Mass Update Ledger Period Status</li> <li>• Schedule Mass Update Ledger Period Status</li> </ul>
<b>Fiscal Summary Schedule</b>	Select what to base a summary time frame on.
<b>Balance or Activity</b>	<p>Select to run the rule for ledger account balances or ledger account activity. You can select <b>Activity</b> only when you select <b>Period</b> on the <b>Time Frame</b> prompt.</p> <p>If you select <b>Activity</b>, you can't create a reversal.</p>
<b>Create Reversal</b>	<p>Defaults to creating a reversal journal entry on the first day of the next period. You can change the reversal date to a date after the run date on the <b>Run Revaluation</b> task. Workday posts the reversal journal when the ledger period for the selected date opens.</p> <p>When you don't check it, Workday includes only incremental changes each period.</p>

**4. Define rule criteria for handling revaluation accounting.**

As you complete the grid, consider:

Option	Description
<b>Ledger Account / Ledger Account Summary</b>	<p>Select the balance sheet or income statement accounts and ledger account summaries that have foreign currency amounts to revalue. Available summaries include at least 1 balance sheet or income statement account.</p> <p>If multiple companies are linked to the rule, then the list displays only valid accounts across the selected companies.</p>
<b>Revaluation Currency Rate Type</b>	<p>Select the currency rate type to use for the revaluation. When you run reports with revalued amounts, you can select a currency rate type consistent with the revaluation rule.</p> <p>Example: Revalue intercompany payables and receivables at the average period rate. Revalue cash, account receivables, and account payables at the period end rate.</p>
<b>Worktags to Retain on Target</b>	<p>Select the worktags from the source entry to retain on the target debit or credit entry on the originating ledger accounts. If balancing your books by worktag, include the balancing worktag type.</p> <p>Workday recommends selecting:</p> <ul style="list-style-type: none"> <li>• Bank account for cash accounts because reconciliation reports are by bank account.</li> <li>• Supplier for accounts payable accounts.</li> <li>• Customer for accounts receivable accounts.</li> </ul> <p>When you select a balancing worktag, Workday automatically populates the same value on the <b>Worktags on Offset</b>.</p>
<b>Offset Account Posting Rule</b>	<p>To determine the account in which to post the realized, unrealized, or translation gain or loss, select the account posting rule for the offset journal line.</p> <p>Example: You select <i>Realized Gain/Loss</i> for a cash account, <i>Unrealized Gain/Loss</i> for a payable or receivable account, and <i>Translation Gain/Loss</i> for an intercompany account.</p>
<b>Worktags on Offset</b>	<p>To record the gain/loss entry on the offset account, select the worktags from the target account entry. If balancing your books by worktag, include the balancing worktag type.</p> <p>When you select an optional balancing worktag, Workday automatically populates the same value on the <b>Worktags to Retain on Target</b>.</p>

## Result

After you create revaluation rules, you can use the:

- **Edit Revaluation Rule** task to update the revaluation rule.
- **View Revaluation Rule** report to review your rules and copy a rule from its related actions menu.

## Related Information

### Reference

[Reference: Frequency Combinations for Revaluation Rules](#) on page 205

[The Next Level: Mastering Revaluation in Workday](#)

[2023R2 What's New Post: Record Revaluation Journals to a Target Book Code](#)

### Examples

[Troubleshooting: Single-Source Allocations Don't Clear Down Fully](#) on page 185

## Group Revaluation Rules

### Prerequisites

- Create revaluation rules.
- Security: *Set Up: Revaluation* domain in the Financial Accounting functional area.

### Context

Revaluation group sets are groupings of revaluation rules. You can incorporate each revaluation rule into a group set. They enable you to:

- Organize revaluation rules to run concurrently.
- Provide an organized way for you to monitor revaluation processing.

### Steps

1. Access the **Create Revaluation Group** task.

2. As you complete the task, consider:

Option	Description
<b>Revaluation Group Name</b>	Enter a name for the revaluation group.
<b>Revaluation Rules</b>	You can assign a revaluation rule to multiple revaluation groups.  Select from the revaluation rules that: <ul style="list-style-type: none"> <li>• Are active.</li> <li>• Have the same account set.</li> <li>• Are associated with companies on the same fiscal schedule.</li> </ul>
<b>Inactive</b>	Select when the revaluation group isn't ready for use or to discontinue use.

## Result

After you create revaluation groups, you can use the:

- **Edit Revaluation Group** task to update the revaluation group.
- **View Revaluation Group** report to review revaluation rules in a revaluation group.

## Run Revaluation

### Prerequisites

- Configure the *Revaluation Run Event* business process and security policy.
- Define and group revaluation rules.
- If the revaluation rule creates a reversal, open the next period. See [Steps: Create and Open Ledger Years and Periods](#).
- Security: *Process: Revaluation* domain in the Financial Accounting functional area.

### Context

As part of your close process, run revaluation for a specified company or group of companies. You can revalue foreign currency journal amounts based on your revaluation rules for a fiscal period.

**Note:** When you run revaluation in a new fiscal year, ensure you first roll forward prior year balances to create beginning balances. If you want to rerun roll forward, mass cancel the revaluation results and rerun revaluation for all periods.

Automatic revaluation supports incremental processing. If you rerun revaluation using the same criteria more than once in a period, the process only adds the incremental amount to the preceding run in the new result. Example: You reprocess because of an incorrect exchange rate.

If you need to run the complete revaluation again, cancel the existing revaluation result and rerun the revaluation.

**Note:** You can see pending revaluations on the ledger period status tasks.

### Steps

- Access the **Run Revaluation** task.
- As you complete the task, consider:

Option	Description
<b>Revaluation Group or Revaluation Rule</b>	Select from active revaluation groups or rules. Revaluation rules are associated with the specified companies and company hierarchies. If a rule includes a specific book code, the revaluation is for that book code only. If the rule requires the creation of a reversal journal, that reversal period must be open to submit the revaluation request.  When you run the revaluation for a group, you can only select companies or hierarchies specified on a given rule within the group.
<b>Company</b>	The revaluation process creates a separate revaluation result for each company.
<b>Fiscal Period for Revaluation</b>	Workday uses the end date of the selected period for the revaluation.
<b>Revaluation Reversal Date</b>	Populates to the first day of the next period. To change the date, enter a reversal date that is after the run date. Workday posts the reversal journal when the ledger period for the selected date opens.

Option	Description
	Workday populates this field when you enable the <b>Create Reversal</b> option on the revaluation rule.

## Result

For each company, the revaluation result creates the revaluation journal, target result lines, and offset result lines in the specified period based on the revaluation group or rule you select.

Workday also initiates the *Run Revaluation* business process for review and approval of these revaluation results. If the business process includes an approval step, the journal remains in a *Proforma* status until the reviewer approves or denies the revaluation results. For denied revaluation results, the business process updates the journal status to *Canceled*. For approved revaluation results, the business process:

- Posts the results to the revaluation journal.
- Updates the revaluation journal to *Posted* status.
- Creates and posts a reversal journal in the next period or on the specified date, if the revaluation rule requires it.

If you rerun the entire revaluation, you can cancel the original revaluation result. Use the **Find Revaluations** report to locate the result, and from its related action menu select **Revaluation Result > Cancel**.

To cancel all *Approved* revaluation results for an open or closed period, use the **Mass Cancel Revaluation Results** task.

When you enable the **Always Reverse Operational Journals** option on the **Edit Tenant Setup - Financials** task, Workday creates reversal journals for the canceled revaluation result.

## Related Information Examples

[Troubleshooting: Single-Source Allocations Don't Clear Down Fully](#) on page 185

## Review Foreign Currency Revaluation

### Prerequisites

- [Maintain Currency Conversion Rates](#).
- Security: *Reports: Financial Accounting* domain in the Financial Accounting functional area.

### Context

At the end of the month or quarter, there could be currency exchange gains or losses for ledger accounts that have balances in foreign currencies. For balance sheet accounts that have transactions in foreign currencies, you can:

- View the impacts of currency rate fluctuations.
- Analyze your currency exposure by ledger account and currency.

**Note:** The report identifies ledger accounts with foreign currency amounts that Workday will revalue. It doesn't display the revaluation result. To review results, access the **Find Revaluations** report and select **View Revaluation Result**.

### Steps

1. Access the **Foreign Currency Revaluation Report**.

2. As you complete the run criteria, consider:

Option	Description
<b>Balance or Activity</b>	<p>Select whether you want to report on ledger account balances or activity. Select <b>Balance</b> to revalue ledger accounts on a Year to Date (YTD) basis that includes beginning balances. Select <b>Activity</b> to revalue ledger accounts for period activity that excludes beginning balances.</p> <p>Consider using saved filters to run the report for these separate groups:</p> <ul style="list-style-type: none"> <li>• Balance sheet accounts revalued at Current rate using Balance.</li> <li>• Income statement accounts revalued at Average rate using Activity.</li> </ul>
<b>Currency Rate Type</b>	<p>To calculate the revaluation amounts, use the default or select the same currency rate type that you use in your revaluation rule.</p>
<b>Ledger Accounts</b>	<p>Select specific income, expense, or balance sheet accounts to include or exclude in the report. Example: you can exclude equity accounts.</p>

3. Review the impact of each foreign currency within each affected ledger account:

Option	Description
<b>Ledger Account</b>	<p>The account impacted by foreign currency transactions.</p>
<b>Foreign Currency</b>	<p>For an account that has foreign currency transactions, Workday displays each foreign currency on a separate line.</p>
<b>Foreign Amount</b>	<p>The total account balance of transactions in this currency, recorded as part of the transaction. You can drill into the journal entries behind the amount.</p>
<b>Recorded Base Amount</b>	<p>The foreign amount, converted into base currency of the company as part of the transaction. To calculate, Workday uses the <i>Default</i> rate type in your tenant to convert the foreign currency for the transaction to the base currency of the company as of the transaction date. Displays as a debit or credit. Click to drill into the journal entries behind the amount.</p>
<b>Base Currency</b>	<p>The base currency of the company. Workday uses this currency to calculate the recorded base and revalued base amounts.</p>
<b>Currency Rate</b>	<p>The selected currency rate type, as of the period end date, to convert the amount from the transaction currency to the base currency. Workday uses this rate and the foreign amount column to calculate the revalued base amount.</p>

Option	Description
<b>Revalued Base Amount</b>	The foreign currency account balance, revalued into the base currency for the company as of the end of the period. Workday uses the selected exchange rate as of the period end date to convert the foreign currency amount for the transaction to the base currency for the company. Displays as a debit or credit.
<b>Exchange Gain/(Loss)</b>	This column in the report will display a zero amount once revaluation is complete. If the gain or loss resulting from the foreign currency rate change doesn't zero out, the revaluation isn't complete. Rerun the revaluation till you get a zero balance.

### Result

View the revalued foreign currency amounts. If you've processed your revaluation journal for the period, the gain or loss amount should be zero for all accounts included in the revaluation rules.

Workday summarizes journal entries by:

- Ledger Account/Ledger Account Summary.
- Time frame, and Balance or Activity parameters.

### Reference: Frequency Combinations for Revaluation Rules

Consider these guidelines as you configure the **Time Frame** and **Balance or Activity** prompts on the **Frequency** section when defining a revaluation rule:

Combinations	Workday Calculates	Comments
<b>Time Frame - Period</b> <b>Balance or Activity - Activity</b>	Revaluation for the current period activity only.	
<b>Time Frame - Period</b> <b>Balance or Activity - Balance</b>	Year to date balance, includes beginning balance journals for balance sheet accounts.	There are no beginning balances for profit and loss accounts. Assuming you are on a calendar fiscal schedule, year to date balance is from January 1 to the revaluation process run date.
<b>Time Frame - Summary</b> <b>Balance or Activity - Balance</b>	Year to date balance as of the end of summary period. Includes beginning balance journals for balance sheet accounts.	When you select <b>Summary</b> on the <b>Time Frame</b> prompt, <b>Balance</b> is the only option available on the <b>Balance or Activity</b> prompt.
<b>Time Frame - Year</b> <b>Balance or Activity - Balance</b>	Current year activity starting with the first day of the fiscal year to the revaluation process run date. Includes beginning balance journals for balance sheet accounts.	When you select <b>Year</b> on the <b>Time Frame</b> prompt, <b>Balance</b> is the only option available on the <b>Balance or Activity</b> prompt.

[Define Revaluation Rules](#) on page 198

## Currency Translation

---

### Steps: Set Up Currency Translations

**Context**

You can use currency translations when you perform transactions in different currencies and need to translate them for financial reporting.

**Steps**

1. [Set Up Account Posting Rules](#) on page 84.

Set up the *Translation Gain* and *Translation Loss* rules to define which ledger accounts to use to capture translation gain and loss.

2. [Maintain Currency Rate Types](#).

Define rates for all of your companies.

3. [Set Up Currency Translation Methods](#) on page 206.

Create methods for translating from company currency into translation currency during financial reporting.

4. [Create Rules for Translating Ledger Accounts](#) on page 209.

Define rule sets to determine which translation method each account uses.

5. (Optional) [Assign Company Accounting Details](#) on page 64.

Assign 1 default account translation rule set for each company. When you run translated financial reports for the company, Workday populates the account translation rule set into your reporting criteria. You can override the default for the selected company with any translation rule set that uses the same account set.

6. [Maintain Currency Conversion Rates](#).

Enter conversion rates for each currency rate type. Workday uses these rates to complete currency translations for the currency rate types that you specify in your account translation methods.

To maintain accurate currency translations, regularly enter updated currency conversion rates into Workday.

**Related Information****Concepts**

[Concept: Currency Translation](#) on page 214

## Set Up Currency Translation Methods

**Prerequisites**

Set up currency rate types. See [../../../../manage-workday/tenant-configuration/globalization/currencies/dan1370796738168.dita](#).

**Context**

You can create methods for translating company currencies into translation currencies during financial reporting.

To reflect your typical accounting standards, use one of these user-defined translation types to reflect your typical accounting standards:

- **Average:** Typically used with income statement accounts. Translates activity at the designated average rate as of the end date of the period in which the activity occurred.

Example: Translates revenue for January at the average as of the end of January. Similarly, translates revenue for February at the average as of the end of February.

- **Current:** Typically used with balance sheet accounts.
- **Historic:** Translates beginning balance for balance sheet accounts.

## Steps

1. Access the **Create Account Translation Method** task.

2. As you complete the task, consider:

Option	Description
<b>Translation Type</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <b>Average</b> to translate income statement activity at the designated average rate as of the end date of the period in which the activity occurred.</li> <li>• <b>Current</b> to translate balance sheet accounts, such as beginning balance, activity, and ending balance at the current rate as of the last day of the reporting period.</li> <li>• <b>Historic</b> to translate beginning balances for balance sheet accounts using:           <ul style="list-style-type: none"> <li>• A blended rate.</li> <li>• An entered translated amount to translate activity at the current rate on the date of the transaction.</li> </ul>           This type translates activity for income statement accounts using the current rate on the transaction date.         </li> <li>• <b>Custom</b> when the other translation types don't meet your needs.</li> </ul>

3. As you complete the **Fiscal Year Beginning Balance** section, consider:

Option	Description
<b>Use Historic Translation Amounts</b>	<p>For:</p> <p>Historic or Custom translations, select this check box to use the historic amount approach to beginning balance currency translations. With this approach, define 1 translation method. All accounts for which you translate beginning balance amounts will share it. You don't need to create a different method for each account.</p> <p>This translation method uses the beginning balance amounts that you enter on the <b>Maintain Beginning Balance Translation Amounts</b> task.</p>
<b>Currency Rate Type</b>	For:

Option	Description
	<ul style="list-style-type: none"> <li>Average translations, select nothing.</li> <li>Current translations, select the same value for both the beginning balance and activity. Workday sets it to equal the rate type for the activity.</li> <li>Historic translations, select to determine which currency rates to use in the calculation when using a historic blended rate approach to currency translation. With this approach, you create a different account translation method and rate type for each account that you want to translate.</li> <li>Custom translations, select any rate type.</li> </ul>
<b>Currency Rate As Of Date</b>	For: <ul style="list-style-type: none"> <li>Average translations, select nothing.</li> <li>Current translations, select the date at the end of the report period.</li> <li>Historic translations, the date is preset to year begin date. Used with a historic blended rate approach to currency translation.</li> <li>Custom translations, select the report end date or begin date of the year.</li> </ul>

4. As you complete the **Fiscal Year Activity** section, consider:

Option	Description
<b>Currency Rate Type</b>	For: <ul style="list-style-type: none"> <li>Average and Custom translations, select any type.</li> <li>Current and Historic translations: typically select the current or daily rate.</li> </ul>
<b>Currency Rate As Of Date</b>	For: <ul style="list-style-type: none"> <li>Average translations, select the end date of the transaction period for each period you're reporting.</li> <li>Current translations, select the date at the end of the report period.</li> <li>Historic translations, the date Workday presets to the transaction date.</li> <li>Custom translations, select the report end date, transaction date, transaction period end date, or year begin date.</li> </ul>

### Result

Workday uses the currency rate in effect as of the date specified in the **Currency Rate As of Date** field.

If there's no current rate at the end of the period, Workday uses the most recent rate before that date.

## Next Steps

Use this account translation method as part of a translation rule set.

### Related Information

#### Concepts

[Concept: Currency Translation](#) on page 214

## Create Rules for Translating Ledger Accounts

### Prerequisites

- Define account translation methods.
- Security: *Set Up: Currency Translation* domain in the Financial Accounting functional area.

### Context

You can specify the translation method for each account in an account set by defining translation rules. These rules control how Workday translates monetary amounts from company currencies for each account during financial reporting. When ledger accounts have transactions in other currencies, Workday translates the amount recorded in the company currency, not the transaction currency.

Example: To translate revenue and expense accounts from USD to JPY on financial reports ending March 31, use an *Average* rate type at the period end date. In March, Workday translates the monetary amounts for those accounts using the average rate as of March 31.

Workday displays account translation methods as: <*user-defined name*> (<*translation type*>).

Example: *Daily (Current)*.

### Steps

1. Access the **Create Account Translation Rule Set** task.
2. When creating a rule set, select an **Account Set** for which to define the translation rule set.
3. Enter a name for the rule set.
4. As you complete the task for setting the **Account Translation Method**, consider:

Option	Description
<b>Ledger Account Type</b>	<p>Specify a method for every account type so that all accounts have a translation method.</p> <p>Workday first evaluates the individual account-based method, then the summary method, and finally the account type.</p>
<b>Ledger Account Summary</b>	<p>Specify the method to use for accounts within an account summary. Workday evaluates ledger account summaries from lowest <b>Sequence Number</b> to highest, using the first match that it finds. List your account summaries from most to least specific.</p>
<b>Ledger Account</b>	<p>(Optional) Specify the method to use for an individual account. Workday evaluates from most to least granular. This method takes precedence over methods you specify for ledger account summary and account type.</p>

## Result

You can run translated financial reports with an account translation rule set that uses the same account set as the company.

## Next Steps

(Optional) Assign the account translation rule set to company accounting details. Workday populates the translation rule set when you run translated financial reporting for that company.

### Related Information

#### Concepts

[Concept: Currency Translation](#) on page 214

## Steps: Enter Translated Beginning Balances for Financial Reporting

### Prerequisites

- [Set Up Currency Translation Methods](#) on page 206.
- [Create Rules for Translating Ledger Accounts](#) on page 209.

### Context

You can make a one-time change to translated beginning balances when necessary. These are the only 2 use cases that require a one-time change:

- You enabled your alternate chart of accounts after you went live on Workday.
- You need to enter translated beginning balance amounts for an alternate ledger.

**Note:** If you run roll forward after making a change to beginning balances, Workday overwrites your changes. Only make one-time changes when absolutely necessary.

### Steps

1. Run a year-end Balance Sheet report that displays prior year-end balances translated from company currency to the translation currency.

You can use these amounts to establish your translated beginning balances.

2. [Roll Year-End Balances Forward](#) on page 304.

Create beginning balance journals for the fiscal year of the company.

3. Change translated beginning balance amounts.

When you roll forward, you have the option of producing translated beginning balances. If the translated beginning balance amounts are inaccurate, you can change the amounts.

See:

- [Enter Translated Beginning Balance Amounts for Primary Ledger Accounts](#) on page 211.
- [Steps: Enter Translated Beginning Balance Amounts for Alternate Ledgers at Year-End](#).
- [Steps: Enter Translated Beginning Balance Amounts for Alternate Ledgers Midyear](#).

## Result

You can run the translated financial reports for the company using ledger currency mapping. The reports use the translated beginning balance amounts that you've entered for each currency. When you run the reports, select:

- The currency and fiscal year for which you've entered translated beginning balance amounts.
- A translation rule set that contains an account translation method that uses historic translation amounts.

## Related Information

### Concepts

[Concept: Currency Translation on page 214](#)

[Setup Considerations: Alternate Ledger Currencies on page 71](#)

### Reference

[2024R1 What's New Post: Alternate Ledger Currency in Roll Forward](#)

## Enter Translated Beginning Balance Amounts for Primary Ledger Accounts

### Prerequisites

- Enable account translation methods for manual entry of historic translation amounts.
- Set up the translation rule set.
- Roll forward year-end balances for the preceding fiscal year to create beginning balance journals.
- Security: *Process: Close Year End* in the Common Financial Management functional area.

### Context

You can, for any currency that you want to translate to another currency during financial reporting, enter and maintain beginning balance amounts in each target currency.

When you use historic translation amounts for beginning balances, you can set up beginning balances in the translation currency; otherwise the beginning balance is zero for those accounts.

Workday recommends that you run a year-end report that returns prior-year ending balances translated from company currency to the translation currency. Use the translated currency amounts to establish your translated beginning balances.

### Steps

- Access the **Maintain Beginning Balance Translation Amounts** task.
- As you complete the task to retrieve ledger accounts that have beginning balance journals, consider:

Option	Description
<b>Company</b>	The account set for the company must have at least 1 balance sheet account with a translation method that uses historic translation amounts.
<b>Fiscal Year</b>	Select the fiscal year for which you created beginning balance journals through the roll forward year-end process.  For multiple fiscal schedules, you must enter the beginning balances for both the primary and alternate fiscal schedule. To enter beginning balances for the: <ul style="list-style-type: none"> <li>Primary schedule, select <b>Standard Corporate Schedule</b>.</li> <li>Alternate schedule, select <b>Alternate Fiscal Schedule</b>.</li> </ul>
<b>Ledger</b>	Select the ledger for which you created beginning balance journals through the roll forward year-end process.

Option	Description
<b>Translation Currency</b>	Select the currency in which you want to enter beginning balances to produce translated financial reports.
<b>Book Code</b>	When using multibook accounting and reporting, select a value to retrieve ledger accounts that have beginning balance journals for transactions with the specified book code. Leave blank to retrieve beginning balances for transactions with no book code.
<b>Ledger Accounts</b>	Select the ledger accounts that are associated with a historic translation method for which you want to define translated beginning balances. Leave blank to return all applicable ledger accounts.

3. Review the beginning balance **Debit Amount** and **Credit Amount** for each account in the company currency.

Workday displays a separate line for each unique **Ledger Account** and **Worktag** combination.

4. Enter the beginning balance **Translated Debit Amount** or **Translated Credit Amount** in the translation currency.

Workday recommends that you specify a translated beginning balance for each line that has a balance in the company currency. If you don't, you won't get accurate translated financial statements.

## Result

You can now run financial reports for the company in the translation currency using the translated beginning balance amounts that you entered for each currency.

## Next Steps

Enter your beginning balance amounts and make adjustments to the prior year. Rerun the **Roll Forward Year-End Balance** task and re-enter the translated beginning balance amounts.

### Related Information

#### Tasks

[Roll Year-End Balances Forward](#) on page 304

## Steps: Enter Translated Beginning Balance Amounts for Alternate Ledgers at Year-End

### Prerequisites

- Set up the translation rule set.
- Roll forward year-end balances for the preceding fiscal year to create beginning balance journals.
- Review [Roll Translated Beginning Balances Forward](#) on page 306.
- Security: *Process: Close Year End* in the Common Financial Management functional area.

### Context

If the translated beginning balances are incorrect after rolling year-end balances forward, you can use an EIB to make changes.

## Steps

### 1. Set Up Inbound EIB.

Select the *Put Beginning Balance Translation Amounts* web service as the **Web Service Operation**.

### 2. Generate EIB Spreadsheet Template.

Generate an EIB spreadsheet template with beginning balance translation amounts data. When entering beginning balance data for the first time, you must add your data to the template by specifying a reference ID. Example: You want to specify the reference ID of a company. To find the company reference ID, select **Integrations IDs > View IDs** from the related actions menu of the company.

**Note:** When you don't enter a beginning balance journal reference ID (found through the related actions menu of the original beginning balance journal), the web service returns all existing translated beginning balance lines in the tenant.

## Result

You can now run financial reports for the company in the translation currency using the translated beginning balance amounts that you entered for each currency.

### Related Information

#### Concepts

[Setup Considerations: Alternate Ledger Currencies](#) on page 71

#### Reference

[2024R1 What's New Post: Alternate Ledger Currency in Roll Forward](#)

## Steps: Enter Translated Beginning Balance Amounts for Alternate Ledgers Midyear

### Prerequisites

- Set up the translation rule set.
- Roll forward year-end balances for the preceding fiscal year to create beginning balance journals.
- Review [Roll Translated Beginning Balances Forward](#) on page 306.
- Review [Setup Considerations: Alternate Ledger Currencies](#) on page 71.
- Security: *Process: Close Year End* in the Common Financial Management functional area.

### Context

If the translated alternate ledger currency amounts are incorrect on activity lines after you roll balances forward, you can use a book code and web service to make changes.

## Steps

### 1. Create a book code.

Give the book code a name such as *Translated Reporting*.

See: [Steps: Create Book Codes and Books](#).

### 2. Include the book code in relevant books.

Include the book code in books that you use exclusively for reporting in the relevant translation currency.

**Note:** Include a blank book code in any books that use the *Translated Reporting* book code.

### 3. Create a standard journal entry.

Create the journal entry using the book code and the *Import Accounting Journal* web service. Enter the translation adjustment amount as the transaction currency amount in the journal.

### 4. Use the book code when running translated reports.

## Result

You can now run financial reports for the company in the translation currency using the translated beginning balance amounts that you entered for each currency.

### Related Information

#### Concepts

[Setup Considerations: Alternate Ledger Currencies](#) on page 71

#### Reference

[2024R1 What's New Post: Alternate Ledger Currency in Roll Forward](#)

## Concept: Currency Translation

Currency translation enables you to report on financial balances and activity in a currency other than the company base currency, also known as the ledger currency. Example: Your U.S. corporation has companies in the U.S., France, and Germany. To see results for the German company, you can run the trial balance from Germany and translate from the company currency (EUR) to U.S. currency (USD). The currency to which you translate is the translation currency.

The currency translation complies with FASB 52 and IAS 21 standards.

### Requirements for Currency Translation

Workday translates amounts using account translation methods that you specify for each ledger account in an account translation rule set. You must configure account translation methods and account translation rule sets before you can use translations in financial reports.

You must also have translated beginning balances in all currencies that you want to report on. You can create these at year end by rolling forward translated beginning balances. When you roll forward, ensure that you select all currencies you want to report on.

You can specify a ledger account to use for cumulative translation adjustments (CTAs) on your account posting rules for translation gains and losses. Workday also provides separate posting rules for realized and unrealized gains and losses that appear on the Income Statement.

## Running Financial Reports

You can specify a translation currency and account translation rule set when you run:

- Financial statements and consolidated financial statements.
- Trial balance and consolidated trial balance.
- Consolidated plan summaries and plan details.

You can run these reports in any currency in which you have exchange rates for conversion.

When you select a translation currency that is different to the company currency, Workday translates amounts from the company currency to the translation currency based on the account translation rule set. You can use the default or any other translation rule sets. When the translation currency is the same as the company currency, Workday doesn't translate amounts.

When you run the report, Workday translates each journal line based on the account translation method assigned to the ledger account in the account translation rule set. Workday calculates whether the net impact is a translation gain or loss based on the total value of translated assets, liabilities, and equity. Workday then records a CTA line to either the translation gain or translation loss ledger account defined in the account posting rule set for the company. Workday generates CTA lines for each unique combination of:

- Company.
- Book code.
- Period.
- Balancing worktag (where applicable).

Note: Since beginning balances have their own period, Workday generates an additional CTA line for January 1 for beginning balances only, as well as the CTA line for other transactions for January 31.

When ledger accounts have transactions in other currencies, Workday translates the amount recorded in the company currency, not the transaction currency. To revalue journals recorded in currencies other than the company currency, access the **Run Revaluation** task. This task revalues transaction currency amounts into the ledger currency based on rules that you set up. These are posted entries.

When you run a financial report, Workday then translates those revalued amounts from their new ledger currency amount, but doesn't store those translated amounts for future use. Instead, Workday recalculates the translated amounts each time you run a report.

## Custom Reports

You can access report fields for translated amounts in these report data sources:

- **Journal Lines**
- **Journal Lines for Financial Reporting**

## Consolidation Data Capture

### Concept: Consolidation Data Capture

You can use Consolidation Data Capture to load summarized trial balance data from external Enterprise Resource Planning (ERP) endpoints to arrive at a consolidated trial balance in Workday for your legal entities that aren't transacting in Workday.

Workday doesn't recommend using this feature for high-volume use cases such as ledger conversion or to replace any Accounting Center use cases. Refer to product comparison matrix here for more detail: [Accounting Ingestion Feature Comparison](#).

You can load consolidation data manually from the Consolidation Data Hub or by Document Retrieval Services. Example: Secure File Transfer Protocol (SFTP).

Load consolidation data in the Workday defined file format. See [Reference: Consolidation Data - Inbound Integration CSV File Format](#) on page 233.

### Additional Guidelines

When loading consolidation data into Workday, consider these guidelines:

- Workday identifies each consolidation data (that is, each created journal) by a Grouping Dimension composed of:
  - Company
  - Accounting Date
  - Book Code

- Each consolidation data upload must consist of less than 200,000 consolidation data lines.
- Workday recommends that each consolidation data that you load contains a maximum of 100,000 lines. Loading more than 100,000 lines for each consolidation data will impact performance. Example: You're using one .CSV file to load 3 consolidation data files. Each consolidation data file can't contain more than 100,000 lines.
- Workday doesn't calculate period activity. Therefore don't submit ending trial balances.
- Workday doesn't support incremental activity when you resubmit post-close data. If you're resubmitting the data, you must resubmit the entire consolidation data for the non-Workday company.
- To reduce the number of journals created, Workday recommends that you use the period end date as the Accounting Date. Example: 1/31/23.
- Workday won't default related worktags in your mapping tables unless you've included them in your mapping definition as additional worktags.
- Opening up .CSV data files with certain editors (Example: Excel) might lead to data parsing or conversion challenges as some will automatically update certain field display formats. Examples: Including commas representing thousands separators in number fields, reformatting dates and so on. Some editors will also remove non-English values such as accents, symbols, and characters. Ensure you reformat the field formats using a text editor (Example:TextEdit) if these changes take place during file editing before loading your Consolidation Data.
- There can be only 1 approved journal per Book Code, Company, and Accounting Date. If you reload the same file with the same grouping dimension, Workday cancels the previous journal and replaces it with the most recent upload.

- Note:** If you have enabled **Always Reverse Operational Journals** option on the **Edit Tenant Setup - Financials** task, Workday won't cancel the journal, but will instead create a reversal of the original journal and will create a new approved journal with the same grouping dimension. The reversal journal provides a complete audit trail of the original journal.
- Workday shares custom validations set and worktag configurations (Example: primary worktags) with Accounting Journal.

## Limitations

Workday doesn't support:

- Auto-generating intercompany lines or worktag balancing lines. Workday will create 1-sided journals if you include any intercompany or worktag balancing lines.
- Suspense accounting for created journals.
- Journal sequencing.
- Evaluation of account posting rules.

[Reference: Consolidation Data - Inbound Integration CSV File Format](#) on page 233

[2023R1: What's New Post: Consolidation Data Capture](#)

[The Next Level: Consolidation Data Capture](#)

[The Next Level: Intercompany Transactions and Consolidation Data Capture](#)

## Steps: Set Up Consolidation Data Capture

### Prerequisites

Access the **Maintain Functional Area** task and enable the Advanced Close and Consolidation functional area.

## Context

Set up Workday to capture consolidation data before you can upload consolidation data from external Enterprise Resource Planning (ERP) endpoints.

## Steps

1. [Create Source Systems](#) on page 217.
2. [Create Consolidation Data Mapping Table Definitions](#) on page 217.
3. [Create Consolidation Data Mapping Tables](#) on page 219.
4. [Steps: Create Consolidation Data Capture Integration](#) on page 222.
5. [Map Source Systems to Integration Systems](#) on page 224.

## Create Source Systems

### Prerequisites

Security: *Set Up: Map Worktags* in the Common Financial Management functional area.

### Context

You can create separate source systems for each external Enterprise Resource Planning endpoint (ERP) from which you want to upload consolidation data into Workday.

**Note:** When legal entities transacting outside of Workday are on different instances of the same external ERP, Workday recommends that you create source systems for each entity in Workday. Creating separate source systems enables you to better manage the security permissions for Consolidation Data Mapping Definitions, Consolidation Data Mapping Tables, and file uploads.

For more information on configuring security, see [Configure Consolidation Data Capture Security on Community](#).

## Steps

1. Access the **Maintain Source Systems** task.
2. Add a row.
3. Enter a source system name and optionally a description.
4. Click **OK**.

## Next Steps

Map the source system to the integration system.

### Related Information

#### Tasks

[Create Consolidation Data Mapping Table Definitions](#) on page 217

[Create Consolidation Data Mapping Tables](#) on page 219

## Create Consolidation Data Mapping Table Definitions

### Prerequisites

- Use the **Maintain Worktag Usage** task to enable worktag as either a primary or alternate dimension for the taggable type of Accounting Journal.
- Use the **Maintain Source Systems** task to create source systems that corresponds to your external Enterprise Resource Planning (ERP) endpoint.

- Security: Set Up: *Consolidation Data Capture Mapping Definition* domain in the Advanced Close and Consolidation functional area. For more information, see Configure Consolidation Data Capture Security on [Community](#).

## Context

You can create a consolidation data mapping table definition to:

- Define the number of input values in your mapping table.
- Define the number and type of outputs.

You can also use the table definition to configure how to define input values by using wildcards and ranges.

**Note:** Once you create a Consolidation Data Mapping Definition and create a Consolidation Data Mapping Table based on that definition, you can't edit the Consolidation Data Mapping Definition except for changes to the definition name.

## Steps

1. Access the **Create Consolidation Data Mapping Definition** task.
2. Enter a name for the mapping definition.
3. Select a Source System.
4. As you complete the **Parameters** tab for the parameter inputs for the mapping definition, consider:

Option	Description
Display Name	Enter the display name for each parameter. Example: Company, Ledger Account, Cost Center.
Allow Wildcards	Select if you want to enable wildcards when you define mapping rules.  <b>Note:</b> Workday doesn't support wildcards in ranges.  If you have wildcards (*) and (?) in your dataset and want to evaluate them as string values, you might not want to enable this option.
Range Field	Select if you want to specify a range when you define mapping rules.  You can't specify a range and wildcard for the same external code.

**Note:** You can enter a maximum of 20 parameter inputs.

5. Click the **Additional Dimensions** tab to map company and ledger accounts.
6. Select **Company** to map a company.
7. Select **Ledger Account** to map ledger accounts.
8. Select an **Account Set** for the ledger account mapping.
9. Click the **Worktags** tab.

10. As you complete the **Primary Worktag Types** and **Additional Worktag Types** grids, consider:

Field	Description
Accounting Worktag Types	Select worktag types to which you want to map your consolidation data.
Worktag Type Required	Set up worktag types as required. If you require a worktag type, you must select a worktag value for every row when you create mapping table rules.
Disallow Inactive Values	Select for Workday to remove inactive values automatically.

Each primary worktag type that you define is displayed in a separate column. All additional worktag types are displayed in a single column, enabling you to select additional worktags from a single column.

**Note:** Related worktags defined at the tenant level, will only populate if you define the worktags types as additional worktags when creating a Consolidation Data Mapping Definition. Workday won't automatically retrieve the related worktags you define on the **Maintain Related Worktag Usage** task.

11. Click **OK** to create the structure for the consolidation data mapping table.

#### Related Information

##### Tasks

[Create Source Systems](#) on page 217

[Configure Worktags for Transactions](#)

## Create Consolidation Data Mapping Tables

#### Prerequisites

- You've created a consolidation data-mapping table definition.
- Security: *Set Up: Data Capture Mapping Table* domain in the Advanced Close and Consolidation functional area.

#### Context

You can create a consolidation data-mapping table to define rules to map your input values to your target output values.

You can only create 1 consolidation data-mapping table per mapping table definition, but can create unlimited mapping table definitions for each source system.

In addition to 1-to-1 mapping, you can also map:

- One input value to many output values.
- Many input values to 1 output value.
- Many input values to many output values.

Once you create a consolidation data-mapping table based on the definition, you can edit mapping table rules (Example: add, delete, reorder) but can't modify mapping definitions, except for changes to the definition name.

#### Steps

1. Access the **Create Consolidation Data Mapping Table** task.

2. For **Consolidation Data Mapping Definition**, select the consolidation data-mapping table definition you previously created, and click **OK**.

Workday displays the mapping table with the structure of the selected definition.

**Note:** To display accounting worktags for a consolidation data-mapping table when using an Enterprise Interface Builder (EIB), you must edit the template to add the Accounting Worktag columns. See [Customize EIB Spreadsheet Template](#).

3. As you complete mapping inputs to target output values, keep these guidelines in consideration:

Mapping Functionality	Guidelines
Input Values	<p>For each row, enter a combination of input values that maps to a particular output value.</p> <p>If you leave value blank, Workday won't evaluate the column for that row.</p>
Operators	<p>When entering input values, you can use these operators:</p> <ul style="list-style-type: none"> <li>• NOT: Checks whether a value isn't equal to OR isn't like an input value. Examples: NOT abc, NOT ab?</li> <li>• IS NULL: Checks whether a field value is empty.</li> <li>• IS NOT NULL: Checks whether a field value isn't empty.</li> <li>• IN (list): Checks whether a value is within a set of values. Example: IN (abc, def, xyz).</li> <li>• NOT IN (list): Checks whether a value isn't within a set of values. Example: NOT IN (abc, def, xyz).</li> </ul>
Wildcard Expressions	<p>If you selected to include wildcards when defining a parameter on the mapping definition, use ? to match any single character. Example: 10?0 matches these codes: 1020, 1030, 1080.</p> <p>Use * to match any number of characters.</p> <p>Example: A*00 matches all codes starting with A and ending with 00, such as A100, A1000, A1100, A1200.</p>
Range Expressions	<p>If you selected Range Field on the mapping table definition, enter a Range Start and Range End value.</p> <p>You can enter Alphanumeric ranges. Example: A100 - D300</p> <p>Workday evaluates range expression as a string. Example: Value of 5 falls outside a range of 1-19, but value of 05 falls within a range of 01-19.</p>
Output Values	Select the desired output value resulting from the combination of input values.

**Note:** Workday evaluates rules from the top down and once it finds a matching mapping table rule, it stops further evaluation. Therefore, order rules from *most* to *least* specific using **Order**.

- Once you complete creating all rules, click **OK** and then **Done**.

#### Related Information

##### Tasks

[Create Consolidation Data Mapping Table Definitions](#) on page 217

## Concept: Consolidation Data - Inbound Integration

Import consolidation data from an external ERP endpoint into Workday with the Consolidation Data Capture integration. This integration (and related Workday tasks) translates data between:

- External ERP endpoint account structures.
- Your Workday worktag and account structures

The integration imports data in a Workday-defined Comma-Separated Value (CSV) file format.

## Consolidation Data Capture Integration and Supporting Tasks

The Consolidation Data Capture Integration consists of these components and supporting tasks:

Component	Description
Create Source System	This task enables you to define external source endpoints.
Maintain Source System to Integration Mappings	This task enables you to map your source system to the integration system.
Create Consolidation Data Mapping Definitions	This task enables you to: <ul style="list-style-type: none"> <li>Define the number and type of input values in your mapping table.</li> <li>Define the number and type of outputs.</li> </ul>
Create Consolidation Data Mapping Tables	This task enables you to create a data capture mapping table to define rules to map your input values to your target output values.
<i>Consolidation Data - Inbound</i> integration template	This integration template enables you to create an integration system that you can use to: <ul style="list-style-type: none"> <li>Manually load consolidation data from the <b>Consolidation Data Hub</b> report or retrieve a CSV file from an external Document Retrieval Service (Example: SFTP) endpoint that contains the consolidation data.</li> <li>Translate data by applying the mapping rules that you define with the <b>Create Consolidation Data Mapping Table</b> task.</li> <li>Map rules that you define directly in the integration as part of integration maps.</li> </ul>

## Launch/Schedule Options for Document Retrieval Services

Workday provides these launch schedule options for the Consolidation Data Capture Integration:

- Launch on schedule. You specify a run frequency, and Workday launches the integration automatically. Upon launch, the integration retrieves any files from the endpoint.
- Launch immediately. You can launch the integration manually.

## Related Information

### Tasks

[Map Source Systems to Integration Systems](#) on page 224

[Create Source Systems](#) on page 217

[Create Consolidation Data Mapping Table Definitions](#) on page 217

[Create Consolidation Data Mapping Tables](#) on page 219

## Steps: Create Consolidation Data Capture Integration

### Prerequisites

- Access to a Document Retrieval Service server (Example: SFTP), including user ID and password that contains the consolidation data files.
- Consolidation data files must be in the Workday-defined Comma-Separated Value (CSV) format.  
See [Reference: Consolidation Data - Inbound Integration CSV File Format](#) on page 233.
- Create source systems.  
Create 1 source for each external Enterprise Resource Planning (ERP) endpoint task.

**Note:** When you have different instances of an ERP endpoint, Workday recommends that you create separate source systems to secure, and better manage Mapping Table Definitions and Mapping Tables.

### Context

You can create integrations to load consolidation data in the form of summarized trial balance lines into Workday from various external endpoints.

### Steps

- [Create Integration System](#).

Enter *Consolidation Data - Inbound* at the **New using Template** prompt.

- (Optional) Configure integration services. As you complete this section, consider:

Option	Description
Consolidation Data - Inbound/Import Consolidation Data Configurations	<p>Enable this service to provide these additional configuration options in Message Audit:</p> <ul style="list-style-type: none"> <li>Attribute: Input File Tag</li> <li>Include Web Service Requests</li> </ul> <p>In addition, this service also provides the launch parameter for Auto Submit and Parallel Thread Count Override configuration.</p>
Consolidation Data - Inbound/Financials Document Retrieval Service	<p>Enable this service to retrieve files for processing through the related integration system.</p> <p>Select the <b>Configure Files for External Delivery</b> integration attribute to enable this service to deliver the <b>CSV Audit Diagnostic File</b> output file to external endpoints.</p> <p>To deliver this file, you must select the <b>Create Audit File in CSV Format</b> integration attribute.</p> <p>To deliver files to external endpoints, configure a document delivery step on a business process in the integration system.</p>

Option	Description
	<p>We don't support backslashes on these fields when you generate an audit file on a CSV import file:</p> <ul style="list-style-type: none"> <li>• Journal Entry Memo</li> <li>• Journal External Reference ID</li> <li>• Journal Line External Reference ID</li> <li>• Journal Line Memo</li> </ul>
Filter Import Process Messages	<p>This service provides technical processing that isn't impactful to your integration. You can either enable or disable it with no meaningful impact.</p>

3. [Set Up Integration Retrieval](#).
4. (Optional) [Create Integration Notifications](#).
5. Create an Integration System User (ISU) and grant the ISU *Get* and *Put* access to these domains:

- *Process: Consolidation Data Capture*
- *Integration Event*

See: [Steps: Grant Integration or External Endpoint Access to Workday](#).

6. Select **Integration System Configure Integration Attributes** as a related action on the integration system and if required, enter these integration service attributes:
  - For the Import Trial Balance Configurations attribute provider:
    - Input File Tag
    - Include Web Service Requests in Message Audit.
  - For the Integration Document Retention attribute provider:
    - Document Retention Policy

Security: *Integration Build* and *Integration Configure* domains in the Integration functional area.

7. Select **Integration System > Configure Integration Maps** as a related action on the integration system to map tables to external values in the input file.

Security: *Integration Build* and *Integration Configure* domains in the Integration functional area.

As you configure the integration map, consider:

Option	Description
Internal Value	<p>Select the name of the mapping tables you defined on the <b>Create Consolidation Data Mapping Table</b> task to match the external codes to:</p> <ul style="list-style-type: none"> <li>• Company</li> <li>• Workday Ledger Accounts</li> <li>• Worktags</li> </ul>
External Value	<p>Provide a value that will correspond to the column header values for the Table Name in the input file. It must be an exact match to what displays in the input file. Workday doesn't support special characters.</p> <p>Each mapped column must follow this format:</p>

Option	Description
	<ul style="list-style-type: none"> <li>• EC. indicates that the column is a Mapping Table column.</li> <li>• TableName is the exact name of the external value in the <i>Map: Apply Mapping Tables</i> located on the integration system.</li> <li>• ColumnName is the exact name of the column within the Referenced Mapping Table in Workday.</li> </ul>

**Related Information****Tasks**[Create Source Systems](#) on page 217[Create Consolidation Data Mapping Tables](#) on page 219**Reference**[Reference: Consolidation Data - Inbound Integration CSV File Format](#) on page 233

## Map Source Systems to Integration Systems

**Prerequisites**

- You've created a source system using the **Maintain Source Systems** task.
- You've created an integration system. See [Create Integration System](#).
- Security: *Set Up: Source System to Integration Mapping* in the Advanced Close and Consolidation functional area.

**Context**

Before uploading data from the **Consolidation Data Hub** report you'll need to map your source system to the integration system. Mapping your source system to the integration system enables you to upload data from your external Enterprise Resource Planning (ERP) endpoint into Workday.

Workday supports 1 to 1 mapping (1 source system to 1 integration system).

You can only map a source system to an integration system if the integration system has mapping tables assigned to that particular source system.

**Note:** This task is optional if you're using a Document Retrieval Service connection (Example: SFTP) to import consolidation data.

**Steps**

1. Access the **Maintain Source System to Integration Mappings** task.
2. Enter a name for the mapping.
3. Select a source and integration system.
4. Click **OK**.

**Related Information****Tasks**[Create Source Systems](#) on page 217

## Load Consolidation Data into Workday

### Prerequisites

- Set up Consolidation Data Capture. See [Steps: Set Up Consolidation Data Capture](#) on page 216.
- For new entities on external ERP endpoints, you can use either the *Put Beginning Balance Journal* or the *Import Beginning Balance Journal* web services to load beginning balances in Workday.
- Configure the *Consolidation Data Journal Creation Event* business process.  
See [../manage-workday/business-processes/customize-business-processes/dan1370797385122.dita](#).
- Map the **External Consolidation Data Journal Entry Source** to operational transactions using the **Maintain Journal Source Mapping to Operational Transactions** task.  
See [Steps: Set Up and Update Journal Sources](#).
- Security: *Process: Data Capture* in the Advanced Close and Consolidation functional area.

### Context

You can load consolidation data manually or by a Document Retrieval Service connection (Example: Secure File Transfer Protocol (SFTP)).

Load only period activity for the current open period.

**Note:** Workday won't recalculate period activity based on ending balances loaded.

**Note:** Workday will only retain the name of the CSV file that you uploaded and won't save the file. Workday assumes that your external ERP endpoint will continue to serve as the system of record for your non-Workday entity for audit purposes.

When reloading consolidation data in an open period for the same Company, Book Code and Accounting Date (or Grouping Dimension), consider these statuses for the consolidation data:

Consolidation Data Status	Description
Approved	An accounting journal is posted and associated with this data. Workday cancels the previous consolidation data with the same Grouping Dimension, including all journals, and will replace it with the new consolidation data.
Replaced	Workday has replaced this data by a subsequent consolidation data with the same Grouping Dimension. Its associated journal has been canceled.
Draft	No accounting journal is associated with this data. Therefore, Workday won't cancel the previous consolidation data. You'll need to cancel the consolidation data manually by clicking <b>Cancel</b> .

**Note:** If you want to resubmit the consolidation data for the same Grouping Dimension, you must reload the entire summarized trial balance period activity. Don't load incremental adjusting journal entries.

### Steps

- (Optional) Based on your requirements, create custom validations to identify transaction issues that need a more careful review or further action. Example: Create a custom validation to ensure that

anytime you update a line using the **Correct Consolidation Data** task, Workday will create a line memo for audit trail purposes. See [Steps: Set Up Custom Validations](#).

You can share these validations in accounting journals as long as the fields exist in both places.

For a list of Workday delivered validations during the integration event and before creating the Consolidation Data load, see [Consolidation Data Capture Validations](#) on [Community](#).

2. Access the **Consolidation Data Hub** report.
3. Click **Upload**.
4. As you complete the task in the **Upload Consolidation Data** page, consider:

Option	Description
Source System Integration	Select the name of the integration to run. You assigned an integration name at the <b>Maintain Source System to Integration Mappings</b> setup task.
Auto Submit	<p>Check this option if you want to have Workday automatically initiate the Business Process for error free consolidation data.</p> <p><b>Note:</b> When your mapping rules yield conflicting output values, Workday:</p> <ul style="list-style-type: none"> <li>• Won't populate the mapping result.</li> <li>• Will display a warning.</li> <li>• Won't automatically submit the data even if you select the <b>Auto Submit</b>.</li> </ul>
Attachments	<p>Use the <b>Drop files here</b> or <b>Select files</b> option to add the Consolidation Data files.</p> <p>You can only load files based on a Workday-defined file format. See <a href="#">Reference: Consolidation Data - Inbound Integration CSV File Format</a> on page 233.</p>

5. Confirm that consolidation data files load successfully and then click **OK**.
6. On the **Consolidation Data Hub** report, click **Refresh** to confirm that integration event completes successfully.

**Note:** Once the integration events complete successfully, Workday replaces the **Processing** tab on the **Integration Events (Last 30 Days)** grid with the **Completed** tab, if no integration errors took place.

The **Consolidation Data Hub** report displays details of the consolidation data on these 2 grids:

- Consolidation Data (This grid will by default display consolidation data for the current open period. You can customize this view by the search prompt).
- Integration Events (Last 30 Days)

7. On the **Consolidation Data** grid, review details of each consolidation data uploaded, such as:

Option	Description
Company	Name of the company that contains the consolidation data.
Source System	The name of the external ERP endpoint.
Status	Indicates these statuses of each consolidation data file:

Option	Description
	<ul style="list-style-type: none"> <li>Approved: You've approved the consolidation data and generated accounting.</li> <li>Draft: You've successfully loaded the consolidation data but haven't submitted the data for approval. There might be errors/warnings that require your attention before submitting the data through the Business Process.</li> <li>Canceled: You've canceled the consolidation data using the Cancel button</li> <li>Replaced: You've resubmitted a file containing the same Grouping Dimension:           <ul style="list-style-type: none"> <li>The consolidation data being replaced changes from <i>Approved</i> to <i>Replaced</i> status.</li> <li>The associated journal has a status of <i>Canceled</i>.</li> </ul> </li> <li>Error: You've successfully submitted the consolidation data for approval but on completion of the business process, Workday creates an error journal. If you can't resolve the error, contact your Workday Customer Support for further help.</li> <li>Submitted: You've submitted the data using the <i>Consolidation Data Journal Creation Event</i> business process for approval.</li> </ul>
Errors	<p>Indicates the number of errors in the consolidation data.</p> <p>You can click the number to view details of the errors.</p>
Journal	<p>Journal that Workday creates after approval of the consolidation data.</p> <p>You can click the journal to drill into the details of the journal.</p>

8. Click **View** to review details of the consolidation data you uploaded.

- Check **Only Updated Lines** if you want to view only updated lines for ledger accounts and worktags that you previously corrected.
- Click **OK**.

Workday displays information for the consolidation data, such as:

- Mapped and current ledger accounts.
- Transaction and ledger currency.
- Transaction and ledger amounts.
- Mapped and current worktags.
- Mapping results
- Name of the user who last updated the data and the minute of the last update.

9. Click **Correct** to correct errors in the consolidation data. After correcting the errors, you can submit the consolidation data for approval.

**10.**(Optional) Click **Cancel** to cancel the consolidation data. You can only cancel consolidation data that is in *Draft* status.

**11.**Review the 4 tabs on the **Integration Events (Last 30 Days)** grid.

- The **Processing** tab displays details of the integration event that Workday is still completing.
- The **Completed** tab displays details for each completed integration event, such as:

<b>Option</b>	<b>Description</b>
Integration Event	<p>Instance of the integration event.</p> <p>You can click the instance to drill into the details of the event.</p>
Diagnostic Audit Download URL	<p>Instance to the diagnostic file.</p> <p>To diagnose file errors, click the URL and click the '+' button to expand the selection.</p> <p>Diagnostic Audit Download provides an integration summary and displays file-related errors, if any.</p>
Integration Messages	<p>Integration messages display integration-related errors.</p> <p>If you're unable to resolve all errors after uploading the file, Workday recommends that you contact your system administrator.</p>
View Consolidation Data	<p>Click the down arrow to:</p> <ul style="list-style-type: none"> <li>• View details of the consolidation data.</li> <li>• Export to Excel.</li> <li>• Export to PDF.</li> </ul>

- The **Incomplete** tab displays details of each integration event that creates some consolidation sets due to errors. It displays information, such as:

<b>Option</b>	<b>Description</b>
Integration Event	<p>Instance of the integration event.</p> <p>You can click the instance to drill into the details of the event.</p>
Diagnostic Audit Download URL	<p>Instance to the diagnostic file.</p> <p>To diagnose file errors, click the URL and click the '+' button to expand the selection.</p> <p>Diagnostic Audit Download, primarily displays file-related errors.</p>
Integration Messages	<p>Integration messages display integration-related errors.</p>

Option	Description
	If you're unable to resolve all errors after uploading the file, Workday recommends that you contact your system administrator.

- The **Failed** tab displays details of failed integration events where Workday created no consolidation data sets due to a system error. It displays information, such as:

Option	Description
Integration Event	Instance of the integration event. You can click the instance to drill into the details of the event.
Diagnostic Audit Download URL	Instance to the diagnostic file. To diagnose file errors, click the URL and click the '+' button to expand the selection. Diagnostic Audit Download, primarily displays file-related errors.
Integration Messages	Integration messages display integration-related errors. If you're unable to resolve all errors after reloading the file, Workday recommends that you contact your system administrator.

## Related Information

### Tasks

[Correct Consolidation Data](#) on page 229

### Reference

[The Next Level: Data Validations for Consolidation Data Capture](#)

## Correct Consolidation Data

### Prerequisites

- Upload consolidation data into Workday. See [Load Consolidation Data into Workday](#) on page 225.
  - Create the default definition for the *Consolidation Data Journal Creation Event* business process.
  - Edit the business process security policy to include relevant security groups. For more information, see [Configure Consolidation Data Capture Security](#) on [Community](#).
- See [Steps: Configure Business Process Definitions](#).
- Security: *Process: Data Capture* in the Advanced Close and Consolidation functional area

### Context

You can review and correct line level errors once you have uploaded consolidation data into Workday. After you resolve the errors, you can submit the corrections, if any for approval and creating accounting journals.

**Note:** You can correct errors for the ledger account and worktags only.

## Steps

1. Access the **Consolidation Data Hub** report.
2. Click **Refresh** to display all consolidation data uploads.
3. For the consolidation data upload that you want to correct, click **Correct**.

Workday will only display the **Correct** button if the Consolidation Data is in a *Draft* status. For more information on document statuses, see [Load Consolidation Data into Workday](#) on page 225.

Workday displays the **Correct Consolidation Data** task.

4. (Optional) On the **Line Summary** section:
  - Click **Errors** and **Warnings** to view summary of line errors and warnings.
  - Review number of **Updated Lines** that have an error. You can't drill down to view the details.
5. On the **Search Criteria** section, select a search category to narrow your results.
6. As you narrow your search criteria, consider:

Option	Description
Mapped Ledger Account Mapped Worktags	Select mapped ledger account and worktags. To resolve these mapping errors, you can modify rules you defined in the mapping table. See <a href="#">Create Consolidation Data Mapping Tables</a> on page 219.
Errors and Warnings	Select errors or warnings that you want to correct. You can select a single error or warning or multiple errors or warnings. If you select more than 1 error or warning, only those lines that satisfy all the selected errors, or warnings will populate in the grid below.
Row ID Minimum Row ID Maximum	Select a minimum and maximum row that you want to retrieve in the grid.
Only Updated Lines	Select if you want to search for errors from lines you previously updated.

7. Click **Search**.

Workday loads a maximum of 250 lines at one-time in the grid, as specified by your criteria.

8. Review these columns in the grid:

Option	Description
Column Heading	Represents the row from the .CSV file. Example: First row after header row will have a Row ID of 1, and so on.
Mapped Ledger Account	Ledger account that Workday maps after evaluating referenced mapping tables. If this field is blank, Workday was unable to find a mapping table rule match.
Current Ledger Account	Mapped ledger account plus any corrections (additions or deletions) that you want to submit as your final ledger account for the given consolidation data line.

Option	Description
Mapped Worktags	Worktags that Workday maps after evaluating referenced mapping tables. If this field is blank, Workday was unable to find a mapping table rule match.
Current Worktags	Mapped worktags plus any corrections (additions or deletions) that you want to submit as your final worktags for the given consolidation data line.
Mapping Results	Provides details of the mapping tables that Workday creates by the integration and input values from the .CSV values, and the output results.
Memo	Line level message that you can provide when performing error handling.
Updated	A Yes indicates that you've corrected a ledger account or worktags for this consolidation line from what you mapped.

**Note:** You can either select to update single lines individually or mass update selected lines in the grid.

#### 9. To correct single lines individually

- a) Select a line or lines in the grid.
- b) Enter the correct values for the current ledger account or the current worktag.
- c) Click **Update** to update the lines in the grid with the correct values to process any changes made.

When you resolve errors or warnings and click **Update**, Workday updates the error/warning count in real time. Example: Workday initially displays 10 errors. As you keep resolving errors, the number of errors displayed on the **Line Summary** section will adjust accordingly.

If you're making changes to more than 20 lines at a time, review the number of **Processing Lines** under the **Line Summary** section that Workday is processing. Click **Update** again, to have Workday complete processing these lines.

**Note:** While Workday is processing the lines, you can't search for and modify these lines.

- d) (Optional) Click **Save for Later** if you want to review the lines before submitting them for approval.
- e) Click **Submit** to submit the lines for approval.

Workday launches the *Consolidation Data Journal Creation Event* business process to submit the lines for approval.

**Note:** Submit will only display once Workday resolves all critical errors.

- f) (Optional) Click **Cancel** if you want to cancel your actions.

## 10.To mass update lines

- a) Select the lines that you want to update in the grid. You can also select all of them if you want to update all lines in the grid.
  - b) On the **Mass Update Selected Lines** section, select the correct values for the ledger account and worktag.
- Workday will apply the values that you specify to all the selected lines in the grid.
- c) As you select **Actions**, consider:
- **Add**: Workday either adds the correct values to the missing values or replaces the existing values in the grid with the correct values.
  - **Remove**: Workday removes all existing values from the selected lines in the grid.
  - **Do not apply**: Workday won't apply any values in the grid. You'll have to enter the correct values individually for each transaction line in the grid.
- d) Click **Update** to update the lines in the grid with the correct values and process the corrections.

When you resolve errors or warnings and click **Update**, Workday updates the numbers in real time.

Example: Workday initially displays 10 errors. As you keep resolving errors, the number of errors displayed on the **Line Summary** section will adjust accordingly.

If you're making changes to more than 20 lines at a time, review the number of **Processing Lines** under the **Line Summary** section that Workday is processing.

**Note:** While Workday is processing the lines, you can't search for and modify these lines.

- e) On the **Mass Updated Selected Lines** section, for **Actions**, select **Do not apply** and then click **Update** again.

Workday completes processing these lines.

- f) (Optional) Click **Save for Later** if you want to review the lines before submitting them for approval.

- g) Click **Submit**.

Workday launches the *Consolidation Data Journal Creation Event* business process to submit the lines for approval.

Submit will only display once Workday resolves all critical errors.

- h) (Optional) Click **Cancel** if you want to cancel your actions:

- Enter a comment and click **OK**.

- Click **Done** to navigate back to the **Consolidation Data Hub** report.

## Concept: Period Close Activity Group of Consolidation Data Capture

Workday provides a Consolidation Data Capture period close activity group, enabling you to close your Consolidation Data Capture journals separately from other journals. You can now close these 2 groups independently, providing greater control and flexibility in processing different types of journals as you work through your ledger period close. You still have the ability to add them to your configured groups.

Access the **Maintain Period Close Activity Groups** task to configure your period close activity group. See [Set Up Period Close Activity Groups](#) on page 297.

Before closing the period, Workday recommends that you:

- Confirm that all consolidation data for a unique grouping dimension has an approved journal.
- Run the **Trial Balance Composite** report each period to reconcile YTD balances between the Source System and Workday.

### Related Information

#### Concepts

[Concept: Ledger Close Activity Groups](#) on page 321

## Reference: Consolidation Data - Inbound Integration CSV File Format

You can't generate A CSV file from a delivered template. Your organization will have to create one using the Workday defined guidelines as specified below:

The CSV import file format has 2 types of rows:

- **Header** row. The first row in the CSV file is a fixed header row. The header row describes the columns that the consolidation data rows populate. There can be only 1 header row in a file, and it must be the first row of the file. You can skip the optional columns in the input file by removing the column or leaving it empty.
- **Consolidation Data** are rows that display the summarized trial balance lines. The integration separates the CSV file by grouping all lines with the same *Grouping Dimension* that consists of:
  - Company
  - Book Code
  - Accounting Date

For each set of lines with the same Grouping Dimension, Workday will:

- Create a single Consolidation Data file.
- Process the single Consolidation Data file into a single journal entry in Workday.

The CSV import file format has 2 types of fields that you can use to upload consolidation data from the **Consolidation Data Hub** report or using a Document Retrieval Service connection (Example: SFTP):

- **Standard Fields**

You can include these standard fields:

Field Name	Supported Data Type	Grouping Dimension	Required	Description
ACCOUNTING_DATE	YYYY-MM-DD MM/DD/YYYY MM-DD-YYYY MM/DD/YY MM-DD-YY	Yes	Yes	Determines ledger period based on Company fiscal schedule.
BOOK_CODE	Integration ID-for the Book Code  Access <b>Integration IDs &gt; View IDs</b> as a related action on the book code.	Yes	No  If left blank, Workday records the journal to blank/common book code.	Segregates transactions for financial reporting.
HEADER_MEMO	Free Text	No	No	Header message
TRANSACTION_CURRENCY	Code	No	No	Currency in which a transaction takes place.
TRANSACTION_AMOUNT	Amount with no commas.	No	No	Amount in transaction currency.

Field Name	Supported Data Type	Grouping Dimension	Required	Description
LEDGER_CURRENCY	Alpha-3 code	No	Yes	Ledger currency of specified Company.
LEDGER_AMOUNT	Amount with no commas.	No	Yes	Amount in ledger currency of specified Company.
LINE_MEMO	Free Text	No	No	Line level message
EXTERNAL_REFERENCE_ID	Free Text	No	No	Enables you to associate a journal with a record in a third party system.
DOCUMENT_LINK	Free Text	No	No	Enables you to create a link to additional information for the journal.  Before you enter the Document Link, ensure you enter <b>Consolidation Data Capture Document Link</b> as a Valid URI Pattern on the <b>Maintain External Link Validation</b> task.

**Note:** Enter the field name as shown in the **Field Name** column above. Example: Enter ACCOUNTING\_DATE not ACCOUNTING.DATE.

Column names are case-sensitive.

- **Mapping Fields**

You can use these fields in your mapping tables:

Mappable Field	Data Type	Singular	Grouping Dimension	Required	Description
Company	Mapping Value	Yes	Yes	Yes	Company in Workday
Ledger Account	Mapping Value	Yes	No	No	Ledger accounts from the account set of the company.

Mappable Field	Data Type	Singular	Grouping Dimension	Required	Description
Worktags	Mapping Value	One per type.	No	No	Attributes for each consolidation data line.

As you enter mapping values, keep these guidelines in consideration:

Mapping Value	Valid Values
Alphabet	aA-zZ
Numbers	0 to 9

**Note:** Expressions aren't case-sensitive.

Use this format for a field or column header on your CSV file for mapping values:

*EC.TableName.ColumnName*, where:

- EC indicates that the column contains mapped values. Every mapping field must start with 'EC.'
- TableName is the external value of the mapping table name. This name should correspond to the external value in the *Map: Apply Mapping Tables* located on the integration system.
- ColumnName is the exact name of the Column in the Referenced Mapping Table in Workday.

For more information about the configuration, see Integration Maps Configuration, on [Community](#).

Example:

EC.Map1.Ledger Acct	EC.Map2.Company	ACCOUNTING_DATE	LEDGER_CURRENCY	LEDGER_AMOUNT
Cash	Company A	2023-01-31	USD	1000
Accounts Receivable	Company A	2023-01-31	USD	250
Fixed Assets	Company A	2023-01-31	USD	3000

### Additional Guidelines

Consider these additional guidelines when you format a CSV file:

- Workday records positive ledger amounts or transaction amounts as Debits and negative ledger amounts or transaction amounts as Credits.
- When you open CSV files with certain editors (Example: Excel) Workday might convert certain field display formats. Remove non-English values such as accents, symbols, and characters and so on. After using such an editor, view the CSV file with a program such asTextEdit to ensure file wasn't altered.
- Field or column order doesn't matter.
- Commas in Ledger Amount or Transaction Amount fields aren't supported (Example: input 1000 vs 1,000).
- Workday considers a field required unless otherwise stated.
- Boolean values are 1 (true) and 0 (false).

- Date value formats accepted are:
  - YYYY-MM-DD
  - MM/DD/YYYY
  - MM-DD-YYYY
  - MM/DD/YY
  - MM-DD-YY
- Field or Column header names must display in the file exactly as this document specifies.
- Column header names are case-sensitive.
- For HEADER\_MEMO, Workday will use a memo per unique grouping, based on Company, Accounting Date, and Book Code.

[The Next Level: Historic Translation Method/Revaluation and Consolidation Data Capture](#)

---

## **Supplemental Schedules**

### **Concept: Supplemental Schedules**

Supplemental Schedules are financial data sets that can:

- Provide additional insights into the movements or composition of general ledger account balances.
- Satisfy external reporting requirements.

Using Supplemental Schedules, you can:

- Streamline your collection of periodic supplemental data when reporting across distributed teams, including those entities transacting in accounting systems outside of Workday.
- Drive data integrity and consistency by configuring supplemental schedule templates and sharing across your distributed teams.
- Streamline the aggregation and translation of supplemental data in a common reporting currency based on translation rule sets and currency conversion rates in your tenant.
- Enhance process visibility and monitoring.
- Digitize the approval process and introduce a formal audit trail.

Some types of Supplemental Schedules you can bring into Workday, include:

- Balance sheet roll-forwards, including fixed assets, debt, prepaids, equity, intangibles, and so on.
- Aging Schedules.
- Future commitment schedules for debt and leases.

#### **Related Information**

##### **Tasks**

[Create Consolidated Supplemental Data](#) on page 245

### **Concept: Workday Worksheets**

Supplemental Schedules applies Worksheets a spreadsheet based component in Workday that enables ad hoc data exploration, analysis, visualization, and collaboration with live transactional data. Workday users (employees, managers, and executives) can collaborate with secure, live, Workday data as well as external data using the Workday browser application.

In addition to including nearly all well-known spreadsheet functions such as those in Google Sheets™ or Microsoft® Excel®, Worksheets includes many additional Worksheets-unique functions.

Worksheets help you make your workflow more efficient by enabling you to work with live Workday data, and to use Worksheets-unique functions that improve the analysis workflow.

Workday recommends that you do not exceed 2,000 entry area rows for optimal performance.

For more information, see:

- [Concept: Data Analysis with Worksheets Functions](#).
- [Reference: Workbook Limits](#).

## Concept: Custom Validations for Supplemental Data

Based on your requirements, you can create custom validations to identify transaction issues that need a more careful review or further action.

You can configure custom validations by creating a set of condition rules using report fields on the related **Supplemental Data Row** business object.

Workday displays line level custom validations on the Supplemental Data set when you enter data in Worksheets.

**Note:** As of this release, Workday only supports Critical Line level validations on the **Supplemental Data Row** business object.

See [Steps: Set Up Custom Validations](#) on page 52.

## Create Supplemental Data Templates

### Prerequisites

- Create text lists.
- Create Calc fields.
- Security: *Setup: Supplemental Data* security domain in the Advanced Close and Consolidation functional area.

### Context

Create Supplemental Data Templates to:

- Ensure consistent data collection across distributed teams.
- Create a template configuration based on your organization's specific use cases.
- Configure each supplemental data template with these 5 delivered Data Types:
  - Currency
  - Date
  - Numeric
  - Text
  - Text List

### Steps

1. (Optional) Create calculated fields if you want to define arithmetic expressions for certain columns within a template. See [Concept: Calculated Fields in Supplemental Schedules](#) on page 250.
2. Access the **Create Supplemental Data Template** task.
3. As you complete the template header, consider:

Option	Description
<b>Name (Required)</b>	Enter a unique name for the supplemental data template.
<b>Description (Required)</b>	Enter a description for the supplemental data template.

Option	Description
<b>Fiscal Schedule (Required)</b>	<p>Select a fiscal schedule for the template. Supplemental Data you create from this template will only display periods from the selected fiscal schedule.</p> <p><b>Note:</b> This schedule will likely be the shared fiscal schedule for your reporting hierarchy.</p>
<b>Default Account Translation Method (Required when Currency Data Types are configured)</b>	<p>When you configure at least 1 Currency Data Type on a template, the <b>Default Account Translation Method</b> field becomes available and is required. Select the appropriate Account Translation Method configuration that you'll use to determine the correct currency conversion Rate Type for all <b>Currency Data Types</b> configured on the template.</p> <p>Workday will apply the Account Translation Method configured at the header level to all Currency Data Types configured in the Template.</p> <p><b>Note:</b> For alternative Account Translation Method configuration options, you can override the template header level configuration by using either of these configurations at the column or row level:</p> <ul style="list-style-type: none"> <li>• Currency Data Type at the column level within the <b>Properties</b> section for the Currency Data Type.</li> <li>• Text List Data Type at the row level with the Account Translation Method configuration. See <a href="#">Create Supplemental Data Text List</a> on page 240.</li> </ul>
<b>Roll Forward (Optional)</b>	<p>Enable the option to define additional template configurations when creating a balance sheet roll-forward type of schedule.</p> <p>If you enable <b>Roll Forward</b> you must select or create a calculated field on the <b>Data Type</b> column of Currency.</p>

4. In the **Data Type** grid, each row represents a column you want to include in your template.

You can enter a maximum of 25 columns and each column name must be unique.

5. As you enter data for the 5 Workday delivered Data Types, consider:

Option	Description
<b>Currency - Data type used to capture currency amount values. Example: \$0.00.</b>	<p>Click <b>Properties</b> to:</p> <ul style="list-style-type: none"> <li>• (Optional) Select an Account Translation Method configuration to override the value you specified in the <b>Default Account Translation Method</b> field in the template header for the specific <b>Currency Data Type</b> columns. (Column Level). If the specific Currency Data Type column is the result of an arithmetic</li> </ul>

Option	Description
	<p>calculation (Example: Ending Balance when rolling forward ending balances, then select or create a Calculated Field to derive calculations in Worksheets. See <a href="#">Concept: Calculated Fields in Supplemental Schedules</a> on page 250)</p> <p>For more information, see:</p> <ul style="list-style-type: none"> <li>• <a href="#">Create Calculated Fields</a>.</li> <li>• <a href="#">Concept: Calculated Fields</a>.</li> </ul>
<b>Date</b> - Data type used to capture date values. Example: MM/DD/YYYY.	<p>For certain Account Translation Method selections that have a Currency Rate As of Date set to Transaction Date or Transaction Period End Date, you must specify 1 Date Data Type column on a Supplemental Data Template.</p>
<b>Text</b> - Data type to to capture free-form text.	<p>None</p>
<b>Text List</b> - Data type to capture specific text list items from a configured text list.	<p>Select a Text List in <b>Properties</b>.</p> <p><b>Note:</b> You can't have more than 1 Text List with an Account Translation Method Configuration configured on a given Supplemental Data Template.</p> <p>To specify a translation method at the Row Level, select a <b>Text List</b> that has an Account Translation Method configuration.</p> <p>Row level configurations will override these 2 specified values:</p> <ul style="list-style-type: none"> <li>• In the <b>Default Account Translation Method</b> field in the template header(Header Level).</li> <li>• Translation configurations in the <b>Properties</b> section for a <b>Currency Data Type</b> (Column Level).</li> </ul>
<b>Numeric</b> - Data type used to capture non-currency numeric values. Example: 0.00.	<p>Click <b>Properties</b> to select or create a calculated field to calculate the column values when performing data entry based on the arithmetic expression configured.</p> <p>When creating calculated fields, keep these guidelines in consideration. See:</p> <ul style="list-style-type: none"> <li>• <a href="#">Create Calculated Fields</a>.</li> <li>• <a href="#">Concept: Calculated Fields</a>.</li> </ul>

6. Click **OK** and then **Done**.

### Result

Workday creates a Supplemental Data Template.

- Once you generate and approve Supplemental Data from a given Supplemental Data Template, you can't modify the template.

- You can copy the Header information and column properties of Supplemental Data Templates at any time.
- Supplemental Data Templates that you create will have a default status of *Inactive: No*. To prevent an end user from creating new Supplemental Data from a given template, you can change it to a status of *Inactive* using the **Maintain Supplemental Data Templates** task. See [Maintain Supplemental Data Templates](#) on page 241.

## Next Steps

Create supplemental data. See [Create Supplemental Data](#) on page 242.

### Related Information

#### Tasks

[Maintain Supplemental Data Templates](#) on page 241

## Create Supplemental Data Text List

### Prerequisites

Security: *Setup: Supplemental Data* in the Advanced Close and Consolidation functional area

### Context

To drive consistency during data entry, you can create a Supplemental Data Text List to create a list of items you would like an end user to select from. Example: You can create a text list for Asset Class for text list items representing the various asset classes that a user performing data entry can select from.

After you create Text Lists, you can associate them to a column configured as a Text List Data Type under **Properties** when you configure the Supplemental Data Template.

### Note:

- You can configure 1 Text List on many Supplemental Data Templates.
- Once you configure a Text List on at least 1 template, you can no longer delete the Text List items. However, you can modify existing Text Lists and add new Text List items.

### Steps

1. Access the **Create Supplemental Data Text List** task.
2. As you complete the task, consider:

Option	Description
<b>Name (Required)</b>	Enter a unique name for the text list.
<b>Account Translation Method Configuration (Optional)</b>	<p>Check to enable the text list with Account Translation Method Configuration for row level configuration options.</p> <p>If you enable the Account Translation Method Configuration, you must configure at least 1 Text List Item with an Account Translation Method.</p> <p>Row level configurations for the text list will override these 2 values:</p> <ul style="list-style-type: none"> <li>• Account Translation Method configuration at the Template header level.</li> <li>• Currency Data Type Properties column level account translation method configurations.</li> </ul>

Option	Description
	<b>Note:</b> You can't have more than 1 Text List with an Account Translation Method Configuration configured on a Supplemental Data Template.

3. Enter a list item name.
4. Click the plus icon to add a new row and enter a new Text List Item name.
5. Click **OK**.

## Maintain Supplemental Data Templates

### Prerequisites

Security: *Setup: Supplemental Data* security domain in the Advanced Close and Consolidation functional area.

### Context

You can:

- Inactivate templates that you don't want to generate Supplemental Data from (the action is reversible).
- Review details of all Supplemental Data Templates in your tenant.

### Steps

1. Access the **Maintain Supplemental Data Templates** task.
2. As you complete the task for each template, consider:

Option	Description
<b>Inactive</b>	<p>Check to disable the template from it being used to create future Supplemental Data.</p> <p><b>Note:</b> If required, you can uncheck the option to change the status back to Active.</p>
<b>Editable</b>	<p>Indicates whether you can edit the template.</p> <p><b>Note:</b> Once you create Supplemental Data from the template, you can't modify the template.</p>
<b>In Progress</b>	<p>Indicates the number of <i>In Progress</i> Supplemental Data that you've created from the template.</p> <p>You can drill down from the number to access details of the Supplemental Data, including the workbook.</p>
<b>Approved</b>	<p>Indicates the number of Approved Supplemental Data created from a template.</p>

### Related Information

#### Tasks

[Create Supplemental Data Templates](#) on page 237

## Create Supplemental Data

### Prerequisites

- Create a Supplemental Data Template. See [Create Supplemental Data Templates](#) on page 237.
- Configure the *Detailed Supplemental Data Event* business process to approve or deny the creation of Detailed Supplemental Data. See [../../manage-workday/business-processes/customize-business-processes/dan1370797385122.dita](#).
- Security: *Process: Supplemental Data* security domain in the Advanced Close and Consolidation functional area.

### Context

You create Supplemental Data using a predefined Supplemental Data Template to generate a workbook that you can use to enter data.

You can create only 1 Approved Supplemental Data with the same grouping dimension of:

- Company
- Period
- Time Period
- Supplemental Data Template

If you create and approve a Supplemental Data with the same grouping dimension, Workday:

- Replaces the previous Supplemental Data with a status of *Replaced*
- Gives the new Supplemental Data a status of *Approved*.

**Note:** You can only have 1 Supplemental Data workbook with the same grouping dimension.

See [Reference: Supplemental Data Statuses](#) on page 254.

Each entity, regardless of whether it transacts in or outside Workday must submit the supplemental data using the **Create Supplemental Data** task to report off a single Supplemental Data Row report data source (RDS).

**Note:** Once you create the Workbook, Workday evaluates the *Process: Supplemental Data* domain and evaluates contextual security to determine if a user can access a file and what are their permissions. Example: View, modify, and so on.

### Steps

1. Access the **Create Supplemental Data** task.
2. As you complete the Supplemental Data details, consider:

Option	Description
<b>Company</b>	Select the company for which you want to enter Supplemental Data.
<b>Supplemental Data Template</b>	Select a Supplemental Data Template from your tenant.  You can only use templates with a status of <i>Inactive: No</i> .  To maintain templates and their statuses, see <a href="#">Maintain Supplemental Data Templates</a> on page 241.
<b>Period</b>	Select the appropriate fiscal period. You can only select Actuals.

Option	Description
	Workday will only display the fiscal periods associated with the fiscal schedule that you configured on the selected Supplemental Data Template.
<b>Time Period</b>	Select the supplemental data collection period. You can select Current, YTD, MTD, and so on.
<b>Name</b>	Enter a name for the Supplemental Data. The name will also be the name of the created workbook and how Workday will display it on the <b>Supplemental Data Hub</b> .
<b>Currency</b>	Workday automatically populates the field in the Primary ledger currency of the Company selected. To enter supplemental data in a currency other than the primary ledger currency of the Company, you can modify this prompt value.
<b>Number of Rows</b>	Enter a numeric value between 1 to 2,000 to prepopulate the number of data rows you want to display when you create a Supplemental Data workbook.

3. Click **OK**.

Workday:

- Generates a workbook that displays the name, number, and type of columns as you defined in your Supplemental Data Template.

For Supplemental Data Templates that have at least 1 Currency Data type, Workday automatically creates the first column and named currency. The column is read-only and is derived from the currency of the supplemental data you're creating.

4. To add additional rows to the Entry Area (green dotted line) in the workbook:

- Right-click a column and select **Multiple Rows**.
- In the **Insert Multiple Rows** page, specify the number of rows you want to insert and click **OK**.

5. Enter values in the Entry Data area (green dotted area).

- You can enter data:
  - Manually.
  - Using the clipboard functionality.
  - Linking values from other cells. Example: cell references.
  - Entering formulas.

6. For documents in a *Draft* status, you can perform these actions:

- (Optional): Right-click in the workbook to add comments for the entire workbook and cell reference.
- (Optional) Click **Actions** and then select **Supplemental Data > Maintain Attachments** to attach documents to support the data you're submitting.
- Click **Actions** and then click **Supplemental Data > Submit** to initiate the *Detailed Supplemental Data Event* business process.
- Click **Actions** and then select **Supplemental Data > Copy** to copy the entire workbook.
- Click **Actions** and then select **Supplemental Data > Cancel** to cancel the workbook.

**Note:** Once you approve the workbook, you can't cancel it.

7. For documents in an *Approved* status, you can perform these actions from the related menu of a workbook:
  - View Workbook
  - Copy
  - Roll Forward (For templates that you enable as Roll Forward). See [Steps: Roll Forward Setup and Configuration](#) on page 250.
  - Maintain Translation Amounts

#### **Related Information**

##### **Reference**

[Reference: Supplemental Data Statuses](#) on page 254

## **Maintain Supplemental Data Translation Amounts**

### **Prerequisites**

Security: *Process: Translated Supplemental Data* in the Advanced Close and Consolidation functional area

### **Context**

You can:

- View system generated translation amounts for a given *Approved* Supplemental Data for a selected reporting currency.
- If required, make adjustments to translation amounts. Example: due to rounding.
- Load amounts for a given reporting currency when you roll forward. See

### **Steps**

1. From the related actions menu of the *Approved* Supplemental Data, select **Supplemental Data > Maintain Translation Amounts**.
2. For **Reporting Currency**, select the reporting currency you want the Ledger Currency values translated to and click **OK**.
3. For all **Currency Data Type** columns review details of:

Option	Description
<b>Column Name</b>	Values represent the Ledger Currency values from data entry.
<b>Column Name - Translation Adjustment Amount</b>	Editable column used to enter translation adjustment amounts. Example:translated beginning balances, rounding, and so on.
<b>Column Name - Translation Amount</b>	Values represent translated currency values in the reporting currency, selected based on template and system currency conversion rates.

4. (Optional) In the **Column Name - Translation Amount** column, enter the override amount.
  - There's no business process approval process for this workbook.

Workday overrides the system generated translation amount and automatically saves the translation adjustment amount, if entered, as the reportable value.

  - There's no document status associated with this workbook type.

## Create Consolidated Supplemental Data

### Prerequisites

- Create a custom report for each Supplemental Data Template to return Supplemental Data Rows from Supplemental Data. See [Create Custom Reports for Supplemental Schedules](#) on page 248.
- Security:
  - *Process: Consolidated Supplemental Data* domain in the Advanced Close and Consolidation functional area.
  - *Worksheets* - Provides access to Worksheets to create and manage workbooks and to control which users can export Workday data to a workbook.

### Context

You can access and report on supplemental data for a given template in a workbook using Worksheets Live Data capabilities. This enables you to aggregate and consolidate supplemental data in a single reporting view in a common reporting currency.

Once you create a workbook, Workday evaluates the *Process: Consolidated Supplemental Data* domain and its contextual security to determine if a user can access a file and what permissions the user has. Example: View, Modify, and so on.

### Steps

1. Access the **Create Consolidated Supplemental Data** task.
2. As you complete the task, consider:

Option	Description
<b>Company Hierarchy</b>	Select a company hierarchy.
<b>Supplemental Data Template</b>	Select the template for which you want to create a Consolidated Supplemental Data workbook.  <b>Note:</b> Companies in the hierarchy should have used this template to create Supplemental Data.
<b>Period</b>	Should be the same period for which you create Supplemental Data for a given Supplemental Data Template.
<b>Time Period</b>	Should be the same Time Period for which you create Supplemental Data for a given Supplemental Data Template.
<b>Name</b>	Enter a unique name for the Consolidated Supplemental Data workbook.  <b>Note:</b> You can only have 1 Consolidated Supplemental Data workbook in a <i>Draft</i> status at any given time.

3. Click **OK**.
4. On the **Consolidated Supplemental Data Details** page, click **Workbook**.
5. On the Worksheet, click the cell where you want to add Live Data.
6. Click **Add Live Data**.  
You can add multiple Live Data sets for each reporting currency.
7. Select the custom report for the Supplemental Data Template you previously created.

**8. Click Next.**

**9. Click Select All to include all available columns in the Worksheet.**

You can also select and move individual columns into the Worksheet.

**10.(Optional) Once you insert data from a Workday report into the workbook, complete these optional tasks:**

- a) Perform Pivot functions to summarize detailed supplemental data and format data according to business reporting requirements.
- b) Add transaction data from Workday to tie out balances using the Worksheets Live Data Capabilities.
- c) Leave comments on cells or the entire workbook. Tag comments so others can receive a notification about your comment.
- d) Add additional sheets for supporting documentation.
- e) Download the workbook to a different format, such as XLSX, PDF, or HTML.

**11.Click Actions and then click Submit to initiate the *Consolidated Supplemental Data Event* business process to approve or deny the creation of Consolidated Supplemental Data.**

**Note:** Once you approve the Consolidated Supplemental Data workbook, you can't make any further edits to the workbook.

#### Related Information

##### Concepts

[Concept: Supplemental Schedules](#) on page 236

## Concept: Supplemental Data Hub

You can use the **Supplemental Data Hub** report to:

- View and filter Supplemental Data and Consolidated Supplemental Data for current or previous periods.
- Track the status of Supplemental Data & Consolidated Supplemental Data and take necessary actions.

**Note:** Supplemental Data Workbooks are not displayed on Workday Drive. Workday recommends you access and search for all Supplemental Data & Consolidated Supplemental Data workbooks from the **Supplemental Data Hub** task.

You can access the **Supplemental Data Hub** report from Workday search.

Security: *Process: Supplemental Data* domain in the Advanced Close and Consolidation functional area.

As you review the report, consider these:

Tab	Description
Overview	<p>Highlights items that warrant your attention and displays all relevant tasks you have access to based on security domain permissions.</p> <p>Security: One of these domains in the Advanced Close and Functional area:</p> <ul style="list-style-type: none"> <li>• <i>Process: Supplemental Data</i></li> <li>• <i>Set Up: Supplemental Data</i></li> </ul>
Checklist	<p>Highlights the count and statuses of Supplemental Data created, organized by Supplemental Data Template to manage deliverables.</p> <p>Security: <i>Process: Consolidated Supplemental Data</i> in the Advanced Close and Consolidation functional area.</p>

Tab	Description
Supplemental Data	<p>Displays by default, all Supplemental Data created for periods with ledger period statuses of <i>Close in Progress</i> and <i>Open</i>. Use <b>Search</b> to filter and search for Supplemental Data from a previous reporting period. Use the <b>Actions</b> button to take relevant action on your Supplemental Data.</p> <p>Security: One of these domains in the Advanced Close and Consolidation functional area:</p> <ul style="list-style-type: none"> <li>• <i>Process: Consolidated Supplemental Data</i>.</li> <li>• <i>Process: Supplemental Data</i>.</li> </ul>
Consolidated Supplemental Data	<p>Displays by default, all Consolidated Supplemental Data created for periods with ledger period statuses of <i>Close in Progress</i> and <i>Open</i>. Use <b>Search</b> to filter and search for Consolidated Supplemental Data from a previous reporting period.</p> <p>Security: <i>Process Consolidated Supplemental Data</i> in the Advanced Close and Consolidated functional area.</p>

## Create Multiple Supplemental Data Workbooks

### Prerequisites

Security: These 2 domains in the Advanced Close and Consolidation functional area:

- *Process: Consolidated Supplemental Data*
- *Process: Supplemental Data*

### Context

You can configure and schedule a mass operation to create multiple Supplemental Data and Consolidated Supplemental Data workbooks for the current or future periods.

**Note:** To create multiple Supplemental Data for Roll Forward type of Supplemental Data templates, you must use the **Mass Roll Forward Supplemental Data** task.

See [Mass Roll Forward Multiple Supplemental Data Workbooks](#) on page 254.

### Steps

1. Access the **Mass Generate Supplemental Data** task.
2. Select a **Run Frequency** from :
  - Run Now.
  - Run Once in the Future.
  - Monthly Recurrence.
3. As you complete the **Mass Generate Supplemental Data Criteria** task for the Run Now frequency, consider:

Option	Description
<b>Company Hierarchies</b>	You can select a single hierarchy or multiple hierarchies.

Option	Description
	When you enter a company hierarchy, Workday will create a Consolidated Supplemental Data Workbook. If you wish to create only Supplemental Data Workbooks leave this prompt blank.
<b>Company</b>	<p>You can select a single company or multiple companies.</p> <p>When you enter a company, Workday will create Supplemental Data Workbooks. If you wish to create only Consolidation Supplemental Data Workbooks leave this field blank and enter a company hierarchy in the <b>Company Hierarchy</b> field.</p>
<b>Currencies</b>	Enter a currency value if you want to create Supplemental Data Workbooks in a currency other than the primary ledger currency of the company selected. If not, then leave this field blank.
<b>Supplemental Data Template</b>	You can select a single template or multiple templates.
<b>Period</b>	Select the appropriate fiscal period.
<b>Time Period</b>	Select a time period.

4. For the Monthly and Run Once in the Future frequency, click the Schedule tab and fill out the details.  
For the Monthly frequency, select the month that you want to correspond for the period that is associated with the future Workbooks that you want to create.
5. Click **OK**.
6. Click **Refresh** to complete the process.
7. Click the **Mass Generate Supplemental Data Results** value to open the results.
8. From the related actions of Supplemental Data, select **Supplemental Data > View Workbook** to open the Workbook.
9. To monitor future schedule processes, perform these actions:
  - a) Access the **Scheduled Future Processes** report.
  - b) Filter by **Process Mass Generate Supplemental Data**.
  - c) For Process Type, select **Job**.

## Create Custom Reports for Supplemental Schedules

### Prerequisites

Security:

- *Process: Consolidated Supplemental Data* domain in the Advanced Close and Consolidation functional area.
- *Custom Report Creation* domain in the System functional area.

## Context

You can create a custom report to return Supplemental Data Rows from Supplemental Data to help with the aggregation and currency conversion in common reporting currency.

Workday requires you to create a custom report for each Supplemental Data Template. Workday Worksheets supports Advanced and Composite reports. The custom report uses Live Data Capabilities within Worksheets to aggregate and consolidate Supplemental Data.

For additional guidelines on creating custom reports with Workday Worksheets, see [../../../../user-guide/en-us/worksheets/live-workday-data-in-workbooks/tyl1541093843707.dita](#).

The steps below details how to create an Advanced Report for Supplemental Schedules.

See:

- [Concept: Custom Reports](#).
- [Create Custom Reports](#).

## Steps

1. Access the **Create Custom Report** task.
2. For Report Type, select **Advanced**.
3. Check **Enable As a Web Service**.

Workday Web Services enable access to report results through URLs, which you can use in integrations between Workday and related external business services. See [Concept: Reports as a Service \(RaaS\)](#).

4. Uncheck **Optimized for Performance**.
5. For Data Source, select **Supplemental Data Row** report data source.
6. On the **Columns** tab, for **Report** fields, select fields to mirror the data types you selected in the Supplemental Data Template and their position in the template.

Example: Your custom report will have these report fields selected based on the Supplemental Data Template below:

- Column 01 Currency
- Column 02 Text
- Column 03 Numeric
- Column 04 Text List
- Column 05 Date

Option	Description
Column 1	Currency
Column 2	Text
Column 3	Numeric
Column 4	Text List
Column 5	Date

The above report fields will yield ledger currency values. For translated currency values, select the equivalent translated report fields. Example: Column 01 Currency Translated.

7. Select **Override Label** to change the field display option to match the column header name.
8. On the **Prompts** tab, check **Populate Undefined Prompt Defaults**. Specify any Prompt Defaults as deemed necessary for the report.
9. On the **Share** tab, under **Report Definition Sharing Option**, check **Share with all authorized users**.
10. On the **Advanced** tab, check **Enable for Worksheets** to use in Worksheets as Live Data.

11.Click **OK** to save the report.

## Concept: Calculated Fields in Supplemental Schedules

You can create calculated fields that you can use in Worksheets to:

- Calculate the value for a currency or numeric column.
- Calculate the translated currency value for roll forward.
- Calculate Arithmetic Expression function.

See [Concept: Calculated Fields](#).

When creating calculated fields for Supplemental Schedules, keep these guidelines in consideration:

- You can only create a calculated field using the Arithmetic Expression.
- You create the calculated field on the **Supplemental Data Row** business object.
- In the **Field Type** prompt, select one of these 2 data types:
  - Currency
  - Numeric
- If you specify **Currency** in the Field Type, you must specify a currency code in the **Currency Code Field** prompt as follows:
  - For creating a Calculated Field, select **Currency**.
  - For creating the respective Translated Calculated Field, select **Reporting Currency**.
- When you configure a Supplemental Data template and enable **Roll Forward**, you must create a **Currency** data type of Calculated Field and its respective Translated Calculated Field. If you don't enable **Roll Forward**, configuring Calculated Field is optional.
- The calculated field must match the data type of the column. Example:
  - For the **Currency** data type, you can only select a calculated field that returns a currency attribute value.
  - For the **Numeric** data type, you can only select a calculated field that returns a numeric attribute value.
- For numeric calculated field results, Workday displays up to 6 decimal places.
- For currency calculated field results, Workday adheres to ISO currency code standards to determine the number of decimal places. Example: If  $\$10 \div \$3 = 3.333333$  (numeric), then  $\$10 \div 3 = \$3.33$  USD (currency).

See [Create Calculated Fields](#).

## Steps: Roll Forward Setup and Configuration

### Context

You can create and configure a roll-forward type of supplemental schedule and roll forward your ending balances to the next period beginning balances by using Supplemental Schedules.

Consider these guidelines and setup configurations when rolling forward ending balances using Supplemental Schedules. This ensures accurate calculation, translation, and roll forward of such schedules from period to period.

Use the Mass Roll Forward Supplemental Data task to roll forward multiple workbooks. See [Mass Roll Forward Multiple Supplemental Data Workbooks](#) on page 254.

## Steps

1. [Create Supplemental Data Templates](#) on page 237.

  - a) Access the **Create Supplemental Data Template** task.
  - b) Select **Roll Forward** in the template header.
  - c) For **Data Type of Currency**, click **Properties** and enter these values:

Option	Description
<b>Calculated Field</b>	<p>Create an arithmetic expression to derive the calculation of your ending balance column. See <a href="#">Concept: Calculated Fields in Supplemental Schedules</a> on page 250.</p> <p>When you assign a Calculated Field to a Currency Data Type, Workday will calculate the column value during data entry based on the configured arithmetic expression. This column will be Read-Only during data entry.</p> <p>You can configure more than 1 Calculated Field in a given Supplemental Data Template.</p>
<b>Translated Calculated Field</b>	<p>Create another Calculated Field referencing translated report fields on the <b>Supplemental Data Row</b> business object.</p> <p>Configuring translated Calculated Fields ensures that Workday accurately calculates translated currency values in addition to ledger currency values.</p>
<b>Roll Forward Column</b>	<p>Specify the column where you want to roll forward the ending balance of a roll-forward schedule for each period.</p> <p>This will likely be your beginning balance column in a roll-forward.</p>

Example: Roll Forward Template Column Configuration.

Option	Description
<b>Name and Data Type</b>	<b>Properties</b>
<b>Name: Beginning Balance</b>	
<b>Data Type: Currency</b>	
<b>Name: Additions</b>	
<b>Data Type: Currency</b>	
<b>Name: Ending Balance</b>	<i>Calculated Field</i>
<b>Data Type: Currency</b>	<i>Calc_Field</i>
	<i>Translated Field</i>
	<i>Calc_Field_Translated</i>
	<i>Rollforward Column</i>

Option	Description
	Beginning Balance

In the example above:

- Calc\_Field is a calculated field for an arithmetic expression in the **Ending Balance** column. Workday references the calculated field by these report fields on the **Supplemental Data Row** business object:

Column 01 Currency + Column 02 Currency

- Calc\_Field\_Translated is a calculated field for an arithmetic expression representing the **Translated Ending Balance** column. Workday references the calculated field by these translated report fields on the **Supplemental Data Row** business object:

Column 01 Currency Translated + Column 02 Currency Translated

## 2. Create Supplemental Data on page 242.

You can create Supplemental Data using a predefined Supplemental Data Template that you enable as a **Roll Forward** template.

- Access the **Create Supplemental Data** task.
- As you complete the Supplemental Data details, consider these guidelines for creating Supplemental Data from templates that you enable as **Roll Forward**:

Option	Description
<b>Time Period</b>	<p>Workday only supports these reporting Time Periods:</p> <ul style="list-style-type: none"> <li>Current Period (Workday Owned).</li> <li>Current Period (Workday Owned).</li> <li>Quarterly Time Periods (that is, reporting time periods that have a summary schedule with 4 fiscal time intervals each summarizing 3 fiscal posting intervals).</li> </ul> <p><b>Note:</b> For Quarterly Reporting Time Periods, ensure you specify a value under the <b>Use Specific within the Period</b> section of Reporting Time Period configuration.</p>

## 3. Maintain Supplemental Data Translation Amounts on page 244

- From the related actions menu of the *Approved* Supplemental Data, select **Supplemental Data > Maintain Translation Amounts**.
- For the first period for which you want to roll forward balances, load translated beginning balance values into your beginning balance translation adjustment amount column. The default values for this column are zero until you create an adjustment.

**Note:** This is a one-time step for the first period. This ensures accurate calculation of ending translated balances that you roll over from period to period. Thereafter, accessing the task is optional and you can use it to make translation amount adjustments to activity columns.

Once a Supplemental Data has a status of *Approved* for the current period:

- You can't create any new Translated Supplemental Data for the previous period.
- You can no longer modify any existing Translated Supplemental Data for the previous period.

#### 4. Roll forward Supplemental Data

To ensure accurate data entry from period to period, Workday supports the automatic roll-forward of ending balances into beginning balances for Supplemental Data Templates that you enable as **Roll Forward**.

**Security:** Process: *Supplemental Data* in the Advanced Close and Consolidation functional area.

- From the related actions menu off of an Approved Supplemental Data that you wish to roll forward, select **Supplemental Data > Roll Forward**.

You can also access the **Roll Forward Supplemental Data** task and for the **Previous Detailed Supplemental Data** field, select the **Approved Supplemental Data** that you wish to roll forward.

- As you complete the task, consider:

Prompt	Description
Period	Workday defaults the value to the Supplemental Data Period from where you're rolling balances.  Update the period to the next Period to where you want to roll forward balances.
Time Period	Workday defaults the value to the reporting time period of the Supplemental Data that you're rolling forward balances from.  <b>Note:</b> Workday recommends that you don't change this defaulted value unless you're using a Quarterly Time Period. Example: For Quarterly Time Period, select the next Quarter that you wish to roll forward balances to.

- Select **Copy Supporting Information** to copy over non-Entry Area items (sheets, pivot tables, or other supporting details) from the Supplemental Data workbook that you're running the Roll Forward action on.
- Under **Name** enter a unique name.
- Click **OK**.

#### Result

Workday:

- Generates a workbook that displays the name, number, and type of columns as you defined in your Supplemental Data Template.
- Rolls forward ending balances from your previous Supplemental Data to the beginning balance column, per your template configuration.

**Note:** Balances that you've rolled forward (that is, beginning balances) are read-only during data entry and you can't modify them.

You can't roll forward a previous Supplemental Data under these conditions:

- When you have already created a rolled forward Supplemental Data for the next period, in a *Draft* or *Submitted* Document Status.
- When you have Supplemental Data for a previous period in *Draft* or *Submitted* Document Status with these same grouping dimensions of:
  - Company
  - Supplemental Data Template
  - Period
  - Time Period

## Mass Roll Forward Multiple Supplemental Data Workbooks

### Prerequisites

Security: *Process:Supplemental Data* in the Advanced Close and Consolidation functional area.

### Context

You can perform a mass operation to roll forward multiple Supplemental Data workbooks created with a Supplemental Data Template with Roll Forward configuration.

### Steps

1. Access the **Mass Roll Forward Supplemental Data** task.
2. As you complete the task consider:

Option	Description
Option	<b>Description</b>
<b>Company</b>	You can select single company or multiple companies.
<b>Supplemental Data Template</b>	You can select a single template or multiple templates that are configured as a Roll Forward.
<b>Period</b>	Select the period you want to roll forward to.
<b>Time Period</b>	Select the time period you want to roll forward to.

3. Click **OK**.
4. For **To Period** and **To Time Period**, select the period and time period you want to roll forward to.
5. Check **Copy Supporting Information** if you want to copy over non-entry area items such as, sheets, pivot tables, or other supporting details from the Supplemental Data workbooks that you are rolling forward.
6. In the **Supplemental Data to Roll Forward** grid, select the Supplemental Data workbooks that you want to roll forward or check **ALL** to select all workbooks in the grid.
7. Click **OK**.
8. Click **Refresh** to complete the process.
9. Click the **Mass Generate Supplemental Data Results** value to view the results.

### Reference: Supplemental Data Statuses

After creating Supplemental Data, consider these statuses:

Supplemental Data Status	Description
Draft	Is the default status once you create Supplemental Data. The workbook is ready for data entry.
Submitted	Workday has submitted the Supplemental Data for business process approval.
Approved	Workday has approved the Supplemental Data by a business process.

Supplemental Data Status	Description
	(Optional) You can now maintain translation amounts if necessary. See <a href="#">Maintain Supplemental Data Translation Amounts</a> on page 244. Workday locks the workbook from further edits.
Replaced	Workday has replaced the Supplemental Data with a new <i>Approved</i> Supplemental Data with the same grouping dimensions.
Canceled	You have manually canceled the Supplemental Data. You can only cancel Supplemental Data if the data has a status of <i>Draft</i> .

**Note:** The above statuses are also applicable to Consolidated Supplemental Data.

- There can be only 1 *Approved* Supplemental Data with the same grouping dimension of Company, Period, Time Period, and Supplemental Data Template.
- If you create and approve a Supplemental Data with the same grouping dimension, Workday replaces the previous Supplemental Data with a status of *Replaced*.

## Consolidations and Eliminations

---

### Setup Considerations: Consolidations and Eliminations

You can use this topic to help make decisions when planning your configuration and use of consolidations and eliminations. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Consolidation aggregates financial transactions from multiple companies in a hierarchy into a single financial statement. You create rules to eliminate these transactions when consolidating:

- Intercompany transactions.
- Investments in subsidiaries.
- Noncontrolling interest (NCI).

### Business Benefits

You can:

- Consolidate 2 or more companies as a single entity to meet global statutory and tax reporting requirements.
- Eliminate intercompany transactions to prevent double counting.
- Run consolidated reports throughout the period and include elimination information in your reporting at any time.

- Create journals that record the NCI for subsidiaries.

### Use Cases

When a parent company either directly or indirectly controls a majority interest in a subsidiary, you can consolidate the affiliated companies and run consolidated financial statements. A consolidated financial statement eliminates equity, intercompany, and NCI transactions, and displays the parent and its subsidiaries as a single entity.

### Questions to Consider

Questions	Considerations
Are the subsidiaries wholly owned or partially owned by the parent company?	For partially owned subsidiaries, define the ownership percentage.
What intercompany ledger accounts do you want to eliminate during consolidations?	<p>Include the intercompany and interworktag ledger accounts you want to eliminate when you configure elimination rules.</p> <p>Use the first tab of the elimination rules for these types of eliminations.</p>
How will you settle intercompany transactions?	<p>To settle by cash, ensure that you create organizations as companies in Workday.</p> <p>Otherwise, you can create a custom organization or another type of organization such as a cost center as a primary balancing worktag. Interworktag eliminations can't settle with cash and will only eliminate for the primary balancing worktag.</p>
What sort of interest does the parent company have in subsidiaries?	<p>When the parent company has a controlling interest in a subsidiary, configure elimination rules to eliminate the parent company investments from the subsidiary.</p> <p>If a third party has a noncontrolling interest in a subsidiary, define elimination rules for NCI.</p>
Which accounting method will you use when consolidating?	If you use the equity method, automate equity pickup calculation by defining rules on the <b>Equity Pickup</b> tab of the elimination rules.
Which companies will you run equity pickup for?	<p>Your intercompany elimination rules will have different configurations depending on whether you:</p> <ul style="list-style-type: none"> <li>• Run equity pickup on all companies and eliminate companies that don't use equity method accounting.</li> <li>• Run equity pickup only for companies that use equity method accounting.</li> </ul> <p>We recommend that you run equity pickup for all owned companies. Since Workday calculates NCI on the equity pickup for all companies, running equity pickup for all companies generates the correct ownership change calculation. When you use this configuration, include the ledger accounts from your equity pickup rules in your intercompany</p>

Questions	Considerations
	<p>or interworktag elimination rules to eliminate equity pickup entries from companies that use full consolidation.</p> <p>When you don't have NCI, derived NCI, or ownership changes, you can run equity pickup for companies that use equity method accounting only. When you use this configuration, you don't need to include the ledger accounts from your equity pickup rules in the intercompany or interworktag elimination rules. However, you must create a separate company hierarchy to process only the necessary equity method entries.</p>
Will you be reporting consolidated results for an alternate fiscal schedule?	<p>Create a separate hierarchy for the alternate fiscal schedule and select the alternate fiscal schedule on the <b>Edit Consolidations Details</b> task.</p>

When you're planning to calculate and record NCI eliminations using the **Run Noncontrolling Interest** task, consider:

Questions	Considerations
What currencies and hierarchies do you perform consolidation reporting for?	<p>Create:</p> <ul style="list-style-type: none"> <li>• NCI journals for each currency and company or hierarchy that you report on.</li> <li>• Translated beginning balances for each translated reporting currency you consolidate in.</li> </ul> <p>Example: If you perform consolidation reporting in USD and EUR, ensure that you have NCI journals for both currencies, and for all companies or hierarchies that you report on.</p>
Who should opt in when they want to perform reporting using NCI journals?	<p>If you currently derive NCI, you can opt in to run persisted NCI reports.</p> <p>If you don't opt in, you won't be able to report using NCI journal lines.</p> <p>If you're new to Workday, Workday opts you in automatically.</p>
How do you currently calculate NCI?	<p>If you haven't run noncontrolling interest in your Implementation or Production tenant before 2024-09-21, Workday will calculate persisted NCI for all companies owned by a parent company, regardless of whether they're in the same hierarchy.</p> <p>If you currently derive NCI, or if your tenant was configured to persist NCI before 2024-09-21, you can continue to calculate NCI for companies within a single company hierarchy.</p>

Questions	Considerations
	You can opt in to run NCI by ownership instead of by hierarchy by accessing the <b>Noncontrolling Interest Journal Lines Opt-In</b> task.
Do you plan to report on NCI using OfficeConnect?	<p>To report on NCI using OfficeConnect, you must opt in to run NCI by ownership on the <b>Noncontrolling Interest Journal Lines Opt-In</b> task.</p> <p>When you configure company ownership structures, consider that:</p> <ul style="list-style-type: none"> <li>The consolidating parent company of any top-level hierarchy that you run NCI for must be included in that hierarchy or a subordinate hierarchy.</li> <li>When the consolidating parent company of the top-level hierarchy is included in a subordinate hierarchy, you must also set it as the consolidating parent company of the hierarchy that contains it and any other subordinate hierarchies between that hierarchy and the top-level hierarchy.</li> </ul>
At what level do you want to approve NCI results?	<p>You can approve or deny NCI results at:</p> <ul style="list-style-type: none"> <li>Hierarchy level, reducing the number of business process events that need your approval.</li> <li>Company level, providing you with more visibility and control over your NCI results.</li> </ul>
When are you going to run NCI?	You can run NCI now or schedule to run it in the future.
What type of NCI ownership does your company have?	<p>You can set up NCI to calculate for direct ownership on the <b>Maintain Elimination Rules</b> task.</p> <p>To report on NCI journal lines, or to calculate NCI for all owned companies, you must set up NCI to calculate for direct ownership.</p> <p>We plan to retire the ability to calculate NCI for indirect ownership in a future update.</p>

When you're planning to calculate and record equity pickup using the **Equity Pickup** task, consider:

Questions	Considerations
How will NCI and ownership changes affect your equity pickup rules?	<p>When you use NCI and track and post ownership changes, we recommend that you run equity pickup on all companies and eliminate non-equity method companies.</p> <p>When you don't use NCI and track and post ownership changes, you can run equity pickup only for companies that require equity method</p>

Questions	Considerations
	consolidations. When there are owned entities that aren't subject to equity method entries, you can create a separate company hierarchy to process only the necessary equity method entries.
In which currency do you plan to record investments in subsidiaries?	<p>When you create equity pickup rules, you can record investments in subsidiaries in the ledger currency of the subsidiary or the parent. Your choice determines the process of revaluing investments.</p> <p>When you record in the subsidiary ledger currency, you can:</p> <ul style="list-style-type: none"> <li>Include the investment in subsidiary ledger account in a revaluation rule.</li> <li>Run revaluation for the company using this revaluation rule.</li> <li>Run equity pickup for your company.</li> <li>After you book equity pickup to the investment in subsidiary account, run revaluation again.</li> </ul> <p>When you record in the parent ledger currency, you record the investment in subsidiary at historical rates. To revalue these investments, you can:</p> <ul style="list-style-type: none"> <li>Post a cumulative translation adjustment (CTA).</li> <li>Add the posted CTA account to your equity pickup rules.</li> <li>Run equity pickup for your company.</li> </ul>
How have you configured worktag balancing in your tenant?	Workday supports primary and optional worktag balancing in equity pickup, once you configure your equity pickup rules to specify the balancing worktags as target worktags.

## Recommendations

- When you're configuring elimination rules for intercompany and interworktag ledger accounts:
  - Select a unique account as the variance ledger account. A unique account ensures that Workday tracks differences if the intercompany and interworktag accounts don't net to zero upon consolidation.
  - Update year-end closing rules when an equity pickup rule generates net income, to ensure that retained earnings roll forward correctly each year.
- When creating custom reports to eliminate interworktags, ensure that you perform these actions:
  - For each sub-report, uncheck the **Do Not Prompt at Runtime** option for the **Balancing Worktags** prompt.
  - When running the custom report, select the **Primary Balancing Worktags** value at the **Balancing Worktags** prompt.
- When you're recording NCI, set up an elimination rule for each ledger account or ledger account summary that you want to calculate NCI on.

- When you're configuring rules for equity pickup:
  - Select a provision account. If you don't select an account, Workday tracks losses but won't record them.
  - Record equity pickup results in the subsidiary base currency to record eliminations accurately, and to automate revaluation of the investment in subsidiary.
- Add NCI and equity pickup journals to new or existing period close activity groups.

## Requirements

To ensure that Workday calculates consolidations accurately:

- Complete the company hierarchy.
- Ensure each company in the hierarchy shares the same account set, and either a primary or an alternate fiscal schedule. The companies can have different ledger (base) currencies.
- Complete the company ownership details for every company in the hierarchy.
- Configure eliminations and equity method consolidation rules.
- Opt in to report using NCI journal lines if you've been deriving NCI.
- Enable the **Translated Currency** prompt when you're creating a custom report to perform consolidation reporting. Workday uses this value to perform eliminations for NCI, and investment in subsidiary and subsidiary equity.

## Limitations

Workday doesn't support worktag balancing on NCI journals. When you need to add worktags on NCI journals, you can create a manual journal or allocation to post entries directly to the subsidiary that has the noncontrolling interest, using a book code that is only included in consolidated financial reports.

## Tenant Setup

You can use the **Edit Tenant Setup - Financials** task to enable options to:

- Include worktag types for retained earnings.
- Add the intercompany affiliate worktag type.
- Reverse operational and NCI journals.

## Security

Domain	Consideration
<i>Set Up: Consolidation</i> in the Financial Accounting functional area.	Can configure elimination rules.
<i>Process: Equity Pickup</i> in the Financial Accounting functional area.	Can run and calculate equity pickup.
<i>Set Up: Financial Accounting</i> in the Common Financial Management functional area.	Can create ownership details.
<i>Process: Noncontrolling Interest</i> in the Financial Accounting functional area.	Can create journal entries.
<i>Process: Noncontrolling Interest Opt-in</i> in the Financial Accounting functional area.	Can opt in to report NCI using NCI journals, and to calculate NCI by ownership. Only applies to unconstrained groups.

## Business Processes

Business Process	Consideration
<i>Equity Pickup Event</i>	You can approve and deny equity pickup entries.
<i>Noncontrolling Interest Group Run Event</i>	You can approve and deny NCI group results. Workday creates 1 NCI group result per hierarchy that you run NCI for.
<i>Noncontrolling Interest Run Event</i>	You can add <i>Noncontrolling Interest Run Event</i> as a subprocess of the <i>Noncontrolling Interest Group Run Event</i> business process. This enables you to preapprove and deny NCI results for individual subsidiaries or companies in a hierarchy.

## Reporting

You can run the **Consolidated Trial Balance** report to review these eliminations:

- Intercompany and interworktag.
- NCI.

You can use these reports to view NCI results and journal lines:

- **Find Consolidation Journal**
- **Find Consolidation Journal Lines**

You can use the **Find Noncontrolling Interest Results** report to view and cancel NCI results.

You can view equity pickup journals in a:

- Standard trial balance report.
- A composite consolidated trial balance report.

## Integrations

Web Services	Considerations
<i>Get Company Ownership Details Full List</i>	Retrieves information about company ownership, including all related snapshots for the company.
<i>Get Consolidation Details of Company Hierarchy</i>	Retrieves consolidation details on company hierarchies.
<i>Get Noncontrolling Interest Results</i>	Retrieves all NCI results.
<i>Put Company Ownership Detail Full List</i>	Uploads snapshots of company ownership details.
<i>Put Consolidation Details of Company Hierarchy</i>	Uploads the consolidation details of company hierarchies.
<i>Put Noncontrolling Interest Result</i>	Mass creates NCI balances when you perform reporting using persisted elimination journals.

## Connections and Touchpoints

Features	Considerations
Company Intercompany Profile	You use this profile to define relationships between companies in Workday. The profile enables you to specify which companies can initiate transactions and which companies can only settle transactions.
Set Up a Single Legal Entity	You share this feature with a Workday Payroll (USA) implementation. Define the company relationship to enable multiple companies to roll up to a single company.
Worktag Balancing	You can eliminate primary worktags, but you can't eliminate optional worktags.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[2024R2 Feature Release Note: Noncontrolling Interest for All Owned Companies](#)

## Steps: Set Up Consolidations

### Prerequisites

- Create a company hierarchy that includes all companies that are part of the consolidation. See [Steps: Set Up Companies](#).
- Review setup considerations for consolidations and eliminations.

### Context

You can:

- Set up elimination rules for intercompany and interworktag transactions, noncontrolling interest (NCI), and equity pickup.
- Generate reports to view detailed information about these eliminations:
  - Intercompany and interworktag.
  - Investment in subsidiary and subsidiary equity.
  - NCI.

## Steps

### [1. Set Up Company Ownership Details](#) on page 264.

Select the legal companies that are part of the consolidation hierarchy, and define either of these percentages:

- Ownership.
- Claim on assets.

Security:

- *Set Up: Consolidation* domain in the Financial Accounting functional area.
- *Set Up: Financial Accounting* domain in the Common Financial Management functional area.

### [2. Set Up Intercompany and Interworktag Elimination Rules](#) on page 266.

Set up rules for using intercompany affiliate worktags to eliminate ledger accounts for the consolidation.

Security: *Set Up: Consolidation* domain in the Financial Accounting functional area.

### [3. Set Up Equity Pickup Elimination Rules](#) on page 272.

Define the equity method accounting rules that consolidation investor and investee companies use to eliminate equity pickup earnings.

### [4. Calculate Equity Pickup Results](#) on page 275.

Record the equity earnings of consolidated subsidiaries onto the books of parent companies.

### [5. Set up your tenant to calculate NCI.](#)

See [Steps: Set Up for Persisting Noncontrolling Interest](#) on page 280.

### [6. Run Noncontrolling Interest](#) on page 284

### [7. Create Trial Balance Reports](#) on page 388.

View these eliminations by running the standard composite consolidated trial balance report:

- Investment in subsidiary and subsidiary equity eliminations, including any NCI portion.
- NCI activity.
- Equity pickup.

You can view equity pickup journals in a:

- Standard trial balance report.
- Composite consolidated trial balance report.

## Related Information

### Tasks

#### [Steps: Set Up Companies](#) on page 58

## [Steps: Set Up Alternate Fiscal Year Consolidations](#)

### Prerequisites

- Review setup considerations for consolidations and eliminations.
- [Create Organization Hierarchies](#).

Create a company hierarchy that includes all companies that are part of the consolidation.

- Ensure you've recorded the Primary Fiscal Schedule opening balances using the Journal Enterprise Interface Builder (EIB).

- Security:

- *Set Up: Consolidation* domain in the Financial Accounting functional area.
- *Set Up: Financial Accounting* domain in the Common Financial Management functional area.

## Context

Workday enables you to create consolidated financial statements for companies with different fiscal schedules. When you want to roll up companies with alternate fiscal schedules into a hierarchy, each company in the hierarchy must share either:

- A primary fiscal schedule.
- An alternate fiscal schedule.

Also ensure:

- You create an alternate fiscal schedule for all years that have data.
- You roll forward the alternate fiscal year for each year that has data.

**Note:** Create a separate hierarchy if you want to report consolidation results for the alternate fiscal schedule.

## Steps

1. Consolidate companies in the hierarchy to eliminate:

- Intercompany.
- Equity pickup.
- Noncontrolling interest (NCI).

See [Steps: Set Up Consolidations](#) on page 262.

2. Associate 1 or more alternate fiscal schedules with each company in the hierarchy.

See [Assign Company Accounting Details](#) on page 64.

3. Access the **Edit Consolidation Details** task and enter a standard or alternate fiscal year to define the consolidation fiscal schedule for the company hierarchy.

4. Roll forward year-end balances and translated beginning balances for all companies in the hierarchy at the end of their fiscal years.

See [Roll Year-End Balances Forward](#) on page 304.

## Next Steps

Run the **Consolidated Trial Balance** report.

### Related Information

#### Tasks

[Create Trial Balance Reports](#) on page 388

## Set Up Company Ownership Details

### Prerequisites

- Create a company hierarchy that includes all companies that are part of the consolidation. See [Steps: Set Up Companies](#).
- Security:
  - *Set Up: Consolidation* domain in the Financial Accounting functional area.
  - *Set Up: Financial Accounting* domain in the Common Financial Management functional area.

## Context

You can set up ownership details for your investments in subsidiaries for legal companies that are part of a company hierarchy.

When you change the third party ownership details of a parent company, consider the impact on subsidiaries associated with it. We recommend that you create a separate ownership change snapshot on the date of change.

When you haven't defined a parent company for the company hierarchy, Workday won't apply any elimination rules that you define for:

- Investment in subsidiary and subsidiary equity.
- NCI.

When you plan to report on noncontrolling interest (NCI) using OfficeConnect, ensure that:

- You include the consolidating parent company of any top-level hierarchy that you want to run NCI for in that hierarchy or a subordinate hierarchy.
- When the consolidating parent company of the top-level hierarchy is included in a subordinate hierarchy, you also set it as the consolidating parent company of the hierarchy that contains it and any other subordinate hierarchies between that hierarchy and the top-level hierarchy.

## Steps

### 1. Access the subsidiary company.

You can search for a subsidiary company:

- Using global search.
- By accessing the company hierarchy and viewing the companies included in it.

If you don't define a parent company, Workday won't apply any elimination rules that you define for:

- Investment in subsidiary and subsidiary equity.
- Noncontrolling Interest (NCI).

### 2. From the related actions menu of the subsidiary company, select **Company > Edit Company Ownership Details**.

Enter an **Effective Date**.

Workday uses this date to calculate net income and prior year retained earnings based on the date that these changes go into effect:

- **Ownership %**
- **Claim on Assets %**

### 3. As you complete the **Edit Company Ownership Details** task, consider:

Option	Description
<b>No Owner Companies</b>	Select when the company is a consolidating parent that doesn't have any owner companies.
<b>Owner Company</b>	<p>Select an owner company or a third party.</p> <p>Select <b>Create &gt; Create Third Party</b> to create a worktag for owners that don't have a company within your Workday tenant. Third-party worktags enable you to associate third-party owners with their corresponding elimination entries.</p> <p>To prevent errors when you run noncontrolling interest or equity pickup, Workday doesn't support circular ownership configurations. You can't select an owner company that is owned directly or indirectly by the company whose ownership details you're editing.</p>

Option	Description
<b>Ownership %</b>	<p>Enter whole or decimal numbers from zero to 100 that represent ownership in the company. The <b>Total</b> for all owner companies and third-parties must equal 100.</p> <p>If you reduce the ownership percentage of an owner company to zero, don't remove the value for the fiscal period. You can remove the zero percent ownership line in a subsequent period after Workday records the ownership adjustment.</p>
<b>Claim on Assets %</b>	<p>Enter a percentage if you're attributing income that isn't based on relative <b>Ownership %</b>. Enter whole or decimal numbers from zero to 100. The <b>Total</b> for all owner companies and third-parties must equal 100.</p>

## Result

You can configure elimination rules for the company hierarchy.

[The Next Level: Introduction to Workday Consolidations](#)

## Set Up Intercompany and Interworktag Elimination Rules

### Prerequisites

- Create a hierarchy that includes all companies that are part of the consolidation. See [Steps: Set Up Companies](#).
- Complete ownership details for each company in the company hierarchy. See [Set Up Company Ownership Details](#).
- Security: *Set Up: Consolidation* domain in the Financial Accounting functional area.

### Context

You can configure rules for all intercompany and intercompany worktag ledger accounts that you want to eliminate upon consolidation. Workday uses the intercompany affiliate on journal lines to perform the elimination when the company and intercompany affiliate are both in the hierarchy for which you run the report. Eliminations can consist of these relationships:

- One to one.
- One to many.
- Many to one.

These eliminations occur when you run the report and aren't persisted. Workday only performs eliminations on the ledger accounts you configure in the rules.

Example: You can create separate rules to eliminate:

- Intercompany receivable and intercompany payable accounts.
- Intercompany revenue and intercompany expense accounts.
- Interworktag receivable and interworktag payable accounts.

**Note:** When creating custom reports to eliminate interworktags, ensure that you perform these actions:

1. For each sub-report, uncheck the **Do Not Prompt at Runtime** option for the **Balancing Worktags** prompt.
2. When running the custom report, select the **Primary Balancing Worktags** value at the **Balancing Worktags** prompt.

## Steps

1. Access the **Maintain Elimination Rules** task.
2. Select the **Account Set** for which you're defining elimination rules.  
Create 1 or more elimination rules for the account set.
3. As you complete the **Intercompany/Interworktag** tab, consider:

Option	Description
<b>Elimination Ledger Accounts</b>	<p>Select the consolidation intercompany or interworktag ledger accounts you want to eliminate.</p> <p>Workday only evaluates a ledger account when it has intercompany affiliate worktags on transactions. See <a href="#">Setup Considerations: On-Behalf-of Intercompany Activities</a>.</p> <p>Interworktag affiliate only eliminates for required worktag balancing.</p> <p>Consider the account translation method of the ledger accounts. If you've different translation methods, it can result in translation variances.</p>
<b>Variance Ledger Account</b>	<p>Select the variance accounts to post any out-of-balance amounts to when the intercompany or interworktag ledger accounts don't eliminate on consolidation.</p> <p>Workday recommends that you:</p> <ul style="list-style-type: none"> <li>• Select a different variance ledger account for each elimination rule, to provide more visibility into the intercompany reconciliation process.</li> <li>• Don't define intercompany or interworktag accounts as the variance ledger account.</li> </ul>

## Result

Workday calculates and displays the elimination entries in an elimination column on each consolidated financial report, when you select 1 or more of these prompts:

- **Eliminations Only**
- **Perform Intercompany Eliminations**

You can use the **Intercompany Elimination Out of Balance** report to reconcile:

- Intercompany accounts in an elimination rule.
- Differences with the suspense account in the **Consolidated Trial Balance** report.

You can use the **View Intercompany Reconciliation** report to view intercompany differences due to unmatched intercompany journal lines. You should only use the report when using the Manual

Intercompany Matching feature. Otherwise, you should continue to use the **Intercompany Elimination Out of Balance** report. The **View Intercompany Reconciliation** report doesn't support:

- Alternate ledger currencies.
- Commitment or Budget ledger types.

### Example

Elimination Rule Name	Elimination Ledger Accounts	Variance Ledger Account
<i>Intercompany Management Fee Elimination</i>	<i>4999:Management Fee Revenue</i> <i>5999:Intercompany Cost of Sales</i> <i>7999:Management Fee Expense</i>	<i>7900:Other Expenses</i>
<i>Intercompany Pay/Rec Elimination</i>	<i>1900:Intercompany Receivable</i> <i>2900:Intercompany Payable</i>	<i>1100:Suspense</i>
<i>Investment in Subsidiary, Associate, and Joint Venture</i>	<i>1950:Investment in Sub</i> <i>1951:Investment in Subsidiary - Current Year Earnings</i> <i>1952:Investment in Subsidiary - Income Losses</i> <i>1955:Investment in Associate and Joint Ventures</i> <i>1956:Investment in Associate and Joint Ventures - Income</i> <i>1957:Investment in Associate and Joint Ventures - Income Losses</i> <i>2800:Subsidiary Losses Provision</i> <i>2805:Associate and Joint Venture Losses Provision</i> <i>3005:Noncontrolling Interest Equity</i> <i>3100:Capital Stock</i> <i>3110:Preferred Stock</i> <i>3124:APIC Other</i> <i>3125:Additional Paid in Capital</i> <i>3300:Retained Earnings - Prior Years</i> <i>3305:Dividends Declared</i> <i>3310:Preferred Dividends Declared</i> <i>3350:Treasury Stock</i> <i>3410:CTA (FX Reserve)</i> <i>3450:OCI (Revaluation Surplus)</i> <i>3500:Unrealized Gain/Loss</i>	<i>1101:Suspense Intercompany Payable/Receivable</i>

Elimination Rule Name	Elimination Ledger Accounts	Variance Ledger Account
	8700: <i>Earnings in Subsidiary</i> 8701: <i>Earnings in Associate / Joint Ventur</i>	

In this example, we add retained earnings to the elimination rules.

### Next Steps

You can report on individual elimination rules using the **Intercompany Elimination Out of Balance Report**.

When an intercompany affiliate is tagged on an income statement account that isn't in your elimination rules and a roll forward has occurred, the retained earnings an carry that additional intercompany affiliate. This results in more elimination than intended. To resolve this, you can create a reclassification entry of the unwanted intercompany affiliate in the retained earnings account. See [Workday Community: Intercompany Elimination Details and Reclassification](#).

## Example: Set Up Proportional Consolidation

This example illustrates how to set up proportional consolidation for a single company.

### Context

Global Modern Services S.P.A (Italy) owns 90% of Global Modern Services Ltd. (Ireland). As an accountant for Global Modern Services Ltd. (Ireland), you want to see the ledger account balances of the percentage owned for internal reporting. In this scenario, you want to see 90% of the ledger account balances in each ledger account.

### Prerequisites

- Set up a company that is owned by 2 other companies that own 90% and 10% each.
- Security:
  - *Set Up: Allocations* in the Financial Accounting functional area.
  - *Set Up: Ledger and Book* in the Common Financial Management functional area.

### Steps

1. Access the **Maintain Book Codes** task.
  - a) Add a row to the grid and enter *Proportional Consolidation using a Book Code* in both the **Name** and **Description** columns.
  - b) Click **OK** and **Done**.
2. Access the **Maintain Books** task.
  - a) Add a row to the grid and enter these values:

Name	Description	Includes Book Codes	Includes Blank Book Code	Tenant Default
<i>Proportional Consolidations</i>	<i>Proportional Consolidations</i>	<i>Proportional consolidation using a book code</i>	Select	Leave clear

- b) Click **OK** and **Done**.

3. Access the **Create Financial Condition Rule** task.

- Enter *Exclude Current Year* in the **Description** field.
- In the **Rule Conditions** grid, enter these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	Ledger Account	<i>not in the selection list</i>	<i>Value is specified in this filter</i>	3200: <i>Retained Earnings - Current Year</i>

- Click **OK**.

4. Access the **Create Allocation Definition** task.

- In the **Details** section, enter these values:

Option	Description
<b>Allocation Definition Name</b>	<i>Proportional Consolidation for GMS (Ireland) book code only</i>
<b>Currency Rate Type</b>	<i>Current</i>
<b>Account Set</b>	<i>Corporate</i>
<b>Fiscal Schedule</b>	<i>Standard Corporate Schedule</i>
<b>Used By</b>	<i>301.11 Global Modern Services Ltd. (Ireland)</i>
<b>Create Reversal</b>	Leave clear
<b>Balancing Fund</b>	Leave clear

- In the **Information** section, enter these values:

Option	Description
<b>Inactive</b>	Leave clear
<b>Reference</b>	Leave clear
<b>Description</b>	<i>This allocation definition calculates the noncontrolling interest for GMS (Ireland), for use in subconsolidations reporting.</i>

- In the **Source** section, enter these values:

Option	Description
<b>Source Type</b>	<i>Ledger/Plan Structure</i>
<b>Allocation Percent</b>	<i>10</i>
<b>Currency</b>	<i>EUR</i>
<b>Ledger/Plan Structure</b>	<i>Actuals</i>

Option	Description
Book Code	Leave clear

- d) In the **Source Filter Conditions** table, select *Corporate: All Accounts* from the **Ledger Account/Ledger Account Summary** column.
- e) Select *Exclude Current Year* from the **Financial Condition Rule** prompt.
- f) In the **Basis** section, enter these values:

Option	Description
Ledger/Plan Structure	<i>Actuals</i>
Allocation Method	<i>Spread Even</i>
Dimension	<i>Cost Center</i>

- g) In the **Basis Filter Conditions** table, add a row and select *Cost Center: 31000 Operations Management* from the **Worktags** column.
- h) In the **Target** section, enter these values:

Option	Description
Ledger/Plan Structure	<i>Actuals</i>
Company is from	<i>Source</i>
Ledger Account is from	<i>User Specified</i>
Ledger Account	<i>3500:NCI Equity</i>
Book Code	<i>Proportional Consolidation using a book code</i>

- i) In the **Offset** section, enter these values:

Option	Description
Company is from	<i>Source</i>
Ledger Account is from	<i>Source</i>

- j) In the **Worktag Mapping** table, add these rows:

Worktag Type	Worktag Value is from
Cost Center	<i>Source</i>
Region	<i>Source</i>
Supplier	<i>Source</i>
Customer	<i>Source</i>
Revenue Category	<i>Source</i>
Spend Category	<i>Source</i>
Project	<i>Source</i>
Intercompany Affiliate	<i>Source</i>

- k) Click **OK** and **Done**.

## Next Steps

Use the new allocation definition in an allocation group set.

## Related Information Concepts

# Equity Pickup

## Set Up Equity Pickup Elimination Rules

### Prerequisites

- Set up company ownership details for investor and investee companies. See [Set Up Company Ownership Details](#).
- Security: *Set Up: Consolidation* domain in the Financial Accounting functional area.

### Context

You can define rules for eliminating equity pickup earnings for the investor and investee companies when you consolidate subsidiaries using the equity method of accounting. For each equity pickup rule, you can define:

- Default ledger accounts.
- Ledger accounts for 1 or more companies with their own set of accounts.

Workday supports equity pickup on all subsidiary investments regardless of ownership percent.

Equity pickup elimination rules work in conjunction with elimination rules for intercompany or interworktag and noncontrolling interest.

### Steps

1. Access the **Maintain Elimination Rules > Equity Pickup** tab.
2. As you complete the **Equity Pickup** tab, consider:

Option	Description
<b>Rule Name</b>	You can't use a rule name more than once.
<b>Record in Subsidiary Base Currency</b>	Select to record equity pickup in the base currency of the subsidiary. When you select this check box, you can revalue investments as configured in your revaluation rules.  When you don't select this check box, Workday calculates the equity pickup results in the ledger (base) currency of the parent company or companies. This results in the revaluation of your investment account at historical rates, such as the rates that applied at the time of recording.
<b>Journal Source</b>	Select only 1 journal source.  You can define journal sources on the <b>Maintain Journal Sources</b> task.

Option	Description
<b>Currency Rate Type</b>	Select to override the default currency rate types Workday defines at the company or tenant level.
<b>Source Ledger Accounts/Summaries</b>	<p>Select 1 or more default ledger accounts or ledger account summaries that you want to use to derive equity pickup results. Each account must be unique, and typically comprises the net income of the subsidiary.</p> <p>You can create more than 1 row for each ledger account or ledger account summary entry.</p> <p>Example: Select 1 source ledger account for net income and another for dividends.</p> <p>If you have multiple levels of ownership, ensure that you include the profit/loss account so that your results flow to the various levels of ownership in the hierarchy. Do this also if you configure the <b>Ownership Change Adjustment Account</b> option.</p>
<b>Investment Account</b>	<p>Select a default ledger account to record the change to the parent investment in the subsidiary.</p> <p>Select an account that is different to the provision account to avoid processing errors.</p> <p>To avoid processing errors, the selected account:</p> <ul style="list-style-type: none"> <li>• Must be zero or debit balance by intercompany affiliate before equity pickup is run each period.</li> <li>• Can't be the same account as the <b>Provision Account</b>.</li> </ul>
<b>Profit/Loss Account</b>	<p>Select a default ledger account to record the change to the parent equity income or loss in the subsidiary.</p> <p>The equity pickup process creates duplicate results if you calculate equity pickup using a different rule with the same:</p> <ul style="list-style-type: none"> <li>• Company or Company Hierarchy.</li> <li>• Fiscal Period.</li> <li>• Source Ledger Accounts.</li> </ul>
<b>Provision Account</b>	<p>(Optional) Select a provision account to record equity pickup losses for the parent company. When you don't select a provision account, Workday tracks losses but won't record them to any account.</p> <p>Select a provision account when you select a ledger account from the <b>Ownership Change Adjustment Account</b> option.</p> <p>To avoid processing errors, the selected account:</p>

Option	Description
	<ul style="list-style-type: none"> <li>Must be zero or credit balance by intercompany affiliate before equity pickup is run each period.</li> <li>Can't be the same as the <b>Investment Account</b>.</li> </ul>
<b>Ownership Change Adjustment Account</b>	<p>(Optional) Select a ledger account to record the change in ownership from prior period to current period.</p> <p>If you don't select an account, Workday won't record ownership changes.</p> <p>Workday records the offset on adjustments to the profit/loss account.</p>
<b>Worktags</b>	<p>(Optional) Select 1 or more worktags, which can include balancing worktags, that you want to associate with target journal lines.</p>

3. (Optional) In the **Company Overrides** grid, configure an equity pickup rule for 1 or more investor companies when each company has different investment, profit and loss, and provision accounts. Ledger accounts and worktags that you specify on the grid override default ledger account and worktag values for investor companies.

### Example

This example illustrates an elimination rule for equity pickup:

Option	Description
<b>Rule Name</b>	<i>Equity Pickup with Provision</i>
<b>Record in Subsidiary Base Currency</b>	Select.
<b>Journal Source</b>	<i>Equity Pickup</i>
<b>Currency Rate Type</b>	Leave blank.
<b>Source Ledger Accounts/Summaries</b>	<i>Standard: Income Statement Accounts</i>
<b>Investment Account</b>	<i>1930:Investment in Joint Ventures</i>
<b>Profit/Loss Account</b>	<i>8000:Earnings in Joint Ventures</i>
<b>Provision Account</b>	<i>2800:Provision for Loss in Joint Ventures</i>
<b>Ownership Change Adjustment Account</b>	Leave blank.

In this example, the **Record in Subsidiary Base Currency** check box is selected so that investments can be revalued using revaluation rules.

The **Investment Account** is the investment in subsidiary account, which is the target account for equity pickup of subsidiary earnings. You could also set up and use an *Investment in Subsidiary - Earnings* account to segregate cumulative earnings from the original investment balance and provide more visibility into the investment accounts.

The **Profit/Loss Account** for the net income rule is the earnings or loss in subsidiary account on the income statement. For other comprehensive income (OCI) rules, select the same account as the **Source**

**Ledger Accounts/Summaries** to effectively record the parent's portion of the subsidiary's OCI into the same account on the parent's ledger.

## Next Steps

Use the **Equity Pickup** task to calculate equity pickup results.

### Related Information

#### Tasks

[Set Up Company Ownership Details](#) on page 264

[Create Journal Sources](#) on page 108

## Calculate Equity Pickup Results

### Prerequisites

- Define equity pickup rules.
- Verify that the current ledger period status of the investor company isn't:
  - Closed*.
  - Close In Progress* for the **Equity Pickup** journal source.
  - Not Available*.
- Ensure that equity pickup journals for earlier fiscal periods are in a **Posted** state before running equity pickup for subsequent fiscal periods to avoid processing errors.
- Configure the *Equity Pickup Event* business process and security policy in the Financial Accounting functional area so that you can approve journal entries for equity pickup before posting them to target and offset ledger accounts of investor companies.
- Security: *Process: Equity Pickup* domain in the Financial Accounting functional area.

### Context

Record the equity earnings of a consolidated subsidiary onto the books of the parent company.

When you record equity pickup results in the base currency of a subsidiary, the journal entry displays in the subsidiary currency.

### Steps

- Access the **Equity Pickup** task.
- As you complete the task, consider:

Option	Description
<b>Company</b>	Select the investor company or company hierarchy for recording equity pickup results.
<b>Equity Pickup Rules</b>	<p>When you run equity pickup for 2 rules that use the same source and profit or loss accounts, Workday calculates equity for both.</p> <p>If you select multiple rules, Workday displays results for each rule when you run the task.</p> <p>The <b>Equity Pickup</b> task performs equity pickup for all rules simultaneously. It doesn't calculate them sequentially.</p> <p><b>Note:</b> To avoid processing errors, run equity pickup 1 rule at a time if you have overlapping investment and provision ledger accounts.</p>

Option	Description
<b>Fiscal Period</b>	Ensure that periods are open for all investor companies to post equity pickup results.
<b>Source Book</b>	(Optional) Select a default source book for equity pickup. Leave blank to select source journals from the blank book code.
<b>Target Book Code</b>	(Optional) Select a book code to assign to the equity pickup journal entries. Leave blank to post equity pickup results to the blank book code.
<b>Post to Subsidiary Companies</b>	Select to post the equity pickup journal entries to all investor companies. If you clear the check box, Workday won't create operational journals and sets the equity pickup <b>Status</b> to <i>Complete</i> .
<b>Account Translation Rule Set</b>	Select the rule to translate accounts in a subsidiary onto the parent books.

3. (Optional) From the related actions menu of the *Equity Pickup* business process and security policy in the Financial Accounting functional area, select **View Accounting** to display the equity pickup **Journal Entry**.

- When there's a pending approval step, the business process sets the:
  - Equity pickup status to *In Progress*.
  - Operational journal status to *Pro forma*.
- If there's no business process or you approved the equity pickup results, the:
  - Equity pickup status is *Approved*.
  - Operational journal status is *Posted*.
- If there's no accounting associated with the equity pickup results, the:
  - Equity pickup status is *Complete*.
  - The equity pickup process doesn't create an operational journal.

4. (Optional) To cancel the results of an equity pickup run, find the results that you generated and select **Cancel** from the **Equity Pickup Result** related actions menu.

## Result

When you process equity pickup, it creates a result for each investor company that you run the **Equity Pickup** task for. If you run the task for a hierarchy with multiple investor companies, Workday creates separate equity pickup results for each investor company and includes the:

- Percentage the investor company owns in the subsidiary.
- Source amount that Workday uses to calculate equity pickup.
- Provision amount that the equity picks up.

If you selected an ownership change adjustment ledger account on the equity pickup rule, Workday displays an **Ownership Change Details** tab on the result. You can use this tab to drill into how Workday calculates your equity pickup.

- Workday calculates direct ownership change adjustment amounts based on the:
  - Change in ownership percentage from the current period to the prior period.
  - Opening source amount at the beginning of the period multiplied by the ownership change amount.

- Workday calculates indirect ownership change adjustment amounts based on the:
  - Current period ownership percentage.
  - Source amount deriving from the direct ownership change adjustment result of the subsidiary on the same equity pickup run. Workday multiplies this value by the current period ownership percentage.

When no indirect ownership changes occur during the current period, Workday displays values of zero.

## Next Steps

Use the **Find Equity Pickup Results** report to view previous equity pickup results.

### Related Information

#### Tasks

[Change the Status of Ledger Periods](#) on page 299

[Create Trial Balance Reports](#) on page 388

### Reference: Equity Pickup Results

Run the equity pickup process for these parent and subsidiary companies:

Parent Company	Subsidiary	Ownership	Net Income Debit/(Credit) USD	Change in Parent Investment Debit/(Credit) USD	Provision for Loss
GMS USA	Green Planet	100%	151,900	(150,000)	1,900
GMS USA	GMS Hong Kong	65%	(46,501)	30,225	
GMS USA	GMS Canada	100%	(3,162)	3,162	
GMS USA	GMS Australia	80%	(17,337)	13,870	
GMS Canada	GMS Australia	20%	(17,337)	3,467	
Third-party Company	GMS Hong Kong	35%	(46,501)	16,275	

Workday displays results on the parent books in either of these base currencies, depending on how you calculate equity pickup:

- Parent
- Subsidiary

### Equity Pickup Results in Subsidiary Base Currency

When you record equity pickup results in the base currency of the subsidiary, Workday posts these accounting entries to the books of the parent company in the subsidiary base currency:

#### GMS USA

Ledger Account/ Worktag	Debit (Subsidiary Currency)	Credit (Subsidiary Currency)	FX Rate	Debit (Company Currency)	Credit (Company Currency)
Investment in subsidiary		150,000	1.000000		150,000

Ledger Account/ Worktag	Debit (Subsidiary Currency)	Credit (Subsidiary Currency)	FX Rate	Debit (Company Currency)	Credit (Company Currency)
Green Planet					
Equity income in subsidiary Green Planet	151,900		1.000000	151,900	
Provision for Loss Green Planet		1,900	1.000000		1,900
Investment in subsidiary GMS Hong Kong	234,389		0.128955	30,225	
Equity income in subsidiary GMS Hong Kong		234,389	0.128955		30,225
Investment in subsidiary GMS Canada	3,671		0.861334	3,162	
Equity income in subsidiary GMS Canada		3,671	0.861334		3,162
Investment in subsidiary GMS Australia	12,855		1.078958	13,870	
Equity income in subsidiary GMS Australia		12,855	1.078958		13,870

**GMS Canada**

Ledger Account/ Worktag	Debit(Subsidiary Currency)	Credit(Subsidiary Currency)	FX Rate	Debit(Company Currency)	Credit(Company Currency)
Investment in subsidiary GMS Australia	3,214		1.078958	3,467	
Equity income in subsidiary		3,214	1.078958		3,467

Ledger Account/ Worktag	Debit(Subsidiary Currency)	Credit(Subsidiary Currency)	FX Rate	Debit(Company Currency)	Credit(Company Currency)
GMS Australia					

### Third-Party Company

The Equity Pickup amount is related to the noncontrolling interest parent. Workday uses the rules for recording net income attributions for noncontrolling or minority interest consolidations. You can configure these rules on the **Maintain Elimination Rules** task.

The equity pickup process doesn't create operational journals for noncontrolling interest in Workday. When you run the **Consolidated Trial Balance** report, these results are the accounting entries in the currency of the Hong Kong subsidiary:

Ledger Account/ Worktag	Debit (Subsidiary Currency)	Credit (Subsidiary Currency)	FX Rate	Debit (Company Currency)	Credit (Company Currency)
NCI Expense	126,210		0.128955	16,275	
NCI Accrual		126,210	0.128955		16,275

### Troubleshooting: Equity Pickup Processing

After the equity pickup process completes, Workday displays an error message when either the:

- Provision ledger account doesn't have a zero balance and the investment ledger account has a debit value.
- Investment ledger account doesn't have a zero balance and the provision ledger account has a credit balance.

**Cause:** Manual posting to ledger accounts can create balances in both investment and provision ledger accounts for an intercompany affiliate.

**Solution:** Before processing equity pickup for the fiscal period, create a manual journal or set up an allocation definition that clears the balance to zero for either of these accounts:

- Investment
- Provision

### Steps

1. Access the **Create Allocation Definition** task.

Security: *Set Up: Allocations* in the Financial Accounting functional area.

2. In the **Details** section, select a source company in the **Used By** field.

In the **Source** section, select these values:

Option	Description
<b>Ledger Account/Ledger Account Summary</b>	Provision or investment account.
<b>Worktags</b>	Intercompany affiliate worktag.

In the **Basis** section, select these values:

Option	Description
<b>Ledger/~Plan~Structure</b>	<i>Actuals</i>
<b>Allocation Method</b>	<i>Fixed Percent</i>

Option	Description
<b>Definition</b>	Select a fixed percentage statistic definition that results in 100%.

In the **Target** section, select these values:

Option	Description
<b>Company is From</b>	<i>Source</i>
<b>Ledger Account is from</b>	<i>User Specified</i>
<b>Ledger Account</b>	Either: <ul style="list-style-type: none"> <li>• Investment in subsidiary account.</li> <li>• Provision account.</li> </ul>
<b>Worktag Type</b>	<i>Intercompany Affiliate</i>
<b>Worktag Value is from</b>	<i>Source</i>

In the **Offset** section, select these values:

Option	Description
<b>Ledger Account is from</b>	<i>Source</i>
<b>Worktag Type</b>	<i>Intercompany Affiliate</i>
<b>Worktag Value is from</b>	<i>Source</i>
<b>Company is from</b>	<i>Source</i>

## Noncontrolling Interest

### Steps: Set Up for Persisting Noncontrolling Interest

#### Prerequisites

- Review setup considerations for consolidations and eliminations.
- Configure the *Noncontrolling Interest Group Run Event* business process to approve and deny NCI group results at hierarchy level.
- Security: *Process: Noncontrolling Interest* domain in the Financial Accounting functional area.

#### Context

You can configure Workday to calculate and store noncontrolling interest (NCI) journals, enabling you to access and report on NCI journal lines.

You must opt in to this functionality if you currently derive NCI and want to:

- Perform reporting using NCI journal lines.
- Calculate NCI for all companies owned by a parent, regardless of hierarchy.

If you have already opted in to perform reporting using NCI journal lines, you must opt in again to calculate NCI by ownership rather than hierarchy.

When you enable the calculation of NCI by ownership using this task, you can opt out at a future date. The opt-out behavior depends on the NCI functionality you used before you opted in:

- If you previously derived NCI, Workday reverts to derived NCI.
- If your tenant was automatically opted in to persisted NCI, calculated by hierarchy, Workday reverts to persisted NCI by hierarchy.
- If you manually opted in to persisted NCI, calculated by hierarchy, Workday reverts to derived NCI.

## Steps

1. (Optional) Set up security for preapproving and denying NCI results for companies and subsidiaries in a hierarchy.  
Configure the *Noncontrolling Interest Run Event* business process, which is a subprocess of the *Noncontrolling Interest Group Run Event* business process.
2. (Optional) Set up security for opting in to persist NCI.  
Configure the *Process: Noncontrolling Interest Opt-in* domain in the Financial Accounting functional area for unconstrained groups only.
3. [Set Up Elimination Rules for Noncontrolling Interest](#).
4. Access the **Noncontrolling Interest Journal Lines Opt-In** task to perform reporting using NCI journal lines.  
Ensure you've performed the tasks in the checklist, and select these check boxes:
  - **Report Noncontrolling Interest Journal Lines**
  - **Run Noncontrolling Interest by Direct Ownership**

## Next Steps

Create NCI balances for each period, company hierarchy, and reporting currency that you want to report on using the:

- **Run Noncontrolling Interest** task, or
- *Put Noncontrolling Interest Result* web service. Workday creates the NCI journals when you approve the NCI results.

## Related Information

### Tasks

## Set Up Elimination Rules for Noncontrolling Interest

### Prerequisites

- Review setup considerations for consolidations and eliminations.
- Security: *Set Up: Consolidation* domain in the Financial Accounting functional area.

## Context

You can set up elimination rules to calculate the equity and net earnings (income statement and equity) that are attributable to parties that aren't in the hierarchy for which you run the report.

## Steps

1. Access the **Maintain Elimination Rules** task.
2. (Optional) If you're opting in to persist NCI, remove your configuration details on the **Investment in Subsidiary/Subsidiary Equity (To Be Retired)** tab.
3. Access the **Noncontrolling Interest Activity** tab.

Create a rule for the ledger accounts and ledger account summaries that you want to calculate NCI on.

As you complete this tab, consider:

Option	Description
<b>Direct Ownership Only (Always Select)</b>	<p>Select this check box to calculate noncontrolling interest (NCI) for direct ownership only.</p> <p>We recommend that you always select this check box as we plan to retire the ability to calculate NCI for indirect ownership in a future update.</p> <p>Workday doesn't display this check box if your tenant is configured to calculate NCI by ownership.</p>
<b>NCI Source Ledger Accounts/Summaries</b>	<p>Select the ledger account or ledger account summaries that you want to use for calculating NCI activity. These are typically:</p> <ul style="list-style-type: none"> <li>• Equity accounts.</li> <li>• Net income accounts.</li> <li>• Other Comprehensive Income (OCI) accounts.</li> </ul> <p>Include all equity accounts that:</p> <ul style="list-style-type: none"> <li>• Represent ownership consistent with the ownership table of the subsidiary. Consider that some ownership equity accounts might not be attributable to additional parties. Example: Particular series of preferred stock.</li> <li>• Survive consolidation. These represent the OCI accounts. Exclude accounts that are assigned to translation gain or loss account posting.</li> </ul> <p>When you've selected the <b>Direct Ownership Only (Always Select)</b> check box, we recommend that you take these actions when you select ledger account summaries for parent companies in company hierarchies, to prevent double counting:</p> <ul style="list-style-type: none"> <li>• Exclude the earnings in subsidiary accounts in the parent companies from the ledger account summaries.</li> <li>• Create a separate ledger account summary for the earnings in subsidiary accounts.</li> </ul>

Option	Description
<b>NCI Attribution Method</b>	<p>Select either of these methods to calculate NCI activity:</p> <ul style="list-style-type: none"> <li>• <i>Claim on Assets %</i></li> <li>• <i>Ownership %</i></li> </ul> <p>To change the percentages, access the <b>Edit Company Ownership Details</b> task from the related actions menu of the subsidiary company.</p>
<b>NCI Target Ledger Account</b>	<p>Select a ledger account to record NCI eliminations to that offsets the NCI equity account.</p> <p>For net income accounts, this is typically the NCI expense account on the income statement. For equity accounts, this is typically the same as the source account.</p>
<b>Ownership Change Adjustment Account</b>	<p>Select a ledger account that isn't retired to record the ownership change adjustments. For equity accounts, select the same account as the source account.</p> <p>When you update ownership details, Workday calculates ownership change adjustments based on the activity posted to date in the source ledger accounts that you define on the NCI rule. It records the ownership change adjustments to the ledger account that you select.</p> <p>Workday calculates ownership adjustment separately on prior year activity and current year activity to date.</p> <p>If you don't select a ledger account, the <b>Run Noncontrolling Interest</b> task won't calculate ownership change adjustments even when there are ownership changes in the period that you run the task for.</p>
<b>NCI Offset Ledger Account</b>	<p>Define the NCI offsetting ledger account that you want to use for balancing NCI target ledger accounts. You can use a different account for each elimination rule to facilitate reconciliation.</p>

### Example

This example illustrates some elimination rules for noncontrolling interest.

Direct Ownership Only (Always Select)	NCI Rule Name	NCI Source Ledger Accounts/ Summaries	NCI Attribution Method	NCI Target Ledger Amount	Ownership Change Adjustment Account	NCI Offset Ledger Account
Yes	NCI Activity	Standard: Income	Ownership %	8850:NCI Expense	3120:Additional Paid In Capital	3000:NCI Equity

Direct Ownership Only (Always Select)	NCI Rule Name	NCI Source Ledger Accounts/ Summaries	NCI Attribution Method	NCI Target Ledger Amount	Ownership Change Adjustment Account	NCI Offset Ledger Account
		<i>Statement Accounts</i>				
Yes	NCI Equity	3100:Capital Stock	Ownership %	3100:Capital Stock	3100:Capital Stock	3000:NCI Equity
Yes	NCI Revaluation Reserve	3600:Revaluation Reserve	Ownership %	3600:Revaluation Reserve	3600:Revaluation Reserve	3000:NCI Equity

## Next Steps

Run noncontrolling interest.

### Related Information

#### Tasks

[Run Noncontrolling Interest](#) on page 284

#### Examples

[2024R2 Feature Release Note: Noncontrolling Interest for All Owned Companies](#)

## Run Noncontrolling Interest

### Prerequisites

- Set up Workday to persist noncontrolling interest (NCI). See [Steps: Set Up for Persisting Noncontrolling Interest](#).
- Security: *Process: Noncontrolling Interest* in the Financial Accounting functional area to secure NCI tasks and reports, and enable you to create journal entries.

### Context

You can create consolidation journals that record the NCI for subsidiaries in persisted elimination journals.

When there's a change in NCI ownership, Workday calculates your NCI ownership change adjustment amounts, based on:

- NCI source amounts.
- Previous NCI percentages.
- Current NCI percentages.
- Change in NCI ownership percentages.

### Steps

- Access the **Run Noncontrolling Interest** task.
- As you complete the task, consider:

Option	Description
<b>Company Hierarchy</b>	Select the company hierarchy that you want to record the NCI eliminations for.
<b>Consolidating Parent Company</b>	Workday displays the consolidating parent company for the selected <b>Company Hierarchy</b> .

Option	Description
	<p>Workday uses this company as the basis for calculating NCI.</p> <p>When calculation of NCI by ownership is not enabled in your tenant, Workday calculates NCI for all companies within the selected <b>Company Hierarchy</b> in which the consolidating parent company has ownership.</p> <p>When calculation of NCI by ownership is enabled in your tenant, Workday traverses the company ownership structure to calculate NCI for all companies in which the consolidating parent company has direct or indirect ownership, even those outside the hierarchy. When you don't have access to a company in the structure, Workday doesn't generate NCI results for that company.</p>
<b>Fiscal Schedule</b>	<p>Workday calculates NCI eliminations for the current earliest open period.</p> <p>Example: If you schedule to run the task on the 1st of April and the March period is open, Workday calculates and records NCI eliminations for the March period.</p>
<b>Currencies</b>	<p>You can select 1 or multiple currencies for hierarchies.</p>

## Result

You can access the **View Noncontrolling Interest Result Group** and **View Noncontrolling Interest Result** reports to gain insight on NCI activities.

If NCI ownership changes occur, you can view how Workday calculates the NCI change adjustment amounts.

Workday creates separate result lines for each rule and ownership change based on activity for the:

- Current year.
- Prior year.

## Next Steps

- If NCI results look inaccurate, you can cancel:
  - NCI group results using the **Cancel** related action from an NCI result group.
  - Individual NCI results from the **Find Noncontrolling Interest Results** report, when you've opted in to run NCI by ownership.

- You can roll forward NCI beginning balances using either of these tasks on the *Process: Close Year End* domain in the Common Financial Management functional area:
    - **Roll Forward Noncontrolling Beginning Balances** when you want to roll forward just NCI journal lines.
    - **Roll Forward Year-End Balance** when you want to roll forward all beginning balances, including NCI.
- Workday creates beginning balance journal lines for unique combinations of:
- Company hierarchy.
  - Book codes.
  - Ledger accounts.
  - Intercompany affiliates.
  - Third parties.
- To view NCI entries, use the standard composite consolidated trial balance report.

## **Troubleshooting: Reconcile Currency Translation Adjustment Accounts**

**Cause:** Your current configuration in your tenant is preventing Workday from reconciling currency translation adjustment (CTA) accounts.

#### **Solution:**

##### **Steps**

1. Configure the *Set Up: Consolidation* domain in the Financial Accounting functional area.
2. Access the **Maintain Elimination Rules** task.
3. In the **Investment in Subsidiary/Subsidiary Equity (To Be Retired)** tab, use these configurations so that Workday can reconcile the CTA account:

Option	Description
<b>Segregate CTA and Suspense for Consolidation</b>	Select for multicurrency transactions.
<b>Investment in Subsidiary Ledger Accounts/Summaries</b>	Create a new ledger account for the manual entries that you want to make to the CTA account.  Don't: <ul style="list-style-type: none"> <li>• Combine manual entries with entries derived from the account posting rules.</li> <li>• Include accounts that you assign to the translation gain or translation loss account posting rule set.</li> </ul>
<b>Subsidiary Equity Ledger Accounts/Summaries</b>	Create a new ledger account for the manual entries that you want to make to the CTA account.  Don't: <ul style="list-style-type: none"> <li>• Combine manual entries with entries derived from the account posting rules.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Include accounts in your year-end closing rules.</li> </ul>
<b>NCI Source Ledger Accounts/Summaries</b>	Select the same accounts as in the <b>Subsidiary Equity Ledger Accounts/Summaries</b> field. Leave blank if there are no noncontrolling interest (NCI) transactions. Don't include accounts that are in your year-end closing rules.
<b>NCI Portion of Equity</b>	Leave blank if there are no NCI transactions.
<b>Variance Ledger Account</b>	Select a unique variance suspense account for each elimination rule.

## Alternate Ledger Currency in Consolidations

### Concept: Alternate Ledger Currency in Consolidated Financial Reporting

To report on an alternate ledger currency (ALC) in consolidated reports, you can configure ledger currency mappings for your companies. See [Steps: Set Up Ledger Currency Mappings](#) on page 79.

When you select a ledger currency mapping while running a consolidated report, Workday uses it to:

- Display ledgers for each company in either the primary or alternate ledger currency, as configured.
- Perform eliminations using either the primary or alternate ledger currency.
- Translate from either the primary or alternate ledger currency to the translation currency.

Workday doesn't support ALC in noncontrolling interest (NCI) and equity pickup. NCI and equity pickup journals only generate results and journals for the primary ledger currency.

Before you begin including ALC in consolidated reports, consider:

- If your investment in subsidiary elimination rules are configured on the **Investment in Subsidiary / Subsidiary Equity (To Be Retired)** tab on the **Maintain Elimination Rules** task, you must move them to the **Intercompany / Interworktag** and the **Noncontrolling Interest Activity** tabs. See [Workday Community: Guide to Updating the Investment in Subsidiary Elimination Rule](#).
- If you're using derived noncontrolling interest, you must opt-in to persisting noncontrolling interest on the **Noncontrolling Interest Journal Lines Opt-In** task. See [Steps: Set Up for Persisting Noncontrolling Interest](#) on page 280.

### Enabling the Ledger Currency Mapping Prompt

On these consolidated reports, Workday displays the **Ledger Currency Mapping** prompt by default:

- Audit Consolidation**
- Intercompany Elimination Out of Balance Report**

On these additional delivered reports, and any other custom consolidated reports that you create, you must first enable the **Ledger Currency Mapping** prompt:

- **Balance Sheet - Consolidated**
- **Balance Sheet Retained Earnings Reconciliation**
- **Consolidated Trial Balance**
- **Income Statement Retained Earnings Reconciliation**

See [Example: Enable Alternate Ledger Currency on the Consolidated Trial Balance Report](#) on page 288.

[2024R1 What's New Post: Alternate Ledger Currency in Financial Reporting and Consolidated Reporting](#)

### Example: Enable Alternate Ledger Currency on the Consolidated Trial Balance Report

This example illustrates how to enable the **Ledger Currency Mapping** prompt on the **Consolidated Trial Balance** report. Selecting a ledger currency mapping enables you to choose whether to perform eliminations and translation on the primary or alternate ledger currency (ALC) for each of your companies.

### Context

You have 3 companies based in the United Kingdom with different functional currencies.

Company	Functional Currency
VIC Distribution UK	GBP
VIC Distribution EU	EUR
VIC Distribution Worldwide	USD

You need to perform local currency consolidations in GBP, so you've configured GBP as an alternate ledger currency for VIC Distribution EU and VIC Distribution Worldwide.

To run the **Consolidated Trial Balance** report for these 3 companies in GBP, you:

- Set up a ledger currency mapping that specifies whether to use the primary or alternate ledger currency in reporting for each of your companies.
- Create a custom copy of the **Consolidated Trial Balance** report.
- Enable the **Ledger Currency Mapping** prompt on the copied report and all subreports, so that you can select the ledger currency mapping when you run the report.

### Prerequisites

- If your investment in subsidiary elimination rules are configured on the **Investment in Subsidiary / Subsidiary Equity (To Be Retired)** tab on the **Maintain Elimination Rules** task, move them to the **Intercompany / Interworktag** and the **Noncontrolling Interest Activity** tabs. See [Workday Community: Guide to Updating the Investment in Subsidiary Elimination Rule](#).
- If you're using derived noncontrolling interest, opt-in to persisting noncontrolling interest on the **Noncontrolling Interest Journal Lines Opt-In** task. See [Steps: Set Up for Persisting Noncontrolling Interest](#) on page 280.
- Configure GBP as the alternate ledger currency for companies that have a different functional currency. See [Steps: Set Up Alternate Ledger Currency](#) on page 77.

## Steps

1. Access the **Create Ledger Currency Mapping** task.
  - a) In the **Ledger Currency Mapping Name** field, enter *Local Currency Reporting (GBP)*.
  - b) In the grid, add 2 rows and select these values:

Company	Ledger
VIC Distribution EU	<i>VIC Distribution EU: Actuals (GBP)</i> (This is the alternate ledger.)
VIC Distribution Worldwide	<i>VIC Distribution Worldwide: Actuals (GBP)</i> (This is the alternate ledger.)

Security: *Set Up: Alternate Ledger Currency* domain in the Financial Accounting functional area.

2. Access the **Copy Standard Report to Custom Report** task.
  - a) From the **Standard Report Name** prompt, select *Consolidated Trial Balance*.
  - b) Click **OK**.
  - c) Enter the name *Consolidated Trial Balance (GBP Reporting)*.
  - d) Click **OK**.

Security: *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.
- 3.
4. From the **View Custom Report** report, access the related actions menu of the report and select **Custom Report > Edit**.
 

Security: *Manage: All Custom Reports* domain in the System functional area.
5. On the **Edit Custom Report** task, navigate to the **Prompts** tab and the **Subreport Prompts (Not Prompted)** grid.
  - a) Click the header of the **Field** column to filter the grid.
  - b) From the **Value** prompt, select *Ledger Currency Mapping*.

Workday displays the 3 rows that contain the *Ledger Currency Mapping* field for each subreport.

  - c) In the **Subreport Name** column, access the related actions menu of the first subreport, with the name that ends with **Journal Lines Eliminations**, and select **Custom Report > Edit**.
  - d) On the **Edit Custom Report** task for the subreport, navigate to the **Prompts** tab.
  - e) In the **Prompt Defaults** grid, find the *Ledger Currency Mapping* row and clear the **Do Not Prompt at Runtime** check box.
  - f) Click **OK and Done**.

Workday returns you to the **Edit Custom Report** task for the copied consolidated trial balance report.
6. On the copied consolidated trial balance report, navigate to the **Prompts** tab and the **Subreport Prompts (Not Prompted)** grid.
  - a) In the **Subreport Name** column, access the related actions menu of the second subreport, with the name that ends with **Journal Lines Translated**, and select **Custom Report > Edit**.
  - b) On the **Edit Custom Report** task for the subreport, navigate to the **Prompts** tab.
  - c) In the **Prompt Defaults** grid, find the *Ledger Currency Mapping* row and clear the **Do Not Prompt at Runtime** check box.
  - d) Click **OK and Done**.

Workday returns you to the **Edit Custom Report** task for the copied consolidated trial balance report.

7. On the copied consolidated trial balance report, navigate to the **Prompts** tab and the **Subreport Prompts (Not Prompted)** grid.
  - a) In the **Subreport Name** column, access the related actions menu of the third subreport, with the name that ends with **Journal Lines Translated Summary**, and select **Custom Report > Edit**.
  - b) On the **Edit Custom Report** task for the subreport, navigate to the **Prompts** tab.
  - c) In the **Prompt Defaults** grid, find the *Ledger Currency Mapping* row and clear the **Do Not Prompt at Runtime** check box.
  - d) Click **OK** and **Done**.

Workday returns you to the **Edit Custom Report** task for the copied consolidated trial balance report.
8. Click **Run**.

### Result

When you run your **Consolidated Trial Balance (GBP Reporting)** custom report, you can select your *Local Currency Reporting (GBP)* ledger currency mapping.

Workday retrieves the company ledgers (primary and alternate) and performs eliminations as configured on the ledger currency mapping:

Company	Result
VIC Distribution UK	Workday displays and performs eliminations on the primary ledger currency (GBP).
VIC Distribution EU	Workday displays and performs eliminations on the alternate ledger currency (GBP).
VIC Distribution Worldwide	Workday displays and performs eliminations on the alternate ledger currency (GBP).

## Deriving Eliminations

### Set Up Investment in Subsidiary and Subsidiary Equity

#### Prerequisites

- Define elimination rules for elimination ledger accounts or ledger account summaries for account sets.
- Select a **Consolidating Parent Company** on the **Edit Consolidation Details** task.
- Security: *Set Up: Consolidation* domain in the Financial Accounting functional area.

#### Context

You can set up rules to eliminate investment in subsidiary and subsidiary equity when you're deriving noncontrolling interest (NCI).

**Note:** If you're new to Workday, you don't have access to the **Investment in Subsidiary/Subsidiary Equity (To Be Retired)** tab on the **Maintain Elimination Rules** task.

#### Steps

1. Access the **Maintain Elimination Rules** task.

2. Select the **Account Set** for which you're defining elimination rules.

You can only create 1 rule for an account set.

3. Access the **Investment in Subsidiary/Subsidiary Equity (To Be Retired)** tab.

As you complete this tab, consider:

Option	Description
<b>Investment in Subsidiary Ledger Accounts/Summaries</b>	<p>Select the parent investment, equity income, and provision for loss accounts you want to eliminate.</p> <ul style="list-style-type: none"> <li>Configure the parameters defined on the <b>Edit Consolidation Details</b> task for each company hierarchy that you're consolidating.</li> <li>Select a ledger account that has an intercompany affiliate worktag that corresponds to the subsidiaries in the hierarchy.</li> <li>Create a new ledger account for any manual entries that you want to make to the currency translation adjustment (CTA) account.</li> <li>Don't include accounts that you assign to the translation gain or translation loss account posting rule set.</li> </ul>
<b>Subsidiary Equity Ledger Accounts/Summaries</b>	<ul style="list-style-type: none"> <li>Select the equity ledger accounts or ledger account summaries of all the subsidiaries that you want to eliminate against the investment accounts of the parent.</li> <li>Don't include intercompany affiliate worktags on subsidiary equity accounts, as Workday eliminates all account balances for the selected ledger accounts. Workday doesn't eliminate balances in the consolidating parent.</li> <li>Workday recommends that you don't include accounts on year-end closing rules.</li> <li>The balances of these equity accounts must equal the balances of the parent investment accounts defined in the <b>Investment in Subsidiary Ledger Accounts/Summaries</b> tab.</li> </ul>
<b>Variance Ledger Account</b>	<ul style="list-style-type: none"> <li>Select a separate variance suspense account.</li> <li>Don't use target accounts associated with the elimination process.</li> </ul>

## Result

Workday uses the rules to calculate the elimination entries.

## Next Steps

To view the investment in subsidiary and subsidiary equity elimination entries, use the standard composite consolidated trial balance report.

## Related Information

### Tasks

## Set Up for Deriving Noncontrolling Interest

### Prerequisites

- Define elimination rules for investment in subsidiary and subsidiary equity for an account set.
- Select a **Consolidating Parent Company** on the **Edit Consolidation Details** task.
- Security: *Set Up: Consolidation* in the Financial Accounting functional area.

### Context

Set up noncontrolling interest (NCI) for derived frameworks.

**Note:** Workday recommends that you persist NCI. If you're new to Workday, you don't have the option to derive NCI.

### Steps

1. Access the **Maintain Elimination Rules** task.
2. Select the **Account Set** for which you're defining elimination rules.  
Create 1 or more elimination rules for the account set.
3. Access the **Investment in Subsidiary/Subsidiary Equity (To Be Retired)** tab.

As you complete this tab, consider:

Option	Description
<b>NCI Source Ledger Account Summaries</b>	<p>Select the ledger accounts or ledger account summaries of the subsidiaries to calculate the equity portion of the NCI.</p> <p>Workday recommends that you:</p> <ul style="list-style-type: none"> <li>• Select the same accounts as in the <b>Subsidiary Equity Ledger Accounts/Summaries</b> tab.</li> <li>• Don't include accounts that are in year-end closing rules.</li> <li>• Enter a value even if you don't have any NCI activity, to ensure best practice.</li> </ul>
<b>NCI Portion of Equity</b>	<p>Select the ledger account that you want to record the NCI derived from the <b>NCI Source Ledger Accounts/Summaries</b> accounts.</p> <p>Workday recommends that you enter a value even if you don't have any NCI activity.</p>

**4. Access the Noncontrolling Interest Activity tab.**

As you complete this tab, consider:

Option	Description
<b>Direct Ownership Only (Always Select)</b>	This functionality isn't available when you derive NCI.
<b>NCI Source Ledger Accounts/Summaries</b>	<p>Select the ledger account or ledger account summaries that you want to use for calculating NCI activity.</p> <p>To prevent double-counting, Workday recommends that when you select ledger account summaries for parent companies in company hierarchies, you:</p> <ul style="list-style-type: none"> <li>• Exclude the earnings in subsidiary accounts in the parent companies from the ledger account summaries.</li> <li>• Create a separate ledger account summary for the earnings in subsidiary accounts.</li> </ul>
<b>NCI Attribution Method</b>	Select either the <i>Claim on Assets %</i> or <i>Ownership %</i> as the method for calculating NCI activity. To change the percentages, select <b>Edit Company Ownership Details</b> from the related actions menu of the subsidiary company.
<b>NCI Target Ledger Account</b>	Select the ledger account that you want to record NCI eliminations to that offsets the NCI equity account.
<b>Prior Year Retained Earnings Ledger Account</b>	Select the subsidiary retained earnings account you want to use for displaying prior year NCI retained earnings.
<b>Ownership Change Adjustment Account</b>	<p>Select 1 ledger account.</p> <p>If an ownership change results in an NCI equity change, Workday derives the current year offset to the NCI equity change and will post to the selected ledger account.</p> <p>If you don't select an ownership change adjustment account and there's an NCI equity change within the current year, the consolidated trial balance will be unbalanced by the offset amount.</p>
<b>NCI Offset Ledger Account</b>	<p>Define the NCI offsetting ledger account that you want to use for balancing NCI target ledger accounts.</p> <p>Select the same account you defined in the <b>NCI Portion of Equity</b> field on the <b>Investment in Subsidiary Ledger Accounts/Summaries</b> tab.</p>

### Result

Workday uses the rules to calculate NCI activity entries and related equity pickup results.

## Next Steps

To view NCI activity entries, use the standard composite consolidated trial balance report.

## Steps: Migrate from Deriving Noncontrolling Interest to Persisted Noncontrolling Interest

### Prerequisites

- Set up your tenant to derive noncontrolling interest. See [Set Up for Deriving Noncontrolling Interest](#) on page 292.
- Security: These domains in the Financial Accounting functional area:
  - *Process: Noncontrolling Interest*
  - *Process: Noncontrolling Interest Opt-In*
- Configure the *Noncontrolling Interest Run Event* business process and security policy in the Financial Accounting functional area.

### Context

If you currently derive noncontrolling interest (NCI) and want to start using persisted NCI, you can update your configuration to do so.

You can choose to revert from persisted NCI back to derived NCI at a later date.

### Steps

#### 1. Access the **Maintain Elimination Rules** task.

- Migrate all elimination rules from the **Investment in Subsidiary / Subsidiary Equity (To Be Retired)** tab to the **Intercompany / Interworktag** and **Noncontrolling Interest Activity** tabs as applicable. For more information, see [Preconfigured Content: Guide to Updating the Investment in Subsidiary Elimination Rule](#).
- On the **Noncontrolling Interest Activity** tab, select the **Direct Ownership Only (Always Select)** check box for all NCI rules.

Security: *Set Up: Consolidation* domain in the Financial Accounting functional area.

#### 2. Access the **Noncontrolling Interest Journal Lines Opt-In** task.

Confirm all checklist items, and select both of these check boxes:

- **Report Noncontrolling Interest Journal Lines**
- **Run Noncontrolling Interest by Direct Ownership**

**Note:** You don't need to have created beginning balances, as directed by the first checklist item. Confirm the checklist item and you can create the beginning balances after you opt in.

#### 3. Use 1 of these methods to create NCI balances for companies, book codes, currencies, and fiscal periods that you want to report on:

- Schedule the **Run Noncontrolling Interest** task for the top-level consolidated reporting hierarchy and periods that you want to report on.
- Upload NCI results for each period using the *Put Noncontrolling Interest Result* web service.

## Result

Workday will now calculate and persist NCI results, enabling you to:

- Report on NCI journal lines.
- Calculate NCI for all companies in which a parent company has direct or indirect ownership, regardless of whether they are in the same company hierarchy.

## Next Steps

Schedule or run noncontrolling interest.

### Related Information

[Steps: Set Up for Persisting Noncontrolling Interest](#) on page 280

### Troubleshooting: Elimination Balance Variances

**Cause:** You're getting out-of-balance accounts when eliminating intercompany balances using the **Investment in Subsidiary/Subsidiary Equity (To Be Retired)** tab on the **Maintain Elimination Rules** task.

**Note:** Workday recommends that you:

- Eliminate intercompany and interworktag balances using the **Intercompany/Interworktag** tab on the **Maintain Elimination Rules** task.
- Troubleshoot out-of-balance accounts using the **Intercompany Elimination Out of Balance Report**.

#### Solution:

##### Steps

1. Ensure that you've assigned a unique variance account and not a suspense account to each elimination rule. Example: Investment in Subsidiary - Variance.  
A unique variance account makes it easier to identify the account with an out of balance amount.
2. Run the **Consolidated Trial Balance** report and identify the out-of-balance amount.
3. In the **Total** column, drill down on the out of balance amount.
4. In the **View by:** field, select **Company**.
5. In the **and then by:** field, select **Intercompany Affiliate**.
6. Click **Refresh**.

Workday analyzes the ledger accounts you selected on the **Investment in Subsidiary/Subsidiary Equity (To Be Retired)** tab on the **Maintain Elimination Rules** task.

Workday displays:

- The equity balance of each subsidiary in the **(Blank)** column.
- Investment of the parent in each subsidiary in each affiliate column.

Example: Company by Intercompany Affiliate Grid

Company	Inter- Company Affiliate Subsidiary 1	Inter- Company Affiliate Subsidiary 2	(Blank)	Elimination Amount
(Parent)	100,000	250,000		350,000
Subsidiary 1	Blank	Blank	110,000 Equity of Subsidiary 1.	(110,000)

Company	Inter- Company Affiliate Subsidiary 1	Inter- Company Affiliate Subsidiary 2	(Blank)	Elimination Amount
Subsidiary 2	Blank	Blank	250,000	(250,000)
Total	100,000 Investment of parent in Subsidiary 1	250,000	(360,000)	(10,000) Difference between the equity of Subsidiary 1 and investment of parent in Subsidiary 1.

7. Compare the equity balance of each subsidiary with the investment of the parent in each subsidiary.  
The balances should net to zero.
8. For balances that don't net to zero, drill down to review and correct the journal entries.
9. If you've more than 20 companies in the hierarchy, create a custom variance report to identify the elimination variances.

#### Related Information

##### Tasks

## Period and Year Close

---

### Steps: Set Up Close Process

#### Context

Before closing, you should define rules and activity groups that pertain to the close process. You can also create an optional close checklist to manage period, quarter, and year-end closes directly in Workday through the business process workflow. A close checklist enables you to:

- Monitor close progress.
- Analyze key metrics.
- Send notifications to workers about the close.

#### Steps

1. [Define Rules for Processing Year-End Close](#) on page 298.

2. [Set Up Period Close Activity Groups](#) on page 297.

3. Create and Maintain a To Do.

Create *To Do* items that reflect the steps you perform during period-end and year-end close processes, in Workday and external resources.

4. Create and Maintain Checklist.

Create a close *Checklist* to add groups of *To Do* items to your period close process. Each checklist is a single ordered step within the business process, but you can complete the *To Do* items within that checklist in any order.

## 5. Create Custom Business Processes.

Add the *To Do* items and checklists as steps to the *Period Close Event* business process for your organizations. Assign security groups to workers who are responsible for the completion of each step.

## 6. Configure the *Period Close Notification Event* business process.

The business process enables you to send notifications about a close to any worker.

## Result

Your close checklist is built into the *Period Close Event* business process. Place the close checklist tasks in a logical order and designate the responsibility for each step. Workday notifies the responsible person when they need to complete a task.

## Example

You can create your checklist with these typical tasks to do within Workday:

- Reconcile cash to operational transactions.
- Run reconciliation reports for accounts payable.
- Approve pending transactions, such as expense reports.
- Match transactions on journal lines.
- Update ledger period statuses.
- Review year-end closing rules.
- Certify accounts.
- Run the year-end close process.

You can also create your checklist with these tasks to do outside of Workday:

- Collect on customer accounts.
- Coordinate with people responsible for completion of each step.
- Review steps.
- Approve steps.
- Send close notifications.

## Next Steps

Start period, quarter, and year-end closes.

[Process: Procure to Pay Period Close](#) on page 310

## Set Up Period Close Activity Groups

### Prerequisites

- Security: *Set Up: Period Close* domain in the Common Financial Management functional area.

## Context

You can group your period close activities and use these groups when you update the status of your ledger periods. These activity groups enable you to close a set of transactions, rather than an entire ledger period. Each close activity is a group of operational transactions. Workday automatically populates a set of these close activity groups, but you can also create your own for a more granular close process.

## Steps

1. Access the **Maintain Period Close Activity Groups** task.
2. Remove operational transaction types from pre-existing period close activity groups for use with other groups.  
You can only assign operational transaction types to 1 period close activity group at a time.
3. Create new period close activity groups and assign them operational transaction types.

## Result

You can select period close activity groups in the **Closed Activity** field when you update your ledger period status to *Close in Progress*. You can't edit closed activities that are in use.

You can't delete a close activity group that is used for *Close in Progress*. However, you can edit the activity group even if the ledger period has a status of *Closed*.

## Next Steps

Update your ledger period status.

### Related Information

[Concept: Ledger Close Activity Groups](#) on page 321

[Concept: Close](#) on page 322

#### Tasks

[Change the Status of Ledger Periods](#) on page 299

## Define Rules for Processing Year-End Close

### Prerequisites

Define account sets for the company.

See: [Set Up Account Sets](#) on page 82.

## Context

Define rules that map source accounts to target accounts when rolling account balances forward.

## Steps

1. Access the **Maintain Year-End Closing Rules** task.
2. As you complete the task, consider:

Option	Description
<b>Account Set</b>	The set of accounts for which you want to establish the year-end closing rules.
<b>Ledger Account Source</b>	The ledger account from which you want to move balances when you close a ledger year. You can only select from balance sheet accounts.

Option	Description
<b>Ledger Account Target</b>	The ledger account to which you want to move balances when you close a ledger year. You can only select from balance sheet accounts.

## Result

Workday applies these rules when you:

- Roll year-end balances forward using the **Roll Forward Year-End Balance** task.
- Close a ledger year using the **Close Ledger Year** task.

You can specify a rule with the same source and target retained earnings account. If you don't specify a rule, Workday rolls account balances forward to the same account during roll-forward and year-close processing. If you want to apply changes to future closes, change the rules. If you want to reopen prior ledger years and close them again, use new rules. You can change rules at any time.

Use the **Year-End Closing Rules** report to review existing rules by account set.

## Example

You keep current year and prior year retained earnings in separate accounts. At year-end, move the retained earnings balance from the current year account to the prior year account. This creates a blank current year account to use for the next year. When you report for your new current year, you see the net income.

## Next Steps

Close a ledger year.

### Related Information

#### Concepts

[Concept: Close](#) on page 322

#### Tasks

[Close a Ledger Year](#) on page 308

## Change the Status of Ledger Periods

### Prerequisites

- Configure the *Period Close Event* business process and security policy.
- Create the ledger year and ledger periods.
- To manage period and year-end closes through the workflow, define a close checklist to include steps for updating ledger period statuses.

### Context

Update ledger period status of a single ledger or multiple ledgers to:

- Open a ledger period.
- Limit journal activity as a period close progresses.
- Close the ledger period.
- Reopen the ledger period.

**Note:** You update ledger period statuses for Primary fiscal schedules only. Alternate fiscal schedules are for reporting purposes only.

If you have journals and pending transactions that you haven't processed, understand what the account impact is going to be before closing the period. To close a period for specific groups of operational transactions, you can update the status to *Close in Progress* and select the activity groups to close. You can create or configure your own activity groups for *Close in Progress* in the **Maintain Period Close Activity Group** task.

**Note:** When changing the status of activity groups to *Close in Progress*, you can always create an adjustment journal.

## Steps

- **Option A: Update the Status of Single Ledger Period**

- a) Access the **Update Ledger Period Status** task.
- b) As you complete the task, consider:

Option	Description
<b>Ledger Period</b>	Select by company and ledger year the ledger period that you want to update.
<b>All Book Codes</b> <b>Blank Book Code</b> <b>Select Book Code</b>	Workday selects <b>All Book Codes</b> by default. Workday uses the book code to filter transactions, the ledger status, and pending transactions. Use <b>Select Book Code</b> to specify 1 or more specific book codes. Updates to the ledger period status apply only to accounting journals and operational transactions for the book codes you select.
<b>Status</b> <b>Closed Activity</b>	Select the new status of the ledger period. The ledger period must be in <i>Open</i> status before you can post transactions to the ledger. If you select <i>Close in Progress</i> , select 1 or more close activities. Workday considers those close activities as <i>Closed</i> . You can't edit close activities that are in use.

- **Option B: Update the Status of Multiple Ledger Periods**

- a) Access the **Mass Update Ledger Period Status** task.
- b) As you complete the task, consider:

Option	Description
<b>Year</b>	Select the fiscal year for the ledger periods you want to update.
<b>Company</b>	Select 1 or more companies or a company hierarchy. You can select from only the company hierarchies where every company within it has the selected fiscal year.
<b>Sort By</b>	Select <i>Period</i> or <i>Company</i> by which you want to sort the processing results.
<b>All Book Codes</b> <b>Blank Book Code</b> <b>Select Book Code</b>	Workday selects <b>All Book Codes</b> by default. Workday uses the book code to filter transactions, the ledger status, and pending transactions.

Option	Description
	<p>Use <b>Select Book Code</b> to specify 1 or more specific book codes.</p> <p>Updates to the ledger period status apply only to accounting journals and operational transactions for the book codes you select.</p>
<b>Select All</b> <b>New Status</b> <b>Closed Activity</b>	<p>Select the new status for all or selected periods. If you select the <i>Close in Progress</i> status, select 1 or more <b>Closed Activity</b>.</p> <p>To schedule updates for multiple ledger periods, use the <b>Schedule Mass Update Ledger</b> task.</p> <p>You can't close a ledger year if the period for a book code is in <i>Closed</i> status.</p>

## Result

- Workday updates the status of the ledger journals.
- You can review journal statuses, pending transactions, and ledger period status history. You can close out work-in-progress before you update the ledger period status.
- After you close a period, you can no longer post anything to it.
- If there are pending operational transactions, Workday posts them to the next open ledger period once you complete them.
- You can view the process monitor on the **My Reports** tab to see status of any periods that didn't update.

These messages include the reason Workday didn't update the statuses and provide recommendations for how to correct those periods.

Example: *The status of the following periods was not updated because there were accounting journals pending approval.*

## Next Steps

- Change the status for these and other ledger periods to:
  - Open them.
  - Limit journal activity.
  - Select which activity groups to close.
  - Close them.
  - Reopen them.
- Close a ledger year.

# Close Ledger Periods

## Prerequisites

- Create ledger years and ledger periods.
- To manage period, quarter, and year-end closes directly in Workday through the business process workflow, create close checklists.

## Context

Closing a ledger period transfers the balances of temporary accounts, such as revenue, to permanent accounts, such as retained earnings at the end of an accounting period. You can close a ledger period in preparation for a new period. Closing ledger periods:

- Calculates period actual and budget account balances for reporting.
- Controls journal entry and posting.
- Maintains accurate accounting records.

## Steps

1. If you are using a close checklist within Workday, use the *Period Close Event* business process to begin a close.
2. Review the journal statuses and pending transactions.
3. As the close progresses, limit journal activity. Close out work-in-progress before you change ledger period statuses to *Closed*.

## Result

After you close a period, you can no longer post anything to it. Workday posts any pending operational transactions to the next open ledger period once you complete them.

You can use the **Ledger Year** report to view a snapshot of period and year-end close status. You can view:

- All ledger periods for the ledger year of a company.
- The status of each ledger period.
- The status history of the ledger year overall.

## Next Steps

- Close other ledger periods.
- Close a ledger year.

## Related Information

### Tasks

[Create Ledgers](#) on page 68

[Steps: Set Up Close Process](#) on page 296

## Set Up Worktag Types for Roll Forward

### Prerequisites

- Associate journal lines with worktags.
- Security: *Set Up: Accounting Rules* domain in the Common Financial Management functional area.

### Context

To optimize the roll-forward, configure rules to group beginning balances only for the worktags that belong to specific worktag types. Using configuration rules can also reduce the number of beginning balance lines.

When you set up more than 1 rule for the same company and ledger account, Workday applies the first rule and disregards the rest.

You can apply worktag type configuration rules only to balance sheet accounts.

You can't configure worktag type rules for:

- Retained earnings accounts.
- Income statement accounts.

When you don't set up a configuration rule with worktag types for a company ledger account, Workday includes all used worktags when you roll forward that account.

### Steps

- Access the **Maintain Worktag Types for Beginning Balance Journals** task.
- As you complete the task, consider:

Option	Description
<b>Ledger Account</b>	<p>For ledger accounts with year-end closing rules, select the target ledger accounts.</p> <p>For ledger account summaries, Workday uses the version in effect at the time you run the roll-forward.</p> <p>You can't use the <b>Maintain Worktag Types for Beginning Balance Journals</b> task to configure worktag type rules for:</p> <ul style="list-style-type: none"> <li>Retained earnings accounts.</li> <li>Income statements.</li> </ul>
<b>Worktag Types to Include for Retained Earnings</b>	<p>To configure worktag types that you want to include in retained earnings accounts, see the <b>Retained Earnings</b> section in <a href="#">Reference: Edit Tenant Setup - Financials</a>.</p> <p>If you don't configure anything for retained earnings on the <b>Edit Tenant Setup - Financials</b> task, Workday drops all worktags and aggregates your beginning balance into 1 journal line specific to that retained earnings account.</p>
<b>Inactive</b>	When you select this check box, Workday ignores the configuration rule during a roll-forward. You can use this option to activate 1 out of multiple

Option	Description
	configuration rules for the same company and ledger account.

### Result

When you roll forward year-end balances for accounts with configuration rules, Workday retains only the worktag types you include in the beginning balances.

### Next Steps

Roll forward year-end balances.

## Roll Year-End Balances Forward

### Prerequisites

- Create the next ledger year.
- Security: *Process: Close Year End* in the Common Financial Management functional area.

### Context

Roll year-end balances forward on accounts to create beginning balances for the next ledger year.

**Note:** Workday recommends that you must always first run or rerun roll forward year-end balances for the primary schedule and then for the alternate fiscal schedule.

You can roll forward balances as often as necessary before you close the current year. Workday considers the beginning balance for the year plus activity for the year when you report on the data. You can also configure Workday to roll translated beginning balances forward after rolling year-end balances forward.

### Steps

1. Access the **Roll Forward Year-End Balance** task.
2. As you complete the **Criteria** tab, consider:

Option	Description
<b>Company</b>	When a company hierarchy has companies with different fiscal schedules, you must run the process for each fiscal schedule.
<b>Fiscal Year</b>	<p>For multiple fiscal schedules, select:</p> <ul style="list-style-type: none"> <li>• Standard fiscal year to roll forward year-end balances for the primary schedule.</li> <li>• Alternate fiscal year to roll forward year-end balances for the alternate fiscal schedule.</li> </ul> <p>Example: If Company A is on a January to December fiscal schedule, run the roll-forward after close of the December period. If Company B is on an alternate fiscal schedule (July to June), run the roll-forward after close of the June period.</p> <p>When you roll forward year-end balances for an alternate fiscal year for the first time, you must include all balances since inception. Example: If you have tenanted data since 2006, you must roll forward balances from 2006 to the current year.</p>

Option	Description
	When the year for which you want to roll forward balances isn't available, you must close all of its ledger periods.
<b>Journal Source</b>	<p>Select the accounting source to assign the beginning balance journals you created.</p> <p>Example: You can use a year-end journal source that identifies journals created during year-end processing.</p>
<b>Roll Forward Ledger Option</b>	<p>Select to roll forward:</p> <ul style="list-style-type: none"> <li>• All Ledgers</li> <li>• Alternate Ledger Only</li> <li>• Primary Ledger Only</li> </ul> <p>This prompt only displays when you select both a company that is running an alternate ledger and a fiscal year that coincides with an active period for that alternate ledger.</p>
<b>Roll Forward Translated Beginning Balances</b>	<p>For multiple fiscal schedules, roll forward translated beginning balances for both the primary and alternate fiscal schedules.</p> <p>Select to:</p> <ul style="list-style-type: none"> <li>• Enable the fields on the <b>Roll Forward Translated Beginning Balances</b> tab.</li> <li>• Run the <b>Roll Forward Translated Beginning Balances</b> task for the primary and alternate fiscal schedules after rolling forward year-end balances.</li> </ul>
<b>Roll Forward Noncontrolling Interest Beginning Balances</b>	Select to roll forward NCI journal lines.
<b>Journal Source for Noncontrolling Interest Beginning Balance Journal</b>	Define a journal source for NCI beginning balances. Select this journal source when you have checked <b>Roll Forward Noncontrolling Interest Beginning Balances</b> .
<b>Roll Forward up to Current Year</b>	<p>Select to roll forward multiple years for all ledgers of the same company at once, including alternate ledgers where applicable.</p> <p><b>Note:</b> If your company has an alternate ledger with a fiscal start year earlier than the selected fiscal year and you select the <b>Roll Forward Up to Current Year</b> check box, Workday doesn't display the <b>Roll Forward Ledger Option</b> field but will still roll forward the relevant alternate ledgers up to the current year.</p>
<b>All Book Codes</b> <b>Blank Book Code</b>	Workday uses the book code to filter transactions, the ledger status, and pending transactions.

Option	Description
Select Book Code	Updates to the ledger period status apply only to accounting journals and operational transactions for the book codes that you select.

3. (Optional) As you complete the **Roll Forward Translated Beginning Balances** tab, consider:

Option	Description
Ledger	Lists ledger accounts with a translated beginning balance as of the first day of January for the fiscal year that you selected.
Translation Currencies	Displays your configured default translation currencies. You can add or remove translation currencies.

## Result

When you complete the task, Workday:

- Creates a separate event for each company.
- Sends you My Tasks notifications when the process completes.
- Creates a beginning balance journal for the next fiscal year or replaces the beginning balances for existing journals.
- Creates retained earnings in both the transaction and ledger currencies.

Workday automatically rolls account balances forward to the same account during processing. When you configure year-end closing rules, Workday applies them instead of the default setting. You can move prior-year balances to a separate account and start with a blank account for the current year.

When you add additional worktags on the **Edit Tenant Setup-Financials** task, Workday includes the additional worktags (up to 10) in addition to the primary and optional balancing worktags when grouping the income statement (current year retained earnings) lines during the year-end roll forward process.

## Next Steps

Close the ledger year.

### Related Information

#### Concepts

[Concept: Close](#) on page 322

#### Reference

[The Next Level: Year-End Roll Forward and Close Processing](#)

[2021R2 What's New Post: Redesigned Retained Earnings Reporting](#)

[2024R1 What's New Post: Alternate Ledger Currency in Roll Forward](#)

## Roll Translated Beginning Balances Forward

### Prerequisites

- Complete roll forward year-end balances to create beginning balance journals.
- Enter the translated beginning balance amounts for ledger accounts that don't have translated balances. Workday requires this step if the account has a historic type translation method that uses historic translation amounts, with a new combination of company and translation currencies.
- Security: *Process: Close Year End* domain in the Common Financial Management functional area.

## Context

As part of the year-end roll forward process, you can roll forward the translated balances to establish translated beginning balances for the new primary or alternate ledger period. If your company has a an alternate ledger that you report in a different currency to the ledger's designated currency, you can also use this task to obtain translated beginning balances for that alternate ledger.

## Steps

1. Access the **Roll Forward Translated Beginning Balances** task.
2. As you complete the task, consider:

Option	Description
<b>Company</b>	Determines the translation currencies, based on the translation currencies you configured in the company accounting details.
<b>Fiscal Year</b>	Select a year for which you've already rolled forward year-end balances.  For multiple fiscal schedules, roll forward the translated beginning balances for both primary and alternate fiscal schedules.
<b>Roll Forward Ledger Option</b>	Select to roll forward: <ul style="list-style-type: none"> <li>• All Ledgers</li> <li>• Alternate Ledger Only</li> <li>• Primary Ledger Only</li> </ul> This prompt only displays when an alternate ledger exists for the selected <b>Company</b> and <b>Fiscal Year</b> . When left blank, Workday rolls forward all available ledgers.
<b>Ledger Accounts</b>	Select from ledger accounts with beginning balances as of January 1 of the <b>Fiscal Year</b> you select.

## Result

Workday sends you My Tasks notifications when the process completes.

To see the translated beginning balances for specific worktags or book code for the primary ledger, run the **View Beginning Balance Translation Amounts** report.

To see the translated beginning balances for the alternate ledger, refer to [Ledger Year Beginning Balances versus Prior Year Ending Balances Report](#).

## Next Steps

If there's a translation variance, you can correct it by manually entering the translated beginning balance for the ledger accounts.

For accounts with a zero ledger balance, use the *Put Beginning Balance Translation Amounts* web service to enter the corrected translated beginning balances.

Calculate changes to retained earnings by adding these translated balances:

- Prior year retained earnings (the beginning balance of the prior fiscal year).
- Ending balances of the profit and loss accounts (as of the last day of the prior fiscal year).

## Related Information

### Tasks

[Steps: Enter Translated Beginning Balances for Financial Reporting](#) on page 210

[2024R1 What's New Post: Alternate Ledger Currency in Roll Forward](#)

## Close a Ledger Year

### Prerequisites

- Close all periods for the ledger year.
- Define or update the rules for processing year-end close.
- To begin the close, start the *Period Close Event* business process.
- Use the **Roll Forward Year-End Balance** task to obtain the beginning balances for the next ledger year.
- Security: *Process: Close Year End* domain in the Common Financial Management functional area.

### Context

You close ledger periods to control journal entry and posting, as well as calculate period and year-end actual and budget account balances for reporting. Run the year-end close process after you define your year-end closing rules. You can also create an optional close checklist to manage year-end closes directly in Workday through the business process workflow.

### Steps

1. Access the **Close Ledger Year** task.
2. When you select the **Roll Forward Beginning Balances** check box, you can schedule the roll forward to run in the future under the **Run Once in the Future** section.

**Note:** You can't schedule ledger year close to run in the future, only roll forward for beginning balances.

### Result

Workday updates the ledger year status to *Closed*. After you close a ledger year, it's no longer available for processing but remains available for reporting.

### Next Steps

To change one of the ledger periods, use the **Reopen Ledger Year** task. Once you reopen the ledger year, you can reopen the ledger period.

### Related Information

#### Concepts

[Concept: Close](#) on page 322

#### Tasks

[Change the Status of Ledger Periods](#) on page 299

[Steps: Set Up Close Process](#) on page 296

[Roll Year-End Balances Forward](#) on page 304

## Start a Close Process

### Prerequisites

- Create ledger years and ledger periods.
- Create a checklist to manage year-end closes directly in Workday using the Period Close Event business process.

### Context

Close open ledger periods for companies.

### Steps

1. Access the **Start Period Close** task directly from the related action menu of a company.
2. As you complete the task for an open **Period**, consider:

Option	Description
<b>Company</b>	Each company or company hierarchy can have only 1 close event per ledger period. A close for a company hierarchy doesn't start the close process for each company in the hierarchy. Each company within the hierarchy needs its own close process.
<b>Period Close Type</b>	Select <i>Period</i> , <i>Quarter</i> , or <i>Year</i> close. Workday displays the type in period close reports, metrics, and notifications. If the <i>Period Close Event</i> business process includes check list steps that are applicable to a certain type, Workday includes those steps in the workflow.
<b>Expected Completion Date</b>	Track the actual completion date against this target date. Workday displays the date in period close reports, metrics, and notifications. To change the date later, select <b>Period Close &gt; Edit Period Close Details</b> from the related action of the period close.

### Result

**Submit** initiates the *Period Close Event* business process. For close events that are in progress, you can:

- Attach documents.
- Use the **Period Close Work Area** to manage your period, quarter, and year-end closes.
- Review the **Find Period Closes** report for details about the close business process.
- Use the **Period Close Metrics** report to analyze close metrics.
- Click the **Period Close Notification** button to send ad hoc notifications to workers about a period close.

### Related Information

#### Concepts

[Concept: Close](#) on page 322

#### Tasks

[Steps: Set Up Close Process](#) on page 296

[Process: Procure to Pay Period Close](#) on page 310

## Process: Procure to Pay Period Close

### Prerequisites

Review the [Period Close Product Flow](#) to familiarize yourself with the period close process.

### Context

This topic provides guidelines you can consider to facilitate your period end close process and how you would like to handle open documents related to requisitions, purchase orders, supplier contracts and supplier invoices.

Your procure-to-pay process checklist might consist of different tasks. Consider these guidelines as an example for your period close activities. For a use case related to this topic, see [.../use-case-library/procure-to-pay.dita](#) in the Use Case Library.

### Steps

1. (Optional) Consider reviewing your open requisitions using the **Requisitions Pending Approval** or **Sourcing** report from your wdsetup tenant and decide what you want to do with them. You can either:
  - Source them into purchase orders.
  - Close the requisitions that you no longer need. See [Steps: Mass Close Procurement Documents](#).
  - Keep them open.
  - a) Access the **Mass Close Procurement Documents** task.  
Mass close any outstanding requisitions that you won't issue as purchase orders.  
Security: *Procurement Document Mass Action Event* business process and security in the Procurement functional area.
  - b) (Optional) Access the **Requisitions Pending Approval** or **Sourcing** report in your wdsetup tenant.  
Locate all requisitions that you haven't sourced.  
For more information, see [Procurement Reports](#).

2. (Optional) Consider reviewing your purchase orders and change orders to decide what you want to do with them. You can either:

- Keep them open.
- Approve and issue any outstanding purchase orders or change orders.

a) To issue outstanding purchase orders, access the **Find Purchase Orders** report.

Review purchase orders with a status of *In Progress* or *Draft* and change their statuses to *Approved* so you can issue them.

See [../../../../spend-management/procurement/purchase-orders/ajj1636931548659.dita](#).

b) **Issue Purchase Orders**.

Issue those purchase orders for which you'd like to create receipts and supplier invoices.

c) **Create Change Orders**.

Create change orders for issued purchase orders.

d) Access the **Mass Close Procurement Documents** task.

Mass close any outstanding purchase orders that you'll never receive.

Security: *Procurement Document Mass Action Event* business process and security in the Procurement functional area.

For more information, see [Steps: Mass Close Procurement Documents](#).

e) If you have enabled **Automatically Close Purchase Orders** on the **Edit Company Procurement Options** task, Workday will close open or issued purchase orders when they are:

- Fully received, with receipts in *Approved* status.
- Fully paid.

See also [../../../../spend-management/procurement/procurement-setup/ibh1477004818793.dita](#).

3. (Optional) Access the **Supplier Contracts Needing Attention** report in your wdsetup tenant.

This report displays all contracts expiring in the next month and contracts with less than 10% remaining balance.

You can select to either:

- Create an amendment to extend the contract.
- Copy the contract to a new contract.
- Close the contract.

Security: *Process: Supplier Contract - Reporting* domain in the Procurement functional area.

4. Review and accrue any open supplier invoices.

a) Access 1 or all of these reports:

- **Find Supplier Invoices**: Process invoices in *Draft* or *In Progress* status.

Security: These domains in the Supplier Accounts functional area:

- *Reports: Supplier Accounts*
- *Process: Supplier Invoice - Reporting*
- **Supplier Open Items**: Pay any partially paid or unpaid invoices.

Security: *Reports: Supplier Accounts* in the Supplier Accounts functional area.

- (Optional) **Unapproved Supplier Invoice Line Accrual** in your wdsetup tenant.

Use the report to create a reversing manual journal entry at the end of each period to accrue properly supplier invoices.

Security: *Reports: Supplier Accounts* in the Supplier Accounts functional area.

For more information, see [Supplier Invoice Accrual Dashboard and Reports](#).

5. (Optional) [Register Assets](#) on page 1469.

Register and capitalize the assets and place them in service before you record depreciation. Placing them in service will accurately state your assets and depreciation expenses.

6. [Record Asset Depreciation and Amortization Expenses](#) on page 1547.

Create a schedule to record depreciation and amortization expenses for company assets.

7. Do 1 or both of these:

- [Create Amortization Schedules for Prepaid Purchase Orders](#) on page 1599.
- [Create Amortization Schedules and Installments for Prepaid Supplier Invoices](#) on page 1600.

You amortize prepaid invoices and related installments for the period to decrease prepaid liability by debiting expense accounts.

8. [Create Receipt Accruals](#).

Create period-end accruals for approved uninvoiced receipts for goods and services.

**Note:** This will create receipt accruals for purchase orders that are not consignment, inventory, or bill only.

9. (Optional) [Create Manual Settlement Runs](#) on page 2160.

Pay and settle all applicable supplier invoices.

For more information, see [Concept: Settlement Processing](#) on page 2172.

10. Access the **Fix Operational Journals With Errors** task.

Correct any operational journal errors not posted to the current period.

Security: *Process: Audits and Corrections* domain in the Financial Accounting functional area.

For more information, see [Troubleshooting: Financial Journals](#) on page 132.

11. [Change the Status of Ledger Periods](#) on page 299.

Close activity groups for procurement, suppliers, and ad hoc payments.

For more information, see [Concept: Ledger Close Activity Groups](#) on page 321.

12. (Optional) [Run Revaluation](#) on page 202.

For multicurrency organizations, revalue foreign currency journal amounts based on your rules for the period.

**13.** Reconcile payables to the ledger.

Use 1 or all of these reports to reconcile your payables to the ledger balance:

- **Payables Aging.**

Security: *Reports: Supplier Accounts* domain in the Supplier Accounts functional area.

- **Payables to Supplier Balances Reconciliation.**

Security: *Reports: Financial Accounting* domain in the Financial Accounting functional area.

- **Payables to Supplier Reconciliation** composite report.

Security: *Process: Payables to Supplier Reconciliation Initial Balance* in the Financial Accounting functional area.

**Note:** Before you run the report, perform these actions:

- Run Generate Payables to Supplier Reconciliation Initial Balances to generate initial balances up to the current period or any other period.
- Ensure you completely close fiscal periods for all functional areas. *Close In Progress* status or closing just supplier accounts is not sufficient. If you open a prior period and make adjustments that impact payables, Workday won't capture those adjustments in the report.

- **Payables to Supplier Balances Reconciliation Exception Summary.**

Security: *Reports: Financial Accounting* domain in the Financial Accounting functional area.

- **Trial Balance** for the Payables ledger account.

Security: *Reports: Financial Accounting* domain in the Financial Accounting functional area.

**14.** Complete bank reconciliation.

Reconcile bank statements against your cash transactions.

- a) [Reconcile a Bank Statement Automatically](#) on page 2023 or [Reconcile Multiple Bank Statements Automatically](#) on page 2025.

- b) Access the **Book to Bank Summary - Uncleared Bank Statement Lines** report.

Check for unreconciled lines.

Security: *Process: Bank Statement-Reporting* domain in the Banking and Settlement functional area.

- c) [Reconcile a Bank Statement Manually](#) on page 2026.

Manually reconcile any remaining unreconciled lines.

For more information, see:

- [Steps: Use Bank Account Reconciliation](#) on page 2016.
- [Reconcile First-Notice Items on a Bank Statement](#) on page 2028.
- [Bank Reconciliation Product Flow](#).

**15.** Access 1 or both of these reports to reconcile cash to bank balances.

- **Book to Bank Summary Report**
- **Book to Bank By Bank Account Currency Report**

Security: *Report Execution* domain in the Tenant Non-Configurable functional area.

For more information, see:

- [Reference: Book-to-Bank Reports](#) on page 2047.
- [Reference: Bank Account Reconciliation Reports](#).

## 16. Reconcile cash transactions to ledger account.

Use these reports to reconcile your cash transactions to your ledger accounts.

- **Cash to Bank Reconciliation Composite** report to reconcile cash operational transactions to the ledger account in ledger currency.
- **Cash to Bank Reconciliation in Bank Currency** report to reconcile cash operational transactions to the ledger account in bank currency.

Security: *Report Execution* domain in the Tenant Non-Configurable functional area.

## 17. Steps: Mass Close Procurement Documents.

During year-end closing, roll forward commitment and obligation journals to the first date of the next open period.

**Note:** This is a year-end task and not a period-end task.

Access the **Create Ledger** task and select the **Roll Journals Forward for Procurement** check boxes for the **Create Commitments** and **Create Obligations** grids.

Security: *Set Up: Ledger and Book* domain in the Common Financial Management functional area.

[Concept: To Do Step](#)

[Concept: Checklist Step](#)

#### Reference

[The Next Level: Period Close](#)

## Process: Order to Cash Period Close

### Prerequisites

Review the [Period Close Product Flow](#) to familiarize yourself with the period close process.

### Context

This topic provides guidelines you can consider to facilitate your period end close process and how you would like to handle open documents related to receiving payments, complete invoicing, and accounting for goods and services.

Your order to cash process checklist might consist of different tasks. Consider these guidelines as an example for your period close activities. For a use case related to this topic, see [../../use-case-library/order-to-cash-period-close-process.dita](#) in the Use Case Library.

### Steps

#### 1. Enter payments.

Ensure you've entered and approved all payments received from customers.

See:

- [Record Customer Payments](#) on page 828.
- [Concept: Customer Payments](#) on page 837.

**2.** Create deposits for any undeposited payments.

To find undeposited customer payments:

- Access the **Find Customer Payments** report.

Security: *Process: Customer Invoice Payment* in the Customer Accounts functional area.

- For **Payment Date On or Before**, select the period end date of the period you're closing.
- Uncheck **Include Deposited Payments** to only display payments that you have not yet deposited.
- To create a deposit for each undeposited payment, from the related actions of each payment, select **Customer Payment > Create Deposit**.

**Note:** You can also use the related actions of the payment to apply payments to unapplied payments by selecting **Customer Payment > Apply**.

- Select the payment for which you want to create the deposit or apply the payment and select **Submit** to initiate the approval process.

**3.** Apply any unapplied payments.

To find unapplied payments that have been deposited:

- Access the **Find Customer Payments** report.

Security: *Process: Customer Invoice Payment* in the Customer Accounts functional area.

- For **Payment Date On or Before**, select the period end date of the period you're closing.
- For **Application Status**, select **Unapplied**.
- Check **Include Deposited Payments** to display payments that you have deposited.
- To apply the unapplied payment, from the related actions of each payment, select **Customer Payment > Apply**.
- Select the invoice for which you want to apply the payment and select **Submit** to initiate the approval process.

**4.** Complete invoicing for the period.

- Access the **Find Customer Invoices for Company** report.

Security: *Reports: Customer Accounts* in the Customer Accounts functional area.

- For **Invoice Status**, select:

1. Draft
2. Incomplete
3. In Progress
4. For **Invoice Date or Before**, select the period end date of the period you're closing.
5. Click **OK**.

Workday displays all invoices that are available to complete.

- From the related actions of each invoice that you want to complete, select **Customer Invoice > Submit** to initiate the approval process for these invoices:

- Draft
- Incomplete

**5.** (Optional) Create customer invoices for billable transactions. If your company is using project billing and usage-based transactions, access the **Create Customer Invoice for Billable Transactions** task to create invoices for period end.

Security:

- *Process: Project Billing - Invoicing* in the Project Billing functional area.
- *Process: Billing Invoice* in the Customer Contracts and Project Billing functional areas.

- For **Transaction Date On or Before**, select the period end date of the period you're closing.

- Click **OK**.

- Review the transactions in the **Invoices to be Created** grid and select the specific transactions for which you want to create invoices.

- Click **OK** to initiate the approval process.

6. (Optional) Create customer invoices for billing installments. If your company is using a customer contract and billing schedule, access the **Create Customer Invoice for Billing Installments** for creating invoices for period end.

Security:

- *Process: Project Billing - Invoicing* in the Project Billing functional area.
- *Process: Billing Invoice* in the Customer Contracts and Project Billing functional areas.

- a) For **Company**, enter your company.
- b) For **Invoice Date or Before**, select the period end date of the period you're closing.
- c) Click **OK**.
- d) In the **Billing Installments** grid, select the billing installment that you want to invoice.
- e) Click **OK** to initiate the approval process.

See [Steps: Set Up Project Billing](#) on page 1399.

7. (Optional) Create revenue installments for billable transactions.

If your company is using customer contracts and wants to recognize revenue, access the **Create Revenue Installments for Billable** task.

Security: *Process: Revenue Schedule - Core domain* in the Customer Contracts and Project Billing functional areas.

- a) For **Company**, select the name of your company.
- b) For **Transaction Type**, select 1 of these transaction types:
  - Project Time and Expenses
  - Fixed Fee Project
  - Order Fulfillment
  - Usage-Based
- c) For **Transaction Date no later than**, select the period end date of the period you're closing.
- d) Click **OK**.
- e) Review and select the lines for which you want to create installments.
- f) Click **Create or Update Revenue Installments** to create installments for billable transactions.

See

- [Create Revenue Installments for Billable Transactions](#) on page 1116.
- [Concept: Revenue Recognition](#) on page 1118.
- [Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110.

8. (Optional) Create revenue installments for percent complete based schedules.

If your company is using Percent Complete Revenue Schedules and wants to recognize revenue on a project as it progresses, access the **Review Percent Complete for Revenue** task.

- a) For **Company or Project/Project Hierarchy** select your criteria.
- b) For **Transaction End Date**, select the end date of the period you're closing.
- c) For **Percent Complete Status**, select **Approved**.
- d) For **Percent Complete Method**, select **Hours or Cost**.
- e) Click **OK**.
- f) Review and select the lines for which you want to create installments.
- g) Click **Create Revenue Installments for Billable Transactions** to create installments for Transaction Type of **Fixed Fee Project**.

See [Review Percent Complete Calculations for Revenue Recognition](#) on page 1448.

**9.** Create accounting to recognize revenue.

After creating installments, recognize revenue by generating accounting.

- Access the **Create Revenue Recognition Accounting** task.

Security: *Revenue Recognition Installment Event* in the Customer Contracts and Project Billing functional areas.

- For **Company**, select the name of your company.
- For **Accounting Date On or Before**, select the period end date of the period you're closing.
- Click **OK**.
- Select the installments for which you want to generate revenue recognition accounting and click **OK**.
- Click **OK** to start the process.
- Click **Refresh** to complete the process.
- View the accounting generated by the process by selecting **Revenue Recognition Installment > View Accounting** from the related actions menu of the installment.

**10.** [Steps: Reclassify Customer Contract Assets and Liabilities](#) on page 1141

Configure Workday to manage your period end accounting by debiting or crediting your *Deferred Revenue* and *Unbilled Receivables* ledger accounts.

**11.** Create Carve In and Carve Out Adjustment Journals.

Configure Workday to manage your period end accounting for Multiple Element Arrangements. You can create carve in/carve out adjustment journals to reclassify deferred and accrued revenue balances.

- Access the **Create Carve In/Carve Out Adjustment Journal** task.

Security: Configure the *Carve In Carve Out Journal Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

- For **Company**, select the contract Header company.
- For **Year**, select the posting year for the contract-to date amounts and operational journals.
- For **Period**, select the posting period for the contract-to date amounts and operational journals.
- Click **OK**.
- Review the journal lines and click **OK** to create Carve In/Carve Out adjustment journals.

Workday will automatically calculate and post the necessary journal entries to reclassify deferred revenue among the contract lines.

See [Carve-In and Carve-Out and Foreign Currency Adjustments](#).

**12.** Create Foreign Currency Adjustment Journals.

When there are billing and revenue recognition discrepancies due to timing and conversion rates, you can create foreign currency adjustment journals to calculate the difference. Workday will automatically calculate and post the necessary journal entries to account for exchange gain/loss.

- Access the **Create Customer Contract Foreign Currency Adjustment Journal** task.

Security: Configure the *Carve In Carve Out Journal Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

- For **Company**, select the contract Header company.
- For **Year**, select the posting year for the contract-to date amounts and operational journals.
- For **Period**, select the posting period for the contract-to date amounts and operational journals.
- For **Foreign Currency Adjustment Rule**, select a currency adjustment rule to specify worktags and ledger accounts to credit or debit for the realized currency gain or loss.
- Click **OK**.
- Review the contract lines and click **OK** to create a Customer Contract Foreign Currency Adjustment Journal for the contract lines.

Workday will automatically calculate and post the necessary journal entries to account for exchange gain or loss .

See [Carve-In and Carve-Out and Foreign Currency Adjustments](#).

**13. Change the Status of Ledger Periods** on page 299.

Close activity groups for customer accounts.

For more information, see [Concept: Ledger Close Activity Groups](#) on page 321.

**14. Reconcile receivables to the ledger.**

Use 1 or all of these Workday - delivered reports or custom reports that you've created to reconcile your receivables to the ledger balance:

- **Receivables to Customer Balances Reconciliation .**

Use this report to view differences between receivable ledger accounts and operational balances for customer accounts.

Security: *Reports: Financial Accounting* in the Financial Accounting functional area.

- **Receivables to Customer Balances Reconciliation Exception Summary**

Use this report to view summarized receivable exceptions that result from open items, timing differences, and accounting journals posted to control accounts.

Security: *Reports: Financial Accounting* in the Financial Accounting functional area.

## Concept: Journal Statuses and Pending Transactions

You can use the **Ledger Period Journal Status** report, **Update Ledger Period Status** task, or **Mass Update Ledger Period Status** task to review ledger period details and statuses.

Before closing ledger periods, make sure that:

- You've posted everything for the period.
- Everything in progress has an *In Progress* status.
- Everything you need finalized is in its final state.

If you have journals in progress that you need to finalize, you should cancel or post them before closing the period. Ensure that all journals balance because Workday prevents you from posting unbalanced journals.

On the tabs or columns of these tasks and reports, consider:

Tab / Column	Description
<b>Journal Status</b>	<p>Displays how many accounting and operational journals you have for each journal status. Make sure that all the journals are in the status that you want when you close. After you close, the journals remain in these statuses:</p> <ul style="list-style-type: none"> <li>• <i>Created</i>: You've created the journal and saved it for later or created a reversal journal on or after the accounting date. Submit the created journal to start the business process to get it approved. If you want to post journals, submit them for approval. When the reversal period opens, use the <b>Mass Post Reversal Journals</b> task to post the reversal journals you created. Otherwise, cancel the journals, delete them, or leave them in this status when you close.</li> <li>• <i>In Progress</i>: You've created the journal and started the business process, but haven't approved the journal. Approve the journal to post it or deny the journal to change it to a <i>Canceled</i> status. Before you can close the</li> </ul>

Tab / Column	Description
	<p>period, you must post or cancel <i>In Progress</i> journals.</p> <p><b>Note:</b> To view <i>In Progress</i> status journals, you must select <b>Allow Accounting in Arrears</b> on the <b>Edit Company Accounting Details</b> task.</p> <ul style="list-style-type: none"> <li>• <i>Pro forma:</i> The journal has allocations that you haven't yet posted or equity pickup results waiting for your approval. Post these journals and finalize allocations before you close the period. To cancel these journals, cancel the allocation or leave them in this status when you close.</li> <li>• <i>Posted:</i> You've posted the journals. Review to make sure that you haven't posted any journals in error.</li> <li>• <i>Unposted:</i> You've formerly posted the journals then changed your mind. Rather than leaving journals in this status, either edit the journal, or cancel the journal if you don't need it.</li> <li>• <i>Canceled:</i> Is a finalized status. Review to make sure that you haven't canceled any journals in error. If someone cancels a transaction and the original ledger period is still open, Workday cancels the journal for the transaction. If you've closed the ledger period, perform these actions: <ul style="list-style-type: none"> <li>• Leave the original journal posted.</li> <li>• Create a reversing journal in the next open ledger period.</li> </ul> </li> <li>• <i>Correct In Progress:</i> You processed an accounting journal and are editing it using the <b>Business Process &gt; Correct</b> related action. The accounting journal status changes to <b>Posted</b> when you submit the accounting journal.</li> <li>• <i>Error:</i> Operational journals that have errors that you need to fix before close. To troubleshoot, use the <b>Fix Operational Journals With Errors</b> task.</li> <li>• <i>Reserved:</i> Workday reserves the journal when the budget check step in the accounting journal event business performs a budget verification for the ledger account and any other dimensions defined.</li> </ul> <p>The journal has a status of <i>Reserved</i> whether or not the budget check passes, fails, or isn't required.</p> <p>Before you can close the period, you must approve or cancel <i>Reserved</i> journals.</p>
<b>Pending Accounting Journal Events</b>	Displays accounting journals that have <i>Unpost in Progress</i> statuses. Approve the journal to post it or

Tab / Column	Description
	deny the journal to return it to the <i>Created</i> status. From there, you can cancel the journal.
<b>Pending Operational Transactions</b>	Displays operational transactions that you've either saved as drafts or submitted into the business process but not yet approved. Decide whether you want these transactions to post in this period or the next open period. To post to this period, approve the transaction so that Workday generates operational journals for it.
<b>Pending Depreciation Transactions</b>	<p>Displays assets that have depreciation you need to record. You can post them or leave them pending for the next period. If you have depreciation transactions and select not to depreciate their value for this period, they roll forward into the next period. Workday adds them to the depreciation total for that period. To post, use the <b>Record Depreciation Amortization Expense</b> task.</p> <p>You can cancel a depreciation transaction except when it is:</p> <ul style="list-style-type: none"> <li>• In a ledger period with a status of <i>Closed</i> or <i>Close in Progress</i> for Operational Accounting.</li> <li>• Containing assets that you've disposed of or further depreciated.</li> <li>• An adjustment (catchup depreciation or reversal).</li> <li>• Created by an asset transfer, recategorization, or disposal because these events automatically record depreciation for periods up to the transaction period.</li> <li>• Canceled.</li> </ul>
<b>Pending Allocations</b>	<p>Displays the allocations ready for processing. Based on the allocation schedule, decide whether to:</p> <ul style="list-style-type: none"> <li>• Post them now and have the accounting impact this period.</li> <li>• Cancel them.</li> <li>• Run the allocations later.</li> </ul> <p>To resolve the allocations that aren't yet run or in process, use the <b>Allocation Work Area</b>.</p>
<b>Pending Receipt Accruals</b>	Displays receipt accruals that you've either saved as draft or submitted into the business process but not yet approved. Workday prevents you from closing a period with pending/draft accruals to ensure that they post to the current period. For receipt accruals in draft, either submit and approve them or cancel them. For receipt accruals already processing, approve them or deny and then cancel them.

Tab / Column	Description
<b>Status History</b>	<p>Displays status change history for ledger periods and their associated <i>Closed Activity</i> groups on the <b>Ledger Period Journal Status</b> report.</p> <p>If any periods are in <i>Close in Progress</i> status, you can't update those activity groups with new transaction activity.</p>

[The Next Level: Guide to Period Close Journal Entries](#)

## Concept: Ledger Close Activity Groups

#### Context

Workday provides period close activity groups that categorize operational transactions and accounting activity. You can close these groups independently to provide greater control and flexibility as you work through your ledger period close. You can configure your own period close activity groups in Workday to customize further your close process to suit your business needs.

**Note:** Workday includes each activity in only 1 period close activity group.

#### Period Close Activity Groups and Operational Transactions

The **View Period Close Activity Groups** report displays the period close activity groups and their associated operational and accounting transaction types.

#### Example: Change Ledger Period Close Statuses for Activity Groups

Your organization has separate teams for processing customer and supplier transactions, and you want to close the transaction ledgers on different dates.

Close the *Procurement* activity group on the first day of the close period to stop processing purchase orders and supplier invoices. To post backlog payments, you should still keep the *Customer Accounts* activity group open, which includes customer invoices and payments you received during the current ledger period.

Keeping this activity group open gives you the flexibility to finalize expense activities and analyze their impact early in the close period. Workers can still post supplier invoices to the same period.

First, access the ledger period you want to close using the **Update Ledger Period Status** task. Next, change the status to *Close in Progress* from the **Status** prompt, and then select *Procurement* from the **Closed Activity** prompt.

You have now stopped procurement transactions from posting to the period you changed to *Close in Progress*, and kept the period open for processing customer transactions.

#### Related Information

##### Tasks

[Change the Status of Ledger Periods](#) on page 299

[Set Up Period Close Activity Groups](#) on page 297

## Concept: Close

Workday provides several tools to help you complete close activities at the end of an accounting period, quarter, or year. These activities enable you to:

- Change ledger period and year statuses.
- Close periods for some operational transaction groups before closing them for others.
- Roll forward year-end balances.
- Roll forward translated beginning balances.
- Create and execute a close checklist.

You can use these tools, along with other tasks performed outside of Workday, to manage your close processes.

### Ledger Period Close

Workday enables you to have multiple ledger periods open at the same time. While you're finalizing a ledger period, you can get the next ledger period under way. You can select new statuses and close activities for one or more ledger periods, and use different statuses and close activities for other ledger periods.

If you have more than 1 ledger type, the corresponding ledger periods and statuses are always in sync.

Example: If your company uses *Actuals* and *Commitments* ledger types, you update the ledger periods and statuses for each ledger type concurrently.

To close a ledger period, you gradually lock it down to limit new journal activity as you work towards the close.

Example: On February 2, you change the January ledger period status from *Open* to *Close in Progress*. This status prevents operational journal activity for specific activities, such as *Procurement*. You keep the Payroll close activity as *Open* to process payroll on the next run date of February 15.

### Roll Forward Year-End Balances

Before closing the previous ledger year, Workday enables you to roll journal balances forward into the beginning balance of the current ledger year. At any point in the close timeline, you can run the *Roll Forward Year-End Balance* process to create or replace journal beginning balances. These beginning journal balances, combined with current-year journal activity, give you the latest numbers when you report on the current ledger year.

Example: You run the roll forward process in mid-January after you've changed the status for previous year ledgers to *Adjustments Only*. Running the roll forward process in mid-January enables you to create a more realistic January balance sheet.

You can also have Workday roll forward translated beginning balances after rolling year-end balances forward.

### Ledger Year Close

Just as you can have multiple ledger periods open simultaneously, in Workday you can have the preceding ledger year open as you work in the next ledger year. Leave at least 1 ledger period open (typically the last) for a place to post adjustments until you're ready to close the ledger year.

Example: You open the January ledger period in late December. You gradually limit your December journal activity by changing the ledger period status. On January 10, you limit the ledger period to *Adjustments Only*. After you make adjustments and close all periods, in early March you close the preceding ledger year.

To close a ledger year, you define year-end closing rules and run the ledger year close process. Close all ledger periods for the year before you can close the ledger year. The process:

- (Optional) Rolls forward remaining balances from the preceding ledger year into the beginning balance of the current ledger year, for the last time.
- Updates the ledger year status to *Closed*.

### Close Checklist

To manage your close procedures, you can create close checklists in Workday to incorporate all your close steps into your business process workflow. At the scheduled time, Workday sends a notification to complete the task to the assigned worker. By using a close checklist, you can also analyze close metrics and send workers additional notifications about a close step anytime.

### Related Information

#### Tasks

[Define Rules for Processing Year-End Close](#) on page 298

[Steps: Set Up Close Process](#) on page 296

#### Reference

## Reference: Period Statuses and Permitted Transactions

Period statuses control what you can process in your accounting period and by which source.

You can set up different statuses for ledger periods that will affect the activities that you can perform during that period.

This table lists permitted transactions during each period status:

Period Status	Operational Journal	Reversal Journal	Accounting Journals, Depreciations, and Receipt Accruals	Adjustment Journal
<i>Created</i>	No	Yes	No	No
<i>*Not Available</i>	No	Yes	No	No
<i>Open</i>	Yes	Yes	Yes	Yes
<i>**Close in Progress</i> Depends on the individual status of your activity groups.	Configurable	Configurable	Configurable	Yes
<i>Adjustment Only</i>	No	No	No	Yes
<i>Closed</i>	No	No	No	No

**Reversals:** For reversals of accounting journals, Workday creates reversal journals in *Created* status but doesn't post them.

**\*Not Available Status:** You can set periods you open in error to a *Not Available* status.

**\*\*Close in Progress Status** You can close activity groups independently giving you flexibility to close some groups and leave others open.

## Tasks

[Change the Status of Ledger Periods](#) on page 299

## Reference: Period Close Work Area

As your workers complete steps in the *Period Close* event business process, you can use the **Period Close Work Area** report to manage your period, quarter, and year-end closes.

Security: *Process: Period End* domain in the Common Financial Management functional area.

You can access these tasks from the work area:

Task	Description
<b>Change Fiscal Period</b>	<p>Workday automatically displays the latest period that has one or more closes.</p> <p>Change the fiscal period as necessary.</p>
<b>Find Period Closes</b>	Review details of the period close process.
<b>Period Close Metrics</b>	Analyze period close metrics and review the progress for the latest fiscal period with a close event.
<b>Period Close &gt; Manage Attachments</b> from the Period Close related actions menu.	<p>Attach documents to the closed period.</p> <p>Example:</p> <ul style="list-style-type: none"> <li>• Attach completed balance sheet reconciliations for the accounting manager to review and sign off on.</li> <li>• Attach final financial statements for the controller to review and approve.</li> </ul> <p>The documents are then available on:</p> <ul style="list-style-type: none"> <li>• Close notifications.</li> <li>• The <b>View Period Close</b> report.</li> </ul>
<b>Period Close &gt; Edit Period Close Details</b> from the Period Close related actions menu.	Change the expected completion date of the period.
<b>Period Close Notification</b>	<p>Notify workers regarding a period close that's in progress.</p> <p>When you submit the notification, Workday launches the <i>Period Close Notification</i> event business process.</p> <p>Each close event can have only one active notification event. If a notification is in progress when you submit another one, Workday cancels the existing notification and launches a new notification event.</p> <p>If you included the <i>Review Period Close</i> action step, the business process creates a My Tasks notification for the worker.</p> <p>If the worker has appropriate security access, the notification includes:</p> <ul style="list-style-type: none"> <li>• Detailed period close information.</li> </ul>

Task	Description
	<ul style="list-style-type: none"> <li>Period close business process information.</li> <li>Process history.</li> </ul>

[Steps: Set Up Close Process](#) on page 296

## Period Close Management

### Setup Considerations: Reconcile Cash Operational Transactions to Ledger

You can use this topic to help make decisions when planning your configuration and use of reconciling cash operational transactions to your cash ledger account. It explains:

- Why to set it up.
- How this feature fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can use Workday to reconcile cash operational activities to the corresponding cash ledger account by company and bank account.

### Business Benefits

You can reconcile cash operational transactions to your cash ledger account within Workday. This eliminates the need to reconcile cash operational transactions outside of Workday.

### Use Cases

As part of your reconciliation process during period end, you must reconcile all your cash operational transactions to your cash account.

### Questions to Consider

Before reconciling cash operational transactions, consider these questions:

Questions	Considerations
For what period should I create an initial balance?	Select a period from which you want to start reconciliation.  <b>Note:</b> You must have reconciled cash transactions for all prior periods.
How many times can I create an initial balance?	You usually create initial balances once, but can create them again if you want.

Questions	Considerations
	<b>Note:</b> If you create initial balances again, Workday deletes all previously created beginning operational cash balances.

## Recommendations

Before you create an initial balance, Workday recommends that you reconcile cash transactions for all prior periods. Example: You've reconciled all cash transactions for the period ending June 30th, 2016. Create initial balances for the Period and Fiscal Year, July 2016. Once you run the process, Workday creates initial balances by Company and Bank Account dated July 1, 2016.

## Requirements

To reconcile operational cash transactions, you must:

- Create initial balances as a starting point for your reconciliation. If you don't, the reconciliation reports won't display any data.
- Close your fiscal year or run the **Generate Period Beginning Balances for Reconciliation Activities** task to create beginning balances for each open period. If you don't, the reconciliation reports will display only activity.

**Note:** The **Generate Period Beginning Balances for Reconciliation Activities** task creates beginning balances for all subsequent open periods. Example: If you run the task for February 2019, Workday creates beginning balances for March and all subsequent open periods.

## Limitations

- The **Cash to Bank Reconciliation Composite** report only reconciles cash balances in Ledger currency. To reconcile cash transactions in Bank Account currency, Workday recommends that you use the existing **Cash to Bank Account Balances Reconciliation** report.
- When you recreate an initial balance, Workday deletes all previously created initial balances and beginning balances.

To restore beginning balances, run the **Generate Period Beginning Balances for Reconciliation Activities** task.

## Tenant Setup

No impact.

## Security

Domains	Considerations
<i>Process: Cash to Bank Reconciliation Initial Balance</i> in the Financial Accounting functional area.	Users with security enabled for this domain can create initial balances.
<i>Reports: Financial Accounting</i> in the Financial Accounting functional area.	Users with security enabled for this domain can run the reconciliation reports.
<i>Process: Period End</i> in the Financial Accounting functional area.	Users with security enabled for this domain can run the <b>Generate Period Beginning Balances for Reconciliation Activities</b> task to create beginning balances.

## Business Processes

No impact.

## Reporting

Reports or Dashboards	Considerations
Cash to Bank Reconciliation Composite	Use this report to confirm that cash operational transactions reconcile to the ledger account.
Cash to Bank Reconciliation Initial Balances Composite	Use this report to confirm and review the initial balances.
Find Cash to Bank Reconciliation Activities.	Use this report to view details of cash operational transactions for a specific period.
Find Cash to Bank Reconciliation Initial Balances.	Use this report to view initial balances. Also, use the related actions from the report to edit initial balances.
Cash to Bank Reconciliation by Reconciliation Status Composite.	Use this report to view the reconciliation status of each cash operational transaction to cash ledger balance.

You can use the Cash to Bank Reconciliation Activity report data source (secured to the *Reports: Financial Accounting* domain) to create custom reports to reconcile cash operational transactions to cash ledger balance.

## Integrations

No impact.

## Connections and Touchpoints

Cash to Bank reconciliation interacts with these other areas in Workday:

Features	Considerations
Customer Accounts	Reconciles cash transactions collected from customers.
Supplier Accounts	Reconciles cash transactions paid to suppliers.
Expenses	Reconciles cash transactions paid for expenses.
Payroll	Reconciles cash paid for payroll transactions.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Reference

[The Next Level: Automate Your Account Reconciliation Process with Transaction Matching](#)

[The Next Level: Efficiently Certify Your Reconciliation Accounts with Account Reconciliation](#)

## Steps: Process Manual Transaction Matching on Journal Lines

### Context

You can match and unmatch transactions manually to reconcile your ledger account ending balances on journal lines.

Example: You can manually match transactions that:

- Are small in number that you want to match quickly without creating a matching rule set.
- Are missing identifiable attributes that you can't include in rule sets.

You can mark offsetting journal lines as matched and focus on journal lines that remain unmatched.

### Steps

1. (Optional) [Mass Mark Journal Lines as Unavailable for Manual Matching](#) on page 328.
2. [Match Journal Line Transactions Manually](#) on page 329.

### Next Steps

- Use custom reports to report on journal lines that remain unmatched.
- Open transactions that make up the balance.
- Unmatch journal lines in case of mistakes in matching.

[The Next Level: Efficiently Certify Your Reconciliation Accounts with Account Reconciliation](#)

## Mass Mark Journal Lines as Unavailable for Manual Matching

### Prerequisites

Security: *Process: Account Certifications - Create* domain in the Financial Accounting functional area.

### Context

You can schedule mass updates to mark existing journal line transactions as unavailable for matching.

Example: When you want to focus on transactions from the current year, you can mark journal lines from previous years as unavailable to match.

### Steps

1. Access the **Mass Update Journal Lines as Unavailable for Matching** task.
2. As you complete the task, consider:

Option	Description
<b>Ledger Account</b>	Select a ledger account or alternate ledger account.

Option	Description
	<p>You can only select balance sheet accounts that are available for use with the <b>Company</b> you select.</p> <p>The alternate ledger account option only displays for companies with alternate accounts defined.</p>
<b>Mark as Available</b>	(Optional) Select when you want to correct an error and now want to make previously marked unavailable lines as available for matching.

## Result

Journal lines you mark as unavailable:

- Aren't displayed when you match transactions using the **Transaction Matching on Journal Lines** task.
- Aren't considered for automatic matching when using the **Schedule Matching Run** task.

## Next Steps

Use the **Select Journal Lines as Available for Matching** task to mark individual journal lines you previously marked unavailable as available for matching. Example: You previously marked all journal lines from previous years as unavailable for matching, but now want to match 1 journal line from the previous year with a current year journal line. You can use this task to select the previous year journal line as available for matching with a current year journal line.

## Match Journal Line Transactions Manually

### Prerequisites

Security: These domains in the Financial Accounting functional area:

- *Process: Account Certifications - View*
- *Process: Account Certifications - Create*

### Context

You can manually match journal lines during period close to:

- Increase data integrity.
- More accurately analyze your ledger account ending balances.

### Steps

1. Access the **Transaction Matching on Journal Lines** task.
2. As you complete the task, consider:

Option	Description
<b>Ledger Account</b>	Select a ledger account or alternate ledger account.

Option	Description
	<p>You can only select balance sheet accounts that are available to use with the <b>Company</b> you select.</p> <p>The alternate ledger account option only displays for companies that you defined alternate accounts for.</p>
<b>Match On Type</b>	<p>Workday populates this field based on the <b>Match On Type</b> selected in the <b>Set Up Journal Line Matching</b> task.</p>
<b>Filter By Book Code</b>	<p>Leave blank to retrieve journal lines for all book codes.</p> <p>You can't match transactions across book codes.</p>
<b>Adjustment Journal</b>	<p>Select to include only adjustment journals.</p>

3. Select the journal lines you want to match, and click **Match**.
4. (Optional) To adjust your search criteria, for additional journal lines, expand the **Select Journal Lines** section, enter new search criteria, and then click **Get Journals**.  
Workday retrieves additional journal lines based on the new criteria.
5. Select the additional journal lines, and then click **Match**.  
Workday generates a Match ID to record the match and to display journal lines included in the match. You can click the Match ID to view match details and from the related actions menu, perform an Unmatch.

[Concept: Close](#) on page 322

##### Reference

[Workday 32 What's New Post: Transaction Matching on Journal Lines for Alternate Accounts](#)

#### Steps: Match Intercompany Journal Lines Manually

##### Context

You can manually match journal lines across 2 or more companies based on intercompany elimination rules, enabling you to focus on the unmatched differences when reconciling intercompany journal lines. You can use the **View Intercompany Reconciliation** report to view intercompany differences due to unmatched intercompany journal lines.

##### Steps

1. (Optional) Access the **Set Up Journal Line Matching** task.  
Select a **Match On Type** for intercompany matching. You can make intercompany matches in either the ledger currency or the transaction currency.  
Security: *Set Up: Account Certifications* domain in the Financial Accounting functional area.
2. [Create ID Definitions and Sequence Generators](#).  
Workday assigns a default match ID definition in this format: IC\_OPEN\_ITEM\_MATCH-<unique ID>. We recommend creating a sequence generator ID to distinguish intercompany matching IDs from transaction matching IDs. You can select the sequence generator creation task directly from the **ID Generator for Journal Line Intercompany Matching** prompt on the **Edit Tenant Setup - Financials** task.

**3. Access the **Intercompany Matching on Journal Lines** task.**

Security: *Process: Account Certifications - Intercompany Create Match* domain in the Financial Accounting functional area.

**4. As you complete the task, consider:**

<b>Option</b>	<b>Description</b>
<b>Companies</b>	Select 2 or more companies that you want to match journal lines across.
<b>Match On Type</b>	Workday populates this field based on the <b>Match On Type</b> selected in the <b>Set Up Journal Line Matching</b> task.

**5. Select the journal lines you want to match from the grid.**

**Note:** When you attempt to match a line that has an intercompany association (or link) with a line that isn't selected, Workday displays a warning message in this format for accounting and operational journals:

SELECTED: [journal number if applicable][source operational transaction if applicable]; LINKED  
BUT NOT SELECTED: [linked journal number if applicable][linked source operational transaction if applicable]

Workday only displays this warning message once per individual run of the task. When updating selections, we recommend that you either:

- Take a record of the items listed in the warning message and update your selections accordingly.
- Take a record of the items in your current grid selection and rerun the task with updated selections. The warning message will display again if applicable.

**6. (Optional) Expand the **Select Intercompany Journal Lines** section to adjust your search criteria.**

Enter new search criteria and select **Get Journal Lines**. Workday retrieves additional journal lines that you can match based on the new criteria.

### **Result**

Workday generates a match ID to record a match and displays journal lines included in a match. You can click on the match ID to view match details. Workday includes the match ID as both a prompt and a field in the **Find Journal Lines** report and you can add these match IDs to your custom journal line reports.

### **Related Information**

### **Steps: Process Automated Transaction Matching on Journal Lines**

#### **Context**

You can create rule sets that process matching rules to automate transaction matching on journal lines, enabling you to reconcile your ledger account ending balances on journal lines. Using the automated matching process, you can then mark offsetting journal lines as matched and focus on journal lines that remain unmatched.

#### **Steps**

**1. Access the **Set Up Journal Line Matching** task.**

Select the **Match on Type** that Workday will use on all matches.

**Note:** Switching the **Match on Type** will deactivate any rule sets using the previous matching type.

Security: *Set Up: Account Certifications* domain in the Financial Accounting functional area.

**2. [Create Rule Sets for Matching Transactions](#) on page 332.**

3. [Schedule Matching Run](#) on page 333.

## Next Steps

Use the **Find Journal Lines** report or create custom reports to gather data on journal lines that remain unmatched and review open transactions that make up the balance.

### Related Information

#### Concepts

[Concept: Close](#) on page 322

#### Tasks

[Steps: Unmatch Journal Lines](#) on page 334

## Create Rule Sets for Matching Transactions

### Prerequisites

- Use the **Set Up Journal Line Matching** task to select a matching type.
- Security: These domains in the Financial Accounting functional area:
  - *Set Up: Matching Rule Set*
  - *Access: Matching Rule Set (Segmented)*

### Context

You can create a rule set consisting of different matching rules to match transactions on journal lines automatically. In addition to a 1-to-1 matching method, matching rules enable you to compare:

- One journal line to many journal lines.
- Many journal lines to 1 journal line.
- Many to many journal lines.

### Steps

1. Access the **Create Matching Rule Set** task.

You can't change the matching type for a rule set once it's created.

2. As you complete the task, consider:

Option	Description
<b>Matching Type</b>	Select <b>Journal Line</b> to match transactions on journal lines.
<b>Order</b>	Enter a number 1 through 50 for the order of the rule. Workday evaluates and processes the rules in the order you specify.  Place the most specific rules before rules that require less precision in the match. That way, when Workday identifies more granular matches first, it removes the matched journal lines from future consideration.
<b>Matching Method</b>	Select a matching method.
<b>Filter Criteria</b>	You can specify filter criteria to reduce the number of transaction lines to match from Source 1 to Source 2.

Option	Description
	<p>When setting up both sets of filter criteria, consider these guidelines:</p> <ul style="list-style-type: none"> <li>• Workday applies the filters as OR conditions when you select the same type of worktag types. Example: When you select 2 cost centers.</li> <li>• Workday applies the filters as AND condition when you select different worktag types. Example: When you select 1 worktag type as cost center and the 2nd as custom worktag.</li> </ul>
<b>Match On</b>	<p>For more precise matching, you can select multiple criteria for each ledger account.</p>
<b>Matching Options</b>	<p>Select <b>Include Blank Values for Line Memo, Worktags, External Reference ID</b>, if you want to include them in the matching criteria.</p> <p><b>Note:</b> Workday automatically excludes the options from the <b>Match On</b> criteria.</p>

## Result

When you run automatic transaction matching, Workday uses the rules in the matching rule set to match transaction lines.

## Next Steps

To view the defined matching rule sets and the number of rules within each set, you can access the **Maintain Matching Rule Sets** task. You can then drill down to view these details for each rule in the set:

- Matching method.
- Rule order.
- Whether the rule is currently active.

## Schedule Matching Run

### Prerequisites

- Create a matching rule set.
- Use the **Set Up Journal Line Matching** task to select a matching type.
- Security: *Process: Account Certification – Create Auto Match* domain in the Financial Accounting functional area.

### Context

You can schedule the matching run to apply the matching rule sets to match transactions.

Workday limits each match to contain a maximum of 99,999 journal lines.

### Steps

1. Access the **Schedule Matching Run** task.
2. Select a **Run Frequency**.
3. For **Matching Run Type**, select **Journal Line**.

4. Enter a **Request Name** to provide more visibility for the matching run.

Workday appends a date and time stamp on each request name when you process the matching run.

5. As you complete the **Run Criteria**, consider:

Option	Description
<b>Company</b>	You can select multiple companies or company hierarchies.
<b>Ledger Account</b>	You can select multiple ledger accounts, ledger account summaries, or alternate accounts.  Alternate ledger account option only displays values for companies with alternate accounts defined.
<b>Include All Open Items</b>	Includes all nonmatched journal lines in the selected <b>Fiscal Year</b> up to the <b>Job Run Date</b> .
<b>Fiscal Year</b>	You can select a maximum of 2 fiscal years.
<b>Fiscal Period</b>	You can select more than 1 fiscal period.  This option isn't available when you select <b>Include All Open Items</b> .
<b>Use Job Run Date for As Of Effective Date</b>  <b>As Of Effective Date</b>	Enter a date as the effective date for the job run.  Workday uses effective date to identify the snapshot of the selected company hierarchy and ledger account summary for the matching run.
<b>Matching Rule Set</b>	Select a matching rule set for which you want to match transactions.  You can only select rule sets using the matching type selected in the <b>Set Up Transaction Matching</b> task.

## Result

Workday uses the matching rules in the selected rule set to match transactions on journal lines.

## Next Steps

(Optional) On the **Match Statistics** grid, click **Matches** to view details of all the matches in the matching run.

### Steps: Unmatch Journal Lines

#### Prerequisites

Match journal line transactions.

#### Context

You can unmatch large volumes of journal lines at a time.

## Steps

- Access the **Find Journal Lines** report to unmatched a single journal line.

For matched journal lines, select **Matched Journal Lines > Unmatch** from the related actions menu of the matched ID.

Security: *Process: Account Certifications - Cancel* domain in the Financial Accounting functional area.

- Access the **Mass Unmatch Journal Lines** task to unmatched journal lines based on multiple criteria.

As you complete the task, consider:

Option	Description
<b>Accounting Date On or After</b>	Workday unmatches journal lines on and after this date.
<b>Accounting Date On or Before</b>	Workday unmatches journal lines on and before this date.

Security: These domains in the Financial Accounting functional area:

- Process: Account Certifications*
- Process: Account Certifications - Cancel All Match*

## Result

Based on the filters you configure Workday unmatches all journal lines and makes them available for matching again.

### Related Information

#### Tasks

[Steps: Process Automated Transaction Matching on Journal Lines](#) on page 331

[Steps: Process Manual Transaction Matching on Journal Lines](#) on page 328

## Unmatch Intercompany Journal Lines

### Prerequisites

Match intercompany journal lines.

Security: These domains in the Financial Accounting functional area:

- Process: Account Certifications - Intercompany Cancel All Match*
- Process: Account Certifications - Intercompany Cancel Match*

### Context

You can unmatched individual or large volumes of intercompany journal lines based on multiple criteria. This doesn't impact transaction matching IDs.

## Steps

- Access the **Find Journal Lines** task to unmatched individual matched journal lines.

For matched intercompany journal lines, select **Matched Journal Lines > Unmatch** from the related actions menu of the intercompany match ID.

- Access the **Mass Unmatch Intercompany Journal Lines** task to unmatched multiple journal lines based on various criteria.

## Result

Based on the filters you configure, Workday unmatches all matched journal lines and makes them available for matching again.

## Steps: Reconcile Cash Operational Transactions to Ledger

### Context

You can reconcile cash operational transactions to your cash ledger accounts.

### Steps

1. [Create Cash to Bank Reconciliation Initial Balances](#) on page 336.

Create initial cash balances as a starting point for your reconciliation.

2. [Change the Status of Ledger Periods](#) on page 299.

Change the status of ledger period to *Closed*. The process creates beginning balances for the next period. Create beginning balances before you run the reconciliation reports. If you don't, the reconciliation reports will display only activity.

**Note:** If you don't change the status of ledger periods, you must access the **Generate Period Beginning Balances for Reconciliation Activities** task to generate beginning balances. You can use this task to create beginning balances only if initial balances exist.

3. Run the Reconciliation Reports.

Access the **Cash to Bank Reconciliation Composite** report to confirm that cash operational transactions reconcile to the ledger account.

**Note:** The **Cash to Bank Reconciliation Composite** report only reconciles cash balances in Ledger currency. If you want to reconcile cash transactions in Bank Account currency, Workday recommends that you use the existing **Cash to Bank Account Balances Reconciliation** report.

Access the **Find Cash to Bank Reconciliation Activities** report to view details of cash operational transactions for a specific period. You can run this report using any selected time period, but it defaults to the current period.

## Related Information

The Next Level: [Automate Your Account Reconciliation Process with Transaction Matching](#)

The Next Level: [Efficiently Certify Your Reconciliation Accounts with Account Reconciliation](#)

## Create Cash to Bank Reconciliation Initial Balances

### Prerequisites

Roll year-end balances forward.

Security: *Process: Cash to Bank Reconciliation Initial Balance* domain in the Financial Accounting functional area.

## Context

You can create initial operational cash balances for the period from which you want to start reconciliation. Example: If you want to start reconciling cash operational transactions from a specific month, select the month and year for the **Period** prompt.

Create initial balances before you can run the reconciliation reports. If you don't, the reconciliation reports won't display any data.

You usually create initial balances once, but can create them again if you want.

**Note:** If you create initial balances again, Workday deletes all previously created beginning operational cash balances. Note that ledger beginning balances you create using the **Roll Forward Year-End Balance** task aren't deleted.

## Steps

1. Access the **Generate Cash to Bank Reconciliation Initial Balances** task.
2. Select a **Run Frequency**.
3. As you complete the task, consider:
 

Option	Description
<b>Company</b>	Select a company or company hierarchy.
<b>Period</b>	Can be open or closed. Workday creates initial operational cash balances for the period you select.
4. Confirm that the process completes.
5. Access the **Cash to Bank Reconciliation Initial Balances Composite** report to confirm and review the initial balances.
6. (Optional)
  - To edit initial balances, access the **Find Cash to Bank Reconciliation Activity Initial Balances** report. From the related actions of the Reconciliation Activity, select **Cash to Bank Reconciliation Initial Balance > Edit**.
  - To delete initial balances, access the **Find Cash to Bank Reconciliation Activity Initial Balances** report. From the related actions of the Reconciliation Activity, select **Cash to Bank Reconciliation Initial Balance > Delete**.

**Note:** Workday only deletes the specific initial balance. To recreate initial balances, you must rerun the **Generate Cash to Bank Reconciliation Initial Balances** task. The task recreates all previously created initial balances and regardless of the period you select, deletes all initial and beginning balances.

## Result

Workday:

- Retrieves all posted journals for cash operational transactions from the inception of your financial activity to create an initial balance.
- Retrieves journals for all cash operational transactions that you post after the date of the initial balance and creates reconciliation activity for them.

## Steps: Process Account Certifications

### Context

You can set up a process to:

- Create account certifications and assign certification roles to specific employees.
- Decertify account certifications that have ledger activities or ledger balance changes.

Workday then routes the certification or decertification to employees with the assignable roles for their review and approval.

If you're using worksheets, you can enter amounts to certify in a workbook and submit the workbook and certification for review and approval.

## Steps

1. (Optional) [Create Account Reconciliation Template Definitions](#) on page 338.

You create a template if you want to use Worksheets to reconcile and certify your account balances.

2. (Optional) Access the **Create Policy Purpose and Procedure** task.

You can create a Policy and Procedure document to identify company policies and procedures for reconciling account balances for period close. You can share these Policy Purpose and Procedure documents across the Certification Sets and Certification Definitions.

If you are already using Account Certification Definitions, you can create and add the Policy Purpose and Procedure document to an existing account certification using the **Edit Account Certification Set** task within the **Maintain Account Certification Sets** task.

For new Account Certification Definitions, you can add the Policy Purpose and Procedure document when you create a new account certification set within the **Maintain Account Certification Sets** task.

Security: *Set Up: Account Certifications* domain in the Financial Accounting functional area.

3. [Create Account Certification Sets](#) on page 339.

4. [Run Account Certification Sets](#) on page 341.

5. (Optional) [Decertify Account Certifications](#) on page 342.

Decertify previously approved certifications with ledger activity or ledger balance changes.

## Next Steps

Use custom reports to report on completed, decertified, and open account certifications.

### Related Information

#### Concepts

[Concept: Close](#) on page 322

## Create Account Reconciliation Template Definitions

### Prerequisites

Security:

- Security: *Set Up Account Reconciliation Template* domain with the security group type of *Unconstrained Groups* in the Financial Accounting functional area.
- Drive in the System functional area.

### Context

You can create account reconciliation template definitions to reuse existing names of workbooks and sheets when you create new reconciliation workbooks.

## Steps

1. Access the **Create Account Reconciliation Template Definition** task.
2. As you complete the task, consider:

Option	Description
<b>Name</b>	The name you enter displays for selection in prompts only when selecting a template. It doesn't display in the final workbook that you generate from the template definition.
<b>Sheet Name</b>	Add a sheet name to your plan template definition. Template definitions must include at least 1 reconciliation entry sheet.

3. Click **OK** and then **Done**.

## Result

You've created a reconciliation template definition that is now available for selection when you create an account certification.

## Next Steps

Use the **Edit Account Reconciliation Template Definition** task to maintain or reuse your reconciliation template definition.

### Related Information

#### Reference

[2020R1 What's New Post: Account Reconciliation Using Worksheets](#)

[The Next Level: Automate Your Account Reconciliation Process with Transaction Matching](#)

## Create Account Certification Sets

### Prerequisites

- Security: *Set Up Account Certifications* domain in the Financial Accounting functional area.
- From the **Maintain Assignable Roles** task, assign each of these roles enabled for Account Certification the same security groups that are assigned on the *Setup: Account Certifications* domain:
  - Approver
  - Preparer
  - Reviewer

See [Set Up Assignable Roles](#).

### Context

You can create account certification sets to:

- Include 1 or more account certifications in the set.
- Assign these roles to your employees for each certification:
  - Approver
  - Preparer
  - Reviewer
- If using Worksheets, associate an Account Reconciliation Template definition to each account certification.

## Steps

1. Access the **Maintain Account Certifications Sets** report.
2. Click **Create**.
3. As you complete the task, consider:

Option	Description
<b>Company/Company Hierarchy</b>	<p>You can select a company or company hierarchy. All companies in the company hierarchy must contain the same ledger currency.</p>
<b>Account Reconciliation Template Definition</b>	<p>Select an Account Reconciliation Template Definition if you're using Worksheets to reconcile and certify balances. You can select the same reconciliation definition for multiple certifications. If you don't select the template definition, Workday won't generate the reconciliation workbook when you create the certification.</p>
<b>Policy Purpose and Procedure</b>	<p>Select or create a policy and procedure document that you want to associate with the account certification.</p>
<b>Ledger Account/Ledger Account Summary</b>	<p>Select the ledger accounts and ledger account summaries that you want to certify for the certification.</p>
<b>Balance or Activity</b>	<p>Select if you want to certify a ledger account balance or ledger account activity. Year to date balance includes beginning balance journals for balance sheet accounts. Ensure that you roll year-end balances forward before you select <b>Balance</b>.</p>
<b>Book</b>	<p>Leave blank to select all books.</p>
<b>Worktags</b>	<p>Select specific worktags to enable reviewers and approvers to drill down and certify individual worktag balances for the ledger account. When you want to specify more than 25 individual worktags, Workday recommends that you use a worktag hierarchy on the Account Certification to improve performance and scalability. Leave blank to select all worktags associated with the ledger account.</p>
<b>Priority</b>	<p>Select how you want to prioritize processing certifications. Example: Select a high priority for certifications that you want to complete early.</p>

4. Click **OK** and then **Done**.
5. For each account certification set, click **View Roles**.
6. To assign roles to each account certification, click **Assign Roles**.
7. Select an effective date and click **OK**.

8. As you complete the **Assign Roles** grid, consider:

Option	Description
<b>Role</b>	Select 1 of the Assignable Roles.
<b>Restricted to Single Assignment</b>	Select if you want to assign the role to a single employee.
<b>Assigned To</b>	You can assign each role to multiple employees.

## Next Steps

To edit a certification set, access the **Maintain Account Certification Sets** report and for the account certification set you want to edit, click **Edit**.

### Run Account Certification Sets

#### Prerequisites

- Create an account certification set and assign account certification roles to employees.
- Trial balance is ready for approval.
- Security: These domains in the Financial Accounting functional area:
  - *Set Up Account Certifications*.
  - *Process: Account Certifications*.
  - These domains in the System functional area:
    - *Drive*
    - *Worksheets*

#### Context

You run the account certification sets to:

- Generate and route account certifications to the assigned employees for their necessary action.
- Generate workbooks (if using Worksheets) with the latest ledger account balances.

**Note:** To avoid duplicate certifications, run an account certification only once for a period. If you need to rerun the account certification, first cancel the existing account certification from the related actions menu of the account certification.

You can configure your account certification process to route certifications to reviewers and approvers, with or without worksheets. You can also set up condition rules to bypass the routing for approval of accounts with no activity.

If using Worksheets, always click **Refresh Grid Data** from the first sheet before submitting to ensure that workbook has consistent data.

**Note:** Click **Save for Later** on your certification before you navigate back to the workbook to refresh the data.

#### Steps

##### 1. [Edit Business Processes](#).

Add steps to the *Account Certification Event* business process to route account certifications to employees assigned to the account certification roles.

(Optional) Configure additional conditional rules for the *Account Certification Event* business process to certify ledger accounts automatically that have no activity for the fiscal period.

##### 2. Access the **Run Account Certification Sets** task.

3. As you complete the task, consider:

Option	Description
<b>Company/Company Hierarchy</b>	<p>You can select multiple companies or company hierarchies.</p> <p>All companies in a company hierarchy must have the same ledger currency.</p>
<b>Account Certification Set</b>	You can select multiple account certifications.
<b>Account Certification for the Selected Set</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <b>All Account Certifications</b> to certify ledger accounts or ledger account summaries for all account certifications.</li> <li>• <b>Select Account Certification</b> to certify or recertify ledger accounts or ledger account summaries for specific account certifications.</li> </ul>

## Result

Workday initiates the *Account Certification Event* business process and for accounts with:

- Activity, routes for approval as configured. If you configured the certification to include worksheets, Workday routes the worksheet and certification.
- No activity (if you've configured the additional conditional rules), Workday automatically certifies the accounts.

## Related Information

### Reference

[2020R1 What's New Post: Automatically Certify Ledger Accounts with Zero Activities](#)

[2020R1 What's New Post: Account Reconciliation Using Worksheets](#)

## Decertify Account Certifications

### Prerequisites

- You've created and approved account certifications.
- Configured the *Account Certification Event* business process to route account certifications to employees assigned to the account certification roles.
- Security: These domains in the Financial Accounting functional area:
  - *Process: Account Certification - Decertify*.
  - *Process: Account Certification - Decertify All*.

### Context

You can decertify previously approved certifications that have ledger activity or ledger balance changes by either:

- Scheduling an automated process to decertify mass account certifications.
- Decertifying a single account certification.

You don't require an open period activity group to run account decertification.

## Steps

- **Option A: Mass Decertify Account Certifications**

- a) Access the **Schedule Automated Decertification** task.

Run the task to identify and decertify previously approved certifications with ledger activity or ledger balance changes.

The Automated Decertification process looks at Account Certifications with a status of *Certified* or *Automatically Certified* for the periods specified in the Schedule Automated Decertification criteria. The process decertifies the Account Certification if journal activity is found for the company and ledger accounts in that Account Certification after its certification date.

- b) Select a **Run Frequency**.

- c) As you complete the **Criteria** tab, consider:

Field	Description
<b>Company/Company Hierarchy</b>	Select a company or company hierarchy.  <b>Note:</b> If you select a company hierarchy, Workday will only decertify account certifications that are assigned at a company hierarchy and will not decertify account certifications for all the companies under that hierarchy.
<b>Current Period</b> <b>Prior Period</b>	Select the fiscal period for which you want to run the schedule. If you want to run the schedule for a time period that spans both periods, select both <b>Current Period</b> and <b>Prior Period</b> . Example: You're running the schedule on June 19, 2020 but want to identify and decertify certifications from May 19, 2020 to June 19, 2020.  Current period and prior period are relative to the current date.  Current period includes the current date when you are running the report.  Prior period is based on the current period found and is the fiscal period prior to the current period.

- d) (Optional) If you select a recurring schedule for **Run Frequency**, consider these guidelines as you complete the **Schedule** tab:

Field	Description
<b>Recurrence Type</b>	Select a recurring schedule for the task.
<b>Catch Up Behavior</b>	Select how many times that you want to run the task after your environment goes offline for maintenance issues.  Example: You schedule a process to run multiple times in a day. When your environment goes offline for maintenance, you can limit the process to run once instead of catching up on all missed runs.

Field	Description
	<p>Select:</p> <ul style="list-style-type: none"> <li>• <b>None:</b> If you don't want to run any occurrences of the missed schedule, but to run it on the current schedule.</li> <li>• <b>Run Once:</b> If you want to run the schedule once, usually the last run before your environment went offline.</li> </ul>

e) Click **OK**.

Workday identifies and decertifies all account certifications with ledger activity or ledger balance changes.

• **Option B: Decertify a Single Account Certification**

- Access the **Find Account Certifications** report.
- From the related actions of the approved certification that you want to decertify, select **Account Certification > Decertify**.
- On the **Confirm Account Decertification** page ensure that the certification has a status of *Certified*.
- Click **Confirm** and then click **OK**.

Workday decertifies the account certification and changes the status of the certification to *Decertified: Recertification in Progress*.

## Result

Workday initiates the *Account Certification Event* business process and sends a My Tasks notification for correction, approval, and recertification as configured. If you configured the certification to include worksheets, Workday routes the worksheet and certification.

## Next Steps

Review details of decertifications, including which person Workday assigns to the next task to complete the recertification:

1. Access the **Find Decertified Certifications** report.

Security: Process: *Account Certifications - Reporting* in the Financial Accounting functional area.

2. Click an account certification to access the **View Account Certification** report.

Security: Process: *Account Certifications - View* in the Financial Accounting functional area.

3. Click **Decertification Details** to access the **Decertification Details Report** report.

Security:

- *Report: Execution* domain in the Tenant Non-Configurable functional area.
- These sub reports in the Financial Accounting functional area:

- **Sub Report - Journal Lines for Account Certification - Journal Activity Post Certification** report secured to the *Reports: Financial Accounting* domain.
- **Sub Report - Account Certification Lines Filter by Certification - Ledger Balance as of Approval Date** report secured to the *Process: Account Certifications - Reporting* domain.
- **Sub Report - Journal Lines Filtered by Status for Account Certification - Ledger Amount** report secured to the *Process: Journals-Reporting* domain.

### Tasks

[Run Account Certification Sets](#) on page 341

[Steps: Configure Business Process Definitions](#)

## Reference

[2020R2 What's New Post: Automated Decertification of Account Certifications](#)

## Certify Account Balances

### Prerequisites

- Define the *Account Certification Event* business process and security policy.
- You've reconciled all accounts you want to certify.
- Trial balance is ready for approval.
- Security: These domains in the Financial Accounting functional area:
  - Process: Account Certifications - View*
  - Process: Account Certifications - Reporting*
  - Process: Account Certifications - Cancel*

### Context

You can create quick, one-off, account certifications that require immediate action without creating certification sets and assigning roles. You can then submit the reconciled account balances for review and approval.

### Steps

- Access the **Create Account Certification** task.
- As you complete the task, consider:

Option	Description
<b>Ledger Account/Summary</b>	Select the ledger accounts and ledger account summaries you want to certify for the certification.
<b>Book</b>	Leave blank to select all books.
<b>Balance or Activity</b>	Select if you want to certify a ledger account balance or ledger account activity.  Year to date balance includes beginning balance journals for balance sheet accounts. Ensure that you roll year-end balances forward before you select <b>Balance</b> .
<b>Worktags</b>	Select specific worktags to enable reviewers and approvers to drill down and certify individual worktag balances for the ledger account.  Leave blank to select all worktags associated with the ledger account.
<b>Priority</b>	Select how you want to prioritize processing certifications. Example: Select a high priority for certifications you want to complete early.

- Click **OK**.

In the **Ledger Accounts to Certify** grid, Workday populates these fields with the balances of the accounts you select in the **Ledger Account/Summary** field:

- Ledger Account Balance**
- Amount to Certify for Account**

4. In the **Amount to Certify for Account** field, enter the amount to certify for each account. Workday calculates and populates the **Variance** field with the difference between the amounts you enter in the **Amount to Certify for Account** field and the **Ledger Account Balance**.
5. (Optional) Attach supporting documents.
6. (Optional) Click **Save for Later** to save the certification in a *Draft* status.  
You can still edit and cancel an account certification from the related actions menu of the account certification in a *Draft* status on the **Find Account Certification** report.

## Result

Workday initiates the *Account Certification Event* business process and sends **My Tasks** notifications to reviewers and approvers for necessary action at their end.

## Next Steps

(Optional) To cancel an approved account certification, navigate to **Find Account Certifications** report and from the related actions menu of the approved certification, select **Cancel**.

#### Concepts

[Concept: Close](#) on page 322

## Configure Account Certification Dashboard

### Prerequisites

- Create a Ledger Account summary of all balance sheet accounts.
- Map the standard alias `_BS_Balance_Sheet_Accounts` to the Ledger Account Summary.
- Security: *Process: Account Certifications - Reporting* domain in the Financial Accounting functional area.

### Context

You can configure the Account Certification Dashboard to display these reports on the dashboard:

- Account Certification Definitions for Balance Sheet Accounts.
- Balance Sheet Certification Progress.
- Number of Account Certifications by Status.

### Steps

1. (Optional) Verify that for the **Balance Sheet Certification Progress** report, the **Ledger** prompt field has a value of **Actuals Ledger Type (Derived)**.
  - a) Access and run the **Balance Sheet Certification Progress** for the company and fiscal period for which you want to configure the Account Certification Dashboard.
  - b) From the related actions menu of the report, select **Standard Report > Edit**.
  - c) From available actions menu of column **C3**, select **Edit**.
  - d) Under the **Map Sub Report Prompts** section, confirm these values:
    - **Prompt Field: Ledger**.
    - **Value Type: Use Value From Prompt Set**.
    - **Value: Actuals Ledger Type (Derived)**.
  - e) Click **OK** and then exit.
2. Access the **Maintain Dashboards** report.
3. Locate the *Account Certification Dashboard*, and click **Edit**.
4. On the **Content** tab, click **Add**.

5. In the **Tab Name** field, enter a name for the dashboard. Example: Account Certification Statistics.
6. Clear the **Configurable By User** option.
7. In the **Prompt Set** field, select **Account Certification Prompt Set**.
8. Expand **Worklets**, and add these 3 Account Certifications reports as worklets to the grid:

Option	Description
<b>Worklet</b>	<ul style="list-style-type: none"> <li>Balance Sheet Certification Progress.</li> <li>Account Certification Definitions for Balance Sheet Accounts.</li> <li>Number of Account Certifications by Status.</li> </ul> <p><b>Note:</b> If required, you also add custom reports as Worklets.</p>
<b>Worklet Size</b>	<p>1x or 2x</p> <p>You also select a combination of 1X and 2X to configure the report layout to meet your needs.</p>

9. Click **Done**.
10. From your Home page, click **Menu** to display your installed **Apps**.
11. If you don't see the Account Certification App installed, click **Add Apps**.
12. In the **Find Apps** field, enter **Account Certification**, and click the + sign to add the **Account Certification** App to your menu.
13. Click **Back to Menu**.

Workday displays the Account Certification dashboard.

## Next Steps

1. Click to open the dashboard.
2. Enter the dashboard prompts and click **OK** to view the reports.

**Note:** The value you enter on these prompts will apply to all the reports displayed on the dashboard.

## Related Information

### Concepts

[Concept: Account Certification Dashboard](#) on page 347

### Examples

[Example: Map Aliases to Ledger Account Summaries](#) on page 403

### Concept: Account Certification Dashboard

The Account Certification dashboard is a configurable workspace, enabling you to monitor progress of your account certifications in a single place. You can select the account certification reports and custom reports you want to display on the dashboard using the **Maintain Dashboards** report. To add links to account certification reports, custom reports and external links, click **Edit**.

Workday provides these reports as worklets that you can add to your Account Certification dashboard:

- **Account Certification Definitions for Balance Sheet Accounts** - Identifies account certification definitions for each balance sheet account. It also indicates if there are no account certifications for specific balance sheet accounts.
- **Balance Sheet Certification Progress Report** - Tracks the certification progress for balance sheet ledger accounts.
- **Number of Account Certifications by Status** - Tracks account certifications by their statuses.

The value you enter on the Dashboard prompts will apply to all reports displayed on the dashboard. Example: When you enter Company A for the *Company/Company Hierarchy* prompt and *Feb-2020* for the Fiscal Period prompt, Workday displays all certification status reports on the dashboard for the selected prompts.

Once you configure the dashboard, you can add it as a worklet to your Home page.

### Tasks

[Steps: Process Account Certifications](#) on page 337

[Configure Account Certification Dashboard](#) on page 346

## Process: Order to Cash Period Close

### Prerequisites

Review the [Period Close Product Flow](#) to familiarize yourself with the period close process.

### Context

This topic provides guidelines you can consider to facilitate your period end close process and how you would like to handle open documents related to receiving payments, complete invoicing, and accounting for goods and services.

Your order to cash process checklist might consist of different tasks. Consider these guidelines as an example for your period close activities. For a use case related to this topic, see [../../../../use-case-library/order-to-cash-period-close-process.dita](#) in the Use Case Library.

### Steps

#### 1. Enter payments.

Ensure you've entered and approved all payments received from customers.

See:

- [Record Customer Payments](#) on page 828.
- [Concept: Customer Payments](#) on page 837.

#### 2. Create deposits for any undeposited payments.

To find undeposited customer payments:

##### a) Access the **Find Customer Payments** report.

Security: *Process: Customer Invoice Payment* in the Customer Accounts functional area.

b) For **Payment Date On or Before**, select the period end date of the period you're closing.

c) Uncheck **Include Deposited Payments** to only display payments that you have not yet deposited.

d) To create a deposit for each undeposited payment, from the related actions of each payment, select **Customer Payment > Create Deposit**.

**Note:** You can also use the related actions of the payment to apply payments to unapplied payments by selecting **Customer Payment > Apply**.

e) Select the payment for which you want to create the deposit or apply the payment and select **Submit** to initiate the approval process.

**3.** Apply any unapplied payments.

To find unapplied payments that have been deposited:

- Access the **Find Customer Payments** report.

Security: *Process: Customer Invoice Payment* in the Customer Accounts functional area.

- For **Payment Date On or Before**, select the period end date of the period you're closing.

- For **Application Status**, select **Unapplied**.

- Check **Include Deposited Payments** to display payments that you have deposited.

- To apply the unapplied payment, from the related actions of each payment, select **Customer Payment > Apply**.

- Select the invoice for which you want to apply the payment and select **Submit** to initiate the approval process.

**4.** Complete invoicing for the period.

- Access the **Find Customer Invoices for Company** report.

Security: *Reports: Customer Accounts* in the Customer Accounts functional area.

- For **Invoice Status**, select:

1. Draft

2. Incomplete

3. In Progress

- For **Invoice Date or Before**, select the period end date of the period you're closing.

5. Click **OK**.

Workday displays all invoices that are available to complete.

- From the related actions of each invoice that you want to complete, select **Customer Invoice > Submit** to initiate the approval process for these invoices:

- Draft

- Incomplete

**5.** (Optional) Create customer invoices for billable transactions. If your company is using project billing and usage-based transactions, access the **Create Customer Invoice for Billable Transactions** task to create invoices for period end.

Security:

- Process: Project Billing - Invoicing* in the Project Billing functional area.

- Process: Billing Invoice* in the Customer Contracts and Project Billing functional areas.

- For **Transaction Date On or Before**, select the period end date of the period you're closing.

- Click **OK**.

- Review the transactions in the **Invoices to be Created** grid and select the specific transactions for which you want to create invoices.

- Click **OK** to initiate the approval process.

6. (Optional) Create customer invoices for billing installments. If your company is using a customer contract and billing schedule, access the **Create Customer Invoice for Billing Installments** for creating invoices for period end.

Security:

- *Process: Project Billing - Invoicing* in the Project Billing functional area.
- *Process: Billing Invoice* in the Customer Contracts and Project Billing functional areas.

- a) For **Company**, enter your company.
- b) For **Invoice Date or Before**, select the period end date of the period you're closing.
- c) Click **OK**.
- d) In the **Billing Installments** grid, select the billing installment that you want to invoice.
- e) Click **OK** to initiate the approval process.

See [Steps: Set Up Project Billing](#) on page 1399.

7. (Optional) Create revenue installments for billable transactions.

If your company is using customer contracts and wants to recognize revenue, access the **Create Revenue Installments for Billable** task.

Security: *Process: Revenue Schedule - Core domain* in the Customer Contracts and Project Billing functional areas.

- a) For **Company**, select the name of your company.
- b) For **Transaction Type**, select 1 of these transaction types:
  - Project Time and Expenses
  - Fixed Fee Project
  - Order Fulfillment
  - Usage-Based
- c) For **Transaction Date no later than**, select the period end date of the period you're closing.
- d) Click **OK**.
- e) Review and select the lines for which you want to create installments.
- f) Click **Create or Update Revenue Installments** to create installments for billable transactions.

See

- [Create Revenue Installments for Billable Transactions](#) on page 1116.
- [Concept: Revenue Recognition](#) on page 1118.
- [Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110.

8. (Optional) Create revenue installments for percent complete based schedules.

If your company is using Percent Complete Revenue Schedules and wants to recognize revenue on a project as it progresses, access the **Review Percent Complete for Revenue** task.

- a) For **Company or Project/Project Hierarchy** select your criteria.
- b) For **Transaction End Date**, select the end date of the period you're closing.
- c) For **Percent Complete Status**, select **Approved**.
- d) For **Percent Complete Method**, select **Hours or Cost**.
- e) Click **OK**.
- f) Review and select the lines for which you want to create installments.
- g) Click **Create Revenue Installments for Billable Transactions** to create installments for Transaction Type of **Fixed Fee Project**.

See [Review Percent Complete Calculations for Revenue Recognition](#) on page 1448.

**9.** Create accounting to recognize revenue.

After creating installments, recognize revenue by generating accounting.

a) Access the **Create Revenue Recognition Accounting** task.

Security: *Revenue Recognition Installment Event* in the Customer Contracts and Project Billing functional areas.

b) For **Company**, select the name of your company.

c) For **Accounting Date On or Before**, select the period end date of the period you're closing.

d) Click **OK**.

e) Select the installments for which you want to generate revenue recognition accounting and click **OK**.

f) Click **OK** to start the process.

g) Click **Refresh** to complete the process.

h) View the accounting generated by the process by selecting **Revenue Recognition Installment > View Accounting** from the related actions menu of the installment.

**10.** [Steps: Reclassify Customer Contract Assets and Liabilities](#) on page 1141

Configure Workday to manage your period end accounting by debiting or crediting your *Deferred Revenue* and *Unbilled Receivables* ledger accounts.

**11.** Create Carve In and Carve Out Adjustment Journals.

Configure Workday to manage your period end accounting for Multiple Element Arrangements. You can create carve in/carve out adjustment journals to reclassify deferred and accrued revenue balances.

a) Access the **Create Carve In/Carve Out Adjustment Journal** task.

Security: Configure the *Carve In Carve Out Journal Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

b) For **Company**, select the contract Header company.

c) For **Year**, select the posting year for the contract-to date amounts and operational journals.

d) For **Period**, select the posting period for the contract-to date amounts and operational journals.

e) Click **OK**.

f) Review the journal lines and click **OK** to create Carve In/Carve Out adjustment journals.

Workday will automatically calculate and post the necessary journal entries to reclassify deferred revenue among the contract lines.

See [Carve-In and Carve-Out and Foreign Currency Adjustments](#).

**12.** Create Foreign Currency Adjustment Journals.

When there are billing and revenue recognition discrepancies due to timing and conversion rates, you can create foreign currency adjustment journals to calculate the difference. Workday will automatically calculate and post the necessary journal entries to account for exchange gain/loss.

a) Access the **Create Customer Contract Foreign Currency Adjustment Journal** task.

Security: Configure the *Carve In Carve Out Journal Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

b) For **Company**, select the contract Header company.

c) For **Year**, select the posting year for the contract-to date amounts and operational journals.

d) For **Period**, select the posting period for the contract-to date amounts and operational journals.

e) For **Foreign Currency Adjustment Rule**, select a currency adjustment rule to specify worktags and ledger accounts to credit or debit for the realized currency gain or loss.

f) Click **OK**.

g) Review the contract lines and click **OK** to create a Customer Contract Foreign Currency Adjustment Journal for the contract lines.

Workday will automatically calculate and post the necessary journal entries to account for exchange gain or loss .

See [Carve-In and Carve-Out and Foreign Currency Adjustments](#).

**13. Change the Status of Ledger Periods** on page 299.

Close activity groups for customer accounts.

For more information, see [Concept: Ledger Close Activity Groups](#) on page 321.

**14. Reconcile receivables to the ledger.**

Use 1 or all of these Workday - delivered reports or custom reports that you've created to reconcile your receivables to the ledger balance:

- **Receivables to Customer Balances Reconciliation .**

Use this report to view differences between receivable ledger accounts and operational balances for customer accounts.

Security: *Reports: Financial Accounting* in the Financial Accounting functional area.

- **Receivables to Customer Balances Reconciliation Exception Summary**

Use this report to view summarized receivable exceptions that result from open items, timing differences, and accounting journals posted to control accounts.

Security: *Reports: Financial Accounting* in the Financial Accounting functional area.

## Close and Consolidation Hub

---

### Steps: Set Up Close and Consolidation Hub

#### Prerequisites

Configure access to roles for the relevant company or company hierarchy.

#### Context

The **Close and Consolidation** hub enables you to complete and view close and consolidation tasks and reports from a central location. With the relevant close and consolidation data and security permissions, accountants can use the hub to view and maintain their close and consolidation processes. The hub includes these sections:

- Overview
- Data
- Close Tasks
- Period Close
- Financial Reports
- Balancing Reports
- Dashboards
- Rules and Configuration
- Suggested Links

## Steps

### 1. Set Up Hubs.

On the **Close and Consolidation Hub** row, you can customize these content types for the hub:

- Announcement headers.
- Suggested links.
- Text on cards.

You can customize hub navigation to prevent specific sections from displaying in the hub, even when users have the relevant data and security permissions. Example: Your company doesn't use the revaluation task, so you hide the task from view.

**Note:** You can't customize the hub for individual users. Any changes you make to the hub affect all users.

### 2. (Optional) Replace the default data visualization cards on the **Overview** page of the hub with insights from your own custom reports.

See [Steps: Replace Default Overview Cards on the Close and Consolidation Hub with Custom Reports](#) on page 353.

### 3. Edit Domain Security Policies.

- a. Configure the *Manage: Close and Consolidation Hub* domain in the Advanced Close and Consolidation functional area to secure access to the **Close and Consolidation** hub.
- b. Configure domain security policies for the *Consolidation Data* report data source on the *Process: Consolidation Data Capture* domain in the Advanced Close and Consolidation functional area to secure access to the hub cards.

### 4. Activate Pending Security Policy Changes.

#### Related Information

##### Concepts

[2024R2 Release Note: Close and Consolidation Hub](#)

## Steps: Replace Default Overview Cards on the Close and Consolidation Hub with Custom Reports

### Prerequisites

#### Context

You can customize the cards on the **Overview** page of the **Close and Consolidation** hub to replace the default data visualization cards with insights from your own custom reports.

You can also:

- Customize the title and subtitle on the cards.
- Set up overflow menus that displays links to other tasks, reports, dashboards, or external resources.

To enable Workday to display a custom report on a card, the report must use the:

- *Matrix* report type.
- *Chart* output type.
- **Share with all authorized users** sharing option.

## Steps

### 1. Access the **Create Custom Report** task.

Set up your custom report so that Workday can display it on a card.

- Select the **Matrix** report type.
- Select a report data source or data source filter that has report fields as required or optional prompts that you can map to the **Consolidation Grouping** and **Close Period** filter prompts on the hub.
- On the **Prompts** tab, add a row to the **Prompt Defaults** grid to map a report prompt to the **Consolidation Grouping** filter prompt on the hub:

Field	Default Type	Default Value	Required	Do Not Prompt at Runtime
Select Company or Company/ Hierarchy	Determine default value at runtime	Consolidation Group	Select.	Select.

- When the report data source or data source filter has start and end date prompts, add 2 rows to the **Prompt Defaults** grid to map those prompts to the **Close Period** filter prompt on the hub:

Field	Default Type	Default Value	Required	Do Not Prompt at Runtime
Select the start date report field.	Determine default value at runtime	Fiscal Period Start Date	Select.	Select.
Select the end date report field	Determine default value at runtime	Fiscal Period End Date	Select.	Select.

- When the report data source or data source filter has an accounting period prompt, add a row to the **Prompt Defaults** grid to map that prompt to the **Close Period** filter prompt on the hub:

Field	Default Type	Default Value	Required	Do Not Prompt at Runtime
Select the accounting period report field.	Determine default value at runtime	Close Period	Select.	Select.

- Add rows for all other prompts on the report data source or data source filter, and select the **Do Not Prompt at Runtime** check box for each row.
- On the **Output** tab, select the output type *Chart*.
- On the **Share** tab, select **Share with all authorized users**.
- Complete your report configuration to display the data you want to show on the hub.
- Click **OK**.

Security: *Custom Report Creation* domain in the System functional area.

### 2. Access the **Maintain Hubs** task.

- For the **Close and Consolidation** hub, select **Action > Configure Overview**.
- On the **Configure Hub by Admin** task, click **Edit** for the card you want to replace with your custom report.

Security: *Set Up: Tenant Setup - General* and *Set Up: Tenant Setup - Hub* domains in the System functional area.

3. Complete the **Edit Card by Admin** task to replace the default card.
  - a) On the **Informational Text** tab, select **Customize Title** and enter a new title for the card.
  - b) Select **Customize Subtitle** and enter a new subtitle for the card.  
When you don't enter a new subtitle, Workday displays the subtitle from the default card.
  - c) On the **Overflow Menu** tab, add rows to the grid to set up an overflow menu for the card.  
Select security groups or condition rules to control which users can see the overflow menu items.  
Add subrows to the **Links** and select items to display in the overflow menu.
  - d) On the **Custom Report** tab, select the custom report you want to display on the card.
  - e) Click **OK**.

Security: *Set Up: Tenant Setup - General* and *Set Up: Tenant Setup - Cards* domains in the System functional area.

## Result

The **Close and Consolidation** hub displays your custom reports on the cards on the **Overview** page. You can use the filter prompts on the hub to change the filter criteria for the reports displayed on the cards.

## Example

**Related Information****Concepts**

[2024R2 Release Note: Close and Consolidation Hub](#)

**Reference: Close and Consolidation Hub Cards**

Workday displays cards on the **Overview** page of the **Close and Consolidation** hub to centralize insights and prioritize relevant tasks. To view these cards, you must have access to the *Manage: Close and Consolidation Hub* domain in the Advanced Close and Consolidation functional area. You can replace the default data visualization cards to display insights from your own custom reports.

This topic outlines the filter options that you can use to view close and consolidation data on the cards, and the purpose of each default card.

You can click **Filter** on the **Overview** page to change the criteria for data displayed on the cards.

Filter Prompt	Description
<b>Consolidation Group</b>	The company or company hierarchy for which you want to view close and consolidation data.
<b>Close Period</b>	The fiscal period for which you want to view close and consolidation data.

Workday displays these cards by default on the **Overview** page:

Card	Description	Data Source and Security
<b>Consolidation Data</b>	<p>Displays the status of summarized trial balance data loaded through the <b>Consolidation Data Capture</b> feature.</p> <p>These are the possible statuses for trial balance files:</p> <ul style="list-style-type: none"> <li>• <i>Approved</i></li> <li>• <i>Cancelled</i></li> <li>• <i>Draft</i></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Consolidation Data</b> report data source on the <i>Process: Consolidation Data Capture</i> domain.</li> <li>• <i>Process: Consolidation Data Capture</i> domain in the Advanced Close and Consolidation functional area.</li> </ul>

Card	Description	Data Source and Security
	<ul style="list-style-type: none"> <li>• <i>Error</i></li> <li>• <i>Submitted</i></li> </ul> <p><b>Note:</b> Workday excludes trial balance files with <i>Replaced</i> status.</p> <p>You can use the <b>Trial Balance</b> link to navigate to the <b>Consolidation Data Hub</b>. This link only displays if you have access to the <i>Process: Consolidation Data Capture</i> domain.</p>	
<b>Ledger Period Status</b>	<p>Displays a count by ledger period status. When a ledger period has a status of <i>Close in Progress</i>, the <b>Close in Progress</b> count is equal to the number of closed period close activity groups.</p> <p><b>Note:</b> Workday excludes ledger periods with these statuses:</p> <ul style="list-style-type: none"> <li>• <i>Created</i></li> <li>• <i>Open for Journal Activity</i></li> <li>• <i>Open for Journal and Payroll Activity</i></li> </ul> <p>You can use the <b>View More</b> link to access the <b>Mass Update Ledger Period Status</b> task. This link only displays when you have access to the <i>Process: Period End</i> domain.</p>	<ul style="list-style-type: none"> <li>• <b>Ledger Period Status Activity for Financial Reporting</b> report data source on the <i>Set Up: Ledger and Book</i> domain.</li> <li>• <i>Process: Period End</i> domain in the Common Financial Management functional area.</li> </ul>
<b>Close in Progress - Activity Group Status</b>	<p>Displays the status of each period close activity group for a ledger period with a <i>Close in Progress</i> status. When the ledger period doesn't have a <i>Close in Progress</i> status, the card doesn't display any results.</p> <p>You can use the <b>View More</b> link to access the <b>Mass Update Ledger Period Status</b> task. This link only displays when you have access to the <i>Process: Period End</i> domain.</p>	<p>These domains in the Common Financial Management functional area:</p> <ul style="list-style-type: none"> <li>• <i>Process: Period End</i></li> <li>• <i>Set Up: Ledger and Book</i></li> </ul>

[2024R2 Release Note: Close and Consolidation Hub](#)

## Journal Balancing by Worktag

---

### Steps: Configure Worktag Balancing for Journals

#### Prerequisites

- Security: *Set Up: Worktag Balancing* domain in the Common Financial Management functional area.
- Review setup considerations on worktag balancing for payroll.

#### Context

You can set up the required balancing worktag type you want to use in addition to company for balancing journals, for all companies in your tenant. You can enable worktag balancing for:

- New implementation.
- Workday Expenses.
- Workday Payroll.
- Workday Student.

**Note:** Carefully plan the business dimension that you want to use as your required balancing worktag. Once you enable worktag balancing, you can't disable it or change the balancing worktag type.

Set up the optional balancing worktag types you want to use in addition to company for balancing journals, for all companies in your tenant. You can enable worktag balancing for new implementation and existing implementation.

Optional balancing worktags aren't mandatory on a transaction. You can add or remove optional balancing worktags. Create reclassifying journal entries when transactions that are in process no longer balance after you update the optional balancing worktag configuration.

#### Steps

1. If already using Workday Expenses or Payroll, ensure the control ledger account balance nets to zero before you load beginning balance journals.
  - a) Before enabling worktag balancing, complete all in-process transactions and settle payments in your tenant.
    - Fringe benefit (fringe benefit, commitments, obligations, facilities, and administration expense).
    - Expenses (expense report, expense report payment, and expense credit card payment).
    - Payroll (payroll accrual, forward accrual, payment, commitments, and obligations).
    - Settlement (prenote payment, payment return, ad hoc payment, ad hoc bank transaction, bank transfer, and intercompany payment / receipt).
  - b) Create a manual journal to reverse account balances and close all prior periods.

Closing all periods restricts modifications to historic transactions after enabling worktag balancing. If you later reopen a period for adjustment, add new transactions as opposed to changing historic details.

2. Set up worktag balancing rules for required balancing worktags.
  - a) If using required worktag balancing for financial transactions, define financial balancing rules.  
Set up how you want Workday to assign a required balancing worktag to the offset side of journals that use balancing rules.  
See [Define Worktag Balancing Rules for Financial Transactions](#) on page 361.
  - b) If using required worktag balancing with Workday Payroll, define payroll balancing rules.  
Set up how you want Workday to assign a balancing worktag to:
    - The deductions portion and net accumulation of gross-to-net payroll (including forward accruals).
    - Fringe benefit charges.If you change historic payroll transactions after you enable worktag balancing, the transactions have an error status because they don't have a balancing worktag. The **Fix Operational Journals With Errors** task tags the payroll accounting entries with the default worktag from the **Worktag Balancing Transaction Rule Set** that you entered on the company accounting details. Use the **Fix Operational Journals With Errors** task to resolve issues.  
See:  
[Define Worktag Balancing Rules for Payroll Accrual](#) on page 363.  
[Define Worktag Balancing Rules for Fringe Benefit Actuals Transactions](#) on page 364.
- c) If using worktag balancing for cash transactions, define a cash balancing rule to associate primary balancing worktags to bank accounts.  
Workday generates worktag balancing entries at the time of settlement to reflect accurate balances for cash balance checks or financial reports.  
See [Define Cash Balancing Rules for Cash Transactions](#) on page 365.
- d) Define worktag balancing transaction rule sets to associate balancing rules for required balancing worktags with applicable transactions.  
See [Configure Worktag Balancing Rule Sets for Transaction Journals](#) on page 370.
- e) Configure a balancing worktag for the tenant.  
Use the **Maintain Worktag Balancing Configuration** task to configure the balancing worktag Workday uses to balance journals in addition to company.  
See [Configure Worktag Balancing for the Tenant](#) on page 373.
- f) (Optional) Configure optional balancing worktags for the tenant.  
You can balance operational transactions and accounting journals by optional balancing worktags without setting up required balancing worktags. Use the **Optional Balancing Worktag** section on

the **Maintain Worktag Balancing Configuration** task to select up to 5 of these worktag types for use when balancing company books:

- Business Unit
- Cost Center
- Custom Organizations
- Custom worktags
- Fund
- Gift
- Grant
- Location
- Program
- Project
- Region

When transactions that are in progress no longer balance after you update the optional balancing worktag configuration, create adjusting journal entries.

See [Configure Optional Worktag Balancing for the Tenant](#) on page 374.

g) Update account posting rules for *InterWorktag Payables* and *InterWorktag Receivables*.

Account posting rules define where to post due to and due from journal lines for transactions between worktags.

See [Set Up Account Posting Rules](#) on page 84.

3. Configure the balancing worktag as required for all worktag objects on the **Maintain Worktag Usage** task.

See [Configure Worktags for Transactions](#).

4. Load beginning balance journals from your external ledger into Workday.

## Result

For required balancing worktags, Workday:

- Balances journals by company.
- Uses the balancing worktag you configured to balance all journals.

## Define Worktag Balancing Rules for Financial Transactions

### Prerequisites

Set up any custom worktags that you want to use in your balancing rule.

### Context

Define rules that instruct Workday on how to assign a balancing worktag to the offset side of an operational transaction journal. You need a rule for applicable transactions for which you want to specify the balancing worktag.

Example: If you balance by fund, the rule enables you to settle and receive payments for a group of funds using a single, specified fund. You don't need a rule if you want the offset journal line to always inherit the balancing worktag from the operational transaction side.

Changes to balancing rules affect new transactions only.

## Steps

1. Access the **Create/Edit Financial Balancing Rule** task.
2. As you complete the task, consider:

Option	Description
<b>Worktag Type</b>	<p>Worktag types are groupings of worktags by a business dimension: Cost center, business unit, region, fund, and custom organization. Select the type to use to balance journals for transactions subject to this rule.</p> <p>Your choice determines the worktags available for selection within this balancing rule.</p> <p>Your tenant can use only 1 balancing worktag type for all companies.</p>
<b>Default Option</b>	<p>The <b>Default Option</b> applies to all worktag values except worktags listed in the <b>Balancing Worktag Offset</b> grid. Select whether you want the offset transaction journal (liability or receivables) to:</p> <ul style="list-style-type: none"> <li>• <i>Inherit</i> the same balancing worktag as the operational transaction side (spend or revenue). The journal lines automatically balance by the balancing worktag value of the transaction.</li> <li>• <i>Specify</i> a different balancing worktag than the operational transaction side.</li> </ul> <p>Example: You can settle and receive payments for a group of funds using a single fund. To balance the journal, generate due to and due from journal lines.</p>
<b>Default Value</b>	<p>Select <i>Specify</i> to apply the balancing worktag offset to a transaction journal when there's no matching balancing worktag on the operational transaction.</p>

3. Use the **Balancing Worktag Offset** grid to list exceptions to the default setting of the rule.

Workday compares the balancing worktag on the operational transaction to the worktags specified in the grid. On first match, Workday uses the balancing **Option** for that row. If there's no match, Workday applies the **Default Option** for the rule.

Option	Description
<b>Worktags</b>	<p>Select one or more worktags or worktag hierarchies that:</p> <ul style="list-style-type: none"> <li>• Are exceptions to the default of the rule.</li> <li>• Share the same balancing option and offset balancing worktag.</li> </ul>
<b>Option</b>	<p>Select whether you want the offset transaction journal to:</p>

Option	Description
	<ul style="list-style-type: none"> <li>• <i>Inherit</i> the worktag from the operational transaction side.</li> <li>• <i>Specify</i> a different worktag value.</li> </ul> <p>Example: <i>Specify</i> enables you to settle and receive payments for a group of funds using a single fund.</p>
<b>Offset Balancing Worktag</b>	If you selected <i>Specify</i> , select the worktag that you want to apply to the offset side.

## Result

You can use the rules for a given worktag type to build rules sets. These rule sets define which rule to use for each of the various types of transactions subject to worktag balancing.

Review the **View Financial Balancing Rule** report to confirm the rules that you have set up to balance financial transactions by worktag in addition to company.

## Example

Set up a rule for supplier invoices where all cost centers use the *Inherit* option except *Cost Center A* and *Cost Center B*. Use the *Specify* option for *Cost Center A* and *Cost Center B*. Also, indicate that *Cost Center Z* is the worktag balancing offset. In this case, *Cost Center Z* settles payment for the other 2 cost centers provided that you associate the rule to supplier invoices in the worktag balancing transaction rule set.

## Next Steps

- (*Payroll implementations*) Create a payroll balancing rule to associate a balancing worktag with the deductions and net accumulation portions of gross-to-net payroll.
- Define a worktag balancing transaction rule set.

## Related Information

### Concepts

[Concept: How Transactions Get Balancing Worktags](#) on page 376

## Define Worktag Balancing Rules for Payroll Accrual

### Prerequisites

Set up any necessary custom worktags.

If using Workday Financials, define a financial balancing rule.

### Context

Create a payroll balancing rule to associate a balancing worktag with the deductions portion and net accumulation of gross-to-net payroll. You can use the payroll balancing rule for forward accruals.

You can override defaults of the balancing rule and specify at the paygroup level how you want transactions to carry worktag information.

**Note:** Changes to balancing rules affect new transactions only, not previously completed ones.

### Steps

1. Access the **Create Payroll Balancing Rule** or **Edit Payroll Balancing Rule** task.

2. When using the **Create Payroll Balancing Rule** task, select *Payroll Accrual* for your **Transaction**. *Specify* is automatically selected as the **Default Option**.
3. When using the **Edit Payroll Balancing Rule** task, select a **Payroll Balancing Rule to Edit** from **Payroll Accrual Rules**. The **Transaction** name defaults in.
4. Select a **Worktag Type** to balance journals for your worktag balancing transaction rule for payroll.
5. Specify a **Default Value** for payroll accrual transactions using this balancing rule. The **Default Value** must be the same type as the **Worktag Type**.
6. Identify a **Payroll Balancing Source** for the worktag balancing rule.
  - Select *Assign by Pay Group* to create a worktag balancing rule based on a pay group.
  - Select *Default by Organization* to create a worktag balancing rule based on an employee organization assignment.
7. (Optional) If you use the **Edit Payroll Balancing Rule** task for payroll accruals, note any worktag balancing rule sets that use the rule.
8. (Optional) Once you've established a balancing rule for *Payroll Accrual*, you can create a **Balancing Worktag Offset** to exclude specific pay groups from the rule.

To create a **Balancing Worktag Offset**, select *Assign by Pay Group* as the **Payroll Balancing Source**.

You can't specify rules by **Pay Group** if you set *Default by Organization* as the **Payroll Balancing Source**.

If you later change the rule, you can't make retroactive transactions for a previously completed payroll. Don't change a rule if a payroll is calculated but not settled. Settle all payrolls before making any change to the rule.

To limit the application of the balancing rule:

- From the **Pay Group** prompt, select one or more pay groups.
- For selected pay groups, select an **Offset Balancing Worktag**, which must be the same type as the **Worktag Type**.

## Result

Review the **View Payroll Balancing Rule** report to confirm its details.

## Next Steps

To associate a balancing worktag with actual fringe benefit charges, create a payroll balancing rule.

## Define Worktag Balancing Rules for Fringe Benefit Actuals Transactions

### Prerequisites

Set up any necessary custom worktags.

If using Workday Financials, define a financial balancing rule.

### Context

Create a payroll balancing rule to associate a balancing worktag with actual fringe benefit charges.

**Note:** Changes to balancing rules affect new transactions only, not previously completed ones.

## Steps

1. Access the **Create Payroll Balancing Rule** or **Edit Payroll Balancing Rule** task.
2. When using the **Create Payroll Balancing Rule** task, select *Fringe Benefit Actuals* for your **Transaction**.
3. When using the **Edit Payroll Balancing Rule** task, select a **Payroll Balancing Rule to Edit** from **Fringe Benefit Actuals Rules**.

The **Transaction** name defaults in.

4. To balance journals for your worktag balancing transaction rule, select a **Worktag Type**.
5. Select *Fringe Benefit Actuals* for your **Transaction**.
6. Select a **Default Option** to indicate whether the worktag balancing value:

- Is *inherited* from the operational side of the transaction.
- Or the value is based on a *specified* balancing worktag rule.

If you select *Inherit*, don't select a **Default Value** or a **Payroll Balancing Source**.

7. (Optional) If you select *Specify* as your **Default Option**, indicate a **Default Value** for fringe benefit actuals transactions using this balancing rule.
8. (Optional) If you select *Specify* as your **Default Option**, identify a **Payroll Balancing Source** for the worktag balancing rule.
  - To create a worktag balancing rule based on a pay group, select *Assign by Pay Group*.
  - To create a worktag balancing rule based on an employee organization assignment, select *Default by Organization*.
9. (Optional) If you use the **Edit Payroll Balancing Rule** task for fringe benefit actuals, note any worktag balancing rule sets that use the rule.
10. (Optional) Once you've established a balancing rule for *Fringe Benefit Actuals*, you can create a **Balancing Worktag Offset** to exclude specific pay groups from the rule.

To create a **Balancing Worktag Offset**, you must select *Specify* as your **Default Option** and select *Pay Group* as your **Payroll Balancing Source**.

You can't create a **Balancing Worktag Offset** if you select *Inherit* as your **Default Option** or select *Default by Organization* as your **Payroll Balancing Source**.

If you later change the rule, you can't make retroactive transactions for a previously completed payroll. Don't change a rule for calculated payroll that you have yet to settle. Settle all payrolls before making any change to the rule.

To limit the application of the balancing rule:

- From the **Pay Group** prompt, select one or more pay groups.
- For one or more of the selected pay groups, select an **Offset Balancing Worktag**, which should be the same type as the **Worktag Type**.

## Result

Review the **View Payroll Balancing Rule** report.

## Next Steps

Create a balancing rule set for your balancing worktag.

## Define Cash Balancing Rules for Cash Transactions

### Prerequisites

- Process all open transactions and payments that generate cash accounting.

- Security: Set Up: Worktag Balancing domain in the Common Financial Management functional area.

## Context

You can create a cash balancing rule to associate a primary balancing worktag to a bank account.

Example: A specific fund or pooled cash funds as a primary balancing worktag. When you add this rule to your worktag balancing transaction rule set, Workday:

- Derives the balancing worktag defined in the rule on cash accounting entries.
- Generates interworktag payable and receivable journal lines to balance at the bank account level.

You can generate interworktag entries at the time of settlement to reflect accurate balances for cash balance checks or financial reports. When you use this rule, you no longer need to create manual journal entries to balance between funds at period close.

## Steps

1. Access the **Create Cash Balancing Rule** task.
2. As you complete the task, consider:

Option	Description
<b>Worktag Type</b>	<p>Worktag types are groupings of worktags by a business dimension: Cost center, business unit, region, fund, and custom organization. Select the type to use to balance journals for transactions subject to this rule.</p> <p>Your choice determines the worktags available for selection within this balancing rule.</p> <p>You can use only 1 balancing worktag type for all companies.</p> <p>Note that when the cash balancing rule is <b>In Use</b> as part of your worktag balancing configuration, you can't change the worktag type.</p>
<b>Default Option</b> <b>Default Value</b>	<p>The <b>Default Option</b> applies to all bank accounts except for accounts specified in the <b>Balancing Worktag Offset</b> grid. Select to either:</p> <ul style="list-style-type: none"> <li>• <i>Inherit</i> the same balancing worktag as the operational transaction side (spend or revenue). The offset journal lines automatically balance by the balancing worktag value of the transaction.</li> <li>• <i>Specify</i> a default balancing worktag value to use.</li> </ul>

3. (Optional) In the **Balancing Worktag Offset** grid, map a specific bank account to a primary balancing worktag. Workday applies the balancing worktag to the cash entries with the matching bank account worktag.

**4. Configure Worktag Balancing Rule Sets for Transaction Journals** on page 370.

To add the cash balancing rule to your worktag balancing transaction rule set, you:

- Edit the worktag balancing transaction rule set.
- Select the **Always Inherit** check box for all worktag balancing transaction types in the **Financial Transaction Types** grid.

The transaction accounting entries will inherit the balancing worktag from the offset lines. This prevents Workday from generating the due to and due from entries at the time of accrual.

- Clear **Always Inherit** in the **Cash Transaction Type** grid.
- Select the cash balancing rule to apply it to all cash entries associated with a bank account.

## Result

Workday uses the primary balancing worktag to create interworktag balancing entries when generating cash accounting or settling cash transactions for each bank account. Any predefined optional balancing worktags also display on the interworktag balancing entries.

Workday overrides any balancing worktags defined in the financial balancing rule with the bank account worktag defaults for:

- Ad hoc bank transactions
- Ad hoc payments
- Miscellaneous payment requests (cash basis accounting)
- Prenote payments

For bank account transfers and transfers for settlement, Workday derives the associated balancing worktag when generating the transactions.

## Example

Your proposed amount of \$100,000 for your project that uses Fund A is approved for budget. You receive a federal grant of \$100,000 for the approved budget in your Treasury Fund. This intermediary fund assigned to the Treasury bank account pays and receives on behalf of other funds. In turn, Fund A has a claim on cash with the Treasury Fund.

When you create the customer invoice for the federal agency, Workday uses the worktag balancing transaction rule to generate accrual accounting entries with the inherited *Fund A* worktag:

Ledger Account	Debit	Credit	Worktag
Accounts Receivable	100K		<i>Fund A</i>
Revenue		100K	<i>Fund A</i>

When you receive the grant, you record the customer payment and apply the payment to the agency invoice. Workday generates the cash entry with the *Treasury Fund* worktag mapped to the Treasury bank account defined in the cash balancing rule. Workday also generates initial claim on cash (interworktag) entries between the *Treasury Fund* and *Fund A* worktags:

Ledger Account	Debit	Credit	Worktag
Cash	100K		<i>Treasury Bank Account</i> <i>Treasury Fund</i>
Accounts Receivable		100K	<i>Fund A</i>
Claim on Cash		100K	<i>Treasury Fund</i>
Claim on Cash	100K		<i>Fund A</i>

You expend the grant funds and record a supplier invoice for Fund A. Workday uses the worktag balancing transaction rule to generate accrual accounting entries with the inherited *Fund A* worktag:

Ledger Account	Debit	Credit	Worktag
Spend	100K		<i>Fund A</i>
Accounts Payable		100K	<i>Fund A</i>

When you settle the supplier invoice, Workday generates the cash entry with the *Treasury Fund* worktag mapped to the Treasury bank account. Workday also generates claim on cash entries to balance between Treasury Fund and Fund A:

Ledger Account	Debit	Credit	Worktag	Interworktag Affiliate
Accounts Payable	100K		<i>Fund A</i>	
Cash		100K	<i>Treasury Bank Account</i> <i>Treasury Fund</i>	
Claim on Cash	100K		<i>Treasury Fund</i>	<i>Fund A</i>
Claim on Cash		100K	<i>Fund A</i>	<i>Treasury Fund</i>

## Next Steps

To help ensure manual cash accounting entries post with the correct balancing worktag, use the **Worktag doesn't match Cash Balancing Rule** report field to create:

- A custom validation to inform you when a manually entered balancing worktag on a cash journal line doesn't match the rule definition.
- A custom report to identify manual cash journal lines with a bank account and balancing worktag that doesn't match the rule definition.

## Related Information

### Concepts

[Concept: How Transactions Get Balancing Worktags](#) on page 376

### Tasks

[Steps: Configure Advanced Cash Balance Checking](#) on page 2123

## Define Intercompany Balancing Rules for Balancing Worktags

### Prerequisites

- Configure cost centers and their restrictions. See [Set Up Nonsupervisory Organizations](#).
- Set up on-behalf intercompany transactions. See [Steps: Set Up On-Behalf Intercompany Transactions](#) on page 35.
- Configure worktag balancing. See [Steps: Configure Worktag Balancing for Journals](#) on page 359.
- Security: The *Set Up: Accounting Rules* domain in the Common Financial Management functional area. See [Steps: Set Up Security Permissions](#).

### Context

You can create an intercompany balancing rule:

- That applies on intercompany operational journals while respecting cost center restrictions.

- For each company that can initiate intercompany transactions.

## Steps

- Access the **Maintain Intercompany Balancing Rule for Balancing Worktag** task.
- As you complete the task, consider:

Option	Description
<b>Intercompany Clearing Worktag</b>	Select 1 balancing worktag to use for all companies in the rule.  You can only select an unrestricted cost center worktag that's available for all companies in the tenant.
<b>Default Balancing Worktag</b>	Workday assigns the default balancing worktag to the journal lines where the balancing worktag violates the cost center restrictions.

## Result

Workday uses your intercompany balancing rule configurations to balance intercompany transactions while respecting your cost center restrictions.

## Example

You select *Cost Center: Intercompany Clearing* as the **Intercompany Clearing Worktag** for these companies:

Company	Default Balancing Worktag
A200.1 Alma Mater University (USA)	A2230 Intercompany Purchases
A200.2 Alma Mater University Federation (USA)	A4210 Administration

You create a supplier invoice when your company, *A200.1 Alma Mater University (USA)*, purchases laptops on behalf of company *A200.2 Alma Mater University Federation (USA)*. The invoice line has a *Cost Center: A2200 Facilities and Administrative Services* worktag for company *A200.2 Alma Mater University Federation (USA)* that's not valid for header company *A200.1 Alma Mater University (USA)*.

Workday generates operational journals using the clearing and default balancing worktag to balance the journal lines.

*A200.1 Alma Mater University (USA)* Operational Journal:

Ledger Account	Debit Amount	Credit Amount	Worktags
1910:Interworktag Receivable	21990.00 USD		Cost Center: A2230 Intercompany Purchases
1900:Intercompany Receivable	21990.00 USD		Cost Center: Intercompany Clearing Intercompany Affiliate A200.2 Alma Mater University Federation (USA)
2910:Interworktag Payable		21990.00 USD	Cost Center: Intercompany Clearing

Ledger Account	Debit Amount	Credit Amount	Worktags
2000:Accounts Payable		21990.00 USD	Cost Center: A2230 Intercompany Purchases Supplier: Dell

A200.2 Alma Mater University Federation (USA) Operational Journal:

Ledger Account	Debit Amount	Credit Amount	Worktags
1910:Interworktag Receivable	21990.00 USD		Cost Center: Intercompany Clearing
15609:IT Support : Computers	21990.00 USD		Cost Center: A2200 Facilities & Administrative Services Supplier: Dell
2910:Interworktag Payable		21990.00 USD	Cost Center: A2200 Facilities & Administrative Services
2900:Intercompany Payable		21990.00 USD	Cost Center: Intercompany Clearing Intercompany Affiliate A200.1 Alma Mater University (USA)

##### Concepts

[2024R2 Feature Release Note: Intercompany Balancing Rule for Balancing Worktag](#)

## Configure Worktag Balancing Rule Sets for Transaction Journals

### Prerequisites

- Define a financial balancing rule for each type of financial transaction subject to the rules.
- Define a payroll balancing rule for each type of payroll transaction subject to the rules.
- Security: Set Up: *Worktag Balancing* domain in the Common Financial Management functional area.

### Context

Create a set of rules for how to balance journals by worktag for operational transaction that use balancing rules. Each transaction type can use a different balancing rule.

### Steps

- Access the **Create/Edit Worktag Balancing Transaction Rule Set** task.
- Enter the rule set details:

Option	Description
Worktag Type	You can use only 1 balancing worktag type for all companies in the tenant. Worktag types are groupings of worktags by a business dimension: cost center, business unit, region, fund, and

Option	Description
	<p>custom organization. Select the type to use to balance journals for transactions subject to this rule set.</p> <p>Your selection determines the rules available to assign to transaction types within the rule set. The rule sets for a selected worktag type are available for use when defining the worktag balancing configuration for the same worktag type.</p> <p>If the rule set is <b>In Use</b> as part of your worktag balancing configuration, you can't change the worktag type.</p>
<b>Default Worktag for Unapplied Customer Payments</b>	<p>To account for unapplied cash when you deposit a customer payment or put a remaining amount on account, the journal lines must balance by worktag. Workday assigns this default worktag to the journal lines for unapplied deposited payments and on account payments, as well as the corresponding cash entry. When you apply the payment to an invoice, Workday transfers the amount from the default worktag to the invoice receivables distribution worktag. The amount is transferred based on the <b>Financial Balancing Rule for Customer Invoice and Cash Sale</b> transactions.</p> <p>If you change the default worktag, run a trial balance to check whether you have any unapplied cash from customer payments with the prior worktag value. If there's an account balance, manually create accounting journals to move the balance from the former worktag to the new one.</p>
<b>Default Worktag for Fix Operational Journals</b>	<p>To account for reversal journals generated due to canceling historic transactions, the journals lines must balance by worktag.</p> <p>To balance the reversal journals for these historic transactions by worktag and remove them from error status, use the <b>Fix Operational Journals With Errors</b> task to find them. Select the journals that are missing a balancing worktag and submit them for posting again. For transactions that involve employees (such as payroll), Workday first looks to the employees organization assignment for the balancing worktag to use. If that isn't available, or if the transaction doesn't involve an employee, then Workday assigns the default worktag to the journal lines to balance the journal.</p> <p>Workday doesn't assign a balancing worktag to historic journals in posted status.</p>

Option	Description
<b>Default Worktag for Facilities and Administration</b>	<p>To account for expenses generated due to facilities and administration transactions, the journals lines must balance by worktag.</p> <p>The credit side of the transaction identifies the account used to record facilities and administration revenue. Which is typically a revenue account.</p> <p>If worktag balancing is enabled, the balancing worktag is determined based on the <b>Facilities and Administration Expense</b> worktag balancing rule.</p>
<b>Default Worktag for Unapplied Student Payments</b>	<p>Workday assigns the default worktag to the journal lines for unapplied and on account student payments. When you apply the payment to a student charge, Workday transfers the amount from the default worktag to the student receivables distribution worktag. The amount is transferred based on the <b>Financial Balancing Rule</b> for <i>Student Charge</i> transactions.</p>
<b>Use Default Worktag for Unapplied Student Payments for Award Disbursements</b>	<p>Select to assign the default worktag for unapplied student payments as the balancing worktag for the on account operational journal lines created by overpayments on student award disbursement payments. When clear, Workday assigns the balancing worktag configured on the associated student award item.</p>
<b>Default Worktag for Expense Payee Receivable</b>	<p>When you enable worktag balancing, you must select a balancing default worktag to enable accounting for negative reimbursable expense reports.</p> <p>Workday assigns the default worktag to these account posting rules to balance journals for negative reimbursable expense reports:</p> <ul style="list-style-type: none"> <li>• <i>Expense Payee Receivable</i></li> <li>• <i>Credit Card Payable</i></li> </ul>
<b>Default Worktag for Customer Contract Asset and Liability Reclassification</b>	<p>When you enable worktag balancing, you must select a balancing default worktag to enable accounting for the reclassification of customer contract assets and liabilities.</p> <p>Workday assigns the default worktag to the credit and debit journal lines created by running the task.</p>

3. As you complete the rules for each worktag balancing transaction type, consider:

Option	Description
<b>Financial Balancing Rule</b>	<p>Select a balancing rule for a given transaction or group of transactions. The balancing rule enables the receivables or liability side of the transaction</p>

Option	Description
	journal to inherit the balancing worktag from the operational transaction side or use a specified worktag.
<b>Always Inherit</b>	Leave the rule blank and select this check box to have the offset side of the transaction journal always use the same balancing worktag as the operational transaction side.

The rule set has a limited number of transaction types because not every transaction uses a balancing rule. Some transactions use other worktag balancing options.

## Result

You can use the worktag balancing transaction rule set on the **Maintain Worktag Balancing Configuration** task as part of your worktag balancing configuration. When Workday generates accounting for operational transactions, it evaluates the balancing option on the rule set to determine which balancing worktag to apply to the offset side of journals.

Review the **View Worktag Balancing Transaction Rule Set** report to confirm the details of your rule set.

## Next Steps

Configure worktag balancing at the tenant level.

### Related Information

#### Concepts

[Concept: How Transactions Get Balancing Worktags](#) on page 376

## Configure Worktag Balancing for the Tenant

### Prerequisites

- Determine which worktag type to use as the balancing worktag for your tenant.
- Create a worktag balancing transaction rule set to associate balancing rules with transactions.

### Context

You can plan the business dimension you want to use as your balancing worktag. Workday doesn't require you to enable balancing worktag for your tenant. Once you enable balancing worktags, you can't change it or disable it. Workday assigns the required balancing worktag to the offset side of journals for all financial transactions that use balancing rules.

### Steps

- Access the **Maintain Worktag Balancing Configuration** task.
- As you complete the task, consider:

Option	Description
<b>Worktag Type</b>	<p>Worktag types are groupings of worktags by a business dimension:</p> <ul style="list-style-type: none"> <li>Business unit</li> <li>Region</li> <li>Fund</li> <li>Custom organization</li> </ul>

Option	Description
	<p>Select the worktag type to balance journals for transactions subject to worktag balancing.</p> <p>Your choice determines the rule sets available for selection within this task.</p> <p>For Workday Student, you must include the <i>Fund</i> Worktag Type option.</p>
<b>Worktag Balancing Transaction Rule Set</b>	<p>When Workday generates accounting for operational transactions, it evaluates the rule set to determine which balancing worktag to apply to the offset side of the journal. You can only select from the rule sets of the selected worktag type.</p> <p>You can later change the rule set. For any transaction in progress, Workday applies the rule set in effect when the transaction is completed.</p> <p>For Workday Student, select <i>Fund</i> on the <b>Default Worktag for Unapplied Student Payments</b> field.</p>

### Result

For the current period forward, all journals must balance by a worktag of the selected worktag type. Workday uses the selected rule set to determine the worktag to balance the operational transaction journal.

## Configure Optional Worktag Balancing for the Tenant

### Prerequisites

Security: Set Up: Worktag Balancing domain in the Common Financial Management functional area.

### Context

Set up the optional balancing worktags you want to use for balancing operational transactions for all companies in your tenant. You can use optional balancing worktags with or without setting up a required balancing worktag.

### Steps

1. Access the **Maintain Worktag Balancing Configuration** task.
2. As you complete **Optional Balancing Worktag** section, consider:

Option	Description
<b>Worktag Types</b>	<p>Worktag types are groupings of worktags by a business dimension. Select up to 5 worktag types to balance transactions subject to worktag balancing.</p> <p>Worktags that are in use as a required balancing worktag or resulting worktag aren't available for selection as an optional balancing worktag.</p>
<b>Default Optional Worktags for Unapplied Payments</b>	Available options depend on the optional balancing <b>Worktag Types</b> you select. You

Option	Description
	<p>can select 1 or more default optional balancing worktags that you want assigned to:</p> <ul style="list-style-type: none"> <li>• Journal lines for unapplied deposited payments.</li> <li>• On Account payments.</li> <li>• Corresponding cash entries for unapplied payments.</li> </ul> <p>When you apply the payment to an invoice, Workday transfers the amount from the default optional balancing worktag to the balancing worktag you selected for the <i>Customer Invoice Cash Sale</i> financial transaction types.</p>
<b>Default Optional Worktags for Student Unapplied Payments</b>	<p>Available options depend on the optional balancing <b>Worktag Types</b> you select. You can select up to 5 default optional balancing worktags that you want assigned to journal lines for unapplied and on account payments. When you apply the payment to a student charge, Workday transfers the amount from the default optional balancing worktag to the student receivables distribution worktag.</p>
<b>Default Optional Worktags for Expense Payee Receivable</b>	<p>Available options depend on the optional balancing <b>Worktag Types</b> you select. You can select up to 5 default optional balancing worktags. Workday assigns the default optional worktags to these account posting rules to balance the journals for negative reimbursable expense reports:</p> <ul style="list-style-type: none"> <li>• <i>Expense Payee Receivable</i></li> <li>• <i>Credit Card Payable</i></li> </ul>

## Result

Optional balancing worktags aren't required on a transaction. You can add or remove optional balancing worktags at any time. Create adjusting journal entries if in-process transactions no longer balance after you update the optional balancing worktag configuration.

When in use, Workday-generated journal lines are fully balanced by optional balancing worktags and automatically:

- Inherit optional balancing worktags on based on the worktags selected.
- Generate due to and due from entries to balance transactions.

You can create trial balance reports and balance sheets by optional balancing worktags.

## Associate a Balancing Worktag with Procurement Card Transactions

### Prerequisites

Determine the worktag type to use as the balancing worktag for your tenant.

## Context

Enable worktag balancing for procurement cards and verification of procurement card transactions.

## Steps

1. Access the **Maintain Worktag Balancing Configuration** task and specify the **Worktag Type**.

Balancing worktags for procurement cards and verification of procurement card transactions don't require a **Worktag Balancing Transaction Rule Set**.

2. Access the **Create Corporate Credit Card Billing Account** task.
3. In **Account Details**, select the **Balancing Worktag**.

You can't update an existing procurement corporate card with existing transactions; you must start with a new corporate procurement card.

## Result

When workers verify procurement card transactions, you must enter the balancing worktag from the **Worktags** prompt.

### Related Information

#### Tasks

[Create Corporate Procurement Card Accounts](#)

[Verify Procurement Card Transactions](#)

## Concept: How Transactions Get Balancing Worktags

After you enable required worktag balancing, transactions that generate accounting must balance by worktag.

This table lists the balancing option Workday uses to determine the balancing worktag for the offset journal line of applicable transactions:

Always Inherits from Predecessor Transaction	Always Inherits from Transaction	Determined by Balancing Rules and Rule Set	Balancing Worktag Specified in Transaction
Assign asset accounting	Depreciation	Ad hoc bank transaction	Allocation  You can specify the balancing worktag in the transaction header. Workday automatically creates due to and due from entries for the other balancing worktag values in the journal. Alternatively, you can manually create journal entries to balance the journal by balancing worktag.
Customer payment deposit	Fringe benefit commitment	Ad hoc payment	Asset disposal
Customer refund	Fringe benefit commitment liquidation	Customer cash sale	Asset transfer

Always Inherits from Predecessor Transaction	Always Inherits from Transaction	Determined by Balancing Rules and Rule Set	Balancing Worktag Specified in Transaction
Expense credit card payment	Fringe benefit obligation	Customer invoice	Asset reclassification
Expense payment	Fringe benefit obligation liquidation	Customer invoice adjustment	Bank account transfer
Intercompany payment	Grants transactions	Customer invoice writeoff	<p>Journal entries</p> <p>You can specify the balancing worktag in the transaction header. Workday automatically creates due to and due from entries for the other balancing worktag values in the journal.</p> <p>Alternatively, you can manually create journal entries to balance the journal by balancing worktag.</p>
Intercompany receipt	Payroll commitment	Expense report	<p>Procurement card transaction verifications</p> <p>You specify the balancing worktag in the <b>Create Corporate Credit Card Billing Account</b> task.</p>
Payment return	Payroll commitment liquidation	Fringe benefit	Roll forward year-end balances
Payroll payment	Payroll accrual	Payroll result	
Prenote payment	Payroll forward accrual	Supplier invoice	
Prepaid spend amortization	Payroll obligation	Supplier invoice adjustment	
Procurement card load	Payroll obligation liquidation		
Supplier invoice payment	Purchase order		
	Receipt accrual		
	Requisition		
	Revenue recognition		
	Reverse depreciation		
	Supplier contract		

**Related Information****Concepts**[Concept: Worktags](#)**Tasks**[Steps: Configure Worktag Balancing for Journals on page 359](#)

## Average Daily Balance

---

### Setup Considerations: Average Daily Balances

You can use this topic to help make decisions when planning your configuration and use of average daily balance functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

**What It Is**

Workday enables you to track daily ending balances for ledger account and worktag combinations to calculate average daily balances for regulatory reporting.

**Business Benefits**

You can:

- Calculate average daily balances and daily ending balances on a combination of ledger accounts and worktag types.
- Calculate the average daily balances on a month-to-date, quarter-to-date, or year-to-date basis.
- Configure average daily balance rules to calculate on any balance sheet account including current year retained earnings.
- Filter both average daily balances and daily ending balances by company, book, ledger account, and worktag type.
- You can also create consolidated balance sheets with these elimination values:
  - Intercompany.
  - Interworktag (if you have a primary balancing interworktag).
  - Investment in subsidiary.
  - Subsidiary equity.

**Use Cases**

You can use average daily balance to comply with banking regulations. Examples:

- Banks calculate and pay interest to their customers based on the average daily balances of customer deposits.
- Credit card companies calculate and charge interest based on the average daily balances of customers outstanding balances.

## Questions to Consider

Questions	Considerations
What do you need to do to produce consolidated reports on average daily balances?	Set up reports using the <b>Average Daily Balance Lines for Financial Reporting</b> report data source. Then select the <b>Intercompany Affiliate</b> worktag on the average daily balance rule so that eliminations generate correctly when you run reports.
Do you want to process average daily balances on retained earnings?	When processing average daily balances on balance sheet accounts, you can select the <b>Calculate Current Year Retained Earnings</b> check box in the average daily balance rule. If you select the check box, Workday requests the account used for the retained earnings beginning balances, and includes the amount in the process.  If you're using the latest version (ADB 3.0), Workday uses the accounts specified in the Year End Closing Rules to calculate average daily balances on retained earnings.
Do you need to set up worktags for average daily balance retained earnings?	For ADB 2.0, Workday doesn't support any worktag carryover from net income, for both the current and prior year retained earnings accounts in the average daily balance job.  For ADB 3.0, Workday preserves worktags on ADB lines for Retained Earnings accounts as defined in your ADB rules.  <b>Note:</b> High-volume worktag types can significantly impact your ADB processing and reporting performance.
How do you want to calculate average daily balances?	If you want to use Average Daily Balance job processing, see <a href="#">Steps: Process Average Daily Balance</a> on page 381.  If you want to use OfficeConnect, see <a href="#">Average Daily Balance Reporting with OfficeConnect</a> on page 410.

## Recommendations

When calculating average daily balance on balance sheet accounts, select the **Calculate Current Year Retained Earnings** check box in the average daily balance rule.

Workday recommends balancing to source systems based on either the transaction posting date or the transaction accounting date (value date) using the **Journal Lines** report data source. In Workday, the posting date is the last updated date, not the accounting date. When balancing to source systems based on posting date, Workday recommends not editing the journal at a later date. The reposted journal will reflect the edit date, not the original post date.

Workday also recommends using only those ledger accounts and worktag combinations required for the average daily balances.

## Requirements

No impact.

## Limitations

Average Daily Balance doesn't support detailed payroll journals, and only supports summarized payroll journals when configured.

Actuals ledgers are the only supported ledger type.

## Additional Considerations

Average Daily Balance supports:

- Company security on all average daily balance report data sources.
- Organization security on the **Average Daily Balance Lines** report data source, but not on the **Average Daily Balance Lines for Financial Reporting** report data source.
- Consolidated reporting for wholly owned companies using the same ledger currency, using the **Average Daily Balance Lines for Financial Reporting** report data source.

You can't process Average Daily Balances for more than 6 months at a time.

## Tenant Setup

No impact.

## Security

Configure these domains in the Financial Accounting functional area:

Domains	Considerations
<i>Process: Average Daily Balance</i>	Enables users to process average daily balances.
<i>Reports: Average Daily Balance</i>	Enables users to create average daily balance reports.
<i>Reports: Organization Average Daily Balance Lines</i>	Enables users to filter average daily balance lines by company and organization.

## Business Processes

Configure the *Average Daily Balance Event* business process to approve the average daily balance results.

## Reporting

You can use these report data sources to create custom reports:

- **Average Daily Balance Headers**
- **Average Daily Balance Line for Financial Reporting**
- **Average Daily Balance Lines**

## Integrations

Web Services	Considerations
<i>Get Average Daily Balance Rules</i>	Retrieves and creates average daily balance rule configurations.
<i>Put Average Daily Balance Rule</i>	

Web Services	Considerations
<i>Get Historic Average Daily Balance Amounts</i>	Retrieves and creates daily ending balances.
<i>Put Historic Average Daily Balance Amounts</i>	

### Connections and Touchpoints

Workday updates your average daily balance with any activity in manual and operational journals.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Process Average Daily Balance

### Context

Set up rules and the process for calculating the average daily balance for the time period or date range.

**Note:** Average Daily Balance doesn't support detailed payroll journals, and only supports summarized payroll journals when configured.

### Steps

**1. Create Average Daily Balance Rule** on page 382

You can create rules that calculate the average daily balance by:

- Ledger.
- Ledger account summaries.
- Worktags.

Example: Set up rules that use asset and liability accounts or ledger account summaries to generate regulatory reports.

**2. Assign Company Accounting Details** on page 64.

**3. Calculate Average Daily Balances** on page 383.

Process average daily balances and set up the average daily balance process frequency. You can run ad hoc processes or schedule processes to run:

- Daily.
- On a selected date.
- For a predefined journal date over a specified date range.

**4. (Optional) Create custom reports.**

See [Concept: Custom Reports](#).

### Result

Run average daily balance processes according to your schedule.

### Next Steps

Use the Report Writer to define custom reports that:

- Provide a month end average daily balance of cash, by fund, for allocating monthly investment income to funds.

- Compare average daily balances for a selected account, worktag, or book combination.
- Calculate product profitability.
- Display differences between actual ledger by date and average daily balance in transaction currency.
- Display a balance sheet in actual ledger balances and average daily balance, within the same report.

## Create Average Daily Balance Rule

### Prerequisites

Security: Set Up: *Accounting Rules* domain in the Financial Accounting functional area.

### Context

You can configure ledger accounts and associated worktags that you want to include in average daily balance calculations.

### Steps

1. Access the **Create Average Daily Balance Rule** task.
2. As you complete the task, consider:

Option	Description
<b>Rule Name</b>	You can only change the name once you start using the rule.
<b>Account Set</b>	When you assign an average daily balance rule to a company, you must select the same account set for both the rule and the company.
<b>Book</b>	Select 1 or more books to filter the source journal lines used in the average daily balance rule. When you don't enter a book code, Workday returns all journal lines with a blank book code. Workday uses the book code to calculate average daily balance.
<b>Calculate Current Year Retained Earnings</b>	Select this check box to generate average daily balance values for current year retained earnings. When you select this check box, Workday hides income statement ledger accounts on the <b>Ledger Account/Summary</b> field. You'll be able to select an account to send your current year retained earnings in the <b>Retained earnings account for fiscal year beginning balance</b> prompt.
<b>Worktag Type</b>	When you balance your books by worktag, you must include the balancing worktag type. Workday displays worktag options according to your <b>Ledger Account/Summary</b> selections. When you select all balance sheet ledger accounts for the <b>Ledger Account</b> , select the ledger account to which you want to assign

Option	Description
	<p>retained earnings. When you process average daily balances for the first time in the next fiscal year, net income from the preceding year rolls forward in the account you select. Workday calculates beginning balances based on the type of ledger account.</p> <p>See <a href="#">Concept: Worktags</a>.</p>

## Next Steps

- Assign the average daily balance rule to a company.

### Related Information

#### Tasks

[Assign Company Accounting Details](#) on page 64

## Calculate Average Daily Balances

### Prerequisites

Create average daily balance rules.

Security: These domains in the Financial Accounting functional area:

- Process: Average Daily Balance*
- Reports: Average Daily Balance*
- Reports: Organization Average Daily Balance Lines*

Configure the *Process Average Daily Balance Event* business process and security policy in the Financial Accounting functional area. See [Concept: Business Processes](#).

### Context

You can configure a time period or date range to calculate the average daily balance.

**Note:** You can also calculate your average daily balance using OfficeConnect. See [Average Daily Balance Reporting with OfficeConnect](#) on page 410.

### Steps

- Access the **Process Average Daily Balance** task.
- Select a **Run Frequency**.
- On the **Average Daily Balance** tab, you can only select companies that you assigned average daily balance rules to.
- (Optional) On the **Schedule** tab, you can set up recurring average daily balance processing.

Workday processes average daily balances from the accounting date of the earliest transaction posting or adjustment up to the current date.

Example: You process the average daily balance from February 1 through June 30. On July 1, you adjust 2 journals dated March 25 and April 5. When you process the average daily balance on July 7, Workday processes the balance from the earliest adjustment date (March 25) up to July 7.

### Result

For each company or company hierarchy, Workday:

- When configured, initiates the *Process Average Daily Balance* business process for review of the average daily balance results.
- Calculates both the transaction and base amount.

### Next Steps

Create custom average daily balance reports or other financial reports.

### Related Information

#### Concepts

[Concept: Custom Reports](#)

## FAQ: How do I change an average daily balance rule?

You can't change an average daily balance rule while it's in use by 1 or more companies. To edit or delete a rule, you must first cancel or mass cancel the Average Daily Balance header. To cancel:

- Individual headers, select **Cancel** from the related actions menu of the **Average Daily Balance Header**.
- All average daily balance headers from the average daily balance start date for a company, use the **Mass Cancel Average Daily Balance Headers** task.

After you change an average daily balance rule, recalculate canceled headers by rerunning the *Average Daily Balance* process using these **Start Dates**:

- For individually canceled headers, select the **Average Daily Balance Header Date** of the first canceled header.
- For mass header cancellations, select the **Average Daily Balance Start Date** on the **View Company Accounting Details** report.

## Financial Reporting

---

### Steps: Create and Schedule Groups of Financial Reports

#### Prerequisites

- Define fiscal reporting time periods.
- Define financial statement profiles.

#### Context

Schedule groups of financial reports to run at the same time. You can create different report groups to meet your needs. For a report group, you can burst a set of reports by company or cost center, generating a separate report for each company or cost center in the set.

#### Steps

##### 1. [Save Filters](#).

Save report filters for the financial reports that you want to include in your report group. Saved filters define preset run parameters for reports. You can use them to run recurring reports more quickly, and as criteria when you create a schedule group of reports. You can create saved filters to use in report groups for:

- Financial statements (run with or without using a report profile) and the **Manager Financial Report**.
- Trial balance
- Ledger detail
- Custom reports (through the Report Writer)

## 2. Group Reports.

Group financial reports so that you can schedule them to run as a single unit. You can include a bursting set in the report group to generate multiple versions of each report by company or cost center. A bursting set eliminates the need to run each company or cost center report individually.

## 3. Schedule Reports or Report Groups.

### Result

At the scheduled time, Workday generates all financial reports in the report group by company or cost center, if the report group includes a bursting set.

### Example

- Create a report group for month-end reporting and schedule it to run after period close.
- Use report groups to schedule financial statements for reporting to the U.S. Securities and Exchange Commission (SEC), such as:
  - Annual Form 10-K.
  - Quarterly Form 10-Q.

### Related Information

#### Tasks

##### [Burst Reports](#)

## Create Reporting Time Periods

### Prerequisites

- Set up the fiscal, award, or summary schedule you can use to create reporting time periods.
- Security: *Reports: Financial Accounting* domain in the Financial Accounting functional area.

### Context

Reporting time periods define the years and periods that you can use to report on financial, award, and project transactions. You can create time periods relative to the report time, or use specific years and periods. You use reporting time periods to build predefined profiles for financial and award statements.

Workday delivers various common reporting time periods. You can use any of these Workday-delivered time periods in a financial statement profile, or define your own fiscal or award time periods.

**Note:** To create new time periods, use the delivered time periods as examples.

### Steps

1. Access the **Create Reporting Time Period** task.
2. As you complete the task, consider:

Field	Description
<b>Schedule Type</b>	Determines the type of reporting period you're creating, depending on whether it is on a fiscal, award, or project schedule. The default selection is <b>Fiscal</b> , which allows you to view and set options specific to the fiscal period or summary schedule.
<b>Fiscal Schedule</b>	Set this field to use a specific fiscal year or period.

Field	Description
<b>Summary Schedule</b>	Select a summary schedule if you plan to use a summary period. The summary schedule can be specific or relative to the report run date.
<b>Inactive</b>	To override the default tenant time period, select the <b>Inactive</b> check box.

3. As you complete the **Year** and **Period** sections, consider:

Field	Description
<b>Use Report Run</b>	<p>Base the reporting time on the period you select at the time of report run. You can further adjust this time by using the <b>Add or Subtract</b> option.</p> <p>For reporting time period following a fiscal schedule, you can clear this check box to select a specific fiscal year, period, or summary schedule.</p>
<b>Add or Subtract</b>	<p>Use this option to move the reporting year or period backward or forward relative to the report run period. If you specify a negative number, the reporting time period will move to before the report run period, by the specified number of periods. If you specify a positive number, the reporting time period will move to after the report run period, by the specified number of periods.</p> <p>This field can only be set when you select the <b>Use Report Run</b> check box.</p> <p>Example: To create a time period for the previous year of the report run period, enter <b>-1</b> under <b>Year</b>.</p>
<b>Use Specific</b>	<p>For reporting time period based on a specific fiscal year, select the fiscal year under <b>Year</b>.</p> <p>For reporting time period based on a specific summary schedule, select the summary period under <b>Period</b>.</p> <p>If you select to <b>Use Report Run</b> for year and <b>Use Specific</b> for period, the reporting time period will cover the specified period during the report run year.</p> <p>This option is only available for the fiscal schedule reporting time.</p>

4. As you complete the **Periods to Include** section, consider:

Field	Description
<b>Periods to Include</b>	<p>Enter the number of fiscal, award, or summary periods up to and including the report run or specified period.</p> <p>Example: Enter <b>4 Periods to Include</b> to see a full-year quarterly report when using a quarterly fiscal or award summary schedule.</p>

Field	Description
<b>Year To Date or Award Year To Date</b>	Select to include cumulative activities for all periods from the beginning of the fiscal or award year to the report run or specified period. Clear to include activities from only the specified period.
<b>Year From Date</b>	For fiscal schedules, select to include cumulative activities from the period after the report run or specified period to the end of the fiscal year.  If you select a summary period, this option will report from the next summary period. If you do not select a summary period, this option will report from the next month.
<b>Plan to Date</b>	Select to include plan activities from the inception of the fiscal financial plan to the report run or specified period.
<b>Award Life to Date or Project Life to Date</b>	Select to include activities from inception of a project or award to the report run or specified period.
<b>Award Life</b>	Select to include cumulative activities for all periods from the start date to the end date in the award schedule.  Award Life is not restricted by report date but includes activities for all periods during the duration of the award schedule.
<b>Grant Life to Date</b>	Select to include grant activities from the inception of a fiscal schedule grant to the report run or specified period.
<b>Summary Schedule to Date</b>	Select to include all periods in the summary schedule up to and including the report run period, for all years.
<b>Include all Periods in Previous Summary Schedules</b>	Select to include all periods in the previous summary schedule up to and including the report run period, irrespective of the year.
<b>Include Periods Based on Period Selection in Summary Schedules (To Date)</b>	Select to include all periods in the summary schedule up to and including the report run period, for all summary periods in the report.
<b>Summary Schedule from Date</b>	Select to include all periods in the summary schedule that occur after the report run period, for all years.
<b>Include all Periods in Future Summary Schedules</b>	Select to include all periods in the summary schedule that occur after the report run period, irrespective of the year.
<b>Include Periods Based on Period Selection on Summary Schedules (From Date)</b>	Select to include all periods in the summary schedule that occur after the report run period, for all summary periods in the report.

## Result

You can use the fiscal and award reporting time periods you created to build reports for financial and award statements.

## Create Trial Balance Reports

### Context

The Workday trial balance is a list of all the ledger accounts with balances for your company. You can only view and report on ledger accounts to which you have security permission.

When run for a single company, the report lists the:

- Ledger account.
- Beginning balance.
- Total debit amount.
- Total credit amount.
- Ending balance for the reporting period.

When run for multiple companies, you can select from these display options:

- Company: Displays an ending balance column for each company that you include in the report request.
- Summary: When running the report for a multilevel company hierarchy, displays an ending balance column for each subordinate company hierarchy.
- Total: For a company hierarchy, displays an ending balance column with the total amount for each company in the company hierarchy.

When run for multiple fiscal schedules, Workday:

- Summarizes journal lines by journal date instead of accounting period and fiscal year. You can then run financial statements for either the primary or alternate fiscal schedules.
- Determines the correct fiscal period based on the fiscal schedule you select.

To balance by both required and optional balancing worktags, you must run the nontranslated trial balance report. Workday only balances translated trial balance reports by the required balancing worktag.

Workday also delivers a standard composite consolidated trial balance report that is useful for reporting on company hierarchies. Use Workday Report Writer to copy and configure column and row types that enable you to:

- View a list of companies and their respective totals.
- View intercompany entries.
- View elimination entries.
- Define calculations for columns and row types.
- Select fields that you want summarized.
- Select fields for which you want to view detailed data.
- Configure filter conditions.
- Define prompt defaults.

**Note:** Filters and data are specific to your Workday tenant, and might be different than the values used in the standard composite trial balance report. Use any value in the report as guidance.

### Related Information

#### Concepts

[Concept: Currency Translation](#) on page 214

#### Tasks

[Steps: Create Composite Reports](#)

[Steps: Set Up Consolidations](#) on page 262

## Concept: Financial Reporting

Workday provides standard financial accounting reports so you can analyze activity and meet financial statement needs. You can display, download, and print Workday reports in tabular or graphical formats. Workers can report only on ledger accounts to which they have permission using configurable ledger account security.

You can run reports in any currency that you have configured. When you select a translation currency on a report, Workday translates amounts recorded in the company base currency rather than the transaction currency. To revalue journals recorded in currencies other than the company currency, access the **Run Revaluation** task.

### Statutory Reporting

In addition to standard reports, Workday provides these tools to create statutory reports:

- The Report Writer for customizing standard reports.
- Journal Connector for loading accounting data from an external source into Workday.
- Integration with a third-party service to enable statutory reporting.

See also:

- [../../../../reporting-and-analytics/custom-reports-and-analytics/workday-reporting-concepts/reference--reporting-tools-in-workday.dita](#).
- [../../../../reporting-and-analytics/custom-reports-and-analytics/workday-reporting-concepts/reference--fulfill-a-report-request.dita](#).

### Standard Financial Reports

Most financial reports are fiscal period based, meaning that once you run a report for a closed period, you can't change its content.

Workday delivers standard reports and a financial statement generator. Use the financial statement generator to define the content of the report by specifying rows and time periods.

### Custom Reports and Data Sources

You can create your own reports using the Workday Report Writer tool. Workday defines financial information to enable you to add required data to your report.

For a list and description of report data sources (RDSs) and RDS filters used in Financial Reporting, access the **Data Sources** report and filter on **Category** by:

- Financials
- Financial Accounting
- Financial Reconciliation and Close

## Reference: Workday-Delivered Reports for Financial Close

This table lists some of the Workday-delivered reports that enable you to:

- Gain visibility into your data.
- Reconcile operational transactions.
- Track the status of account certifications.

Report	Description	Subreports and Security
<b>Account Certification Definitions for Balance Sheet Accounts</b>	Lists all balance sheet ledger accounts and their associated account certification definitions.	Set Up: <i>Account Certifications</i> domain in the Financial Accounting functional area.
<b>Balance Sheet Certification Progress</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to display ledger balances versus amounts to certify with variances. Also, the report indicates if a given account certification has:</p> <ul style="list-style-type: none"> <li>• Has started</li> <li>• Not started</li> <li>• Isn't created</li> </ul>	<p>The 3 subreports:</p> <ul style="list-style-type: none"> <li>• Sub Report - Journal Lines for Account Certification - Ledger Amount, secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area.</li> <li>• Sub Report - Account Certification Lines By Status, secured to the <i>Process: Account Certifications - Reporting</i> domain in the Financial Accounting functional area.</li> <li>• Sub Report - All Balance Sheet Ledger Accounts with Optional Ledger Account Filter, secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area.</li> </ul>
<b>Balance Sheet - Consolidated</b>	Use this report to view a consolidated balance sheet across companies in a hierarchy.	<i>Report Execution</i> domain in the Tenant Non-Configurable functional area.
<b>Balance Sheet - Non Consolidated</b>	Use this report to view a balance sheet for a single company.	<i>Report Execution</i> domain in the Tenant Non-Configurable functional area.
<b>Balance Sheet Retained Earnings Reconciliation</b>	Use this report to reconcile the current year retained earnings calculated from balance sheets and income statements.	<i>Report Execution</i> domain in the Tenant Non-Configurable functional area.
<b>Cash to Bank Reconciliation</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to reconcile cash to bank for a single company and one or more bank accounts for a specified fiscal period and time period.</p> <p>Reconciles in company currency, operational cash ending balances to the operational ledger ending balances and displays any differences by company, ledger account, and bank account.</p>	<p>These 6 subreports secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area:</p> <ul style="list-style-type: none"> <li>• Sub Report - Cash to Bank Journal Non-Operational Transaction Activity Ending Balance (Standard).</li> <li>• Sub Report - Cash to Bank Ledger Balances by Balancing Worktag (Standard).</li> <li>• Sub Report - Cash to Bank Reconciliation Activities (Standard).</li> </ul>

Report	Description	Subreports and Security
	<p><b>Note:</b> If you run this report without creating initial balances or Beginning Balances, Workday displays zeroes.</p>	<ul style="list-style-type: none"> <li>• Sub Report - Cash to Bank Reconciliation Future Period Activities.</li> <li>• Sub Report - Cash to Bank Reconciliation Error Activities.</li> <li>• Sub Report - Cash to Bank Reconciliation Beginning Balances (Standard).</li> </ul>
<b>Cash to Bank Reconciliation in Bank Currency</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to reconcile cash to bank for a single company and one or more bank accounts for a specified fiscal period and time period.</p> <p>Reconciles in bank currency, operational cash ending balances to the operational ledger ending balances and displays any differences by company, ledger account, and bank account.</p>	<p>These 6 subreports secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area:</p> <ul style="list-style-type: none"> <li>• Sub Report - Cash to Bank Reconciliation Beginning Balances.</li> <li>• Sub Report - Cash to Bank Reconciliation Activities.</li> <li>• Sub Report - Cash to Bank Reconciliation Future Period Activities.</li> <li>• Sub Report - Cash to Bank Reconciliation Error Activities.</li> <li>• Sub Report - Cash to Bank Journal Non-Operational Transaction Activity Ending Balance in Transaction Currency.</li> <li>• Sub Report - Cash to Bank Ledger Balances in Transaction Currency by Balancing Worktag.</li> </ul>
<b>Cash to Bank Reconciliation by Reconciliation Status in Bank Currency</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to view the reconciliation status of each cash operational transaction to cash ledger balance in bank currency.</p>	<p>These 6 subreports secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area:</p> <ul style="list-style-type: none"> <li>• Sub Report - Cash to Bank Reconciliation Beginning Balances.</li> <li>• Sub Report - Cash to Bank Reconciliation Activities - Unreconciled Prior Periods.</li> <li>• Sub Report - Cash to Bank Reconciliation Activities - Reconciled.</li> <li>• Sub Report - Cash to Bank Reconciliation Activities - Unreconciled.</li> </ul>

Report	Description	Subreports and Security
		<ul style="list-style-type: none"> <li>• Sub Report - Cash to Bank Journal Non-Operational Transaction Activity Ending Balance in Transaction Currency.</li> <li>• Sub Report - Cash to Bank Ledger Balances in Transaction Currency.</li> </ul>
<b>Cash to Bank Reconciliation Initial Balances</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to verify and reconcile cash to bank initial balances for a single company and one or more bank accounts.</p> <p>For each company and bank account, compares cash ledger ending balances, including manual cash journals to the related operational cash ending balances.</p>	<p>These 3 subreports secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area:</p> <ul style="list-style-type: none"> <li>• Sub Report - Cash to Bank Journal Non-Operational Transaction Activity Ending Balance for Reconciliation Initial Balances (Standard).</li> <li>• Sub Report - Cash to Bank Ledger Balances for Reconciliation Initial Balances(Standard).</li> <li>• Sub Report - Cash to Bank Ledger Balances for Reconciliation Initial Balances by Balancing Worktag (Standard).</li> </ul>
<b>Cash to Bank Reconciliation Initial Balances in Bank Currency</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to verify and reconcile cash to bank initial balances for a single company and one or more bank accounts.</p> <p>For each company and bank account, compares cash ledger ending balances, including manual cash journals to the related operational cash ending balances in bank currency.</p>	<p>These 6 subreports secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area:</p> <ul style="list-style-type: none"> <li>• Sub Report - Cash to Bank Reconciliation Beginning Balances.</li> <li>• Sub Report - Cash to Bank Reconciliation Activities - Unreconciled Prior Periods.</li> <li>• Sub Report - Cash to Bank Reconciliation Activities - Reconciled.</li> <li>• Sub Report - Cash to Bank Reconciliation Activities - Unreconciled.</li> <li>• Sub Report - Cash to Bank Journal Non-Operational Transaction Activity Ending Balance in Transaction Currency.</li> <li>• Sub Report - Cash to Bank Ledger Balances for</li> </ul>

Report	Description	Subreports and Security
		Reconciliation Initial Balances in Transaction Currency by Balancing Worktag
<b>Currency Translation Adjustment Reconciliation</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to:</p> <ul style="list-style-type: none"> <li>• Reconcile currency translation gains and losses by ledger account for a single company.</li> <li>• Compare the currency translation adjustment for the current period with the prior period.</li> </ul> <p>View derived journal entries by drilling on the Currency Translation Gain and Loss accounts in the Reconciliation section of this report.</p> <p>You can run this report for a single company only.</p>	<p>These 3 subreports secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area:</p> <ul style="list-style-type: none"> <li>• Sub Report - Current Period CTA Derivation (Standard).</li> <li>• Sub Report - Journal Lines Translated for CTA Gain (Standard).</li> <li>• Sub Report - Journal Lines Translated for CTA Loss (Standard).</li> </ul>
<b>Currency Translation Adjustment Reconciliation by Company</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to:</p> <ul style="list-style-type: none"> <li>• Reconcile currency translation gains and losses by ledger account for a company or company hierarchy.</li> <li>• View derived journal entries by drilling on the Currency Translation Gain and Loss accounts in the Reconciliation section of this report.</li> </ul>	<p>These 3 subreports secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area:</p> <ul style="list-style-type: none"> <li>• Sub Report - Current Period CTA Derivation (Standard).</li> <li>• Sub Report - Journal Lines Translated for CTA Gain (Standard).</li> <li>• Sub Report - Journal Lines Translated for CTA Loss (Standard).</li> </ul>
<b>Find Cash to Bank Reconciliation Activities</b>	<p>Use this report to view details of cash operational activities for a company and one or more bank accounts.</p> <p>Displays cash operational activity by:</p> <ul style="list-style-type: none"> <li>• Accounting date</li> <li>• Bank account</li> <li>• Company</li> <li>• Ledger account</li> <li>• Reconciliation activity type</li> <li>• Transaction date</li> </ul>	<i>Reports: Financial Accounting</i> in the Financial Accounting functional area.

Report	Description	Subreports and Security
<b>Find Cash to Bank Reconciliation Initial Balances</b>	<p>Use this report to view initial balances for company or company hierarchy and one or more bank accounts and ledger accounts.</p> <p>Displays initial cash balances in ledger and bank currency by company, ledger account, bank account, and accounting date. Also, use this report to edit and delete an initial balance using related actions.</p>	<p>Reports: <i>Financial Accounting</i> in the Financial Accounting functional area.</p>
<b>Income Statement Retained Earnings Reconciliation</b>	<p>Use this report to reconcile the current year retained earnings calculated from income statements.</p>	<p><i>Report Execution</i> domain in the Tenant Non-Configurable functional area.</p>
<b>Intercompany Elimination Out of Balance Report</b>	<p>Use this report to reconcile:</p> <ul style="list-style-type: none"> <li>• Intercompany accounts in an Elimination rule.</li> <li>• Differences with the Suspense account in the Consolidated Trial Balance report.</li> </ul> <p>The report displays Intercompany and Intercompany Affiliate Elimination Ledger account differences in both transaction and translated currencies.</p> <p>The report by default runs for all Elimination rules, but you can select to run it for a specific rule.</p> <p>Clear the <b>Include all Intercompany Affiliates</b> option if you want to run the report for affiliates that are only under the company hierarchy.</p>	<p>Reports: <i>Financial Accounting</i> domain in the Financial Accounting functional area.</p>
<b>Ledger Year Beginning Balances by Company</b>	<p>Use this report (secured to the <i>Report Execution</i> domain in the Tenant Non-Configurable functional area) to display the ledger year beginning balances for a company or company hierarchy in:</p> <ul style="list-style-type: none"> <li>• Ledger Currency</li> <li>• Translation Currency</li> </ul>	<p>These 2 subreports secured to the <i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area:</p> <ul style="list-style-type: none"> <li>• Sub Report - Beginning Balance Journal Lines.</li> <li>• Sub Report - Beginning Balance Journal Lines Translated.</li> </ul>
<b>Number of Account Certifications by Status</b>	<p>Provides the number of account certifications grouped by Account Certification status. Drill-down</p>	<p><i>Process: Account Certifications - Reporting</i> domain in the Financial Accounting functional area.</p>

Report	Description	Subreports and Security
	provides details of ledger accounts included in each Account Certification along with other pertinent data.	
<b>Outstanding Intercompany Transactions</b>	<p>Use this report to review outstanding intercompany transactions by paying company and intercompany affiliate.</p> <p><b>Note:</b> Workday doesn't include any posted reversal journals that have a related reversal journal in the next period. This prevents you from adjusting any journals that Workday will automatically reverse the next period.</p>	<i>Reports: Financial Accounting</i> in the Financial Accounting functional area.
<b>View Intercompany Reconciliation Report</b>	<p>Use this report to view intercompany differences due to unmatched intercompany journal lines. This report enables you to:</p> <ul style="list-style-type: none"> <li>• View unreconciled intercompany balances by:           <ul style="list-style-type: none"> <li>• Intercompany pair.</li> <li>• Elimination rule.</li> <li>• Transaction currency.</li> </ul> </li> <li>• View intercompany reconciliation balances in translation currency, and by time period and amount types.</li> <li>• Drill down into unmatched journal lines and amounts to understand the source of differences.</li> </ul> <p>The tiles in the <b>Reconciliation Differences in Absolute Values</b> section display the totals for certain sources of difference in absolute values. An absolute value is a number's distance from zero, regardless of whether the number is positive or negative. We use absolute values on these tiles to indicate the total magnitude of differences, and to avoid positive and negative differences netting each other out.</p> <p>You can click the tiles to filter the grid to display journal lines relevant to:</p>	<i>Reports: Financial Accounting</i> in the Financial Accounting functional area.

Report	Description	Subreports and Security
	<ul style="list-style-type: none"> <li>• Differences due to unmatched intercompany journal lines.</li> <li>• Differences due to translated currency amounts.</li> <li>• Both sources of difference.</li> </ul> <p>The report doesn't support:</p> <ul style="list-style-type: none"> <li>• Alternate ledger currencies.</li> <li>• Commitment or Budget ledger types.</li> </ul> <p>You should only use this report when using the Intercompany Matching feature. Otherwise, you should continue to use the existing <b>Intercompany Elimination Out of Balance</b> report.</p>	
<b>View Ledger Period Statuses</b>	Use this report to view reference IDs of all ledger period statuses.	<i>Process: Period End</i> in the Common Financial Management functional area.

You can also access the **Workday Standard Reports** report to view a list of all Workday-delivered reports.

## Reference: Additional Options Prompt on Journal Lines for Financial Reporting RDS

This table describes details of the **Additional Options** prompt on the Journal Lines for Financial Reporting Data Source (RDS):

Prompt	Description
Calculate Ledger Amount for Translated Beginning Balances	<p>Enables you to convert loaded journals to the company currency of the report.</p> <p>The Ledger Beginning Balance and Translated Beginning Balance amounts display separately in the report.</p>
Exclude Adjustment Journals	Select to exclude adjustment journals.
Exclude Allocation Journals	Select to exclude allocation journals.
Exclude Pro forma Journals	Select to exclude pro forma journals. Workday places unposted allocation journals in <i>Pro Forma</i> status.
Include In Progress Journals	Select to include journals with <i>In Progress</i> status.

Prompt	Description
Include Payroll Details <i>Security: Reports: Financial Reports with Payroll Details</i> domain in the Financial Accounting functional area.	<ul style="list-style-type: none"> <li>Select to include detailed operational payroll accounting journal lines. Details include:               <ul style="list-style-type: none"> <li>Employee Name</li> <li>Cost Center</li> <li>Base Pay</li> <li>Job Profile</li> <li>Location</li> <li>Position</li> </ul> </li> <li>Leave unselected to include summarized operational payroll accounting journal lines. Won't include any payroll details.</li> </ul> <p><i>Security: Worker Data: Position and Employee Worktag</i> domain in the Common Financial Management and Core Payroll functional areas.</p>
Include Reserved Journals	Select to include reserved journals. Workday places journals in <i>Reserved</i> status as soon as a requisition passes budget check.
Report by Accounting Date using Plan Structure	When using plan structures, select to report by accounting date instead of budget date.

##### Concepts

[Concept: Business Objects, Data Sources, and Fields](#)

## Example: Composite Income Statement Report

This example illustrates how you can create a custom report that displays a detailed income statement. Composite reporting uses matrix report types as sub reports to enable you to combine data into 1 report. Use financial-specific report data sources (RDS) to define the *primary business object's* row and column:

- Types.
- Groupings.
- Calculations.

#### Context

As a company accountant, you need an actuals income statement with configurable rows and columns that:

- Lists the amounts for Current Period Year-to-date.
- Lists the Last Year Current Period Year-to-date.
- Calculates net income or loss.
- Displays certain expenses in detail.
- Displays revenue in summary.

**Note:** Filters and data are specific to your Workday tenant and might be different than the values suggested in this example. Use the information as a guide.

## Prerequisites

- Have the appropriate security permissions:
  - For ledger account segments.
  - To all journals, including accounting and operational journals.
- Create a basic matrix report consisting of the ledger accounts and activity for each cost center. To provide source data into your Composite Report Income Statement, use the report as a sub report. Use:
  - *Journal Lines for Financial Reporting* as the data source.
  - One of these data source filters:
    - *Journal Lines for Company and Reporting Time Period*.
    - *Journal Lines for Organization and Reporting Time Period*.

Define the report to include:

- Default prompts for company.
- Amount type.
- Ledger.
- Period and time period.

## Steps

1. Access the **Create Custom Report** task.

2. Enter:

Field	Value
Report Name	A unique name for your composite report income statement
Report Type	Composite

3. Click **OK**.

4. From the available action menu of column **C1**, select **Define > Control Field**.

5. Enter:

Field	Value
Column Name	Ledger Account
Business Object	Ledger Account

6. Click **OK**.

7. From the available actions menu of column **C2**, select **Define > Data**.

8. Enter:

Field	Value
Column Name	Current YTD
Sub report	Select the basic matrix sub report for journal lines you previously created. Workday populates the <b>Map Sub Report Prompts</b> grid with prompt values you defined in the sub report.

9. In the **Map Sub Report Prompts** grid, enter:

Prompt field	Value Type	Value
Company	Specify Value	Select your company
Amount type	Specify Value	Activity
Period	Specify Value	Period (Example: 2013 - Mar)
Time period	Specify Value	Current period YTD

10. Select **Field to Aggregate > Amount**.

11. In the **Style** field, select **Workday Styles > Default**.

12. Click **OK**.

13. From available actions menu of column **C3**, select **Define > Data**.

14. Enter:

Field	Value
Column Name	Prior YTD
Sub report	Select the basic matrix sub report for journal lines you previously created. Workday populates the <b>Map Sub Report Prompts</b> grid with prompt values you defined in the sub report.

15. In the **Map Sub Report Prompts** grid, enter:

Prompt Field	Value Type	Value
Company	Specify Value	Name of your company
Amount type	Specify Value	Activity
Period	Specify Value	Period (Example: 2013 - Mar)
Time period	Specify Value	Current period YTD

16. Select **Field to Aggregate > Amount**.

17. In the **Style** field, select **Workday Styles > Default**.

18. Click **OK**.

19. From the available actions menu of row **R1**, select **Define > Lookup Data**.

20. Enter:

Field	Value
Row Name	Revenue
Row Label Override	Revenue

21. In the **Filter Data in Sub Report** grid, enter:

Field	Detailed Instances to Include
Ledger Account	<ul style="list-style-type: none"> <li>• 4000: Revenue</li> <li>• 4500: Other Income</li> <li>• 4900: Sales Discounts</li> <li>• 4999: Management Fee Revenue</li> </ul>

22. In the **Outline Options** section, select **Options > Reverse the Sign**.

**23.**Click **OK**.

**24.**From the available actions menu of row **R2**, select **Define > Lookup Data**.

**25.**Enter:

Field	Value
Row Name	<i>Cost of Sales</i>
Row Label Override	<i>Cost of Sales</i>

**26.**In the **Filter Data in Sub Report** grid, enter:

Field	Detailed Instances to Include
Ledger Account	<ul style="list-style-type: none"> <li>• 5000: <i>Cost of Sales</i></li> <li>• 5100: <i>Billable Travel Expenses</i></li> <li>• 5900: <i>Purchase Discounts</i></li> </ul>

**27.**Click **OK**.

**28.**From the available actions menu of row **R3**, select **Define > Calculation**.

**29.**Enter:

Field	Value
Row Name	<i>Gross Profit</i>
Calculation Type	<i>Sum</i>
Rows	<ul style="list-style-type: none"> <li>• <i>Revenue</i></li> <li>• <i>Cost of Sales</i></li> </ul>

**30.**In the **Outline Options** section, select **Options > Reverse the Sign**.

**31.**Click **OK**.

**32.**From the available actions menu of row **R4**, select **Define > Empty**.

**33.**Enter:

Field	Value
Row Name	<i>Empty Row 1</i>

**34.**Click **OK**.

**35.**Starting with row **R5**, add these values:

Reference	Name/ Override	Row Type	Calculation	Options	Ledger Account > Detailed Instances to Include
R5	Salaries & Benefits	<i>Look Up Data</i>			<ul style="list-style-type: none"> <li>• 6000: <i>Salaries &amp; Wages</i></li> <li>• 6010: <i>Benefits Expenses</i></li> <li>• 6020: <i>Employer Paid Taxes</i></li> </ul>

Reference	Name/ Override	Row Type	Calculation	Options	Ledger Account > Detailed Instances to Include
					<ul style="list-style-type: none"> <li>• 6030: Retirement</li> <li>• 6040: Bonus - Quarterly</li> </ul>
R6	Legal Service & Fees	Look Up Data			6400: Legal & Service Fees
R7	Contingent Labor	Look Up Data			6600: Contingent Labor Expense
R8	Employee-Related Expense	Look Up Data			<ul style="list-style-type: none"> <li>• 6850: Staff Meeting Food</li> <li>• 6860: Employee Expense</li> </ul>
R9	Travel & Entertainment	Look Up Data			6800: Travel & Entertainment
R10	Marketing	Look Up Data			6200: Marketing
R11	Facilities & Rent	Look Up Data			<ul style="list-style-type: none"> <li>• 6100: Facilities</li> <li>• 6300: Office &amp; Administrative</li> <li>• 7200: Utilities</li> </ul>
R12	IT Expense	Look Up Data			<ul style="list-style-type: none"> <li>• 6500: Information Technology</li> <li>• 6700: Depreciation</li> <li>• 7500: Repairs &amp; Maintenance</li> </ul>
R13	Amortization	Look Up Data			6790: Amortization Expense
R14	Miscellaneous Expense	Look Up Data			<ul style="list-style-type: none"> <li>• 6900: Insurance</li> <li>• 7300: Taxes &amp; Licenses</li> </ul>

Reference	Name/ Override	Row Type	Calculation	Options	Ledger Account > Detailed Instances to Include
					<ul style="list-style-type: none"> <li>• 7310: Postage Expense</li> <li>• 7400: Spend</li> <li>• 7800: Bad Debt</li> <li>• 7900: Other Expenses</li> <li>• 7999: Other Direct Costs</li> </ul>
R15	Total Operating Expense	Calculation	<b>Sum Range</b> <b>Starting Row</b> <ul style="list-style-type: none"> <li>• R5 (Salaries &amp; Benefits)</li> </ul> <b>Ending Row</b> <ul style="list-style-type: none"> <li>• R14 (Miscellaneous Expense)</li> </ul>		
R16	Empty Row 2	Empty			
R17	Other Income & Expenses	Look Up Data			<ul style="list-style-type: none"> <li>• 8000: Interest Income</li> <li>• 8100: Interest Expenses</li> <li>• 8200: Impairment Expense</li> <li>• 8300: Motor Pool Allocation</li> <li>• 8500: Telecommunications Allocation</li> <li>• 9000: Gain/Loss on Sale of Assets</li> </ul>
R18	Income Taxes	Look Up Data			8900: Income Taxes
R19	Net Income	Calculation	Sum Rows:	Reverse the Sign	

Reference	Name/ Override	Row Type	Calculation	Options	Ledger Account > Detailed Instances to Include
			<ul style="list-style-type: none"> <li>• R3 (<i>Gross Profit</i>)</li> <li>• R15 (<i>Total Operating Expense</i>)</li> <li>• R17 (<i>Other Income/ Expenses</i>)</li> <li>• R18 (<i>Income Taxes</i>)</li> </ul>		

36. Click the **Run** or **Preview** button to view the report.

## Result

The matrix report RDS accesses the journal line as its primary object. The income statement definition:

- Uses Reporting Time Periods as relative time spans.
- Includes journal lines that are in *Posted* or *Pro Forma* status.
- Excludes journals that are *Canceled*, in *Error*, or in *Draft* status.

Depending on which fields you designated as drillable on the matrix sub report, some of the detailed data for column and row groups you can view include:

- Company.
- Cost Center.
- Ledger Account.
- Revenue Category.
- Region.
- Spend Category.

You can:

- Share the report definition with organization members that have the appropriate security level.
- Produce the report output in table format.
- Use your income statement as the basis for other composite financial reports.

## Related Information

### Tasks

[Steps: Create Composite Reports](#)

## Example: Map Aliases to Ledger Account Summaries

This example illustrates how you can run a standard income statement and balance sheet.

### Context

As an accounting manager, you need to produce an income statement and balance sheet for an urgent board meeting. You decide to use and configure the Workday-delivered income statement and balance sheet by mapping Workday aliases to your ledger account summaries.

**Note:** Ledger account summaries are specific to your Workday tenant and might be different from the values suggested here.

## Prerequisites

Security:

- Access to the *Aliases* domain.
- Appropriate ledger account segment security permissions to all journals, including the accounting and operational journals.
- Reports: Financial Accounting* domain in the Financial Accounting functional area.

## Steps

- Access the **Map Standard Aliases** task.
- From the **Business Object** prompt, select **Ledger Account Summary**.
- Map these Workday-delivered aliases to your ledger account summaries:

Field	Value
_BS_Current_Assets_Row1 _BS_Current_Assets_Row2 _BS_Current_Assets_Row3	Map the ledger account summary you want to display in the first, second, and third rows of the Current Assets section for the Balance Sheet.  Example: 1: Corporate: Cash and Cash Equivalents 2: Corporate: Receivables 3: Corporate: Investments
_BS_Current_Liabilities_Row1 _BS_Current_Liabilities_Row2 _BS_Current_Liabilities_Row3 _BS_Current_Liabilities_Row4 _BS_Current_Liabilities_Row5	Map the ledger account summary you want to display in the first to fifth rows of the Current Liabilities section for the Balance Sheet.  Example: 1: Corporate: Accounts Payable 2: Corporate: Notes Payables 3: Corporate: Interest Payable 4: Corporate: Customer Deposits 5: Corporate: Short Term Loans
_BS_Equity_Row1 _BS_Equity_Row2 _BS_Equity_Row3 _BS_Equity_Row4 _BS_Equity_Row5	Map the ledger account summary you want to display in the first to fifth rows of the Equity section for the Balance Sheet.  Example: 1: Corporate: Capital Stock 2: Corporate: Retained Earnings 3: Corporate: Currency Translation Adjustments 4: Corporate: Accumulated Other Comprehensive Income 5: Corporate: Treasury Stock

Field	Value
<code>_BS_Noncurrent_Assets_Row1</code> <code>_BS_Noncurrent_Assets_Row2</code> <code>_BS_Noncurrent_Assets_Row3</code>	Map the ledger account summary you want to display in the first to third rows of the Noncurrent Assets section for the Balance Sheet.  Example: 1: Corporate: Property, Plant, and Equipment 2: Corporate: Goodwill 3: Corporate: Other Noncurrent Assets
<code>_BS_NonCurrent_Liabilities_Row1</code> <code>_BS_NonCurrent_Liabilities_Row2</code> <code>_BS_NonCurrent_Liabilities_Row3</code>	Map the ledger account summary you want to display in the first to third rows of the Noncurrent Liabilities section for the Balance Sheet.  Example: 1: Corporate: Long Term Debt 2: Corporate: Deferred Revenue 3: Corporate: Other Noncurrent Liabilities
<code>_IS_Expense_Row1</code> <code>_IS_Expense_Row2</code> <code>_IS_Expense_Row3</code> <code>_IS_Expense_Row4</code> <code>_IS_Expense_Row5</code> <code>_IS_Expense_Row6</code>	Map the ledger account summary you want to display in the first to sixth rows of the Expense section for the Income Statement.  Example: 1: Corporate: Salary and Benefits 2: Corporate: Other Employee Related Expenses 3: Corporate: Contingent Labor 4: Corporate: Operating Expenses 5: Corporate: Facilities Related Expenses 6: Corporate: Misc. Expenses
<code>_IS_Other_Revenue_Expense_Row1</code> <code>_IS_Other_Revenue_Expense_Row2</code> <code>_IS_Other_Revenue_Expense_Row3</code>	Map the ledger account summary you want to display in the first to third rows of the Other Revenue or Expense section for the Income Statement.  Example: 1: Corporate: Interest Expense 2: Corporate: Income Taxes 3: Corporate: Other Income
<code>_IS_Revenue_Row1</code> <code>_IS_Revenue_Row2</code>	Map the ledger account summary you want to display in the first and second rows of the Revenue section for the Income Statement.  Example: 1: Corporate: Total Income 2: Corporate: Operating Income

4. Click **OK** and **Done**.

## Result

You can run the standard income statement and balance sheet.

## Next Steps

When you select **Copy** from the related actions menu of the income statement and balance sheet, Workday automatically creates custom financial reports. You can then edit the custom reports according to your company needs.

## Financial Reporting with OfficeConnect

---

### Steps: Set Up Your Tenant for OfficeConnect for Financial Management

#### Prerequisites

**Note:** The solutions described in this section are not part of the Workday Service. See [Legal Notice](#) for details.

Before you set up your tenant for OfficeConnect, you must:

- Set up the Workday Financial Management area. See [Steps: Set Up Financial Accounting Structure](#) on page 55.
- Meet eligibility requirements as described in [Enable OfficeConnect for Workday Financial Management](#).

#### Context

You can set up your tenant for OfficeConnect to use with Financial Management data.

#### Steps

1. [Enable OfficeConnect for Workday Financial Management](#) on page 407.
2. Create or edit a security policy for these security domains:
  - *Set Up: Financial Reporting and Analytics Data Model.* The users in the groups you add to this policy are able to set up the financial reporting data model. Add a security group with View permissions, such as Finance Administrator.
  - *Access Workday Financials OfficeConnect.* The users in the groups you add to this policy have permission to log in to Workday from OfficeConnect using the financial modeled data source. Add a security group with View and Modify permissions.

See [Edit Domain Security Policies](#).

3. [Activate Pending Security Policy Changes](#).
4. [Set Up the Financial Reporting Data Model](#) on page 407.
5. Install OfficeConnect on the computer of each financial analyst.

You can install OfficeConnect either as:

- An Administrator. See [Install OfficeConnect as an Administrator](#).
- An end user. See [Install OfficeConnect as an End User](#).

## [6. Add OfficeConnect Tenants \(Workday\).](#)

Use the API client settings Workday generated when you enabled OfficeConnect for Workday Financial Management.

## **Enable OfficeConnect for Workday Financial Management**

### **Prerequisites**

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

### **Context**

You can enable OfficeConnect in your tenant to use it with Workday Financial Management data.

### **Steps**

1. Access the **Tenant Setup** report.
2. Navigate to **Financials > OfficeConnect**.
3. Select **Enable OfficeConnect**.
4. Click the **API Client** link.

Copy these values and save somewhere for a later step:

- Client ID
- Workday REST API Endpoint
- Authorization Endpoint

[The Next Level: Video Shorts - OfficeConnect - Financial Management](#)

## **Set Up the Financial Reporting Data Model**

### **Prerequisites**

Security: *Set Up Reporting Model* domain in the System functional area.

## Context

Set up the financial reporting data model before you sign in to Workday in OfficeConnect. By defining the reporting data model, you're curating the Workday Financials data model (FDM), so that you only expose the components of the FDM needed for reporting. When you set up the financial data model, Workday creates the financial modeled data source.

## Steps

1. Access the **Set Up Reporting Model** task.
2. As you complete this task, consider:

Option	Description
<b>Company</b>	<p>Select the primary top-level hierarchy for the company to report on. The company you select determines the <b>Account Set</b> value and the <b>Fiscal Schedule</b> value.</p> <p>In the <b>Alternate Company Hierarchies</b> field, optionally select one or more additional company hierarchies to use.</p>
<b>Ledger Accounts</b>	<p>Select the top-level hierarchy that includes the accounts to report on and analyze. The company you select determines the <b>Account Set</b> value.</p> <p>In the <b>Alternate Account Top-Level Hierarchies</b> field, optionally select one or more additional ledger account hierarchies to use.</p> <p>The <b>Default Amount Field</b> is summarized by ledger debit minus credit. When creating a report in OfficeConnect, you can select a different amount field, such as Natural Amount, by applying a filter to the worksheet or workbook.</p>
<b>Time</b>	<p>Select a Fiscal Summary Schedule that represents a time period in the selected Fiscal Schedule that's between year and the posting interval period, such as quarter.</p> <p>Workday creates a three-tier time hierarchy in the reporting data model that goes from year (based on Fiscal Schedule) to the selected Fiscal Summary Schedule to the posting interval period.</p> <p>Example: FY2021 &gt; Quarter &gt; Month</p> <p>The company hierarchy that you select determines the Fiscal Schedule value.</p>
<b>Currency</b>	<p>Select the default currency to use when reporting on the Corporate currency or any company hierarchy level.</p> <p>When reporting on a single company, Workday uses the ledger currency for that company by default.</p> <p>Select the <b>Default Translation Rule Set</b> that defines the translation method to apply based on ledger account type when Workday performs currency translation. In OfficeConnect, you can select a different translation rule set by applying a filter to the worksheet or workbook.</p>
<b>Versions</b>	<p>Journal lines and plan lines are selected by default. To report on plan lines, you must select the financial plan structures.</p> <p>You can select from a limited number of plans.</p>

Option	Description
<b>Effective Date</b>	<p>Select the default effective date that determines the dimension hierarchies and values in your model elements. The date can be:</p> <ul style="list-style-type: none"> <li>• Dynamic. Select a date relative to the current date (or the current date itself). Example: Prior Period End Date. If the period is monthly and the current date is April 5, 2022, then the effective date is March 31, 2022. If the period is monthly and the current date is May 5, 2022, then the effective date is April 30, 2022.</li> <li>• Static. Commonly used static dates that the system populates. These dates are auto-generated based on the model's selected fiscal schedule and summary schedule. The list updates automatically over time. Example: The date of the end of each interval posting period for the past 12 months.</li> <li>• Custom: Define custom dates that represent something specific to the company. These dates are available for selection indefinitely. Example: An org change that occurred on <i>mm/dd/yyyy</i>.</li> </ul> <p>A change in the date applies to all users of the model.</p> <p><b>Note:</b> OfficeConnect displays the effective date as a label under Labels &gt; Model &gt; Model Effective Date so that users know which effective date is used.</p>
<b>Dimensions</b>	<p>Select the optional dimensions, such as worktags and organizations, to drill down into the data. If you add a hierarchical dimension, select a hierarchy to use. If you don't specify a hierarchy, Workday includes the values as a flat list.</p> <p>The dimensions you select determine how report creators can filter and group the data.</p> <p>In <b>Alternate Top-Level Hierarchies</b>, optionally select one or more additional hierarchies to use. You have to select a primary hierarchy before you can add alternate hierarchies.</p>
<b>Show Details</b>	<p>Manage the journal and plan line details users can view for a report cell when they click <b>Show Details</b> for deeper analysis. You can:</p> <ul style="list-style-type: none"> <li>• Delete any optional fields.</li> <li>• Search for and add fields.</li> <li>• Reorder the fields to change the display and sort order.</li> </ul> <p>If you don't change anything, <b>Show Details</b> displays the default set of fields from OfficeConnect reports.</p> <p><b>Note:</b> The number of fields you configure to display in the OfficeConnect worksheet impacts performance. A large number of rows and columns creates larger and slower reports.</p>

## Result

Workday creates the financial modeled data source using the components you defined in the financial reporting data model. You can use this modeled data source when you sign in to Workday from OfficeConnect.

## Average Daily Balance Reporting with OfficeConnect

### Prerequisites

Create an OfficeConnect report with the data for which you want to generate average daily balances. See [../../../../adaptive-planning/en-us/reporting-and-analysis/officeconnect/using-officeconnect/officeconnect-reporting-workbooks/xur1623711193958.dita](#).

Review these topics to familiarize yourself with OfficeConnect terminology, such as account element, date elements, labels, and so on:

- [../../../../adaptive-planning/en-us/reporting-and-analysis/officeconnect/using-officeconnect/officeconnect-overview/tjm1623711190927.dita](#).
- [../../../../adaptive-planning/en-us/reporting-and-analysis/officeconnect/using-officeconnect/officeconnect-overview/rdk1623711188333.dita](#).
- [../../../../adaptive-planning/en-us/reporting-and-analysis/officeconnect/using-officeconnect/officeconnect-report-elements/qmj1623711197333.dita](#).

Review these topics to familiarize yourself with OfficeConnect and Financial Management:

- [OfficeConnect - Financial Management - Getting Started](#).
- [OfficeConnect: Use OfficeConnect with Financial Management Data](#).

### Context

You can calculate and report on the average daily balance using OfficeConnect for Financial Management for any:

- Given account.
- Multiple accounts.
- Account summary over different time spans.

This enables you to assess interest required against the respective balance averages.

If you want to validate or verify a cell amount in OfficeConnect, you can use Expand or Expand to Leaf Level on the parent Time element in OfficeConnect. Then, switch the Amount Type for its children to Ending Balance.

Similarly, if you want to get to-date ending balances for each day in an Average Daily Balance cell, you can:

- Apply a Time Context, such as Period to Date.
- Use Expand or Expand to Leaf Level on the parent Time element in OfficeConnect.

**Note:** Because Workday calculates Average Daily Balance on daily ending balances, Workday doesn't display journal line rows with the Show Details function when you use Average Daily Balance in OfficeConnect. To view the daily ending balances, you can expand the time element of the ending balance to daily or leaf level node.

## Differences Between OfficeConnect for Average Daily Balance and Average Daily Balance Job Processing

Average Daily Balance in OfficeConnect for Financial Management:

- Is calculated in real time.
- Doesn't require you to run the Average Daily Balance job that requires the Report Writer.
- Doesn't require you to create Average Daily Balance rules and assign them to a company.
- Supports currency translation.

### Steps

1. Log in to OfficeConnect.
2. Open the OfficeConnect report that you created.
3. In the report, select and highlight the row, column, or cell for the data that you want to convert to Average Daily Balance.
4. In the **Elements** tab, expand **Dimensions** and then **Amount Type**.
5. Right-click **Average Daily Balance** and then select **Apply to Selection**.
6. From the Toolbar, click **Refresh**.

Workday updates the highlighted data to display the Average Daily Balance for the selected time period.

7. (Optional) Click the **Review** tab to confirm that the amount type is Average Daily Balance.
8. (Optional) From the Toolbar, click **Label** to apply descriptive text in your report for some of the elements you've used. See [..../adaptive-planning/en-us/reporting-and-analysis/officeconnect/using-officeconnect/officeconnect-reporting-workbooks/zvg1623708831138.dita](#).

Examples:

- Use Amount Type as a label type to help display the amount type name of Average Daily Balance or Ending Balance.
  - If using Time Context, use both the Time and Context label types to display them together. Example: June Year to Date.
9. (Optional) To apply to-date average daily balances for the data in the report, you can use Time Context.
    - a) Highlight the time period in the report to which you want to apply to-date balances.

Example: To calculate period to date average daily balances, select monthly time period in your report.

- b) For the selected time period, from the Toolbar, select **Expand**.

Workday displays all days in the selected time period.

- c) Select the days in the selected time period.
- d) In the **Elements** tab, expand **Time** and then **Context**.
- e) Select the relevant Time Context.

Example:

- If you've highlighted and expanded the monthly time period, right-click **Period to Date** and then select **Apply to Selection**.
  - If you've highlighted and expanded the Quarter time period, right-click **Quarter to Date** and then select **Apply to Selection**.
- f) Select the values that you want to display or hide and then select **Keep Only** or **Remove Only** from the toolbar. See: [..../adaptive-planning/en-us/reporting-and-analysis/officeconnect/using-officeconnect/officeconnect-reporting-workbooks/vwe1623708876751.dita](#).

### Related Information

#### Tasks

[Steps: Set Up Your Tenant for OfficeConnect for Financial Management](#) on page 406

## Reference

[2023R2 What's New Post: Average Daily Balance Support in OfficeConnect for Financial Management](#)

## Concept: Time Context with Average Daily Balance

You can use Time Context based on the Financial Reporting Data model in OfficeConnect to calculate to - date average daily balances. Time Context enables you to build a report over a specified to - date range. Example: Period to Date, Quarter to Date, or Year to Date.

Example: You can apply a Quarter to Date time context element for a single period (Feb) to get Jan 1 – Feb 28, or can apply the time element for a specific date (Feb 17) to get Jan 1 – Feb 17.

### Note:

To use Time Context, you must have the latest OfficeConnect client installed. See [Check Your OfficeConnect Version](#).

When using Time Context with Expand or Expand to Leaf Level, Workday recommends using it with the same to - date anchor period. It can be a year, quarter, or period. Example: YTD + Year (2023), QTD + Quarter (FY23-Q2), or PTD + Period (FY23-May).

OfficeConnect expands time that is based on the parent time anchor and its hierarchy in the Elements tab. Example: If you specify May+QTD, OfficeConnect will only expand for the month of May. If you want to see the average daily balance for the full 2nd quarter (April 1 to June 30), you must specify Q2+QTD.

You can use Time Context like Period to Date for a specific date. Example: If you want to calculate average daily balance till Jan 15, you can specify Jan 15 + PTD. However, if you use a specific day or date, you can expand it as the day has no leaf - level children.

To see PTD average daily balance for only Jan 1-6, use Jan+PTD, expand it, and then use the Keep Only or Remove Only options to keep or remove the necessary rows. Similarly, you could use Q2+QTD, expand it, and keep or remove the necessary rows.

If you aren't using Time Context, OfficeConnect calculates the average daily balance only for the period end. Example: If the time period in the report is quarter and you don't specify Quarter to Date, OfficeConnect only calculates the average daily balance for the quarter. When you expand the quarter to daily, the expanded balances are daily ending balances and not average daily balances.

#### Examples

[Add Time Contexts](#)

## Concept: OfficeConnect and Reporting on the Financial Modeled Data Source

You can use the financial model data source in OfficeConnect to query Workday Financial Management data directly, enabling easy, performant, reporting.

OfficeConnect is a Microsoft Excel add-in that enables you to create reports in Excel using financial data in Workday from the financial model data source. With OfficeConnect, you can create financial reports using the Excel interface you're familiar with, using data backed by Workday, such as journal lines.

OfficeConnect updates the data when you run or refresh your report in real time. These reports are based on model elements like ledger accounts, time period, and worktags.

You might want to use OfficeConnect to perform ad hoc analysis on journal line data.

When creating and editing a report, you can:

- Use formatting capabilities of Excel.
- Use cell formulas and calculations of Excel.
- Expand and collapse hierarchies in the data model.

- Filter Workday data.

Example: You can use OfficeConnect for Financial Reporting to:

- Create an income statement.
- Create a balance sheet.
- Perform ad hoc dimension analysis.
- Perform salary and benefit analysis.
- Calculate product and customer margin.

Workday supports OfficeConnect only on Windows operating systems.

## **Concept: The Financial Reporting Data Model**

The financial reporting data model is a curated subset of components selected from the Workday financial data model (FDM). The reporting data model determines which information from the FDM, such as which company hierarchies, ledger account hierarchies, and dimensions, is available for analyzing and reporting on in OfficeConnect.

When you set up the financial reporting data model, Workday creates the financial modeled data source that you can access from OfficeConnect.

When you sign in to Workday from OfficeConnect using the financial data source, OfficeConnect displays most of the information in the reporting data model in the Elements tab. You can drag and drop individual elements, such as a company or ledger account, from the Elements tab into the worksheet.

OfficeConnect summarizes the data in your Workday ledger accounts as determined by the intersection of the elements you place in the worksheet.

The financial reporting data model includes these elements:

Model Elements	Description
Company	The primary top-level company hierarchy you can report on. One or more alternate company hierarchies you can report on.
Ledger Accounts	The primary account top-level hierarchy you can report on.

Model Elements	Description
	One or more alternate ledger account hierarchies you can report on.
Time	<p>The three-tier time hierarchy defined in the reporting data model. Typically, the hierarchy goes from year to quarter to month/period:</p> <ul style="list-style-type: none"> <li>• Year is based on the Fiscal Schedule.</li> <li>• Quarter is based on the configured Fiscal Summary Schedule.</li> <li>• Month/Period is based on the posting interval period.</li> </ul> <p>Example: FY2021 &gt; Quarter &gt; Month</p>
Currency	<p>Defines:</p> <ul style="list-style-type: none"> <li>• The default currency to use when reporting on the Corporate currency or any company hierarchy level.</li> <li>• The translation method to apply based on ledger account type when Workday performs currency translation.</li> </ul>
Versions	<p>Determines what data displays in OfficeConnect reports. You can use other elements to further filter the data in that version.</p> <p>You can use versions as scenarios for comparison.</p> <p>We include these versions by default in the reporting model:</p> <ul style="list-style-type: none"> <li>• Actuals</li> <li>• Plans</li> <li>• Obligation</li> <li>• Commitment</li> </ul> <p>You can also configure the Accounting Center Journals version and other custom versions to include Prism ledger-like data. Before configuring these versions, you must set up the Prism data sources and create field mappings from the data source to the reporting model. See:</p> <ul style="list-style-type: none"> <li>• <a href="#">Concept: Custom Versions</a></li> <li>• <a href="#">Steps: Set Up the Reporting Model for Prism Data Sources</a></li> </ul>
Effective Date	The default effective date that determines the dimension hierarchies and values in your model elements (prepopulated dynamic and static dates, or custom dates defined by an administrator).
Dimensions	<p>The list of optional dimensions, such as worktags and organizations, that you can use to group and filter the data.</p> <p>For hierarchical dimensions, a primary top-level hierarchy and optionally one or more alternate hierarchies.</p> <p>Required dimensions don't count toward your maximum number of dimensions that can have alternate hierarchies.</p>
Show Details	The contributing journal line, plan line, and transaction details that users can view for a data point.

The financial reporting data model:

- Includes aggregated data at the ledger account level.

- Summarizes the amount field by Ledger Debit Minus Credit. When creating a report in OfficeConnect, you can select a different amount field, such as Natural Amount, by applying a filter to the worksheet or workbook. You can't change the amount field at the row, column, or cell level.
- Specifies a default translation rule set to use for currency translation. You can select a different translation rule set by applying a filter to the worksheet or workbook. You can't change the translation rule set at the row, column, or cell level.
- Includes these amount types:
  - Ending Balance (default)
  - Beginning Balance
  - Beginning Balance Translation Adjustment
  - Adjusted Beginning Balance
  - Activity
- Displays intercompany eliminations in OfficeConnect at the lowest common parent level.

## Considerations for Plan Lines

When working with plan lines, keep these considerations in mind:

- Only Workday Financial Plan Lines are supported.
- You can't disable the currency translation adjustment (CTA) account, which might affect your partial balance sheet plans.
- Revisit the dimensions selected for the model to ensure that the selected plan structure dimensions are also in the model, or add them.

Example: If a plan uses Cost Center as its dimension, the model doesn't require that specific dimension to be present. For reporting purposes, you need to add the same dimensions to the model so that they're available in reports.

- When applying a plan version in a report, specify the company (or companies) and time periods for the report.

Example: Even if a plan name says 2012 Company A Plan, the time period for 2012 and Company A aren't automatically applied and should be applied to the row, column, cell, or worksheet filter.

- When using dimensions for plan lines that are intended only for journal lines:

- *Journal Status*: Plan lines have a blank status and display under Journal Status (Uncategorized/Blanks) because there is no journal status for plan lines.
- *Journal Source*: Plan lines have a blank source and display under Journal Source (Uncategorized/Blanks) because there is no journal source for plan lines.
- *Match Status*: Plan lines have a blank status and display under Match Status (Uncategorized/Blanks) because there is no match status for plan lines.

**Note:** These fields can't be ignored for plan lines because the same summarized Plan Value would be applied for every instance of Journal Status.

- You can now include a new dimension called Plan Entry Document Status in the financial reporting data model to filter on the financial plan line status explicitly (Available, Draft, In Progress). Otherwise, all available Plan Entry Document Statuses are included.
- If your plan is at a higher summary level than period, OfficeConnect uses the last period for any activity on that plan and the last period's end date to match up with its translation exchange rate.

Example: If your plan is at the quarterly level for Q3 (Jul-Sep), the plan amount registers activity in September and uses the September 30 end date for the currency translation exchange rate. A similar impact would apply to a plan amount meant to cover an entire year.

- All plan amounts entered in Workday Budgets are considered as period activity (plan amount for a specific time period). If you enter plan ending balances as plan amounts, use the Amount Type of "Activity" when reporting on ending balances for these plans.

## **Related Information Concepts**

[Concept: Currencies and Currency Translation](#)

[Concept: Modeled Data Sources](#)

## **Tasks**

[Set Up the Financial Reporting Data Model](#) on page 407

[Display Journal Line Details for Report Cells](#)

## **Reference**

[2022R2 What's New Post: Workday Financial Plan Lines in OfficeConnect for Financial Management](#)

[2022R2 What's New Post: Journal Line Details in OfficeConnect for Financial Management](#)

[2022R1 What's New Post: OfficeConnect Availability for Financial Management](#)

## **Concept: Differences Between OfficeConnect and Report Writer**

This section describes the differences between reporting on journal line data using OfficeConnect with the financial modeled data source and using Workday Report Writer with a Workday-delivered data source.

### **Eliminations**

OfficeConnect supports intercompany and noncontrolling interest (NCI) elimination rules. For NCI, you must first set up the NCI by Ownership feature. See:

- [Steps: Set Up for Persisting Noncontrolling Interest](#) on page 280
- [Set Up Elimination Rules for Noncontrolling Interest](#) on page 281

OfficeConnect doesn't support interworktag eliminations.

OfficeConnect displays intercompany eliminations at the lowest common parent level.

### **Currency Translation Adjustment**

OfficeConnect only uses Translation Loss account and its posting conditions for currency translation adjustment.

### **Current Year Retained Earnings**

OfficeConnect doesn't automatically calculate the current year retained earnings. To include current year retained earnings in your worksheet, add a row that aggregates net revenue and expenses.

### **Filtering Data**

OfficeConnect filters data differently than Report Writer. In Report Writer, data source filters, built-in prompts, and report filters all filter the data displayed in the report in an additive way, further constraining the data that ultimately is displayed.

OfficeConnect uses default values for filtering data in the report, and you can define filters at different levels. The filters you define at the different levels might conflict with each other, so OfficeConnect follows predefined precedence rules to determine what data to display.

Example: Cells override rows.

### **Breadth of Data**

When you create a report in Report Writer, you specify a data source and data source filter to determine the data that the report displays.

When you create a report in OfficeConnect, the modeled data source contains data that comes from multiple security domains. The data you see in a report in OfficeConnect is all data you have access to

in all applicable domains. As a result, the data in your OfficeConnect report is a union of data you have access to in multiple domains.

### **Rounding and Significant Digits with Currency Translation**

Significant digits and rounding are important when performing arithmetic operations. When you report on a currency that's different than the ledger currency, the report performs currency translation.

When performing currency translation, OfficeConnect and Report Writer round numbers at different times. This difference in rounding might lead to a small, but noticeable difference in numbers when you compare reports using the same data from each tool.

- OfficeConnect retains all significant digits without rounding when performing internal calculations. OfficeConnect leaves all formatting decisions, such as rounding, to the user. Retaining the precision until the last possible moment improves performance when performing currency translation.
- Users can specify rounding for the entire workbook by accessing Workbook Properties and on the **Format** tab, select how to round data for OfficeConnect. Users can also leverage the Excel rounding functionality.
- Report Writer performs currency translation for each journal line and then rounds the value before performing other calculations.

If you compare the numbers in an OfficeConnect worksheet to a Workday Report Writer report with the same data, there might be a difference in numbers due to the different method of handling significant digits.

### **Time Period Planning**

If your plan is at a higher summary level than period, OfficeConnect uses the last period for any activity on that plan and the last period's end date to match up with its translation exchange rate.

Example: If your plan is at the quarterly level for Q3 (Jul-Sep), the plan amount registers activity in September and uses the September 30 end date for the currency translation exchange rate. A similar impact would apply to a plan amount meant to cover an entire year.

In contrast, Report Writer uses the first period in the summary period but the end period for the translation rate. In the prior example, the plan amount registers activity in July, but uses the September 30 end date for the currency translation exchange rate.

## **Financial Analytics**

### **Configure Manager Metrics Reporting**

#### **Context**

Configure definitions for the **Manager Metrics** report for your companies and company hierarchies. The report provides managers with a quick snapshot of organization costs and average cost per headcount for a cost center, region, custom organization, or project.

#### **Steps**

1. Access the **Configure Manager Metrics** task.

2. As you complete the task, consider:

Option	Description
<b>Company</b>	Select one or more companies and company hierarchies that the manager metrics definition applies to. All must use the same fiscal schedule and belong to the same account set.
<b>Translation Currency</b>	The currency of the report. You can run the report in any currency in which you have exchange rates for conversion.
<b>Translation Rule Set</b>	<p>If the company currency differs from the translation currency, select the translation rule set to use to calculate the translated amounts. You can use any of these translation rule sets:</p> <ul style="list-style-type: none"> <li>• The default translation rule set of the company.</li> <li>• Any other account translation rule set of the company.</li> </ul>
<b>Default Time Period</b>	The relative time period choices that Workday provides, such as current period year to date (YTD), last 12 periods, and last year. The user who runs the report can change this selection.
<b>Book</b>	Narrow the activity in the reporting metrics to a specific book.

3. Select the **Organization Metrics**, including the key **Account/Account Summary** for each measure.
4. (Optional) Select a **Financial Headcount Definition** to include a headcount metrics section in the report.

This selected definition drives the calculation of headcount on the report. The metric fields on the report include: **Budgeted**, **Filled**, **Open**, **Available Plan**, and **Plan Usage**. When you run the report for an organization hierarchy, Workday aggregates the headcount metrics for all child organizations.

## Result

Managers can run the **Manager Metrics** report. Metrics default to the organization and time period from the definition, but managers can click **Change Selection** to select a different organization and relative time period. If the manager belongs to more than 1 organization, Workday uses the highest organization within the highest hierarchy node.

## Configure Financial Metrics Reporting

### Context

Configure definitions for the **Financial Metrics** report for your companies and company hierarchies. The report enables accountants and financial analysts to provide executives with a quick snapshot of key metrics such as liquidity, balance sheet, and profit/loss.

### Steps

1. Access the **Create/Edit Financial Metrics Definition** task.

2. As you complete the task, consider:

Option	Description
<b>Company</b>	<p>Select one or more companies and company hierarchies that the financial metrics definition applies to. All must use the same fiscal schedule and belong to the same account set.</p> <p>Financial metrics default to the company of the user but the user who runs the report can change it. If the user has a financial reporting role in more than 1 company, Workday uses the highest company within the highest hierarchy node.</p>
<b>Translation Currency</b>	<p>The currency of the report. You can run the report in any currency in which you have exchange rates for conversion.</p>
<b>Account Translation Rule Set</b>	<p>If the company currency differs from the translation currency, select a translation rule set to calculate the translated amounts. You can use the default rate or any other translation rule sets of the company.</p>
<b>Default Time Period</b>	<p>The relative time period choices that Workday provides, such as current period year to date (YTD), last 12 periods, and last year. The user who runs the report can change this selection.</p>
<b>Book</b>	<p>Narrow the activity in the reporting metrics to a specific book.</p>

3. Select each **Metric**, whether to **Display** the metric, and the **Measures** used to calculate the metrics, including the key **Account/Account Summary** for each measure.

### Result

Users permitted to view financial metrics information (such as executives) can run the **Financial Metrics** report. They can click the **Change Selection** button to select a different company, translation currency, and relative time period than the ones from the definition.

## Concept: Financial Executive Scorecard

The **Financial Executive Scorecard** is a configurable dashboard that gives you insight into important performance indicators for your organization. With the Financial Executive Scorecard, you can:

- Create snapshots of your organization key financial metrics for a given fiscal period.
- Review the financial performance of your business in a consolidated view.

You can customize the dashboard with worklets that you want to display from the **Reports and Dashboards** profile group.

Workday provides these scorecard components:

- Composite reports enabled as worklets for the dashboard.
- **Financial Executive Scorecard Sub-Report - Published** report that provides initialized, calculated, and published scorecard metric values.
- Scorecard prompt set that specifies the metric set, organization, and period for the subreport.
- *Financial Executive* metric set that defines the organizations, fiscal schedule, and published period for the scorecard metrics.

- Standard financial metrics.

The **Financial Executive Scorecard** reports use these layouts to display these metrics:

Report	Layout	Using these Metric Calculations and Metrics
<b>Financial Executive Scorecard - Net Income</b>	KPI Card	WD Matrix Report Metric Calculation • <b>Net Income</b>
<b>Financial Executive Scorecard - Revenue per Employee</b>	KPI Card	WD Simple Arithmetic Metric Calculation • <b>Revenue per Employee</b>
<b>Financial Executive Scorecard - Spend per Employee</b>	KPI Card	WD Simple Arithmetic Metric Calculation • <b>Spend per Employee</b>
<b>Financial Executive Scorecard - Operations</b>	KPI List	WD Simple Arithmetic Metric Calculation: • <b>Profit %</b> • <b>Gross Margin %</b> WD Matrix Report Metric Calculation: • <b>Total Revenue</b> • <b>Total Spend</b> WD Headcount Metric Calculation: • <b>Financial Employee Count</b>
<b>Financial Executive Scorecard - Financial Ratios</b>	KPI List	WD Simple Arithmetic Metric Calculation • <b>Debt to Equity Ratio</b> • <b>Return on Equity Ratio</b> • <b>Current Ratio</b>

You can drill down on the delivered worklets to review descriptions and report details of each worklet.

You can also access the Financial Executive Scorecard on Android, iPad, and iPhone devices.

## Scorecard Setup

To set up the Financial Executive Scorecard, you must:

1. Enable scorecard in your Workday tenant.
2. Configure security policies on the *Metric Management*, *Manage: Metric Values*, *Metrics in Review*, and *Published Metrics* domains.
3. Configure the *Financial Executive* scorecard on the **Metric Set Details** profile group.
4. Map financial scorecard standard aliases to your ledger account summaries, ledger types, and account translation rule set in your tenant.

5. Initialize, calculate, review, and publish metric values for Workday-delivered metrics on the **Process** profile group.
6. Configure the dashboard by clicking **Maintain Dashboards** on the **Reports and Dashboards** profile group.

## Concept: Report Administrator Dashboard

The Report Administrator dashboard is a configurable workspace, enabling you to monitor report performance in a single place. You can select the reports you want to display in the default menu using the **Maintain Dashboards** report. To add links to custom reports and external links, click **Edit**.

Security: *Custom Report Administration* in the System functional area.

Workday provides these reports as worklets that you can add to your Report Administrator dashboard:

- **Custom Report Exceptions by Owner**

Contain reports:

- That fail exception audits, organized by report owner.
- Enabled as worklets but not available on any dashboards.
- Temporary reports past their deletion date.
- That you can't share with any users.
- Containing items marked **Do Not Use**.

- **Custom Reports Not Run**

A list of reports not run in the tenant for the past 365 days. Helps to identify reports that might have fallen off user radars or might no longer have value.

- **Recently Created and Modified Reports**

Reports added or modified in the last 90 days. This can help you measure or identify needed education and change management activities specific to these updates.

- **Recently Updated Calculated Fields**

A list of calculated fields created or modified in the last 7 days. Useful when researching when report results unexpectedly change.

- **Scheduled Reports That Will Fail**

Proactively identify actively scheduled reports with scheduling exceptions and that will fail on their next scheduled run. A commonly caught error is a nonexpired report schedule associated with a user who is no longer authorized to run the report.

- **Slowest Reports Run in Background**

A worklet that displays the average report execution time, in milliseconds. Sorted with the slowest average time at the top. By default, the report returns results from the last 90 days, however you can adjust the number of days.

You can also add tasks including these to the Dashboard Menu for quick access:

- All Custom Reports
- Create Calculated Field
- Create Custom Report
- Delete Custom Report
- Delete Temporary Report Definition
- Edit Custom Report
- Edit Report Performance Log Settings
- Hide Workday Delivered Report

- Maintain Dashboards
- Process Monitor
- Report fields
- Schedule a report.
- Transfer Ownership of Custom Reports
- View Custom report
- View Report Performance Logs

**Note:** When you hide standard reports, Workday doesn't display them in searches. If you can't find a specific report, access the **Hide Workday Delivered Report** task to determine if you hid it.

Once you configure the dashboard, you can add it as a worklet to your Home page. You can also access the Report Administrator dashboard on Android, iPad, and iPhone devices.

## Example: Set Up a Custom Financial Scorecard

This example illustrates how you can build custom financial scorecard to make important analytic information available from your home page, dashboard, or scorecard worklet.

#### Context

Teresa Serrano is Chief Financial Officer at Global Modern Services. In a meeting with the Chief Human Resources Officer Logan McNeil, she notices that Logan uses a management reporting dashboard to gain insight into workforce operations.

Teresa talks with the Scorecard Administrator Norman Chan about developing custom financial scorecards that:

- Displays revenue, net income, and profit margin for January 2013.
- Uses analytic indicators to display performance and trend.
- Enables her to view more detailed information to gain greater insight.
- Enables other vice presidents to provide comments and recommendations when profit is at risk of being below target.

**Note:** Ledger account summaries, company hierarchies, and matrix reports are specific to your Workday tenant and might be different from the values suggested here.

#### Prerequisites

- On the **Edit Tenant Setup - Reporting and Analytics** task, select the **Enable Scorecarding** check box to enable custom scorecards.

- Have an existing actual or plan matrix report to produce aggregate value for the metrics. You can also create custom matrix reports by copying these 2 delivered standard reports:
  - Financial Scorecard Metric for Journal by Company.
  - Financial Scorecard Metric for Journal by Cost Center.
- Have the appropriate security permissions for ledger account segments to all journals, including the accounting and operational journals.
- Security:
  - These domains in the System functional area:
    - *Metric Management*
    - *Manage Metric Values*
  - *Reports: Financial Accounting* domain in the Financial Accounting functional area.

## Steps

- Create a custom analytic scorecard.
- a) Access the **Create Analytic Scorecard Profile** task.

Field	Value
Name	Financial Executive Scorecard
Organization Type	Company Hierarchy
Top Level Node	1CON Consolidation - Corporate
Fiscal Schedule	Standard Corporate Schedule

- b) Click **OK** to display the scorecard profile.
- c) Click the **Metric Set Details** profile group.
- d) Click **Edit**.
- e) Enter or confirm these field values:

Field	Value
Inactive	Unchecked
Organization Type	Company Hierarchy
Include Content	Checked
Metric Calculation Scope	Node including subordinates
Top Level Node	1CON Consolidation - Corporate
Levels From Top	1
Additional Nodes	Blank
Fiscal Schedule	Standard Corporate Schedule
Published Period	2012 - Dec
Metric Processing Period	Workday automatically populates the next period of 2013 - Jan.

- f) Click **OK** and then click **Done**.

- Create a custom metric for Net Income.
  - a) Access the **View Analytic Scorecard Profile** report.
  - b) From the **Analytic Scorecard Profile** prompt, select **Custom-> Financial Scorecard**.
  - c) Click **OK** to display the **Financial Scorecard** profile.
  - d) Click the **Metrics** profile group.
  - e) Click **Create Custom Metric** and confirm or enter these values:

Field	Value
<i>Metric Set</i>	Financial Scorecard
<i>Metric Name</i>	Net Income
<i>Workday Metric Calculation Name</i>	WD Matrix Report

- f) Click **OK**.
- g) On the **Metric Source** tab, enter:

Field	Value
<i>Track Target</i>	Checked
<i>Target Source</i>	Matrix Report

- h) Click the **Calculation Configuration** tab.
- i) In the **Actual Amount** section, enter:

Field	Value
<i>Matrix Report</i>	(Actuals) Matrix Report for Financial Scorecard Metrics by Company

- j) In the **Map Matrix Report Prompts** grid, enter:

Prompt Field	Value Type	Value
<i>Company</i>	Specify Value	1CON Consolidation-Corporate
<i>Ledger</i>	Specify value	Actuals
<i>Amount Type</i>	Specify value	Activity
<i>Time Period</i>	Specify Value	Current Period YTD
<i>Period</i>	Use Value from Metric Calculation	Metric Period
<i>Ledger Accounts and Summaries</i>	Specify Value	Corporate: Total Revenue Corporate: Total Expenses
<i>Translation Currency</i>	Specify value	USD

Prompt Field	Value Type	Value
Account Translation Rule Set	Specify value	Consolidations

k) On the **Aggregation Field**, select **Debit Minus Credit Amount**.

l) In the **Target Amount** section, enter:

Field	Value
Matrix Report	(Plan) Matrix Report for Financial Scorecard Metrics by Company

m) In the **Map Matrix Report Prompts** grid, enter:

Prompt Field	Value Type	Value
Company	Specify Value	1CON Consolidation-Corporate
Ledger	Specify value	Actuals
Amount Type	Specify value	Activity
Time Period	Specify Value	Last Year - Current Period YTD
Period	Use Value from Metric Calculation	Metric Period
Plan Structure	Specify Value	Budget
Ledger Accounts and Summaries	Specify Value	Corporate: Total Revenue Corporate: Total Expenses
Translation Currency	Specify value	USD
Account Translation Rule Set	Specify value	Consolidations

n) On the **Aggregation Field**, select **Debit Minus Credit Amount**.

o) On the **Thresholds** tab, enter:

Field	Value
Threshold Type	Percentage of target
Threshold Direction	Increasing is better
Bad Upper Limit	0.9
Warning Upper Limit	0.95

p) On the **About This Metric** header, enter:

Field	Value
About This Metric	Net income is calculated by taking revenue and adjusting for the cost of doing business, depreciation, interest, taxes, and other expenses.

q) Click **OK** and then click **Done**.

- Create a custom metric for total revenue.
  - a) Click **Create Custom Metric** and confirm or enter these values:

Field	Value
<i>Metric Set</i>	Financial Executive Scorecard
<i>Metric</i>	Revenue
<i>Workday Metric Calculation Name</i>	WD Matrix Report

- b) Click **OK**.
- c) On the **Metric Source** tab, enter:

Field	Value
<i>Track Target</i>	Checked
<i>Target Source</i>	Matrix Report

- d) Click the **Calculation Configuration** tab.
- e) In the **Actual Amount** section, enter:

Field	Value
<i>Matrix Report</i>	(Actuals) Matrix Report for Financial Scorecard Metrics by Company

- f) In the **Map Matrix Report Prompts** grid, enter:

Prompt Field	Value Type	Value
<i>Company</i>	Specify Value	1CON Consolidation-Corporate
<i>Ledger</i>	Specify value	Actuals
<i>Amount Type</i>	Specify value	Activity
<i>Time Period</i>	Specify Value	Current Period YTD
<i>Period</i>	Use Value from Metric Calculation	Metric Period
<i>Ledger Accounts and Summaries</i>	Specify Value	Corporate: Total Revenue
<i>Translation Currency</i>	Specify value	USD
<i>Account Translation Rule Set</i>	Specify value	Consolidations

- g) On the **Aggregation Field**, select **Credit Minus Debit Amount**.
- h) In the **Target Amount** section, enter:

Field	Value
<i>Matrix Report</i>	(Plan) Matrix Report for Financial Scorecard Metrics by Company

- i) In the **Map Matrix Report Prompts** grid, enter:

Prompt Field	Value Type	Value
<i>Company</i>	Specify Value	1CON Consolidation-Corporate
<i>Ledger</i>	Specify value	Actuals

Prompt Field	Value Type	Value
Amount Type	Specify value	Activity
Time Period	Specify Value	Last Year - Current Period YTD
Period	Use Value from Metric Calculation	Metric Period
Plan Structure	Specify Value	Budget
Ledger Accounts and Summaries	Specify Value	Corporate: Total Revenue
Translation Currency	Specify value	USD
Account Translation Rule Set	Specify value	Consolidations

- j) On the **Aggregation Field**, select **Credit Minus Debit Amount**.  
 k) On the **Thresholds** tab, enter:

Field	Value
Threshold Type	Percentage of target
Threshold Direction	Increasing is better
Bad Upper Limit	0.9
Warning Upper Limit	0.95

- l) On the **About This Metric** header:

- a. Enter:

Field	Value
About This Metric	Revenue is the amount of money a company actually receives during a specific period, including discounts and deductions for returned merchandise. It's the top line or gross income figure less costs, to determine net income.

- b. Click the **Link** icon. For **Link Type**, select **Report Link** and then select **Report Link 1**. Click **OK**.  
 m) To link the custom metric scorecard to other reports, expand **Report Links** and enter:

Field	Value
Tag	View Top 10 Customers by Revenue
Drill To	Top 10 Customers by Revenue

- n) Click the **Map Prompts** button and enter:

Prompt	Value Type	Field	Value
Company	Use Value From Metric	Organization	Leave Blank
Ledger	Specify default value	Leave Blank	Actuals
Time Period	Specify default value	Leave Blank	Current Period YTD
Period	Use Value From Metric	Period	Leave Blank

Prompt	Value Type	Field	Value
<i>Account Translation Rule Set</i>	Specify default value	Leave Blank	Consolidations
<i>Translation Currency</i>	Specify default value	Leave Blank	USD
<i>Revenue Accounts</i>	Specify default value	Leave Blank	Corporate: Total Revenue

- o) Click **Done**.
- p) Click **OK** and then click **Done**.
- Create a custom metric for Profit Margin.
- a) Click **Create Custom Metric** and confirm or enter these values:

Field	Value
<i>Metric Set</i>	Financial Scorecard
<i>Metric</i>	Profit Margin
<i>Workday Metric Calculation Name</i>	WD Simple Arithmetic

- b) Click **OK**.
- c) On the **Metric Source** tab, select:

Field	Value
<i>Actual Source</i>	Workday Algorithm
<i>Track Target</i>	Checked
<i>Target Source</i>	Workday Algorithm

- d) Click the **Calculation Configuration** tab and select:

Field	Value
<i>Operand A</i>	Net Income
<i>Operand B</i>	Blank
<i>Operator 1</i>	Divide
<i>Operand C</i>	Revenue
<i>Operand D</i>	Blank
<i>Operand E</i>	Blank
<i>Operand F</i>	Blank

- e) On the **Thresholds** tab, enter:

Field	Value
<i>Threshold Type</i>	Percentage of target
<i>Threshold Direction</i>	Increasing is better
<i>Bad Upper Limit</i>	0.9

Field	Value
Warning Upper Limit	0.95

- f) On the **About This Metric** header, enter:

Field	Value
About This Metric	Profit Margin is calculated as net income divided by total revenue or profits divided by sales. Profit margins are expressed as a percentage and measures how much out of every dollar of sales a company actually keeps earning. Example: a 20% profit margin means that the company has a net income of \$0.20 for each dollar of total revenue earned.

- g) Click **OK**.
- h) Click the **Calculation Configuration** tab and confirm that the Expression displays *Net Income/Revenue*.
- i) Click **Done**.
- Create a custom dashboard.
    - a) Click the **Reports and Dashboards** profile group.
    - b) Click **Create Custom Dashboard** and enter:

Field	Value
Dashboard	Financial Scorecard

- c) Click **OK**.
- d) Enter these dashboard settings:

Field	Value
Prompt Set	Scorecard
Domain	Metric Management
Dashboard Icon	Actuals vs Budget
Max Worklets Allowed	6
Configurable by User	Unchecked

- e) Click **OK** and then click **Done**.
- Create scorecard report.
    - a) Click **Create Scorecard Report** and enter:

Field	Value
Report Name	Sub Report - Scorecard
Dashboard	Financial Scorecard

- b) On the **Metrics** grid, enter these values:

Metric	Formatting Style
Revenue	Thousands (1 Decimal Place) K
Net Income	Leave Blank

Metric	Formatting Style
Profit Margin	Percentage - 2 Decimal Places

- c) On the **Layout Options** section, confirm **Enable Drilling To** is checked and for the **Target** prompt, select **Target Value**.
- d) On the **Share Option** section, select **Share with all authorized users**.
- e) Click **OK** and then click **Done**.
- Display the Financial Scorecard in Worklets.
  - a) Click the **Reports and Dashboards** profile group.
  - b) Click **Maintain Dashboards**.
  - c) Locate the *Financial Scorecard* you created.
  - d) Click the **Edit** button.
  - e) On the **Dashboards Prompts** tab, enter these values:

Prompt Field	Label for Prompt	Default Type	Default Value
Metric Set	Metric Set	Specify default value	Financial Scorecard
Metric Organization	Metric Entity	Specify default value	1CON Consolidation-Corporate
Metric Period	Metric Period	Specify default value	Jan 2013

- f) On the **Required Worklets** tab, add this worklet to the grid:

Field	Value
Worklet	Sub Report - Scorecard
Worklet Size	1x (for all worklets)

- g) Click **Map Prompts** and then **Done**.
- h) Click **OK** and then click **Done**.
- Initialize and calculate the metric set.
  - a) Click the **Process** profile group to generate values for the current processing period.
  - b) Verify that the current processing period is 2013 - Jan.
  - c) Click **Initialize**.

Workday automatically populates these values:

Field	Value
Metric Set	Financial Scorecard
Period	2013 - Jan
Run Frequency	Run Now

Field	Value
Processing Type	Process metric set for current period.

- d) Check **Confirm**.
- e) Click **OK** and then click **Done**.
- f) Click the **Process** profile group to refresh the process **Status**.

Workday initializes the metric values in the *Financial Scorecard* metric set and displays a message when complete. Confirm that the process is complete before moving to the next processing step.

- g) Click **Calculate**.

Workday automatically populates these values:

Field	Value
Metric Set	Financial Scorecard
Period	2013 - Jan
Run Frequency	Run Now

- h) Check **Confirm**.
- i) Click **OK** and then click **Done**.
- j) Click the **Process** profile group to refresh the process **Status**.

Workday calculates the metric values in the *Financial Scorecard* metric set and displays a message when complete.

- Publish the metric set.

- a) Click **Publish**.

Workday automatically populates these values:

Field	Value
Metric Set	Financial Scorecard
Period	2013 - Jan
Run Frequency	Run Now

- b) Select **Confirm**.
- c) Click **OK** and then click **Done**.
- d) Click the **Process** profile group to view the process **Status**.

- View the Financial Scorecard in the Dashboard.

- a) Search for the **Financial Scorecard** custom dashboard you created.
- b) From the related actions menu of the scorecard name, select **Custom Dashboard > Run** to display the Key Performance Indicator (KPI) card worklets on the dashboard.

## Result

Norman Chan gives Teresa security permissions to see the financial scorecard. On the *Financial Scorecard* custom dashboard, Workday displays these Financial Scorecard worklets in the KPI card layout:

- Revenue.
- Net Income.
- Profit Margin.

The KPI-style worklets display as green, yellow, or red to indicate how well Global Modern Services is meeting defined targets. Using the **Gear** icon, Teresa can refresh the data for each worklet. She can select **View More** to view details for:

- Metric Period.

- Metric Organization.
- Metric Set.

Teresa can:

- Use the *Top 10 Customers by Revenue* link to drill down to view the **Top 10 Customers by Revenue** report.
- Review comments and recommendations from vice presidents.

## Example: Set Up a Financial Executive Scorecard

This example illustrates how you can build a financial executive scorecard to create snapshots of your organization's financial metrics for a fiscal period.

### Context

Teresa Serrano is Chief Financial Officer at Global Modern Services and wants to gain insight into important financial performance indicators for her company for July 2017.

Teresa talks with the Scorecard Administrator Norman Chan about developing a custom financial executive scorecard that displays these financial metrics for the consolidated company:

- Net income.
- Revenue and spend per employee.
- Financial ratios.
- Financial operation metrics.

**Note:** Ledger account summaries and company hierarchies are specific to your Workday tenant and might be different from the values suggested here.

### Prerequisites

- Control access to ledger accounts and ledger account segments to all journals, including accounting and operational journals.
- Security:
  - These domains in the System functional area:
    - *Metric Management*
    - *Manage Metric Values*
  - *Management Dashboard: Financial Executive Scorecard* domain in the Financial Management functional area.
  - *Reports: Financial Accounting* domain in the Financial Accounting functional area.

### Steps

- Enable custom scorecards.
  - On the **Edit Tenant Setup - Reporting and Analytics** task, select the **Enable Scorecarding** check box to enable custom scorecards.

- Configure the financial executive scorecard and map aliases.
  - Access the **View Analytic Scorecard Profile** report.
  - From the **Scorecard** prompt, select **Delivered -> Financial Executive Scorecard**.
  - Click **OK**.
  - From the **Financial Executive Scorecard** profile, click the **Metric Set Details** profile group.
  - Click **Configure**.
  - Enter these field values:

Field	Value
Inactive	Unchecked
Skip Review	Unchecked
Metric Calculation Scope	Node including subordinates
Top Level Node	1CON Consolidation - Corporate
Fiscal Schedule	Standard Corporate Schedule
Published Period	2017 - Jun
Metric Processing Period	Workday automatically populates the next period of 2017 - Jul.

- Click **OK** and then click **Done**.
- Click **Map Aliases**.
- Map these aliases to your mapped tenant values:

Business Object	Standard Aliases	Mapped Tenant Value
Ledger Type	_Actuals	Actuals
Ledger Account Summary	_FIN_Scorecard_Cost_of_Sales	Cost of Sales
Ledger Account Summary	_FIN_Scorecard_Current_Assets	Current Assets
Ledger Account Summary	_FIN_Scorecard_Current_Liabilities	Current Liabilities
Ledger Account Summary	_FIN_Scorecard_Total_Equity	Total Equity
Ledger Account Summary	_FIN_Scorecard_Total_Expense	Total Expense
Ledger Account Summary	_FIN_Scorecard_Total_Liabilities	Total Liabilities
Ledger Account Summary	_FIN_Scorecard_Total_Revenue	Total Revenue
Account Translation Rule Set	_FinAggAccountTranslationRules	Consolidations
Custom Organization	_Top_Level_Company_Hierarchy	1CON Consolidation - Corporate

- Click **OK** and then click **Done**.
- Initialize metric values.
  - From the **Financial Executive Scorecard** profile, click the **Process** profile group.
  - Click **Initialize**.
  - Workday automatically populates these values:

Field	Value
Metric Set	Financial Executive Scorecard
Period	2017 - Jul

Field	Value
Run Frequency	Run Now
Processing Type	Process metric set for current period

- d) Check **Confirm**.
- e) Click **OK** and then click **Done**.
- f) Click the **Process** profile group to update the status.  
Workday initializes the metric values for the *Financial Executive Scorecard* and displays a notification when complete.
- Calculate and review metric values.
  - a) Click **Calculate**.
  - b) Workday automatically populates these values:

Field	Value
Metric Set	Financial Executive Scorecard
Period	2017 - Jul
Run Frequency	Run Now

- c) Check **Confirm**.
- d) Click **OK** and then click **Done**.  
Workday calculates the metric values for the *Financial Executive Scorecard* and displays a notification when complete.
- e) Click **Start Review**.
- f) Workday automatically populates these values:

Field	Value
Metric Set	Financial Executive Scorecard
Period	2017 - Jul
Run Frequency	Run Now

- g) Check **Confirm**.
- h) Click **OK** and then click **Done**.
- i) Click the **Process** profile group to update the process **Status**.  
Workday reviews the metric values for the *Financial Executive Scorecard* and displays a notification when complete.
- Publish metric values.
  - a) Click **Publish**.
  - b) Workday automatically populates these values:

Field	Value
Metric Set	Financial Executive Scorecard
Period	2017 - Jul
Run Frequency	Run Now

- c) Check **Confirm**.
- d) Click **OK** and then click **Done**.
- e) Click the **Process** profile group to update the process **Status**.  
Workday publishes the metric values for the *Financial Executive Scorecard* and displays a notification when complete.

- Display the Financial Executive Scorecard in Worklets.
  - a) From the **Financial Executive Scorecard** profile, click the **Reports and Dashboards** profile group.
  - b) Click **Maintain Dashboards**.
  - c) Locate the *Financial Executive Scorecard* you created.
  - d) Click **Edit**.
  - e) On the **Dashboard Prompts** tab, enter these values:

Prompt Field	Label for Prompt	Default Type	Default Value
<i>Metric Set</i>	Metric Set	<i>Specify Default Value</i>	Financial Executive Scorecard
<i>Metric Organization</i>	Metric Entity	<i>Specify Default Value</i>	1CON Consolidation - Corporate
<i>Metric Period</i>	Metric Period	<i>Specify Default Value</i>	2017 - Jul

- f) Click **OK**.
- g) On the **Required Worklets** tab, add these Financial Executive Scorecard worklets to the grid:

Field	Value
<i>Worklet</i>	<ul style="list-style-type: none"> <li>• Financial Executive Scorecard - Net Income</li> <li>• Financial Executive Scorecard - Revenue per Employee</li> <li>• Financial Executive Scorecard - Operations</li> <li>• Financial Executive Scorecard - Financial Ratios</li> <li>• Financial Executive Scorecard - Spend per Employee</li> </ul>
<i>Worklet Size</i>	1x (for all worklets)

- h) Click **OK** and then click **Done**.
- i) Click **Done**.
- Configure the home page to display the Financial Executive Scorecard.
  - a) From your Home page, click the **Configure Applications (gear)** icon to display the **Configure Worklets** page.
  - b) Under **Optional Worklets**, add a row and select the **Financial Executive Scorecard** worklet.
  - c) Click **OK** and then click **Done**.

Workday displays the Financial Executive Scorecard on your home page.

- d) Click to open the Financial Executive Scorecard.

## Result

Workday displays these Financial Executive Scorecard worklets in the KPI card layout:

- Net Income.
- Financial ratios.
- Revenue and spend per employee.
- Financial operation metrics.

Concept: [Financial Executive Scorecard](#) on page 419

## External Financing Sources

---

### Steps: Maintain Access to Investors

#### Prerequisites

- Understand segment-based security groups and segmented security.
- Determine whether you need to restrict segments of data to groups of workers.

#### Context

Control access to individual investors through security segments so that workers can access only the investors that they can see.

Segmented security requires a lot of planning. With:

- Security segments, included values can cross multiple segments or be mutually exclusive.
- Security groups, workers can be part of one or more groups and have access to one or more security segments.

#### Steps

##### 1. [Edit Domain Security Policies](#).

Enable members of selected security groups to define security segments.

Configure the *Set Up: Investor Security Segments* domain in the **System Functional Area**.

##### 2. Access the **Create Investor Security Segment** task.

Create enough security segments to cover each unique security access requirement. Example: Create different segments for executives, managers, and employees. Workday recommends that you build from least to most restrictive.

If you don't select a **Company**, workers from any company can access the listed investors.

Security: *Set Up: Investor Security* domain in the System functional area.

##### 3. [Create Segment-Based Security Groups](#).

Create a *Segment-Based Security Group* and associate it with an *Investor Security Segment* to meet your business requirements.

##### 4. [Edit Domain Security Policies](#).

Edit permissions on the applicable domain security policy to enable members of the new segment-based security groups to access investor information.

Configure the *Access Investor (Segmented)* security policy in the **Financial Accounting Functional Area**, adding the segment-based security groups with the appropriate access.

##### 5. [Activate Pending Security Policy Changes](#).

##### 6. Test the security policy changes.

Sign in as a different user for each segment and verify that they have access to only the investors associated with their segment-based security groups.

#### Result

Workers can select from only the investors that they have security access to.

#### Example

- Enable members of your senior management team to access only certain investors, and members of your executive branch to access all investors in your company.

**Related Information****Concepts**

[Concept: Security Groups](#)

**Define Investors****Prerequisites**

To control access to investor information, create investor security segments.

**Context**

Create or edit investors for your company.

**Steps**

1. Access the **Create/Edit Investor** task.
2. As you complete this step, consider:

Field/Tab	Description
<b>Investor Name</b>	If you select a value from the <b>Create Investor from Business Entity</b> prompt, the <b>Investor Name</b> populates.
<b>Phonetic Name</b>	<p>Records the correct pronunciation of the <b>Investor Name</b> and these details on the <b>Settlement Bank Account</b> tab:</p> <ul style="list-style-type: none"> <li>• <b>Bank Phonetic Name</b></li> <li>• <b>Branch Phonetic Name</b></li> <li>• <b>Phonetic Name on Account</b></li> </ul> <p>Displays when:</p> <ul style="list-style-type: none"> <li>• You enable phonetic names on the <b>Edit Tenant Setup - Global</b> task.</li> <li>• Users select the relevant locale and display language in their preferences.</li> </ul> <p>The preferred language of the bank account country must match the language enabled on the tenant setup.</p>
<b>Create Investor from Business Entity</b>	<p>Create an investor from an existing business entity.</p> <p>The investor name and ID populates based on the business entity you select and can't be modified.</p>
<b>Tax Authority Form Type</b>	<p>Select the investor's tax authority form type:</p> <ul style="list-style-type: none"> <li>• 1042-S for a non-resident alien subject to U.S. income withholding.</li> <li>• 1099 MISC to report miscellaneous income to the IRS.</li> <li>• TDS to identify tax deducted at source for non-resident investors.</li> </ul>
<b>TIN Type</b>	Enter the tax identification type for the investor:

Field/Tab	Description
	<ul style="list-style-type: none"> <li>• SSN or ITIN (Social Security Number or Individual Taxpayer Identification Number)</li> <li>• EIN (Employer ID Number)</li> </ul>
<b>Investor Security Segments</b>	Select a security segment to control a worker's access to this investor.
<b>Tax Document Date</b>	Record the date for submitting the tax document.
<b>Default Payment Type</b>	Select the <b>Default Payment Type</b> for this investor. If you specify Automated Clearing House (ACH), direct debit, direct deposit, or wire, you must complete information in the <b>Settlement Bank Account</b> tab.
<b>Contact Information</b>	<p>Provide contact details for this investor, such as:</p> <ul style="list-style-type: none"> <li>• <b>Billing</b>, <b>Remit To</b>, and <b>Shipping</b> addresses.</li> <li>• Primary <b>Email</b> account.</li> </ul>
<b>Settlement Bank Account</b>	Add settlement bank account details for electronic payments to investors (ACH, direct debit, direct deposit, or wire).
<b>Alternate Names</b>	<p>Examples of using alternate names:</p> <ul style="list-style-type: none"> <li>• The <i>Remit To Payee</i> is different from the investor.</li> <li>• The investor name is too long to print on a check. To print a shorter name, enter the <b>Alternate Name</b> and select <i>Remit to Payee</i> as the <b>Alternate Name Usage</b>.</li> </ul>
<b>Attachments</b>	Attach related investor business documents.

### Tasks

[Create Ad Hoc Payments](#) on page 1964

## Set Up Loan Information

### Prerequisites

- Security: *Setup: Loan* domain in the Common Financial Management functional area.
- Set up loan investor types using the **Maintain Loan Investor Types** task.
- Set up loan referral types using the **Maintain Loan Referral Types** task.
- Set up any custom fields that you want to use for your loan.

### Context

Customize customer and supplier loan details specific to your organization for reporting and tracking.

### Steps

1. Access the **Create Loan** task.

2. As you complete the task, consider:

Option	Description
<b>Loan Number</b>	<p>Enter a value you want to associate with the loan for reporting and transactions.</p> <p>You can use the same loan number more than once, such as when you record loans from more than 1 company with the same loan number.</p>
<b>Vintage Date</b>	Enter the original close year for the loan.
<b>Investor Type</b>	<p>You can define the types of investors that are specific to your organization using the <b>Maintain Loan Investor Types</b> task. You can typically categorize investor types under these categories:</p> <ul style="list-style-type: none"> <li>• Traditional financiers like banks.</li> <li>• Hard money investors.</li> <li>• Portfolio investors.</li> </ul>
<b>Referral Type</b>	<p>Enter the type of referrer that assisted with the loan origination. Referrers can include:</p> <ul style="list-style-type: none"> <li>• Financial consultants.</li> <li>• Loan brokers.</li> <li>• Real estate agents.</li> </ul> <p>You can define the specific referral types for your organization in the <b>Maintain Loan Referral Types</b> task.</p>
<b>Related Worktags</b>	<p>Set up related worktags for this object using the related worktag types that you configure on the <b>Maintain Related Worktag Usage</b> task. Workday automatically populates transactions with the values in the <b>Default Worktag</b> column when you select the object on the transaction.</p>

## Result

Use the loan worktag object to track loan transactions, and generate reports on specific loans for these transactions:

- Customer invoices
- Customer invoice adjustments
- Cash sales
- Supplier invoices
- Supplier invoice adjustments
- Ad hoc payments
- Ad hoc bank transactions
- Accounting journals

You can add custom fields to the loan using the **Create Custom Objects** task.

- [Configure Worktags for Transactions](#)

## Multiple Funding Sources

---

### Setup Considerations: Multiple Funding Sources

You can use this topic to help make decisions when planning your configuration and use of multiple funding sources. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

A funding source is money set aside for a specific purpose that you can use while within limitations or if you meet conditions. You can pay for costs and transactions directly from the funding sources. When you process a transaction for funding, Workday reclassifies the transaction using the associated funding source rule.

### Business Benefits

You can fund a project with multiple funding sources. When you fund a project with multiple funding sources, you can prioritize specific funding sources to pay for costs and expenses. This helps you budget and track the actual costs of your project, which you can then analyze to help gauge project performance and budget allocation.

### Use Cases

Multiple funding sources enables you to do these things on a project:

- Assign projects to multiple funding sources.
- Reclassify expense transactions using the project worktag to specified funding sources.
- Restrict allocation of funds to funding sources using condition rules.
- Control the priority of funds you charge to a funding source on a funding source rule.
- Track expense transactions that you reclassified to a funding source.

### Questions to Consider

Questions	Considerations
Do you receive state or governmental funding for projects or programs?	Public or government funds frequently have stipulations that require you only use those funds for specific purposes, or towards specific expenses. You can use funding source rules and condition rules to track funds based on those stipulations.
Do you have projects that have restrictive requirements?	
Do you have sponsorships and grants that you can only use for specific purposes?	

Questions	Considerations
How do you want to restrict funds on your funding source?	Workday enables you to restrict access to funds by either spend restrictions or condition rules. You can use spend restrictions to limit funds based on spend categories. You can also use condition rules to limit funds based on indexed journal line attributes.
How do you want to structure your worktags and worktag types?	<p>Multiple funding sources can use worktags configured with the project to identify and reclassify expense transactions to funding sources. When you build your worktag structure, consider if you need these:</p> <ul style="list-style-type: none"> <li>• Awards</li> <li>• Cost Centers</li> <li>• Grants</li> <li>• Projects</li> </ul> <p>There's frequently worktag type requirements on the grants that might not be on the funding source. If you don't account for the restrictions on both the funding source and the grant, your facilities and administration expenses might not fully reflect your funding source transaction.</p>

## Recommendations

Functionality	Considerations
Funding source rule	<p>Workday recommends that you prioritize your most restrictive funding sources when you configure funding source rules.</p> <p>Workday evaluates funding sources from the top down. When you prioritize a loosely restricted funding source rule, Workday allocates funds from that priority first.</p>
Condition rules	<p>Workday recommends you configure condition rules for your funding source rules.</p> <p>Condition rules add an additional layer of restriction using indexed journal line attributes as filter criteria. Without condition rules, any transaction that uses the correct project worktag can take funds from the funding source.</p>
Spend restrictions	<p>We recommend you configure spend restrictions on your funding source rule.</p> <p>Spend restrictions help you include or exclude spend categories on a funding source, even with a shared project worktag. The restrictions help ensure that a funding source only receives the transactions you want.</p>

## Requirements

Before you can use multiple funding sources, you must set up projects and create project hierarchies.

## Limitations

You can't create a business process to review and approve the creation of:

- Funding sources.
- Funding source condition rules.
- Funding source rules.

You can only use multiple funding sources with 1 project hierarchy at a time.

You can only create 1 funding source condition rule per priority line.

## Tenant Setup

Select a project hierarchy on the **Top Project Hierarchy** prompt in the **Funding Source Options** section of the **Edit Tenant Setup - Financials** task.

You can also select the **Disable Funding Source Reclassifications for WIP Lines** check box. This option prevents Workday from reclassifying work-in-progress transactions when you process a funding source. Disabling reclassifications lowers the processing time and reduces the possibility of incorrectly reclassified transactions.

## Security

Configure these security domains in the Financial Accounting functional area:

Domains	Considerations
<i>Process: Funding Sources</i>	Set up to process and reprocess funding sources
<i>Set Up: Funding Sources</i>	Set up to create: <ul style="list-style-type: none"> <li>• Funding sources.</li> <li>• Funding source condition rules.</li> <li>• Funding source rules.</li> </ul>
<i>Set Up: Spend Restrictions</i>	Set up to create spend restrictions.

Configure the *Set Up: Grants* domain in the Grant Management functional area if you want to reclassify expense transactions to your grants.

## Business Processes

Configure the *Funding Source Reclassification Event* business process with an additional approval step to process or reprocess reclassification events for funding sources.

## Reporting

Reports	Considerations
<b>Award Spend Restriction Audit Report</b>	Enables you to verify that your transactions apply to the correct grants.
<b>Find Funding Source Reclassification Lines</b>	Enables you to review the reclassification lines on an expense transaction.
<b>View Default Funding Source</b>	The details on a funding source.

Reports	Considerations
<b>View Funding Source</b>	
<b>View Funding Source Condition Rule</b>	The details on a funding source condition rule. Also helps you find funding source rules that use that condition rule.
<b>View Funding Source Rule</b>	The details on your funding source and funding source priorities.
<b>View Spend Restriction</b>	The configuration of a spend restriction.

## Integrations

Web Services	Considerations
<i>Get Default Funding Sources</i>	Retrieves funding sources. Enables you to view detailed information across multiple funding sources.
<i>Get Funding Sources</i>	
<i>Get Funding Source Condition Rules</i>	Retrieves funding source condition rules assigned to a funding source rule. Enables you to view detailed information on those condition rules.
<i>Get Funding Source Rules</i>	Retrieves funding source rules. Enables you to view detailed information across multiple funding source rules.
<i>Get Spend Restrictions</i>	Retrieves details on spend restrictions. Enables you to view all of your spend restrictions at once.
<i>Put Default Funding Sources</i>	Sets a default funding source for the company.
<i>Put Funding Source Condition Rules</i>	Creates a funding source condition rule on a funding source rule.
<i>Put Funding Sources</i>	Creates a funding source.
<i>Put Funding Source Rules</i>	Creates a funding source rule.
<i>Put Spend Restriction</i>	Creates a spend restriction.

## Connections and Touchpoints

Functional Areas	Considerations
Grant Management	A significant source of funding can come from grants, which organizations frequently award with restrictions or stipulations. Multiple funding sources can help you allocate those granted funds, while maintaining the specified restrictions.
Projects	Multiple funding sources can help you set up and maintain your projects. You use funding sources to allocate funds to a project, which determines the amount of available money.
Project Tracking	You can track the transactions tied to a project using worktags. Reclassification of a transaction to

Functional Areas	Considerations
	a project applies the project worktags and uses any funds the transaction qualifies for.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Concept: Reclassification Journals and Lines](#) on page 453

## Steps: Set Up Multiple Funding Sources

### Prerequisites

Security:

- *Set Up: Fund* domain in the Common Financial Management functional area.
- *Set Up: Fund Accounting* domain in the Common Financial Management functional area.
- *Set Up: Grants* domain in the Grants Management functional area.

### Context

You can set up multiple funding sources to enforce funding source restrictions and to allocate funds to different projects in accordance with the funding agreement.

Funding sources can include grants, awards, subsidies, donations, credit, or venture capital. You can fund a project by multiple funding sources and can fund multiple projects by a funding source.

### Steps

1. Access the [Maintain Ledger Account Types](#) task.

If not already enabled, check **Expense Source** for Account Type Name **Expense** to classify expense items.

2. Access the [Edit Tenant Setup - Financials](#) task.

On the **Funding Source Options** section, specify a top-level project hierarchy. You can then select any project or project hierarchy in the specified top-level hierarchy when you create funding source rules.

3. Configure the *Funding Source Reclassification Event* business process with an approval step for reclassification events.

See [Steps: Configure Business Process Definitions](#).

4. [Configure Worktags for Transactions](#).

Configure worktags for the funding source.

5. [Create Spend Restrictions](#) on page 446.

Create spending restrictions to specify which expenses you want to fund.

6. [Create Default Funding Sources](#) on page 447.

Create a default funding source that a funding source rule can use if no other funding source is available.

7. [Create Funding Sources](#) on page 448.

Create funding sources to specify how much money is available for a specific purpose.

8. [Create Funding Source Rules](#) on page 450.

Create funding source rules to prioritize how to disburse funds.

**9. (Optional) Access the **Create Funding Source Condition Rules** task.**

Create a set of funding source condition rules that you can add to funding source rules. Determines when Workday can distribute funds to an eligible transaction from a funding source.

Security: *Set Up: Funding Sources* domain in the Financial Accounting functional area.

#### Related Information

##### Concepts

[Concept: Reclassification Journals and Lines](#) on page 453

##### Tasks

[Create Business Process Condition Rules](#)

## Create Spend Restrictions

#### Prerequisites

Security:

- *Set Up: Fund* domain in the Common Financial Management functional area.
- *Set Up: Fund Accounting* domain in the Common Financial Management functional area.
- *Set Up: Grants* domain in the Grants Management functional area.
- *Set Up: Funding Sources* domain in the Financial Accounting functional area.
- *Set Up: Spend Restrictions* domain in the Financial Accounting functional area.

#### Context

You can create spend restrictions to specify expenditure categories you want to fund by sources or grants.

You can restrict spending by **Spend Category and Pay Component Group** or **Object Class**.

#### Steps

1. Access the **Create Spend Restriction** task.
2. As you complete the task, consider:

Option	Description
<b>Entry Type</b>	Select <b>Allowable Costs</b> to avoid specifying a large number of spend categories that you don't want to fund. Select <b>Unallowable Costs</b> to avoid specifying a large number of spend categories that you want to fund.
<b>Restricted By</b>	To restrict spending for expenditures or payroll, select <b>Spend Category and Pay Component Group</b> . To restrict spending only for grants, select <b>Object Class</b> .
<b>Restrictions</b>	If restricting by <b>Spend Category and Pay Component</b> , you must select at least 1 restriction. If restricting by <b>Object Class</b> , you must select at least 1 of the <b>Object Classes</b> .

## Next Steps

1. (Optional) Access the **View Spend Restriction** report to review the parameters of a spend restriction.
2. (Optional) Access the **Award Spend Restriction Audit Report** to verify that transactions are applied accurately for grants.

## Create Default Funding Sources

### Prerequisites

Security: Set Up: *Funding Sources* domain in the Financial Accounting functional area.

### Context

You can create a default funding source that a funding source rule can use when no other funding source is available for the project.

### Steps

1. Access the **Create Default Funding Source** task.
2. As you complete the task, consider:

Option	Description
<b>Not Available for Selection</b>	<p>Leave unchecked to enable the default funding source added to a rule.</p> <p>If selected, you can't add the funding source to a new funding source rule. Existing rules with the funding source previously added will continue to use it.</p>
<b>Worktags</b>	<p>Select worktag types and worktags to define funding source at a more granular level of detail.</p> <p>Select from worktags configured for <b>Funding Source</b> on the <b>Maintain Worktag Usage</b> task.</p> <p>You can't select the <i>Project</i>, <i>Project Phase</i>, <i>Project Task</i>, <i>Spend Category</i>, and <i>Pay Component</i> worktag types.</p> <p>When you don't select a worktag type on the default funding source, Workday:</p> <ul style="list-style-type: none"> <li>• Retains worktags of the original transaction on the reclassification journal lines.</li> <li>• Adds the funding source as a worktag.</li> </ul> <p>When you select a worktag on the default funding source, the worktag replaces the retained worktags on the original journal lines when you reclassify the journal lines.</p> <p>Example: You create the ABC default funding source without a worktag for the <i>Cost Center</i> worktag type. When you reclassify an original expenditure with a worktag of 1000 for the <i>Cost Center</i> worktag type, Workday:</p> <ul style="list-style-type: none"> <li>• Retains worktags of the original transaction on the reclassification journal lines.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• Replaces the 1000 worktag on the original expenditure with no worktag.</li> <li>• Adds the funding source as a worktag.</li> <li>• Creates reclassification journal lines with no Cost Center worktag types.</li> </ul>

### Next Steps

Use the **View Default Funding Source** report to view details of the default funding source.

## Create Funding Sources

### Prerequisites

- Create Spend Restrictions.
- Security: *Set Up: Funding Sources* domain in the Financial Accounting functional area.

### Context

You can create and maintain funding sources to specify how much money is available to fund your projects and restrict which costs you can fund.

### Steps

1. Access the **Create Funding Source** task.
2. As you complete the task, consider:

Option	Description
<b>Owning Company</b>	Select a company that is disbursing the funds. You can't select a company hierarchy.
<b>Other Allowed Companies</b>	Select companies or company hierarchies that: <ul style="list-style-type: none"> <li>• Are eligible to use the funds.</li> <li>• Use the same company currency as the owning company.</li> </ul>
<b>Begin Date</b>	Specify the date from which the fund is available for use. You can change it whenever you want.
<b>On Hold</b>	Place a funding source <b>On Hold</b> when you don't want new transactions to add or remove funds. Workday can still add or remove funds from an on hold funding source when you cancel, reverse, or adjust a reclassified transaction.
<b>Spend Restrictions</b>	Leave blank to fund all expenses.
<b>Required Cost Share or Match (%)</b>	Enter a percentage of required matching funds if the funding source is sharing the cost of projects.
<b>Currency</b>	The currency of the owning company.

Option	Description
	Only companies with the same company currency can use the funds.
<b>Estimated Facilities and Administration Rate (%)</b>	Enter the percentage of direct costs available for facilities and administration.
<b>Funding Amount for Direct Costs</b>	<p>Workday calculates the amount as:</p> <p>Funding Amount / (1+ Estimated Facilities and Administration Rate percentage rate in decimals).</p> <p>Example: If the Funding amount is \$100 and the estimated facilities and administration percentage rate is 10%, the funding amount calculated for direct costs is <math>100/(1+.10) = 90.91</math>.</p>
<b>Allocated to Direct Costs</b>	<p>Balance includes all journal sources except facilities and administration.</p> <p>Includes unapproved pending reclassification transactions.</p>
<b>Available Balance for Direct Costs</b>	<p>Workday calculates the amounts as:</p> <p>Funding Amount for Direct Costs - Allocated to Direct Costs</p>
<b>Worktags</b>	<p>Select worktag types and worktags to define funding source at a more granular level of detail.</p> <p>Select from worktags configured for <b>Funding Source</b> on the <b>Maintain Worktag Usage</b> task.</p> <p>You can't select the Project, Project Phase, Project Task, Spend Category, and Pay Component worktag types.</p> <p>When you don't select a worktag type on the funding source, Workday:</p> <ul style="list-style-type: none"> <li>• Retains worktags of the original transaction on the reclassification journal lines.</li> <li>• Adds the funding source as a worktag.</li> </ul> <p>When you select a worktag on the funding source, the worktag you select replaces the retained worktags on the original journal lines when you reclassify the journal lines.</p> <p>Example: You create the ABC funding source without a worktag for the Cost Center worktag type. When you reclassify an original expenditure with a worktag of 1000 for the Cost Center worktag type, Workday:</p> <ul style="list-style-type: none"> <li>• Retains worktags of the original transaction on the reclassification journal lines.</li> <li>• Replaces the 1000 worktag on the original expenditure with no worktag.</li> <li>• Adds the funding source as a worktag.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Creates reclassification journal lines with no Cost Center worktag types.</li> </ul>

### Next Steps

(Optional) Use the **View Funding Source** report to view details of the funding source.

## Create Funding Source Rules

### Prerequisites

- Specify a project or project hierarchy as the top-level project hierarchy on the **Edit Tenant Setup - Financials** task.
- Create a default funding source.
- Create a funding source.
- Security: *Set Up: Funding Sources* domain in the Financial Accounting functional area.

### Context

You can create funding source rules to prioritize and allocate funds across different projects.

### Steps

- Access the **Create Funding Source Rule** task.
- As you configure the funding source rule, consider:

Option	Description
<b>Project or Project Hierarchy</b>	<p>Select a project or project hierarchy in the top-level project hierarchy you specified on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>You can't assign a project or project hierarchy to more than 1 funding source rule.</p> <p>You can't change the project or project hierarchy after you create the funding source rule.</p>
<b>Default Funding Source</b>	<p>Select 1 of the default funding sources you defined on the <b>Create Default Funding Source</b> task.</p>

- (Optional) As you complete the **Funding Source Priorities** grid, consider:

Option	Description
<b>Funding Source Condition Rule</b>	<p>Select a funding source condition rule. When an eligible transaction matches the condition rules, you can disburse funds from a funding source.</p>
<b>Funding Source</b>	<p>Displays the funding sources of the companies you selected on the <b>Company or Company Hierarchy</b> prompt.</p> <p>Each priority can have more than 1 funding source but all funding sources in a priority must have the same currency.</p>

Option	Description
<b>Percentage</b>	<p>Enter a percentage if the priority has more than 1 funding source. You can change the percentage whenever you want.</p> <p>For funding sources with cost sharing:</p> <ul style="list-style-type: none"> <li>Workday automatically populates <b>Maximum Contribution (%)</b> from the <b>Create Funding Source</b> task.</li> <li>You can change the percentage but it can't be more than what you specified as the <b>Required Cost Share or Match (%)</b> on the <b>Create Funding Sources</b> task.</li> <li>The sum of the percentages within a priority must equal 100.</li> </ul>
<b>Current Available Balance</b>	<p>Workday automatically calculates the current available balance for the funding source, including pending reclassifications.</p>

## Next Steps

(Optional) Use the **View Funding Source Rule** task to view details of the funding source rule.

## Process Funding Sources

### Prerequisites

- Set up multiple funding sources.
- Configure the *Funding Source Reclassification Event* business process and security policy in the Financial Accounting functional area to approve funding source process.
- Security: *Process: Funding Sources* domain in the Financial Accounting functional area.

### Context

You must process funding sources to allocate funds to existing expense transactions in your company actual ledger, including:

- Expense transactions.
- Payroll transactions.
- Supplier invoices.
- Ad hoc payments.
- Manual journals.
- Ad hoc bank transactions.
- Expensed assets.
- Depreciation expenses for capitalized assets.

When you process a funding source that's on hold, new transactions don't add or remove funds from a funding source.

### Steps

- Access the **Process Funding Sources** task.

2. As you complete the task, consider:

Option	Description
<b>Company</b>	<p>Select a company. You can't select a company hierarchy.</p> <p>The company currency of the transaction company must be the same as the company currency of the funding source.</p>
<b>Project/Project Hierarchy</b>	<p>Select a project or project hierarchy in the top-level project hierarchy you specified on the <b>Edit Tenant Setup - Financials</b> task.</p>
<b>Accounting Date On or After</b> <b>Accounting Date on or Before</b>	<p>Enter a date or date range for Workday to process journals for reclassification. When you leave this field blank, Workday starts from the first unprocessed journal in your tenant.</p>

## Result

Workday:

- Creates a new operational transaction with reclassification lines.
- Applies worktags from the funding source and allocates funds by reclassifying the original transaction based on the funding source rule.
- Creates a new reclassification journal for every project in the journal source that:
  - Reverses the original expense entries.
  - Displays the new reclassification lines.
- Creates a **Funding Sources** tab on the original operational journal that displays the reclassification activity for the journal.

## Next Steps

(Optional) Click **View Reclassification Event** to view the summary of the reclassification journal.

(Optional) Click **View Reclassification Lines** to view details of the reclassification lines.

(Optional) Select **Accounting > View Accounting** from the related actions menu of the operational journal to view the **Funding Sources** tab.

## Related Information

### Concepts

[Concept: Reclassification Journals and Lines](#) on page 453

### Tasks

[Steps: Set Up Multiple Funding Sources](#) on page 445

## Reprocess Funding Sources

### Prerequisites

- Process Funding Sources.
- Configure the *Funding Source Reclassification Event* business process and security policy in the Financial Accounting functional area to approve reprocessing funding source.
- You can have different approvers for process and reprocess events.
- Security: *Process: Funding Sources* domain in the Financial Accounting functional area.

## Context

You can reprocess funding sources to apply a funding source retroactively to reclassification entries when you change a funding source or funding source rule.

## Steps

1. Access the **Reprocess Funding Sources** task.

2. As you complete the task, consider:

Option	Description
<b>Company</b>	Select a company to reprocess. You can't select a company hierarchy.
<b>Project/Project Hierarchy</b>	Select a project or project hierarchy in the top-level project hierarchy you specified on the <b>Edit Tenant Setup - Financials</b> task.  Workday recommends that you reprocess a funding source using criteria consistent with the original process. Example: Perform both process and reprocess by project hierarchy.
<b>Accounting Date On or After</b> <b>Accounting Date on or Before</b>	Enter a date or date range for Workday to reprocess journals for reclassification. When you leave this field blank, Workday starts from the first processed journal in your tenant.

## Result

If there are changes to worktags on any reclassification lines when you reprocess funding sources, Workday:

- Cancels or reverses the reclassification journal.
- Creates a new reclassification journal for every project in the journal source that:
  - Reverses the original expense entries.
  - Displays the new reclassification lines.
- Marks each existing reclassification line with a status of *Reprocessed*.
- Creates new reclassification lines with a status of *Current*.
- Allocates funds to reclassification transactions based on the changed funding source or funding source rule.
- Creates new reclassification lines with new reclassification journals.

If there are no changes to worktags during reprocessing, Workday:

- Creates a new reclassification line with a status of *Unchanged*.
- Leaves each existing reclassification line with a status of *Current*.

## Next Steps

Access the **Find Funding Source Reclassification Lines** report and search by **Source Transaction** to review details of the reclassification journal lines.

## Concept: Reclassification Journals and Lines

When you allocate funds to existing spend and payroll transactions by running the **Process Funding Sources** task, Workday automatically:

- Reclassifies the journal by creating a new reclassification operational journal with reclassification lines.

- Adds the funding source worktags to each reclassification line.
- Creates 1 transaction line for each operational journal line and funding source combination.

Workday creates reclassification lines for spend and payroll operational journal lines that meet these criteria:

- The ledger account type is an expense source on the **Maintain Ledger Account Types** task.
- The journal line is posted and not canceled.
- The journal line has a project worktag that is within the top-level project hierarchy.
- There's no funding source worktag on the accounting journal.
- The journal line isn't for facilities and administration.
- The journal isn't reversed and doesn't have a reversal journal.

### **Cancel or Reverse Reclassification Lines**

When you process a funding source for a canceled transaction with reclassification lines:

- In an open period, Workday cancels the reclassification journal and the reclassification lines.
- In a closed period, Workday reverses the reclassification journal and the reclassification lines in the next open period.

When you unpost an accounting journal, which you previously reclassified, that's in:

- An open period, Workday cancels the reclassification journal and the reclassification journal lines.
- A closed period, Workday reverses the reclassification journal and the reclassification journal lines in the next open period.

### **Reclassification Line Statuses**

This table lists reclassification line statuses with their description, and the corresponding statuses of reclassification transaction statuses, and reclassification journal statuses:

<b>Reclassification Line Status</b>	<b>Description</b>	<b>Reclassification Transaction Status</b>	<b>Reclassification Journal Status</b>
Pending	Workday creates the journal lines in pro forma, but hasn't approved or denied the batch.	Pending	Pro forma
Current	Workday creates the latest reclassification line and journal of the source journal line and approves the batch process.	Current	Posted
Invalid	Workday creates an invalid reclassification line and doesn't create a journal entry for the reclassification transaction.	Invalid	
Validated	Workday creates a valid reclassification but doesn't include it in a journal because another	Invalid	

Reclassification Line Status	Description	Reclassification Transaction Status	Reclassification Journal Status
	reclassification line is invalid.		
Unposted	Workday cancels or reverses the reclassification journal and unposts the source journal.	Unposted	Unposted
Canceled	Workday cancels the source journal and the reclassification line.	Canceled	Canceled
Reversed	Workday reverses the reclassification journal and cancels or reverses the source journal.	Reversed	Posted
Reprocessed	Workday reprocesses the reclassification journal line and creates a new reclassification transaction during reprocessing.	Reprocessed	Posted
Unchanged	Workday reprocesses the reclassification journal line with no change to worktags. Workday doesn't reclassify the original reclassification journal line.	Unchanged

[Process Funding Sources](#) on page 451

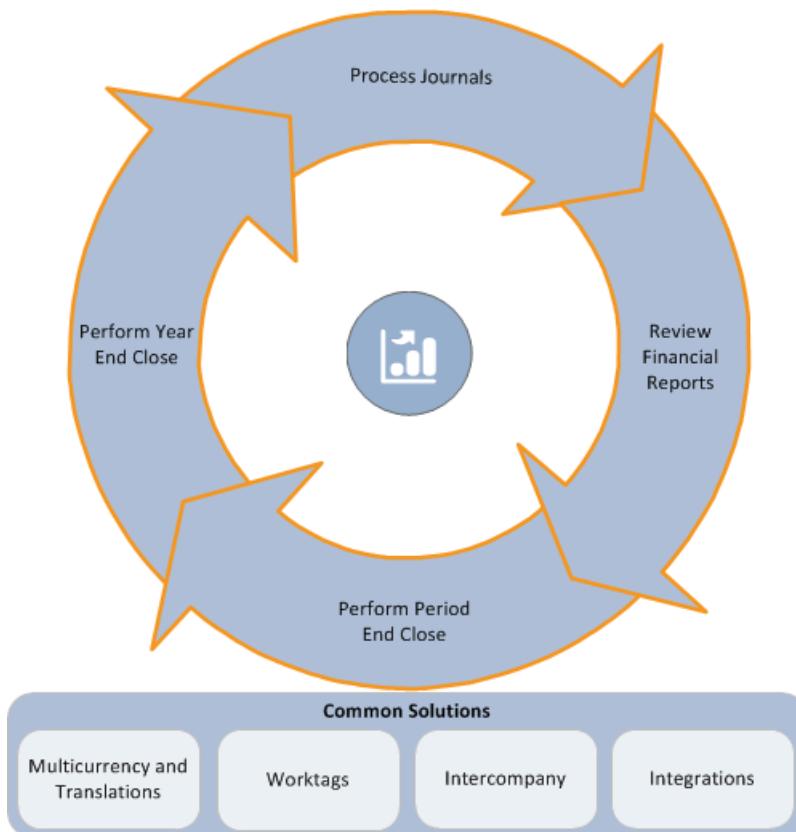

## Concept: Financial Accounting

Workday Financial Accounting is the foundation for all Workday Financial Management solutions. It enables you to satisfy the information requirements of investors, creditors, and regulatory authorities in the post-Sarbanes-Oxley business environment.

Workday Financial Accounting combines a unique, event-driven accounting approach with a built-in control framework. It enables you to use a robust multicompny, multicurrency model for delivering financial records and reports with speed, accuracy, and complete auditability.

The architecture also enables you to adapt to changes in your business as well as new rules and regulations. With Workday Financial Accounting, you're able to manage all of your accounting activity and report on that activity anytime.

This diagram illustrates the flow of financial accounting activities in Workday across a period. It displays common solutions that you can use throughout the fiscal year to enable your work.

Within a given period, you can use Workday Financial Accounting to process:

- *Operational journals* to provide accounting results from your approved operational transactions.
- *Manual accounting journals* to record accounting data not associated with operational transactions.
- *Recurring journals* to create recurring journals to automate the generation of accounting journals that you create on a repetitive basis.
- *Pro Forma allocations* to see the impact of allocations when you view your financial results. The operational journals that the allocation processing creates have a status of pro forma (rather than posted). You can include the pro forma operational journals in reporting throughout the period to see the allocation impact.

You can use Workday Financial Accounting to review:

- *Activity reports* that provide visibility into your financial activity.
- *Trial balances* for either an individual company basis or a consolidated entities basis.
- *Reconciliation reports* to help you in reconciliation of operational transactions to their related ledger balances.

Example: You can use a report to help reconcile supplier accounts to accounts payable.

- *Interim financial statements* that you can also define to meet your reporting needs. You can run and review your financial statements at any time. Workday financial statements also enable you to perform comparative reporting with other time periods or with financial plans.

While performing period close, you can:

- Record depreciation and decide how often to post that information. When you record depreciation, you can view all unposted depreciation up to that period and decide what to post.
- Finalize and post allocations you've processed in the period. You can include or exclude finalized allocations when you run financial statements.
- Run equity pickup to calculate equity earnings of a wholly or partially owned consolidated subsidiary onto the books of the parent.

- Run revaluations to revalue the foreign currency balances at period end and analyze their impact. You can create the revaluation journal manually, or use the report to create it automatically using revaluation rules.
- Update ledger period status to control activities that are available for update.

Example: When you change the ledger period status from *Open* to *Close in Progress* for Operational Accounting, you can't post journals from operational activities. You can still record accounting journals, recurring journals, and depreciation. Over time you can continue to lock down the activity that can occur by progressing through the various ledger period statuses.

- Create adjusting journals to mark journals as adjustments and post these adjusting journals to the period in which they apply. You can include or exclude adjustments when you run financial statements.
- Close the ledger period to control journal entry and journal posting, and compute actual and budget account balances. After you close a period, you can no longer post anything to it. Workday posts any pending operational transactions to the next open ledger period once you complete them.
- Produce consolidated financial statements to report consolidated financial information on companies using the company hierarchies that you define in Workday. You can perform consolidated reporting throughout the period, and include elimination information in the reporting at any time.

While performing year-end close, you can:

- Roll balances forward to accumulate the balance sheet balances and roll them forward to the new year. Workday enables you to repeat this task until you're ready to close the year.
- Roll translated beginning balances forward to have Workday automatically roll forward translated beginning balances. You can drill down on translated amounts to view the journal line in the company currency and the translation currencies.
- Close the year at any time after you've closed all periods. Closing the year rolls forward the balances one last time. You can reopen the year if necessary.

In addition to these period activities, you can use:

- *Multicurrency* to process transactions that occur in a currency other than the base currency of the recording company.
- *Translations* to define different account translation rules for different needs.
- *Worktags* to tag transactions and supporting data. Use worktags to gain a multidimensional view of your business so that you can easily find and report on information.
- *Intercompany accounting* to manage and report on business events transacted between related companies.
- *Integrations* to upload third-party financial data into Workday and to send data between the systems.

# Budgets

---

## Budgets and Plans

---

### Setup Considerations: Budget Check

You can use this topic to help make decisions when planning your configuration and use of budget check. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Budget check functionality in Workday automatically checks your transactions against your financial plans and position budgets. Workday handles over-budget transactions by either:

- Warning you that the transaction exceeds the available budget and will fail budget check.
- Skipping budget check. The transaction displays the budget check status as *Not Required*.
- Automatically passing the transaction. The transaction displays the budget check status as *Pass*.

When a transaction passes budget check, it also displays the budget check status as *Pass*.

### Business Benefits

You can help your organization:

- Use their funds efficiently.
- Ensure that you don't run out of budget during your fiscal period.
- Reduce manual effort in handling over-budget transactions.

### Use Cases

You can use budget check to:

- Control transactions against award budgets to restrict spending to the products and services your sponsors allow.
- Make hiring decisions based on your available budget after checking staffing transactions.
- Enable budget check reviewers to request overrides and authorized approvers to grant those overrides.

### Questions to Consider

Questions	Considerations
How strictly do you want to enforce budget check?	<p>You can configure budget check to handle over-budget transactions by:</p> <ul style="list-style-type: none"> <li>• Preventing the transactions from passing until you revise them or amend the plan or budget.</li> </ul>

Questions	Considerations
	<ul style="list-style-type: none"> <li>Using tolerance amounts so that your transaction only fails when it exceeds the tolerance amount over the budget. When your transaction exceeds the budget by less than the tolerance amount, Workday warns you, but allows it to pass.</li> <li>Automatically passing a transaction even when it's over-budget.</li> <li>Skipping checking a transaction even when the transaction would have failed budget check.</li> </ul>
How should you configure budget check for budgets in a virtual parent-child relationship?	You can configure budget check to restrict overspending on either the parent, child, or both levels. Example: You configure budget check to restrict overspending on the parent level while having a more lenient configuration on the child level. Over-budget transactions on the child level will pass as long as they don't exceed the budget sum on the parent.
How do you want to handle credit transactions?	<p>You can configure budget check to pass the transaction automatically. Your transaction fails budget check with a <i>Fail - Insufficient Budget</i> status when:</p> <ul style="list-style-type: none"> <li>Your transaction exceeds your budget.</li> <li>You don't configure this option.</li> </ul>
When should you include reserved journals in budget check?	You can include reserved journals in budget check to reserve funds for transactions that impact the same budget. Workday reserves these funds after a transaction passes budget check but before the business process completes by posting the journal. Workday doesn't automatically include reserved journals in budget check.
How can you determine when a transaction is subject to budget check?	When your budget has optional structured dimensions, Workday only checks the included dimension members and the rest of the dimension members on the transaction pass as <i>Not Required</i> . When the optional structured dimension is set to <i>Include All Members</i> , any dimension member on the transaction is subject to budget check.

## Recommendations

Workday recommends that you:

- Configure commitment accounting to track commitments, obligations, and actuals for spend authorization, procurement, and payroll transactions.
- Use a more lenient budget check configuration on your child plans and budgets, and a strict configuration on your parent plan. You can configure Workday to warn you when your transaction is over the child-level budget and block overspending on the parent level.

## Requirements

For Workday to find the correct plan structure and plan lines to check your transaction against, your transaction worktags must:

- Include all the required structured dimension members on a plan structure.
- Exactly match the worktags on a plan line on the plan structure.

If you configure commitment accounting at a later date:

- For spend and procurement transactions, you must close all open purchase orders first.
- For payroll transactions, you must create initial payroll commitments. Exclude completed payroll periods so that Workday only creates commitments for ongoing or future payroll periods. If you don't exclude completed payroll periods, Workday creates commitments for the entire year. Workday begins to liquidate the commitments after the first payroll of the year.

## Limitations

You can only configure up to 50 budgetary control option lines.

Workday doesn't use these structured dimensions to match a transaction to a plan structure and plan lines for staffing budget check:

- Job Family
- Job Family Group
- Job Profile

## Tenant

No impact.

## Security

Users with access to the *Set Up: Budget General* domain in the Budgets functional area can configure budgetary control for plans and budgets.

When you use budget check overrides, configure the Budget Check Exception Override Approver security group.

## Business Processes

You can add these business processes as a subprocess to your Financial and Staffing business processes:

- *Check Budget (Financial)*
- *Check Budget (Staffing)*

You can configure the *Check Budget (Staffing)* subprocess to check your staffing transactions for both Job Management and Position Management positions against your financial plan.

We recommend that you configure the *Check Budget (Financial)* business process with a *batch/job* type *Run Budget Check* step for better performance. Create a role specifically to run this *batch/job* step with:

- A profile that doesn't run on a browser.
- A nonexpiring password.

## Reporting

Report Data Source	Consideration
<b>Plan Lines for Financial Reporting</b>	Use to create reports on the plan lines for your plans and budgets.

Report Data Source	Consideration
<b>Journal Lines for Financial Reporting</b>	Use to create custom reports on commitments, obligations, and actuals when you use commitment accounting.

## Integrations

No impact.

## Connections and Touchpoints

When you use commitment accounting, Workday posts journal entries to your ledgers after these transaction types pass budget check:

- Expense
- Payroll
- Procurement

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Tasks

[Steps: Check Position Budgets](#) on page 519

### Reference

[Reference: Budget Check Transactions](#) on page 546

[The Next Level: Controlling Your Spend with Budget Check on Financial Plans](#)

## Steps: Set Up Plans or Budgets

### Context

You can use plans and budgets in Workday to manage your plans, forecasts, and actuals. You can create an unlimited number of plans and budgets for:

- These plan types, with or without budget checking before transaction approval:
  - Award
  - Award Proposal
  - Financial
  - Position
  - Project
- Financial, award, award proposal, position, and project budgets with or without budget checking before transaction approval.
- Comparative reporting and analysis, giving you insight into plan versus actuals ledgers when you generate financial statements.

You can use the same dimensions and ledger accounts for actuals and plan or budget data to streamline comparative reporting.

### Steps

#### 1. [Define Plan Structures](#) on page 464.

Create a plan structure to provide the foundation for your plans or budgets.

**2. Access the **Maintain Entry Types** task.**

Define entry types to identify the plan lines for specific plan types, such as financial plans or position budgets. Workday uses entry types for reporting purposes when you roll over and close plans and budgets.

You associate an entry type with a structure and company or company hierarchy when you create a template.

Security: *Set Up: Budget General* domain in the Budgets functional area.

**3. Access the **Mass Update Entry Types** task.**

Assign entry types to existing structures and budget amendment types. Workday updates existing plan lines and sets default types for future lines.

You can only run this task the first time you roll your budget forward.

Security: *Set Up: Budget General* domain in the Budgets functional area.

**4. (Optional) Access the **Map Award and Award Proposal Plan Structures** task.**

Map award proposal and award plan structures to create an award plan template directly from an award proposal budget that already exists.

Security: *Set Up: Budget* domain in Budgets functional area.

**5. (Optional) If you select **Use Amendments/Approval** on your plan structure, configure the *Plan Event* and *Budget Amendment Event* business processes and their security policies:**

- [Edit Business Processes](#).
- [Edit Business Process Security Policies](#).

**6. (Optional) Access the **Maintain Budget Amendment Types** task.**

Define your budget amendment types.

**7. (Optional) Assign identification numbers to budget amendments.**

Configure your ID Definition on the **ID Generator for Budget Amendment** field on any of these tasks:

- [Edit Tenant Setup - Financials](#) or [Tenant Setup > Financials](#), for your tenant.
- [Edit Company ID Definitions](#), for individual companies.

Security:

- *Set Up: Tenant Setup - Financials* in the System functional area.
- *Set Up: System* in the System functional area.
- *Set Up: Company General* in the Common Financial Management functional area.

**8. (Optional) Set up custom validations to run on plan lines in tasks, reports, workbooks, and web service imports.**

See [Steps: Set Up Custom Validations](#).

**9. (Optional) Access the **Create Budget Fringe Rate Table** task.**

Define tables to store and maintain fringe rates for selection during plan or budget detail entry.

Associate the tables with position plan templates to ensure that budget users have access to the most current and accurate rates. Example: Create tables for different fiscal years to populate standard fringe rates into yearly position budgets.

Security: *Set Up: Budget General* domain in the Budgets functional area.

**10.(Optional) Access the [Edit Consolidation Details](#) task.**

To plan by and report on company hierarchies, configure these consolidation details:

- **Fiscal Schedule**
- **Account Set**
- **Default Reporting Currency**

Security: *Set Up: Consolidation* domain in the Financial Accounting functional area.

**11.[Create Plans or Budgets](#) on page 468.**

Create a plan template to:

- Associate the structure with 1 or more companies or company hierarchies.
- Build the periods and duration.

For award budgets, Workday automatically builds the periods based on the award schedule.

**12.(Optional) Access the [Create Award Budget Template from Proposal Budget Template](#) task.**

Create plan templates for awards directly from plan templates for award proposals. Workday populates the award template with all of the plan lines from the award proposal budget.

You must create an award from an award proposal before you can create award plan templates from award proposal plan templates.

Security: *Set Up: Budget General* domain in the Budgets functional area.

**13.[Enter or upload plan or budget details for each period](#):**

- [Maintain Budget](#) on page 471.
- Enter plan or budget details manually.
- [Set Up Inbound EIB](#) and [Customize EIB Spreadsheet Template](#).

Upload details using an Enterprise Interface Builder. Workday recommends that you use the *Import Budget* web service operation.

**14.If you select [Use Amendments/Approval](#) on your plan structure:**

- [Submit a Plan or Budget for Approval](#) on page 474.
- [Amend Plans or Budgets](#) on page 475.

Once approved, create amendments to make any changes to the plan or budget.

**15.(Optional) Configure project budgets to use *Project* plan type structures.**

See: [Steps: Set Up Project Budgets](#).

**16.(Optional) Use budgetary control options to check plans and budgets as part of your business process workflow before approving financial transactions and HR events:**

- [Steps: Configure Budget Checking for Spend Transactions](#) on page 537
- [Steps: Check Position Budgets](#) on page 519
- [Steps: Set Up Position Budgets](#) on page 510
- [Steps: Set Up and Manage Award Proposals](#)

## Result

You can now use your plans and budgets to compare plan to actuals when you generate financial statements.

## Next Steps

Workday provides a number of standard reports to help you manage your plans and budgets. For a list, access the **Workday Standard Reports** report and select the *Plans* category.

## Related Information

### Tasks

[Steps: Set Up Budgetary Roll Forward and Close on page 477](#)

[Create ID Definitions and Sequence Generators](#)

### Reference

[Reference: Budget Reports on page 487](#)

[Reference: Edit Tenant Setup - Financials](#)

[FAQ: Project Budgeting on page 1322](#)

## Define Plan Structures

### Prerequisites

- Create fiscal schedules, summary schedules, years, and periods.
- Define account sets, account types, and ledger account summaries.
- For award and award proposal budget types, define grants, proposal grants, awards, award schedules, and award summary schedules.
- To use the **Book** prompt or add **Book Code** as a structured dimension, and configure your books.
- Security: *Set Up: Budget General* domain in the Budgets functional area.

### Context

Plan structures are the foundation for plans and budgets in Workday. The structures determine:

- The type of plan or budget.
- The fiscal schedule and periods on which to build the periods and duration.
- The ledger accounts and dimensions available to include when defining plans and budgets.
- Whether plans and budgets require approval and other key attributes.

You can use the same structure for multiple companies and company hierarchies.

### Steps

1. Access 1 of these tasks:

- [Create Plan Structure](#)
- [Edit Plan Structure](#)

2. As you complete the task, consider:

Option	Description
<b>Use Amendments/Approval</b>	<p>Select to:</p> <ul style="list-style-type: none"> <li>• Enable amendments on existing plans and budgets.</li> <li>• Require approval for new plans and budgets.</li> </ul> <p>Select this check box for true parent and child plans.</p> <p>When you select this check box, Workday displays only approved entries in the totals for the <b>Actuals vs. Budgets</b> worklet and these reports:</p> <ul style="list-style-type: none"> <li>• <b>Budgetary Balance Report</b></li> <li>• <b>Financial Budgetary Balance</b></li> <li>• <b>Manager Budgetary Balance Report</b></li> <li>• <b>Manager Financial Budgetary Balance</b></li> </ul>

Option	Description
	Otherwise, Workday calculates the totals for the plans and budgets in all statuses, including <i>Approved</i> and <i>Denied</i> .
<b>Use Contextual Amendments</b>	<p>Select to amend plans or budgets that you create using this structure in context of your current budget and current spend.</p> <p>When you select this check box, Workday displays the running total of your budget and these columns on budget amendment tasks:</p> <ul style="list-style-type: none"> <li>• Current Plan Amount</li> <li>• Current Spend</li> <li>• Remaining Plan</li> <li>• Percentage Change</li> <li>• Total Plan</li> <li>• Proposed Remaining Plan</li> </ul> <p>For awards, Workday also displays the <b>Award Amount</b> field when you amend the award budget.</p> <p>You can change this setting at any time.</p>

3. As you complete the **Structured Dimensions** tab, consider:

Option	Description
<b>Account Set</b>	<p>Your selection must match the account set for:</p> <ul style="list-style-type: none"> <li>• The companies you plan by.</li> <li>• The company hierarchies you plan by.</li> </ul>
<b>Account Type</b>	<p>Select to control the <b>Ledger Accounts</b> available when determining <b>Ledger Accounts</b> on <b>Plan Dimensions</b>.</p> <p>Example: If you select <b>Expense</b> for <b>Account Type</b>, you can only select expense ledger accounts when determining <b>Ledger Accounts</b> on the <b>Plan Line</b>.</p>
<b>Organizing Dimension Type</b>	<p>Requires that you enter a plan or budget for 1 dimension value at a time per plan or budget, and per period. This entry method streamlines review and approval.</p> <p>Example: You can select <i>Region</i> on the <b>Organizing Dimension Type</b> prompt to view all the plan balances by region on the <b>Current Plan Report</b>.</p>
<b>Book</b>	<p>Once you select a book on the plan structure, you can't delete the book.</p> <p>If you enable budgetary control, Workday filters the budget check based on the book code associated with the book you select.</p>

Option	Description
	<p>For true parent and child plan structures, you must manually ensure that the parent and child books match. You don't need to match the books for virtual parent and child plan structures.</p> <p>Workday doesn't support budgetary roll forward or close for plans that use a book.</p>
<b>Must Be Empty</b>	<p>Select to require that a transaction not contain a specific dimension. Workday doesn't apply the transaction to the budget or run budget check.</p> <p>Example: You want a plan for transactions that impact certain cost centers and funds, but not any projects. You can specify that the project worktag must be empty on the transaction. For transactions that have the project worktag on the line, Workday doesn't run budget check.</p>
<b>Dimension</b>	<p>Select the dimensions you want as available worktags when you create or amend plans and budgets that use this structure.</p> <p>For multicurrency reporting, include the <i>Ledger Account</i> dimension. Workday translates currencies based on ledger accounts and ledger account summaries.</p> <p>Workday doesn't support budgetary roll forward or close for position budgets with <i>Company</i> as a dimension.</p>
<b>Required</b>	<p>Select to require the dimension for entry on each plan line. If you select the dimension as the <b>Organizing Dimension Type</b>, you must require entry of the dimension.</p>
<b>Primary Worktag</b>	<p>Select to display the worktag in its own column rather than as additional worktags on the plan lines. When you maintain or amend your plan or budget:</p> <ul style="list-style-type: none"> <li>• Workday displays primary worktag columns in the order that you configure on your plan structure.</li> <li>• Primary worktag columns enable you to enter line information faster.</li> </ul> <p>Because <i>Company</i> and <i>Ledger Account</i> are required dimensions that automatically display, you can't select them as primary dimensions.</p> <p>You can designate up to 10 worktags as primary worktags for each plan structure.</p>
<b>Top Level Hierarchy</b>	<p>Since dimension members can be part of multiple hierarchies, determine the uppermost hierarchy and select it as the top-level hierarchy.</p>

Option	Description
	To plan and report by company hierarchies, select a top-level hierarchy for the <i>Company</i> structured dimension.
<b>Hierarchy Level</b>	If you select a top-level hierarchy, select a hierarchy level on this prompt. This configuration enables you to include or exclude dimensions as worktags when you create or amend plans or budgets made from this structure.
<b>Dimensions to Include</b>	<p>When you select a company or company hierarchy for the <i>Company</i> structured dimension, you can't also select the:</p> <ul style="list-style-type: none"> <li>• Superior or subordinate companies.</li> <li>• Company hierarchies at any other level.</li> </ul> <p>This restriction prevents double-counting budget between superior and subordinate companies and company hierarchies.</p>

## Result

You can now create a plan or budget for your company based on this structure.

When you select the **Use Amendments/Approvals** check box on a plan structure with plan lines:

- Workday automatically moves plans from *Available* status to *Draft* status. Move plans back to *Available* status to use the budget check functionality.
- Workday changes the transaction budget check status to *Fail (No Budget)* on submitted transactions for plans with budget check enabled.

You can only clear the **Use Amendments/Approvals** check box on a plan structure with plan lines if all of the plans are in *Draft* status. Workday moves these plans to *Available* status.

When you select books on plan structures, you can report on books by using the **Journal Lines for Financial Reporting** report data source in custom reports.

## Next Steps

To compare structures, access the **Plan Structures** report.

Once you create plans or budgets based on the structure, you can only revise the structure definition in these ways:

- Rename the structure.
- Add additional optional structured dimensions to the structure.
- Exclude structured dimensions as long as no plan lines exist with those dimensions.
- Select the **Primary Worktag** check box on a structured dimension.
- Select or clear the **Use Amendments/Approvals** check box even if plan lines exist.

[Create Financial Plan Structures for Adaptive Planning](#)

[Steps: Publish Financial Plans from Adaptive Planning](#)

#### Reference

[Workday 33 What's New Post: Company Hierarchies on Financial Plans](#)

## Create Plans or Budgets

### Prerequisites

- Define a plan structure that matches the fiscal schedule and account set for the companies and company hierarchies.
- For award proposal budgets, create an award proposal.
- For award budgets, create an award.
- For multicurrency plans, define a currency rate type and conversion rates for currencies used in the plan.
- Security: *Set Up: Budget General* domain in the Budgets functional area.

### Context

After you define the plan structure, you create a template to specify the configuration for your plan or budget. On the template, you configure these options for use on your plan or budget:

- Companies. For financial plans, you can also plan by company hierarchies.
- Currencies.
- Time periods.

You can create many templates from a single structure to maximize efficiency as you build plans or budgets:

- Across companies and company hierarchies.
- From year to year.

For financial plan structures, you can create a single plan template for multiple companies and company hierarchies. If you plan by companies, Workday also supports plan lines in currencies foreign to the managing company.

### Steps

1. Access the **Create Plan Template** task.
2. As you complete the task, consider:

Option	Description
<b>Plan Structure</b>	When creating child plans or budgets, only top-level parent plan structures are available for selection.
<b>Company</b>	For multicomppany financial plan structures, select the related companies that are available for this plan and plan lines.  If you don't use an account set on the structure, Workday validates that the companies and companies hierarchies use the same account set.
<b>Plan Name</b>	(Optional) Specify a plan or budget name according to the plan type for the selected structure: <ul style="list-style-type: none"> <li>• <i>Financial</i> or <i>Project</i>. Enter a unique name.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li><b>Award:</b> Select an award for the selected header company.</li> </ul> <p>For parent and child plans or budgets, the name you enter automatically populates any linked children. You can change these names using the <b>Edit Plan Structure Hierarchy Name</b> task.</p>
<b>Plan Group</b>	<p>Displays only for parent and child plans or budgets when you enter a plan or budget name. Workday appends Budget Group to that name for the plan group name, which you can change here or on the <b>Edit Budget Group Name</b> task. The plan group groups together all linked members of the plan or budget family -- the parent, child, and associated grandchild plans or budgets.</p> <p>Use the <b>Plan Group</b> report to view and compare all plans or budgets in a hierarchy plan, including the baseline, cost, and revenue plans or budgets for a company.</p>
<b>Default Entry Type</b>	<p>Identifies the entry type for original plan lines for the template.</p>
<b>Default Reporting Currency</b>	<p>For multicurrency financial plans, select a default currency to use on reports. The default currency is usually the company base currency.</p> <p>Workday uses the standard conversion rate defined for the currency rate type to convert the different currencies to the specified default currency.</p> <p>When a report has a <b>Translation Currency</b> prompt, the report returns currency based on the value you entered in the prompt.</p>
<b>Enable Multicurrency</b>	<p>(Optional) For multicurrency financial plans, select this check box to enter plan lines in currencies other than the company base currency. The plan will reflect the same currencies as the actual transactions.</p> <p>You can enable multicurrency if you make a plan using companies only.</p>
<b>Currency Rate Type for Budget</b>	<p>To convert amounts from child level plans to virtual parent level plans with company hierarchies, Workday uses:</p> <ul style="list-style-type: none"> <li>The currency rate type that you select on these prompts.</li> <li>The default reporting currency on the consolidation details of your company hierarchy.</li> <li>The accounting date on your journal lines for spend conversions.</li> </ul>

Option	Description
<b>Currency Rate Type for Budget Spend</b>	<p>To convert company-level spend transactions to company hierarchy currencies on plan lines, Workday uses:</p> <ul style="list-style-type: none"> <li>• The currency rate type that you select on these prompts.</li> <li>• The default reporting currency on the consolidation details of your company hierarchy.</li> <li>• The accounting date on your journal lines for spend conversions.</li> </ul>
<b>Enable for Allocations</b>	<p>(Optional) Select to enable the plan or budget as a source or target when creating allocations.</p> <p>Include only 1 template in allocations for each unique combination of company, plan structure, and fiscal year. To enable allocations for a new template using the same combination of company, plan structure, and fiscal year:</p> <ol style="list-style-type: none"> <li>a. Access the <b>Edit Plan Template</b> task.</li> <li>b. Clear <b>Enable for Allocations</b>.</li> </ol> <p>Workday disables this option for plan templates with these configurations:</p> <ul style="list-style-type: none"> <li>• Company hierarchies</li> <li>• Multicompany</li> <li>• Multicurrency</li> <li>• True Child</li> <li>• True Parent</li> </ul>
<b>Default Balanced Amendment</b>	<p>(Optional) For financial plans, award budgets, and award proposal budgets, select this check box to select <b>Balanced Amendment</b> automatically on all amendments created for this plan or budget.</p> <p>You can change this setting when you create or edit amendments if you have access to the <i>Create Unrestricted Budget Amendment (Segmented)</i> domain.</p>
<b>Validate Expense Account Amendments</b>	<p>(Optional) Select the level of severity that you want to validate expense account amendments when they're less than the current spend. You can leave this prompt empty.</p> <p>Workday only displays this prompt if you select <b>Use Contextual Amendments</b> on your plan structure.</p> <p>You can change this setting on the <b>Edit Plan Template</b> task. Workday only validates budget amendments that:</p> <ul style="list-style-type: none"> <li>• You create or edit while you have a critical or warning validation configured.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Have a ledger account that's marked as an <b>Expense Source</b>.</li> </ul>
<b>From</b> <b>To</b>	To define the duration, select the start and end periods. Select the year and either: <ul style="list-style-type: none"> <li><b>Period</b>, for entry by period.</li> <li><b>Summary Schedule</b>, for entry by summary schedule.</li> </ul>

## Result

Workday creates and displays the plan or budget duration and periods based on the specified company, plan structure, and **From** and **To** periods.

You can select the **Inactive** check box on the **Edit Plan Template** task to deactivate financial plans.

## Next Steps

Input plan or budget amounts or upload them into Workday using the Enterprise Interface Builder.

You can edit your financial plan templates on the **Edit Plan Template** task after plan lines exist to correct errors or accommodate unplanned events.

#### Concepts

[Concept: Convert Spend to Currencies on Company Hierarchy Plan Lines](#) on page 487

#### Tasks

[Steps: Set Up Plans or Budgets](#) on page 461

[Maintain Currency Conversion Rates](#)

[Create Ledger Account Types](#) on page 82

#### Reference

[Workday 33 What's New Post: Company Hierarchies on Financial Plans](#)

## Maintain Budget

### Prerequisites

- Create plan periods for each combination of plan structure and company or company hierarchy.
- For award proposals or awards, create an award proposal plan template or an award plan template.
- To plan by company hierarchies, configure the Default Reporting Currency on the **Edit Consolidation Details** task.
- Security: *Process: Budget* domain in Budgets functional area.

### Context

You can enter or update data to define plans or budgets and forecasts for each period in your plan or budget duration. You can then use this data as the basis for comparative reporting. If the plan or budget requires approval, you can update details for each period until you submit the plan or budget.

### Steps

- Access the **Maintain Budget** task.

2. As you complete the first part of the task, consider:

Option	Description
<b>Company</b>	You can only enter details for 1 currency and 1 company or company hierarchy at a time.
<b>Organizing Dimension</b>	The organizing dimension type applies to all plan details for the period, summary period, or duration.
<b>Plan Currency</b>	Workday converts plan credit and debit amounts from this currency into the company base currency according to the conversion rate that you set up.  For multicurrency financial plans, you can add plan lines with identical ledger accounts and worktags if you use different currencies on each plan line.

3. As you complete the second part of the task, consider:

Option	Description
<b>Ledger Account/Summary</b>	For each plan line, select a unique combination of ledger account and worktags.  With structured dimensions, you can select the specified ledger account summaries. Without structured dimensions, you can only select the accounts in the specified ledger account summary.
<b>Worktags</b>	For plans or budgets with structured dimensions, you can only select worktags specified in the plan structure. These structured dimensions also determine which worktags are optional or required. If you don't configure structured dimensions, you can select any worktag enabled for plans or budgets.

### Example

For a financial plan, you could set a travel plan with 10,000 USD for cost center 10001. You could configure this plan in 2 ways:

- Set a plan for travel expense to 10,000 USD for cost center 10001. With this configuration, workers in region A can consume the entire travel plan for the cost center without any allocated expenses used by another region.
- Set a plan for travel expenses to 4,000 USD for cost center 10001, region A, and 6,000 USD for cost center 10001, region B. With this configuration, you allocate the plan by region within this cost center.

### Next Steps

- Generate financial statements that compare actuals ledgers to plans or budgets across years or periods.
- Use the **View Plan** report to view the plan details by period.

## Edit Plan Templates

### Prerequisites

- Create an award, award proposal, financial, or project plan or budget.
- Security:
  - *Manage: Project Budget* domain in the Projects functional area.
  - *Set Up: Budget General* domain in the Budgets functional area.

### Context

You can edit your plan templates after plan lines exist to correct errors or accommodate unplanned events.

### Steps

1. Access the **Edit Plan Template** task.
2. As you complete the task, consider:

Option	Description
<b>Inactive</b>	<p>You can only deactivate financial plans. Changes to this setting might impact existing report, dashboard, and scorecard references. If you select this option, you cancel all <i>Budget Amendment Event</i> and <i>Planning Event</i> business processes for this plan.</p>
<b>Company</b>	<p>You can add or remove companies or company hierarchies from financial plans. If your plan is associated with a true plan hierarchy, you can only add or remove companies.</p>
<b>Enable Multicurrency</b>	<p>You can change this setting at any time except when:</p> <ul style="list-style-type: none"> <li>• Plan lines exist. You can't clear this check box.</li> <li>• You've selected a currency rate type.</li> <li>• You include company hierarchies on your plan template.</li> </ul>
<b>Enable for Allocations</b>	<p>You can change this setting on your financial plan template for all plan structure types except:</p> <ul style="list-style-type: none"> <li>• Multicompany</li> <li>• Multicurrency</li> <li>• True Child</li> <li>• True Parent</li> <li>• Virtual Parent</li> </ul>

Option	Description
<b>Default Balanced Amendment</b>	You can change this setting when your template isn't associated with a virtual parent plan structure.
<b>Validate Expense Account Amendments</b>	<p>Select to validate if budget amendments on expense accounts are less than current spend. Workday only validates expense account amendments that you create or edit while this check box is checked.</p> <p>Workday only displays this check box if you select <b>Use Contextual Amendments</b> on your plan structure.</p>
<b>To</b>	<p>You can add periods to financial plans when the plan:</p> <ul style="list-style-type: none"> <li>• Has any status other than <i>Available</i> or <i>In Worksheets</i>.</li> <li>• Isn't associated with a true plan hierarchy.</li> </ul>

#### Related Information

##### Concepts

[Concept: Inactive Financial Plans](#) on page 486

## Submit a Plan or Budget for Approval

### Prerequisites

- Enter or upload plan or budget values.
- On the plan or budget structure, select the option to require approvals and amendments.
- Configure the *Plan Event* business process and corresponding security policy.
- For all plans and budgets in hierarchies (both multicompny and single company), you must approve the parent before you can submit a child.

### Context

You can review a company's plan or budget to ensure that it's complete, then submit for approval. You can use the approved plan or budget in financial reporting and budget checking during various transactions.

### Steps

1. Access the **Submit Plan** task.
2. Select the **Plan Structure** and **Company** for the plan or budget that requires approval.  
For multicompny plans or budgets, you can only submit for 1 company at a time. Workday only moves the overall plan or budget to *Available* status after you submit and approve every individual company's plan or budget.
3. Submit the plan or budget for approval.

### Result

For a true parent-child plan hierarchy, Workday issues a validation upon submission if the linked child amounts exceed the parent amounts. You can then adjust the amounts and resubmit.

If you configured custom validations for plan lines, Workday issues those validations upon submission. You can access the **Plan Lines with Custom Validations** report to view plan lines with validation errors and warnings.

Workday initiates the *Plan Event* business process and sends an inbox item to the reviewer to approve or deny the plan or budget. Once approved, you can only change the plan or budget values with amendments.

### Related Information

#### Tasks

[Steps: Set Up Plans or Budgets](#) on page 461

## Amend Plans or Budgets

### Prerequisites

- Select the **Use Amendments/Approval** check box on your plan structure.
- Select the **Use Contextual Amendments** check box on your plan structure to amend in context of your:
  - Current budget.
  - Current spend.
  - Award amount, for an award plan type.

Select the check box for plans or plan hierarchies with company hierarchies.

- Approve the original plan or budget. For multicountry plans or budgets, submit and approve every individual company's plan or budget.
- For unbalanced amendments, you must be assigned to a segment-based security group on the *Create Unrestricted Budget Amendment (Segmented)* domain in the Budgets functional area.
- Configure the *Budget Amendment Event* business process and corresponding security policy.

### Context

To change an approved plan or budget, you can:

- Create a budget amendment.
- Copy or copy and reverse an amendment you already created.
- Revise an amendment as long as that amendment has any status except *Available*.

You can then submit the budget amendment for approval.

In Workday, amendments are changes, not replacement amounts.

For true hierarchical plans, amendments can impact both the parent and child plans.

### Steps

1. Access 1 of these tasks:

- **Create Budget Amendment**.
- **Create Budget Amendment for Organization** if you use organization-based roles.

2. As you complete the first part of the task, consider:

Option	Description
<b>Company</b>	You can only enter details for 1 currency and 1 company or company hierarchy at a time.
<b>Plan Currency</b>	Workday converts plan credit and debit amounts from this currency into the company base

Option	Description
	<p>currency according to the conversion rate that you set up.</p> <p>For multicurrency financial plans, you can add amendment lines with identical ledger accounts and worktags if you use different currencies on each amendment line.</p>

3. As you complete the second part of the task, consider:

Option	Description
<b>Ledger Account/Summary</b>	<p>For each budget amendment line in this grid, select a unique combination of ledger account and worktags. If your selections match with an existing plan line on the plan or budget you want to amend, Workday automatically populates the existing values into the grid.</p>
<b>Restricted</b>	<p>On the <b>Create Budget Amendment for Organization</b> task, Workday displays <b>Yes</b> when you don't have access to view current budget and spend for the budget amendment line.</p>
<b>Percentage Change</b> <b>Amount Change</b> <b>Total Plan</b>	<p>On the <b>Create Budget Amendment</b> task, you can amend by entering positive or negative values on the <b>Amount Change</b> column. Workday converts negative values into credits and positive values into debits when you submit the amendment.</p> <p>On the <b>Create Budget Amendment for Organization</b> task, you must use the <b>Amount Change</b> column to amend when you don't have access to view current budget and current spend. Workday displays zeroes on all of the other columns.</p> <p>If you select <b>Use Contextual Amendments</b> on the plan structure and use the <b>Create Budget Amendment</b> task or if you have access to view current budget and current spend on the <b>Create Budget Amendment for Organization</b> task, enter:</p> <ul style="list-style-type: none"> <li>• A percent change to a plan line.</li> <li>• The amount a plan line needs to change by.</li> <li>• A new total amount on the plan line.</li> </ul> <p>When you enter a value on 1 of these columns, the other 2 automatically update.</p>

## Result

If you configured these validations, then Workday issues the validations when you attempt to submit the budget amendment:

- Custom validations for plan lines.
- Expense account amendment validations.

Workday initiates the *Budget Amendment Event* business process. For hierarchical plans or budgets, you can route amendments to both parent and child approvers.

## Next Steps

- If you configure custom validations for plan lines, use the **Plan Lines with Custom Validations** report to view plan lines with validation errors and warnings.
- Use these reports to view all changes to a plan or budget.
  - **Find Budget Amendments**
  - **Find Budget Amendments for Organization**

## Related Information

### Concepts

[Concept: Amendments to Plan Hierarchies](#) on page 497

### Tasks

[Steps: Set Up Plans or Budgets](#) on page 461

[Create Custom Business Processes](#)

[Maintain Currency Conversion Rates](#)

## Steps: Set Up Budgetary Roll Forward and Close

### Context

Set up Workday to roll budgets forward at year-end. You can roll unspent budget for specific cost centers, funds, or other worktag types from the completed ledger year to the next year. You can also close your unspent budget.

### Steps

**1. Access the [Maintain Entry Types](#) task.**

Define entry types to identify the plan lines for specific plan types, such as financial plans or position budgets. Workday uses entry types for reporting purposes when you roll over and close plans and budgets.

You associate an entry type with a structure and company or company hierarchy when you create a template.

Security: *Set Up: Budget General* domain in the Budgets functional area.

**2. Access the [Mass Update Entry Types](#) task.**

Assign entry types to existing structures and budget amendment types. Workday updates existing plan lines and sets default types for future lines.

You can only run this task the first time you roll your budget forward.

Security: *Set Up: Budget General* domain in the Budgets functional area.

**3. [Define Rules to Roll Budgets Forward and Close](#) on page 478.**

**4. [Roll Budgetary Year-End Balances Forward](#) on page 480.**

### Result

You can complete the budgetary roll forward and close process using the **Create Budgetary Roll Forward / Close** task.

## Define Rules to Roll Budgets Forward and Close

### Prerequisites

- Create entry types.
- Create budget amendment types.
- Security: *Set Up: Budget General* domain in Budgets functional area.

### Context

Configure rules that:

- Calculate the balance to roll over and close.
- Apply the relevant entry types for year-end plan or budget processing. Workday maps the source entry types to target entry types when you roll forward budgetary balances to the next year.

The rules enable you to select specific ledger types to add or subtract from your planned amount when you determine the amount to roll over. You can also exclude the plan or budget from the equation to roll only specific ledger account types forward.

### Steps

1. Access the **Maintain Budget Treatment Rules** task.
2. Create a rule for each rolling forward or closing transaction.
3. As you complete the task, consider:

Option	Description
<b>Plan Treatment</b>	<p>Select how you want to treat the plan lines for the remaining fiscal year and the new fiscal year:</p> <ul style="list-style-type: none"> <li>• <i>Close</i>: Select to zero out the balance of the remaining fiscal year by adjusting the plan amount.</li> <li>• <i>Roll as Original without Source Reversal</i>: Select to roll plan lines from a source budget to a target budget. These rolled plan lines replace any existing plan lines on the plan for that new year. On the new plan, any rolled plan lines are indistinguishable from plan lines created when you maintain the plan directly.</li> <li>• <i>Roll as Original with Source Reversal</i>: Select to roll plan lines from a source budget to a target budget. These rolled plan lines replace any existing plan lines on the plan for that new year. On the new plan, any rolled plan lines are indistinguishable from plan lines created when you maintain the plan directly. Workday then creates a reversal budget entry in the source budget to zero out the budget. Workday also closes the old plan or budget.</li> <li>• <i>Roll as Supplemental without Source Reversal</i>: Select to roll plan lines from the remaining fiscal year into the plan for the new year. When you maintain the new plan, Workday displays the rolled plan lines on a <b>Rolled Budget Lines</b> tab.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li><i>Roll as Supplemental with Source Reversal:</i> Select to roll plan lines from the remaining fiscal year into the plan for the new year. When you maintain the new plan, Workday displays the rolled plan lines on a <b>Rolled Budget Lines</b> tab. Workday also closes the old plan or budget.</li> </ul>
<b>Allowed Plan Type</b>	<p>The type of plan structure for which you want to establish the year-end closing rules.</p> <p>Workday only supports financial and position plan types.</p>
<b>Source Entry Types</b>	<p>Select 1 or more entry types from which you want to move balances when you close a ledger year.</p>
<b>Decrease by / Increase by Ledger Types</b>	<p>Identifies the ledger types to exclude or include when you move balances over to the new year.</p> <p>Workday decreases or increases the ledger amounts by the specified percentage from the source entry types to determine the balance to roll over.</p>
<b>Source Rolling Entry Type</b> <b>Destination Rolling Entry Type</b> <b>Closing Entry Type</b>	<p>Select which entry types to apply to plan lines generated to roll forward or close budgets.</p>

## Result

Use the **View Plan Treatment Rules** report to review the new rules by plan treatment.

## Example

You want to roll over 50% of your unspent budgetary balance for an operating plan. In the plan treatment rule equation, you specify these values:

Rule Parameter	Value
Plan Treatment	<i>Roll as Supplemental without Source Reversal</i>
Allowed Plan Type	<i>Operating</i>
Source Entry Type	<i>Permanent</i>
Decrease by Ledger Types	<i>Actuals</i> <i>Commitment</i> <i>Obligation</i>
Roll Percentage	<i>50</i>
Source Rolling Entry Type	<i>Rolled From</i>
Destination Rolling Entry Type	<i>Rolled To</i>

When you specify this rule for budgetary roll, Workday subtracts the actuals, commitments, and obligations from the permanent plan to calculate the unspent plan. Workday rolls 50% of the calculated amount, and applies the *Rolled From* entry type to entries that reduce the plan in the first period. The budgetary roll process then generates entries with the *Rolled To* entry type in the new period.

## Next Steps

Use these rules on the **Create Budgetary Roll Forward/Close** task to roll plan lines forward and create closing entries.

## Roll Budgetary Year-End Balances Forward

### Prerequisites

- Define plan treatment rules.
- For financial plans, the plan must be:
  - In *Available* status.
  - Active.
  - Single company.
  - Single currency.
  - Single year. This year must be the same year as the company's fiscal year.
- For position budgets, the budget must:
  - Be active.
  - Not use Company as a dimension.
- The plan structure must not use a book.
- To roll forward plan lines, create the plan template for the new year.
- Security: Set Up: *Budget General* domain in Budgets functional area.
- Configure the *Budgetary Roll Forward Close Event* business process and security policy in the Budgets functional area.

### Context

You can roll budgetary balances, expenditure amounts, forward to establish additional budget in the new ledger year. Example: Transfer balances to fund non-lapsing accounts in the next year.

You can specify a plan treatment rule to calculate the plan or budget amount to roll from the source entry type to the target entry type. You can specify another plan treatment rule for closing plans or budgets. Workday creates plan entries to:

- Reduce the budget for the completed year.
- Establish the rolled amount in the new year.

### Steps

1. Access the **Create Budgetary Roll Forward / Close** task.
2. As you complete the first part of the task, consider:

Option	Description
<b>Plan Structure</b>	You can specify fiscal year, worktags, and ledger accounts from the plan structure to filter the plan lines to roll over.
<b>Source Year</b>	Select the fiscal year in the source plan to roll from or close.

3. As you complete the second part of the task, consider:

Option	Description
<b>Structured Dimension</b>	You must add Ledger Account as a structured dimension.
<b>Target Year</b>	You can only edit this field if you select a plan treatment rule that rolls over budget.
<b>Worktag Filters</b>	Select specific worktags to use to filter plan lines. Example: Roll the remaining budget forward from plan lines with specific funds or cost centers.
<b>Plan Treatment Rule</b>	Workday uses the rule to calculate the remaining plan or budget by type to roll over and close. Workday processes the rules sequentially top to bottom.

## Result

Workday:

- Calculates roll forward balances.
- Creates new plan entries and lines for the target entry type.
- Creates credit entries for the source entry type.

## Next Steps

Submit using the **Submit Budgetary Roll Forward / Close** task.

Use the **Budgetary Roll Forward / Close** report to review the summary results.

## Related Information

### Tasks

[Steps: Set Up Budgetary Roll Forward and Close](#) on page 477

[Roll Procurement Documents Forward](#)

## Steps: Create a Pooled Budget

### Prerequisites

- [Create posting rules](#)
- Security *Set Up: Budget General* in the Budgets functional area.

### Context

You can create a pooled budget with budget check enabled so that your organization's position transactions impact a position and financial budget simultaneously.

Pooled budgets are financial and award type budgets that you can share between multiple positions or staffing activities. You don't need to restrict a pooled budget to any 1 position or staffing model. Example: You have an annual pool of funds allocated for salary expenses for a department in your organization. Each staffing transaction gets checked against the pooled budget for that department. The unspent budget is the salary savings.

Workday requires budget check to use pooled budgets. Workday checks your financial or staffing transactions against a pooled budget only if the transactions belong to the Job Management staffing model.

## Steps

1. Create a plan structure for the Position Budget.  
See [Define Plan Structures](#).
  2. Create a plan template for the Position Budget.  
See [Create Plans or Budgets](#).
  3. Create a plan structure for the Financial Budget.  
See [Define Plan Structures](#).
  4. Create a plan template for the Financial Budget.  
See [Create Plans or Budgets](#)
  5. Create a Position Budget for the pool.  
See [Create Position Budgets](#)
  6. Create a Financial Budget with the same Ledgers, Structured Dimensions, and Worktags as the Position Budget.
- Note:** Ledgers, Structured Dimensions, and Worktags for the Financial Budget must match those on the Position Budget.
7. Access the **Maintain Budget** task for the financial budget and add plan lines.
  8. Submit both the Position and Financial Budget for approval.  
See [Submit a Plan or Budget for Approval](#)
  9. Access the **Edit Budget Check Options** task for the Financial Budget.
    - a) Select the **Enable Budget Check** check box.
  10. Access the **Edit Budget Check Options** task for the Position Budget.
    - a) Select the **Enable Budget Check** check box.

**Note:** You must enable budget check on both the Financial and Position Budget.

## Result

When your organization runs staffing transactions with the correct posting rules, they will impact the pooled budget you create with the position and financial budget.

## Example

### Next Steps

## Steps: Set Up Revenue Driven Budget Rules

### Prerequisites

[Set Up Plans or Budgets](#).

### Context

You can use Revenue Driven Budget Rules to automatically increase available budget amounts based on revenue recorded in:

- Accounting Journals
- Ad Hoc Bank Transactions
- Cash Sales

Example: A department can spend the amount of collected fees in addition to their approved operating budget. The approved budget for the department is 100,000 USD. The posted revenue recorded on an

accounting journal is 25,000 USD. When you use revenue driven budget rules, Workday automatically increases the budget to 125,000 USD when the journal posts. When you turn on budget check for this budget, the budgetary control amount available for spending is 125,000 USD.

Note: When you manually correct an Accounting Journal from the *Accounting Journal Event* business process, Workday won't cancel original budget increases or add new budget increases through Revenue Driven Budget Rules. Workday recommends that when you configure the *Accounting Journal Event* business process security policy, you limit corrections.

## Steps

### 1. Edit Domain Security Policies

Grant users who can create and maintain revenue driven budget rules access to the *Set Up: Revenue Driven Budgets* domain.

If you assign constrained security groups access to the *Set Up: Revenue Driven Budgets* domain, they'll have access to unconstrained privileges. Workday recommends you use unconstrained security groups in the security set up.

### 2. Activate Pending Security Policy Changes.

### 3. Access the **Create Revenue Driven Budget Rule** task.

In the **Revenue Source Definition** section, enter the source criteria for incoming revenue transactions to result in a budget line increase.

In the **Revenue Budget Increases** section, enter the resulting plan and plan line attributes that Workday creates once the **Revenue Source Definition** is met.

As you complete the task, consider:

<b>Default ~Entry Type~</b>	Workday recommends accessing the <b>Maintain Entry Types</b> task to create a new entry type specific to Revenue Driven Budgets to use on rules.
<b>~Plan~</b>	Only plans using amendments on approval display for selection.  Plans must be in <i>Available</i> status to generate automatic increases to the budget.
<b>Worktags</b>	Workday uses worktags to match journals with revenue source on rules. Journals can have many worktags but need to have at least the same worktags as a revenue source or be a subordinate of a hierarchy value on the rule.
<b>Journal Source</b>	Select 1 or more journal sources for supported transactions to apply to a rule.

### 4. (Optional) Access the **Maintain Revenue Driven Budget Rule Evaluation Order** task.

For revenue driven budget rules using hierarchies, assign an order for revenue driven budget rules. Workday evaluates the ordering of rules from top to bottom set by this task and uses the first rule it finds with matching criteria.

### 5. **Create Accounting Journals**.

Create revenue transactions based on your **Revenue Source Definition**.

### 6. (Optional) Edit rules by selecting **Revenue Driven Budget Rule > Edit** from the related actions menu of the **Company**.

You can edit rules to change budget values and point to new budgets for subsequent years. Once Workday uses a **Revenue Source Definition** you can't use it in other rules even if the rule is inactive.

## 7. (Optional) Set Up Floors and Ceilings for Revenue Driven Budgets.

If you don't configure a **Floor** and **Ceiling**, the fields **Floor** and **Ceiling** display a 0 indicating neither a **Floor** nor a **Ceiling** applies for that revenue driven budget rule.

### Result

When you record revenue on an accounting journal, Workday automatically creates a new budget line that increases budgets defined by the rule.

### Next Steps

You can use the **Revenue Driven Budget Balance and Spend** report to view a detailed budget to actuals balance of expense ledger accounts and ledger account summaries for a financial plan that uses revenue driven budget rules.

#### Related Information

##### Reference

[2023R1 What's New Post: Revenue Driven Budgets for Accounting Journals](#)

## Steps: Set Up Floors and Ceilings for Revenue Driven Budgets

### Prerequisites

### Context

You can define a **Floor** as the amount of revenues to be recorded before the budget spending authority begins increasing for your revenue driven budget rules. You can also define a **Ceiling** amount as the maximum amount the budget spending authority can increase to from the recorded revenue for your revenue driven budget rules.

### Steps

1. [Set Up Revenue Driven Budget Rules](#)
2. Access the **Create Revenue Driven Budget Rule** task.

As you complete the task, consider:

Option	Description
<b>Ceiling</b>	Enter a maximum amount that the budget spending authority can increase to.
<b>Floor</b>	Enter a minimum amount of recorded revenues before the budget spending authority begins increasing.
<b>Effective Date</b>	<p>Workday:</p> <ul style="list-style-type: none"> <li>• Recommends setting the <b>Effective Date</b> the same as the <b>Plan Date</b>.</li> <li>• Only considers revenue transactions from the <b>Effective Date</b> onward.</li> <li>• Won't retroactively consider revenue lines prior to the <b>Effective Date</b>. This includes calculations for <b>Floor</b> and <b>Ceiling</b>.</li> </ul>

### Example

## Next Steps

You can use the **Recorded Revenue to Floors and Ceilings** report to view the:

- Total recorded revenue compared to the floor and ceiling.
- Increased target budget.
- Recorded revenue.

## Related Information

### Reference

[2024R2 Feature Release Note: Revenue Driven Budgets - Floors and Ceilings](#)

## Concept: Plan Structures

### Plan Types

Workday uses your **Plan Type** selection to determine the type of plan structure.

Plan Type	Description
Award	Use this structure as the basis for award budgets (such as grant awards for sponsored research). You can use award budgets to control spend during spend and staffing transactions.
Award Proposal	Use this structure as the basis for preaward budgets (such as grant awards for sponsored research). You can use award proposal budgets to control spend during spend and staffing transactions.
Financial	Use this structure as the basis for financial plans and when creating parent-child plan hierarchies. You can use financial plans to control spend during spend and staffing transactions.
Position	Use this structure as the basis for position budgets. You can use position budgets to control position approval during staffing events for organizations with position management staffing models.
Project	Use this structure as the basis for project budgets. You can use project budgets to forecast expenses and revenue for your projects.

### Schedule and Plan Entry By

Workday uses your **Plan Entry By** selection to create each time period that you define a plan or budget for.

Plan Entry by	Description
Period	Base the periods on the periods of the fiscal schedule or award schedule.
Summary Schedule	Base the periods on a summarized group of fiscal or award periods, such as quarterly or half yearly.
Duration	For financial plans and position budgets, a single period that spans the entire time frame of the plan or budget.

For financial plans and position budgets, Workday uses your fiscal schedule together with your **Plan Entry by** selection and time frame to create periods and duration. Your **Schedule** selection must match the fiscal schedule for:

- The companies you plan by, as set on the **Edit Company Accounting Details** task.
- The company hierarchies you plan by, as set on the **Edit Consolidation Details** task.

For award and award proposal budgets, Workday uses your award schedule and **Plan Entry by** selections to create your budget periods and duration. You can define your award schedule on the **Create Award Schedule** task.

Use fiscal or award years to ensure that the same years and periods are always available for comparison between plans and actuals.

### **Structured Dimensions**

Structured dimensions determine whether transactions are subject to budget. If a transaction has worktags that match the structured dimension criteria, the transaction is subject to that budget.

To enable budget checking, you must use structured dimensions.

For company hierarchies, you can only select company hierarchies with subordinate companies that use the same:

- Account set.
- Currency.
- Fiscal schedule.

### **Fringe**

Consider disabling fringe when:

- Workday doesn't include fringe benefits on your commitments, obligations, or actuals.
- You don't budget for fringe.

### **Related Information**

#### **Tasks**

[Define Plan Structures](#) on page 464

## **Concept: Inactive Financial Plans**

When you deactivate financial plans, Workday:

- Cancels all related *Planning Event* business processes.
- Cancels all related budget amendments that aren't in *Available* status.
- Disables all fields and options on the **Edit Plan Template** task except the **Inactive** check box.

You can't see inactive financial plans on these tasks and reports:

Tasks	Reports
<b>Create Budget Amendment</b>	<b>Budget Check Exceptions</b>
<b>Create Budgetary Roll Forward / Close</b>	<b>Find Budget Amendment</b>
<b>Edit Budget Check Options</b>	<b>View Plan</b>
<b>Edit Budgetary Roll Forward / Close</b>	
<b>Maintain Budget</b>	
<b>Submit Budget</b>	

You can't inactivate financial plans when:

- The plan is part of a plan hierarchy, because the plans and budgets in your hierarchy will fall out of sync.
- Budget check is enabled, because you'll remove the plans from the spending approval process. To inactivate these plans, first clear **Enable Budget Check** on the **Edit Budget Check Options** task.

## Concept: Convert Spend to Currencies on Company Hierarchy Plan Lines

Workday uses your **Currency Rate Type for Budget Spend** selection on your plan template to convert transaction spend. We convert transaction spend to the currencies of the company hierarchies on your plan lines before we total the amounts when you:

- Amend plans.
- Review transactions on the **Budget Check Exceptions** report.
- View spend amounts on custom reports created using these report data source (RDS) filters:
  - Financial Plan Lines for Company and Reporting Time Period
  - Financial Plan Lines for Organization and Reporting Time Period

We only convert in this order when:

- The currencies on your subordinate companies and company hierarchies differ from the currencies of the company hierarchies on your plan lines.
- The currencies on the companies and company hierarchies of your child plans differ from the currencies of the company hierarchies on your virtual parent.

## Reference: Budget Reports

Workday delivers a number of standard reports to give you greater insight into the health and progress of your plans and budgets. We provide these financial reports to help you manage your plans and budgets. For a complete, descriptive list of Workday delivered standard reports for plans and budgets, access the **Workday Standard Reports** report and select these report categories:

- *Planning*
- *Plans*
- *Set Up Plan*

Name	Security	Description
<b>Budget Check Exceptions</b>	<i>Reports: Company Financial Budgets and Reports: Manager Financial Budgets</i> domains in the Budgets functional area.	Displays the budgetary balance for a budget check exception. Use this report to identify transactions that have failed budget check during the budget check process.
<b>Budgetary Balance</b>	<i>Reports: Company Financial Budgets</i> domain in the Budgets functional area.	Displays the budgetary balance for a financial plan or award budget for a company.

Name	Security	Description
<b>Current Plan</b>	<i>Manager: Project Budget and Process: Budget</i> domains in the Projects and Budgets functional areas.	Displays all details about the current plan or budget for a company or company hierarchy.
<b>Manager Budgetary Balance</b>	<i>Reports: Manager Financial Budgets</i> domain in Budgets functional area.	Displays the budgetary balance for a financial plan or award budget for an organization.
<b>Award Budget for Fiscal Period</b>	<i>Process: Budget and Reports: Award</i> domains in the Budgets and Grants Management functional areas.	Displays plan amounts for 1 or more awards, with the option to view awards in fiscal year context using prorations.

Workday also delivers an **Actuals vs. Budget** worklet, enabling you to see graphical analytics that compare your plan to your ledger account actuals. To set up the **Actuals vs. Budget** worklet, access the **Configure Plan Worklet** task and select:

- **Company**.
- **Year**.
- **Business Plan**, or the plan or budget for the company.
- **Ledger Accounts** for which to compare plan to actuals.

## Example: Create Financial Plan to Actuals Composite Reports with Eliminations

This example illustrates how to set up a composite report that displays:

- Company plan lines and actuals.
- Intercompany transaction elimination options.

### Context

You want to create a composite report that applies intercompany transaction eliminations to your financial plan and actuals for comparison and viewing.

### Prerequisites

- Set up elimination rules for your intercompany ledger accounts.
- Enable intercompany affiliate worktags on intercompany elimination:
  - Plan lines for an existing plan.
  - Journal lines.
- Security: these domains in the System functional area:
  - *Custom Report Creation*
  - *Manage: All Custom Reports*

### Steps

1. Access the **Copy Standard Report to Custom Report** task.
2. Select *Financial Plan to Actuals* from the **Standard Report Name** prompt.
3. Click **OK**.
4. Enter *Financial Plan to Actuals with Eliminations* in the **Name** field.
5. Click **OK**.
6. Access the **Edit Custom Report** task.

7. Select *Financial Plan to Actuals with Eliminations-Financial Plan Consolidation Sub-Report* from the **Report Name** prompt.
8. Click **OK**.
9. In the **Prompt Defaults** grid on the **Prompts** tab, clear the **Do Not Prompt at Runtime** check box for these fields:
  - **Eliminations Only for Plan**
  - **Perform Intercompany Eliminations for Plan**
10. Click **OK**.
11. Access the **Edit Custom Report** task.
12. Select *Financial Plan to Actuals with Eliminations* from the **Report Name** prompt.
13. Select **Edit** from the related actions menu of the C3 column header.
14. On the **Value Type** column in the **Map Sub Report Prompts** grid, select *Prompt User for Value at Run Time* for these prompt fields:
  - **Eliminations Only for Plan**
  - **Perform Intercompany Eliminations for Plan**
15. Click **OK**.
16. Access the **Prompts** tab in the report settings.
17. Select the **Populate Undefined Prompt Defaults** check box.  
When you select the check box, Workday populates the **Prompt Defaults** grid with undefined prompt defaults based on the configurations on the subreport. The check box automatically clears once Workday finishes updating the **Prompt Defaults** grid.
18. On the **Prompt Defaults** grid, clear the **Do Not Prompt at Runtime** check box for these fields:
  - **Eliminations Only**
  - **Perform Intercompany Eliminations**
19. Click **OK**.
20. Click **Run**.  
Select these check boxes to display only intercompany transaction eliminations lines on your reports:
  - **Eliminations Only**
  - **Perform Intercompany Eliminations**
  - **Eliminations Only for Plan**
  - **Perform Intercompany Eliminations for Plan**

When you don't select the check boxes, Workday displays all plan lines and actuals on your reports.

## Result

When you run your custom report, you can compare your data and check for any variances on:

- All plan lines and actuals with eliminations.
- Only intercompany eliminations for plan and actuals.

## Plan Hierarchies

---

### Setup Considerations: Plan Hierarchies

You can use this topic to help make decisions when planning your configuration and use of plan hierarchies. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Workday plan hierarchies enable you to link plans and budgets in a hierarchical structure, making it easier to control and report on multiple plans and budgets simultaneously.

Virtual parent-child plans link multiple child plans to 1 parent plan while true parent-child plans link 1 child to 1 parent.

### Business Benefits

- Parent plans contain their own budget amounts or aggregate amounts from linked child plans. This enables you to view the details for the parent and linked child plans in 1 place.
- You can use plan hierarchies to run a single budget check for multiple plans simultaneously, reducing the number of exceptions for review.
- Plan hierarchies improve reporting efficiency by enabling you to consecutively link high-level budgets to subordinate-level budgets that increase in granularity with each level. As you progress through the levels, the budget details become more refined.
- You can use plan hierarchies to budget check at higher levels than your budget entries. This gives you the flexibility to create budgets with more dimensions and control them at levels that aggregate your budget amounts based on fewer dimensions.
- You can use virtual plan hierarchies to consolidate budget and plan amounts from different plan types for improved control and reporting.

### Use Cases

- You can use a plan hierarchy to report on summary plan amounts using a parent budget and report on more granular plan amounts using child budgets.
- You can link child budgets from different companies to a parent budget in a virtual plan hierarchy.
- You can ensure that child budget amounts don't exceed the budget limits set at the parent in a true plan hierarchy.
- You can use a virtual plan hierarchy to consolidate multiple budgets into a single parent summary amount to budget check your transactions against.

### Questions to Consider

Question	Considerations
How do you create and manage budget amounts?	You can use 1 of these hierarchy types to manage budget amounts:

Question	Considerations
	<ul style="list-style-type: none"> <li>True plan: Use when you need to enter budget amounts at multiple levels with varying levels of granularity. You can create an unlimited number of hierarchy levels.</li> <li>Virtual plan: Use to consolidate individual budget entries virtually at a summary level and link position and financial plan types to the same parent plan structure. You can only create 2 hierarchy levels.</li> </ul>
How can you use budget check in a plan hierarchy?	<p>You can budget check at these levels:</p> <ul style="list-style-type: none"> <li>Child: Workday checks each child configured for budget check, giving you tighter control over your budget and enabling you to identify which child plan fails.</li> <li>Parent: You only need to configure budget check for 1 budget or plan. Since parents contain aggregate amounts and fewer dimensions, you check your transactions against the overall budget summary instead of the more granular child budgets. Example: You create child budgets at the company, ledger account, and cost center levels for reporting purposes. You can enable budget check on the parent plan to control your budgets at the company or ledger account summary level.</li> <li>Both child and parent: Enables you to control budgets and plans at the aggregated parent level and more granular child entry level.</li> </ul>
How do you want amendments to update existing plans or budgets?	<ul style="list-style-type: none"> <li>Use a true plan hierarchy to amend the parent and each child plan level individually. Amendments on the parent plan don't impact the child, but amendments on child or grandchild plans can cascade up to the parent.</li> <li>Use a virtual plan hierarchy to make an amendment on a child budget plan that impacts the parent summary. You can make amendments on the child plan or budget but not the parent.</li> </ul>
How do you want to report on plans or budgets in a hierarchy?	<p>You can use structured dimensions for reporting. Example: On a child plan, you report at the individual cost center level. On the parent plan, you report at the cost center hierarchy level. The child-level report provides a detailed view, whereas the parent-level report returns a summary view.</p>

## Recommendations

To avoid double-counting budget amounts when converting historical transactions into hierarchies, Workday recommends being aware of:

- Existing budgets you link to your new plan hierarchy.

- The sources for the amounts in the budgets that you link in your new plan hierarchy.

Run budget check at the parent level when you link many child plans and budgets to the same parent plan.

## Requirements

Child plans are a subset of the parent plan so they must have the same summary schedule as or a more granular schedule than the parent plan.

For virtual plan hierarchies, parents must include at least 1 structured dimension from the children.

For true plan hierarchies:

- Use a Financial plan type for both parent and child plan structures.
- Children must include all structured dimensions from the parent.

## Limitations

- True parent structures only support 1 child per level.
- Virtual parent structures don't contain their own plan lines.
- You can't amend virtual parent budgets or plans.
- Workday only supports 2 hierarchy levels for virtual plan hierarchies. Virtual child plans can't be a parent to another child plan.

## Tenant Setup

No impact.

## Security

Users with access to the *Set up: Budget General* domain in the Budgets functional area can configure plan hierarchies.

## Business Processes

No impact.

## Reporting

Reports	Considerations
<b>Child Budget Exceptions</b>	<ul style="list-style-type: none"> <li>Use to view child plan line amounts that exceed the parent summary.</li> <li>Supports plans in true plan hierarchies.</li> </ul>
<b>Plan Consolidation</b>	<ul style="list-style-type: none"> <li>Use to create aggregated reports based on multiple financial plans.</li> <li>Supports plans in virtual plan hierarchies.</li> </ul>
<b>Plan Structure Hierarchy Name</b>	<ul style="list-style-type: none"> <li>Use to compare the structure dimensions and schedules of parent and child plans.</li> <li>Supports plans in true plan or virtual plan hierarchies.</li> </ul>
<b>View Plan</b>	<ul style="list-style-type: none"> <li>Use to create reports on individual financial plans.</li> <li>Supports plans in virtual plan hierarchies.</li> </ul>

## Integrations

No impact.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Create Plan Hierarchies

### Prerequisites

Security: *Set Up: Budget General* domain in Budgets functional area.

### Context

You can set up your plans or budgets so that you have greater control in managing them at all levels of your organization. You can link plan structures to create plan hierarchies.

You can create 2 types of plan hierarchies:

- True plan hierarchies enable you to control child and grandchild plans using your parent. You can link a parent to 1 child and that child to 1 grandchild, and so on; Workday doesn't limit the number of hierarchy levels.
- Virtual plan hierarchies enable you to report across multiple plan structures. The parent has no lines of its own, and reflects the total of all its children. You can link a parent to many children, or a child to many parents; Workday limits you to 2 hierarchy levels.

### Steps

#### 1. Define Plan Structures on page 464.

Create a plan structure with these settings:

- Financial* as the **Plan Type**.
- For true hierarchies, **Use Amendments/Approval** checked.
- For true hierarchies, **Required** checked for all dimensions on the **Structured Dimensions** tab.

This structure becomes the primary or parent structure once you use it to create a child or link it to another structure with the same settings.

For virtual hierarchies, create all parent and child structures. Child structures must have:

- In **Plan Entry by**, the same time periods as the parent or a subset of these time periods.
- The same structured dimensions as the parent. Children can have more, but if they're required on the parent, they're required on the children.

#### 2. Create or link plan structures for a true hierarchy or a virtual hierarchy:

- See [Create or Link True Child Plan Structures](#) on page 494.
- See [Link Virtual Child Plan Structures](#) on page 495.

**3.** (Optional) Create all additional subordinate plan structures:

- To create a grandchild structure for a true hierarchy, create or link another structure from the related actions menu of the child structure.
- To create another child structure for a virtual hierarchy, link another structure.

**4.** [Create Plans or Budgets](#) on page 468.

Create plan templates for your hierarchy.

For true hierarchies, create plan templates from the parent plan structure. Workday generates templates for each child structure within the hierarchy at the same time, and links parent and child plans.

For virtual hierarchies, create child plan templates before you create your parent template. When you create your parent template, you can select multiple child templates in the **Linked Virtual Children Budgets** prompt.

**5.** [Maintain Budget](#) on page 471.

**6.** [Submit a Plan or Budget for Approval](#) on page 474.

### Result

The resulting plan includes all details from all members in the hierarchy.

### Next Steps

For virtual plan hierarchies with company hierarchies, you can use these reports to view plan lines for all your company hierarchies and companies:

- [Current Plan](#)
- [Plan Consolidation](#)

## Create or Link True Child Plan Structures

### Prerequisites

- Create a plan structure to be the parent.
- Security: *Set Up: Budget General* domain in Budgets functional area.

### Context

Parent plan structures must use these settings to create a link to a child-level structure:

- *Financial* as the **Plan Type**.
- **Use Amendments/Approval** checked.
- **Required** checked for all dimensions on the **Structured Dimensions** tab.

You create a plan hierarchy by creating a child plan structure for your intended parent plan structure, or by linking a plan structure to your intended parent plan structure. The settings of this child plan structure must match the parent settings, but can have additional structured dimensions.

## Steps

1. Access the **Create Child Plan Structure** or **Link Child Plan Structure** tasks from the related actions menu of your intended parent plan structure.  
If you choose the linking method, Workday only displays eligible structures in the **True Child Budget Structure** prompt.
2. Select **True Parent-Child** as the **Hierarchy Type**.  
You can use the **Edit Plan Structure Hierarchy Name** task anytime to revise the name.
3. In **Plan Entry by**, select the same time periods as the parent or a subset of these time periods.  
Workday automatically populates the same time periods as the parent. You can change these default time periods as long as you select a subset of the parent time periods.
4. (Optional) On the **Structured Dimensions** tab, add more dimensions to give more detail to your plan.  
Workday automatically populates structured dimensions with **Required** checked from the parent plan structure.  
If you plan to create a subordinate plan structure from this child plan, select **Required** on your additional dimensions. The grandchild plan structure must contain all dimensions from the child and all are required. This procedure applies to all hierarchy levels.

## Result

The child plan structure you created is now linked to the parent plan structure.

You can detach a child plan structure from a parent if no plan lines exist in child plan structure. Access the **Detach Child Plan Structure** task from the related actions menu of the child plan structure. After detaching the child plan structure, both the parent and child are available for linking again.

## Next Steps

Create your hierarchical plan using these linked plan structures on the **Create Plan Template** task.

## Link Virtual Child Plan Structures

### Prerequisites

- Create all parent and child plan structures.
- Security: *Set Up: Budget General* domain in Budgets functional area.

### Context

Financial and project plan type structures are eligible to be the primary or parent structure in a hierarchy. In financial plan type structures, you can include child structures with financial or position plan types. In project plan type structures, you can include child structures with project plan types.

You can create a plan hierarchy by linking a plan structure to your intended parent structure. Child structures must have:

- In **Plan Entry by**, the same time periods as the parent or a subset of these time periods.

- At least 1 structured dimension in common with the parent. Dimension members must be the same as the parent or a subset of these dimension members.

## Steps

1. Access the **Link Child Plan Structure** task from the related actions menu of your intended parent plan structure.

Workday only displays eligible structures in the **Virtual Child Budget Structure** prompt.

2. Select **Virtual Parent-Child** as the **Hierarchy Type**.

You can use the **Edit Plan Structure Hierarchy Name** task anytime to revise the name.

## Result

The child plan structure is now linked to the parent plan structure.

You can detach a child structure from a parent if no plan lines exist. Access the **Detach Child Plan Structure** task from the related actions menu of the child structure.

## Next Steps

Create your hierarchical plan using these linked structures with the **Create Plan Template** task.

[The Next Level: Structuring Your Budget Hierarchies Leveraging Virtual Parent-Child](#)

## Concept: Hierarchies in Plans and Budgets

You can use hierarchical relationships to link your plans and budgets. Workday provides 2 unique hierarchy types, true parent-child and virtual parent-child. With these plan hierarchies:

- Your organizations can create separate plan structures.
- You can generate structures at different levels of detail.

In Workday, the plan structure is the linking mechanism for these relationships.

### True and Virtual Hierarchy Comparison

This table compares true and virtual plan hierarchies:

	True Hierarchy	Virtual Hierarchy
<b>Purpose</b>	Defines a top-down process for plan entry. The parent plan structure defines the summary details and the plan amount, which are passed down to its child plan structure.	Enables you to link an unlimited number of plan structures to: <ul style="list-style-type: none"> <li>• Create aggregated reports.</li> <li>• Establish budgetary control at a more summarized level than your plan entry.</li> </ul>
<b>Hierarchy Levels</b>	<ul style="list-style-type: none"> <li>• Unlimited number of hierarchy levels.</li> <li>• Parent-child relationship is a 1-to-1 relationship.</li> </ul>	<ul style="list-style-type: none"> <li>• 2 hierarchy levels.</li> <li>• Parent can have many children, and child can have many parents.</li> </ul>

	True Hierarchy	Virtual Hierarchy
		<ul style="list-style-type: none"> <li>Plans or budgets used in a true hierarchy can also be a virtual child.</li> </ul>
<b>Plan Types</b>	Financial	Parent must be Financial. Children can be Financial or Position.
<b>Structured Dimensions</b>	<ul style="list-style-type: none"> <li>Child must have all structured dimensions of the parent.</li> <li>Child can have more structured dimensions than the parent.</li> <li>Must be required.</li> </ul>	<ul style="list-style-type: none"> <li>Parent can have any structured dimension as long as it exists on at least 1 child.</li> <li>Child can have more structured dimensions than the parent.</li> <li>Can be optional, but if they're required on the parent, they must be required on all children.</li> </ul>
<b>Dimension Members</b>	Child must be a subset or the same as the parent.	Child must be a subset or the same as the parent.
<b>Time Periods</b>	Child must be a subset or the same as the parent so it can roll up into the parent time periods.	<ul style="list-style-type: none"> <li>Child must be a subset or the same as the parent so it can roll up into the parent time periods.</li> <li>Child must contain at least 1 time period defined in the parent.</li> </ul>
<b>Amounts</b>	<ul style="list-style-type: none"> <li>Child must be equal to or less than the parent.</li> <li>Amendments on the child cascade up to the parent.</li> </ul>	<ul style="list-style-type: none"> <li>Parent has no amounts of its own because virtual parents are summarized totals of their children.</li> <li>Cannot be entered or changed directly in the parent.</li> </ul>

#### Related Information

##### Reference

[The Next Level: Structuring Your Budget Hierarchies Leveraging Virtual Parent-Child](#)

### Concept: Amendments to Plan Hierarchies

When you amend a plan that's part of a true plan hierarchy, the changes can impact both the parent and child plan. These changes depend on the amendment type. In general, amendments to a child plan can cascade up to the parent, with some exceptions that depend on whether the amendment is balanced or unbalanced.

For virtual plan hierarchies, you can only amend at the child plan or budget level. Amendment behavior is identical to that of plans and budgets not in hierarchies.

In Workday, you can restrict who has the ability to make unbalanced amendments. Assign these users to a segment-based security group on the *Create Unrestricted Budget Amendment (Segmented)* domain security policy. When they amend, they can edit the **Balanced Amendment** check box.

Amendment Type	True Parent	True Child
Balanced	<p>Amendments to the parent don't impact the child plan. You can increase the parent plan with no impact to the child plan. However, you can't decrease the parent plan amount below the child amount.</p>	<p>Full debit and credit amounts cascade up to amend the parent plan regardless of the amount on the parent. The only exception is when there's a net zero change to the parent.</p> <p>Example: You amend a child plan with a 10,000 USD debit for <i>Cost Center 1</i> and a 10,000 USD credit for <i>Cost Center 2</i>. There's no change to the parent plan because the amendment is a transfer from one cost center to another.</p>
Unbalanced	<p>Only increases the difference of the child plan increase, not the full amount of the amendment debit on the child.</p> <p>Example: You amend a 100,000 EUR child plan with an amendment debit of 60,000 EUR. The original parent plan was 150,000 EUR, so the new parent plan becomes 160,000 EUR.</p>	<ul style="list-style-type: none"> <li>• Amendment credits on the child plan don't decrease the parent.</li> <li>• Amendment debits on the child plan only impact the parent when they cause the child debits to exceed the parent debits.</li> </ul>

### Approval Routing

You can configure the *Budget Amendment Event business process definition* and security policy to manage approval and routing for amendments to parent and child plans. You configure the order in which approval takes place by editing the definition steps. Example: To ensure that the hierarchy manager can review the amendment before the individual cost center manager, you can use these security groups in this order:

1. Cost Center Hierarchy Manager
2. Cost Center Manager

Workday routes amendments to plan hierarchies as a single event in the business process. Even though you can route them to different approvers, any actions taken on an amendment at any level impacts the entire hierarchy. These actions include:

- **Approvals:** To move the plan to an approved state, approve the amendment at all hierarchy levels. If the amendment in the child plan is net zero within the hierarchy, the parent plan doesn't route for approval.
- **Denials:** If an amendment is denied at any level, it's denied at all levels and the plan won't reach an approved state.
- **Send backs:** If an amendment is sent back for changes at any level, all plans are sent back and any changes at this point are made on all of the plans. These changes then go through the approval process again. Example: If a manager deletes a line on the child amendment, Workday removes that line from the parent amendment as well.

### Related Information

#### Tasks

[Amend Plans or Budgets](#) on page 475

## Reference: Valid True Plan Hierarchy Relationships

This table describes valid relationship rules for true plan hierarchies, to use when you create child plan structures that are compatible to parent plan structures:

	<b>Parent</b>	<b>Children and Grandchildren</b>
<b>Hierarchy Relationship</b>	Can have only 1 child.	<ul style="list-style-type: none"> <li>• Can have only one parent.</li> <li>• Each child can have only 1 child.</li> <li>• Can have multiple levels of grandchildren, with 1 member at each level.</li> </ul>
<b>Dimensions</b>	All are required.	<ul style="list-style-type: none"> <li>• All are required.</li> <li>• Must include all dimensions from the parent.</li> <li>• All dimensions must roll up to the parent's top level dimension.</li> <li>• Dimension members can be a subset of the parent dimension.</li> </ul> <p>Example: If the parent structure includes <i>Cost Center Hierarchy 1</i>, then the child structure can include <i>Cost Center Hierarchy 1.1</i> or individual cost centers within that hierarchy.</p> <ul style="list-style-type: none"> <li>• Can have additional <i>Required</i> or <i>Optional</i> structured dimensions to give more granular plans.</li> </ul> <p>Example: For the parent plan, you choose <i>Cost Center Hierarchy</i> as your organizing dimension. On the child plan you include <i>Cost Center 1</i> and <i>Cost Center 2</i>. At the grandchild level, you can drill further into those cost centers by identifying specific regions within them as dimensions to give you a more granular plan.</p>
<b>Time Periods</b>	Largest time periods. The parent time periods can't be smaller than any of its children.	<p>Must be a subset or the same as the parent so it can roll up into the parent time periods.</p> <p>Example: If the parent uses a summary schedule of quarterly for plan entry, the child and any grandchildren can be quarterly or by period, but not use the duration plan entry.</p>

	<b>Parent</b>	<b>Children and Grandchildren</b>
<b>Accounts</b>	Must include all accounts from the child and all grandchildren.	Parent accounts must include all accounts from the child and all grandchildren.
<b>Amount</b>	Controls the amounts available to the child and grandchild plans.	<ul style="list-style-type: none"> <li>Can't exceed the amount of the parent plan. Amounts must roll up to be within the parent plan amount.</li> </ul> <p>Example: If the parent plan is 100,000 EUR, the child plan can have 4 rows, 25,000 EUR each. An associated grandchild can have 3 rows of 25,000 EUR and later be amended to increase by up to an additional 25,000 EUR.</p> <ul style="list-style-type: none"> <li>Can be less than the parent amount.</li> </ul> <p>Workday includes a validation during the submit plan process to ensure that the child plan amounts don't exceed those of the parent. Use the <b>Child Budget Exceptions</b> report to identify which child plan lines exceed the amount of the parent.</p>
<b>Amendments</b>	Don't impact child plans.	<ul style="list-style-type: none"> <li>Must be within the parameters of the parent plan.</li> <li>Cascade up to the parent to amend the corresponding line of the parent, if the child plan is amended to exceed that of the parent. Workday doesn't cascade these amendments if the parent is configured for unbalanced amendments.</li> <li>Unbalanced amendments to the child don't cascade if: <ul style="list-style-type: none"> <li>The child amount is decreased.</li> <li>The parent plan amount is not exceeded.</li> </ul> </li> <li>Adding a new row and amount to a child plan, adds a new row to the parent as well.</li> </ul>

## Reference: Virtual Plan Hierarchy Relationships

This table describes rules for relationships in virtual plan hierarchies, to use when you create child plan structures that are compatible with parent plan structures:

	<b>Parent Plans</b>	<b>Child Plans</b>
<b>Hierarchy Relationship</b>	Can have many child plans.	<ul style="list-style-type: none"> <li>• Can have many parent plans.</li> <li>• Can't have child plans.</li> <li>• Plan in a true hierarchy can also be a virtual child.</li> </ul>
<b>Structured Dimensions</b>	<ul style="list-style-type: none"> <li>• Can have <i>Optional</i> structured dimensions.</li> <li>• Must include all dimension members used in child plans, to ensure that the plans add up correctly.</li> <li>• Can have any structured dimension as long as it exists on at least 1 child plan.</li> </ul>	<ul style="list-style-type: none"> <li>• Must share at least 1 structured dimension with the parent plan.</li> <li>• Dimension members must be the same as or a subset of the parent dimension.</li> <li>• Can have additional <i>Required</i> or <i>Optional</i> structured dimensions for more granular plans.</li> </ul>
<b>Time Periods</b>	<p>Can't have a smaller time period than any of its child plans.</p> <p>Example: If the parent plan uses a quarterly summary schedule for plan entry, the child plans can use either a quarterly or a period schedule, but not duration.</p>	
<b>Accounts</b>	Must include all child plan accounts.	
<b>Amount</b>	Have no amounts of their own because virtual parent plans are summarized totals of their child plans.	
<b>Amendments</b>	Can't be amended.	Can be amended.

<b>View Plan</b>	Virtual	<i>Process: Budget and Manage: Project Budget</i> domains in the Budgets and Projects functional areas	Displays a <b>Linked Plans</b> tab that lists all child plans.

## Appropriations

---

### Steps: Set Up Appropriations

#### Context

You can create appropriations to include on budgets and on transactions as worktags to track costs for authorized spend. The appropriations worktag enables you to:

- Report on recorded amounts from the appropriation value.
- Control spend against budgeted appropriation amounts.

#### Steps

##### 1. Access the **Maintain Appropriation Types** task.

Create the appropriation types to include and define the usage on appropriations.

Security: *Set Up: Appropriation* domain in the Common Financial Management functional area.

##### 2. Access the **Create Appropriation** task.

As you complete the task, consider:

Option	Description
<b>Appropriation ID</b>	When you don't enter an ID, Workday creates 1 when you submit the appropriation.
<b>Include Appropriation ID in Name</b>	Adds the appropriation ID to the appropriation name. Workday uses the appropriation ID to create a unique name, enabling you to use a name multiple times.

Option	Description
<b>Appropriation Type</b>	Select the type of appropriation to indicate its use.

Security: *Set Up: Appropriation* domain in the Common Financial Management functional area.

3. (Optional) [Create Appropriation Hierarchies](#) on page 503.

4. [Configure Worktags for Transactions](#).

Configure the *Appropriation* worktag type.

5. [Configure Related Worktags](#).

Configure the worktag usage for the *Appropriation* taggable and worktag type.

## Next Steps

Include appropriations and appropriation hierarchies on:

- Plan structures as structured dimensions.
- Budget lines.
- Transactions as worktags and related worktags.
- Account posting rules as condition dimensions.
- Business process definitions as a condition rule.

Access the **Inactivate** task from the related actions menu of an appropriation or appropriation hierarchy to discontinue its use.

### Related Information

#### Tasks

[Set Up Account Posting Rules](#) on page 84

[Steps: Set Up Plans or Budgets](#) on page 461

#### Reference

[2022R2 What's New Post: Appropriation Organization and Accounting Worktags](#)

## Create Appropriation Hierarchies

### Prerequisites

- Create appropriations.
- Security: *Set Up: Appropriation* domain in the Common Financial Management functional area.

### Context

You can create a hierarchical structure to group your appropriations for enhanced reporting.

### Steps

1. Access the **Create Appropriation Hierarchy** task.

2. As you complete the task, consider:

Option	Description
<b>Appropriation Hierarchy ID</b>	When you don't enter an ID, Workday creates one when you save the appropriation hierarchy. Once you submit the hierarchy, this ID becomes the reference ID for integrations.
<b>Include Appropriation Hierarchy ID in Name</b>	Adds the appropriation hierarchy ID to the appropriation hierarchy name. Workday uses

Option	Description
	the appropriation hierarchy ID to create a unique name, enabling you to use a name multiple times.
<b>Superior</b>	To create the highest level of a hierarchy, leave the field blank. To enable a multilevel hierarchy, select a superior.
<b>Includes</b>	Select the appropriations that belong to the appropriation hierarchy. You can't have the same appropriation in more than 1 level of a hierarchy.
<b>Assign Roles</b>	Create or assign a role to associate with the hierarchy. Example: Configure an Appropriation Hierarchy Manager role.

## Position Control

---

### Setup Considerations: Position Budgets

You can use this topic to help make decisions when planning your configuration and use of position budgets. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Position budgets in Workday are budgets you can use to manage and budget check your staffing transactions. They contain the compensation and fringe benefits for a position restriction. You can generate position budgets using payroll commitments. Workday groups multiple position budgets together into 1 budget for each plan structure and fiscal year.

### Business Benefits

You can use position budgets to:

- Compare budgets against actuals.
- Make staffing decisions based on your overall company budget.
- Identify overspending in any staffing modifications.
- Realize any savings throughout the year.
- Track salaries.

### Use Cases

- View and manage compensation and fringe benefit expenses for positions. Example: For a sales position, you consider a commission rate along with salary, while for IT you only consider salary.
- Control your compensation and costing allocations using budget check to make better staffing and financial decisions based on your commitments and obligations. Example: As a university budgets

administrator, you decide on the hourly compensation for student jobs based on the time, effort, and training required.

### Questions to Consider

Questions	Considerations
Which staffing model do you use?	<p>You must use the position management staffing model to use position budgets since the job management staffing model doesn't support position restrictions. However, if you already use the job management staffing model, you can create a financial plan to support your staffing transactions not restricted to any position. If you want to use both position and job management staffing models, you can create a virtual plan hierarchy with these child plans:</p> <ul style="list-style-type: none"> <li>• Financial plan with job management structured dimensions on the plan structure.</li> <li>• Position budget for position management positions.</li> </ul>
What job dimensions do you want to use?	<p>You can use job profiles, job families, and job family groups to help determine the correct population of employees to create position budgets for. Workday locates the position that you want to create a position budget for by filtering matching dimensions between your plan structures and position restrictions.</p> <p>You can only use 1 of the 3 job dimensions per plan structure.</p>

### Recommendations

Workday recommends:

- You include costing allocation or pay component worktags on your plan structure so that Workday can perform budget check on your transactions.
- When you're generating position budgets from your payroll commitments, ensure you have the correct fringe benefit rates to avoid manually revising them later.

### Requirements

- You must configure payroll commitment accounting to track commitments, obligations, and actuals for Workday to reflect accurate compensation for active employees in your available budget.
- Use the position management staffing model.

### Limitations

No impact.

### Tenant Setup

No impact.

## Security

In the Budgets functional area:

Domains	Considerations
<i>Access Plan Type (Segmented)</i>	<p>Enables you to:</p> <ul style="list-style-type: none"> <li>Control which users have access to different plan types.</li> <li>Configure a segment-based security group for the financial, position, and award plan type segment.</li> </ul> <p>You must configure this domain for all budget types.</p>
<i>Process: Position Budget</i>	Enables you to edit and view position budgets.
<i>Process: Manager Position Budgets</i>	<p>Enables managers to edit and view these budgets when assigned to an organization:</p> <ul style="list-style-type: none"> <li>Position budgets.</li> <li>Position budget amendments.</li> </ul>
<i>Process: Cancel Position Budget</i> <i>Process: Cancel Position Budget Amendment</i>	Enables you to cancel position budgets and position budget amendments.
<i>Reports: Company Position Budgets</i>	Enables you to view position budget and position budget amendment lines for your company.
<i>Reports: Manager Position Budgets</i>	Enables you to report on position budgets by manager.
<i>Set Up: Budget General</i>	<ul style="list-style-type: none"> <li>Create and edit plan structures and plan templates.</li> <li>Create a budget fringe rate table.</li> <li>Edit budget check options.</li> <li>Mass generate position budgets.</li> <li>Roll forward or close budgets.</li> <li>Submit a position budget group.</li> </ul>

## Business Processes

Business Processes	Considerations
<i>Position Budget Event</i>	<p>Enables you to:</p> <ul style="list-style-type: none"> <li>Create, edit, and submit position budgets and budget amendments.</li> <li>Import position budgets using the <i>Import Position Budget</i> web service.</li> </ul>
<i>Position Budget Group</i>	<p>Enables you to:</p> <ul style="list-style-type: none"> <li>Create a position budget group to run the <i>Import Position Budget</i> web service.</li> <li>Mass generate position budgets.</li> </ul>

## Reporting

Reports or Dashboards	Considerations
Find Position Budgets and Amendments	<p>View:</p> <ul style="list-style-type: none"> <li>• A particular position budget.</li> <li>• All position budgets for your plan structure and year.</li> <li>• Information about the position budgets like current incumbent, compensation budget, and total plan.</li> </ul>
Position Budgetary Balance Report	View a summary of your position budgets and the commitments, obligations, and actuals.
Manager Position Budgetary Balance Report	View budgetary balance for position budgets for the company, plan structure, and year of an organization. Limited to manager roles.
Position Budgets	Use this report data source when creating position budget reports for organization managers.
View Available Budget	View line-level details about your position budgets.

You can also use the Position Budgets report data source when creating position budget reports for organization managers.

## Integrations

You can create an EIB based on the *Import Position Budget* web service to mass:

- Upload or update position budgets.
- Import budget amendment lines for an approved position budget.

You must import the annual amount when you import position budget amendments.

## Connections and Touchpoints

When you use commitment accounting and budget check, Workday checks your compensation and staffing transactions against position budgets.

To budget check your position budgets, you must have Workday Payroll.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Steps: Set Up Position Budgets](#) on page 510

[Steps: Generate Multiple Position Budgets](#) on page 515

[Define Position Budget Structures](#) on page 511

## Steps: Set Up Position Control

### Context

Set up position control in Workday. You can use position budgets without commitment accounting and payroll commitments. Similarly, you can use commitment accounting and payroll commitments without position budgets.

### Steps

1. Create a position and a position restriction as needed for position budget entry.  
See [Steps: Set Up Job Requisitions for Commitments and Obligations](#) on page 509.
2. Create position budgets.  
See [Steps: Set Up Position Budgets](#) on page 510.
3. Configure commitment accounting for position control.  
See [Steps: Configure Commitment Accounting to Control Positions](#) on page 524.
4. Create payroll commitments.  
See [Steps: Process Payroll Commitment Accounting](#).

#### Reference

[Reference: Position Control Terminology](#) on page 529

## Steps: Use Position Control

### Prerequisites

Set up position control.

### Context

Use and maintain position control in Workday.

### Steps

- At the start of the fiscal year:
  - a) Create position budgets.  
See [Steps: Set Up Position Budgets](#) on page 510.
  - b) (Optional) Define position budget checking.  
See [Steps: Check Position Budgets](#) on page 519.
  - c) [Create Initial Payroll Commitments](#).
  - d) Use ad hoc reports to view commitment and obligations once initial calculations have been made.  
See [Reference: Payroll Commitment Reports](#).
  - e) [Review Budgetary Balances for Position Budgets](#) on page 525.  
Perform detailed budgetary balance reporting to compare your commitment accounting and position budgets against your actuals.
- Throughout the fiscal year:
  - a) Calculate real-time payroll commitment adjustments and perform budget checking as needed.  
You can adjust payroll commitments (and optionally check position budgets) as part of various position-related business processes. For a complete list, access the **Business Process**

**Configuration Options** report for the *Check Budget (Staffing)* business process, and review the **Allowed Subprocess For** column.

See [Automate Payroll Commitment Adjustments](#) and [Review Position Budget Check Results](#) on page 522.

b) [Adjust Payroll Commitments Ad Hoc](#).

Create, calculate, and review bulk payroll commitment adjustments. This task doesn't perform budget checks.

c) Review fringe benefit actuals. Fringe benefit actuals are calculated automatically when you run each regular on-cycle and off-cycle pay calculation, or use the stand-alone **Run Payroll Fringe Benefits Accounting** task.

See [Concept: Fringe Benefit Actuals](#).

d) View payroll liquidations. Run regular on-cycle and off-cycle payroll calculations, or use the stand-alone **Run Payroll Commitments Liquidation** task.

See [Concept: Payroll and Fringe Benefit Liquidations](#).

e) View initial payroll commitment, payroll commitment adjustment, and payroll commitment liquidation accounting.

See [Reference: Payroll Commitment Reports](#).

f) [Review Budgetary Balances for Position Budgets](#) on page 525.

View commitment accounting balance reports. You can filter these reports to view the budgetary balances for companies or cost centers.

g) [Reconcile Ledger Commitment Balances to Payroll Commitments](#) on page 527.

## Related Information

[Concept: Position Control](#) on page 528

### Tasks

[Steps: Set Up Position Control](#) on page 508

### Reference

[Reference: Position Control Terminology](#) on page 529

## Steps: Set Up Job Requisitions for Commitments and Obligations

### Context

The position control process begins with job requisitions. Job requisitions enable you to request approval to fill a vacant position. Job requisitions are available if you use either the position management or job management staffing models.

When you turn job requisitions on, all vacant positions that you fill require an open job requisition.

### Steps

1. Access the **Edit Tenant Setup - HCM** task:

- Enable job requisitions for position management, either for all staffing events or based on rules.
- Enable job requisitions for job management.
- Select an ID definition.

Job requisitions trigger the capture of job details needed for commitment calculations. Job requisitions are required if you're using commitments and obligations. They're optional if you're only using obligations.

**Note:** Once you generate commitments, you can't disable job requisitions.

See [Reference: Edit Tenant Setup - HCM](#).

## 2. Create Positions.

Create a new position. You must have a position (filled or unfilled) to create a position budget.

## 3. Propose Compensation for Employees or Positions.

Use the **Request Compensation Change** task to assign compensation to a position. Payroll uses this information to perform the commitment calculation.

Alternatively, you can include the *Request Requisition Compensation* subprocess in the *Job Requisition* and *Job Requisition Change* business processes.

## 4. Steps: Change Organization Assignments for Worker.

Assign organizations to a position by selecting **Change Organization Assignments** from the related actions menu of the unfilled position. This provides the information necessary for the correct accounting of the commitment amount.

Alternatively, you can include the *Change Organization Assignments* subprocess in the *Create Position* business process.

## 5. Access the **Assign Pay Group for Position Restriction** task.

Assign a pay group to a position. This provides the information for prorating the planned payroll portion of the commitment calculation.

## 6. (Optional) Define Cost Allocations for Position Restrictions.

Allocate costs to the default organization assignment and other cost centers.

## 7. Create and Edit Job Requisitions.

Workday begins commitment accounting on the **Target Hire Date**.

## Position Budgets

### Steps: Set Up Position Budgets

#### Prerequisites

- Create and approve a position restriction.
- Determine the amounts to budget for compensation and fringe budgets, and identify how to allocate and account for those costs.
- Define the *Position Budget Event* business process.

#### Context

Use these high-level steps to create position budgets and submit them for approval in Workday. Click the links in each step for details.

#### Steps

1. Access the **Assign Users to User Based Security Group** task, and select the **Finance Administrator** user-based security group.
2. Select the **System Users** for the group.

3. [Set Up Fiscal Schedules and Years](#).
4. Access the **Create Account Set** task to create ledger accounts.  
You can use an existing account set across multiple companies.  
See [Steps: Create and Organize Ledger Accounts](#).
5. Set up these account posting rules for payroll commitments, payroll obligations, and fringe benefits:
  - Payroll Commitment
  - Payroll Obligation
  - Payroll Earnings
  - Fringe Benefit Commitment
  - Fringe Benefit Obligation
  - Fringe Benefit Expense
  - Fringe Benefit Recovery
 For details about how these account posting rules relate to commitment transactions, see [Concept: Commitment Accounting for Position Control](#) on page 525.
6. From the **Edit Company Accounting Details** task, select the **Fiscal Schedule**, **Account Set**, and **Account Posting Rule Set** you created.  
The required currency for position budget accounting is US dollars (USD).
7. Access the **Ledger Period Journal Status** report and open the periods.  
See [Change the Status of Ledger Periods](#).
8. Create a budget structure with plan type of position.  
See [Define Position Budget Structures](#) on page 511.
9. Create a budget template by associating a company with the budget structure.  
See [Create Plans or Budgets](#) on page 468.
- 10.(Optional) If you upload position budgets into Workday, you can create a position budget group.  
Use the *Position Budget Spreadsheet* EIB to group position budgets into logical collections.  
See [Steps: Create Position Budget Groups for EIB Upload and Approval](#) on page 515.
- 11.Enter or upload position budgets in Workday:
  - a) Enter position budgets using the **Create Position Budget** task.  
See [Create Position Budgets](#) on page 513.
  - b) Upload position budgets into Workday.
- 12.From the **Create Position Budget** or **Submit Position Budget Group** task, submit the position budget or position budget group.
- 13.(Optional) Amend a budget to make changes to an approved position budget.  
See [Amend Position Budgets](#) on page 516.

## Next Steps

(Optional) Set up position budget checking.

## Related Information

### Tasks

[Steps: Check Position Budgets](#) on page 519

## Define Position Budget Structures

### Prerequisites

- Create a fiscal schedule, posting intervals, and fiscal year for the company for position budgets.
- Create an account set for the company for position budgets.

- Establish the dimensions used for the position budget.
- To enable only certain members to select ledger account summaries in position budgets, define specific members of the ledger account summary for the account set.

## Context

You can create or update the structure of a position budget and implement position control for your organization or company. This structure specifies the filtering dimensions and other factors that define your position budgets. A company can have only 1 budget template per structure.

## Steps

1. Access 1 of these tasks:

- **Create Plan Structure**
- **Edit Plan Structure**

2. Select **Position** as the **Plan Type**.

If you edit a budget structure that's in use, you can only change:

- The name.
- Structured dimension with values not in use on budget or budget lines for the structure.
- Primary worktags.

3. Select the corresponding **Schedule**, and select an annual fiscal summary from the **Summary Schedule** prompt. An annual fiscal summary combines all periods in the annual position budget.

Because position budgets require approval, Workday automatically enables the **Use Amendments/Approval** option. This option ensures that the business process requires position budget approvals.

4. Select the **Account Set** for the fiscal schedule you selected.

5. Define **Structured Dimensions** to filter budget criteria, and associate the dimension types (such as Business Unit, Cost Center, Fund, Grant, Pay Component, Position Restriction, Program, Project, or Region) to the members.

Select 1 structured dimension as the **Organizing Dimension Type** for position budgets.

Examples:

- Select the **Cost Center** dimension as the organizing dimension type and include all members.
- Select the **Pay Component** dimension and include Deduction: Fringe Benefit Commitment, and Earning: Base Pay - 12 Months for specific members.

6. Select the dimension and require it for entry on each budget line. If you select the dimension as the **Organizing Dimension Type**, you must require entry of the dimension.

7. To associate positions to the budget structure, define the job family membership.

## Result

The budget structure is available for creating a position budget.

## Next Steps

Create a budget template that associates the budget structure and company to use for the position budget.

### Related Information

#### Tasks

[Create Plans or Budgets](#) on page 468

## Create Position Budgets

### Prerequisites

- Create a budget for the fiscal year.
- Set up approved positions.
- Define approval steps in the *Create Position* business process.
- If you plan to load position budgets into Workday, create the inbound Import Position Budget EIB from the predefined template.
- Configure the *Position Budget Event* business process and corresponding security policy.

### Context

You can define the compensation and fringe details for position budgets based on the fiscal year.

You can also define budgets for positions assigned to your organization. Organization roles can manage cost allocations across different organizations at the budget line level.

### Steps

1. Access the **Create Position Budget** task.

To create budgets for positions assigned to your organization, access the **Create Position Budget for Organization** task.

2. Enter the control total in the **Compensation Budget** field. Workday compares this value to the available budget for this position during budget check processing.

3. As you complete the **Plan Lines** tab, consider:

Option	Description
<b>Fringe Rate</b>	Enter a fringe rate for each line, or select a different rate from a budget fringe rate table associated with the position budget. If left blank, Workday calculates the fringe rate based on the compensation and fringe amounts.
<b>Fringe Amount</b>	Workday automatically calculates fringe as a percentage of compensation based on a default fringe rate. You can also enter fringe directly on the lines.

4. (Optional) From the **Compensation Information** tab, view the default compensation assigned to the position. This information includes these amounts to assist you in determining values for this position budget:

- Compensation range maximum.
- Compensation range midpoint.
- Compensation range minimum.

### Result

The position budget is ready for review and further processing.

You can use these reports to locate existing position budgets:

- **Find Position Budgets**
- **Find Position Budgets for Organization**

### Next Steps

Approve position budgets.

## Related Information

### Tasks

[Steps: Set Up Position Budgets](#) on page 510

## Create Position Budgets from Commitment Accounting

### Prerequisites

- Create a budget for the fiscal year.
- Set up approved positions.
- Define approval steps in the *Create Position* business process.
- If you plan to load position budgets into Workday, create the inbound Import Position Budget EIB from the predefined template.
- Configure the *Position Budget Event* business process and corresponding security policy.
- Run the **Create Initial Payroll Commitments** task to calculate the payroll commitments for a position.

### Context

Create a budget based on the current commitment accounting for a specific position. Workday leverages payroll commitments, obligations, and actuals to generate compensation and fringe details based on the fiscal year and account dimensions on the position budget structure.

If you create multiple position budgets at once using the **Mass Generate Position Budgets** task, Workday automatically creates these position budgets from payroll commitment journals.

### Steps

1. Access either:
  - The **Create Position Budget** task.
  - The **Create Position Budget for Organization** task.
2. Select the **Auto-Populate Plan Lines** check box.
3. (Optional) From the **Compensation Information** tab, view the default compensation assigned to the position. This information includes these amounts to assist you in determining values for this position budget:
  - Compensation range maximum.
  - Compensation range midpoint.
  - Compensation range minimum.

### Result

Workday generates a position budget and budget lines for compensation and fringe benefit amounts based on payroll journal entries in these statuses:

- *Created*
- *Posted*
- *Reserved*

Workday reserves a payroll commitment or obligation adjustment for budget after passing budget check and multiple approvals.

Workday groups the budget lines by the dimensions on the budget structure with current costing allocations (percent splits, worktags, and compensation and fringe benefit amounts) for the position. The fringe rate automatically populates from the fringe benefit payroll commitment rule.

If no commitment accounting exists, Workday displays the **Edit Position Budget** task for manual entry. On this task, Workday only creates the position budget if you click **Submit** or **Save for Later**.

## Related Information

### Tasks

[Create Initial Payroll Commitments](#)

## Steps: Generate Multiple Position Budgets

### Prerequisites

- Configure the *Position Budget Group* business process with approval steps.
- Create a position budget structure and template.
- Create a position budget group.
- Security: *Set Up: Budget General* domain in the Budgets functional area.

### Context

You can create multiple position budgets for budget structure dimensions and commitment accounting for future budget years. Workday Payroll creates commitment accounting from planned compensation, staffing events, and costing allocations to generate compensation and fringe details for each position. You might also have commitment accounting journal lines from integrations or other sources.

### Steps

- Access the **Mass Generate Position Budgets** task.
- Select a position budget group for grouping the position budgets together for approval.
- (Optional) In the **View Position Budget Group** report, you can drill down into **Total Position Budgets** to view or edit the individual position budgets that Workday generated. Workday includes any position budgets that you edit in the position group for approval.  
If pay component is a structured dimension and fringe is on multiple compensation lines, Workday attaches the fringe amount to the largest compensation line.
- Access the **Submit Position Budget Group** task and submit the group for approval.  
If you select **Require Fringe on at Least One Line** on the position budget structure but no fringe exists, you can't submit the position budget group for approval until you take 1 of these actions:
  - Drill down on each position budget and add fringe amounts.
  - Add fringe in commitment accounting and regenerate the position budget group.
  - Cancel the position budget that's missing fringe. You submit the rest of the position budget group.

### Next Steps

Approve position budgets.

## Steps: Create Position Budget Groups for EIB Upload and Approval

### Prerequisites

- Create a budget for the fiscal year.
- Set up approved positions.
- Configure the *Position Budget Group* business process with approval steps

### Context

Group position budgets together for streamlined loading into Workday using the Import Position Budget EIB. Once you load and group position budgets, you can approve all position budgets in that group in 1 approval action.

## Steps

- Access the **Create Position Budget Group** task.

Define the position budget group. Workday uses the ID and description to associate the position budgets on your Import Position Budget Spreadsheet Template with the position budget group.

- Customize EIB Spreadsheet Template.**

Generate and modify the Import Position Budget Spreadsheet Template in Workday. Specify the ID and description that you used on the **Create Position Budget Group** task.

- Launch EIB Spreadsheet Upload.**

Upload the spreadsheet into Workday. The budget years for your company and the associated budget groups must include unapproved position budgets that you load through the Position Budget Spreadsheet predefined template.

- (Optional) If necessary, make corrections to the source data and reload the template.

- Access the **Submit Position Budget Group** task and submit the position budgets in the group for approval.

## Result

The approval status of the position budgets in the group is available to review and refine as needed.

## Next Steps

Review and approve position budgets.

### Related Information

#### Tasks

[Review Position Budget Check Results](#) on page 522

## Amend Position Budgets

### Prerequisites

- The approval step process for position budgets must be complete.
- Position budgets must be in *Approved* status.
- An existing amendment must not be in process.
- Configure the *Position Budget Event* business process and corresponding security policy.

### Context

You can amend previously approved position budgets throughout the fiscal year when your company has compensation or funding changes.

## Steps

- Access the **Create Position Budget Amendment** task.

- Select an amendment type, such as *Original* or *Revised* for revising the original amendment.

- In the **Position Budget Types** table, enter an amount in the compensation **Amendment** field.

You can overwrite the amounts in **Amended Budget** fields when necessary. You can enter either a new total compensation amount, or an amount to increase or decrease the total compensation budget for the calculated amended budget total.

- In the **Budget Amendment Lines**, you can adjust the percentages or amounts of the compensation and fringe benefit budgets used on existing lines.

The existing transactions amount shows journal lines that match the budget line dimensions. Journal lines in created and posted status are reflected in the amount.

## Result

The position budget amendment is ready for review and any further processing.

Each time you create an amendment, Workday creates a new version of the position budget.

## Amend Position Budgets for Organizations

### Prerequisites

- The approval step process for position budgets must be complete.
- Position budgets must be in *Approved* status.
- An existing amendment must not be in process.
- Configure the *Position Budget Event* business process and corresponding security policy.

### Context

You can amend previously approved position budgets with compensation or funding changes for your organization throughout the fiscal year.

### Steps

1. Access the **Create Position Budget Amendment for Organization** task.
2. Select an amendment type, such as *Original* or *Revised* for revising the original amendment.
3. In the **Position Budget Types** table, enter an amount in the compensation **Amendment** field.  
You can overwrite the amounts in **Amended Budget** fields when necessary. You can enter either a new total compensation amount, or an amount to increase or decrease the total compensation budget for the calculated amended budget total.
4. In the **Budget Amendment Lines**, you can adjust the percentages or amounts of the compensation and fringe benefit budgets used on existing lines.  
The existing transactions amount shows journal lines that match the budget line dimensions. Journal lines in created and posted status are reflected in the amount.

## Result

The position budget amendment is ready for review and any further processing.

After approval, Workday creates a new version of the position budget with amended amounts.

## Amend Position Budgets from Commitment Accounting

### Prerequisites

- The approval step process for position budgets must be complete.
- Position budgets must be in *Approved* status.
- An existing amendment must not be in process.
- Configure the *Position Budget Event* business process and corresponding security policy.

### Context

You can amend previously approved position budgets throughout the fiscal year based on the latest commitment accounting. Workday matches and groups the accounting from all sources into proposed budget lines according to the account dimensions on the position budget structure.

## Steps

1. Access either:
  - The **Create Position Budget Amendment** task.
  - The **Create Position Budget Amendment for Organization (Aggregate)** task.
2. Select an amendment type, such as *Original* or *Revised* for revising the original amendment.
3. Click **Propose Amendment**. This button displays when commitments, obligations, or actuals exist for a position. It also displays if the current budget total is out of balance with negative compensation and fringe amounts.  
Workday shows the full set of proposed budget lines and highlights the changed amounts that adjust the current budget.
4. Click **Accept Proposed Amendment** to add the proposed lines to the amendment.

## Result

The position budget amendment is ready for review and any further processing.

After approval, Workday creates a new version of the position budget with amended amounts.

## Example

You change the costing allocation for a position with an approved budget from 3 projects to 2 projects. The new costing allocation triggers commitment accounting adjustments in Workday Payroll. Workday proposes a budget amendment with an additional budget line to match the current commitments, obligations, and actuals for the position.

### Related Information

#### Tasks

[Create Initial Payroll Commitments](#)

[Amend Position Budgets](#) on page 516

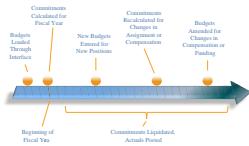

#### Concept: Position Budgets

Position budgets provide your organization capabilities to establish position budgets, which you can use for budget checking when implementing position control. You track position budgets at the position level for the fiscal year. The fiscal year budget is adjusted throughout the year to reflect changes such as compensation and staffing modifications.

When setting up position budgets, you can specify the structure dimensions to include in your position budget. The available dimensions are from payroll, and include cost center, region, location, and pay component. Your structured dimensions provide reporting capabilities and accounting functions in Workday.

By specifying budget check options, you can compare submitted position budgets against the available budget and determine whether the budget is sufficient. Approvers have insight for making decisions and taking appropriate actions.

You can also compare position budgets against actuals without using payroll commitments and the corresponding accounting results. This enables you to report on position budgets without performing position control.

**Figure 1: Position Budget Year**

## Position Budget Checking

### Steps: Check Position Budgets

#### Prerequisites

Set up position budgets.

#### Context

You can set up and check position budgets against proposed payroll commitments and actuals using position-related business processes. Checking position budgets enables you to identify overspending or realize savings throughout the year.

#### Steps

1. [Set Control Options for Position Budgets](#) on page 519.

Enable budget checking and set budgetary control options.

2. [Automate Payroll Commitment Adjustments](#).

Set up and run the *Check Budget (Staffing)* business process as a subprocess for position-related tasks.

#### Result

When you check your position budgets against proposed payroll commitments and actuals, Workday posts commitment accounting journal entries to your ledgers for the approved adjustments.

### Related Information

#### Tasks

[Steps: Set Up Position Budgets](#) on page 510

### Set Control Options for Position Budgets

#### Prerequisites

- Set up a budget for the company using a position budget structure.
- Create budget periods for the company for that position budget structure.

## Context

Set options to control position budgets for each budget structure and fiscal year combination. These settings control:

- The budgets enabled for budget checking.
- The level of severity with which to control budget.

Workday only supports up to 50 budgetary control option lines.

## Steps

1. Access the **Edit Budget Check Options** task.
2. For the specified **Company**, select where you want to set budgetary controls:

Option	Description
<b>Plan Structure</b>	Select from the structures you use to define the budgets for the company.
<b>Fiscal Year</b>	Select from the years for which you create periods for the company and budget structure.

You can configure only 1 set of budgetary control options for the duration of a budget, as defined by the budget structure and fiscal year.

3. As you complete the **Position** tab, consider:

Option	Description
<b>Enable Budget Check</b>	Select to enable budget checking for position-related tasks where the business process includes the <i>Check Budget (Staffing)</i> subprocess as a step.
<b>Budget Check Option</b>	Select the level of severity with which to control the budget when performing budget checking on position-related tasks: <ul style="list-style-type: none"> <li>• <i>Warn</i>: Select to permit the reviewer to continue with transaction approval without taking corrective actions to resolve the exception.</li> <li>• <i>Control</i>: Select to prevent transaction approval until there's a revision to the transaction or budget that enables the transaction to pass budget check.</li> </ul>
<b>Control by Period</b>	Workday automatically selects this option. Workday always checks position budgets against the budget entry period as specified on the budget structure.
<b>Include Reserved Journal Lines for Budget Check</b>	Select to include journals in reserved posted status in calculations of the available balance.  Example: You have 2 position-related tasks that impact the same budget. With this check box selected, you submit the first position-related task. As soon as the first task passes budget check, Workday: <ol style="list-style-type: none"> <li>a. Immediately places the journals in <i>Reserved</i> status.</li> </ol>

Option	Description
	<p>b. Considers these reserved journals when calculating available budget for the second position-related task.</p>
<b>Ledger Types for Budget Check</b>	<p>Select which ledger types to include in the budget check.</p> <p>Example: You can include only your position-related tasks (obligations) for budget check and exclude your position requisitions (commitments). With this configuration, Workday automatically includes:</p> <ul style="list-style-type: none"> <li>• Obligation and actual ledgers in the background if you select the commitment ledger.</li> <li>• Actual ledgers in the background if you select the obligation ledger.</li> </ul>
<b>Allow Budget Check Override</b>	<p>Select to enable budget check reviewers to request approvals for budget check exceptions. If an authorized approver grants an override, Workday displays <i>Override Granted</i> next to the budget check status on the transaction for all subsequent approvers. Once the override is approved, the transaction moves forward to the next step in the parent business process.</p> <p><b>Note:</b> You must first select <i>Control</i> for the <b>Budget Check Option</b>.</p>

4. On the **Entry Periods** tab, review the years and periods for the budget to see when these settings are in effect.

5. (Optional) As you complete the **Budgetary Control Option Line** tab to create budget check rules for certain combinations of ledger account and dimensions, consider:

Option	Description
<b>Budget Check Option</b>	<p><i>Pass</i>: Select to create a rule that allows a transaction to pass budget check even when it's over budget.</p> <p><i>Skip</i>: Select to create a rule allowing a transaction to skip budget check and display a <i>Not Required</i> status even if the transaction fails budget check otherwise.</p> <p>The budget check options you select must differ from the budget check option you configure on the <b>Position</b> tab. If no rules on the grid apply to your transaction, Workday uses the budget check option you configure on the <b>Position</b> tab.</p>
<b>Tolerance Percentage</b> <b>Tolerance Amount</b>	Enter a tolerance percentage or amount so that your transaction only fails budget check when it exceeds the tolerance amount over budget.

**Note:** You can select only 1 worktag of each type per budgetary control option line.

## Result

Workday uses these settings to determine the behavior of the *Check Budget (Staffing)* business process. You can add *Check Budget (Staffing)* as a subprocess step to various position-related business processes where required, such as after the initiation, review, or approval steps. For a list of business processes that enable this subprocess, view the **Business Process Configuration Options** report.

### Review Position Budget Check Results

#### Prerequisites

- Include the *Check Budget* business process as a step in position-related business processes.
- Set up position budgetary control options for each budget structure and fiscal year.
- Perform the position-related task.

#### Context

Review the results of the failed budget check for a staffing transaction and decide how to proceed. Your choices depend on whether you configured the budgetary control to:

- Warn if it failed budget check.
- Control the budget and prevent transaction approval until it passes budget.

Workday only displays transaction lines that failed budget check in My Tasks, not transaction lines that met any *Pass* or *Skip* budget check rules.

The failed transaction can be subject to budgets across multiple companies and budget structures. Workday displays all budgets that a transaction fails to pass on My Tasks.

#### Steps

- Access My Tasks to review budget check.
- As you review the budget check on My Tasks, consider:

Option	Description
<b>Request Override</b>	Sends a request for overriding a failed budget check to an authorized approver. If an authorized approver grants an override, Workday displays an <i>Override Granted</i> status next to the budget check status on the transaction for all subsequent approvers. Once approved, the transaction moves forward to the next step in the parent business process.
<b>Control Periods</b>	The periods that Workday controlled budget against. They can differ from your budget entry periods. Example: You can enter budget amounts by month but control by grouping the entire budget amount across a quarter or budget duration. A transaction can impact multiple budgets, which could have different control periods.
<b>Budget Check Option</b>	The budget check option that caused the transaction to fail budget check. <ul style="list-style-type: none"> <li><i>Warn</i>: Enables you to continue with transaction approval without taking corrective actions to resolve the exception.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>Control:</b> Prevents transaction approval until there's a revision to the transaction or budget that enables the transaction to pass budget check.</li> </ul>
<b>Plan to Date</b>	<p>If you configured the budget check option to use cumulative control periods, Workday determines the budget amount based on the current control period and any prior control periods.</p>
<b>View</b>	<p>For each budget, click to view the <b>Budget Check Exceptions</b> report.</p> <p>The report displays the impact of the transaction on the budget, and how much it's over budget. To pinpoint what's causing the exception in the proposed payroll journal, you can:</p> <ul style="list-style-type: none"> <li>• Drill into the <b>Current Transaction</b> value on this report.</li> <li>• Access the <b>Payroll Commitment Summary</b> report for the transaction.</li> </ul>

3. After you've reviewed the information about why the transaction failed budget check, take 1 of these actions:
  - Amend the budget.
  - Fix the journal error.
  - Send the transaction back to the requester for revision. Example: You send the transaction back to the requester because they requested too much.
  - Deny the request.
  - Continue with transaction approval anyway. You can only continue despite failing budget check if you configured budget check as Warn.
4. Return to My Tasks to review budget check and click **Submit** to rerun budget checking for the transaction.

## Result

Once the transaction passes budget:

- The position-related business process completes.
- Workday posts the accounting for the approved transaction to the commitment, obligation, or actuals ledger.

## Next Steps

Access the **Position Budgetary Balance Report** report to review the available balance.

### Concept: Position Budget Checking Processing

When budget checking for position-related events, Workday:

- Initiates the *Check Budget* subprocess as a step in the position-related business process.
- Calls the *Run Payroll Commitment Accounting and Budget Check* service step to calculate the journal and check the budget.
- Runs the *Review Budget Check* action step.

During the *Review Budget Check* action step, Workday:

- Determines whether the budgetary control is set to *Warn* or *Control* for each budget that the event is subject to.
- Evaluates the event against both the budget date and the accounting date. Example: A biweekly pay run falls between 2 fiscal years. The accounting dates for both payroll actuals are the same but the budget dates are different. When you look at the budget for the previous fiscal year, Workday displays an extra payroll actual that affects the next fiscal year.
- Calculates the available remaining budget.
- Determines whether the position-related event passes or fails budget check.
- Sends the reviewer a task on My Tasks for transactions that exceed the budget or for journal errors.

When events are within the budget, Workday automatically approves the event and completes the position-related business process. When events fail budget check, the reviewer can perform actions based on whether the budgetary control is set to *Warn* or *Control*.

## Commitment Accounting for Position Control

### Steps: Configure Commitment Accounting to Control Positions

#### Context

You can configure Workday to post journal entries to your commitment and obligation ledgers from these transactions:

- Fringe benefit
- Payroll commitment
- Payroll obligation

You can activate job requisitions to account for commitments on your unfilled positions. Job requisitions trigger the capture of job details required for commitment and obligation calculations.

#### Steps

##### 1. (Optional) Access the **Edit Tenant Setup - HCM** task.

This step is optional if you're only using obligations.

Select the **Enable Job Requisitions for Job Management** check box in the **Job Requisitions** section.

**Note:** You can't switch off job requisitions after you generate commitments.

See [Reference: Edit Tenant Setup - HCM](#).

##### 2. Set Up Account Posting Rules.

Set up these rules for your commitment accounting transactions:

- *Payroll Commitment*
- *Payroll Obligation*
- *Payroll Earnings*
- *Fringe Benefit Commitment*
- *Fringe Benefit Obligation*
- *Fringe Benefit Expense*
- *Fringe Benefit Recovery*

##### 3. Create Ledgers.

## Tasks

[Review Budgetary Balances for Position Budgets on page 525](#)

[Steps: Process Payroll Commitment Accounting](#)

## Reference

[FAQ: Position Control on page 532](#)

### Concept: Commitment Accounting for Position Control

Commitment accounting for position control contains the journal entries that post to your commitment, obligation, and actuals ledgers. Workday follows the account posting rules for payroll commitment transactions involving positions that you set up. You can use budgetary balance reporting to compare your position budgets against your commitments, obligations, actuals, and remaining balance.

Processes that trigger the commitment accounting for positions in your organizations include:

- Hiring an employee.
- Changing compensation.
- Reassigning an employee to another organization.

Payroll processes generate the accounting for commitments, obligations, and fringe benefits including:

- Initial payroll commitments at the beginning of your fiscal year.
- Liquidations to back out commitments that turn to obligations, and obligations that turn to actuals.
- Year-round adjustments for activity that occurs after the initial commitment calculations.

The accounting posts when Workday completes the standalone process or the parent business process.

To determine unspent budget:

1. Load position budgets using the EIB web service, or use the **Mass Generate Position Budgets** task or the **Create Position Budget** task to create a position budget for a new position (add budget).
2. Create commitment when you open a position (subtract commitment).
3. Calculate obligation when you fill a position and liquidate commitment (subtract obligation).
4. Liquidate obligation to determine payroll actuals (subtract expenditure).

The result is the salary savings or unspent budget.

## Position Control Reporting

### Review Budgetary Balances for Position Budgets

#### Prerequisites

- Set up a balance for position budgets to compare them against actuals.
- Set up commitment accounting and payroll commitments to compare commitments and obligations against position budgets and actuals.
- Security: *Set Up: Budget General* domain in Budgets functional area.

#### Context

You can perform detailed budgetary balance reporting for your position budgets throughout the fiscal year by dimension.

The budgetary balance reports for position budgets pull in:

- Position budgets and amendments in active status.
- Payroll commitments, obligations, fringe benefits, and adjustments from transactions posted to your company's actuals, commitments, and obligation ledgers where the transactions contain a position ID.

This reporting of the budgetary equation enables you to compare your commitment accounting with your position budgets and actuals to see available balances. Examples:

- A cost center manager can review the budget across their organization.
- A position budget administrator can review all position budgets by company.

The budget structure that's tied to the company budget serves as the data filter for the report, providing the dimensions that you can drill down into and across. Example: A budget structure has an accounting dimension member that's a specific ledger account summary, and structured dimensions that are specific pay groups and cost centers. This budget structure aggregates transaction journal entries that populate the ledger accounts in the summary for only the specified pay groups and cost centers.

## Steps

1. Access the **Position Budgetary Balance** report or **Manager Position Budgetary Balance** report.
2. Filter by these and other criteria to limit the data aggregated in the report:

Option	Description
<b>Company</b>	The specified cost center must be a member of its structured dimensions.
<b>Summarize by Account</b>	Aggregate filtered data into summarized rows by ledger account based on the accounting dimension of the budget structure. Example: The report rows can include rows for ledger accounts in an account set, or only the ledger accounts within a ledger account summary.
<b>Summarize by Organizing Dimension</b>	Aggregate filtered data into summarized rows based on the organizing dimension of the budget structure. Example: If the organizing dimension is region, then the report contains a summary row for each member region.
<b>Negative Balances Only</b>	Use to see where you've overspent; specifically, where your commitments, obligations, and actuals have exceeded your position budget and left you with a negative balance.
<b>Non-Zero Balances Only</b>	Use to see where you're out of balance; specifically, where you have either excess or insufficient position budget balances.

3. For each ledger account or organizing dimension, compare the summarized position budget against summarized commitments, obligations, and actuals ledger balances subtracted from budget.
  - The column names are configurable.

The name of the position budget column is the name of the budget. The name of the commitment, obligation, and actuals columns are the ledger names for the company's ledger type.

4. Drill down into summarized numbers to see the supporting details from the position budgets and ledgers.

Details include the related journal entries, transactions, budget specifics, and positions involved.

If a position has 2 incumbents, Workday processes payroll commitments and obligations only for the primary incumbent. The actuals include both the primary and secondary (overlap) incumbent.

## Next Steps

Adjust your position budgets as necessary to balance your budget.

### Related Information

#### Tasks

[Steps: Configure Commitment Accounting to Control Positions](#) on page 524

## Reconcile Ledger Commitment Balances to Payroll Commitments

### Prerequisites

- Set up commitment accounting and payroll commitments to compare payroll commitment transaction actuals with posted journal entries.
- Security: *Set Up: Budget General* domain in Budgets functional area.

### Context

You can compare the operational transactions of your payroll commitments to what's posted in journal entries in the related ledger. For a select company, ledger, and ledger period, you can see:

- A summary of detailed commitment transaction results (for initial, adjustments, and liquidations) compared to the journal entries that actually posted to the commitment or obligation ledger.
- Differences between the operational transaction and the amount posted.
- A count of positions that make up the commitment transaction results, with the ability to drill down into activity details.

### Steps

1. Access the **Commitment Balance to Payroll Commitment Reconciliation Report**.
2. Review the data aggregated in the report.

Option	Description
<b>Operational Balance at Period End</b>	Total payroll commitment transactions in the ledger period.
<b>Operational Activity in Future Accounting Period</b>	Total payroll commitment transactions in the ledger period posted to a future period.
<b>Calculated Operational Balance at Period End</b>	Sum of <b>Operational Balance at Period End</b> and <b>Operational Activity in Future Accounting Period</b> .
<b>Ledger Balance at Period End</b>	Total ledger activity actually posted during the ledger period.
<b>Difference</b>	Calculated operational payroll commitment transactions amount, minus the actual ledger activity in the period. Typically zero, but if there's a difference, use the information to identify configuration errors.

Option	Description
<b>Positions with Activity</b>	Number of unique positions in the period with payroll commitment transactions. If there are differences related to particular positions, Workday displays a count of positions with differences. You can then drill down into the transaction details for the position to identify and isolate issues.
<b>Positions with Differences</b>	Number of positions in the period with a difference between the calculated operational balance and the ledger balance at period end.

## Result

If there's a difference between an operational transaction and the amount posted, use this information to identify errors in your configuration.

## Concept: Position Control

Service organizations can have specific human resource, payroll, and financial management needs due to their financial, legal, and regulatory obligations. While they share some transaction and reporting needs, Workday takes into account that different entities have different reporting and levels of management oversight needs. Additionally, some activities and assets require legal and accounting segregation. Businesses can use Workday to better manage staff payroll and expenses.

Workday's position control functionality enables you to create and staff new positions if they're part of an authorized headcount and staffing framework. The full use of position control requires a subscription to Workday Human Capital Management and Payroll. A subscription to Workday Financial Management isn't required. Job requisition is a key human resources feature and enables you to manage the full process from approval to filling vacant positions. A position profile compiles information about a single position and makes it easy to view and manage its:

- Budget.
- Fill activity.
- Accounting for planned and actual costs.

Your payroll commitments and obligations calculations at the start of the fiscal year provide a snapshot across your entire company. However, since you continue to have transactions throughout the year which impact your projected payroll, Workday also calculates your payroll commitments and obligations throughout the year to provide accurate real-time budget check.

Position control extends Workday core financial, human resources, and payroll functionality. Its features include:

- Position budgets, which provide position budgeting, position control, and encumbrance.  
See [Concept: Position Budgets](#) on page 518.
- Payroll commitments, which uses Human Capital Management and Financial Management to track and control payroll costs.  
See [Steps: Process Payroll Commitment Accounting](#).
- Commitment accounting, which contains journal entries that post to your commitment, obligation, and actuals ledgers for transactions that involve positions.  
See [Concept: Commitment Accounting for Position Control](#) on page 525.

Position budget and commitment accounting are only available for employees in supervisory organizations that use the position management staffing model.

You can use position budgets without commitment accounting and payroll commitments. Similarly, you can use commitment accounting and payroll commitments without position budgets.

## Reference: Position Control Terminology

This table describes important position control terms:

Term	Meaning
<b>Position vs Position Restriction vs Job Requisition</b>	
Position	Filled position or chair.
Position Restriction	Unfilled position or chair.
Job Requisition	Approved request to fill a position or chair.
<b>Commitment vs Obligation / Payroll vs Fringe Benefit</b>	
Commitment	Amount reserved for unfilled positions. Workday terminology for pre-encumbrance.
Obligation	Amount reserved for filled positions. Workday terminology for encumbrance.
Payroll	Amount reserved for compensation.
Fringe Benefit	Amount reserved for burden (estimated employer expense).
Initial Commitment	Amount reserved at the beginning of a fiscal year for commitments and obligations.
Commitment Adjustment	<p>Value that represents the difference between:</p> <ul style="list-style-type: none"> <li>The previous commitment amount calculated for a position restriction.</li> <li>The current amount calculated.</li> </ul> <p>Examples include:</p> <ul style="list-style-type: none"> <li>Mid-year compensation changes.</li> <li>Mid-year costing allocation changes.</li> <li>Hires.</li> <li>Adding additional jobs.</li> <li>Open positions.</li> </ul> <p>Can be calculated in real time with budget check or in bulk without budget check.</p>
<b>Budget Checking</b>	
Budget Checking	Determines if sufficient position budget is available before enabling a position change that impacts the position budget.
Warn and Control	Options to control budget check.

### Tasks

[Steps: Process Payroll Commitment Accounting](#)

## Reference: Position Control Transactions

This table describes:

- Payroll commitment transactions.
- Type of ledger in which the event posts the accounting.
- The task to run to create the Payroll commitment transactions.
- Posting rules that the event uses to determine which account to post the debit and credit sides of the journal entries of the same name.

Transaction (Ledger Type)	Description	Task to Run	Account Posting Rules (Debit/Credit)
<i>Payroll Commitment</i>	Create a payroll commitment.	Run the <i>Create Initial Payroll Commitments</i> business process using the task of the same name.	Payroll Earnings/Commitment
<i>Payroll Commitment Adjustment</i>	Activities that occur after the initial payroll commitment run that adjust commitment amounts or accounting.	Run the <i>Check Budget</i> business process using the task of the same name, or add the <i>Propose Payroll Commitment Adjustment</i> step to a position-related business process.	Payroll Earnings/Commitment
<i>Payroll Obligation</i>	Create a payroll obligation.	Run the <i>Create Initial Payroll Commitments</i> business process using the task of the same name.	Payroll Earnings/Obligation
<i>Payroll Obligation Adjustment</i>	Activities that occur after the initial payroll commitment run that adjust commitment amounts or accounting.	Run the <i>Create Payroll Commitment Adjustments</i> business process using the task of the same name, or add the <i>Propose Payroll Commitment Adjustment</i> step to a position-related business process.	Payroll Earnings/Obligation
<i>Fringe Benefit Commitment</i>	Create a fringe benefit commitment.	Run the <i>Create Initial Payroll Commitments</i> business process using the task of the same name.	Fringe Benefit Expense/Commitment
<i>Fringe Benefit Commitment Adjustment</i>	Activities that occur after the initial payroll run that adjust fringe benefit	Run the <i>Create Payroll Commitment Adjustments</i> business	Fringe Benefit Expense/Commitment

Transaction (Ledger Type)	Description	Task to Run	Account Posting Rules (Debit/Credit)
	commitment amounts or accounting.	process using the task of the same name, or add the <i>Propose Payroll Commitment Adjustment</i> step to a position-related business process.	
<i>Fringe Benefit Obligation</i>	Create a fringe benefit obligation.	Run the <i>Create Initial Payroll Commitments</i> business process using the task of the same name.	Payroll Earnings/Fringe Benefit Obligation
<i>Fringe Benefit Obligation Adjustment</i>	Activities that occur after the initial payroll run that impact fringe benefit obligation amounts or accounting.	Run the <i>Create Payroll Commitment Adjustments</i> business process using the task of the same name, or add the <i>Propose Payroll Commitment Adjustment</i> step to a position-related business process.	Payroll Earnings/Fringe Benefit Obligation
<i>Payroll Commitment Liquidation</i>	Periodic liquidation of a payroll commitment.	Run regular on-cycle and off-cycle payroll, or use the <b>Run Payroll Commitments Liquidation</b> task to run the standalone process.	Payroll Commitment/Earnings
<i>Payroll Obligation Liquidation</i>	Periodic liquidation of a payroll obligation.	Run regular on-cycle and off-cycle payroll, or use the <b>Run Payroll Commitments Liquidation</b> task to run the standalone process.	Payroll Obligation/Earnings
<i>Fringe Benefit Commitment Liquidation</i>	Periodic liquidation of a fringe benefit commitment.	Run regular on-cycle and off-cycle payroll, or use the <b>Run Payroll Commitments Liquidation</b> task to run the standalone process.	Fringe Benefit Commitment/Expense
<i>Fringe Benefit Obligation Liquidation</i>	Periodic liquidation of a fringe benefit obligation.	Run regular on-cycle and off-cycle payroll, or use the <b>Run Payroll Commitments Liquidation</b> task to run the standalone process.	Fringe Benefit Obligation/Expense
<i>Fringe Benefit (Actuals)</i>	Create actual fringe benefits charges. These charges are based on payroll actuals.	Run regular on-cycle and off-cycle payroll, or use the <b>Run Payroll Fringe Benefits</b> task	Fringe Benefit Expense/Recovery

Transaction (Ledger Type)	Description	Task to Run	Account Posting Rules (Debit/Credit)
		to run the standalone process.

[Concept: Position Control](#) on page 528

**FAQ: Position Control**

- [How do I see the available budget and commitments on an unfilled position?](#) on page 532
- [When does payroll commitment accounting post to the ledgers?](#) on page 532

**How do I see the available budget and commitments on an unfilled position?**

View the position budget for the position restriction. This insight is helpful when you're making hiring decisions for unfilled positions.

1. Access the **View Position Restrictions** report, which displays the position profile. To access the position profile, you can:
  - Navigate directly to the report and select the position restriction.
  - From the related actions menu of the position, select **Position Restrictions > View**.
  - Drill into the position restriction from the **View Open Positions** report.
2. If a position budget exists, click **View** on the **Position Budget** tab to view position budget balance, budget details, and a summary of commitments.

**When does payroll commitment accounting post to the ledgers?**

Journal entries for commitment accounting post to your ledgers at different times depending on the type of payroll commitment and processing you perform:

Types of Payroll Commitment and Processing Performed	When Payroll Commitment Accounting Posts to Ledgers	Accounting Date
Initial payroll commitments.	Posts commitments, obligations, and fringe benefits accounting when you complete the <i>Create Initial Payroll</i>	The first day of the fiscal year for which you're running the process.

Types of Payroll Commitment and Processing Performed	When Payroll Commitment Accounting Posts to Ledgers	Accounting Date
	<i>Commitments</i> business process.	
<ul style="list-style-type: none"> <li>• Payroll commitments</li> <li>• Obligations</li> <li>• Fringe benefit liquidations and fringe benefit actuals</li> </ul>	Posts journals and journal entry lines to your ledgers when you complete the <i>Run Pay Complete</i> business process.	The date the regular pay calculation run completes.
Ad hoc and batch payroll commitment adjustments that you perform using the <b>Create Payroll Commitment Adjustments</b> task.	Posts journals and journal entry lines to your ledgers when you complete the corresponding business process.	The date you specify on the <b>Create Payroll Commitment Adjustments</b> task when you run the process.
Automatic payroll commitment adjustments that you perform by including the <i>Propose Payroll Commitment Adjustments</i> subprocess as part of position-related tasks.	Posts journals and journal entry lines to your ledgers when you complete the parent business process.	The date of the posting.

If the ledger period is closed, Workday posts the accounting to the first day of the next open period.

## Related Information Concepts

[Concept: Commitment Accounting for Position Control](#) on page 525

## Spend Control

---

### Commitment Accounting for Spend Transactions

#### Steps: Configure Commitment Accounting for Expenses

##### Context

After you configure commitment accounting for expenses, you can track your commitment amounts using spend authorizations. You can create commitments in their respective ledgers and control spend from the originating transaction to the spend authorization that posts actuals.

##### Steps

1. Set up the **Spend Authorization Commitment** and **Spend Authorization Commitment Liquidation** journal sources and transactions for accounting.

This setup enables you to:

- Post commitment journal entries to your books for your expense transactions.
- Map the journal sources to their corresponding transactions.

See [Steps: Set Up and Update Journal Sources](#).

2. Update the company chart of accounts account set to add accounts (typically Liability) for **Reserve for Spend Commitments**.

See [Steps: Create and Organize Ledger Accounts](#).

3. To record the reservation for spend commitments, configure the account posting rule for **Spend Commitment with Reserve for Spend Commitments** as the default ledger account.

When you create a spend authorization, this posting rule and the Spend posting rule ensure that your commitments for expenses post to the correct ledger account. Workday debits and credits the appropriate account according to this posting rule.

See [Set Up Account Posting Rules](#).

4. **Create Ledgers**.

Create commitment ledgers to enable the creation of commitments for spend authorization transactions.

5. Create and open ledger years and ledger periods for processing.

See [Steps: Create and Open Ledger Years and Periods](#).

6. (Optional) To control your expenses spend against a budget, configure budget checking.

See [Steps: Configure Budget Checking for Spend Transactions](#) on page 537.

##### Result

Track commitments and their resulting accounting when you create spend authorizations.

#### Steps: Configure Commitment Accounting for Procurement

##### Context

Use these high-level steps to configure commitment accounting for procurement. You can create commitments and obligations in their respective ledgers, and control spend from the originating transaction to the supplier invoice that posts actuals.

## Steps

- Set up the Spend Commitment Liquidation, Spend Obligation Liquidation, and Supplier Contract journal sources and transactions for accounting.

This setup enables you to:

- Post commitment and obligation journal entries to your books for your spend transactions.
- Map the journal sources to their corresponding transactions.

See [Steps: Set Up and Update Journal Sources](#).

- Update the company chart of accounts account set to add accounts (typically Liability) for:

- Reserve for Spend Commitments.
- Reserve for Spend Obligations.

See [Steps: Create and Organize Ledger Accounts](#).

- To record the reservation for spend commitments and obligations, configure these account posting rules:

- Spend Commitment (with Reserve for Spend Commitments as the default ledger account).
- Spend Obligation (with Reserve for Spend Obligations as the default ledger account).

When you create requisitions, purchase orders, and change orders, these posting rules and the Spend posting rule ensure that your commitments for requisitions and obligations post to the correct ledger account. Workday debits and credits the appropriate account according to these posting rules.

See [Set Up Account Posting Rules](#).

- [Steps: Create Supplier Contracts](#).

Set up supplier contracts to create obligations for manual and scheduled supplier invoices.

- Access the **Maintain Supplier Contract Types** task.
- Add a row to create obligations for schedules invoices.
- Select the **Scheduled Invoices** and **Create Obligations** check boxes.
- Add another row to create obligations for manual invoices.
- Select the **Manual Invoices** and **Create Obligations** check boxes.

- [Create Ledgers](#).

Define the commitment and obligation ledgers for the company.

- Update ledger types to name the commitment and obligation ledger associated with an actuals ledger.
- Create commitment and obligation ledgers.

Enable the creation of commitments and obligations, or just obligations, for procurement spend transactions.

- Create and open ledger years and ledger periods for processing.

See [Steps: Create and Open Ledger Years and Periods](#).

- (Optional) To control your procurement spend against a budget, configure budget checking.

See [Steps: Configure Budget Checking for Spend Transactions](#) on page 537.

- Set up prepaid supplier invoices to prepay supplier invoices during accounting periods that occur before the periods when you amortize expenses.

See [Steps: Set Up Prepaid Supplier Spend](#).

## Result

Track commitments and obligations and their resulting accounting when you create:

- Requisitions
- Purchase orders

- Change orders
- Supplier invoices
- Supplier invoice adjustments created from supplier invoices
- Supplier contracts and amendments

## **View Accounting for Spend Commitments and Obligations**

### **Prerequisites**

- Configure commitment accounting for spend transactions.
- Complete the business process for the initiating transaction.

### **Context**

View the commitment and obligation information that Workday posts to your journals for spend transactions that involve commitment accounting.

### **Steps**

1. Select **Accounting > View Accounting** as a related action on the transaction.

Workday posts accounting to the applicable ledger and makes this page available after the completion step of the business process of the transaction.

For multicountry purchase orders with commitment accounting enabled on 1 or more companies, you can view the obligation journals per unique line company in the **View Accounting for Purchase Order** section.

2. Review the header information and tabs for the journal:

<b>Option</b>	<b>Description</b>
<b>Journal Lines</b>	Displays the commitment journal entry for requisitions and the obligation journal entry for either purchase orders or supplier contracts.  Tax is obligated when you allocate it to the purchase order or supplier contract line level. Also select the tax applicability to allocate for nonrecoverable taxes.
<b>Accounting History</b>	Lists all of the accounting activity for the spend transaction.
<b>Liquidations</b>	For transactions that liquidate (expense reports, purchase orders, change orders, supplier invoices, and invoice adjustments), displays the liquidation entries and enables you to drill into the details. Displays only after the liquidation occurs.  Workday has built in safeguards to prevent over liquidation.
<b>Liquidating Journals</b>	Liquidated transactions display details about the liquidated journal within the commitment or obligation ledger. <ul style="list-style-type: none"> <li>• On requisitions, this tab is available after you source the requisition and issue the purchase order.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>On purchase orders, this tab is available after you create a supplier invoice from the purchase order.</li> <li>On spend authorizations, this report is available after you create an expense report from the spend authorization.</li> <li>On supplier contracts, this tab is available after you create the supplier invoice from the contract.</li> </ul>
<b>Balances</b>	Displays by line or split line the quantity and amount committed or obligated, liquidated, and remaining. You can see any remaining balancing for goods and services that you committed or obligated to purchase. If you want to liquidate the remainders without procuring anything, you can close the requisition, purchase order, or supplier contract transaction.
<b>Year End Roll Forward</b>	Displays operational journals generated after rolling forward commitments and obligations from procurement documents. Journals and statuses display for the previous and new fiscal years.

##### Tasks

[Close Procurement Documents](#)

## Spend Budget Checking

### Steps: Configure Budget Checking for Spend Transactions

#### Prerequisites

- Set up financial, award, award proposal, and project plans or budgets.
- Configure commitment accounting to track:
  - Commitments and obligations for procurement transactions.
  - Commitments for spend authorization transactions.

#### Context

You can configure budget check to control spend transactions as part of business process workflows. You can configure commitments, but not obligations, for spend authorization transactions.

#### Steps

##### 1. Create Ledgers.

Select the **View Budget Date** check box to budget check actuals for procurement and expense transactions.

## 2. Edit Business Processes.

Configure the *Check Budget (Financial)* business process and security policy in the Procurement functional area:

- a) Add the *Review Budget Check* step to notify configured users to review the budget check results for the transaction.
- b) (Optional) Add the *Override Budget Check* step for approving overrides to budget check exceptions.
- c) (Optional) Add the *Reserve Budget in Budget Check* step to reserve journal entries after budget check and before posting.

Add the *Check Budget (Financial)* business process as an action step after review or approval steps on your procurement, expense report, or spend authorization business processes to enable them for budget checking. To ensure an accurate final budget check, add the *Check Budget* action step after review or approval steps on business processes.

To ensure an accurate budget check for financial transactions, leave the **Don't wait for this step to complete, move immediately to the next step.** check box unchecked on the **Business Process > Configure Batch/Job Step** task from the related actions menu of the **Run Budget Check** business process step.

For budget checking supplier invoices, Workday recommends adding an *Override Budget Check* step to ensure invoices run through both the *Budget Check* step and the *Override Budget Check* step.

## 3. Edit Domain Security Policies.

Grant security groups permission to the *Process: Budget Date* domain security policy in the Budgets functional area.

## 4. Set Control Options for Spend Plans on page 538.

Enable budget check and configure the default budgetary control options and rules.

## Next Steps

Review budget check results for spend transactions that workers submit.

[The Next Level: Controlling Your Spend with Budget Check on Financial Plans](#)

## Set Control Options for Spend Plans

### Prerequisites

Create your financial plans or award proposal, award, or project budgets.

### Context

Set budgetary control options for each plan that you want to budget check. These settings control:

- The plans or budgets enabled for budget checking.
- The level of severity with which to control budget.
- The periods you control budget against.
- Whether plan or budget amounts accumulate from prior periods.

Workday only supports up to 50 budgetary control option lines.

## Steps

1. Access the **Edit Budget Check Options** task.
2. As you complete the **Financials** tab, consider:

Option	Description
<b>Fiscal Year</b>	You can configure only 1 set of budgetary control options for the duration of a plan or budget, as defined by the structure and fiscal year.
<b>Enable Budget Check</b>	Select to enable budget check for financial transactions where the business process includes the <i>Check Budget (Financial)</i> subprocess as a step.
<b>Allow Credit Transactions to Pass</b>	Select to automatically pass credit transactions that increase the budget if Workday finds a matching plan line.
<b>Include Reserved Journal Lines</b>	<p>Select to include journals in <i>Reserved</i> status in calculations of the available balance. Workday also includes reserved journal lines on the <b>Current Spend</b> column when you amend financial plans with <b>Use Contextual Amendments</b> selected on the plan structure.</p> <p>Example: You have 2 purchase requisitions that impact the same budget. With this check box selected, you submit the first requisition. As soon as the first requisition passes budget check, Workday:</p> <ul style="list-style-type: none"> <li>a. Immediately places the journals in <i>Reserved</i> status.</li> <li>b. Considers these reserved journals when calculating available budget for the second requisition.</li> </ul> <p>You can select this check box even if you don't also select <b>Enable Budget Check</b>. With <b>Enable Budget Check</b> cleared, you can still include reserved journals in commitment accounting even without running budget check.</p>
<b>Budget Check Option</b>	<p>Select the level of severity with which to control budget. Both options alert the person responsible for reviewing the impact of a transaction on a plan or budget when:</p> <ul style="list-style-type: none"> <li>• There are insufficient funds for the transaction.</li> <li>• No plan lines match the journal lines on the transaction.</li> </ul> <p><i>Warn:</i> Select to permit the reviewer to continue with transaction approval without taking corrective actions to resolve the exception.</p>

Option	Description
	<i>Control:</i> Select to prevent transaction approval until there's a revision to the transaction or budget that enables the transaction to pass budget check.
<b>Cumulative Control Periods</b>	<p>Select to accumulate the amount from all control periods up to the budget date or accounting date. Unspent budget from prior periods carries forward into the next period and is available for use in that next period.</p> <p>Clear to check the transaction only against the amount for the control period that the budget date or accounting date of the transaction falls in.</p> <p>Example: If a requisition created halfway through the year is subject to a budget, then Workday checks the transaction against the accumulative budget amount across the first 6 months.</p>
<b>Control by Entry Periods</b>	<p>Specify which periods to control budget against. You can control your amount by different periods than your plan entry periods.</p> <p>Example: You can enter budget amounts by month and control by grouping the entire budget amount across a quarter or budget duration.</p>
<b>Ledger Types for Budget Check</b>	<p>Select which ledger types to include in the budget check.</p> <p>Example: You can include only your purchase orders (obligations) for budget check and exclude your purchase requisitions (commitments). With this configuration, Workday automatically includes:</p> <ul style="list-style-type: none"> <li>• Obligation and actual ledgers in the background if you select the commitment ledger.</li> <li>• Actual ledgers in the background if you select the obligation ledger.</li> </ul>
<b>Allow Budget Check Override</b>	<p>Select to enable budget check reviewers to request approvals for budget check exceptions. If an authorized approver grants an override, Workday displays the <i>Override Granted</i> status next to the budget check status on the transaction for all subsequent approvers. Once the override is approved, the transaction moves forward to the next step in the parent business process.</p> <p><b>Note:</b> You must first select <i>Control</i> for the <b>Budget Check Option</b>.</p>

3. (Optional) As you complete the **Budgetary Control Option Line** tab to create budget check rules for certain combinations of ledger account and dimensions, consider:

Option	Description
<b>Budget Check Option</b>	<p><i>Pass</i>: Select to create a rule that allows a transaction to pass budget check even when it's over budget.</p> <p><i>Skip</i>: Select to create a rule that allows a transaction to skip budget check and display a <i>Not Required</i> status even if the transaction would have failed budget check otherwise.</p> <p>The budget check options you select must differ from the budget check option you configure on the <b>Financials</b> tab. If no rules on the grid apply to your transaction, Workday uses the budget check option you configure on the <b>Financials</b> tab.</p>
<b>Tolerance Percentage</b>	Enter a tolerance percentage or amount so that your transaction only fails budget check when it exceeds the tolerance amount over budget.
<b>Tolerance Amount</b>	

**Note:** You can select only 1 worktag of each type per budgetary control option line.

## Result

Workday uses these settings to determine the behavior of the *Check Budget (Financial)* business process. You can add *Check Budget (Financial)* as a subprocess step to financial business processes to check budget before approving the spend transaction. For a list of business processes that enable this subprocess, view the **Business Process Configuration Options** report.

You can use the **View Budgetary Control Options** report to review your budget check configuration for a company and plan structure.

## Related Information

### Tasks

[Steps: Set Up Plans or Budgets](#) on page 461

### Review Budget Check Results for Spend Transactions

## Prerequisites

[Configure Budget Checking for Spend Transactions](#).

## Context

Review the results of the failed budget check for a spend transaction and decide how to proceed. Your choices depend on whether you configured the budgetary control to:

- Warn if it failed budget check.
- Control the budget and prevent transaction approval until it passes budget.

Workday only displays transaction lines that failed budget check in My Tasks, not transaction lines that met any *Pass* or *Skip* budget check rules.

The transaction on My Tasks can be subject to budgets across multiple companies and plan structures. Workday displays all budgets that a transaction fails to pass.

The *Check Budget (Financial)* step of the procurement, expense report, or spend authorization business process performs the budget check for procurement and spend authorization transactions by:

- Calculating commitment accounting for the transaction.
- Comparing that unposted commitment to the various budgets that the transaction is subject to. For procurement transactions, the subprocess also compares that unposted obligation.

For procurement and expense transactions, you receive a task on My Tasks to review the failed budget check if:

- There's insufficient budget for the transaction.
- There's a journal error (such as posting accounting to an unopened ledger period).

If the transaction passes budget check, Workday bypasses this review step and the procurement or expense report business process completes the approval.

## Steps

1. Access My Tasks to review budget check.
2. As you review the budget check on My Tasks, consider:

Option	Description
<b>Request Override</b>	Sends a request for overriding a failed budget check to an authorized approver. If an authorized approver grants an override, Workday displays an <i>Override Granted</i> status next to the budget check status on the transaction for all subsequent approvers. Once approved, the transaction moves forward to the next step in the parent business process.
<b>Control Periods</b>	The periods that Workday controlled budget against, which can differ by your budget entry periods. Example: You can enter budget amounts by month, but control by grouping the entire budget amount across a quarter or budget duration. A transaction can impact multiple budgets, which could have different control periods.
<b>Budget Check Option</b>	<p>The budget check option that caused the transaction to fail budget check.</p> <ul style="list-style-type: none"> <li>• <i>Warn</i>: Permits you to continue with transaction approval without taking corrective actions to resolve the exception.</li> <li>• <i>Control</i>: Prevents transaction approval until there's a revision to the transaction or budget that enables the transaction to pass budget check.</li> </ul>
<b>Plan to Date</b>	If you configured the budget check option to use cumulative control periods, Workday determines the budget amount based on the current control period and any prior control periods.
<b>View</b>	<p>For each budget, click to view the <b>Budget Check Exceptions</b> report.</p> <p>The report displays the impact of the transaction on the budget, and how much it's over budget. You can drill into the <b>Current Transaction</b> value to pinpoint what is causing the exception.</p>

Option	Description
	If you access the report from global search for plans or plan hierarchies with company hierarchies, you must manually enter the full transaction ID on the <b>Transaction</b> prompt to select your transaction.
<b>Transactions</b>	<p>Click this tab to view the transactions that failed this budget check.</p> <p>From here, you can drill into the transaction to see the amount and worktags associated with each line. The transaction also displays the <b>Budget Check Status</b>.</p>

3. If you have permission to view transactional journals, select **Accounting > View Accounting** from the related actions menu of the transaction to access the accounting details.
4. As you review the accounting details of the transaction, consider:

Option	Description
<b>Operational Journal Information</b>	Review the <b>Accounting Date</b> , which determines which journal period to post the accounting entries for the transaction, and the <b>Ledger</b> (commitment, obligation, or actuals).
<b>Journal Lines</b>	Review the impacted ledger accounts, debits and credits, and worktags. You can also see the budget date, which you can use to determine the budget amounts and control periods that this transaction is subject to.

5. After you've reviewed the information about why the transaction failed budget check, take 1 of these actions:
  - Amend the budget.
  - If you budget check by budget date, change the budget date of the transaction so that all or part of the transaction hits a different control period.
  - Fix the journal error.
  - Send the transaction back to the requester for revision. Example: You send the transaction back to the requester because they requested too much.
  - Deny the request.
  - Continue with transaction approval anyway. You can only continue despite failing budget check if you configured budget check as *Warn*.

Example: If you have submitted multiple purchase orders in a group, and only 1 of the purchase orders has insufficient budget, the group displays a budget check status of *Fail (Insufficient Budget)*. All 3 purchase orders within the group have pending status. Cancel the purchase orders, make any necessary corrections, and reissue them in 2 separate transactions.

6. Return to My Tasks to review budget check and click **Submit** to rerun budget checking for the transaction.

## Result

Once the transaction passes budget, the procurement and expense report business process completes and Workday posts the accounting for the approved transaction:

- For procurement transactions, Workday posts accounting to the commitment, obligation, or actuals ledger.

- For expense reports and spend authorizations, Workday posts accounting to the commitment and actuals ledger.
- For all transactions and to enable transactions to reserve budget, Workday posts accounting to journals in reserved posting status within the appropriate ledger after the initial budget check passes. Workday only posts accounting this way if you select **Include Reserved Journal Lines** on your plan.

Workday posts accounting to journals in posted status after the approval and completion steps of the business process.

## Related Information

### Tasks

[Steps: Configure Budget Checking for Spend Transactions](#) on page 537

[Review Balances for Spend Plans](#) on page 545

### Reference

[The Next Level: Controlling Your Spend with Budget Check on Financial Plans](#)

## Change the Budget Date for a Spend Transaction

### Prerequisites

- Grant security groups permission to the *Process: Budget Date* domain security policy in the *Budgets* functional area.
- Submit the spend transaction.

### Context

If you budget check by budget date and not accounting date, you can review and update the budget date on transaction lines to change the control period that Workday checks the transaction against during budget checking.

Example: If a transaction fails budget, you can change the budget date so that the transaction hits a different budget control period, and Workday checks it against the budget for that period. You can change the budget date for all lines, select lines, or portions of lines.

By default, Workday uses the transaction date of the initiating document as the budget date and carries that date forward to subsequent documents. Example: A worker submits a requisition on May 15. You source the requisition to a purchase order on June 1, and create a supplier invoice for the purchase order on June 15. The budget date for all 3 documents is May 15.

### Steps

1. From the related actions menu of the spend transaction, select **Budget Date > Edit Budget Date** to access the **Edit Budget Date for Transaction Lines** task.
2. Review the transaction details to help decide which new date to select.
3. For each transaction line, change the **Budget Date** column as needed.

If the transaction line is split, you can change the date for each part of the split. This functionality is useful when portions of a transaction line apply to different worktags, and are subject to different budgets and control periods.

### Result

When you check the transaction against budgets, Workday uses the new budget dates to determine the control periods that the transaction impacts.

## Next Steps

Continue with the business process workflow for the procurement transaction. If you already reached the *Review Budget Check* step because the transaction failed budget, return to that Inbox item and resubmit to rerun budget checking.

### Review Balances for Spend Plans

#### Prerequisites

Set up financial plans, or either award proposal or award plans.

#### Context

Check how you're tracking against your spend plan anytime throughout the year. Example: A cost center manager can review the plan across their organization, or a plan manager can review each plan of a company.

Set up budget checking for spend transactions. The **Manager Budgetary Balance Report** pulls in all completed transactions that are subject to plans and whose accounting Workday has already posted to the commitment, obligation, or actuals ledger.

This reporting of the budgetary equation enables you to compare your plans to your subtracted commitments, obligations, and actuals to see available balances.

#### Steps

1. Access the **Manager Budgetary Balance Report**.
2. (Optional) Select the **Include Reserved Journals** check box to include journals in reserved posting status in the calculation of available balance. Workday places transactions in reserved status after passing an initial budget check.
3. (Optional) Click one of the **Saved Filters** to use for run parameters.

To add a new filter, fill in your run parameters, enter the name in the **Filter Name** field, and click **Save**. Click **Manage Filters** to access all the filters that you've saved to your Workday account to delete a filter or edit its report run parameters.

4. Filter by these criteria to limit the data aggregated in the report:

Option	Description
<b>Organization</b>	Select from the organizations that you manage.
<b>Company</b>	Select from the companies with a plan or budget whose structure is for financial, award proposal, or award activity, and contains the specified organizations as a member of its structured dimensions.
<b>Plan Structure</b>	Of the plans available for the specified company, select a structure to identify the specific plan. The plan structure also provides the dimensions that you can drill into and across within the report.
<b>Award</b>	Select from the award years for the specified award budget.
<b>Year</b>	Select from the plan years for the specified financial plan.
<b>Summary Period</b>	Narrow the time frame of the plan information that you want to view.

Option	Description
<b>Period</b>	
<b>Plan to Date</b>	Select this option to report the current year and period plus any prior periods.

5. Analyze your plan as funds flow from commitments to obligations to actuals:

Option	Description
<b>Ledger Account / Summary</b>	All the ledger accounts or ledger account summaries that are part of the selected plan.
<b>Plan</b>	The planned amount. Workday uses the plan name as the column name.
<b>Commitment</b>	The total commitment amount for all commitment journal entries that Workday has posted to your commitment ledger for spend transactions. Workday uses the commitment ledger name as the column name.
<b>Obligation</b>	The total obligation amount for all obligation journal entries that Workday has posted to your obligation ledger for spend transactions. Workday uses the obligation ledger name as the column name.
<b>Actuals</b>	The total actuals amount for all actuals journal entries that Workday has posted to your actuals ledger for spend transactions. Workday uses the actuals ledger name as the column name.
<b>Balance</b>	The remaining plan after subtracting commitments, obligations, and actuals.

The report displays the summarized amounts of all transactions across the time frame you've specified in the report criteria.

6. Drill into summarized amounts by different worktag dimensions to see the supporting data behind the numbers.

Details include the journal entries, transactions, accounting and budget dates, and worktags. Drill into the journal entries and transactions for more specifics.

## Result

Adjust your plans as necessary to balance your plan.

### Reference: Budget Check Transactions

You can add the *Check Budget (Financial)* business process as an action step on:

Transaction Type	Business Process
Actuals	<i>Accounting Adjustment Event</i> <i>Expense Report Event</i> <i>Internal Service Delivery Event</i> <i>Supplier Invoice Event</i>

Transaction Type	Business Process
Commitments	<i>Requisition Event</i> <i>Spend Authorization</i>
Commitments, obligations, and actuals	<i>Accounting Journal Event</i> <i>Procurement Card Transaction Verification Event</i>
Obligations	<i>Create Purchase Order from Contingent Worker Contract</i> <i>Change Order</i> <i>Purchase Order Event</i> <i>Purchase Order Issue Event</i> <i>Supplier Contract Event</i> <i>Supplier Contract Amendment Event</i>

#### Related Information

[Edit Business Process Security Policies](#)

[Edit Business Processes](#)

##### Reference

[The Next Level: Controlling Your Spend with Budget Check on Financial Plans](#)

#### Troubleshooting: Budgets for Capital Projects Double Counted

**Cause:** The financial or project budget plan structure doesn't have a value to differentiate the generated journal lines.

##### Solution:

##### Steps

**1. Define Plan Structures** on page 464.

Create a new plan structure based on your budgetary reporting needs:

- For granular budget amounts, add a **Ledger Account** structured dimension and enter the expense or asset ledger account as the **Dimensions to Include**.
- For less granular budget amounts, add a **Ledger Account** structured dimension and enter the ledger account summary for all expense or asset ledger account types as the **Dimensions to Include**.

**2. (Optional) Link Virtual Child Plan Structures** on page 495.

For less granular budget amounts at the project level, link the new plan structure to a virtual parent that includes the project dimension.

**3. Create a new plan and budget for your plan structure.**

See: [Steps: Set Up Plans or Budgets](#) on page 461.

# Accounting Center

---

## Setup Considerations: Accounting Center

You can use this topic to help make decisions when planning your configuration and use of Accounting Center. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Accounting Center is a fully integrated solution built on an analytic engine that enables you to:

- Bring into Workday high-volume operational transactions from external sources.
- Transform and enrich the external business transactions into accounting journals.

### Business Benefits

You can:

- Ingest, enrich, and transform external transactions into Workday journals.
- Manage and track transactions in batches from ingestion to summarized accounting.
- Generate detailed and summarized accounting.
- Post summarized journals to your ledger.
- Report on both the detailed and summarized balances for financial, operational, and managerial reporting in both the primary and alternate ledger accounts.
- Close your books with full audit capability.

### Use Cases

You can use Accounting Center to bring in to transform and combine external transactions with Workday-generated accounting to include them in your Workday ledger.

Examples:

- For insurance companies - Transform policy and claims data.
- For healthcare companies - Transform healthcare provider insurance plan data.
- For media companies - Transform business events for production shows, including casting, payroll, set designs, visual effects, and campaign costs through award seasons.
- For retail companies - Transform point of sales and subscription billing services.
- For banking companies - Transform loan information.

### Questions to Consider

Questions	Considerations
Will you be ingesting multiple records and including those records in a single transaction?	Ingestion is the process of moving external transactions into a dataset from where you can access and analyze them.

Questions	Considerations
	<p>Use Transaction Grouping ID in enrichment validation stages and the Accounting Source Configuration to properly group records for:</p> <ul style="list-style-type: none"> <li>• Error Management: Ensures that even if 1 record in the transaction has an error, all records in the transaction error out.</li> <li>• Balancing at the transaction level: Ensures that the journal balances at the transaction level.</li> </ul> <p><b>Note:</b> Transaction Grouping ID is alpha-numeric and isn't case-sensitive.</p>
Will you be processing more than 300,000 records per transaction in Detailed Accounting?	<p>Split the transaction into smaller sets of records and balance each smaller transaction if approaching this limit. Example: Processing 5 transactions with each transaction containing 20,000 records will perform better than processing 1 transaction with 100,000 records.</p> <p>For more information, see <a href="#">Accounting Center - Splitting Large Transactions</a>.</p>
How many enrichment steps do you want to create for an accounting source?	<p>Enrichment is the process of enhancing your source data so you can use it for detailed and summarized accounting. Example: adding worktag mapping, reformatting or removing field and so on.</p> <p>You can create a maximum of 3 enrichment stages.</p> <p>You can't change the number of enrichment stages once you create the accounting source.</p>
How do you want Workday to process each batch in a stage?	<p>You can configure the Accounting Center Process to specify how you want Workday to process each batch for a stage. You can select to process and advance each batch:</p> <ul style="list-style-type: none"> <li>• Always Advance to Next Stage and Dismiss Any Errors to Next Batch.</li> <li>• Manually Select Next Action.</li> <li>• Only Advance to Next Stage if No Errors.</li> </ul> <p><b>Note:</b> To remove records from further processing, add a custom dismiss to your process.</p> <p>To specify how you want to process each batch in a stage, access the <b>Edit Accounting Center Process Configuration</b> task and select an option.</p>
Will you be including additional information on the detailed journal lines?	<p>Include fields as additional attributes from the enrichment dataset in the detailed journal lines.</p> <p>Workday recommends you use text as your primary format for attributes.</p>

Questions	Considerations
What information do you want to include on the summarized journal lines?	<p>Use Worktag Mapping Tables and dataset joins to bring necessary business objects into your enrichment datasets.</p> <p>Once these fields exist on your enriched datasets, you can select these fields on your Accounting Source journal line rules.</p>
Will you be using custom validations?	<p>Ensure that your transactions meet your specified conditions by:</p> <ul style="list-style-type: none"> <li>Creating validation stages in the enrichment datasets for identifying specific errors.</li> <li>Creating critical custom validations for the Accounting Center Detailed Journal type.</li> </ul>
Will you be dismissing certain error-free transactions?	Create a custom dismissal step to remove certain transactions from a batch.
Will your ingested data include records with no value?	<p>Ingested records with no value can cause batch errors. Workday must account for every transaction in a batch.</p> <p>You can either:</p> <ul style="list-style-type: none"> <li>Filter out the records with no value in the derived dataset that is the source for the Data Change Task used in the Accounting Source. This will reduce the count of transactions or records that the Accounting Center processes.</li> <li>If you need to maintain records of each ingested record, remove these records from detailed accounting using custom dismissal.</li> </ul>
Will you be using custom account posting rule dimensions?	Use a Join to instantiate the custom account posting rule dimension to the applicable field in your ingested data.
Will you configure alternate ledger currency?  See: <a href="#">Steps: Set Up Alternate Ledger Currency</a> on page 77.	<ul style="list-style-type: none"> <li>For Detailed and Summary Journals - When alternate ledger currency is enabled for your line company, through both Primary Source and Manual batch types, Workday will now generate accounting center detailed and summary journals in both primary and alternate ledger currency.</li> <li>For intercompany transactions: <ul style="list-style-type: none"> <li>When Line and Header companies have the same alternate ledger currency, Workday applies the Alternate Ledger Currency Rate Type of the Header company to the Line company.</li> <li>When the Line and Header companies don't have the same alternate ledger currency or the Header company doesn't have alternate ledger currency enabled, Workday applies the Alternate Ledger Currency Rate Type</li> </ul> </li> </ul>

Questions	Considerations
	<p>of the Line company to the Line company's alternate ledger currency journal entries.</p> <ul style="list-style-type: none"> <li>For Reversal Journals - Workday now creates a reversal journal in the alternate ledger currency when the Reversed and Reversed By journals are respectively accounted for before and after the Alternate Ledger Period start date.</li> </ul> <p>Example: Alternate ledger currency is enabled for Calendar Year 2023. You process a transaction with an accounting date of December 31, 2022. Accounting Source option to Create Reversal is checked. Reversing Journal (Reversed By) to be created with an accounting date of January 1, 2023.</p> <p>Result: The Reversed (12/31/2022) journal is generated in only the primary ledger currency and the Reversed By (1/1/2023) journal is generated in both the primary and alternate ledger currency.</p> <ul style="list-style-type: none"> <li>For Reporting in Accounting Center: <ul style="list-style-type: none"> <li>When you enable alternate ledger currency for a company and report directly from Prism, Workday recommends that you select a single ledger currency. When you don't specify a single ledger currency, Workday returns both Primary from Alternate ledger currency journal lines.</li> <li>Alternatively, Workday adds a new Ledger field to the detailed accounting output tables that populates the ledger value for each detailed journal line, enabling you to utilize this field when reporting on detailed accounting journal lines. Example: You can filter on the Ledger field to exclude detailed journal lines associated with an alternate ledger currency.</li> </ul> </li> </ul>
Will you be using multicurrency journals?	<p>Consider whether you need to include the instance of the transaction currency code in your enriched data.</p> <p>Also, consider:</p> <ul style="list-style-type: none"> <li>If you want to record both the transaction amount and the ledger amount.</li> <li>Have Workday calculate the ledger amount using currency conversion rates.</li> </ul>
Will the ingestion data include cash journals and will you reconcile the cash journals?	<p>Include the instance of the bank account in your ingested data. Also, include the bank account worktag as a worktag type in the accounting configuration and select <b>Reconcile to Bank</b>.</p>

Questions	Considerations
	<p>Also, use the <b>Transaction Reference</b> field when selecting <b>Reconcile to Bank</b>.</p> <p>Include condition rules to separate your cash and bank accounts from your other lines.</p>
Do you want to track the number of transactions Workday dismisses from a current batch?	Access the <b>Find Accounting Center Batch</b> report and view the <b>Dismissed Transactions</b> column.
Do you require notifications of certain events as the Accounting Center is processing the batch through various stages?	Set up custom notifications in the business process definition using report fields on the Accounting Center event.
Will you be using alternate account sets for reporting?	<p>Access the <b>Edit Company Accounting Details</b> task and select an alternate account set for the company to generate reports that map alternate account sets or statutory account sets to your preferred account set.</p> <p>Once you create or post journals, you can't change the alternate account set.</p>
Will you be controlling access for creating and editing mapping table definitions or mapping tables based on role assignments?	<p>Create and assign roles enabled for the Source System.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Maintain Assignable Roles</b> task.</li> <li>2. Enter a role and for the <b>Enable for</b> field, select <b>Source System</b>.</li> <li>3. Access the <b>View Mapping Table Definition</b> report.</li> </ol> <p>From the related actions of the <b>Source System</b>, select <b>Roles &gt; Assign Roles</b>.</p> <ol style="list-style-type: none"> <li>4. On the <b>Assign Roles</b> task, assign the Source System role you previously created to a user.</li> <li>5. Create a role-based security group (constrained) using the newly created role.</li> <li>6. Add the newly created role-based security group (constrained) to the security domain policy for Set Up: Mapping Table Definitions or Set Up: Mapping Tables.</li> </ol> <p>Users will only be able to access the Mapping Table Definitions and Mapping Tables, which contain a source system value for which the user has an assigned role.</p>
Will you be controlling access to an accounting source based on roles defined for a source system?	<p>Create and assign roles enabled for a source system.</p> <ol style="list-style-type: none"> <li>1. Create or select an existing source system. You can use the <b>Create Source Systems</b> task to create a new source system.</li> <li>2. Add the role enabled for Source System, to the newly created role-based security group.</li> <li>3. Access the <b>Maintain Assignable Roles</b> task.</li> </ol>

Questions	Considerations
	<p>4. Enter a role and for the <b>Enable for</b> field, select <b>Source System</b> to create roles enabled for the source system.</p> <p>5. From the related actions of the source system, select <b>Assign Roles</b> to assign a user to an assignable role.</p> <p>6. Create a role-based security (constrained) group.</p> <p>7. Edit the accounting source and add the Source System attribute.</p> <p>8. Add the constrained role-based security group to the applicable domain or business policy with Allowed Security Group Types: Roles Source System.</p> <p>When a user has access to domains through a constrained role-based security group that uses a role enabled for Source System, they can only access Accounting Sources that contain a Source System value in which the user has been assigned a role.</p>
When will you schedule your weekly maintenance?	Ensure that you don't schedule any jobs or processes to run near the start of your weekly maintenance. Once maintenance starts, all currently active jobs and processes will stop running and error out. As Workday doesn't support an automatic restart, you'll have to restart the jobs or processes manually.
Do you use the <b>Manage Workday Maintenance Window</b> task to end your active sessions?	Configure the <b>Manage Workday Maintenance Window</b> task because we enforce Session Restriction on the detailed accounting process. To continue with Accounting Center batches during the maintenance window, add your user that is configured on the business process to the <b>System Accounts Excluded from Session Restriction</b> option on the <b>Manage Workday Maintenance Window</b> task. This is the <b>Run As User</b> for the <i>Accounting Center Detailed Accounting Primary Process Job</i> in the <i>Accounting Center Detailed Accounting</i> business process definition.

## Recommendations

Option	Recommendations
Ingestion Source for Accounting Source	<ul style="list-style-type: none"> <li>• Use a table as your ingestion source.</li> <li>• Use the <b>Edit Data Change Task</b> (Accessed from the related actions menu of the <b>Data Change Task</b>) to populate fields on the Accounting Source Ingestion table. Consider</li> </ul>

Option	Recommendations
	<p>using these updates for simple transformations that you might require on your ingestion table:</p> <ul style="list-style-type: none"> <li>• Creating a Transaction Grouping ID.</li> <li>• Adding or deriving an accounting date.</li> <li>• Field names shouldn't: <ul style="list-style-type: none"> <li>• Contain the word 'id.'</li> <li>• Contain any special characters (Example:, ! @#\$%^*, etc.).</li> <li>• Exceed 255 characters in length.</li> <li>• End in an underscore.</li> <li>• Start with "WPA_ ", "AC_CALC_ ", "AC_PRE_ ", or " AC_POST_"(reserved prefixes).</li> <li>• Use AC_Batch, AC_Batch_Run, AC_Transaction_ID or AC_QUERY_KEY ( reserved words).</li> </ul> </li> </ul>
Enriching Data	<ul style="list-style-type: none"> <li>• Create a new dataset for enrichment between the System Filter {_UnprocessedForBatch} and the User dataset {_UserConfiguration} and perform all enrichment steps in the new dataset.</li> <li>• When expanding 1 record per transaction into many records per transaction in Enrichment, use Transaction Grouping ID as a unique ID for each row in your ingested data.</li> <li>• For complex enrichments, create separate enrichment stages. Separate enrichment stages ensure that Workday persists data at each stage separately, for diagnostic purposes.</li> <li>• Keep Mapping and Validation stages separate.</li> <li>• When adding fields as calculated fields or using Join/Mapping stage, their fields shouldn't: <ul style="list-style-type: none"> <li>• Start with "WPA_ ", "AC_CALC_ ", AC_PRE_ " or "AC_POST_ " (reserved prefixes).</li> <li>• Use AC_Batch, AC_Batch_Run, AC_Transaction_ID or AC_QUERY_KEY (reserved words)</li> </ul> </li> </ul>
Validating Data	<ul style="list-style-type: none"> <li>• Create a new derived dataset containing your validation stages between the System Filter {_UnprocessedForBatch} and the User dataset {_UserConfiguration}.</li> <li>• Add the validation stage on the last Enrichment stage.</li> </ul>
Currency Decimal Precision	<p>The transaction and ledger amounts in detailed accounting must match the currency precision of the transaction and ledger currencies.</p> <p>If the amounts don't meet the currency precision of the relevant currencies, you must round these</p>

Option	Recommendations
	amounts to the correct currency precision in Enrichment.
Configuring domains and securing entities for tables and datasets for an accounting source.	<p>To increase efficiency in configuring domains for tables and datasets for an accounting source, use the <b>Edit Accounting Source Prism Data Source Security</b> task.</p> <p>Security: <i>Setup: Accounting Source - Create domain.</i></p>
Creating Journal Line Rules	You can create up to 5,000 Journal Line Rules across all Snapshots in all Accounting Groups for an accounting source.

## Requirements

The ledger period must be open for the journal to post.

Before you can initiate a batch, ensure it contains at least 1 transaction.

A stage must be complete with no errors before advancing to the next stage.

## Limitations

- If there are more than 10,000 validation exceptions, the entire batch errors out.
- Summarized journals won't check for budget check and will post even if they cause the budget to exceed.
- When entering 2-sided intercompany transactions between companies, you can only have companies with the same ledger currency.
- When you configure alternate ledger currency for a company:
  - Accounting Center doesn't generate single ledger primary currency or alternate ledger currency journals when processing a transaction.
  - The existing Currency Rate Type field in the Accounting Source header only applies to the primary ledger currency. Accounting Center does not support overriding the alternate ledger currency rate type. The alternate ledger currency rate type is driven by the configuration at the company and tenant level.
  - Accounting Center doesn't enable you to define or override alternate ledger currency amounts. For Detailed Accounting processing, Workday uses the system exchange rate to generate all alternate ledger currency amounts.

See:

- [Steps: Set Up Alternate Ledger Currency](#) on page 77.
- You can't use Worktag Balancing functionality on transactions. Manually configure your accounting source to create the accounting correctly.
- For Accounting Center journals, Workday will only support mapping rules from the primary to the alternate account set.
- Accounting Center doesn't support all Prism data types. For Accounting Center processing, Workday doesn't support Currency, Double, and Integer field types. Additionally, for any numeric field that you use as a transaction amount, ledger amount, or taxable amount on the accounting source configuration, you must maintain a field precision of (20,6).

## Tenant Setup

No impact.

## Security

You can access the **Domain Security Policies for Functional Area** report to view all security domains for Accounting Center.

The security domains that you can configure include:

Domain	Considerations
<i>Process: Accounting Center</i> in the Accounting Center functional area.	Can configure accounting center processes and reports.
<i>Process: Accounting Center Detailed Journals</i> in the Accounting Center functional area. Includes these subdomains: <ul style="list-style-type: none"> <li>• Process: Accounting Center Detailed Journals - Add Attachment</li> <li>• Process: Accounting Center Detailed Journals - Add/Change Attachment</li> <li>• Process: Accounting Center Detailed Journals - Cancel</li> <li>• Process: Accounting Center Detailed Journals - Core</li> <li>• Process: Accounting Center Detailed Journals - Reporting</li> <li>• Process: Accounting Center Detailed Journals - View</li> </ul>	Can cancel, add attachments to, and view Accounting Center detailed journals.
<i>Set Up: Accounting Center</i> in the Accounting Center functional area. Includes these subdomains: <ul style="list-style-type: none"> <li>• Set Up: Accounting Source – Create</li> <li>• Set Up: Custom Account Posting Rule Types</li> <li>• Set Up: Accounting Source - Inactivate</li> <li>• Set Up: Accounting Source – Maintain</li> <li>• Set Up: Accounting Source Process Configuration</li> <li>• Set Up: Maintain Accounting Center Processing Windows</li> <li>• Set Up: Source Systems</li> </ul>	Can create, deactivate, and edit accounting source tasks and web services, create source systems.
<i>Process: Accounting Center Error Manager</i> in the Accounting Center functional area.	Can view tasks, reports, and web services for the Accounting Center Error Manager.
<i>Process: Accounting Center Summary Journals</i> in the Accounting Center functional area.	Can view these reports: <ul style="list-style-type: none"> <li>• View Accounting Center Summary Journals</li> <li>• View Accounting Center Summary Journal</li> <li>• View Accounting Center Summary Journal (Expanded)</li> </ul>
<i>Report: Batches and Jobs Impacted During Disaster</i> in the Accounting Center functional area.	Can view the <b>Batches Impacted by Disaster Recovery</b> report.

Domain	Considerations
<i>Set Up: Mapping Tables</i> in the Accounting Center functional area.	Can create and update mapping tables.
<i>Set Up: Mapping Table Definitions</i> in the Accounting Center functional area.	Can create and update mapping table definitions.

### Business Processes

- Configure the *Accounting Center Batch Initiation Event* business process to initiate an accounting center batch.
- Configure the *Accounting Center Enrichment Event* business process to enrich data.
- Configure the *Accounting Center Detailed Accounting Event* business process to generate detailed accounting.
- Configure the *Accounting Center Summarization Event* business process to create summarized accounting.
- Configure the *Accounting Center In-Line Edit Approval Event* business process to grant access to all tasks and reports for using In-Line Edit for correcting errors.

### Reporting

You can access the **Workday Standard Reports** report to view all reports for Accounting Center.

Reports or Dashboards	Considerations
<b>Batches Impacted During Disaster Recovery</b> report	Enables you to identify batches impacted during disaster recovery.
<b>Run Time Metrics at Batch Level</b> report	Enables you to monitor trending run time metrics at the batch level.
<b>Run Time Metrics at Batch Stage Level</b> report	Provides trending run time metrics for all stages in a batch or batches.
<b>Run Time Metrics at Batch Run Level</b> report	Enables you to report on trending run time metrics at the batch run event level.
<b>View Accounting Source Snapshot</b> report.	Provides details of a specific effective dated accounting source snapshot configuration.

You can also create custom reports using these report data sources:

- Accounting Center Batch
- Accounting Center Batch Run
- Accounting Center Batch Stage
- Custom Account Posting Rule Types

### Integrations

You can use these web services to migrate and maintain accounting sources between different tenants:

- Get Accounting Center Implementations*
- Put Accounting Center Implementations*
- Get Source Condition Rules*
- Get Accounting Source Process Configurations*
- Get Accounting Source Snapshots*
- Put Accounting Source Condition Rule*

- *Put Accounting Source Process Configuration*
- *Put Accounting Source Snapshots*

You can use these web services to maintain account posting rules or mapping tables in Accounting Center:

- *Get Custom Account Posting Rule Dimensions*
- *Get Custom Account Posting Rule Types*
- *Get Mapping Table Definitions*
- *Get Mapping Tables*
- *Put Custom Account Posting Rule Dimension*
- *Put Custom Account Posting Rule Type*
- *Put Mapping Table*
- *Put Mapping Table Definition*

You can use the *Put Accounting Center Batch* web service to create a new batch.

You can use these web services to retrieve and update resolution details for dismissed transactions:

- *Get Dismissed Transactions*
- *Put Dismissed Transaction*

Refer to the web service directory on Workday Community for more web services.

## **Connections and Touchpoints**

You can use Accounting Center with Financial Accounting to process journals, produce financial records, and perform period and year-end close.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## **Other Impacts**

Together with Workday Prism Analytics, Workday Accounting Center provides improved statutory, operational, and regulatory reporting.

## Data Management

---

### Create Prism Analytics Table

#### Prerequisites

- Set up your tenant for Prism Analytics.
- Review these topics to familiarize yourself with Prism Analytics terminology, such as tables, datasets, Prism data sources, stages, and so on:
  - Concept: Prism Analytics Data Management Workflow.
  - Steps: Set Up Tenant for Prism Analytics.
  - Concept: Tables.
  - Concept: Datasets.
  - Concept: Dataset Stages.
  - Steps: Create a Dataset with External Data (Upload a File).
  - Steps: Create a Dataset Using Workday Data.
- Security: These domains in the Prism Analytics functional area:
  - *Prism Datasets: Manage*.
  - *Prism Datasets: Create*.
  - *Prism Datasets: Publish*.

#### Context

Prism Analytics enables you to bring in non-Workday data, such as business transactions, and enrich and transform it without exporting it into separate applications. You can then combine external accounting transactions with Workday-generated accounting and include them in your Workday ledger.

You can create a Prism Analytics table to bring in your external accounting transactions.

#### Steps

1. (Optional): Create custom dimensions and custom account posting rule types. See [Create Custom Dimensions and Custom Account Posting Rule Types](#) on page 585.

**2.** As you create the table, consider these guidelines:

- When naming columns, ensure you that don't use these column names:
  - AND
  - AS
  - ASC
  - BY
  - dataSourceFilter
  - DESC
  - effectiveMoment
  - EMPTY
  - entryMoment
  - FROM
  - GROUP
  - HAVING
  - id
  - IN
  - IS
  - LIMIT
  - NOT
  - NULL
  - OR
  - ORDER
  - SELECT
  - WHERE
- Use version 2 of the Prism Analytics dataset REST API.
- Use the REST API or the Prism web interface to both create the table and load data into the table.
- Select **Append** when loading incremental data into the table.
- Use the table as your Ingestion Source prompt when you create the accounting source.

### Next Steps

Enrich your data to create detailed and summarized accounting.

---

## Data Enrichment

### Concept: Enrichment

You enrich data to enhance and refine your source data that you can use in detailed and summarized accounting.

Enriching the dataset is a continuous process. You might have to perform these tasks to enrich your data to meet Accounting Center requirements:

- Map Worktags: Create worktag mapping to enrich your data by assigning worktags to your transactional data that you can use in detailed accounting and reporting. See [Steps: Create Instance Mapping](#) on page 561.
- Add fields/data using stages and Prism calculated fields in the enrichment derived dataset. See [Create Validation Stages for Enrichment](#) on page 569.
- Reformat or remove fields.
- Create multiple derived tables based off the ingestion table.

- Create and join other tables/datasets (containing Workday data) to convert external text data to Workday Instance data.

**Note:** When expanding 1 record per transaction into many records per transaction in Enrichment, Workday recommends that you use Transaction Grouping ID as a unique ID for each row in your ingested data.

You can enrich the data by mapping the source data to the corresponding Workday field types.

## Steps: Create Instance Mapping

### Context

You can create instance mapping to enrich your data by assigning worktags or ledger accounts to your transactional data that you can use in detailed accounting and reporting.

**Note:** You can also use account posting rules to derive ledger accounts. See [Create Custom Dimensions and Custom Account Posting Rule Types](#) on page 585.

### Steps

1. [Create Mapping Table Definition](#) on page 561.

You create a mapping table definition to define a structure for your mapping table rules.

2. [Create Mapping Table](#) on page 562.

You create a mapping table to define rules to map your worktags.

## Create Mapping Table Definition

### Prerequisites

Use the **Maintain Worktag Usage** task to enable worktag as either a primary or alternate dimension for the taggable type of Mapping Table Definition.

Security: *Set Up: Mapping Table Definitions* domain in the Accounting Center functional area.

### Context

You can create a mapping table definition to:

- Define the number of input values in your mapping table.
- Define the number and type of outputs.

In addition to 1-to-1 mapping, you can also map:

- One input value to many output values.
- Many input values to 1 output value.
- Many input values to many output values.

You can also use the table definition to configure how to define input values by using wildcards and ranges.

**Note:** Once you create a mapping table definition and create a mapping table based on the definition, you can't edit the mapping table definition.

### Steps

1. Access the **Create Mapping Table Definition** task.
2. Enter a name for the mapping table definition.
3. (Optional) Create or select a Source System.
4. Enable **Ledger Account** if you want to map ledger accounts.

5. Select an **Account Set** if you're mapping to a ledger account.
6. Click the **Parameters** tab.
7. As you complete the parameters inputs for the mapping definition, consider:

Option	Description
Display Name	Enter the display name for each parameter. Example: Policy, State.
Allow Wildcards	Select if you want to enable wildcards when you define mapping rules.  <b>Note:</b> Workday doesn't support wildcards in ranges.  If you have wildcards (*) and (?) in your dataset and want to evaluate them as string values, you might not want to enable this option.
Range Field	Select if you want to specify a range when you define mapping rules.  You can't specify a range and wildcard for the same external code.

**Note:** You can enter a maximum of 20 parameter inputs.

8. Click the **Worktags** tab.
9. As you complete the **Primary Worktag Types** and **Additional Worktag Types** grids, consider:

Field	Description
<b>Accounting Worktag Types</b>	Select worktag types to which you want to map your transactional data.
<b>Worktag Type Required</b>	Set up worktag types as required. If you require a worktag type, you must select a worktag value for every row when you create mapping table rules.
<b>Disallow Inactive Values</b>	Select for Workday to remove inactive values automatically.

Each primary worktag type you define is displayed in a separate column. All additional worktag types are displayed in a single column, enabling you to select additional worktags from a single column.

10. Click **OK** to create the structure for the mapping table.

#### Related Information

##### Reference

[2022R1 What's New Post: Mapping Table Security](#)

## Create Mapping Table

#### Prerequisites

You've created a mapping table definition.

Security: *Set Up: Mapping Tables* domain in the Accounting Center functional area.

## Context

You can create a mapping table to define rules to map your input values to your target output values.

## Steps

1. Access the **Create Mapping Table** task.
2. For **Mapping Table Definition**, select the mapping table definition you previously created, and click **OK**.

Workday displays the mapping table with the structure of the selected definition.

Once you create a mapping table based on the definition, you can't edit the mapping table definition.

**Note:** To display accounting worktags for a mapping table when using an Enterprise Interface Builder (EIB), you must edit the template to add the Accounting Worktag columns. See [Customize EIB Spreadsheet Template](#).

3. As you complete mapping inputs to target output values, keep these guidelines in consideration:

Mapping Functionality	Guidelines
Input Values	<p>For each row, enter a combination of input values that map to a particular output value.</p> <p>If you leave value blank, Workday won't evaluate the column for that row.</p>
Operators	<p>When entering input values, you can use these operators:</p> <ul style="list-style-type: none"> <li>• NOT: Checks whether a value isn't equal to OR isn't like an input value. Examples: NOT abc, NOT ab?</li> <li>• IS NULL: Checks whether a field value is empty.</li> <li>• IS NOT NULL: Checks whether a field value isn't empty.</li> <li>• IN (list): Checks whether a value is within a set of values. Example: IN (abc, def, xyz).</li> <li>• NOT IN (list): Checks whether a value isn't within a set of values. Example: NOT IN (abc, def, xyz).</li> </ul>
Wildcard Expressions	<p>If you selected to include wildcards when defining a parameter on the mapping definition, use ? to match any single character. Example: 10?0 matches these codes: 1020, 1030, 1080.</p> <p>Use * to match any number of characters.</p> <p>Example: A*00 matches all codes starting with A and ending with 00, such as A100, A1000, A1100, A1200.</p>
Range Expressions	<p>If you selected Range Field on the mapping table definition, enter a Range Start and Range End value.</p> <p>You can enter Alphanumeric ranges. Example: A100 - D300</p>

Mapping Functionality	Guidelines
	Workday evaluates range expression as a string. Example: Value of 5 falls outside a range of 1-19, but value of 05 falls within a range of 01-19.
Output Values	Select the desired output value resulting from the combination of input values.

**Note:** Workday evaluates rules from the top down and once it finds the mapping, it stops further evaluation. Therefore, order rules from most to least specific using **Order**.

- Once you complete creating all rules, click **OK** and then **Done**.

#### Related Information

##### Reference

[2022R1 What's New Post: Mapping Table Security](#)

## Edit an Enrichment Dataset

#### Prerequisites

- Create a derived dataset.
- Create Worktag Mapping. See [Steps: Create Instance Mapping](#) on page 561.
- Create any datasets or tables to join in additional data to instantiate Workday values.

Workday recommends you create a new dataset for enrichment between the System Filter `{_UnprocessedForBatch}` and the User dataset `{_UserConfiguration}`.

#### Context

You can edit an enrichment dataset to prepare further your data for detailed and summarized accounting. Example: Adding worktag types (cost center) to each individual transaction for greater granularity.

#### Steps

- Access the **View Accounting Source** report.
- Select an accounting source.
- From the related actions menu of the accounting source, select **Accounting Source > View Implementation**.
- For the **Enrichment** stage, click to open the **User Dataset**.
- Click **Edit**.

**6.** As you edit your derived dataset, consider these guidelines:

- a. To add worktag mapping to enrich your data, see [Include Mapping in a Dataset](#) on page 565.
  - b. To add validation rules for your enriched data, see [Create Validation Stages for Enrichment](#) on page 569.
  - c. Adding Fields: When adding fields to the enriched dataset, ensure that the field names don't contain spaces. Also, ensure that the field name, field type, and business object are the same on the dataset and table.
- Select the new fields when you edit the accounting source. Workday adds the fields to the detail accounting table when you next run the Accounting Center Process.
- d. When defining numeric attributes, ensure that the numeric values have a maximum of 15 digits to the left of the decimal place and 3 digits to the right of the decimal place. If the numeric value exceeds these limits, you'll receive an error during the Detailed Accounting Stage.
  - e. Removing Fields: Before you manually remove a field from a table, consider if the table contains data. Removing a field will remove all of its data.

**Note:** Workday recommends you shouldn't remove fields in a production environment.

- f. Reuse Existing Enrichment Pipelines: Workday creates an enrichment user dataset as a single blank dataset. You can reference the user dataset on the accounting source enrichment stage, as there's currently no way to reference another enrichment dataset.

Where there's an existing enrichment dataset, or enrichment rules are complex that you need to break them into multiple datasets, you must reconfigure the dataset relationships. This enables the enrichment dataset to import your custom dataset, so that your custom dataset can import the system filter dataset.

- g. Enrichment is a continuous process. Therefore, you must manually add and remove fields if you want to include the fields down stream.

**7.** From related actions menu of the **Enrichment** stage, select **Accounting Source Stage > Sync Schema**.

Workday synchronizes the schema of the Enrichment table to include or exclude fields added or removed in your User dataset.

#### Related Information

[Concept: Accounting Center](#) on page 639

[Concept: Accounting Source](#) on page 571

##### Tasks

[Create Prism Analytics Table](#) on page 559

[Create Accounting Source](#) on page 571

## Include Mapping in a Dataset

### Prerequisites

- You've created a mapping table based on the mapping table definition.

### Context

You can include mapping to populate a dataset with worktag or ledger account values. To include mapping in a dataset, you must associate the columns in your dataset with the inputs defined in your mapping table definition.

### Steps

1. Access the **Data Catalog** report.
2. Right-click the dataset for which you want to use the mapping functionality and select **Edit**.

3. Click **Add Stage** and select **Value Mapping** to add a new Value Mapping stage.
  4. Select a mapping table you want to use as your mapping rule.
  5. Map the required **Input Fields** associating fields in your Prism dataset with input fields from your mapping table. If you map a column in your dataset with no data in the mapping table, Workday ignores the column during the mapping process and uses the remaining columns.
  6. Select **Output Fields** and if needed, rename the field names. Ensure that there are no spaces in the names as Workday writes these values to a table. Also for better clarity, consider a naming convention for these fields. Example: inst\_ or wtg\_.
- Workday provides a **Condition** field as an output field. This output field provides link to the mapping rule applied.
7. After configuring the Prism stage, click **Done**.

### Result

Workday populates the worktag instances for each transactional line per the mapping rules you defined.

## Create Workday Instances with Prism Join

### Prerequisites

- Security: These domains in the System functional areas:
  - *Custom Report Creation*
  - *Manage: All Custom Reports*
- *Prism Datasets*: Create domain in the Prism Analytics functional area when creating a dataset.
- Any of these security requirements when editing an existing dataset:
  - *Prism Datasets: Manage* domain in the Prism Analytics functional area.
  - *Dataset Editor* permission on the dataset.
  - *Dataset Owner* permission on the dataset.

### Context

You can use Prism Join to derive an instance of a Workday business object for use in your accounting source configuration.

### Examples:

- You can match field values in your Prism dataset with custom list values. This matching enables you to populate the instances of the custom account posting rules dimensions created from these custom list values in your Prism dataset. You can then use these instances as custom dimensions for a custom accounting posting rule type configured for an accounting source.
- If you have a text value in your Accounting Center source system that represents a Workday worktag value, you don't need to maintain a separate mapping table. You can instead use Join to instantiate it.

### Steps

#### 1. Create a Custom Report

Create a custom report to create a list of all values and instances of all those values.

- a. Access the **Create Custom Report** task.
- b. Enter:

Field	Value
-------	-------

<b>Report Name</b>	A unique name for your custom report. Workday recommends that you either name or tag reports that you want to use in Prism to identify them.
<b>Report Type</b>	<i>Advanced</i>
<b>Data Source</b>	Select an appropriate data source for the business object values you wish to instantiate. Example: Custom List Values for Custom List.
<b>Enable As Web Service</b>	Select <b>Enable As Web Service</b> .

- c. Click **OK**.
- d. On the **Columns** tab, enter:

Field	Value
<b>Business Object</b>	Select an appropriate business object. Business Object. Example: Custom List Value.
<b>Fields</b>	Select a value for the Business Object Value in these formats: <ul style="list-style-type: none"> <li>• Text. Example: Custom List Value (Text)</li> <li>• Instance. Example: Custom Account Posting Rule Dimension Value (Single Instance).</li> </ul>

- e. (Optional) On the **Prompts** tab, enter any desired prompts. If you don't require any prompts, enter:

Field	Value
<b>Default Type</b>	Select <b>No Default Type</b> .
<b>Do Not Prompt at Run Time.</b>	<i>Check</i>

- f. On the **Advanced** tab, enter:

Field	Value
<b>Enable as Web Service</b>	Confirm it's enabled.
<b>Enable for Prism</b>	<i>Check</i>

- g. Click **OK**.

See [Create Custom Reports](#).

See [Concept: Creating Reports to Import into Tables and Datasets](#).

## 2. Create a Dataset from the Custom Report

- Create a base dataset using the custom report as the source for the dataset. See [Steps: Create a Dataset Using Workday Data](#).

**Note:** When you create a dataset from the custom report, Workday recommends that you consider using a run frequency to schedule updates to the values in the dataset.

### 3. Create a Join Stage

Create a Join stage to combine fields from the Custom Report dataset and your dataset.

- a. Access the **View Accounting Source** report.
- b. Select the accounting source for which you want to create a Join stage.
- c. From the related actions of the accounting source, select **Accounting Source > View Implementation**.
- d. For the **Enrichment** stage, click to open the **User Dataset**.
- e. Click **Edit**.
- f. Click **Add Stage**.
- g. Select **Join**.
- h. As you create the Join, consider:

Field	Description
<b>Join Pipeline</b>	Select the dataset you created from the custom report.
<b>Match Rows</b>	<ul style="list-style-type: none"> <li>• <b>Primary Pipeline:</b> Select the <b>Text</b> field in your Primary Pipeline to match with the <b>Business Object Value Text</b> field from your Custom Report dataset.</li> <li>• <b>Custom Report Dataset:</b> Select the <b>Business Object Value Text</b> field to match with the selected field from your Primary Pipeline.</li> </ul>
<b>Include Rows That Exist In</b>	Select <b>Primary Pipeline</b> . You don't want to drop records that you're unable to join.
<b>Select Fields</b>	<p><b>Primary Pipeline</b> tab: Select <b>Select All</b>.</p> <p><b>Custom List Report Dataset</b> tab:</p> <ul style="list-style-type: none"> <li>• Select <b>Instance</b> and enter the Instance field from the custom report.</li> <li>• Include other fields from the report dataset as desired.</li> </ul> <p>Ensure that all fields have no spaces. If they do, replace the spaces with an underscore.</p>

- i. Click **Done** and then **Save**.

See [Reference: Join Stages](#).

### 4. Synchronize Dataset Schema Changes in Enrichment

Synchronize the schema to include fields added in the Join stage to the schema of the output dataset.

- a. Access the **View Accounting Source** report.
- b. Select the accounting source for which you created a Join stage.
- c. From the related actions menu of the accounting source, select **View Implementation**.
- d. From related actions menu of the **Enrichment** stage, select **Accounting Source Stage > Sync Schema**.
- e. Select **Confirm** and then click **OK**.

**Note:** If you sync the schema for the last enrichment stage, you don't need to publish the system dataset for Detailed Accounting because Workday will automatically publish the system dataset.

## 5. Edit Accounting Source

Edit your accounting source configuration to use the instance fields added in the Join stage.

**Note:** The fields aren't available in the accounting source configuration until you or Workday automatically publishes the system data for the Detailed Accounting stage. To confirm that the Schema Status for the Detailed Accounting stage has a status of *Published*, select **View Implementation** from the related actions menu of the accounting source.

See [Edit Accounting Source](#) on page 575.

### Result

- When you run Enrichment, Workday populates on each transaction the instance derived through the Join stage.
- When you run detailed accounting, Workday uses the field instances to drive accounting that is based on your accounting source journal header and journal line configuration.

## Create Validation Stages for Enrichment

### Prerequisites

You've created an accounting source with user and error tables.

### Context

You can create validation stages and include rules in your enrichment data in Prism. You can then include transactions identified by these validation rules in an error dataset to prevent them from progressing to detailed accounting.

### Steps

- Access the [View Accounting Source Stages](#) report.
- Select an accounting source for which you want to create validation stages.
- From the related actions menu of the User dataset for which you want to create the validation rules, select **Dataset > Edit**.

**Note:** Workday recommends you create a new dataset containing your validation stages between the System Filter `{_UnprocessedForBatch}` and the User dataset `{_UserConfiguration}`. Workday also recommends to add the validation stage on the last Enrichment stage.

- Click **Add Stage**.
- Select the Validation stage.
- As you complete the Validation stage, consider:

Option	Description
Rules	To add Validation rules, click the plus sign. To identify the validation, specify: <ul style="list-style-type: none"> <li>Validation Code</li> <li>Validation Message</li> <li>Exception Conditions: Enter a validation expression to exclude rows that match the invalid condition. Example: To exclude rows</li> </ul>

Option	Description
	<p>that have no cost center worktag, enter [Cost_Center] IS NULL.</p> <p>To add multiple rules, repeat the process. Breaking up rules will make it easier to troubleshoot errors.</p>
Grouping Field	<p>Use only when expanding 1 record per transaction into many records per transaction in Enrichment. Workday uses the field to group rows together by value. If a row generates an exception, all other rows in that group will also generate an exception.</p> <p><b>Note:</b> If you use Grouping Field, you must map the field you select for Grouping Field under Field mapping.</p>
Exceptions Threshold	<p>Workday automatically populates the amount. We recommend that you don't change the amount.</p> <p>If errors exceed the threshold, Workday will stop processing the transactions.</p>
Table for Exceptions	<p>Select the error table in your accounting source to which you want to send the invalid transactions.</p> <p><b>Note:</b> Enter the correct error table, otherwise all subsequent validations will fail. It should be same as the error table for the stage that is displayed in the <b>Error Datsets</b> column on the <b>View Accounting Source Stages</b> report.</p>
Field Mapping	<p>Is only displayed when you select the Exception table.</p> <ul style="list-style-type: none"> <li>• <b>Validation Code and Message:</b> Map your user dataset validation code and message to your validation code and message in your error dataset.</li> <li>• <b>Dataset Fields:</b> Depending on your configuration, you can map as many dataset fields as you want. You <b>must</b> map these 5 user dataset fields to your error dataset fields:           <ul style="list-style-type: none"> <li>• <b>WPA_Load_ID</b> to <b>load_identifier</b>.</li> <li>• <b>WPA_RowID</b> to <b>row_identifier</b>.</li> <li>• <b>AC_Transaction_ID</b> to <b>AC_Transaction_ID</b>.</li> <li>• <b>AC_Batch</b> to <b>AC_Batch</b>.</li> <li>• <b>AC_Batch_Run</b> to <b>AC_Batch_Run</b>.</li> </ul> </li> </ul> <p>Workday recommends that you use the custom fields to retrieve key information to help troubleshoot errors.</p>

7. Click **Done** and then **Save**.

## Next Steps

Create an accounting source.

# Accounting Generation

## Concept: Accounting Source

An accounting source is a Workday configurable object that defines the steps, ingestion source, and rules for processing input rows in Accounting Center.

You can use an accounting source to:

- Bring into Workday external transactions in incremental batches using the data management solution of Workday Prism Analytics.
- Enrich transactions with worktag mapping and unique calculations, and create custom validations.
- Manage rules to generate accounting for high-volume transactions generated by non-Workday sources.
- Transform external operational transactions into accounting journals.
- Create, modify, and maintain custom accounting rules and custom account posting rules to generate detailed and summarized accounting.
- Post summarized journals to your ledger.
- Orchestrate and have visibility over the entire data transformation process, and view, resolve, and reprocess errors.

You must have a table of external transactions prepared for enrichment and accounting generation in Prism called an Ingestion Table. You can use an ingestion table to build your enrichment and accounting rules beginning with the **Create Accounting Source** task.

As you create ingestion tables, consider:

- You can't use the same data source for more than 1 accounting source.
- Workday recommends you create an ingestion table as the ingestion source for the accounting source.

### Related Information

#### Reference

[The Next Level: Accounting Center](#)

## Create Accounting Source

### Prerequisites

- You must have created an ingestion table.
- Security: These domains in the Accounting Center functional area:
  - *Set Up: Accounting Source – Create* .
  - *Process: Accounting Center*.

### Context

You can create an accounting source from the ingestion table to create tables and datasets for these 4 stages:

- Initiation
- Enrichment (maximum of 3 stages)
- Detailed Accounting
- Summarization

Access to an accounting source is governed by the source system. When you create an accounting source and select a source system, Workday limits access to the accounting source based on the constrained user role for the source system.

## Steps

1. (Optional) Assign access to the *Process: Accounting Center* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. (Optional) Create a Data Change Task.

See [Create a Data Change Task](#).

3. Access the **Create Accounting Source** task.

4. As you complete the task, consider:

Field	Description
<b>Name</b>	Enter a name for the accounting source. No special characters. Only letters, numbers, and spaces.
<b>Source System</b>	(Optional) Create or select a Source System. When you grant a user domain access through a constrained security group, Workday limits access to each accounting source based on the user role. <b>Note:</b> Unconstrained users will continue to have access to all accounting sources.
<b>Enrichment Steps</b>	Select the number of enrichment steps that you want to use for the accounting source. You can't change the number of enrichment steps once you create the accounting source.  The number of enrichment steps you select depends on: <ul style="list-style-type: none"> <li>• The type and complexity of enrichment transformations and validations.</li> <li>• Your data processing needs.</li> </ul> <b>Note:</b> Any accounting source that uses a Validation stage that references the result of a Value Mapping stage must have the Validation stage in a subsequent enrichment step. Example: When creating 2 enrichment steps, create the Validation stage on the last enrichment step.  Workday recommends that you create separate enrichment steps:

Field	Description
	<ul style="list-style-type: none"> <li>For complex enrichments so that Workday can persist data at each step separately, for diagnostic purposes.</li> <li>For persisting data that you can use for:           <ul style="list-style-type: none"> <li>Reporting.</li> <li>Exporting to other systems.</li> <li>Downstream processing. Example: Calculating deferred revenue.</li> </ul> </li> </ul> <p>Workday also recommends that you configure the mapping stages before you expand your data. Configured mapped stages reduce the number of rows required for mapping.</p>
<b>Ingestion Source</b>	<p>Select the ingestion table for your transactions that you want to use for accounting.</p> <p>You can only select a Prism table and not a derived dataset as an ingestion source.</p> <p>When you create a Prism table for an accounting source, you can optionally add 2 columns with the exact names <code>Source_WPA_LoadID</code> and <code>Source_WPA_RowID</code> to track ingestion source <code>WPA_LoadID</code> and <code>WPA_RowID</code>. The value in these fields automatically populates in the Batch Mapping table for reference when you initiate an accounting center batch.</p> <p>You can't use a data source for more than 1 accounting source.</p>
<b>Data Change Task</b>	<p>(Optional) Select a Data Change Task to load transformed data automatically from the derived dataset to the ingestion source table when processing an accounting center batch.</p> <p>If you don't select the task, you must manually populate the ingestion source table with new data.</p>

- Click **OK**.
- To refresh the page, click the magnifying icon.
- Workday displays the **View Accounting Source** report.
- To complete the process, refresh the report.
- From the related actions of the accounting source, select **Accounting Source > Edit Accounting Source**.
- As you complete the task, consider:

Field	Description
<b>As Of Date</b>	<p>Specify a date field to configure the accounting source.</p> <p>The As Of Date value for each transaction</p>

	<ul style="list-style-type: none"> <li>Determines which version of the accounting source Workday uses at run time.</li> </ul> <p>The earliest effective date of the accounting source configuration should be earlier than the As Of Date values on the incoming data.</p> <p>You can create multiple versions of an accounting source configuration with different effective dates.</p> <p>Select a date column from your enriched data source to determine which effective-dated configuration you want Workday to apply to the enriched transactions to generate accounting.</p> <p>Example: You have these 2 snapshots of an accounting source configuration:</p> <ul style="list-style-type: none"> <li>Snapshot dated 01/10/2019</li> <li>Snapshot dated 01/15/2019</li> </ul> <p>If the As Of Date column value is 01/17/2019 for a sample transaction, Workday applies the configuration dated 01/15/2019 to the enriched transaction.</p> <p><b>Note:</b> When you bring in a NULL value from the source system, the As of Date on the Accounting Source for Detail Accounting Processing will use the current date. Workday will use this current date to find the Accounting Source snapshot.</p>
<b>Transaction Grouping ID</b>	<p>When expanding 1 record per transaction into many records per transaction in enrichment, Workday recommends that you use Transaction Grouping ID as a unique ID for each row in your ingested data.</p> <p>If you leave this field blank, Workday treats each enriched row in your data source as a unit of work. If you specify a grouping criteria, Workday creates a unit of work from many rows that share a Transaction Grouping ID value.</p> <p>Example: Select Policy Number if you want to bring in multiple premium amounts for a specific policy number as a single transaction in detailed accounting. This will affect the Transaction Count on your Batch run, while the Record Count will count each row.</p>
<b>Enable Multicurrency</b>	Select to enable the fields on your accounting source for multicurrency setup.
<b>Stop Publishing Error Datasets</b>	(Optional) For existing Accounting Sources, select the check box to stop publishing error datasets and have Workday query Prism tables directly. We recommend you select this check box in order to complete your batches faster.

	<p>Existing error datasets will no longer include any errors generated on future batches.</p> <p>For new Accounting Sources that you create, Workday won't create error datasets for Enrichment and Detailed Accounting.</p>
(Optional) <b>Configure Ingestion Fields for Editing</b>	<p>If you want to use In-Line Edit in Error Manager, specify a maximum of 10 ingestion fields that you want to select for editing.</p> <p>The field will only display columns that are in the ingestion table.</p>

10. Click **OK** and then **Done**.

11. From the related actions of the Accounting Source, select **Accounting Source > View Implementation** and confirm that accounting source creates datasets and tables for each stage.

See [Reference: Accounting Source Datasets and Tables](#) on page 586.

## Next Steps

Edit an accounting source to define journal header and header line rules.

### Related Information

#### Concepts

[Concept: Accounting Center](#) on page 639

#### Reference

[2021R2 What's New Post: Automated Pre-Batch Processing in Accounting Center](#)

[2022R2 What's New Post: Accounting Center - Miscellaneous Enhancements](#)

## Edit Accounting Source

### Prerequisites

- Configure an accounting source.
- Edit enriched dataset.
- Security: These domains in the Accounting Center functional area:
  - Set Up: Accounting Source - Maintain.*
  - Process: Accounting Center.*

### Context

You edit an accounting source to:

- Define accounting groups that contain journal header and header line rules.
- To generate detailed accounting, define journal header and header line rules.
- Enter an effective date for accounting groups.
- (Optional) Enter a transaction Grouping ID for the accounting source.
- (Optional) Change the Data Change Task.

**Note:** You can't change the Data Change Task when a batch is in progress.

- (Optional) Specify a new As Of Date for the accounting source.
- (Optional) Configure your related worktag configurations to populate default related worktags automatically on Accounting Center detailed journal lines.

**Note:** Before you edit an accounting source, ensure that Workday has successfully created the accounting source and all stages in the accounting source. To verify, access the **View Accounting Source** report, select your accounting source, and confirm it has a status of *Awaiting Configuration*.

Creating multiple accounting groups for an accounting source enables you to create efficient accounting source configurations to support your business needs. Example: Accounting for a single transaction under multiple book codes.

For each accounting group you can:

- To generate detailed accounting for the accounting group, specify separate header and journal line configurations.
- Configure different journal header rules (Example: book code) and journal line rules.
- Create accounting group condition rules for a transaction.
- Generate more than 1 set of detailed accounting entries from a single transaction.
- To generate detailed accounting for each accounting group, apply 1 or more accounting groups to each transaction in a batch.

## Steps

1. (Optional) Assign access to the *Process: Accounting Center* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. (Optional) Create Custom Account Posting Rule Dimensions and Custom Account Posting Rule Types. See [Create Custom Dimensions and Custom Account Posting Rule Types](#) on page 585.
3. (Optional) If you want to default your related worktag values on Accounting Center detailed journal lines ensure, you:
  - Select **Enable Worktag Type Precedence** on the **Maintain Worktag Type Precedences** task.
  - You properly order Worktag Types from which you want to default related worktag values on the **Order of Precedence** list on the **Maintain Worktag Type Precedences** task.

**Note:** Before you enable or modify the configuration on the **Maintain Worktag Type Precedences** task, consider the impact this will have on operational transactions, accounting journals, and their corresponding web services.

4. Access the **View Accounting Source** report.
  5. For **Accounting Source**, select the accounting source you previously created and click **OK**.
  6. (Optional) Create or select a Source System and contextually secure the *Process: Accounting Center* domain to the constrained Roles - Source System security group.
- When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.
7. (Optional) Select a new **Data Change Task**.
  8. Click **Edit Configuration**.
  9. Enter an **Effective Beginning** date for the accounting group.

The effective date must be the same or earlier than the value in the **As Of Date** field. Otherwise, you can have transactions that Workday can't process as the transactions are unable to find a matching

configuration. Workday recommends you create your initial configuration with a date earlier than any transactions that you plan to bring into the Accounting Center.

Each time you select **Edit Configuration**, you can:

- Create a new snapshot for an existing accounting group by entering a new effective date.

**Note:** For existing Accounting Groups, Workday automatically populates the effective date of the current snapshot of the selected Accounting Group. You can change the effective date.

- Create an initial snapshot for a new accounting group.
- Edit an existing snapshot of an accounting group, by selecting the accounting group and entering the same effective date as the snapshot you want to edit.

**Note:** Workday, therefore recommends that before you edit your configuration, you:

- a. Access the **View Accounting Source**.

- b. Click **Effective Date Snapshots** to check if you have prior snapshots in your Effective Date history.

**10.** For **Accounting Group**, select **Create New** and enter an **Effective Beginning** date to create a snapshot for a new accounting group.

**11.** Click **OK**.

**12.** As you create a new accounting group, consider:

Field	Description
<b>Accounting Group Name</b>	Enter a unique name for the accounting group.
<b>Condition Rule</b>	<p>Select a condition rule for the accounting group. Workday applies the accounting group condition rule to a transaction if the condition rule is met.</p> <p>Condition rules are specific to an accounting source. You can use condition rules across all accounting groups and journal line rules in the same accounting source, but can't use same condition rules in another accounting source.</p> <p>You can create condition rules for the accounting group from the <b>Create Accounting Source Configuration Rule</b> task, which you can also access from this field.</p> <p>If you don't select a condition rule, Workday applies the accounting group to all transactions in the batch.</p> <p><b>Note:</b> For Many to 1 transactions, all rows with the same Grouping ID must pass the accounting group condition rule to generate detailed accounting.</p>

**13.** Click the **Journal Header Rules** tab.

**14.** As you complete the task, consider:

Field	Description
<b>Ledger Company</b>	Map the source data to the corresponding Workday field type. The mapping enables you to select a value from the data source when configuring the accounting source.
<b>Ledger Type</b>	
<b>Journal Source</b>	

	Otherwise, you must select from a list of instance values in your tenant when configuring your accounting source.
<b>Accounting Date</b>	<p>Map the source data to the corresponding Workday field type. The mapping enables you to select a value from the data source when configuring the accounting source.</p> <p>Is the date the journal posts to the ledger. You can use this date to determine the period to post the journal entry to.</p> <p>Select the date of the transactions from the enriched data source. Workday retrieves the value for the Date field in the enriched data source.</p> <p>Accounting date is usually the same as the As of Date, but can be different. This enables you to have an accounting source configuration date earlier than the journal posting date. It's similar to transaction and accounting date in Workday.</p>
<b>Book Code</b>	<p>(Optional) Select a book code for the accounting group.</p> <p>Either select a field from your source data or select an instance value.</p> <p>You can select a separate book code for each accounting group based on your reporting requirements. Example: For the same accounting source, you can select a GAAP book code for 1 accounting group and Local GAAP Adjustments book code for another accounting group.</p>
<b>Memo</b>	<p>Optional</p> <p><b>Note:</b> This value will only carry forward to detailed accounting, and won't populate summarized journals.</p>
<b>External Reference ID</b>	This value will only carry forward to detailed accounting and won't populate summarized journals.
<b>Create Reversals</b>	<p>Optional</p> <p>Select if you want to create a reversal for transactions on the first day of the next available period.</p>
<b>Alternative Reversal Date</b>	<p>Optional</p> <p>Include this field if you:</p> <ul style="list-style-type: none"> <li>• Create reversals.</li> <li>• Want to use a date other than the default option, which is the first day of the next period.</li> </ul>

	The alternate reversal date must be in your enriched data and formatted as a date.
<b>Currency Rate Type</b>	<p>Is available only when you select <b>Enable Multicurrency</b>.</p> <p>Select values from either the enriched data source or a list of values in your tenant. If you select <b>None of the above</b>, Workday uses the default currency rate type for the company. If no company rate type is specified for the company, Workday uses the default currency rate type in your tenant.</p>

15.Click the **Journal Line Rules** tab.

16.As you complete the task, consider:

Field	Description
<b>Condition Rule</b>	<p>Optional</p> <p>Workday evaluates and posts transactions to specific ledger accounts based on rules you create.</p> <p>Condition rules are specific to an accounting source. You can use condition rules across all accounting groups and journal line rules in the same accounting source, but can't use same condition rules in another accounting source.</p> <p>You can create condition rules from the <b>Create Accounting Source Configuration Rule</b> task, which you can also access from this field.</p> <p>If you don't create a condition rule, Workday processes this row for every data row in your file.</p>
<b>Line Company</b>	<p>Optional</p> <p>Leave as the default value unless you're configuring intercompany accounting. Workday automatically populates the value from the Ledger Company on the <b>Journal Header Rules</b> tab.</p> <p>For intercompany transactions, you can select values either:</p> <ul style="list-style-type: none"> <li>• From the enriched data source.</li> <li>• List of values in your tenant.</li> </ul> <p><b>Note:</b> Companies with intercompany transactions must share the same ledger currency.</p>
<b>Ledger Account</b>	Map the source data to the corresponding Workday field type if you want to select a value from the data source when configuring accounting source.

	<p>Otherwise, you must select a value from a list of values in your tenant, or a posting rule type (including custom posting rule type).</p> <p>See <a href="#">Create Custom Dimensions and Custom Account Posting Rule Types</a> on page 585</p> <p>See <a href="#">Create Workday Instances with Prism Join</a> on page 566.</p>
<b>Additional Posting Rule Dimensions</b>	<p>Optional</p> <p>Must enter a value when you select a posting rule type in the <b>Ledger Account</b> field.</p> <p>Map your source data column to the Custom List that you created for a custom account posting rule dimension. See <a href="#">Create Custom Dimensions and Custom Account Posting Rule Types</a> on page 585.</p> <p>When using a posting rule, this field should contain valid posting rule dimension data for the specified posting rule type.</p> <p>Add dimensions from your posting rule type here, including configured custom posting rule dimensions.</p> <p>Don't add the <i>Company</i> dimension, as Workday automatically derives the dimension.</p>
<b>Transaction Amount</b>	<p>Amount in the transaction currency.</p> <p>Select from the enriched data source. Unless you enable multicurrency for the accounting source, you must enter the transaction amount in the company ledger currency.</p>
<b>Transaction Currency</b>	<p>Select from the enriched data source or a list of values in your tenant.</p>
<b>Ledger Amount</b>	<p>Leave this blank, if you want Workday to convert source transactions to your ledger currency.</p> <p>If you've already converted to ledger amount, select from the enriched data source.</p>
<b>Worktags</b>	<p>Optional, but Workday recommends that you map 1 or more fields to worktag dimensions. Workday persists the worktags on your summary journals in the ledger. The worktags summarizes your detailed accounting entries.</p> <p>When you select the <b>Enable Tax Details</b> check box, specify these worktags:</p> <ul style="list-style-type: none"> <li>• Required Worktags: <ul style="list-style-type: none"> <li>• <i>Tax Applicability</i></li> <li>• <i>Tax Code</i></li> <li>• <i>Tax Rate</i></li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>Optional Worktags:           <ul style="list-style-type: none"> <li><i>Tax Recoverability</i></li> <li><i>Tax Point Date Type</i>: Workday automatically includes a <i>Tax Point Date Type</i> value of <b>Transaction Date</b> on all detailed journal lines resulting from a tax-enabled journal line rule. To configure the <i>Tax Point Date Type</i> worktag on a tax-enabled journal line rule, select the <b>Enable Tax Point Date Configuration for Transaction Taxes</b> option under <b>Tax Options</b> on the <b>Edit Tenant Setup - Financials</b> task.</li> </ul> </li> </ul> <p><b>Note:</b> A <i>Tax Point Date Type</i> value that you configure through the journal line rule will take precedence over the default value.</p> <p><b>Note:</b> Workday prevents you from configuring <i>Tax Authority</i> or <i>Tax Category</i> worktags on a tax-enabled journal line rule. Workday derives these worktags from the <b>Tax Rate</b> and automatically populates them on the resulting detailed journal line.</p> <p>Worktags you specify here are displayed in both detailed and summarized accounting.</p>
<b>Interworktag Affiliate</b>	<p>Optional, specify an interworktag affiliate value to process transactions with the affiliate value when you balance detailed and summary journal lines by the required balancing worktag.</p> <p><b>Note:</b> You can apply interworktag affiliate values when you enable primary worktag balancing in your tenant.</p>
<b>Enable Default Related Worktags</b>	<p>Select the check box to populate default related worktag values that are derived from the worktag values from your enriched transactions.</p> <p>This can reduce the need to define these worktag values using mapping tables, lowering the ongoing maintenance of your mapping tables.</p> <p>Workday will only default Worktag types that you select on the <b>Worktags</b> prompt for each journal line rule.</p> <p><b>Note:</b> A worktag value from your enriched data will always take precedence over a default related worktag value.</p> <p>Workday considers the related worktag values added to your detailed journal lines:</p> <ol style="list-style-type: none"> <li>When evaluating the account posting rule for the journal line rule, if applicable.</li> <li>When evaluating detailed accounting custom validations, if applicable.</li> </ol>

	<p><b>c.</b> In summarization, and includes them on the resulting Accounting Center summary journal lines.</p> <p>You can only select the Enable Default Related Worktags option if you enable the <b>Worktag Type Precedence</b> task.</p>
<b>Additional Attributes</b>	<p>Optional, but Workday recommends that you include 1 or more fields of additional attributes.</p> <p>Include any other attributes that you want to include in addition to worktags. Example: Agent Number, Policy Number.</p> <p>Additional attributes won't carry forward to summary journals in the ledger, but are available for reporting in your detailed accounting results.</p>
<b>Reconcile to Bank</b>	<p>Select the check box if you want to reconcile summarized cash journal lines.</p> <p>Journal lines you select are available for reconciliation and displays a Transaction Reference if there's one.</p> <p>You can then match the selected journal lines with your bank statement. See <a href="#">Steps: Use Bank Account Reconciliation</a> on page 2016.</p>
<b>Transaction Reference</b>	<p>Only assign a transaction reference if you've enabled <b>Reconcile to Bank</b> option. A transaction reference helps you in reconciling cash journal lines with your bank statement line.</p> <p>Workday displays the transaction reference on the journal line during summarization.</p>
<b>Enable Tax Details</b>	<p>Select this check box to report on transaction taxes on the resulting journal lines.</p> <p><b>Note:</b> If you enable the check box, you must define tax attributes on the <b>Tax Details</b> field, and specify the required worktags on the <b>Worktags</b> field.</p>
<b>Tax Details</b>	<p>When you select the <b>Enable Tax Details</b> option, you must define these required tax attributes:</p> <ul style="list-style-type: none"> <li>• <b>Taxable Transaction Date</b></li> <li>• <b>Tax Type:</b> When you specify <b>Tax Paid</b> or <b>Tax Self-Assessed</b>, you must specify a <i>Tax Recoverability</i> worktag value on the resulting detailed journal line. Otherwise, Workday derives the <i>Tax Recoverability</i> from <b>Tax Applicability</b>.</li> </ul> <p><b>Note:</b> A <i>Tax Recoverability</i> value that you configure through the journal line rule will take precedence over the value that Workday defaults from <b>Tax Applicability</b>.</p>

- **Taxable Amount**
- **(Optional) Tax Recoverability Type:** Workday defaults the **Tax Recoverability Type** from the *Tax Recoverability* worktag during the Detailed Accounting Stage processing. When you use a *Partially Recoverable Tax Recoverability* worktag, you must define a **Tax Recoverability Type** override of either *Fully Recoverable* or *Non recoverable* on the journal line rule. You cannot specify a **Tax Recoverability Type** value of *Partially Recoverable*.

**Note:** The value you enter in the **Tax Recoverability Type** field overrides the value that defaults from the *Tax Recoverability* worktag.

17. Click the **Summarization Rules** tab to review how Workday groups and summarizes journals for all accounting groups in the accounting source:
  - a) Summarized Journal Header Fields: Displays journal header summarization logic.
  - b) Summarized Journal Line Fields: Displays journal line summarization rules, including all tax reporting worktags and attributes.

**Note:** Workday excludes additional attributes in summarization, but makes them available for reporting in your detailed accounting.

18. Click **OK** and then **Done**.

## Next Steps

Create accounting center batches.

## Related Information

### Reference

[2022R2 What's New Post: Default Related Worktags in Accounting Center](#)

## Inactivate Accounting Source

### Prerequisites

Security: Set up: *Accounting Source – Inactivate* domain in the Accounting Center functional area.

### Context

You can deactivate an accounting source that is incomplete, wrongly configured or that you longer need.

When you deactivate an Accounting Source, Workday automatically disables all tasks for editing a configuration or initiating a batch from the accounting source.

You can though still report on the deactivated accounting source and its transactional data.

Once you deactivate an accounting source, you can't reactivate it.

Before you deactivate an accounting source, we recommend that you check for and resolve:

- In-progress manual accounting center detailed journals.
- Transactions in the ingestion table that Workday hasn't processed. If you want to process these transactions, ensure that you deactivate the accounting source after the next batch run.

- Transactions in DismissedTransactionsConsolidated table that have a resolution of *Process with Next Batch*. If you don't want to process these transactions, ensure that you deactivate the accounting source after the next batch run.

## Steps

- (Optional) Assign access to the *Set Up: Accounting Source - Inactivate* domain through a constrained Roles - Source System security group.  
When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.
- Access the **View Accounting Source** report.
- Select the Accounting Source that you want to deactivate.
- From the related actions of the accounting source, select **Accounting Source > Inactivate Accounting Source**.
- Enter an Inactivation Reason and then select **Confirm**.
- Click **OK**.
- Review the Errors and Alerts.
- If you still want to deactivate the accounting source, click **OK** and then **Done**.

## Result

Workday:

- Disables all configuration and batch initiation tasks.
- Doesn't process any transactions that's waiting to be processed in the next batch.
- Removes access to the Accounting Center Error Manager.
- Won't display these related actions on an inactive accounting source:
  - Accounting Center Error Manager
  - Create Accounting Center Detailed Journal
  - Configure Detailed Journal Additional Attributes task.
  - Edit Accounting Source
  - Edit Accounting Source Configuration
  - Edit Accounting Center Process Configuration
  - Initiate Accounting Center Batch
  - Monitor Accounting Source Job Status
- Removes the related action of Cancel Accounting Center Batch on a batch.
- Disables these related actions on a detailed journal:
  - Add/Change Attachment for Accounting Center Detailed Journal.
  - Edit Accounting Center Detailed Journal.

- Will no longer display an inactive Accounting Source from the Accounting Source field when you access these tasks:
  - Accounting Center Error Manager
  - Configure Detailed Journal Additional Attributes
  - Create Accounting Center Detailed Journal
  - Create Accounting Source Configuration Rule
  - Edit Accounting Source
  - Edit Accounting Center Process Configuration
  - Edit Accounting Source Configuration Rule
  - Initiate Accounting Center Batch
  - Monitor Accounting Source Job Status
- Disables these buttons on the View Accounting Source report:
  - Edit
  - Edit Configuration

## **Create Custom Dimensions and Custom Account Posting Rule Types**

### **Prerequisites**

Security: *Set Up: Custom Accounting Posting Rule Types* domain in the Accounting Center functional area.

### **Context**

You create custom dimensions and custom account posting rule types to create rules for transactions you want to bring into Workday.

### **Steps**

1. Access the **Create Custom List** task.

Use this task to create custom list values that you can then enable for use as custom account posting rule dimensions.

2. Access the **Create Custom Account Posting Rule Dimension** task.

Use the task to enable the custom list objects as your custom dimensions.

3. Access the **Create Custom Account Posting Rule Type** task.

Use the task to create a custom account posting rule type and link the custom posting rule dimension. To add the custom account posting rule type automatically to the existing account posting rule set, save the custom account posting rule type.

4. Access the **View Account Posting Rule Set** report.

Select the custom posting rule type that you created, click **Edit Posting Rule** to add the detail to the posting rule to determine the ledger account. You can now use this posting rule type to build your configuration.

5. Use a Join to map this custom list to the corresponding column in your raw dataset in Prism. The map enables you to instantiate the value in your enriched data source. Workday makes the value available that you can use in posting rules. See [Create Workday Instances with Prism Join](#) on page 566.

## Concept: Custom Validations for Detailed Accounting

Based on your requirements, you can create custom validations to display error messages when transactions that are created in detailed accounting from the source system or manual detailed accounting journals meet certain conditions. Custom validations prevent Workday from processing transactions in detailed accounting that you identify as invalid. You can share these validations in accounting journals as long as the fields exist in both places.

**Note:** When creating custom validations, ensure that you don't use quotes or special characters in the description. Examples: @, #, \$, &.

Use the **Accounting Center Detailed Journal** report field to specify whether you want to apply the custom validation condition rule only to manual Accounting Center detailed journals and not traditional detailed journals.

Select the *Accounting Center Detailed Journal* type of transaction to create custom validations. See [Steps: Set Up Custom Validations](#) on page 52.

Workday displays the error message when it processes the transactions that meet the conditions for the validations.

For Workday-delivered validations, see [The Next Level: Accounting Center Configuration Guide- Delivered Validations](#).

## Reference: Accounting Source Datasets and Tables

When you create an accounting source, Workday creates these datasets and tables:

**Note:** Workday uses System datasets for internal Accounting Center processing. Don't edit or import these System datasets into another derived dataset. Only edit System datasets under these 2 conditions:

- If fields change after you process an accounting center batch. You might need to edit the system datasets manually in order to sync schema. This ensures that Workday selects the fields on join or filter stages. Don't do any other transformations within system datasets.
- The only system dataset that you should read from is the XX\_ENR\_#\_SYS\_UnprocessedForBatch dataset within the Enrichment stage. Workday recommends importing the dataset into a derived dataset from where you can perform transformations.

Stage	Dataset/Table	Comments
Batch Initiation	Input Dataset	The first dataset for the stage and displayed in your Accounting Center header.  This dataset is the Ingestion table for Batch initiation and will be the output of the Data Change Task if you've have one.

Stage	Dataset/Table	Comments
	System Datasets <ul style="list-style-type: none"> <li>• XX_INIT_SYS_NetNewLoadIDs</li> <li>• XX_INIT_SYS_UnprocessedForBatch</li> </ul>	The datasets are necessary for processing the batch. <b>DON'T EDIT ANY SYSTEM DATASETS.</b>
	Output Dataset XX_INIT_TBL_BatchMapping	This dataset contains results of the Initiation stage. Identifies records picked up by the Accounting Center for processing in a batch. Is part of the Input dataset for the Enrichment stage. <b>DON'T TRUNCATE OR EDIT AN OUTPUT DATASET.</b>
Enrichment	Input Dataset XX_SYS_MappedIngestionData	The first dataset for the enrichment stage. Is a join of Output dataset from the Initiation stage and your Ingestion table. For multiple enrichment stages, the input is the output of the previous enrichment stage. <b>DON'T EDIT AN INPUT DATASET.</b>
	System Datasets <ul style="list-style-type: none"> <li>• XX_ENR_#_SYS_ContextDataForErrors **</li> <li>• XX_ENR_#_SYS_Error **</li> <li>• XX_ENR_#_SYS_UnprocessedForBatch: You can import this dataset into a derived dataset where you can transform or enrich your accounting source.</li> </ul> <p>** Are available only in existing Accounting Sources. For new Accounting Sources that you create, Workday won't create these error datasets.</p>	These datasets contain data that Workday is processing for the batch. <b>DON'T EDIT ANY SYSTEM DATASETS.</b>

Stage	Dataset/Table	Comments
	User Dataset XX_ENR_#_USR_UserConfiguration	<p>This dataset is unique to the Enrichment stage.</p> <p>These datasets only process transactions for the batch and don't store records.</p> <p>Instead of adding transformations directly in this dataset, Workday recommends that you make transformations in derived datasets that you've imported from the XX_ENR_#_SYS_UnprocessedForBatch dataset and then connect to this User Dataset.</p> <p>Workday also recommends that you create your transformation datasets between the UnprocessedForBatch dataset and UserConfiguration dataset.</p>
	Output Dataset XX_ENR_#_TBL_EnrichedData	<p>This dataset contains results of the Enrichment stage.</p> <p>The Input table for the Detailed Accounting stage or the next enrichment stage if there are multiple enrichment stages.</p> <p><b>DON'T TRUNCATE OR EDIT AN OUTPUT DATASET.</b></p>
	Error Dataset XX_ENR_#_TBL_EnrichedError	<p>This dataset contains processing errors for the Enrichment stage.</p> <p><b>DON'T TRUNCATE OR EDIT AN ERROR DATASET.</b></p>
Detailed Accounting	Input Dataset XX_ENR_#_TBL_EnrichedData	<p>This dataset is the first table for the Detailed Accounting stage.</p> <p>The Output dataset from the last Enrichment stage.</p> <p><b>DON'T TRUNCATE OR EDIT AN INPUT DATASET.</b></p>

Stage	Dataset/Table	Comments
	<p>System Datasets</p> <ul style="list-style-type: none"> <li>• XX_DTL_SYS_ContextDataForErrors **</li> <li>• XX_DTL_SYS_UnprocessedForBatch</li> </ul> <p>** Is available only in existing Accounting Sources. For new Accounting Sources that you create, Workday won't create this error dataset.</p>	<p>These datasets are necessary for processing the batch.</p> <p>DON'T EDIT ANY SYSTEM DATASETS.</p>
	<p>Output Datasets</p> <p>XX_DTL_TBL_DetailedAccounting</p>	<p>This table contains results of the Detailed Accounting stage.</p>
	<p>Error Tables</p> <ul style="list-style-type: none"> <li>• XX_DTL_TBL_DetailedAccountingError</li> <li>• XX_DTL_TBL_DetailedAccountingErrorDetails</li> </ul>	<p>These tables contain processing errors for the Detailed Accounting stage.</p>
Summarization	<p>Input Dataset</p> <p>XX_DTL_TBL_DetailedAccounting</p>	<p>This table is the Input table for the Summarization stage.</p>
	<p>The Output table from the Detailed Accounting stage.</p>	
	<p>DON'T TRUNCATE OR EDIT ANY INPUT DATASET.</p>	
	<p>System Datasets</p> <ul style="list-style-type: none"> <li>• XX_SUM_SYS_Error</li> <li>• XX_SUM_SYS_JournalToDTLRowIDLinkage</li> <li>• XX_SUM_SYS_SummarizedAccounting</li> <li>• XX_SUM_SYS_UnprocessedForBatch</li> </ul>	<p>These datasets are necessary for processing the batch.</p> <p>DON'T EDIT ANY SYSTEM DATASETS.</p>
	<p>Output Datasets</p> <ul style="list-style-type: none"> <li>• XX_SUM_TBL_JournalToDTLRowIDLinkage</li> <li>• XX_SUM_TBL_JournalToKeyLinkage</li> </ul>	<p>These datasets contain results of the Summarization stage.</p> <p>DON'T TRUNCATE OR EDIT ANY DATASETS.</p>
	<p>Error Datasets</p> <p>XX_SUM_TBL_JournalToKeyLinkageError</p>	<p>These tables contain processing errors for the Summarization stage.</p> <p>DON'T TRUNCATE OR EDIT ANY ERROR DATASETS.</p>
	<p>Reporting Dataset</p> <p>XX_SummaryandDetailedAccountingReference</p>	<p>This dataset is unique to the Summarization stage.</p> <p>Links Detail Accounting records and the Summarized Accounting records.</p> <p>DON'T EDIT THE REPORTING DATASET.</p>

In addition, Workday also creates these systems and user-configured dismiss datasets:

Dataset Type	Dataset/Table
Dismiss System Datasets	XX_SYS_DismissedTransactionsConsolidated XX_SYS_DismissedTransactionsPopulatedForReprocessing XX_SYS_UserDirectedForDismissal DON'T EDIT ANY SYSTEM DATASETS. XX_TBL_DismissedTransactionsConsolidated XX_TBL_UserDirectedForDismissal DON'T TRUNCATE OR EDIT ANY SYSTEM DATASET.
User Configured Dismiss System Dataset	XX_USR_UserDirectedForDismissal Use this dataset to configure your custom dismissals.

## Batch and Error Management

---

### Edit Accounting Center Process Configuration

#### Prerequisites

You've created an accounting source and defined header and journal line rules.

Security: *Set Up: Accounting Source – Maintain* domain in the Accounting Center functional area.

#### Context

You can configure the Accounting Center Process to:

- Specify how you want Workday to process each batch for a stage.
- Set maximum error thresholds by count and percent for each stage in an accounting source. When errors exceed the threshold, Workday pauses the batch so that you can review the errors. You'll have to advance the batch manually.

**Note:** Once you run summarization, you can't roll back and rerun the batch. Workday therefore recommends that during your testing and design phase, you set detailed accounting to progress manually.

#### Steps

- (Optional) Assign access to the *Set Up: Accounting Source - Maintain* domain through a constrained Roles - Source System security group.  
When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.
- Access the **Edit Accounting Center Process Configuration** task.
- As you complete the task for each stage, consider:

Option	Description
Processing Options	Select how you want to process batches for the next stage on completion of a stage.

Option	Description
	<ul style="list-style-type: none"> <li>Select <b>Always Advance to Next Stage and Dismiss Any Errors to Next Batch</b> if you want Workday to proceed automatically to the next stage and dismiss any errors to the next batch.</li> <li>Select <b>Always Advance to Next Stage and Dismiss Errors from the Batch</b> if you want Workday to advance the batch automatically to the next stage and dismiss any errors in the batch to the Accounting Center Error Manager.</li> </ul> <p><b>Note:</b> Errors are available in the Error Manager once the batch completes.</p> <ul style="list-style-type: none"> <li>Select <b>Manually Select Next Action</b> if you want to start and process the batches for the next stage manually.</li> <li>Select <b>Only Advance to Next Stage If No Errors</b> if you want Workday to proceed automatically to the next stage when there are no errors.</li> </ul>
Error Threshold	<p>Specify a threshold by count, percent or both for these 2 processing options:</p> <ul style="list-style-type: none"> <li>Always Advance to the Next Stage and Dismiss Any Errors to Next Batch</li> <li>Always Advance to the Next Stage and Dismiss Errors from the Batch</li> </ul> <p><b>Note:</b> The threshold count or percent can't exceed the Workday-defined threshold of 100,000 errors for a batch.</p> <p>You can also specify a maximum error threshold by both count and percent but when errors exceed the most restrictive threshold, Workday will pause the batch. Example: A stage consists of 50,000 incoming transactions. You have set the error threshold of both 10,000 error count and 10 percent of the incoming transactions (5,000). As soon as there are 5,000 errors in the stage (10% of transactions), Workday will ignore the threshold error count, and will pause the batch.</p>
Count	Specify a threshold error count between zero and 100,000.
Percentage	Specify a threshold percent of the transactions that are coming into a stage. The percent can be between zero and 100 percent.

4. Click **OK**.

### Next Steps

Create a batch.

## Related Information

### Reference

[2022R2 What's New Post: Configure Error Thresholds to Pause Batch Processing](#)

## Approve Accounting Center Batch Journals

### Prerequisites

### Context

If required, you can configure 1 or multiple Review steps in the Accounting Center Summarization Event Business Process. Configuring a Review steps enables you to approve or deny accounting center summary journals before Workday posts them to the ledger for Primary Source batch types.

You configure the Review steps after the Accounting Center Summarization Primary Process Batch/Job and before the Accounting Center Summarization and Sync Completion Batch/Job.

### Note:

You don't need to configure the Accounting Center Summarization and Sync Completion Batch/Job if you don't add any Review steps.

### Steps

1. (Optional) Add the Roles - Source System security group to the *Accounting Center Summarization Event* security policy.

When you grant a user access to a business process through a constrained role-based security group, Workday limits access to each accounting source based on the user role.

2. Access the *Accounting Center Summarization Event (Default Definition)* business process.
3. From the related actions of the business process definition, select **Business Process > Edit Definition**.
4. For **Effective Date**, select today's date.
5. Click **OK**.
6. Click **Add Row**.
7. As you complete the Business Process Steps, consider:

Option	Description
Field	Value
<b>Order</b>	Ensure that the order for the new row comes after the Accounting Center Summarization Primary Process Batch/Job step. Example: c.
<b>Type</b>	Action
<b>Specify</b>	Review Accounting Center Summarization Run
<b>Group</b>	Select a user-based security group that's allowed to Review Accounting Center Summarization runs per the Accounting Center Summarization Event business process security policy.

Workday automatically adds a predefined (Workday Owned) entry condition to this step. This entry condition will only execute the Review step under these conditions:

- Accounting Center Batch Type is the Primary Source.
- The batch has associated Accounting Center Summary Journals in *Created* status.
- Process Option isn't set to Rollback.

8. Add additional Review steps as needed. Example: You might need different Review steps for different Accounting Sources if different security groups must approve or deny specific Accounting Sources.
9. After you've added all Review steps, click **Add Row**.
10. As you complete the Business Process Steps, consider:

Option	Description
Field	Value
<b>Order</b>	Ensure that the order for the new row comes after both the: <ul style="list-style-type: none"> <li>• Accounting Center Summarization Primary Process Batch/Job step.</li> <li>• All Review steps.</li> </ul>
<b>Type</b>	Batch/Job
<b>Specify</b>	Accounting Center Summarization and Sync Completion.  This job posts the summarized journals created by the summarization run.
<b>Run As User</b>	Name of the user or your integration system user that runs Accounting Center batches.  Workday recommends you select the same user that runs the initial Summarization Primary Process job step.

Workday automatically adds a predefined (Workday Owned) entry condition to this step. This entry condition will only execute the Review step under these conditions:

- Accounting Center Batch Type is the Primary Source.
- Process Option isn't set to Rollback.

11. Add condition rules to the Review steps and any post-processing steps as needed.

12. Click **OK**.

#### Result

When you create summarized journals, Workday initiates the *Accounting Center Summarization Event* business process and sends a My Tasks notification to approvers for necessary action.

The My Tasks notification contains a **Summary Journal** grid that displays a maximum of 100 summary journals created in the batch run.

**Note:** Reversal and Alternate Ledger Currency journals are not included in the unique summary grid rows, but are referenced in their parent journal rows.

The Run Status of the Summarization Run on the **View by All Runs** tab from the **View Accounting Center Batch** report displays a status of *Primary Process: Waiting for Approval*.

Approvers can either:

- Click **Approve** to approve the batch run.

The Accounting Center Summarization and Sync Completion job posts the summary journals to the ledger.

**Note:** You approve journals at the batch run level for all summary journals within a batch run, not by individual summary journal.

- Click **Deny** to deny the batch run.

When you deny the batch run:

- The Summarization stage remains in progress until you cancel or rollback the batch.
- The Run Status of the Summarization stage on the **View by All Runs** tab from the **View Accounting Center Batch** report displays a status of *Denied*.

For denied batch runs, you can perform 1 of these actions:

- Cancel the batch from the related actions of the batch.
- Click the **Run** button on the **Current View By Stage** tab from the **View Accounting Center Batch** report to roll back the batch to a prior stage.

Workday performs these actions:

- Cancels the Accounting Center Summary journals created in the Denied batch run.
- Starts a new summarization run event that will create new summarized journals.
- Creates new summary journals when subsequent summarization runs are executed.

Approvers can also:

- Add Attachments to support their actions.
- Click each summary journal to view details of each journal.
  - Click the **Status History** tab to review the status history of the journal.
  - Click the **Process History** tab to review all business process steps executed for all summarization runs in a batch and not just the summarization run that created the journal.

**Note:** All Accounting Center journals in a batch will have the same process history and all steps shown in the Accounting Center Summary Journals Process history may display process steps not associated with the journal.

See [View Summarized Journals](#) on page 636.

## Create Accounting Center Batches from Source Systems

### Prerequisites

Configure these business processes:

- *Accounting Center Batch Initiation Event.*

Include the Accounting Center Batch Initiation Primary Process as Batch/Job in the business process definition.

- *Accounting Center Enrichment Event.*

Include the Accounting Center Enrichment Primary Process as Batch/Job in the business process definition.

- *Accounting Center Detailed Accounting Event.*

Include the Accounting Center Detailed Accounting Primary Process as Batch/Job in the business process definition.

- *Accounting Center Summarization Event.*

Include the Accounting Center Summarization Primary Process as Batch/Job in the business process definition.

If you require prior approval for summarization journals before you post them to the ledger, configure 1 or more additional Review steps to the Accounting Center Summarization Event business process. See [Approve Accounting Center Batch Journals](#) on page 592.

See [Steps: Configure Business Process Definitions](#).

Security: Process: Accounting Center domain in the Accounting Center functional area.

## Context

Depending on the sources, you can create these 2 types of batches in Accounting Center:

- Primary Source: Batches that contain processed transactions that are created by a source system.
- Manual Detailed Journals: Batches that contain transactions created by manual detailed accounting journals. See [Create Manual Accounting Center Detailed Journals](#) on page 600.

You create a Primary Source batch to process a set of source transactions to:

1. Enrich data.
2. Generate detailed accounting.
3. Generate summarized accounting.

## Steps

1. (Optional) Assign access to the *Process: Accounting Center* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. (Optional) Add the Roles - Source System security group to the *Accounting Center Summarization Event* security policy.

When you grant a user access to a business process through a constrained role-based security group, Workday limits access to each accounting source based on the user role.

### 3. Initiate Accounting Center Batch

When you initiate a batch, it:

- Associates the WPA\_Row\_ID and WPA\_Load\_ID on each ingested row from the source system to an:
  - AC\_Transaction\_ID
  - AC\_Batch
  - AC\_Batch\_Run
- Creates a persisted mapping table.

**Note:** Before you can initiate a batch ensure that the batch contains at least 1 transaction.

- a) Access the **Initiate Accounting Center Batch** task.
- b) As you complete the task, consider:

Field	Description
<b>Accounting Source</b>	Select the accounting source for which you want to initiate a new batch.
<b>Initiating Stage</b>	Workday automatically populates <b>Batch Initiation</b> .
<b>Process Options</b>	Workday automatically populates <b>Initiate Batch</b> .

Field	Description
<b>Confirm</b>	<input checked="" type="checkbox"/>

- c) Click **OK** and then **Done**.

Workday:

- Initiates the *Accounting Center Batch Initiation Event* business process.
- Automatically launches Enrichment 1 to enrich data for detailed and summarized accounting.

- d) On the **Initiate Accounting Center Batch** page, click the batch.

Workday displays the **View Accounting Center Batch** page.

- e) Click **Refresh**.

- f) On the **Current View by Stage** tab, confirm that the Batch Initiation stage has an *In Progress* status.

- g) Click the **View by All Runs** tab and confirm that the Batch Initiation stage run event has an *Primary Process In Progress* run status.

- h) Refresh the page to confirm that the Run Status for the Batch Initiation stage run event has a status of *Completed*.

Once the Batch Initiation stage is complete, Workday automatically launches Enrichment 1.

**Note:** The input table for the Enrichment stage is different from the output table of the Initiation stage.

#### 4. Create Enriched Data

When you enrich data, it prepares the data source for detailed and summarized accounting.

- On the **View Accounting Center Batch** page, select the **Current View by Stage** tab, and confirm that the Enrichment stage has an *In Progress* status.
- Click the **View by All Runs** tab and confirm that the Enrichment stage has a *Primary Process In Progress* run status.
- Refresh the page to confirm that the Run Status for the Enrichment stage has a status of *Completed*.

If you have no errors but still want to rerun the process:

- Click **Run**.
- For **Process Options**, select **Rollback to Selected Stage and Reprocess**.
- For **Select Stage**, select **Enrichment**.
- For **Include Dismissed**, leave unchecked.
- Click **OK**.

Workday rolls back the transactions to the Enrichment stage and reprocesses the transactions.

If there are any errors in the run, you'll see a **View Errors** button for the stage on the **View by All Runs** tab.

- d) Click **View Errors** to view any errors. See [View, Resolve, and Reprocess Errors](#) on page 616.

**Note:** Before you run detailed accounting, ensure you've resolved or dismissed all errors from the Enrichment 1 stage.

## 5. Create Detailed Accounting

You can generate detailed accounting for financial, operational, and managerial reporting.

- a) (Optional) Create Custom Validations, see [Concept: Custom Validations for Detailed Accounting](#) on page 586.
- b) Access the **Find Accounting Center Batch** report.
- c) On the **Find Accounting Center Batches** page, for **Batch Type**, select **Primary Source**.
- d) Click the Batch for which you want to create detailed accounting.
- e) On the **View Accounting Center Batch** page, select the **Current View by Stage** tab.
- f) For the **Detailed Accounting** stage, click **Run**.

Workday displays the **Run Accounting Center Event** page.

- g) As you complete the task, consider:

Field	Description
<b>Accounting Source</b>	Workday automatically populates these fields:
<b>Stage</b>	<ul style="list-style-type: none"> <li>• Accounting Source</li> <li>• Stage</li> <li>• Batch details</li> </ul>
<b>Batch</b>	
<b>Process Options</b>	Select <b>Run Unprocessed Transactions</b> to have Workday create detailed accounting for unprocessed transactions.

- h) Click **OK** and then **Done**.

The process initiates an *Accounting Center Detailed Accounting* event.

- i) On the **Current View by Stage** tab, confirm that the Detailed Accounting stage has an *In Progress* status.
- j) Click the **View by All Runs** tab and confirm that the Detailed Accounting stage has an *Primary Process In Progress* run status.
- k) Refresh the page to confirm that the Run Status for the Detailed Accounting stage has a status of *Completed*.

If you have no errors but still want to rerun the process:

- Click **Run**.
- For **Process Options**, select **Rollback to Selected Stage and Reprocess**.
- For **Select Stage**, select **Detailed Accounting**.
- For **Include Dismissed**, leave unchecked.
- Click **OK**.

Workday rolls back the transactions to the Detailed Accounting stage and reprocesses the transactions.

If there are any errors in the run, you'll see a **View Errors** button for the stage on the **View by All Runs** tab.

- l) Click **View Errors** to view any errors. See [View, Resolve, and Reprocess Errors](#) on page 616.

**Note:** Before you run Summarization, ensure you've resolved or dismissed all errors from the Detailed Accounting stage.

## 6. Create Summarized Accounting

You can generate summarized accounting to aggregate detailed accounting results.

**Note:** Summarized journals won't check for budget check and will post even if they cause the budget to exceed.

- On **View Accounting Center Batch** page, select the **Current View by Stage** tab.

- For the **Summarization** stage, click **Run**.

Workday displays the **Run Accounting Center Event** page.

- As you complete the task, consider:

Field	Description
<b>Accounting Source</b>	Workday automatically populates these fields:
<b>Stage</b>	<ul style="list-style-type: none"> <li>• Accounting Source</li> <li>• Stage</li> <li>• Batch details</li> </ul>
<b>Batch</b>	
<b>Process Options</b>	Select <b>Run Unprocessed Transactions</b> to have Workday create summarized accounting for unprocessed transactions.

- Click **OK** and then **Done**.

The process initiates the *Summarization Event* process.

- On the **Current View by Stage** tab, confirm that the Summarization stage has an *In Progress* status.
- Click the **View by All Runs** tab and confirm that the Summarization stage has an *Primary Process In Progress* run status.
- Refresh the page to confirm that the Run Status for the Summarization stage has a status of *Completed*.

If there are any errors in the run, you'll see a **View Errors** button for the stage.

- Resolve, fix, and reprocess any errors. See [View, Resolve, and Reprocess Errors](#) on page 616.

**Note:** Before you can view summarized accounting, ensure you've resolved all errors from the Summarization stage.

## 7. View Summarized Journals for the Batch

- From the related actions menu of the batch, select **Accounting Center Batch > View Accounting Center Summary Journals**.
- Click the journal for which you want to view summarized accounting.
- To navigate back to the Accounting Center batch, from the related actions menu of the journal, select **Journal Entry > View Accounting Center Batch**.

To review all summarized journals for the accounting source, see [View Summarized Journals](#) on page 636.

### Related Information

#### Tasks

[Cancel Accounting Center Batches](#) on page 605

## Configure Detailed Journal Additional Attributes

### Prerequisites

Create an accounting source and run at least 1 batch in the accounting source.

Security: *Set Up: Accounting Source - Maintain* in the Accounting Center functional area.

## Context

You can configure a maximum of 10 additional attributes available to edit on the **Journal Entry Lines Grid** for each Accounting Source. You can then specify which of the configured additional attributes you want available on the manual detail journal entry lines and which additional attributes are required.

**Note:** Workday restricts you from modifying the Reference IDs on Additional Attributes.

## Steps

1. (Optional) Assign access to the *Set Up: Accounting Source - Maintain* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. Access the **Configure Detailed Journal Additional Attributes** task.
3. Select an Accounting Source.
4. Click **OK**.
5. Add a row for each additional attribute that you want available on the Accounting Center Detailed Journal lines.
6. As you complete the task, consider:

Option	Description
<b>Additional Attribute</b>	Select the additional attributes that you want on your manual detailed journal entry lines.  Only additional attributes present on the Detailed Accounting Output Table schema for the selected Accounting Source are available for selection.
<b>Edit on Journal Entry Lines Grid</b>	For each attribute, select if you want to edit the attribute on the manual detailed journal entry lines when you create a manual detailed journal.  <b>Note:</b> You can't select the checkbox if the journal line is for an Analytic Dimension as an additional attribute.
<b>Required</b>	For each attribute, select to require the additional attribute on all manual detailed journal entry lines.

7. Click **OK**.

## Result

The configured additional attributes are available on the manual detailed journal entry lines where indicated.

## Next Steps

Create a manual detailed journal.

## Related Information

[2023R1 What's New Post: Manual Accounting Center Detailed Journal](#)

## Create Manual Accounting Center Detailed Journals

### Prerequisites

- Configure these business processes:
  - *Accounting Center Detailed Journal Approval Event* to route manual accounting center detailed journals for approval.  
Configure Approvals on the Accounting Center Detailed Journals.
  - *Accounting Center Detailed Journal Batch Initiation Event*.  
Include the Accounting Center Detailed Journal Batch Initiation Primary Process as Batch/Job in the business process definition.
  - *Accounting Center Summarization Event*.  
Include the Accounting Center Summarization Primary Process as Batch/Job in the business process definition.

See [Steps: Configure Business Process Definitions](#).

- [Configure Detailed Journal Additional Attributes](#) on page 598.  
If you want to create a manual detailed journal with additional attributes, configure the detailed journal additional attributes first.
- Security: *Process: Accounting Center Detailed Journals* in the Accounting Center functional area.

### Context

You may create a manual journal with worktags, additional attributes and tax details in Detailed Accounting for a number of purposes, including:

- Correct data created by traditional batch processing.
- Create reversing accruals in the current period for source data that isn't yet in the Accounting Center.

You can only process manual detailed journals directly in the Detailed Accounting and Summarization stages. There are no Ingestion or Enrichment stages for manual detailed journals.

For Manual Detailed Journal batches, Workday:

- Ignores any processing options that you've configured for the accounting source on the **Edit Accounting Center Process Configuration** task.
- On the **Run Accounting Center Event** page:
  - Disables the **Dismiss Errors and Process with Future Batch** option as you can't dismiss transactions for the Manual Detailed Journal batch types.
  - Only displays the **Summarization** stage when you click **Run** and select **Rollback to Selected Stage and Reprocess**.

**Note:** The Accounting Center Detailed Journals don't post directly to your ledger but Workday instead summarizes them before posting to the ledger.

### Steps

1. Access the **Maintain Feature Opt-In** report and for the Accounting Center Detailed Journals - Contextual Security by Accounting Source feature, select **Opt In to Feature**.
2. (Optional) Add the Roles - Source System security group to the *Accounting Center Summarization Event* security policy.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

3. (Optional) Opt-in to the **Accounting Center Detailed Journals - Contextual Security by Accounting Source** feature and contextually secure these subdomains on the *Process: Accounting Center Detailed Journals* security domain by the constrained Roles - Source System security group:

- *Process: Accounting Center Detailed Journals - Add Attachment*
- *Process: Accounting Center Detailed Journals - Add/Change Attachment*
- *Process: Accounting Center Detailed Journals - Cancel*
- *Process: Accounting Center Detailed Journals - Core*
- *Process: Accounting Center Detailed Journals - Reporting*
- *Process: Accounting Center Detailed Journals - View*

4. (Optional) Configure an ID Generator for Accounting Center Detailed Journal.

Access 1 of these tasks:

- **Edit Tenant Setup - Financials** to configure an ID for all manual accounting center detailed journals at the tenant level.
- **Edit Company ID Definitions** to configure an ID for all manual accounting center detailed journals at the company level.

**Note:** The company ID sequence generator values take precedence over the Tenant Setup configuration.

See [Create ID Definitions and Sequence Generators](#).

5. (Optional) Use the **Batch Type** report field to create a condition rule on the Accounting Center Summarization Event business process.

6. Access the **Create Accounting Center Detailed Journal** task.

7. As you complete the journal header, consider:

Option	Description
<b>Accounting Source</b>	Select the accounting source for which you want to create the manual detailed journal.
<b>Ledger</b>	Select a company that includes an Actuals ledger. Workday doesn't support entering detailed journal in either of these ledgers: <ul style="list-style-type: none"> <li>• Commitment</li> <li>• Obligation</li> </ul> You can also use the <b>Ledgers by Company Hierarchy</b> prompt category to navigate a company hierarchy and then select the company ledger.
<b>Currency</b>	The company currency used on financial transactions. Workday populates the field based on the <b>Ledger</b> that you select.
<b>Journal Source</b>	Displays journal sources you configured as an <b>Accounting Source</b> on the <b>Maintain Journal Sources</b> task
<b>Currency Rate Type</b>	You can specify a currency rate type when you select the <b>Enable Multicurrency</b> check box. If you don't specify a type, Workday uses the <b>Currency Rate Type Override</b> on the <b>Edit Company Accounting Details</b> task.
<b>Book Code</b>	Leave blank to post to the blank book code.

Option	Description
<b>External Reference ID</b>	(Optional) Enter the reference ID. The reference ID enables you to track source system transactions for auditing purposes that you import into Workday.
<b>Enable Multicurrency</b>	<p>(Optional) Select to enable the <b>Currency Rate Type</b> if you want to use a currency rate type other than the default.</p> <p>Workday populates the <b>Enable Multicurrency</b> check box selection based on whether the selected Accounting Source is enabled for multicurrency.</p>
<b>Enable Tax Details</b>	<p>Select to add tax reporting details on a manual accounting center detailed journal.</p> <p><b>Note:</b> When you enable this option, you must specify <b>Tax Details</b> on the <b>Journal Entry Lines</b> grid.</p>
<b>Create Reversal</b>	<p>Select to enable the <b>Reversal Date</b> so that you can enter the date you want to have journal entries reversed. The default is the next open period.</p> <p>Both the journal period and the reversal period must be open.</p>
<b>Reconcile to Bank</b>	<p>Select the check box if you want to reconcile the summarized cash journal lines.</p> <p>Manual journal lines you select are available for reconciliation and displays a Transaction Reference, if there's one.</p> <p>You can then match the selected journal lines with your bank statement. See <a href="#">Steps: Use Bank Account Reconciliation</a> on page 2016.</p>

**8. Click Continue.**

The additional attributes that you configured on the **Configure Detailed Journal Additional Attributes** task and selected as Editable in the Journal Entry Lines Grid are available on the **Journal Entry Lines** grid.

**9. As you complete the **Journal Entry Lines** grid, consider:**

Option	Description
<b>Ledger Account</b>	Displays the ledger accounts for the Company based on the restricted-to companies you configured on the <b>Create Account Set</b> task. If you selected the company as a dimension in your account posting rules, Workday validates that you can use the ledger account with the company or company hierarchy.
<b>Worktags</b>	Use worktags as keywords to classify and find transactions easily. The worktags that you can select are based on the worktags that are

Option	Description
	<p>present on the Detailed Accounting Output Table. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p> <p>When you add a new line, Workday populates the worktags from last edited line on the new line.</p>
<b>Interworktag Affiliate</b>	<p>Use interworktag affiliate value to process transactions with affiliate values when you balance detailed accounting by the required balancing worktag.</p> <p><b>Note:</b> You can apply interworktag affiliate values when you enable primary worktag balancing in your tenant.</p>
<b>Tax Details</b>	<p>When you select the <b>Enable Tax Details</b> option on the header of the journal, click <b>Tax Details</b> to define these required tax attributes and worktags:</p> <ul style="list-style-type: none"> <li>• Tax Attributes <ul style="list-style-type: none"> <li>• Transaction Date</li> <li>• Tax Type</li> <li>• Taxable Amount</li> <li>• Tax Recoverability Type</li> </ul> </li> <li>• Worktags <ul style="list-style-type: none"> <li>• <i>Tax Applicability</i></li> <li>• <i>Tax Code</i></li> <li>• <i>Tax Rate</i></li> <li>• <i>Tax Recoverability</i></li> <li>• <i>Tax Point Date Type</i></li> </ul> </li> </ul> <p><b>Note:</b> To configure the <i>Tax Point Date Type</i> worktag, select the <b>Enable Tax Point Date Configuration for Transaction Taxes</b> option under <b>Tax Options</b> on the <b>Edit Tenant Setup - Financials</b> task.</p>
<b>Additional Attributes</b>	<p>Enter a value for each <i>Required</i> additional attribute.</p> <p>You configure additional attributes as <i>Required</i> on the <b>Configure Detailed Journal Additional Attributes</b> task.</p>

10.(Optional) Expand **Attachments** and use the **Drop files here** or **Select files** option to add attachments.

**11.(Optional)** To add or change attachments after you create a manual detailed journal, you can either:  
Add, change, or delete attachments, from the related actions menu for an Accounting Center Detailed Journal on the **View Accounting Center Detailed Journal** report, select **Add/Change Attachment**.

Security: *Process: Accounting Center Detailed Journals - Add/Change Attachment* domain in the Accounting Center functional area.

Only add an attachment, access the **Add Attachment for Accounting Center Detailed Journal** task.

Security: *Process: Accounting Center Detailed Journals - Add Attachment* domain in the Accounting Center functional area.

**12.(Optional) Click Generate Draft.**

Workday:

- Performs system and custom validations for the as-entered and generated journal lines.
- Displays expected journal lines for the manual detailed journals based on the as-entered lines.

**Note:** Workday won't submit the detailed journal lines for approval until you click **Submit**.

**13.**Review and click **Submit** to submit the journal lines for approval.

Workday initiates the *Accounting Center Detailed Journal Approval Event* to route manual accounting center detailed journals for approval.

On approval, Workday automatically initiates the *Accounting Center Detailed Journal Batch Initiation Event* business process to create a batch for detailed accounting and summarization.

**14.**Access the **Find Accounting Center Batches** report.

**15.**On the **Find Accounting Center Batches** page, for **Batch Type**, select **Manual Detailed Journal**.

**16.**Click to open the batch created by the detailed manual journal.

**17.(Optional)** If the Detailed Accounting stage has a status of *Failed*, click **Retry** to submit the batch again.

**18.(Optional)** If the Summarization stage has an *In Progress* status, with error transactions, click **Run**.

For **Process Options**, select **Rollback to Selected Stage and Reprocess** and for stage, select **Summarization**.

**19.**Refresh the page to confirm that the batch has a *Completed* status.

**20.**From the related actions of the batch, select **Accounting Center Batch > View Accounting Center Detailed Journals**.

**21.**On the **View Accounting Center Detailed Journal** report, confirm that the detailed journal has an *Approved* status and the batch has a *Completed* status.

For high-volume journal lines, Workday displays the first 1000 journal lines before displaying the **Summarized Journal Lines** grid. The grid enables you to review more journal lines without performance degradation. You can still view the detailed lines of a summarized Accounting Center Detailed Journal by clicking the **Display Journal Lines Details** button, but note that this will affect performance for high-volume journal lines.

If you've configured an ID Generator for the Accounting Center Detailed Journal on the **Edit Tenant-Financials** task, Workday uses it to create a unique manual detailed accounting journal number. This numbering is separate from the traditional numbering for journals that post to the ledger.

**22.**To navigate back to the batch, from the related actions of the detailed journal, select **Accounting Center Detailed Journal > View Accounting Center Batch**.

**23.**From the related actions of the batch, select **Accounting Center Batch > View Accounting Center Summary Journals**.

**24.**On the **View Accounting Center Summary Journal** page, confirm that summary journal has a *Posted* status.

Because Workday posts the summarized journals to the ledger, note that it uses the numbering for traditional journals.

**25.**To navigate back to the batch, from the related actions menu of the journal, select **Journal Entry > View Accounting Center Batch**.

[2023R1 What's New Post: Manual Accounting Center Detailed Journal](#)

## Cancel Accounting Center Batches

### Prerequisites

You've created an accounting center batch.

Security: *Process: Accounting Center* domain in the Accounting Center functional area.

You can optionally cancel an in-progress or completed batch that contains posted summarized journals. This eliminates the need to enter reversal journals manually in your ledger when the source system sends duplicate or bad data.

You can't cancel a batch when:

- You've selected journals for settlement or have settled them.
- You've reconciled Journal lines to a bank statement.
- Ledger periods aren't open for all the journals.
- The Business Process event associated with the Summarization stage has an *In Progress* status.

### Steps

1. (Optional) Assign access to the *Process: Accounting Center* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. (Optional) Enable the **Always Reverse Accounting and Accounting Center Summary Journals** option on the **Edit Setup – Financials** task, if you want Workday to reverse the journals, otherwise Workday will cancel the journals.
3. Access the **Find Accounting Center Batches** report.
4. To cancel a batch, from the related actions menu of the batch, select **Accounting Center Batch > Cancel Accounting Center Batch**.
5. Enter a cancellation reason, select **Confirm**, and click **OK**.

### Result

Workday deletes transactions from the success output tables and error tables for the canceled batch.

If you've enabled the **Always Reverse Accounting and Accounting Center Summary Journals** option on the **Edit Setup – Financials** task, Workday will reverse the journals, otherwise Workday will cancel the journals.

If you've configured alternate ledger currency and cancel a batch, Workday only creates reversing journals to reverse the journals created by the batch. Example: If you've configured alternate ledger currency between the time of batch completion and batch cancellation, Workday creates reversing journals in the primary ledger currency only.

See: [Steps: Set Up Alternate Ledger Currency](#) on page 77.

For In progress batches:

- Workday only terminates new transactions from further processing.
  - Eliminates all successful and error transactions for both the enriched and detailed accounting stages.
  - Doesn't include the transactions in future batches and ignores original data permanently. If you need to use the data in future batches, you must prepare the data again for ingestion.
- Workday will include transactions that were being reprocessed (prior dismissed transactions) for the canceled batch in a subsequent batch.

For completed batches:

- Workday will terminate new transactions that were successful and any error transactions, which you dismiss from further processing. Reinsert the terminated transactions to process them in a subsequent batch.
- New and reprocessed error transactions, which Workday dismisses to an Error Manager will be available in Error Manager for you to resolve.
- New and reprocessed error transactions that Workday dismisses to a future batch are available in a new batch.
- Reprocessed transactions that Workday includes in this batch and were successful are available for a new batch.

See also, [Reference: Results for New and Reprocessed Transactions in a Canceled Batch](#) on page 631.

## Review Details of Batches, Stages, and Runs

### Prerequisites

Create Accounting Center batches.

Security: *Process: Accounting Center* domain in the Accounting Center functional area.

### Context

You can review details of batches, stages, and runs for a batch.

### Steps

1. (Optional) Assign access to the *Process: Accounting Center* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. Access the **Find Accounting Center Batches** report.
3. Select the accounting source that you created and click **OK**.

The **Find Accounting Center Batches** page displays these details of the batch:

Columns	Description
<b>Batch</b>	Displays the instance number to the Display ID of the batch. Number format of the instance is based on your preferred location.

Columns	Description
	You can click the batch to drill down to view the <b>View Accounting Center Batch</b> report from where you can click <b>Run</b> to run the stages.
<b>Created</b>	Date Workday creates the batch.
<b>Accounting Source</b>	The name of the accounting source that created the batch.
<b>Batch Status</b>	<p>The status of the present batch. Possible values are:</p> <ul style="list-style-type: none"> <li>• In Progress</li> <li>• Completed</li> <li>• Canceled</li> </ul>
<b>Transactions In</b>	<p>Number of transactions included in an accounting center batch. Each transaction might consist of one or more records based on a common identifier.</p> <p>Might be different than Records In for a many-to-1 scenario.</p>
<b>In Process Transactions</b>	Transactions that Workday processes in the batch. Includes the number of transactions in the batch, less completed and dismissed transactions.
<b>Completed Transactions</b>	Transactions that Workday successfully processes and includes in summarized journals for the batch. Excludes dismissed transactions.
<b>Dismissed Transactions</b>	<p>Transactions that Workday dismisses in an accounting center batch run.</p> <p>Includes:</p> <ul style="list-style-type: none"> <li>• Error transactions.</li> <li>• Transactions that you identify to dismiss. See <a href="#">Custom Dismiss Transactions</a> on page 612.</li> </ul>
<b>Records In</b>	<p>Number of records included in the batch. One or more records can make up a transaction based on a common identifier.</p> <p>You can use these records count to reconcile to the source Workday.</p>

**4.** Click to open a batch.

The **Batch Level Counts** section displays a summary count of these transactions in the batch:

- Transactions In
- In Process Transactions
- Completed Transactions
- Dismissed Transactions
- Records In

The **Current View by Stage** tab displays these details of all stages for the batch:

Columns and Buttons	Description
<b>Stage</b>	The stage of an accounting center batch that Workday is processing.
<b>Status</b>	<p>The status of a stage for an accounting center batch. Possible values are:</p> <ul style="list-style-type: none"> <li>• Not Started</li> <li>• In Progress</li> <li>• Completed</li> <li>• Aborted</li> <li>• Failed</li> </ul>
<b>Records In</b>	<p>Accessed from the related actions menu of the Stage.</p> <p>Number of records, less dismissed records, included in an accounting center batch for a specific stage. One or more records can make up a transaction based on a common identifier.</p>
<b>Success Records</b>	<p>Accessed from the related actions menu of the Stage.</p> <p>Number of successful records, less records associated with dismissed transactions, in an accounting center batch for a specific stage. One or more records can make up a transaction based on a common identifier.</p>
<b>Transactions In</b>	<p>Number of transactions, less dismissed transactions, included in an accounting center batch for a specific stage. Each transaction can consist of one or more records based on a common identifier.</p>
<b>Success Transactions</b>	<p>Number of successful transactions, less dismissed transactions, in an accounting center batch for a specific stage. Each transaction can consist of one or more records based on a common identifier.</p>
<b>Error Transactions</b>	<p>Number of error transactions, less dismissed transactions, in an accounting center batch for a specific stage. Each transaction can consist of one or more records based on a common identifier.</p>

Columns and Buttons	Description
<b>Total Error Records</b>	Number of errors, less errors associated with dismissed transactions in an accounting center batch for a specific stage.
<b>Run</b>	Click to create a new run event and run the job.
<b>Retry</b>	<p>Click to create a new run event for a failed or aborted run event in an accounting center job with the same parameters.</p> <p>You can use the <i>Retry</i> option:</p> <ul style="list-style-type: none"> <li>• If the pre-step fails or aborts before the accounting center primary process starts.</li> <li>• If the accounting center primary process fails.</li> <li>• If the post-step fails or aborts after the accounting center primary process completes for the Enrichment or Detailed Accounting stage.</li> </ul> <p><b>Note:</b> You can't use the <i>Retry</i> option if the post-step fails or aborts after the accounting center primary process completes for the Summarization stage.</p>
<b>Force Complete</b>	<p>If the post-step fails or aborts after the accounting center primary process completes, you can Force Complete the event.</p> <p>Click to skip the post steps of a run event for an Accounting Center Process, and mark the run status as <i>Force Completed</i>. You must therefore, complete the post steps manually.</p>

5. Click the **View by All Runs** tab.

The **View by All Runs** tab displays these details of all runs for the batch:

Columns	Description
<b>Run Event</b>	<p>Displays these details of the event:</p> <ul style="list-style-type: none"> <li>• Overall status</li> <li>• Initiated On</li> <li>• Accounting Source</li> <li>• Stage</li> <li>• Batch</li> <li>• Process Option</li> <li>• Primary Process</li> <li>• Primary Process Status</li> </ul>
<b>Run Number</b>	The sequential number of the run number in an accounting center batch across all stages.
<b>Run Status</b>	<p>The status of an accounting center batch run for a specific stage. Possible values are:</p> <ul style="list-style-type: none"> <li>• Pre-Step in Progress</li> <li>• Primary Process: In Progress</li> </ul>

Columns	Description
	<ul style="list-style-type: none"> <li>• Primary Process: Waiting for Approval (Summarization Only).</li> <li>• Primary Process: Completion In Progress (Summarization Only).</li> <li>• Post-Step in Progress</li> <li>• Completed</li> <li>• Denied (Summarization Only).</li> <li>• Force Completed</li> <li>• Failed</li> <li>• Aborted</li> <li>• Validation Error</li> </ul>
<b>Stage</b>	The stage of an accounting center batch runs that Workday is processing.
<b>Process Option</b>	The run option selected for an event when running the accounting center process.
<b>Primary Process</b>	<p>Main processing step required for the run event. Includes:</p> <ul style="list-style-type: none"> <li>• Initiation</li> <li>• Enrichment</li> <li>• Detailed Accounting</li> <li>• Summarization</li> </ul>
<b>Records In</b>	<p>Accessed from the related actions menu of the Primary Process.</p> <p>Number of records included in an accounting center batch run for a specific stage. Workday doesn't update record counts when you dismiss errors. One or more records can make up a transaction based on a common identifier.</p>
<b>Success Records</b>	<p>Accessed from the related actions menu of the Primary Process.</p> <p>Number of successful records in an accounting center batch run for a specific stage. Workday doesn't update record counts when you dismiss errors. One or more records can make up a transaction based on a common identifier.</p>
<b>Transactions In</b>	Number of transactions included in an accounting center batch run for a specific stage. Each transaction might consist of one or more records based on a common identifier.
<b>Success Transactions</b>	Number of successful transactions in an accounting center batch run for a specific stage. Each transaction might consist of one or more records based on a common identifier.
<b>Error Transactions</b>	Number of error transactions in an accounting center batch run. Each transaction might consist

Columns	Description
	of one or more records based on a common identifier.
<b>Dismissed Transactions</b>	<p>Transactions that Workday dismisses in an accounting center batch run.</p> <p>Includes separate totals in different rows for:</p> <ul style="list-style-type: none"> <li>• Error transactions.</li> <li>• Transactions that you identify to dismiss. See <a href="#">Custom Dismiss Transactions</a> on page 612.</li> </ul>
<b>Total Error Records</b>	Number of errors in an accounting center batch run for a specific stage.

## Next Steps

View detailed and summarized accounting.

### Related Information

#### Tasks

[Create Accounting Center Batches from Source Systems](#) on page 594

[View Summarized Journals](#) on page 636

## Stop Accounting Center Business Process Event

### Context

You can optionally, configure the Accounting Center Event to stop the business process if the business process meets certain conditions. Example: If the Prism dataset fails to publish you can use the **Publish Prism Dataset Job Status** field as an entry condition to abort the business process.

You can stop the business process for any of these stages:

- Enrichment
- Detailed Accounting
- Summarization

### Steps

1. (Optional) Add the Roles - Source System security group to the *Accounting Center Summarization Event* security policy.

When you grant a user access to a business process through a constrained role-based security group, Workday limits access to each accounting source based on the user role.

2. Access the Accounting Center Event business process definition for which you want to abort the event if it meets certain conditions.

Example:

- *Accounting Center Enrichment Event* business process for the Enrichment stage.
- *Accounting Center Detailed Accounting Event* business process for the Detailed Accounting stage.
- *Accounting Center Summarization Event* business process for the Summarization stage.

3. Add an additional step of Service and in the **Specify** column, select **Abort Accounting Center Event**.

4. Add conditional rules to create conditions when the Accounting Center process should or shouldn't run the *Abort* event. Example: Add a conditional rule of *True* for the **Publish Prism Dataset Job Status** field if you want the Accounting Center process to skip the *Abort* step when the Prism dataset is

successfully published. Add a conditional rule of *False* if you want the Accounting Center process to run the *Abort* event when the Prism dataset fails to publish.

See [Steps: Configure Business Process Definitions](#).

When adding conditional rules, consider using these 4 Custom Fields:

Field	Description
<ul style="list-style-type: none"> <li>• <b>Custom Field 1</b></li> <li>• <b>Custom Field 2</b></li> </ul>	<p>Use these text fields in condition rules to define your Accounting Center Business Process Definition.</p> <p>Use the <i>Put Accounting Center Event Field</i> web service to update these fields for your event.</p>
<ul style="list-style-type: none"> <li>• <b>Custom Field 3</b></li> <li>• <b>Custom Field 4</b></li> </ul>	<p>Use these fields in condition rules to define your Accounting Center Business Process Definition. Possible values are True and False.</p> <p>Use the <i>Put Accounting Center Event Field</i> web service to update these fields for your event.</p>

Example: You can create an Integration type that checks the results based on the published results. If the input and out values for a stage aren't the same, integration uses the *Put Accounting Center Event Field* web service to update these fields. You can then use the fields as conditions to abort the business process.

5. Click **OK** and then **Done**.

## Result

Workday aborts the business process if the business process meets the defined conditions.

## Next Steps

You can either Retry or Force Complete the business process.

## Custom Dismiss Transactions

### Prerequisites

- Ensure that your accounting source has automatically created the `USR_UserDirectedForDismissal` dataset.
- Security: These domains in the Accounting Center functional area:
  - *Set Up: Accounting Source - Create*
  - *Process: Accounting Center*
- Necessary security to edit the Accounting Center Event business processes.

### Context

You can optionally, configure the Business Process Definitions for both enrichment and detailed accounting to dismiss specific Accounting Center transactions from a batch. This enables you to:

- Dismiss transactions that the regular Accounting Center error process might not otherwise dismiss.
- Example uses include:
  - Dismiss success transactions that are related to dismissed error transactions in order to group these transactions for error handling.
  - Dismiss and terminate bad data ingested from a source system.

Workday by default runs custom dismissal processing before error dismissal processing. Therefore, if you direct an error transaction for custom dismissal, Workday:

- Dismisses the error transaction by custom dismissal processing.
- Excludes the error from delivered error dismissal processing.

You can, if required, configure the business process so that custom dismissal processing runs after error dismissal processing.

Example: You can create a condition rule of (Transactions In for a Stage = Success Transactions for a Stage) and apply this as an entry condition on the business process step for the Request Dismiss Transactions job. Configuring the step condition enables you to run Request Dismiss Transactions after Workday dismisses the error transactions for the stage.

## Steps

- (Optional) Assign access to the *Process: Accounting Center* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

### 2. Dismissing Transactions for Enriched Data

- Configure your UserDirectedForDismissal dataset to include the AC\_Transaction\_IDs of what you want to dismiss.  
Workday recommends that you only bring the current Accounting Center batch into the USR\_UserDirectedForDismissal dataset. This improves performance and ensures that Custom Dismissal only runs when needed.
- Configure the *Accounting Center Enrichment Event* business process definition with Batch/Job and Integration types.

See [Steps: Configure Business Process Definitions](#).

As you configure the business process definition, consider these guidelines:

Types	Name and Description	Guidelines
<b>Integration</b>	Custom integration. Use it to identify transactions you want to dismiss and populate the AC_Transactions_IDs of the identified transactions in the USR_UserDirectedForDismissal dataset.	<ul style="list-style-type: none"> <li>Configure the business process definition so that Integration runs before the Request Batch/Jobs. This configuration ensures that the Request process can access the dismissed transactions in the USR_UserDirectedForDismissal dataset.</li> <li>Configure the Integration to run after the Accounting Center Enrichment Process.</li> </ul>
<b>Batch/Job</b>	<ul style="list-style-type: none"> <li>Request Dismiss Transactions and Process</li> </ul>	<ul style="list-style-type: none"> <li>Configure only 1 of the Request Batch/Jobs.</li> </ul>

	<ul style="list-style-type: none"> <li>with Future Batch (Enrichment).</li> <li>Request Dismiss Transactions and Remove from Further Processing (Enrichment).</li> <li>Request Dismiss Transactions from the Batch (Enrichment)</li> </ul> <p><b>Note:</b> Dismissed transactions are available in the Error Manager once the batch completes.</p> <p>Retrieves AC_Transaction_IDs from the USR_UserDirectedForDismissal dataset for custom dismissals and stores them in the TBL_UserDirectedForDismissal.</p>	<ul style="list-style-type: none"> <li>Configure to run the Batch/Job after the Accounting Center Enrichment Primary Process.</li> <li>If the request job fails or aborts, you can either: <ul style="list-style-type: none"> <li>Click <b>Retry</b> to process the batch again.</li> <li>Click <b>Force Complete</b> to complete the batch run.</li> <li>Click <b>Cancel</b> to cancel the batch.</li> </ul> </li> </ul>
--	---	---

**Note:** Workday doesn't support configuring the Batch/Job to run before the Accounting Center Enrichment Process.

- c) (Optional) Configure a condition rule to specify when Request Dismiss Transactions will run.  
Example: Create a condition rule that states that the Request Dismiss Transactions job will run when the Enrichment stage is complete. Example: (Transactions In for a Stage = Success Transactions for a Stage). Configuring the rule enables you to run Request Dismiss Transactions as the last step in the Enrichment stage, before progressing to detailed accounting.

### 3. Dismissing Transactions for Detailed Accounting

- a) Configure the *Accounting Center Detailed Accounting Event* business process definition with Batch/Job and Integration types.

As you configure the business process definition, consider these guidelines:

Types	Name and Description	Guidelines
<b>Integration</b>	<p>Custom integration.</p> <p>Use it to identify transactions you want to dismiss and populate the AC_Transactions_IDs of the identified transactions in the USR_UserDirectedForDismissal dataset.</p>	<ul style="list-style-type: none"> <li>Configure the business process definition so that Integration runs before the Request Batch/Jobs. This configuration ensures that the Request process can access the dismissed transactions in the USR_UserDirectedForDismissal dataset.</li> <li>Configure the Integration to run after the Accounting Center Detailed Accounting Process.</li> </ul>
<b>Batch/Job</b>	<ul style="list-style-type: none"> <li>Request Dismiss Transactions and Process with Future Batch (Detailed Accounting).</li> </ul>	<ul style="list-style-type: none"> <li>Configure only 1 of the Request Batch/Jobs.</li> <li>Configure to run the Batch/Job after the Accounting</li> </ul>

	<ul style="list-style-type: none"> <li>• Request Dismiss Transactions and Remove from Further Processing (Detailed Accounting).</li> <li>• Request Dismiss Transactions from the Batch (Detailed Accounting).</li> </ul> <p><b>Note:</b> Dismissed transactions are available in the Error Manager once the batch completes.</p> <p>Retrieves AC_Transaction_IDs from the USR_UserDirectedForDismissal dataset for custom dismissals and stores them in the TBL_UserDirectedForDismissal.</p>	<p>Center Detailed Accounting Process.</p> <ul style="list-style-type: none"> <li>• If the request job fails or aborts, you can either:           <ul style="list-style-type: none"> <li>• Click <b>Retry</b> to process the batch again.</li> <li>• Click <b>Force Complete</b> to complete the batch run.</li> <li>• Click <b>Cancel</b> to cancel the batch.</li> </ul> </li> </ul>
--	---	--

**Note:** Workday doesn't support configuring the Types (Integration and Batch/Job) to run before the Accounting Center Detailed Accounting Process.

- b) (Optional) Configure a Condition Rule to specify when Request Dismiss Transactions will run. Example: Create a condition rule that states that the Request Dismiss Transactions job will run when the Detailed Accounting stage is complete. Example: (Transactions In for a Stage = Success Transactions for a Stage). Configuring the rule enables you to run Request Dismiss Transactions as the last step in the Detailed Accounting stage, before progressing to summarization.

## Result

If the Request Batch/Job identifies transactions for dismissal, Workday initiates the Accounting Center job with the Dismiss Transactions processing option.

Depending on which Request Batch/Job you initiate, Workday automatically processes your requests as described in this table:

Request Batch/Job	Processing Options
<ul style="list-style-type: none"> <li>• Request Dismiss Transactions and Process with Future Batch (Enrichment).</li> <li>• Request Dismiss Transactions and Process with Future Batch (Detailed Accounting).</li> </ul>	<p>Workday runs the Dismiss Transactions and Process with Future Batch process for the specified stage.</p> <p>Workday dismisses the selected transactions from the batch and processes them with a future batch.</p>
<ul style="list-style-type: none"> <li>• Request Dismiss Transactions and Remove from Further Processing (Enrichment)</li> <li>• Request Dismiss Transactions and Remove from Further Processing (Detailed Accounting).</li> </ul>	<p>Workday runs the Dismiss Transactions and Remove from Further Processing process for the specified stage.</p> <p>Workday removes the selected from further processing.</p>
<ul style="list-style-type: none"> <li>• Request Dismiss Transactions from the Batch (Enrichment)</li> <li>• Request Dismiss Transactions from the Batch (Detailed Accounting)</li> </ul>	<p>Workday runs the Dismiss Transactions from the Batch process for the specified stage.</p> <p>Workday removes custom-dismissed transactions from the batch and sends them to the Accounting Center Error Manager for resolutions.</p>

**Related Information****Examples**

[Example: Custom Dismiss Zero Amount Transactions](#) on page 628

## View, Resolve, and Reprocess Errors

**Prerequisites**

Create an accounting center batch.

Configure the *Request* business process with these additional business objects, to track errors, and submit approval requests for error response:

- Accounting Source
- Custom Account Posting Rule Dimension
- Custom Account Posting Rule Type
- Account Posting Rule Set
- View Mapping Table

See [Setup Considerations: Requests](#).

**Context**

You can review and resolve errors for each stage. After you resolve the errors, you can then reprocess them.

## Steps

### 1. View and Resolve Errors for Enriched Data

- Access the **Find Accounting Center Batches** report.
- Select **From date** and click **OK**.

Workday displays the **Find Accounting Center Batches** page.

- Click the batch for which you want to resolve errors.

Workday displays the **View Accounting Center Batch** page.

- Click the **View By All Runs** tab.

- For the **Enrichment stage**, click **View Errors**.

The **View Summary by Error Type** page displays the summarized errors and the number of transactions with the error type.

- For each error message, click **View Details**.

The **View Errors for Accounting Center Batch Run** page displays all Transaction\_IDs for the specific error. For more information on Transaction\_ID, see [View Detailed Accounting Results](#) on page 634.

- For each AC Transaction ID, click **View Details**.

The **View Error Details** page displays error details for the selected transaction, such as:

- Transaction\_ID
- Batch
- Batch Run

In addition, the **View Error Details** page also displays these 2 grids:

- **Error Summary**: Expand the grid to display details for the Transaction ID error in the Enriched dataset, such as:
  - Error Message.
  - Prior Stage WPA\_RowID that you can use to find the Actual Row ID of the input dataset for the stage.
  - Accounting Source Snapshot.
  - Accounting Group Name.
- **Prior Stage Transaction**: Expand the grid to display the first 25 fields of the records included in the transaction from the prior stage. Number of lines displayed on the grid depends on the number of records in the specified transaction. If the transaction contains 1 record, the grid will display 1 line. If the transaction contains more than 1 record, the grid will display multiple lines.

You can select the **Show All** button to review all error fields.

You can also use the **Configure Error Details – Prior Stage Fields** task to configure the **Prior Stage Transaction** grid to display up to 25 error fields that you want to review.

- Review and fix the errors before proceeding further.

- On the **View Accounting Center Batch** page, select the **Current View By Stage** tab and select **Run**. For **Process Options**, select one of these options:

Field	Description
<b>Processing Options</b>	To process errors: <ul style="list-style-type: none"> <li>• Select <b>Rollback to Selected Stage and Reprocess</b> to have Workday roll back</li> </ul>

Field	Description
	<p>transactions to the selected stage and then reprocess the rolled back transactions.</p> <ul style="list-style-type: none"> <li>• For <b>Select Stage</b>, select <b>Enrichment</b>.</li> <li>• Check <b>Include Dismissed</b>, to include dismissed transactions with the rolled back transactions, and click <b>OK</b>.</li> </ul> <p><b>Note:</b> This option is also available when a run completes with no errors.</p> <ul style="list-style-type: none"> <li>• Select <b>Process Errors Within Stage</b> to have Workday create enriched transactions for batch errors only.</li> <li>• Select <b>Dismiss Errors from the Batch</b> to have Workday dismiss errors to the Accounting Center Error Manager.</li> </ul> <p><b>Note:</b> Errors are available in the Error Manager once the batch completes.</p> <ul style="list-style-type: none"> <li>• Select <b>Dismiss Errors From Further Processing</b> to have Workday dismiss all errors from further processing. The dismissed records won't be available for a future batch and you'll have to ingest them again for processing.</li> <li>• Select <b>Dismiss Errors and Process with Future Batch</b> to have Workday process the dismissed errors with a future batch.</li> </ul> <p><b>Note:</b> Dismissed transactions will be available in a future batch when the batch is complete or canceled.</p>

## 2. View and Resolve Errors for Detailed Accounting

- On the **View Accounting Center Batch** page, select the **View by All Runs** tab.
- For the **Detailed Accounting** stage, click **View Errors**.

The **View Summary by Error Type** page displays the summarized errors and the number of transactions with the error type.

- For each error message, click **View Details**.

The **View Errors for Accounting Center Batch Run** page displays all Transaction\_IDs for the specific error. For more information on Transaction\_ID, see [View Detailed Accounting Results](#) on page 634.

- For each Transaction\_ID, click **View Details**.

The **View Error Details** page displays error details for the selected transaction, such as:

- Transaction\_ID
- Batch
- Batch Run

In addition, the **View Error Details** page also displays these 3 grids:

- **Error Summary Grid:** Expand the grid to display details for the Transaction ID error in the Detailed Accounting dataset, such as:

- Error Message.
- Prior Stage WPA\_RowID that you can use to find the Actual Row ID of the input dataset for the stage.
- Accounting source journal line rule are rules that you specified on the **Journal Line Rules** tab when you configured your accounting source.

**Note:** This value will be unavailable if errors occur at the journal header level or if condition rules fail to select a journal line rule.

- Accounting Source Snapshot.
- Accounting Group Name.

- **Error Details Grid:**

Displays these 2 tables that can help you to resolve errors. The tables display these details:

- From the user configuration on the Accounting Source Snapshot.
- On the user-defined Custom Validations.

Table	Description
<b>Configured Header and Lines</b>	Displays results of merging your enrichment data with your configured accounting source snapshot. Not all fields contain an error, therefore, some fields can be blank.
<b>Expected Detailed Accounting Journals</b>	Displays details of the expected detailed accounting journals. Not all fields contain an error, therefore, some fields can be blank. Additionally, this table will be blank if the errors only occur on the Configured Header & Lines table.

- **Prior Stage Transaction:** Expand the grid to display the first 25 fields of the records included in the transaction from the prior stage. Number of lines displayed on the grid depends on the

number of records in the specified transaction. If the transaction contains 1 record, the grid will display 1 line. If the transaction contains more than 1 record, the grid will display multiple lines.

You can select the **Show All** button to review all error fields.

You can also use the **Configure Error Details – Prior Stage Fields** task to configure the **Prior Stage Transaction** grid to display up to 25 error fields that you want to review.

- e) Review and fix the errors before proceeding further.
- f) On the **View Accounting Center Batch** page, select the **Stage** tab and click **Run**. For **Process Options**, select one of these options:

Field	Description
<b>Process Options</b>	<p>To process errors:</p> <ul style="list-style-type: none"> <li>• Select <b>Rollback to Selected Stage and Reprocess</b> to have Workday roll back transactions to the selected stage and then reprocess the rolled back transactions.           <ul style="list-style-type: none"> <li>• For <b>Select Stage</b>, select <b>Enrichment</b> or <b>Detailed Accounting</b>.</li> <li>• Check <b>Include Dismissed</b>, to include dismissed transactions with the rolled back transactions, and click <b>OK</b>.</li> </ul> <p><b>Note:</b> This option is also available when a run completes with no errors.</p> </li> <li>• Select <b>Process Errors Within Stage</b> to have Workday create detailed accounting for batch errors only.</li> <li>• Select <b>Dismiss Errors from the Batch</b> to have Workday dismiss errors to the Accounting Center Error Manager.</li> <p><b>Note:</b> Errors are available in the Error Manager once the batch completes.</p> <li>• Select <b>Dismiss Errors From Further Processing</b> to have Workday dismiss all errors from further processing. The dismissed records won't be available for a future batch and you'll have to ingest them again for processing.</li> <li>• Select <b>Dismiss Errors and Process with Future Batch</b> to have Workday process the dismissed errors with a future batch.</li> <p><b>Note:</b> Dismissed transactions will be available in a future batch when the batch is complete or canceled.</p> </ul>

### 3. Review and Resolve Errors for Summarization

- a) On the **View Accounting Center Batch** page, select the **View by All Runs** tab.
- b) For the **Summarization** stage, click **View Errors**.  
The **View Summary by Error Type** page displays the summarized errors and the number of transactions with the error type.
- c) Review and fix the errors before proceeding further.
- d) On the **View Accounting Center Batch** page, select the **Current View By Stage** tab and select **Run**.
- e) For **Process Options**, select **Rollback to Selected Stage and Reprocess**.

[2022R2 What's New Post: Accounting Center - Miscellaneous Enhancements](#)

## View and Resolve Errors in Error Manager

### Prerequisites

Create an accounting center batch with errors dismissed to the Accounting Error Manager.

Configure the *Request* business process with these additional business objects, to track errors, and submit approval requests for error response:

- Accounting Source
- Custom Account Posting Rule Dimension
- Custom Account Posting Rule Type
- Account Posting Rule Set
- View Mapping Table

See [Setup Considerations: Requests](#).

Security: *Process: Accounting Center Error Manager* domain in the Accounting Center functional area.

### Context

You can use the Accounting Center Error Manager to track and resolve dismissed errors and custom dismiss transactions for completed and canceled batches in an accounting source.

Unresolved errors and custom dismiss transactions that you dismiss out of a batch will be visible in the Error Manager once the batch is complete.

You can use the Accounting Center Error Manager to view:

- Dismissed transactions by error.
- Nature of each error.
- Number of error transactions.
- Number of transactions pending resolution.
- Use transactional data to filter and group error transactions in the error manager.
- Apply resolutions at the transaction level.

After you process error resolutions, Workday will remove them from the Accounting Center Error Manager.

### Steps

1. (Optional) Assign access to the *Process: Accounting Center Error Manager* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. Access the **Accounting Center Error Manager** task.

3. As you complete the task, consider:

Option	Description
<b>Accounting Source</b>	Select an accounting source for which you want to resolve errors.
<b>Batch Status</b>	You can only select canceled or completed batches.
<b>Batch</b>	You can select a single batch or multiple batches.
<b>From</b> <b>To</b>	Specify a date range for the created batch or batches.

4. Click **OK**.

The Accounting Center Manager displays all errors in the **Errors in Batches** grid for all selected batches across all stages.

5. For the error you want to resolve, click **Apply Resolutions**.

Workday displays the **Apply Resolutions** task.

6. (Optional) Click **Download Prior Stage Transactions** to download and analyze prior stage transactions. After clicking download, you'll receive a notification when the file is ready to download from **My Reports**.

Workday recommends you perform this task first.

**Note:** This option isn't available for Custom Dismiss transactions and for canceled batches.

7. (Optional) Click **Download Ingested Data** if you decide to terminate the transactions and want to download the source data again.

**Note:** This option isn't available for canceled batches.

8. (Optional) If you want to resolve errors that you ingested from a source system, click **Ingested Data**. See [Edit Ingested Errors in Error Manager With In-Line Edits](#) on page 625.

9. Expand **Error Details** to review these details of the error:

- Accounting Source
- Batch Status
- Batch Name
- Stage
- Error Details
- Number of transactions that contain the error.

10. As you retrieve error transactions that you want to resolve, consider:

Option	Description
<b>Search Criteria</b>	Use the <b>Stage Input Fields</b> to select input fields to the error stage to display in the Error Record Details grid. Example: If there are errors in the Enrichment 2 stage, you can select fields from the Enrichment 1 output table. Based on the type of error, you can narrow your search to select fields that are useful to resolve the error. Example: If you have an error for a missing cost center, you can select input fields that were evaluated in the Value Mapping Stage and any other fields that can help you resolve the error.

Option	Description
	<p>You can select a maximum of 10 input fields to the error stage for Enrichment and Detailed Accounting errors.</p> <p>Workday automatically sets the criteria to <b>Show Transactions Pending Resolutions</b>.</p> <p>If you want to see resolved transactions that you haven't processed, select <b>Show Transactions Pending Processing</b> and click <b>Apply Search Criteria</b>.</p>

11. Click **Apply Search Criteria** to retrieve the error transactions.

Workday updates the **Error Record Details** grid with the selected stage input fields, displaying the field values for each transaction. Workday also applies your selection to **Show Resolutions Pending Resolutions** or **Show Transactions Pending Processing**.

12. (Optional) Filter fields on the **Error Record Details** grid to organize and group transactions with common attributes to which you want to apply common resolutions.

13. As you resolve the errors, consider:

Option	Description
<b>Resolution</b>	<p>You can select to:</p> <ul style="list-style-type: none"> <li>Resolve a single transaction or multiple transactions in the <b>Error Record Details</b> grid.</li> <li>Apply the same resolution to all transactions in the grid, or apply a resolution to each transaction individually.</li> </ul> <p><b>Note:</b> When applying resolutions, ensure that you first:</p> <ol style="list-style-type: none"> <li>Select the transactions in the <b>Error Record Details</b> grid.</li> <li>Then select a resolution at either the header or line level in the grid.</li> </ol> <p>To apply the same resolution to all transactions:</p> <ul style="list-style-type: none"> <li>Select each transaction in the <b>Error Record Details</b> grid. You can select the <b>Select All</b> check box to select all transactions in the grid.</li> <li>At the header level, select how you want to resolve the transactions: <ul style="list-style-type: none"> <li>Select <b>Process with Next Batch</b> to dismiss the transactions and process them with the next batch.</li> <li>Select <b>Terminate</b> to terminate the transactions.</li> </ul> </li> </ul> <p>To apply different resolutions to transactions in the grid:</p> <ul style="list-style-type: none"> <li>Select a row in the <b>Error Record Details</b> grid.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>In the <b>Error Record Details</b> grid, for <b>Resolutions</b>, select how you want to resolve the transaction:           <ul style="list-style-type: none"> <li>Select <b>Process with Next Batch</b> to process it with the next batch.</li> <li>Select <b>Terminate</b> to terminate the transaction. It will no longer be available for processing.</li> </ul> </li> </ul> <p><b>Note:</b> When you cancel completed batches:</p> <ul style="list-style-type: none"> <li>Workday will terminate new transactions that were successful and any error transactions, which you dismiss from further processing. You can reinsert the terminated transactions to process them in a subsequent batch.</li> <li>New and reprocessed error transactions, which Workday dismisses to the Error Manager will be available in Error Manager for you to resolve.</li> <li>New and reprocessed error transactions that Workday dismisses to a future batch are available in a new batch.</li> <li>Reprocessed transactions that Workday includes in the batch and were successful, are available in a new batch.</li> </ul>
<b>Clear Resolutions</b>	<p>(Optional) Click to clear resolutions from selected rows in the <b>Error Record Details</b> grid.</p> <p>Click <b>Save</b> to delete the previously saved resolutions.</p>
<b>View Error Details</b>	<p>(Optional) Select if you want to view details of the error.</p> <p><b>Note:</b> This option isn't available for Custom Dismiss transactions and for canceled batches.</p>

14. Click **Save** to save the resolutions.

You can view these saved resolutions by selecting **Show Transactions Pending Processing** and clicking **Apply Search Criteria**.

15. To process resolutions, close the **Apply Resolution** window.

16. On the **Accounting Center Manager** task, click **Process Resolutions** to view and then click **OK** to process the resolutions.

**Note:** The **Process Resolutions** button is only available if there are resolutions pending for the selected accounting source.

17. On the **Monitor Accounting Source Job Status** report, click **Refresh** to confirm that the process completes successfully.

## Result

- Workday removes the processed errors from the Accounting Center Error Manager.
- Transactions that you resolved with the **Process with Next Batch** option are available with the next scheduled batch.

## Related Information

### Tasks

[View, Resolve, and Reprocess Errors](#) on page 616

## Edit Ingested Errors in Error Manager With In-Line Edits

### Prerequisites

Create an accounting center batch with errors dismissed to the Accounting Center Error Manager.

Ensure that ingested records for dismissed error transactions are present in the ingestion table.

Configure a maximum of 10 ingestion fields for editing on each Accounting Source using the **Edit Accounting Source** task.

**Note:** You can't select fields for an Analytic Dimension business object.

See [Create Accounting Source](#) on page 571.

Configure the *Accounting Center In-Line Edit Approval Event* business process to route in-line edits for approval. See [Steps: Configure Business Process Definitions](#).

Security: *Process: Accounting Center Error Manager* domain in the Accounting Center functional area.

### Context

If you want to correct bad source data that Workday ingested from the source system, use In-Line Edit in Accounting Center Error Manager. You can correct the source data, get the edits reviewed and approved, and then submit the corrected transactions for processing.

Edited transactions are processed and summarized in a subsequent batch, and then posted to your ledger.

You can edit 1 record at a time and can only edit the transaction once.

For many to 1 transactions, you can edit a maximum of 50 transactions at one time.

After you correct and process the errors, Workday will remove them from the Accounting Center Error Manager.

### Steps

1. (Optional) Assign access to the *Process: Accounting Center Error Manager* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. (Optional) Add the Roles - Source System security group to the *Accounting Center In-Line Edit Approval Event* security policy.

When you grant a user access to a business process through a constrained role-based security group, Workday limits access to each accounting source based on the user role.

3. Access the **Accounting Center Error Manager**

4. As you complete the task, consider:

Option	Description
<b>Accounting Source</b>	Select an accounting source for which you want to resolve errors.

Option	Description
<b>Batch Status</b>	You can only select canceled or completed batches.
<b>Batch</b>	You can select a single batch or multiple batches.
<b>From</b> <b>To</b>	Specify a date range for the created batch or batches.

**5. Click OK.**

The Accounting Center Manager displays all errors in the **Errors in Batches** grid for all selected batches across all stages.

**6. For the error you want to resolve, click **Apply Resolutions**.**

Workday displays the **Apply Resolutions** task.

**7. (Optional) Click **Download Prior Stage Transactions** to download and analyze prior stage transactions. After clicking download, you'll receive a notification when the file is ready to download from **My Reports**.**

Workday recommends you perform this task first.

**Note:** This option isn't available for Custom Dismiss transactions and for canceled batches.

**8. For the Transaction ID you want to edit, click **Edit Ingested Data**.**

Workday displays the **Edit Ingested Data** task.

For many to 1 records, the **Edit Ingested Data** task displays all ingested records for the transaction even if 1 record in the transaction is in error. You can conduct error analysis to determine which records are in error and then filter the edit screen based on the WPA\_RowID from ingestion table to update the appropriate records.

**Note:** When Transaction Grouping ID is a calculated field, Workday recommends that you don't edit any ingestion fields that affect its generation. Changes don't impact the Transaction Grouping ID as it maintains its original value, but it can impact Detailed Accounting if journal header elements are changed

**9. Expand **Error Details** to review these details of the error:**

- Accounting Source
- Batch Status
- Batch Name
- Stage
- Error Details
- Number of transactions that contain the error.

**10. As you retrieve error transactions that you want to resolve, consider:**

Option	Description
<b>Search Criteria</b>	Use the <b>Stage Input Fields</b> to select input fields to the error stage to display in the Error Record Details grid. Example: If there are errors in the Enrichment 2 stage, you can select fields from the Enrichment 1 output table. Based on the type of error, you can narrow your search to select fields that are useful to resolve the error. Example: If you have an error for a missing cost center, you can select input fields that were evaluated in the Value Mapping Stage and any other fields that can help you resolve the error.

Option	Description
	<p>You can select a maximum of 10 input fields to the error stage for Enrichment and Detailed Accounting errors.</p> <p>Workday automatically sets the criteria to <b>Show Transactions Pending Resolutions</b>.</p> <p>If you want to see resolved transactions that you haven't processed, select <b>Show Transactions Pending Processing</b> and click <b>Apply Search Criteria</b>.</p>

**11.** Click **Apply Search Criteria** to retrieve the error transactions.

Workday updates the **Error Record Details** grid with the selected stage input fields, displaying the field values for each transaction. Workday also applies your selection to **Show Resolutions Pending Resolutions** or **Show Transactions Pending Processing**.

**12.**(Optional) Filter fields on the **Error Record Details** grid to organize and group transactions with common attributes to which you want to apply common resolutions.

**13.**Edit the transaction, and in **Edit Reason**, enter a reason.

You can edit 1 record at a time and can only edit the transaction once.

**14.**Click **Submit**.

Workday initiates the *Accounting Center In-Line Edit Approval Event* business process and sends a My Tasks notification to approvers for their necessary approval.

**15.**(Optional) For the corrected transaction, click **Apply Resolutions**.

a) Select **Show Transactions Pending Processing**.

b) Click **Apply Search Criteria**.

c) Confirm:

- The **Resolution** field has a status of *Edit Ingested Data*.
- The **View Edit Ingested Data** field has a status of *In-Line Edit Approval Event: In Progress*.

**16.**Click **Process Resolutions**.

Workday displays the **Monitor Accounting Source Job Status** report.

**17.**On the **Monitor Accounting Source Job Status** report, click **Refresh** to confirm that the process completes successfully.

## Result

Once the process completes successfully, Workday:

- Removes the processed errors from the Accounting Center Error Manager.
- Inserts new record into the ingestion table.
- Keeps the original record untouched.
- Populates a new **Linked\_WPA\_RowID** field for the new record and links it to the original record.

## Next Steps

Access the **Find Accounting Source Edited Transactions** report to review details of edited transactions, including the before and after values of the transactions.

## Manage Accounting Center Maintenance Window

### Prerequisites

Security: Set Up: Maintain Accounting Center Processing Windows domain in the Accounting Center functional area.

### Context

When Workday is performing Accounting Center upgrades during the maintenance and upgrade window, you might want to schedule a time to delay these upgrades. This delay ensures that:

- No updates to data can occur during the time you schedule.
- You can continue running your scheduled business-critical Accounting Center batches as planned.

Once the scheduled time expires, Workday will start the Accounting Center upgrades and will continue the upgrades till they're complete. Example: You schedule to delay the upgrades starting on Monday from 12.00 am to 3.00 pm and again on Monday from 4.00 pm to 7.00 pm. If the upgrades start on Monday at 3.15 pm, Workday will continue the upgrades till completion. If the upgrades aren't complete by 4.00 pm, Workday will ignore the processing delays you scheduled for 4.00 pm.

### Steps

1. Access the **Maintain Accounting Center Processing Windows** task.
2. In the **Maintain Accounting Center Processing Windows** grid, set the day and time to delay the Accounting Center upgrades. Add a row for each **Day of the Week**, **Start Time**, and **Duration** for which you want to delay the Accounting Center upgrades.
3. Click **OK** and then **Done**.

## Example: Custom Dismiss Zero Amount Transactions

This example illustrates how to custom dismiss zero amount transactions during batch processing for ingestion and tracking in the Accounting Center batch.

### Context

You want to dismiss all zero amount transactions from a batch before submitting the transactions to Detailed Accounting.

Additional considerations to note in this example when custom dismissing zero amount transactions:

- Dismiss transactions from the Enrichment 1 stage.
- Dismiss transactions from further processing.
- Dismiss transactions after you dismiss all errors from the Enrichment 1 stage.
- Dismiss transactions that have a zero amount in a field. Example: TRNS\_AMT # field.

**Note:** Accounting Source and dataset names are specific to your Workday tenant and might be different than the names used in this example. Use the information as a guide.

### Prerequisites

Security:

- Necessary security to edit the Accounting Center Event business processes.
- These domains in the Accounting Center functional area:
  - *Set Up: Accounting Source – Create .*
  - *Process: Accounting Center.*
- *Prism Datasets: Manage* domain in the Prism Analytics functional area.

Ensure that you have:

- Created an Accounting Source.
- Enriched the data by creating the Enrichment dataset.

## Steps

### 1. Configure the UserDirectedForDismissal Dataset to Access Your Enrichment Table

Configure the delivered UserDirectedForDismissal dataset to access the table with the AC\_TransactionID that contains zero transaction amounts by editing the USR\_UserDirectedForDismissal dataset. You can then use the ENR\_1\_TBL\_EnrichedData output as the import source.

The dataset must contain AC\_TransactionIDs, otherwise custom dismiss won't complete successfully. Workday custom dismisses transactions at the AC\_TransactionID level.

**Note:** Workday recommends that you only bring the current Accounting Center batch into the USR\_UserDirectedForDismissal dataset. This action improves performance and ensures that Custom Dismiss only runs when needed.

- a. Access the **View Accounting Source** report.
- b. In the **Accounting Source** field, select the accounting source for which you want to custom dismiss zero amount transactions. Example: AC 1TO1 MC.
- c. Click **OK**.
- d. From the related actions of the Accounting Source, select **Accounting Source > View Implementation**.
- e. Scroll to the bottom of the page.
- f. Click to open the dataset **User Configured Dismiss System Dataset**. Example: AC\_1TO1\_MC\_USR\_UserDirectedForDismissal.
- g. Create a new derived dataset to import the Enrichment output dataset and then create an inner join with the UnprocessedForBatch dataset for that stage. To access the enriched data for the most recent batch, join the datasets on the Accounting Center Batch and Accounting Center Transaction ID. Example: AC\_1TO1\_MC\_ENR\_1\_EnrichedData\_CurrentBatch\_DDS.
- h. Under **Change Pipeline**, change the import source to the new dataset you created that contains the Transaction IDs of the transactions that you want to dismiss.
  - Click the **Pencil** icon next to the Import stage.
  - On the **Change Source** page, select the enriched dataset from above. Example: AC\_1TO1\_MC\_ENR\_1\_EnrichedData\_CurrentBatch\_DDS and click **Select**.
  - i. Select **Edit Transformations** to configure a filter for dismissing all zero amount transactions in the enriched table.
  - j. Select **Stage** and then **Filter**.
  - k. For Description, enter: **Exclude Transactions = 0** for the stage to filter out all zero amount transactions.
  - l. Click **Add Filter**.
  - m. Select **If All** of the following conditions are met.
  - n. For the **Edit Filter Condition**, select the field that contains zero amount transactions. Example: **TRNS\_AMT #** field.
  - o. For **is equal to**, enter **0**.
  - p. On the **Edit Filter Condition** header, click the **Checkmark**.
  - q. Click **Done**.
  - r. Click **Save** to save the dataset.

## 2. Configure the Business Process and Condition Rules for the Enrichment Stage

- a. Access the *Accounting Center Enrichment Event (Default Definition)* business process.
- b. From the related actions of the business process definition, select **Business Process > Edit Definition**.
- c. For **Effective Date**, select today date.
- d. Click **OK**.
- e. Click **Add Row**.
- f. Enter:

Field	Value
Order	Enter an order of where you want to place the step. It must be after the primary process. Example: c
Type	Batch/Job
Specify	Request Dismiss Transactions From Further Processing (Enrichment)
Run As User	Name of the user or your integration system user that runs Accounting Center batches. Example: Accounting Center Administrator 01

- g. Click **OK**.
- h. From the related actions of Order **c**, select **Business Process > Maintain Step Conditions**.
- i. For **Effective Date**, select today date.
- j. Click **OK**.
- k. Click **Add Row**.
- l. In the **Rule** field, select **Create Condition Rule**.
- m. Click **OK**.
- n. For Description, enter **Dismiss \$0 from Enrichment Stage of these Sources**.
- o. In the **Rule Conditions** grid, enter:

Field	Value
Source External Field or Condition Rule	Accounting Source Stage
Relational Operator	in the selection list
Comparison Type	Value specified in this filter
Comparison Value	<Name of your Enrichment dataset>

Field	Value
	Example: AC 1TO1 MC - AC 1to1 dds - Enrichment 1

- p. Click **OK**.
- q. Click **Add Row** to add another condition rule to dismiss transactions after dismissing all errors from the Enrichment stage.

Apply this condition rule as an entry condition on the business process step for the Request Dismiss Transactions job.

- r. In the **Rule** field, select **Create Condition Rule**.
- s. Click **OK**.
- t. For Description, enter **Successful Transactions**.
- u. In the **Rule Conditions** grid, enter:

Field	Value
Source External Field or Condition Rule	Transactions In for a Stage
Relational Operator	equal to
Comparison Type	Value from another field
Comparison Value	Success Transactions for a Stage

- v. Click **OK**.
- w. Click **OK**.
- x. Click **Done**.

## Result

Workday custom dismisses all zero amount transactions for the Enrichment 1 stage.

[Cancel Accounting Center Batches](#) on page 605

## Reporting

---

### View Detailed Accounting Results

#### Prerequisites

Security: *Prism Datasets: Create* in the Prism Analytics functional area.

#### Context

Create a custom report to view detailed accounting results.

#### Steps

1. Access the **View Accounting Source** report.
2. Select an accounting source for which you want to view detailed accounting.
3. From the related actions menu of the accounting source, select **Accounting Source > View Implementation**.
4. In the **Output Dataset** column, click the Detailed Accounting dataset.
5. On the **Fields** tab, click the **Table View** icon.

**6.** Review some of the fields displayed:

- **Worktags and Additional Attributes:** Are displayed in the far right of your dataset, with Additional Attributes prefixed with AA.
- **AC\_Transaction\_ID:** Is a system-generated field that uniquely identifies transactions. When each row of your enriched data generates a balanced entry, each row represents a single transaction for which Workday generates a unique transaction ID. When Accounting Center groups multiple rows to generate a balancing entry with a user-supplied Transaction Grouping ID, Workday generates a unique transaction ID using the user-supplied Transaction Grouping ID.
- **Accounting Center Batch:** Indicates the batch number for the detailed transactions.
- **Accounting Center Batch Run:** Indicates the Detailed Accounting Batch Run stage completed by the batch run.
- **Accounting Source Snapshot:** Click the snapshot to view the accounting source configuration that generated this line in detailed accounting. The format of this value is:
  - Name of the Accounting Source
  - Effective Date
  - Last Updated
- **Accounting\_Source\_Journal\_Line\_Rule:** Refers to the row on your **Journal Line Rules** tab when you configure your accounting source.

These fields might have Null values depending on your configuration.

**Note:** Null values aren't errors.

- **Original Date of Reversed Journal:** For reversal journals, displays the original date of the journal.
- **Intercompany Affiliate:** For intercompany transactions, displays the name of the intercompany affiliate.
- **Intercompany Direction:** Indicates whether line is an Intercompany Receivable or Payable.
- **Intercompany Type:** Indicates intercompany accounting type. Workday supports the 2-sided use case and automatically generates both due-to and due-from entries in detailed accounting.
- **Transaction Debit and Credit Amounts:** Amounts in your transaction currency.
- **Transaction Currency:** The currency that you associate with a transaction when you create or edit it.
- **Ledger Debit and Credit Amounts:** Transaction amounts in your ledger currency.

**7.** These fields relate to currency conversion features:

- **Rounded as Biggest Line:** Workday applies rounding adjustments to the largest line. Automatically populates to False.
- **Currency Rate Type:** Type that identifies the source and purpose of a set of rates. Example: Current, Average, Historic.
- **Currency Rate:** Rate used to convert transaction amounts to ledger amounts.
- **WPA\_LoadID and WPA\_LoadTimestamp:** Are Workday generated columns.

**8.** Create a derived dataset based on the Detailed Accounting dataset.

**9.** Edit the data source security for the derived dataset to grant access to team members who need to see the data.

**10.** Create a custom report using the Prism data source.

## Result

Report on your detailed accounting results with worktags and additional attributes as dimensions.

## View Summarized Journals

### Prerequisites

Security: *Prism Datasets: Create* in the Prism Analytics functional area.

### Context

You can review the link between detailed accounting lines and their associated summary journals, and for each transaction drill into each journal.

### Steps

1. Access the **View Accounting Source** report.
2. Select an accounting source for which you want to view summarized journals.
3. From the related actions menu of the accounting source, select **Accounting Source > View Implementation**.
4. In the **Output Dataset** column, click the Summary and Detailed Accounting Reference dataset. This dataset maps detailed accounting to their respective summary journals.
5. On the **View Dataset** page, select the **Fields** tab, and click the **Table View** icon.
6. Review some of the fields displayed:
  - **Accounting Center Batch**: Indicates the batch number for the detailed transactions.
  - **Accounting Center Batch Run**: Indicates the Detailed Accounting Batch Run and not the Summarized Accounting Batch Run completed by the batch run.
  - Batch Run Column in Summary and Detailed Accounting Reference dataset refers to the Detailed Accounting Batch Run, not Summarization Batch Run.
  - **Accounting Source Snapshot**: Click the snapshot to view the accounting source configuration that generated this line in detailed accounting. The format of this value is:
    - Name of the Accounting Source
    - Effective Date
    - Last Updated
7. For each transaction, scroll to the **Journal Entry** column and click to display the journal.

**Note:** Access to the **Journal Line** column is restricted.

### Result

Workday displays the summarized journals that are an aggregation of detailed accounting for the selected company, year, and period.

### Next Steps

- Build a summarized dataset that you want to use for reporting.
- Build composite or custom matrix reports to drill from summarized accounting to underlying detailed accounting and enriched transactions. See [Set Up Grouping and Summarizing for Matrix Reports](#) and [Steps: Create Composite Reports](#).

## Publish Prism Datasets

### Prerequisites

Security: *Process: Accounting Center domain* in the Accounting Center functional area.

Ensure you have the necessary security to edit the Accounting Center Event business processes.

## Context

You can optionally, use the Accounting Center Process to publish a Prism dataset and use it for reporting.

You can publish a Prism dataset for any or all of these stages:

- Enrichment
- Detailed Accounting
- Summarization

## Steps

1. (Optional) Assign access to the *Process: Accounting Center* domain through a constrained Roles - Source System security group.

When you grant a user access to a domain through a constrained security group, Workday limits access to each accounting source based on the user role.

2. (Optional) Add the Roles - Source System security group to the Accounting Center Summarization Event security policy.

When you grant a user access to a business process through a constrained role-based security group, Workday limits access to each accounting source based on the user role.

3. Access the Accounting Center Event business process for which you want to create a Prism dataset.

Example:

- *Accounting Center Enrichment Event* business process for the Enrichment stage.
- *Accounting Center Detailed Accounting Event* business process for the Detailed Accounting stage.
- *Accounting Center Summarization Event* business process for the Summarization stage.

4. From the related actions menu of the business process, select **Business Process > Edit Definition**.

5. Click **OK**.

6. Configure an additional step of Service and click **OK**.

7. Click **Configure Publish Prism Dataset**.

**Note:** You can't select the same dataset for parallel published steps.

8. As you complete the **Configure Event Service** task, consider:

Field	Description
<b>Prism Dataset</b>	Only displays publishable Prism datasets.
<b>Run As User</b>	Enter a user name with access to both: <ul style="list-style-type: none"> <li>• The publishable dataset.</li> <li>• All datasets in the lineage.</li> </ul>
<b>Abort Business Process Event</b>	Check if you have parallel published steps and want to stop the business process from progressing when the publish job fails or aborts. <p>Workday will set the batch stage status to <i>Aborted</i> and the Business Process status to <i>Canceled</i>.</p> <p>If the publish job fails before the accounting center job started, you can <i>Retry</i> the event.</p> <p>If the publish job fails or aborts after the accounting center job completes for the Enrichment or Detailed Accounting stage, you can <i>Force Complete</i> or <i>Retry</i> the event.</p>

Field	Description
	<p>If the publish job fails or aborts after the accounting center job completes for the Summarization stage, you can only Force Complete the event.</p> <p>If you're defining nonparallel publish steps, use this field and this service step to stop the Business Process event if the Prism dataset fails to publish:</p> <ul style="list-style-type: none"> <li>• <b>Publish Prism Dataset Job Status</b> field.</li> <li>• <i>Abort Accounting Center Event</i> service step.</li> </ul>

**9. Click **OK** and then **Done**.**

See [Steps: Configure Business Process Definitions](#).

### Result

Workday publishes the Prism dataset when processing the Accounting Center event and makes the data available when the process is complete.

### Next Steps

Use the published dataset for reporting.

## Concept: Period Close Activity Group for Accounting Center

Workday provides an Accounting Center Summary Journals period close activity group, enabling you to close your Accounting Center summary journals separately from other journals. You can now close these 2 groups independently providing greater control and flexibility in processing different types of journals as you work through your ledger period close. You still have the ability to add them to your configured groups.

See [Concept: Ledger Close Activity Groups](#) on page 321.

## Reference: Guidelines for Reporting on Accounting Center Datasets

Consider these guidelines when you report on Accounting Center datasets:

- You can only use the AS\_SummaryandDetailedAccountingReference dataset to report on your detailed accounting results using these 2 reporting tools:
  - Workday Report Writer
  - Workday Discovery Boards
- Reference your Accounting Center subscription agreement for:
  - The maximum number of prior months you can report for all AS\_SummaryandDetailedAccountingReference datasets.

Workday determines the number of prior months by the Accounting Date on journal details reported on the AS\_SummaryandDetailedAccountingReference dataset for each accounting source as of the report execution date.

- The maximum number of custom columns you can include in aggregate across all AS\_SummaryandDetailedAccountingReference datasets.

Workday creates a custom column in an AS\_SummaryandDetailedAccountingReference dataset when you include an additional attribute on an accounting source journal line rule.

- You can use temporary reportable datasets to support limited ad hoc reporting as determined by your subscription agreement.

## Concept: Accounting Center

---

Accounting Center is a fully integrated solution that incorporates Prism Analytics functionality enabling you to:

- Import high-volume non-Workday external business events into Workday.
- Reduce time and complexity in integrating external transactions into Workday.
- Maintain and configure mapping rules to transform imported business events from various industries into accounting journals.
- Generate period end accounting journals automatically.
- Report on both detailed and summarized journals for financial, managerial, operational, and external reporting.
- Create accounting with confidence using Finance-owned data transformation.
- Analyze and act on insights to understand profitability and drive strategy.
- Maintain data integrity and quality while importing non-Workday external business events into Workday.
- Ensure data security by auditing changes and managing user access.
- Efficiently scale as volume of processing transactions increase.

See [Accounting Center Product Flow](#).

You can use Accounting Center to bring transactions from disparate systems into 1 solution and automate accounting to:

- Recognize revenue - Transform operational data, such as policy, media production, or technology order data into accounting to recognize revenue, including premium revenue spread and deferred revenue.
- Recognize expenses - Recognize expenses from business events, including deferred and prepaid expenses, to match the revenue being recognized in the same period.
- Record cash sales - Recognize cash sales, credit card sales, billings, and payments from cash transactions and transform them into accounting.
- Summarize journals - Transform summarized journals into more granular detail, providing richer financial and operational reporting.
- Record period end accruals, including stock-based compensation.

Examples of business events that you can automatically create period end accounting journals for, include:

- Insurance companies - Policy and claims data, including premium revenue spread over the life of the policy.
- Healthcare companies - Healthcare provider insurance plan data and external billing systems.
- Media companies - Events for production shows, including casting, payroll, set designs, visual effects, and campaign costs through award seasons.
- Retail companies - Physical and digital product sales.
- Banking companies - Loans and deposits information.

Together with Prism Analytics, Accounting Center offers advanced reporting with a richer reporting dataset enabling you to access enriched and detailed accounting in Prism datasets.

Accounting Center reporting provides full data lineage to the source transactions giving you full audit capability. You can gain more visibility by reporting by line of business, product, sales region, and salesperson. You can then produce detailed reports with data visualizations and distribute these reports through dashboards and scorecards to key decision makers.

With Accounting Center, you can:

- Create an ingestion table as an ingestion source to load data from Prism Analytics into an accounting source. See [Create Prism Analytics Table](#) on page 559.
- Create an accounting source. See [Create Accounting Source](#) on page 571.
- Enrich and refine data by mapping the source data to the corresponding Workday field types. See [Concept: Enrichment](#) on page 560.

- Configure journal header and journal line rules to drive accounting. See [Edit Accounting Source](#) on page 575.
- Define how you want to process each batch. See [Edit Accounting Center Process Configuration](#) on page 590.
- Create and process source transactions in batches to create detailed and summarized accounting. See [Create Accounting Center Batches from Source Systems](#) on page 594.
- View and resolve data errors in batch processing. See [View and Resolve Errors in Error Manager](#) on page 621.
- Report on and analyze the journal entries with full drill-down visibility into the source transactions.

See:

- [View Detailed Accounting Results](#) on page 634.
- [View Summarized Journals](#) on page 636.
- Improve data quality and reporting, as well as streamline your consolidation and close process.

# Financial Transaction Taxes

---

## Transaction Taxes

---

### Setup Considerations: Transaction Taxes

You can use this topic to help make decisions when planning your configuration and use of transaction taxes. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

You can configure Workday to report on the taxes that you pay, self-assess, or collect when you purchase or sell goods and services.

To populate the tax details and calculate the tax amounts on your transactions, you can use either:

- Workday.
- A third-party tax integration, for customer or supplier invoices.

## Business Benefits

Workday:

- Populates the tax attributes on your transaction lines based on the tax configuration, minimizing errors and streamlining your compliance with tax authority regulations.
- Calculates the amount of tax that you pay, self-assess, or collect on your transaction lines based on the tax rates and line amounts, minimizing your manual effort in assessing taxes.
- Allocates the tax amounts to your spend lines or creates separate journal lines for tax, streamlining your tax accounting and reporting.

## Use Cases

- You can configure Workday to populate the tax attributes on your spend or purchase transactions based on the other attributes of your transactions.
- Accounts payable specialists can configure tax attributes as they create purchase transactions like supplier invoices.
- Accounts receivable specialists can configure tax attributes as they create revenue transactions like customer invoices.
- Employees can select the tax codes on expense lines as they create expense reports. Workday calculates the amount of tax from the expense total, based on the tax code.
- Expense partners can review the expense reports and override the tax attributes.
- Tax managers can:
  - Run reports to review and reconcile transaction taxes.
  - Correct transaction taxes.

## Questions to Consider

Question	Considerations
Do you use a third-party service to calculate taxes on your transactions?	You can set up a third-party tax integration to populate the tax details on your customer or supplier invoices. Third-party tax integrations enable you to use Workday's accounting and reporting framework, without the need to maintain the tax configurations in Workday.
To which jurisdictions do you pay or report taxes, and what currency do they use?	You can configure multiple tax authorities that: <ul style="list-style-type: none"> <li>• Represent the jurisdictions to which you pay or report on taxes.</li> <li>• Drive the tax reporting currency of your tax rates.</li> </ul>
What tax rates do you pay or collect?	You can: <ul style="list-style-type: none"> <li>• Configure the individual tax rates that your tax authorities assess. Examples: British Columbia provincial sales tax (PST), Canada goods and services tax (GST), Germany standard value-added tax (VAT).</li> <li>• Configure tax categories for tax rates that share common attributes. Examples: Withholding tax, sales tax, or VAT.</li> </ul>

Question	Considerations
Which tax rates or combinations of tax rates apply to your transaction lines?	<p>You can configure tax codes that combine 1 or more tax rates, so you only need to select 1 tax code on each transaction line.</p> <p>Example: You configure a tax code for British Columbia that combines the PST and the GST tax rates.</p>
Do you reclaim or offset a percentage of the taxes that you pay to your suppliers or tax authorities?	<p>You can configure tax applicability and recoverability codes to:</p> <ul style="list-style-type: none"> <li>Indicate whether to calculate tax on a transaction line.</li> <li>Populate the tax recoverabilities for each tax code on your transaction lines.</li> <li>Reclaim or offset a percentage of the tax amount for a given tax code on a transaction line.</li> <li>Allocate the nonrecoverable portion of tax to your spend lines or to a separate ledger account.</li> </ul> <p>You can use tax recoverability and applicability in your account posting rules.</p> <p>Workday always considers tax on these documents as nonrecoverable:</p> <ul style="list-style-type: none"> <li>Ad hoc bank deposits.</li> <li>Cash sales.</li> <li>Customer invoices.</li> </ul>
On a spend transaction line, do you pay tax to the supplier or to the tax authority?	<p>For each tax code on a spend transaction line, you can:</p> <ul style="list-style-type: none"> <li>Let Workday assess the tax due to the tax authority.</li> <li>Let Workday calculate the tax due to the supplier.</li> <li>Manually enter the tax due to the supplier.</li> </ul> <p>See <a href="#">Reference: Tax Options</a> on page 656 .</p>

## Recommendations

- To reduce the risk of employees selecting the wrong tax attributes on transactions, configure Workday to automatically populate as many tax attributes as possible. See [Setup Considerations: Transaction Tax Rules](#) on page 660.
- To reduce the risk of inaccuracies in your tax reporting, add a tax review step to your business processes on spend and purchase transactions.
- To record partial self-assessments of tax when suppliers undercharge you tax, create tax-only invoices.

## Requirements

Before you can use a third-party tax service to import the tax details on your transactions in Workday:

- Your third-party tax service provider must deploy the third-party tax integration to your Workday tenant. Workday delivers 2 web services that your third-party tax provider can call to get the information they need to calculate tax and to import the results into Workday:
  - Get Taxable Document for Tax Calculation.*
  - Import Taxable Document Tax Details.*
- Add the third-party tax service integration as a step on the *Customer Invoice* or *Supplier Invoice* business process, following the instructions from your third-party tax service provider.
- Enable the third-party tax options for your company on the **Edit Company Tax Details** task.
- Your third-party tax service provider must create empty tax rates for Workday to store the tax rate percentages from the third-party service.

### Limitations

No impact.

### Tenant Setup

You can use the **Edit Tenant Setup - Financials** task to enable options to:

- Configure the tax point date on transactions.
- Populate the tax fields from your tax rules on:
  - Supplier invoices created from supplier invoice requests.
  - Supplier invoices created from a purchase order or supplier contract.
- Hide the **Enable Tax** check box on expense reports when your organization doesn't require tax reporting.

### Security

Domains	Considerations
<i>Set Up:</i> Tax domain in the Common Financial Management functional area	Configure transaction taxes.
<i>Reports:</i> Transaction Tax domain in these functional areas: • Customer Accounts. • Common Financial Management.	View transaction tax reports.

### Business Processes

No impact.

### Reporting

Reports	Considerations
<b>Transaction Tax Detail for Tax on Invoice Transactions</b>	Displays the transaction tax details for the taxable document lines that don't have a <b>Tax Point Date Type</b> or <b>Payment Date</b> at the document line level.
<b>Transaction Tax Detail for Tax on Payment Transactions</b>	Displays the transaction tax details for taxable document lines that have a <b>Tax Point Date Type</b> or <b>Payment Date</b> .

Reports	Considerations
<b>Transaction Tax Liability</b>	Calculates the net tax due to each tax authority, which is the collected and self-assessed tax minus the recoverable tax. Displays the tax liability for sales and purchasing transactions.

## Integrations

Web Services	Considerations
<i>Get Taxable Document for Tax Calculation</i>	Provides third-party tax services with the tax fields and values that they need to calculate the transaction taxes on your taxable documents.
<i>Import Taxable Document Tax Details</i>	This asynchronous web service enables third-party tax services to import the calculated tax details into Workday.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Transaction Taxes

### Prerequisites

- Review setup considerations for transaction taxes.
- Security: *Set Up: Tax* domain in the Common Financial Management functional area.

### Context

You can configure:

- How Workday populates tax attributes on your transactions.
- How Workday calculates transaction tax amounts.
- The ledger accounts where Workday posts transaction taxes.

### Steps

1. [Set Up Tax Authorities](#) on page 645.
2. [Set Up Tax Categories](#) on page 646.
3. [Set Up Transaction Tax Rates](#) on page 647.

4. [Set Up Transaction Tax Codes](#) on page 648.
5. [Set Up Tax Recoverabilities for Financial Transactions](#) on page 648.
6. [Set Up Tax Applicability for Financial Transactions](#) on page 649.
7. [Set Up Company Tax IDs for Financial Transactions](#) on page 650.
8. (Optional) Access the **Maintain Tax ID Grouping** task.  
Create tax ID groupings for countries that require more than 1 tax ID on supplier or customer invoices.
9. Set up transaction tax account posting rules.  
See:
  - [Set Up Account Posting Rules](#) on page 84.
  - [Concept: Transaction Tax Account Posting Rules](#) on page 682.
10. Configure how Workday populates tax attributes on expense reports.  
See [Steps: Set Up Taxes for Expense Reports](#) on page 1797.
11. Configure how Workday populates tax attributes on revenue transactions.  
See [Steps: Set Up Taxes for Revenue Transactions](#) on page 1018.
12. Configure how Workday populates tax attributes on spend transactions.  
See [Steps: Set Up Taxes for Purchase Transactions](#).
13. (Optional) [Configure Transaction Tax ID Exceptions](#) on page 671.
14. (Optional) Map external tax codes to combinations of an internal tax code and a tax applicability.  
See [Steps: Create External Tax Codes and Map to Internal Tax Codes](#) on page 942.

### **Next Steps**

For a list of tax-related reports, access the **Workday Standard Reports** report and select the *Set Up Taxes* report category.

### **Related Information**

#### **Concepts**

[Concept: Effective Dating for Transaction and Withholding Tax Rates](#) on page 741

## **Set Up Tax Authorities**

### **Prerequisites**

Security: *Set Up: Tax* domain in the Common Financial Management functional area.

### **Context**

You can create tax authorities for the jurisdictions where you pay or report on taxes. Example: New York State Department of Taxation and Finance.

Tax authorities drive the tax reporting currency of your tax rates.

Workday creates tax declarations at the tax authority level. To ensure the completeness of tax declarations you create in Workday, we recommend that:

- For countries with only 1 tax jurisdiction, you create only 1 tax authority. Example: The United Kingdom.
- When using a third-party tax integration to calculate tax on either customer or supplier invoices, and Workday on the other type of taxable documents, you use the same tax authority for both.

When you want to pay tax authorities with supplier invoices, create tax authorities from existing business entities and select suppliers.

### **Steps**

1. Access the **Create Tax Authority** task.

**2.** As you complete the task, consider:

<b>Option</b>	<b>Description</b>
<b>Create Tax Authority from Business Entity</b>	Select a business entity for Workday to add tax authority details to. Once you select a business entity, you can't change it.
<b>Tax Reporting Currency</b>	Select the currency to calculate and report taxes for the tax authority. Example: Your company currency is USD, but you report taxes for your European headquarters in EUR. You select EUR. You can't change the reporting currency after you create a tax rate for the tax authority.
<b>Rounding Definition</b>	<p>Select or create a rounding definition for Workday to round tax amounts:</p> <ul style="list-style-type: none"> <li>• In tax reporting currency for tax reports and tax declarations.</li> <li>• In company currency for posting to ledger accounts, when the company currency is the same as the tax reporting currency.</li> <li>• In transaction currency for display on taxable documents, when the transaction currency is the same as the tax reporting currency.</li> </ul> <p>When you don't select a rounding definition, Workday rounds the tax amounts to the nearest currency precision. Example: Workday rounds amounts in EUR to the nearest 2 decimals.</p>

## Next Steps

You can:

- Access the **Update Tax Authority Logo** task to upload a logo for this tax authority.
- Access the **Create Tax Declaration Run** task to report taxes to a tax authority.
- Create supplier invoices or ad hoc payments to pay the tax authority.

## Related Information

### Tasks

[Create Supplier Invoices](#) on page 1618

[Create Ad Hoc Payments](#) on page 1964

## Set Up Tax Categories

### Prerequisites

Security: *Set Up: Tax* domain in the Common Financial Management functional area.

### Context

You can create tax categories to group tax rates with the same attributes. Examples:

- Withholding tax.
- Value-added tax (VAT).
- Vertex.
- Avalara.

## Steps

1. Access the **Maintain Tax Categories** task.
2. As you complete the task, consider:

Option	Description
<b>Subject to Recoverability</b>	Select this check box to calculate the recoverable tax amount for the tax rates in this tax category. Examples: <ul style="list-style-type: none"> <li>• VAT.</li> <li>• Goods and services tax.</li> </ul>
<b>Withholding Tax</b>	Select this check box to calculate withholding taxes for spend and revenue transactions. See <a href="#">Steps: Set Up Withholding Taxes</a> on page 673.
<b>Use Third Party Tax Service</b>	Select this check box when you use a third-party service to calculate taxes on your transactions.

## Set Up Transaction Tax Rates

### Prerequisites

Security: *Set Up: Tax domain* in the Common Financial Management functional area.

### Context

You can configure the individual transaction tax rates that your tax authorities assess. Examples:

- State of California (7.25%).
- County of Los Angeles (0.25%).
- Central City of Los Angeles (1.5%).

## Steps

1. Access the **Create Transaction Tax Rate** task.
2. As you complete the task, consider:

Option	Description
<b>Subject to Recoverability</b>	Workday populates this value from the <b>Transaction Tax Category</b> that you select. <b>Note:</b> Workday always assesses the recoverable tax amount as zero for tax rates that aren't subject to recoverability. Even when you select a recoverable tax applicability on the transaction line.
<b>Third Party Tax Rate</b>	Workday populates this check box from the <b>Transaction Tax Category</b> that you select.
<b>Tax Rate</b>	Workday uses this percentage to calculate the tax amounts on transaction lines. Workday doesn't prompt you for a tax rate when you set up a third-party tax rate.

## Set Up Transaction Tax Codes

### Prerequisites

Security: Set Up: Tax domain in the Common Financial Management functional area.

### Context

You can configure the transaction tax codes that you select on your transaction lines. A transaction tax code combines 1 or more transaction tax rates.

Example: You configure a tax code for the City of Los Angeles with these 3 tax rates:

- State of California (7.25%).
- County of Los Angeles (0.25%).
- Central City of Los Angeles (1.5%).

When you select the City of Los Angeles tax code on a supplier invoice, Workday populates these 3 tax rates on your supplier invoice.

### Steps

1. Access the **Maintain Transaction Tax Codes** task.
2. As you complete the task, consider:

Option	Description
<b>Transaction Tax ID Required</b>	Select for Workday to display the transaction tax ID on customer invoices.
<b>Tax Rate</b>	Select all the tax rates that you want Workday to populate on your transaction lines when you select this tax code.  You can't mix third-party tax rates with other tax rates in the same tax code.

## Set Up Tax Recoverabilities for Financial Transactions

### Context

You can configure tax recoverability codes that indicate, for a tax rate on a transaction line:

- The percentage of the tax amount that you can reclaim or claim as input tax credit.
- Whether you want to allocate the nonrecoverable portion of tax to your spend lines, or post the tax amount to a separate ledger account.

You can configure multiple tax recoverability codes so that Workday accurately applies recoverable percentages on these transaction lines:

- Ad hoc payments.
- Expense reports.
- Purchase orders.
- Requisitions.
- Supplier contracts.
- Supplier invoices.
- Supplier invoice adjustments.

Workday always considers tax on these documents as nonrecoverable:

- Ad hoc bank deposits.

- Cash sales.
- Customer invoices.

## Steps

### 1. Access the **Maintain Tax Recoverabilities** task.

Workday automatically populates the recoverable percentage on the transaction line based on the specified tax applicability and tax code. You can override this selection. When you specify the tax recoverability, Workday applies the recoverable percentage and the allocation method to the tax amount for tax rates within a tax code.

### 2. As you complete the task, consider:

Option	Description
<b>Type</b>	Fully and partially recoverable taxes enable you to reclaim or offset taxes that you pay on purchases and expenses against taxes collected for value-added tax (VAT) purposes.
<b>Recoverable %</b>	Workday applies this percentage to the tax amount in purchase and expense transactions for tax rates that are subject to recoverability. A different percentage applies if you select the <b>Use Company Recovery Pro Rata Factor</b> check box.
<b>Allocate Nonrecoverable Tax</b>	<p>Select to allocate the nonrecoverable tax on purchase transactions across each of the lines where specified tax applicability is:</p> <ul style="list-style-type: none"> <li>• Taxable.</li> <li>• Nonrecoverable or partially recoverable.</li> </ul> <p>Through allocation, the tax becomes part of the spend line. You can allocate transaction tax to the lines regardless of how you enter or calculate tax.</p> <p>If you select <b>Enter Tax Due to Supplier</b> on the <b>Tax Option</b> prompt of the transaction, you can't select a tax applicability that allocates nonrecoverable tax.</p> <p>You can leave this option unchecked for:</p> <ul style="list-style-type: none"> <li>• Ad hoc payments.</li> <li>• Purchase orders.</li> <li>• Supplier invoices and invoice adjustments.</li> </ul>
<b>Use Company Recovery Pro Rata Factor</b>	Select to enable the recoverable tax amount. The recoverable percentage is based on the <b>Company Tax Recovery Pro Rata Factor Percentage</b> that you specify on the <b>Edit Company Tax Details</b> task.

## Set Up Tax Applicability for Financial Transactions

### Context

You can aid transaction entry and approval by assigning a default tax applicability to sales, purchase, and expense items in transaction lines. You can also configure tax rules that specify an override tax

applicability that automatically populates on transaction lines for specific items in specific countries. You can specify tax applicability on these types of transaction lines:

- Customer invoices
- Invoice adjustments
- Cash sales
- Purchase orders
- Supplier invoices
- Ad hoc payments
- Expense reports

### Steps

1. Access the **Maintain Tax Applicability** task.

2. As you complete the task, consider:

Option	Description
<b>Tax Applicability Code</b>	Enter a name for the tax applicability that displays for selection within transactions.
<b>Taxable</b>	Select to enable tax applicability when Workday calculates the tax amount on transactions.
<b>Default Tax Recoverability</b>	Select an available tax recoverability that defaults to the tax recoverability on transactions.

### Result

Workday uses the tax applicability and tax code on the transaction line to:

- Calculate recoverable and nonrecoverable tax amounts for each tax rate within the tax code.
- Segregate transactions for reporting.

## Set Up Company Tax IDs for Financial Transactions

### Prerequisites

Security:

- *Set Up: Company General* domain in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

### Context

You can configure multiple country-specific tax and business identification numbers for your companies. You can then automatically use the appropriate tax identification numbers in transactions to comply with regulatory requirements.

### Steps

1. Access the **Edit Company Tax Details** task.

2. As you complete the **Tax IDs** tab, consider:

Option	Description
<b>Country for Tax ID Type</b>	The prompt displays only the countries with Workday-delivered tax ID types.

Option	Description
<b>Tax ID Type</b>	The prompt displays Workday-delivered tax ID types for the country that you specify.
<b>Transaction Tax ID</b>	<p>Select this check box to include this identification number on financial transactions, like customer invoices and purchase orders. Workday reports the <b>Transaction Tax ID</b> on purchase orders when you select both the <b>Transaction Tax ID</b> and <b>Primary Tax ID</b> checkboxes for a tax ID.</p> <p>If you don't select <b>Transaction Tax ID</b> for any of the identification numbers you configure, financial transactions report the Primary Tax ID.</p> <p>Example: You configure 2 Tax IDs for your company. You select <b>Transaction Tax ID</b> for 1 of them. Workday includes that Tax ID as the Transaction Tax ID on any invoices and purchase orders you generate for that company.</p> <p><b>Note:</b> Tax IDs don't display on supplier invoices or purchase orders. Use reports to view the tax IDs on supplier invoices and purchase orders.</p>
<b>Primary Tax ID</b>	<p>Select to indicate this identification number as the Primary Tax ID for your business entity.</p> <p>If you didn't select <b>Transaction Tax ID</b> for any of the identification numbers you configured, Workday finds and uses the <b>Primary Tax ID</b>.</p> <p>If you configured neither a Transaction Tax ID nor a Primary Tax ID for the business entity, no tax ID is used on financial transactions, except for customer invoices where you selected <b>Transaction Tax ID Required</b>. You're unable to complete the customer invoice without configuring a Transaction Tax ID.</p>

### Next Steps

- Maintain tax ID groupings for countries that require more than 1 tax ID on customer or supplier invoices.
- Configure transaction tax account posting rules for your company.

## Steps: Set Up Address-Level Tax Information

### Prerequisites

Create companies, customers, and suppliers, including any addresses for which you want to record tax information.

### Context

You can set up Workday to record address-level tax information for:

- Companies.
- Customers.

- Suppliers.

This helps you to comply with tax reporting requirements in jurisdictions where:

- Tax IDs must be assigned based on billing or shipping locations.
- There are multiple tax registrations within the same country.

Workday uses address-level tax information, where available, to determine which tax IDs to assign on:

- Customer invoices.
- Customer invoice adjustments.
- Supplier invoices.
- Supplier invoice adjustments.

When you don't enter a shipping address on an invoice for an entity, Workday uses the primary address to determine which tax ID to populate.

## Steps

### 1. Access the **Edit Tenant Setup - Financials** task.

In the **Tax Options** section, select the **Enable Address Level Tax Details** check box.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

### 2. (Optional) Access the **Maintain Transaction Tax Statuses** task.

Set up any tax statuses that you want to assign.

Security: *Set Up: Tax* domain in the Common Financial Management functional area.

### 3. (Optional) Access the **Edit Company Tax Details** task.

Enter address-level tax information for companies.

See [Set Up Company Tax IDs for Financial Transactions](#) on page 650.

### 4. (Optional) Access customer profiles and enter address-level tax information for customers.

See [Set Up Customer Overview](#) on page 751.

### 5. (Optional) Access supplier profiles and enter address-level tax information for suppliers.

See [Change Supplier Information](#).

## Result

When you create documents such as customer invoices or supplier invoices, Workday assigns tax IDs based on the address-level tax information, when you've added it, or the country on the shipping address. When you don't specify a shipping address, Workday assigns tax IDs based on the primary address.

## Example

Your company has 3 addresses in India:

- Two in Delhi.
- One in Hyderabad, in the state of Telangana.

After you enable address-level tax information on the **Edit Tenant Setup - Financials** task, you access the **Edit Company Tax Details** task and select your company.

On the **Address Level Tax Details** tab, you add 2 rows to the grid. On the first row, you enter the relevant GSTIN for Delhi and select the 2 Delhi addresses on subrows in the **Address** column. On the second row, you enter the relevant GSTIN for Telangana and select the Hyderabad address. You select the **Transaction Tax ID** check box for both rows.

When you create a customer invoice where the ship-from address is 1 of the Delhi addresses, Workday assigns the GSTIN for Delhi as the company transaction tax ID on the invoice. When you create a customer invoice where the ship-from address is the Hyderabad address, Workday assigns the GSTIN for Telangana as the company transaction tax ID on the invoice.

## Next Steps

Create customer invoices or supplier invoices.

### Related Information

## View Transaction Tax Liability for Companies

### Context

View a summary of your company tax liability for sales and purchasing transactions.

### Steps

1. Access the **Transaction Tax Liability** report.
2. To narrow your search, specify the company, currency, and date range.
3. As you review the tabs, consider:

Tab	Description
<b>Transactions by Tax Authority</b>	<p>View a list of transactions by:</p> <ul style="list-style-type: none"> <li>• Tax authority.</li> <li>• Total sales amount and tax collected for sales transactions.</li> <li>• Total purchase amount and tax paid or self-assessed for purchase transactions.</li> <li>• Recoverable amount of the tax paid.</li> </ul> <p>The report also calculates the net tax due to the tax authority, which is the combination of collected and self-assessed tax minus the recoverable tax. Click each amount to see the transactions that make up the amount.</p>
<b>Transactions without Tax Code</b>	<p>Lists total sales and purchase amounts for transactions without a tax code, grouped by tax applicability.</p>

## Concept: Self-Assessed Tax

Self-assessed tax enables you to pay tax to the authorities when a supplier or payee doesn't charge you tax. You can self-assess tax on these invoices and financial transactions:

- Supplier invoices.
- Ad hoc payments.
- Procurement card transactions.
- Purchase orders.
- Change orders.

**Note:** The tax amounts that you self-assess on purchase orders and change orders are estimates only. Workday does not include these amounts in your reportable amounts.

## Sample Configurations

Use Case	Example	Considerations
You self-assess value-added tax (VAT) or goods and services tax (GST).	<p>Your Irish company purchases goods from a Dutch supplier who isn't registered for VAT in Ireland and doesn't charge you VAT. You self-assess the Irish VAT on the supplier invoice and pay it to the Revenue Commissioners of Ireland.</p>	<p>You can set up:</p> <ul style="list-style-type: none"> <li>• A transaction tax status for suppliers who aren't registered for VAT in your ship-to addresses.</li> <li>• Transaction tax rules for countries:           <ul style="list-style-type: none"> <li>• With a condition on the supplier status.</li> <li>• That override the <b>Tax Option</b> with <i>Calculate Self-Assessed Tax</i>.</li> </ul> </li> </ul>
You have spend items or spend categories for which the supplier doesn't charge tax for your ship-to locations.	<p>Your US company purchases laptops for its employees from an out-of-state US supplier. The supplier doesn't have nexus in the ship-to location and doesn't charge you sales tax for the laptops. You self-assess tax for the laptops on the supplier invoice and pay the tax authorities.</p>	<p>You can set up:</p> <ul style="list-style-type: none"> <li>• A transaction tax status for suppliers who aren't registered for VAT in your ship-to addresses.</li> <li>• Transaction tax rules for countries:           <ul style="list-style-type: none"> <li>• With conditions on the supplier status and on the items or spend categories that you self-assess.</li> <li>• That override the <b>Tax Option</b> with <i>Calculate Self-Assessed Tax</i>.</li> </ul> </li> </ul>
You have invoices with tax codes where 1 tax rate is payable to the supplier and another is payable to the tax authority.	<p>Your Canadian company purchases goods from a Canadian supplier who charges goods and services tax (GST), but not provincial sales tax (PST). You:</p> <ul style="list-style-type: none"> <li>• Pay the GST to the supplier.</li> <li>• Self-assess the PST and pay it to the tax authorities.</li> </ul>	<p>You can set up transaction tax rules that override the <b>Tax Option</b> with:</p> <ul style="list-style-type: none"> <li>• <i>Calculate Self-Assessed Tax</i> for the tax rate that you self-assess.</li> <li>• <i>Calculate Tax Due to Supplier</i> for the tax rate that you pay to the supplier.</li> </ul> <p>Then, when you select a tax code on a transaction:</p> <ul style="list-style-type: none"> <li>• Workday populates the tax option for each tax rate included in the tax code with the tax option you've configured.</li> <li>• You can change the tax option for each tax rate included in the tax code.</li> </ul>

## Concept: Tax ID Groupings

In Workday, you can create tax ID groupings to add more than 1 tax ID to your customer and supplier invoices. This helps you comply with local tax requirements.

You can create 1 tax ID grouping per country. A tax ID grouping comprises 1 or more lines with:

- 1 principal tax ID type.
- 1 or more additional tax ID types.

When you create customer or supplier invoices with a principal tax ID type, Workday saves the additional tax IDs on the same tax ID grouping line with the customer or supplier invoice.

To view the list of all the tax IDs on a taxable document, you can create custom reports with the report fields:

- **Company Tax IDs** for supplier or customer invoices.
- **Customer Tax IDs** for customer invoices.
- **Supplier Tax IDs** for supplier invoices.

**Note:** For Workday to populate the **Customer Tax IDs** report field on customer invoices, you must use a tax code where the **Transaction Tax ID** is required.

## Concept: Automatic Assignment of Transaction Tax IDs on Invoices

When you create a customer invoice or supplier invoice, Workday attempts to assign transaction tax IDs automatically on the document header. Workday determines which tax ID to apply based on these entities on the documents:

- Companies.
- Customers.
- Suppliers.

### Default Assignment of Tax IDs

Workday determines which tax ID to assign from 1 of these sources, in this order of precedence:

1. Any exception rules you configure.
2. The transaction tax ID of the country of the tax code on the document.
3. The transaction tax ID of the country of the primary address.
4. The primary tax ID.

Example:

You create a customer invoice for a customer in France using a UK tax code of standard 20%. You haven't configured any exception rules that apply to this transaction. The customer is not registered for VAT in the UK, so they have no transaction tax ID in the UK. Therefore, Workday uses the primary address of the customer to determine which transaction tax ID to assign on the invoice. In this case, the primary address is in France, where the customer is VAT-registered and has a transaction tax ID, so Workday assigns the transaction tax ID for France as the customer transaction tax ID on the invoice.

### Assignment of Tax IDs When Address-Level Tax Information is Enabled

When you've configured your tenant to record address-level tax information for entities, Workday also considers address-level tax information in the order of precedence:

1. Any exception rules you configure.
2. The address-level transaction tax ID assigned to the shipping address or primary address.
3. The country-level transaction tax ID assigned to the shipping address or primary address.
4. The transaction tax ID of the country of the tax code on the document.
5. The transaction tax ID of the country of the primary address.

**6.** The primary tax ID.

Example:

One of your suppliers has addresses in several states in India. You've enabled address-level tax details on the **Edit Tenant Setup - Financials** task, and updated the supplier information to record the relevant GSTIN for each address, depending on the state.

You haven't configured any exception rules that apply to this transaction, so when you create a supplier invoice for this supplier, Workday uses the address-level tax information for the shipping address to determine which GSTIN to assign as the supplier transaction tax ID on the invoice.

[Configure Transaction Tax ID Exceptions](#) on page 671

[Steps: Set Up Address-Level Tax Information](#) on page 651

## Reference: Tax Options

The **Tax Option** indicates how you want to record tax on transaction lines. Workday populates the tax option from:

- The value of the **Procurement Tax Option** prompt in your company accounting details.
- Transaction tax rules.

### Tax Options

Option	Description
<i>Calculate Self-Assessed Tax</i>	Select this option when: <ul style="list-style-type: none"> <li>• You pay the tax to the tax authority.</li> <li>• You want Workday to calculate the amount of tax that you owe to the tax authority.</li> </ul> Example: A supplier doesn't charge you VAT or GST.
<i>Calculate Tax Due to Supplier</i>	Select this option when: <ul style="list-style-type: none"> <li>• You pay the tax to the supplier.</li> <li>• You want Workday to calculate the tax amount that you owe to the supplier.</li> <li>• The tax amount is partially or fully recoverable.</li> <li>• You report the tax amount to the tax authorities.</li> </ul> Example: A supplier charges you value-added tax (VAT) or goods and services tax (GST).
<i>Enter Tax Due to Supplier</i>	Select this option when: <ul style="list-style-type: none"> <li>• You want to record the tax amount that the supplier charges you.</li> <li>• The tax amount is nonrecoverable.</li> <li>• You don't report the tax amount to the tax authorities.</li> </ul> You must have at least 1 line with a tax applicability that is taxable and enabled for allocation.

Option	Description
	<p>Example: A supplier charges you the United States Sales tax.</p> <p>When you select this option:</p> <ul style="list-style-type: none"> <li>• You can enter the total amount of tax on the transaction header manually.</li> <li>• You can allocate the amount to the taxable lines that are eligible for allocation.</li> <li>• You can't select a tax code.</li> <li>• Workday doesn't create accounting for the tax amount.</li> <li>• Workday doesn't include the tax amount in the tax declaration reports.</li> <li>• Workday doesn't generate any <i>Tax Rate Application</i> or <i>Line Tax Rate Application</i> on the transaction.</li> </ul>

### Availability of Tax Options for Transaction Types

Transaction Type	Tax Options
Ad Hoc Bank Transactions	Workday can calculate how much of the extended amount on ad hoc bank transactions is tax.
Ad Hoc Payments	<ul style="list-style-type: none"> <li>• <i>Calculate Self-Assessed Tax</i>.</li> <li>• <i>Calculate Tax Due to Supplier</i>.</li> <li>• <i>Enter Tax Due to Supplier</i>.</li> </ul>
Cash Sales	Workday can calculate the tax that you collect on cash sales.
Customer Contracts	Workday can estimate the tax that you collect on customer contracts.
Customer Invoices	Workday can calculate the tax that you collect on customer invoices.
Expenses	<p>Workday can calculate how much of the extended amount on an expense line is tax.</p> <p>When your organization doesn't require tax reporting on expense reports, you can hide the <b>Tax</b> check box with the <b>Edit Tenant Setup - Financials</b> task.</p>
Manual Journals	You can enter the tax amount on manual journals.
Procurement Card Transaction Verifications	Workday can self-assess tax on procurement card transaction verifications.
Purchase Orders	<ul style="list-style-type: none"> <li>• <i>Calculate Self-Assessed Tax</i>.</li> <li>• <i>Calculate Tax Due to Supplier</i>.</li> <li>• <i>Enter Tax Due to Supplier</i>.</li> </ul>

Transaction Type	Tax Options
Requisitions	When you enable tax reporting on requisitions for a company, Workday can calculate the amount of tax on requisitions.
Supplier Invoices	<ul style="list-style-type: none"> <li>• <i>Calculate Self-Assessed Tax.</i></li> <li>• <i>Calculate Tax Due to Supplier.</i></li> <li>• <i>Enter Tax Due to Supplier.</i></li> </ul>

**Reference: Transaction Tax Business Objects**

To report on taxes for different use cases, Workday saves transaction tax details and amounts in various business objects. This table details how Workday calculates transaction taxes by business object:

Business Object	Description
Taxable Document	<p>Workday calculates the total tax on a taxable document. Example: Total transaction tax on a supplier invoice.</p> <p>For ad hoc bank withdrawals and expense reports, which are tax-inclusive, Workday calculates how much of the total amount is tax.</p> <p>For tax-exclusive documents, Workday adds tax to the extended amount.</p>
Taxable Document Line	Workday calculates the transaction and recoverable tax on the lines of taxable documents.
Tax Rate Application (TRA)	<p>On taxable documents, Workday creates 1 TRA business object per combination of tax:</p> <ul style="list-style-type: none"> <li>• Applicability.</li> <li>• Code.</li> <li>• Option.</li> <li>• Point date.</li> <li>• Rate.</li> <li>• Recoverability.</li> </ul> <p>Workday consolidates the tax amounts at the TRA level to create tax accounting for tax documents.</p>

Business Object	Description
	Example: You create a supplier invoice with 4 lines that share the same tax attributes. Workday creates 1 TRA for the supplier invoice.
Payment Tax Rate Application (PTRAs)	Workday creates 1 PTRAs business object for each payment that you apply to an invoice. PTRAs enable you to report on taxes at the time of payment.
Line Tax Rate Application (LTRAs)	Workday distributes the tax amounts of the TRA business objects to the transaction lines and creates 1 LTRA business object per transaction line. LTRAs enable you to report to tax authorities that have different reporting requirements based on spend categories or items.
Manual Journal Tax Rate Application	On manual journals, Workday saves the tax amounts that you enter for accounting and reporting purposes.

**Related Information****Concepts**

[Concept: Business Objects, Data Sources, and Fields](#)

**FAQ: Why do 2 identical invoice lines have different tax amounts?**

To calculate transaction tax amounts on a taxable document, Workday first calculates these amounts at the tax rate application (TRA) level:

TRA	Calculation
Taxable Amount	The sum of the extended amounts on the lines that share the TRA attributes.
Transaction Tax Amount	Tax rate × TRA taxable amount
Recoverable Tax Amount	Recoverability percentage × TRA transaction tax amount

Workday rounds these amounts based on the rounding definition of your tax authority.

Then, Workday distributes the tax amounts to the lines on the taxable document and rounds them.

To balance the sum of the line tax amounts with the TRA tax amounts, Workday adjusts the line with the greatest extended amount. When several lines have the same extended amount, Workday adjusts only the line with the lowest line ID. As a result, 2 identical lines might have different transaction tax amounts.

Workday applies the same calculation and rounding to withholding taxes.

Example: You want to calculate transaction tax amounts on a supplier invoice with these lines:

Line ID	Extended Amount (USD)	Tax Rate (%)
1	100.05	8
2	100.05	8
3	100.05	8
4	100.05	8

On all these lines, you enter the same tax:

- Applicability
- Code
- Option
- Rate
- Recoverability

You also configure the tax authority to round tax amounts to the nearest 2 decimal places.

Since these lines share the same tax attributes, Workday creates 1 TRA:

TRA	Calculation	Total
Taxable Amount	$100.05 \times 4$	400.20
Tax Amount	$8\% \times 400.20$	32.016 (rounded to 32.02)

Workday then:

- Distributes the TRA transaction tax amount to the 4 lines:  $32.02 \div 4 = 8.005$ , rounded to 8.01, for a total of 32.04.
- Adjusts the transaction tax amount of line 1 to 7.99 to balance the line and TRA totals to 32.02.

As a result, the transaction tax amount of line 1 differs from the other lines:

Line ID	Extended Amount (USD)	Tax Rate (%)	Tax Amount (USD)
1	100.05	8	7.99
2	100.05	8	8.01
3	100.05	8	8.01
4	100.05	8	8.01

## Transaction Tax Rules

---

### Setup Considerations: Transaction Tax Rules

You can use this topic to help make decisions when planning your configuration and use of transaction tax rules. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Transaction tax rules in Workday enable you to add these tax attributes on financial transactions automatically:

- Tax applicability.
- Tax code.
- Tax recoverability for expenses and supplier accounts.

- Tax option for supplier accounts only.

## **Business Benefits**

Transaction tax rules:

- Automate the selection of tax attributes to minimize the number you must enter manually on taxable documents.
- Populate tax attributes for specific countries, items, spend categories, and tax item groups so that you don't have to determine which attributes to use on transactions.
- Increase the accuracy of tax reporting.
- Simplify data entry.

## **Use Cases**

You can create transaction tax rules to populate tax attributes on financial documents to:

- Automatically add the tax code of the travel destination where you incur an expense on the expense line.
- Automatically include the ship-to address country on a domestic purchase.
- Automatically charge zero-rated tax on an intra-EU customer invoice.

When a supplier doesn't charge tax, you can:

- Select the self-assess tax option at the line level of the financial document.
- Create a transaction tax rule to select the self-assess tax option automatically.

## **Questions to Consider**

Questions	Considerations
Do you need a minimum set of transaction tax rules?	You can create item rules for exceptions instead of creating tax rules for all scenarios.
Can you configure tax rule exceptions to account for tax rules by country?	You can configure exceptions to transaction tax rules to use a different address for the default tax attributes on a transaction. Workday matches the country tax rule to the country of the alternative address.
Can you configure tax rules for self-assessed tax selection?	You can select a self-assess tax option on supplier invoices and invoice adjustments at the line level.
Can you configure country-specific tax rules?	You can use tax statuses to configure country-specific tax rules based on the status of a customer, supplier, or company, such as: <ul style="list-style-type: none"> <li>• <i>EU Company VAT Registered</i></li> <li>• <i>EU Company Exempt</i></li> </ul>

## **Recommendations**

Create generic transaction tax rules for particular countries and add item rules for exceptions.

## **Requirements**

No impact.

## Limitations

No impact.

## Tenant Setup

You can select tenant-wide configurations on the **Edit Tenant Setup - Financials** task to:

- **Enable Company Tax Options for Supplier Invoice Request Invoices**  
Populate transaction tax rules for supplier invoices created from supplier invoice requests.
- **Enable Tax Defaulting for International Expenses**  
Populate tax codes and tax applicability for international expenses.
- **Hide Tax Checkbox on Expense Report**  
Prevent employees from specifying tax values on their expense reports or enable tax reporting on expense reports.

## Security

Enable the *Set Up: Tax* domain in the Common Financial Management functional area to configure transaction tax rules.

## Business Processes

You can add **Review Tax** as an action step on the *Expense Report Event* business process. This ensures that tax managers can review, modify, and approve tax attributes on an expense report.

## Reporting

No impact.

## Integrations

These web services create transaction tax rules:

- *Create Transaction Tax Rule Exception for ~Country~*: creates a transaction tax rule that is an exception to all other transaction tax rules for a country.
- *Create Transaction Tax Rule for ~Country~*: creates a transaction tax rule for a country.
- *Create Transaction Tax Rule for Items*: creates a transaction tax rule for an item within a country.
- *Create Tax Rule for Worktags*: creates a transaction tax rule for a worktag that applies to an item within a country.

## Connections and Touchpoints

Transaction tax rules use the ship-to address, item, and spend category to populate tax attributes at the line level in these areas:

- Ad hoc payments
- Customer contracts
- Customer invoices
- Purchase orders
- Requisitions
- Supplier invoices

Transaction tax rules use the originating region, destination region, item, and spend category to populate tax attributes at the line level in expense reports.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Tasks

- [Steps: Configure Transaction Tax Rules on page 663](#)
- [Configure Transaction Tax Rules for Items on page 665](#)
- [Configure Transaction Tax Rules for Countries on page 666](#)
- [Configure Transaction Tax Rules for Worktags on page 669](#)
- [Configure Transaction Tax Rule Exceptions on page 670](#)

## Steps: Configure Transaction Tax Rules

### Prerequisites

Security: These domains in the Common Financial Management functional area:

- [Set Up: Company General](#)
- [Set Up: Tax](#)

### Context

When you configure transaction tax rules, Workday automatically populates the appropriate tax code and tax applicability when you enter taxable documents.

### Steps

1. Access the **Maintain Transaction Tax Item Groups** task.

Create groups to:

- Organize purchase, expense, and sales items.
- Use as dimensions in transaction tax rules for items.

When you assign items to a group, you can include only items of the selected type. In transaction tax rules for items, you can use:

- Sales item groups for revenue rules.
- Purchase item and expense item groups for spend rules.

2. Access the **Assign Items to Transaction Tax Item Group** task.

3. Access the **Maintain VAT or GST Groups** task.

Create groups to:

- Organize companies that share the same Value Added Tax (VAT) or Goods and Services Tax (GST) requirements.
- Use as dimensions in transaction tax rules for countries.

4. Access the **Assign Companies to VAT or GST Group** task.

Add 2 or more companies to a group. Use effective dates to track changes to the group over time.

5. Access the **Maintain Transaction Tax Statuses** task.

Create transaction tax statuses for a country, such as *EU Company VAT Registered* or *EU Company Exempt*. You can associate these tax statuses with companies, customers, and suppliers. You can then use them as a dimension in transaction tax rules for countries.

**6. Access the **Edit Company Tax Details** task.**

Configure transaction tax statuses by company to use as matching criteria in transaction tax rules for countries.

As you complete the **Tax Statuses** tab, consider:

Option	Description
<b>Country</b>	Select a country to associate with a specific tax status for the company. You can only select 1 transaction tax status per country.
<b>Transaction Tax Status</b>	Select the appropriate tax status that applies to the company.

**7. [Create Suppliers](#).**

You can assign **Tax Statuses** by country to a supplier to populate tax information automatically.

**8. [Create Customers](#) on page 748.**

You can assign **Tax Statuses** by country to a customer to populate tax information automatically.

**9. Access the **Maintain Tax Rule Exception Groups** task.**

Create a group to enable exceptions for a ship-to country with tax rules different from the shipping country. You can use these exception groups to create tax rules for a country and tax rule exceptions for ship-to countries.

**10. [Configure Transaction Tax Rule Exceptions](#) on page 670.**

Configure tax exception rules for countries and items to determine if the place of supply country should be different than the ship-to address country on an invoice. The ship-to address country on an invoice is usually the place of supply, but you may need to override this when the billing company, supplier, or customer's country should be the country for tax purposes.

**11. [Configure Transaction Tax ID Exceptions](#) on page 671.**

Configure exception rules to override the selection of transaction tax IDs for companies, customers, and suppliers on customer invoices and supplier invoices.

**12. [Configure Transaction Tax Rules for Countries](#) on page 666.**

Create a transaction tax rule for each country where you file a tax declaration.

**13. [Configure Transaction Tax Rules for Items](#) on page 665.**

Create transaction tax rules for revenue and spend items to be used in your transaction tax rules for country. By using the transaction tax item groups, one item rule line defaults for all purchase, sales, or expense items in the tax item group.

**14. [Configure Transaction Tax Rules for Worktags](#) on page 669.**

Configure tax defaulting rules using worktags on document lines to enable Workday to populate transaction tax attributes at the line level on supplier invoices, purchase orders, and ad hoc payments.

## Result

Workday evaluates transaction tax rules in this order:

1. Transaction tax rules for countries based on VAT or GST groups. Only when it's a direct intercompany transaction and both companies are in the same VAT or GST group.
2. Transaction tax rules for countries based on exception groups.
3. General transaction tax rules for countries.
4. Transaction tax rules for items.
5. Transaction tax rules for worktags.

These rules override all other tax transaction rules.

## Configure Transaction Tax Rules for Items

### Prerequisites

- Create a transaction tax item for a country.
- Create transaction tax item groups.
- Create tax applicability.
- Security: *Set Up: Tax domain* in the Common Financial Management functional area.

### Context

You can override all other tax codes and tax applicability by defining tax code and tax applicability rules. Workday uses these rules to calculate taxes for specific items.

### Steps

1. Access the **Create Transaction Tax Rule for Items** task.
2. In the **Tax Item Rule Type** prompt, select:
  - *Revenue* for sales items.
  - *Spend* for purchase items and expense items.
3. As you complete the task, consider:

Option	Description
<b>Spend Category</b> <b>Revenue Category</b>	Workday populates the revenue or spend item for selection depending on whether you specify <b>Revenue</b> or <b>Spend</b> in the <b>Tax Item Rule Type</b> prompt. Select a category to apply the rule line to all items in that category.  The <b>Revenue Category</b> or <b>Spend Category</b> is unavailable for selection if you specify the <b>Tax Item Group</b> .
<b>Tax Item Group</b>	Select a tax item group to apply the rule line to all items in that item group.  The <b>Tax Item Group</b> is unavailable for selection if you specify the <b>Revenue Category</b> , <b>Spend Category</b> , or <b>Item</b> .
<b>Item</b>	Select an item to apply the rule line to only that item.  The <b>Item</b> is unavailable for selection if you specify the <b>Tax Item Group</b> .
<b>Tax Applicability Override</b>	Select the tax applicability to use on transaction lines for this rule. This value overrides other tax applicabilities that Workday automatically populates on revenue or spend transactions.
<b>Tax Code Override</b>	Select the tax code to use on transaction lines for this rule. This value overrides the tax code specified in a tax rule for a country that references this rule.
<b>Tax Point Date Type Override</b>	Select a tax point date type to override the default on spend transaction lines for this rule.

Option	Description
	<p><i>Transaction Date</i> is invalid on spend transaction lines. When you select <i>Transaction Date</i>, Workday instead populates the <i>Invoice/Adjustment Date</i> or, when VAT on payment is enabled for the company, the <i>Payment Date</i>.</p> <p>When you select <i>Goods/Services Delivery Date</i>, Workday doesn't populate this date on supplier invoices created using web services. Since a tax point date is required for <i>Goods/Services Delivery Date</i>, and invoices created using web services can be approved automatically, Workday doesn't populate the <i>Goods/Services Delivery Date</i> to prevent the creation of bad data.</p>
<b>Tax Recoverability Override</b>	<p>Select the tax recoverability to use on transaction lines for <b>Tax Code Override</b> tax rates. This rule overrides other tax recoverabilities that Workday automatically populates on spend transactions.</p>
<b>Tax Option Override</b>	<p>Select the tax option to use on specific tax rates for transaction lines. This rule overrides other tax options that Workday automatically populates on spend transactions.</p>
<b>Worktags Tax Rule</b>	<p>Displays for spend tax item rules only.</p> <p>When you select a transaction tax rule for worktags, Workday evaluates the worktags within the transaction. If the worktags match the worktag-level tax rule, Workday populates tax details from this rule.</p>

### Example

If using both procurement and expenses, account for purchase items and expense items. You design a country tax rule that focuses only on the tax status of the company transaction. That rule might match on both supplier invoices and expense transactions and use the associated item tax rule.

### Next Steps

You can associate your tax rules for items with tax rules for countries.

#### Related Information

##### Tasks

[Configure Transaction Tax Rules for Countries](#) on page 666

[Configure Transaction Tax Rules for Worktags](#) on page 669

## Configure Transaction Tax Rules for Countries

### Prerequisites

- Create Value Added Tax (VAT) or Goods and Services Tax (GST) groups.
- Create transaction tax statuses.
- (Optional) Create tax rule exception groups.
- Security: *Set Up: Tax* domain in the Common Financial Management functional area.

## Context

For each country and its regions, you can specify the default tax code and tax applicability. Workday automatically populates this information onto spend and revenue transaction lines that meet the rule criteria. You can also create transaction tax rules for countries for VAT or GST groups and exception groups.

## Steps

1. Access the **Create Transaction Tax Rule for Country** task.
2. Select the **Country** that the transaction tax rule applies to.

To determine the country rule that applies to a purchase or revenue transaction, Workday uses the ship-to address on the supplier or customer invoice. For expense transactions, Workday uses the travel country on the expense line or travel country preference on the employee profile.

Workday uses the transaction tax rule when the **Country** you select matches the:

- Ship-to address on supplier or customer invoices for purchase and revenue transactions.
  - Travel country on expense lines for expense transactions.
  - Travel country preference on the employee profile for expense transactions.
3. Select the type of transaction tax rule that you want to create:
    - **VAT Group:** Select to create a rule for companies in the same country that qualify for special consolidated VAT or GST filing and exemptions. You can use these rules for direct intercompany transactions. Workday uses this rule based on whether the company and intercompany company are within the same VAT or GST group.
    - **Exception Group:** Select to create rules for transactions where the ship-to country isn't the correct country of taxation.
    - **None of the Above:** Use this default for standard tax rules for countries.
  4. As you complete the task, consider:

Option	Description
<b>Company</b>	You can select multiple companies to create a rule that addresses scenarios for recoverability percentages.
<b>Transaction Tax Status</b>	You can match on transaction tax statuses for company, customer, or supplier based on the country.

5. Select the region of a country such as **State, Territory, or Province** for defining a tax rule.  
When defining country rules for expense items, leave country region and **Postal Code Range** blank.
6. As you complete the task, consider:

Option	Description
<b>Postal Code Range Start</b>	To have Workday automatically populate the tax code to all transactions whose ship-to address is within that jurisdiction, leave blank.  When defining country rules for expense items, leave country region and <b>Postal Code Range</b> blank.
<b>Postal Code Range End</b>	To have Workday automatically populate the tax code to all transactions whose ship-to address is within that jurisdiction, leave blank.

Option	Description
	When defining country rules for expense items, leave country region and <b>Postal Code Range</b> blank.
<b>Classification</b>	Select <b>Goods</b> or <b>Services</b> so that Workday will automatically populate tax attributes, with items or categories classified as either goods or services on spend or revenue transaction lines.
<b>Default Tax Applicability</b>	Select to have Workday automatically populate the tax applicability on the spend or revenue transaction lines that meet this rule line criteria.
<b>Default Tax Code</b>	Select to have Workday automatically populate the tax code on the spend or revenue transaction lines that meet this rule line criteria.
<b>Default Tax Point Date Type</b>	<p>Select the default tax point date type to populate on spend transaction lines.</p> <p><i>Transaction Date</i> is invalid on spend transaction lines. When you select <i>Transaction Date</i>, Workday instead populates the <i>Invoice/Adjustment Date</i> or, when VAT on payment is enabled for the company, the <i>Payment Date</i>.</p> <p>When you select <i>Goods/Services Delivery Date</i>, Workday doesn't populate this date on supplier invoices created using web services. Since a tax point date is required for <i>Goods/Services Delivery Date</i>, and invoices created using web services can be approved automatically, Workday doesn't populate the <i>Goods/Services Delivery Date</i> to prevent the creation of bad data.</p>
<b>Default Tax Recoverability</b>	Select the tax recoverability for the selected tax rates in the <b>Default Tax Code</b> .
<b>Default Tax Option</b>	Select the default tax option that Workday populates on spend transaction lines that meet the criteria for this rule.
<b>Tax Rule for Spend Items</b>	Select a tax rule for spend items to have Workday evaluate the items within the transaction.
<b>Tax Rule for Revenue Items</b>	Select a tax rule for revenue items to have Workday evaluate the items within the transaction.

## Next Steps

You can configure transaction tax rule exceptions.

### Related Information

#### Tasks

[Configure Transaction Tax Rules for Items](#) on page 665

[Configure Transaction Tax Rules for Worktags](#) on page 669

## Configure Transaction Tax Rules for Worktags

### Prerequisites

- Create transaction tax rules for countries.
- Create groups for transaction tax items.
- Create transaction tax rules for items.
- Create tax applicability.
- Security: *Set Up: Tax domain* in the Common Financial Management functional area.

### Context

You can define tax defaulting rules using worktags on document lines to automate the selection of:

- Tax codes.
- Tax applicability.
- Tax recoverability.
- Tax options.

Workday populates these tax attributes at the line level on supplier invoices, purchase orders, and ad hoc payments.

Example: Your healthcare company buys a large number of bandages from a supplier. The supplier invoices the bandages to your company, and your company distributes them to 3 different cost centers: one for a hospital, one for a pharmacy, and another for a medical center. The supplier configures worktag rules for the cost centers to populate the correct tax details on these supplier invoice lines:

- Zero-rated VAT for the hospital.
- A standard 20 percent VAT for the medical center.
- A specific tax recoverability percentage for the pharmacy.

### Steps

1. Access the **Create Transaction Tax Rule for Worktags** task.
2. As you complete the task, consider:

Option	Description
<b>Order</b>	The order of the worktag rules is very important. Workday evaluates rules from the top down and from the most general to the most specific. Place the most general rule first in the list and the most specific rule last in the list.
<b>Worktags</b>	Select a worktag to apply the rule to that worktag only.  The <b>Worktag</b> is available for selection only when you specify a <b>Tax Item Group</b> . When you select a tax item group, Workday applies the worktag rule to all items in that item group.
<b>Tax Applicability Override</b>	Select the tax applicability to use on transaction lines for this rule. This value overrides other tax applicabilities that Workday automatically populates on revenue or spend transactions.
<b>Tax Code Override</b>	Select the tax code to use on transaction lines for this rule. This value overrides the tax code

Option	Description
	specified in a tax rule for a country that references this rule.
<b>Tax Point Date Type Override</b>	<p>Select a tax point date type to override the default on spend transaction lines for this rule.</p> <p><i>Transaction Date</i> is invalid on spend transaction lines. When you select <i>Transaction Date</i>, Workday instead populates the <i>Invoice/Adjustment Date</i> or, when VAT on payment is enabled for the company, the <i>Payment Date</i>.</p> <p>When you select <i>Goods/Services Delivery Date</i>, Workday doesn't populate this date on supplier invoices created using web services. Since a tax point date is required for <i>Goods/Services Delivery Date</i>, and invoices created using web services can be approved automatically, Workday doesn't populate the <i>Goods/Services Delivery Date</i> to prevent the creation of bad data.</p>
<b>Tax Recoverability Override</b>	Select the tax recoverability to use on transaction lines for <b>Tax Code Override</b> tax rates. This rule overrides other tax recoverabilities that Workday automatically populates on spend transactions.
<b>Tax Option Override</b>	Select the tax option to use on specific tax rates for transaction lines. This rule overrides other tax options that Workday automatically populates on spend transactions.

## Next Steps

After you create your worktags tax rules, you can:

- Assign the new worktags tax rules to a transaction tax rule for items.
- Assign the transaction tax rule for items to a transaction tax rule for a country.

## Related Information

### Tasks

[Configure Transaction Tax Rules for Items](#) on page 665

[Configure Transaction Tax Rules for Countries](#) on page 666

## Configure Transaction Tax Rule Exceptions

### Prerequisites

- Create tax rule exception groups.
- Create transaction tax statuses.
- Create transaction tax item groups.
- Configure transaction tax rules for countries based on exception groups.
- Security: *Set Up: Tax domain* in the Common Financial Management functional area.

### Context

You can configure rule exceptions for transaction tax rules when the ship-to country isn't the appropriate country to match country tax rules.

## Steps

- Access the **Create Transaction Tax Rule Exception for Country** task.
- Design the country rule lines from top to bottom.

The best practice is to place rule lines for your most specific use cases first. Place less specific rule lines toward the bottom.

As you complete the task, consider:

Option	Description
<b>Transaction Tax Status</b>	Select to match using transaction tax statuses for company, customer, or supplier based on the country.
<b>Transaction Tax Item Group</b>	Select to have the rule line apply to all items with an item group rather than adding a line for each item.
<b>Spend Category</b>	Select to define purchase category, which automatically updates the <b>Item</b> column to list purchase items only.  If you leave <b>Item</b> blank, select a spend category to apply the rule line to all purchase items with the selected category.
<b>Revenue Category</b>	Select to define sales category, which automatically updates the <b>Item</b> column to list sales items only.  If you leave <b>Item</b> blank, select a revenue category to apply the rule line to all sales items with the selected category.
<b>Item</b>	Select a purchase or sales item to create a rule line that applies specifically to that item. To have the rule apply to all items in a spend or revenue category, leave blank.
<b>Exception Group</b>	If the transaction matches the dimensions of this rule line, Workday uses the transaction tax rule for country based on this exception group.

## Example

The country, tax status, or item type might produce a different answer for a supplier invoice versus a customer invoice in cross border scenarios.

- Transaction ship-to is France, buyer is French VAT registered, but Netherlands (NL) supplier isn't French VAT registered.
- Supplier Invoice self-assesses VAT in country of Ship To (France).
- Related customer invoice charges zero rated (NL) VAT in billing country (NL) of the company.

## Configure Transaction Tax ID Exceptions

### Prerequisites

Security: These domains in the Common Financial Management functional area:

- Set Up: Company General*

- Set Up: Tax

## Context

Configure exception rules to override the default selection of transaction tax IDs for companies, customers, and suppliers on customer invoices and supplier invoices. This ensures that Workday automatically populates the tax IDs that you specify on customer and supplier invoices.

## Steps

1. Access the **Maintain Transaction Tax ID Exception Rules** task.

2. Select the:

- **Revenue** tab to create tax ID exception rules for sales items.
- **Spend** tab to create tax ID exception rules for purchase items.

3. Create a tax ID exception rule.

Workday processes rule lines on the invoice from the most specific rule to the least specific rule so you should order your revenue and spend tax ID exception rule lines accordingly. Workday processes:

- The invoice header for the parties to the invoice.
- The ship-to address for the country.
- The invoice lines for the tax applicability.

Workday applies the highest ordered rule that results in a match.

4. As you complete the grid, consider:

Option	Description
<b>Company</b> <b>Supplier</b>	Select one or more companies or suppliers that the exception rule applies to on customer or supplier invoices.
<b>Statutory Invoice Type</b>	Select a country-specific statutory invoice if you use invoice types to categorize your invoices in compliance with government requirements.  When you select a <b>Company</b> , the prompt only contains invoice types that you've configured for the country of that company.
<b>Ship-to-Country</b>	Select one or more countries that the exception rule applies to on a spend or revenue transaction. Workday uses the exception rule when the country or countries you select match the ship-to address on supplier or customer invoices.
<b>Ship-to-State/Region</b>	Select a ship-to state or region within the ship-to country. The ship-to state or region is only selectable if you select only one ship-to country.
<b>Logic for Company Tax ID Type</b> <b>Logic for Customer Tax ID Type</b> <b>Logic for Supplier Tax ID Type</b>	Select: <ul style="list-style-type: none"> <li>• <i>Default Behavior</i> to return the default tax ID for the company, customer, or supplier.</li> <li>• <i>Specific Tax ID Type</i> to return the exception tax ID that you set up for the company, customer, or supplier.</li> <li>• <i>Transaction Tax ID of Primary Business Address Country</i> to return the tax ID for the primary business address of the company.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <i>Transaction Tax ID of Ship-To Country</i> to return the tax ID for the ship-to country of the company.</li> </ul> <p>When you select any option other than <i>Default Behavior</i>, and that option doesn't return a tax ID for the company, customer, or supplier, Workday returns the default tax ID.</p>
<b>Company Tax ID Type Override</b> <b>Customer Tax ID Type Override</b> <b>Supplier Tax ID Type Override</b>	Select one of these options to choose the exception tax ID that you want to override the default tax ID.

## Result

Workday uses the tax ID exception rule on the invoice to return the correct tax ID on customer and supplier invoices.

## Example

A customer receives goods in Northern Ireland, which is part of the UK. The company that ships the goods is in France, which is an EU country. You have set up 2 UK tax IDs for the customer:

- One for UK VAT, which is set as the transaction tax ID.
- One for UK Northern Ireland VAT, which is not set as a transaction tax ID.

When Workday processes the customer invoice, the transaction tax ID that Workday normally returns for the customer is the UK VAT tax ID. You set up a transaction tax ID exception rule so that Workday returns the UK Northern Ireland VAT tax ID for the customer instead.

## Next Steps

- Create a transaction tax rule for each country where you file a tax declaration. See [Configure Transaction Tax Rules for Countries](#) on page 666.
- Create transaction tax rules for revenue and spend items to be used in your transaction tax rules for country. By using the transaction tax item groups, one item rule line defaults for all purchase, sales, or expense items in the tax item group. See [Configure Transaction Tax Rules for Items](#) on page 665.
- Create tax defaulting rules using worktags on document lines to enable Workday to populate transaction tax attributes at the line level on supplier invoices, purchase orders, and ad hoc payments. See [Configure Transaction Tax Rules for Worktags](#) on page 669.

# Withholding Taxes

---

## Steps: Set Up Withholding Taxes

### Prerequisites

Security: *Set Up: Tax domain* in the Common Financial Management functional area.

### Context

You can configure Workday to automatically calculate and post withholding tax at the line level on taxable documents. This automation:

- Reduces manual entry mistakes and calculation errors.
- Enables you to comply with tax withholding and reporting requirements.

## Steps

**1. Set Up Tax Authorities** on page 645.

When you want to pay your tax authority with supplier invoices, create the tax authority from an existing business entity and select your supplier.

**2. Set Up Tax Categories** on page 646.

Select the **Withholding Tax** check box for Workday to calculate withholding taxes for spend and revenue transactions. You associate these tax categories with withholding tax rates.

**3. Set Up Tax Rates for Withholding Tax** on page 674.

**4. Access the Maintain Withholding Tax Codes task.**

You can configure withholding tax codes by country, assigning multiple withholding tax rates to each tax code. During transaction processing, you select a withholding tax code for each document line that is subject to withholding tax. Workday calculates a separate amount for each tax rate of the tax code.

The **Tax Rate** lists withholding tax rates available for the country. Specify 1 or more rates that collectively make up a complete tax percentage for the tax code.

**5. Set Up Company Tax IDs for Financial Transactions** on page 650.

**6. Set Up Account Posting Rules** on page 84.

Configure the *Withholding Tax Payable* account posting rule for your company. Posting to a liability, asset, or expense account depends on the collection or payment of taxes.

**7. Configure how Workday populates tax attributes on revenue transactions.**

See [Steps: Set Up Taxes for Revenue Transactions](#) on page 1018.

**8. Configure how Workday populates tax attributes on spend transactions.**

See [Steps: Set Up Taxes for Purchase Transactions](#).

**9. (Optional) Access the Maintain Withholding Tax Exemptions task.**

You can create a withholding tax exemption on a withholding tax rate for a supplier. Workday automatically applies the exempt withholding percentage on the supplier invoice when calculating the withholding tax.

## Result

When you create taxable documents such as customer invoices and supplier invoices, Workday calculates the withholding tax amounts and resulting accounting for the lines. Workday also calculates the withholding tax accounting for realized payments on supplier invoices during settlement.

For a list of tax-related reports, access **Workday Standard Reports** and select the *Set Up Taxes* report category.

### Related Information

#### Tasks

[Set Up Tax Rates for Withholding Tax](#) on page 674

## Set Up Tax Rates for Withholding Tax

### Prerequisites

- Create tax authorities for the country. See [Set Up Tax Authorities](#) on page 645.
- Set up tax categories for withholding tax. See [Set Up Tax Categories](#) on page 646.
- Security: *Set Up: Tax* domain in the Common Financial Management functional area.

## Context

Set up the withholding tax rates for each tax authority within a country and categorize them. Configure single or progressive tax rates. You can also configure individual thresholds to apply the withholding tax only when transactions cross the thresholds that you specify.

## Steps

1. Access the **Create Withholding Tax Rate** task.
2. As you complete the task, consider:

Option	Description
<b>Withholding Tax Category</b>	<p>Select a tax category that you enable for withholding tax.</p> <p>When you select a third-party tax category, you can no longer:</p> <ul style="list-style-type: none"> <li>• Select realization point types of <i>Payment</i>.</li> <li>• Enter tax rate details including tax base type, tax base percentage, rate type, and threshold type.</li> <li>• Configure threshold settings and progressive rate tiers.</li> </ul>
<b>Realization Point</b>	<p>Select when to calculate withholding tax and generate accounting:</p> <ul style="list-style-type: none"> <li>• <i>Payment</i>: Calculate estimated withholding tax amounts at invoice time for supplier invoices, but generate accounting at time of payment. Withholding tax amounts at time of payment include any discounts.</li> <li>• <i>Invoice</i>: Calculate withholding tax amounts and generate accounting at invoice time.</li> <li>• <i>Customer Invoice Self Withholding</i>: Calculate withholding amounts and generate accounting at invoice time for customer invoices. Record the accounting for withholding tax expense and payable for the company issuing the customer invoice.</li> </ul>
<b>Third Party Tax Rate</b>	<p>Workday populates this check box from the <b>Withholding Tax Category</b> that you select.</p>
<b>Tax Base Type</b>	<p>Select the base amount on which to calculate withholding tax to deduct from invoice payment:</p> <ul style="list-style-type: none"> <li>• <i>Gross Amount</i>: Withhold on the extended line amount and transaction tax amount.</li> <li>• <i>Net Amount</i>: Withhold on the extended line amount only. Excludes transaction taxes and discounts.</li> <li>• <i>Tax</i>: Withhold on the line amount only of the transaction tax.</li> </ul>
<b>Tax Base Percentage</b>	<p>Select to calculate the withholding tax on the percent of the tax base.</p>

Option	Description
	Example: The withholding tax rate is 10%. The tax base is 50% of net amount. If the extended line amount is 1000 HKD, then the withholding amount is 10% of 500 HKD, 50 HKD.
<b>Rate Type</b>	Select single or progressive tax rate.
<b>Threshold Type</b>	<p>Select the type of threshold to apply on the withholding tax rate:</p> <ul style="list-style-type: none"> <li>• <b>Individual:</b> Calculate withholding tax based on individual invoice or payment.</li> <li>• <b>Accumulated:</b> Calculate withholding tax based on accumulated invoice or payment.</li> <li>• <b>None of the Above:</b> Calculate withholding tax without thresholds.</li> </ul> <p>Select <b>Net Amount</b> to set up withholding tax rates with thresholds or to create a multilayered withholding tax rate. Workday calculates withholding tax amounts only when transactions meet the threshold amounts.</p>
<b>Accumulation Schedule</b>	Specify the fiscal schedule for the withholding tax rate.
<b>Include In Progress for Accumulation</b>	Clear this check box to exclude all in-progress invoices when calculating the withholding tax rate using accumulated thresholds.

3. Specify an **Effective Date**. The effective date is the initial invoice or payment date on which Workday applies the associated tax rate percentage, thresholds, or progressive rate tiers.
4. Specify the tax rate percentage to calculate the withholding tax.
5. Specify the individual or accumulated threshold limits on the withholding tax rate.
  - **Transaction Threshold Amount:** Withhold when the transaction amount meets the transaction threshold.
  - **Threshold Combination:** Calculate withholding tax rate when transaction threshold **AND** rate thresholds are met, or calculate when transaction **OR** rate threshold is met.
  - **Rate Threshold Amount** for individual threshold settings: Withhold when the rate amount meets the rate threshold.

You can't add a threshold amount for a **Realization Point of Payment**.

  - **Rate Threshold Amount** for accumulated threshold settings: Enter the threshold amount for the withholding tax rate.
6. Specify the values for progressive tiers and the tax rate percentage to calculate the withholding tax.

## Next Steps

Configure withholding tax codes by country based on the tax rates.

## Related Information

### Concepts

Concept: [Effective Dating for Transaction and Withholding Tax Rates](#) on page 741

Concept: [Withholding Tax Accounting](#) on page 683

## Steps: Configure Withholding Tax Rules

### Prerequisites

Security: These domains in the Common Financial Management functional area:

- Set Up: Company General
- Set Up: Tax

### Context

You can configure withholding tax rules so that Workday automatically populates the appropriate withholding tax codes when you enter taxable purchase and revenue documents.

### Steps

1. Access the **Maintain Withholding Tax Item Groups** task.

Create groups to:

- Organize purchase, expense, and sales items.
- Use as dimensions in transaction tax rules for items.

As you complete this task, consider:

Option	Description
<b>Tax Item Group Type</b>	Select the type of items that you want to include in the group. When you assign items to a group, you can include only items of the selected type. In withholding tax rules for items, you can use sales item groups for revenue rules and purchase item groups for spend rules.
<b>Country</b>	You can create multiple tax item groups of the same or different types for a country.

2. Access the **Assign Items to Withholding Tax Item Group** task.

Add specific purchase or sales items to your withholding tax item groups. When you select this item group as a dimension in withholding tax rules for items, Workday evaluates all items in the group. You can only assign a specific item to 1 group for each country.

3. Access the **Maintain Withholding Tax Statuses** task.

Create withholding tax statuses relevant to a country. It's best to use more precise names, such as *Individual-Non Resident- J1 or F1 Visa*. You can then associate these tax statuses with companies, customers, and suppliers and use them as a dimension in tax defaulting rules for countries.

4. Access the **Edit Company Tax Details** task.

Configure withholding tax statuses by company to use as matching criteria in withholding tax rules for countries.

As you complete the **Tax Statuses** tab, consider:

Option	Description
<b>Country</b>	Select a country to associate with a specific tax status for the company. You can only select 1 withholding tax status per country.
<b>Withholding Tax Status</b>	Select the appropriate tax status that applies to the company.

## 5. Create Suppliers.

Assign **Tax Statuses** by country to a supplier for tax defaulting.

## 6. Create Customers on page 748.

Assign **Tax Statuses** by country to a customer for tax defaulting.

## 7. Configure Withholding Tax Rules for Countries on page 678.

## 8. Configure Withholding Tax Rules for Items on page 679.

## 9. Configure Withholding Tax Rules for Worktags on page 680.

## Result

When you create taxable purchase and revenue documents, Workday checks them against your withholding tax rules to determine the appropriate withholding tax code to use in transactions. If the rule dimensions and transaction data match, Workday uses the tax defaults from the matching rule line. Workday processes rule lines from the most specific match to the least specific match. Workday evaluates tax rules in this order:

1. Withholding tax rules for countries.

2. Withholding tax rules for items if the matching tax rule line for the country contains a tax rule for spend or revenue items.

If the items on the transaction match a tax rule line for items, Workday uses the withholding tax code.

The tax code comes from the matching rule line for the item instead of the country.

3. Withholding tax rules for worktags if the matching tax rule line for the item contains a tax rule for spend items.

## Related Information

### Tasks

#### [Steps: Set Up Taxes for Purchase Transactions](#)

#### [Steps: Set Up Taxes for Revenue Transactions on page 1018](#)

## Configure Withholding Tax Rules for Countries

### Prerequisites

- Create withholding tax item groups.
- Security: *Set Up: Tax domain* in the Common Financial Management functional area.

### Context

For each country, you can specify the withholding tax code that Workday populates on spend and revenue transaction lines that meet the rule criteria. You can also specify rules for each region, if needed.

### Steps

1. Access the **Create Withholding Tax Rule for Country** task.
2. In the **Source Country** prompt, select the ship-to country that a supplier or customer invoice provides. With no ship-to country, select the country for the primary address of the payer.
3. As you complete the task, consider:

Option	Description
<b>Payee Supplier</b>	The prompt doesn't include contingent workers.
<b>Payee Country</b>	Workday uses the primary business address of the: <ul style="list-style-type: none"> <li>• Supplier for supplier invoices.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Company for customer invoices.</li> </ul>
<b>Payer Withholding Tax Status</b>	<p>You can match the withholding tax status of the payer to the source country of the transaction. Workday compares this status to the withholding tax status of the:</p> <ul style="list-style-type: none"> <li>Company for supplier invoices.</li> <li>Customer for customer invoices.</li> </ul>
<b>Payee Withholding Tax Status</b>	<p>You can match the withholding tax status of the payee to the source country of the transaction. Workday compares this status to the withholding tax status of the:</p> <ul style="list-style-type: none"> <li>Company for supplier invoices.</li> <li>Customer for customer invoices.</li> </ul>

#### 4. Design the country rule lines from top to bottom.

The best practice is to place rule lines for your most specific use cases first. Place less specific rule lines towards the bottom.

As you complete the grid, consider:

Option	Description
<b>Classification</b>	Select <b>Goods or Services</b> so that Workday will automatically populate tax attributes, with items or categories classified as either goods or services on spend or revenue transaction lines.
<b>Default Tax Code</b>	When you select this, Workday populates the withholding tax code on the transaction lines.
<b>Tax Rule for Spend Items</b> <b>Tax Rule for Revenue Items</b>	When you select an item-specific withholding tax rule, Workday evaluates the items within the transaction. If the items match the withholding item-level tax rule, Workday uses the withholding tax code from that rule instead.

## Configure Withholding Tax Rules for Items

### Prerequisites

- Create withholding tax item groups.
- Assign items to the tax item groups.
- Security: *Set Up: Tax* domain in the Common Financial Management functional area.

### Context

You can define withholding tax codes for specific items. You can then map these rules to locales within country-specific tax rules to override all other withholding tax code defaulting.

### Steps

- Access the **Create Withholding Tax Rule for Items** task.

2. In the **Tax Item Rule Type** prompt, select:

- *Revenue* for sales items.
- *Spend* for purchase items.

3. As you complete the task, consider:

Option	Description
<b>Spend Category</b>	If you leave <b>Item</b> blank, select a spend or revenue category to apply the rule line to all purchase, expense, or sales items with the selected category.
<b>Tax Item Group</b>	Select a tax item group to apply the rule line to all items in that item group.
<b>Item</b>	Select an item to apply the rule line to only that item.
<b>Tax Code Override</b>	Select the withholding tax code to use on transaction lines for this rule. This value overrides the default withholding tax code specified in a tax rule for any country that references this rule.
<b>Worktags Tax Rule</b>	Displays for spend tax item rules only. When you select a withholding tax rule for worktags, Workday evaluates the worktags within the transaction. If the worktags match the withholding worktag-level tax rule, Workday uses the withholding tax code from that rule instead of the value you select in <b>Tax Code Override</b> .

### Next Steps

For Workday to apply the new withholding tax rule for items, select it in tax rules for countries.

## Configure Withholding Tax Rules for Worktags

### Prerequisites

Security: *Set Up: Tax domain* in the Common Financial Management functional area.

### Context

You can configure tax rules for Workday to automatically populate withholding tax codes on spend transaction lines based on the worktags that you select.

### Steps

1. Access the **Create Withholding Tax Rule for Worktags** task.
2. As you complete the task, consider:

Option	Description
<b>Order</b>	The order of the worktag rules is very important. Workday evaluates rules from the top down and from the most general to the most specific. Place the most general rule first in the list and the most specific rule last in the list.

Option	Description
<b>Worktags</b>	You can select up to 1 worktag per worktag type.
<b>Tax Code Override</b>	The tax code that Workday populates automatically on transaction lines where you select all worktags in the <b>Worktags</b> column.  This value overrides the tax code specified in tax rules for items and countries that reference this rule.

### Next Steps

For Workday to automatically populate withholding tax codes on transaction lines based on the new withholding tax rule for worktags:

- Assign the withholding tax rule for worktags to a withholding tax rule for spend items.
- Assign the withholding tax rule for items to a withholding tax rule for a country.

### Example: Calculate Withholding Tax Using Progressive Rates

This example illustrates how to configure progressive rates for calculating withholding tax on customer or supplier invoices.

#### Context

As an accounts payable or accounts receivable specialist, you need to determine the withholding tax rate using progressive rates. You determine that each invoice line has the same withholding tax rate for a supplier invoice. The invoice contains 3 lines in amounts of 10,000, 15,000, and 25,000 USD.

#### Steps

1. Access the **Create Withholding Tax Rate** task.
2. Enter these values:

Field	Value
<i>Realization Point</i>	Invoice
<i>Tax Base Type</i>	Net Amount
<i>Rate Type</i>	Progressive
<i>Threshold Type</i>	None of the above

3. Specify an **Effective Date** when you can apply the progressive rate percentage on a withholding tax rate. Workday applies the progressive rate percentage on or after the specified effective date.
4. In the **Progressive Rate Tiers** section, add rows with these values:

Minimum Amount	Maximum Amount	Max Tier	Tax Rate
20,000		Checked	30
1,000	20,000	Unchecked	20
0	1,000	Unchecked	0

5. Click **OK**.

**6. Submit the supplier invoice.**

Workday calculates the withholding tax amount and displays the tax rate on the invoice.

Tier	Taxable Amount	Tax Rate	Tax
First	1,000	0	0
Second	19,000	20	3,800
Third	30,000	30	9,000
Total	50,000		12,800

**Tasks**

[Set Up Tax Rates for Withholding Tax on page 674](#)

## Tax Accounting

---

### Concept: Transaction Tax Account Posting Rules

You might post tax amounts to a liability, asset, or expense account depending on whether:

- You're collecting or paying taxes.
- You can recover a portion of this tax amount.

You can set up transaction tax account posting rules that define the ledger accounts where Workday posts transaction tax based on dimensions such as:

- *Tax Type*
- *Tax Recoverability*
- *Tax Code*
- *Tax Applicability*

Example: To post the Canadian QST and GST to 2 different ledger accounts, you set up a transaction tax rule with a condition on the *Tax Rate* dimension.

To set up transaction tax account posting rules, access the **View Account Posting Rule Set** report and edit these posting rules:

- *Transaction Tax*
- *Transaction Tax on Payment*

### Tax Recoverability Type

The *Tax Recoverability Type* dimension makes it easier for you to develop transaction tax account posting rules for recoverable and nonrecoverable tax.

Use these guidelines when you develop your transaction tax account posting rules:

- Since recoverability doesn't apply to these documents, Workday evaluates their *Tax Recoverability Type* as *Non Recoverable*:
  - Customer invoices.
  - Cash sales.
  - Ad hoc bank transactions of type *Deposit*.
- When the tax recoverability of a transaction is *Non-Recoverable + Allocation*, Workday automatically allocates the nonrecoverable tax amount to the spend ledger account. You don't need to set up tax account posting rules to post the nonrecoverable portion of tax to the spend ledger account.

- When the tax recoverability of a transaction is *Non-Recoverable + no Allocation*, you can post the nonrecoverable tax amount using a condition where:
  - The *Tax Recoverability Type* dimension has a value of *Non Recoverable*.
  - The *Tax Type* dimension has a value of *Tax Paid* or *Tax Self-Assessed*.

### **Tax Type**

You can configure tax account posting rules on the *Tax Type* dimension to define a ledger account where Workday posts the transaction tax paid, collected, or self-assessed on these documents:

Document Type	Tax Type
<ul style="list-style-type: none"> <li>Ad Hoc Bank Transaction of type <i>Withdrawal</i></li> <li>Ad Hoc Payment</li> <li>Expense Report</li> </ul>	<i>Tax Paid</i>
<ul style="list-style-type: none"> <li>Ad Hoc Bank Transaction of type <i>Deposit</i></li> <li>Cash Sale</li> <li>Customer Invoice</li> </ul>	<i>Tax Collected</i>
<ul style="list-style-type: none"> <li>Ad Hoc Payment</li> <li>Procurement Card Verification</li> </ul>	<i>Tax Self-Assessed</i>
Supplier Invoice	<i>Tax Paid or Tax Self-Assessed</i>

### **Related Information**

#### **Tasks**

[Set Up Account Posting Rules](#) on page 84

#### **Reference**

[Reference: Account Posting Rules](#) on page 96

## **Concept: Withholding Tax Accounting**

You can use Workday to:

- Create accounting for the withholding taxes on supplier and customer invoices.
- Set up withholding tax account posting rules that define the ledger accounts where Workday posts withholding tax based on dimensions such as:
  - Realization Point*
  - Tax Authority*
  - Tax Base Type*
  - Tax Rate*

### **Withholding Tax Realization Point**

When you create withholding tax rates, you must select 1 of these withholding realization points to specify how and when you pay tax:

Realization Point	Supported Document Types	Considerations	Example
<i>Invoice</i>	<ul style="list-style-type: none"> <li>Supplier Invoice</li> <li>Customer Invoice</li> </ul>	For supplier invoices, your company withholds the tax on supplier invoices and pays the	A supplier issues a 1,000 USD invoice to your company with 100

Realization Point	Supported Document Types	Considerations	Example
		<p>remaining amount to the supplier. Workday credits the withholding tax account as a withholding tax liability on the supplier invoice.</p> <p>For customer invoices, your company accounts for potential withholding tax by your customer and collects only the remaining amount from the customer. Workday debits the withholding tax account as a withholding tax expense.</p>	<p>USD withholding tax. You:</p> <ul style="list-style-type: none"> <li>• Pay the supplier 900 USD.</li> <li>• Account for a 100 USD liability on the supplier invoice.</li> </ul> <p>You issue a 1,000 USD customer invoice. You anticipate that your customer will withhold 100 USD and pay you 900 USD. You account for 100 USD as a withholding tax expense on the customer invoice.</p>
<i>Payment</i>	Supplier Invoice	Your company withholds the tax on supplier invoices and pays the remaining amount to the supplier. Workday credits the withholding tax account as a withholding tax liability on the supplier payment.	<p>A supplier issues a 1,000 USD invoice to your company with 100 USD withholding tax. You:</p> <ul style="list-style-type: none"> <li>• Pay the supplier 900 USD.</li> <li>• Account for a 100 USD liability on the payment.</li> </ul>
<i>Customer Invoice Self-Withholding</i>	Customer Invoice	You collect the full amount from your customer and pay the withholding tax to the tax authority. Workday debits the withholding tax account as a withholding tax expense and credits the withholding tax account as a withholding tax liability.	<p>You issue a 1,000 USD customer invoice and self-assess 100 USD withholding tax. You agree with your customer that you'll pay the tax authority. Your customer pays you the full 1,000 USD. You:</p> <ul style="list-style-type: none"> <li>• Credit 100 USD as withholding tax liability.</li> <li>• Debit 100 USD as withholding tax expense.</li> </ul>

### Withholding Tax Account Posting Rules

To set up withholding tax account posting rules, access the **View Account Posting Rule Set** report and edit the *Withholding Tax Payable* posting rule.

## Withholding Tax Accounting

This table summarizes the different realization points, document types, accounting, and account posting rules.

Withholding Tax Realization Point	Document Type	Accounting	Account Posting Rule Condition
Invoice	<ul style="list-style-type: none"> <li>Supplier Invoice</li> <li>Customer Invoice</li> </ul>	<ul style="list-style-type: none"> <li>Supplier Invoice: Credit - Withholding tax liability.</li> <li>Customer Invoice: Debit - Withholding tax expense.</li> </ul>	<ul style="list-style-type: none"> <li>Supplier Invoice: <i>Tax Type = Tax Collected.</i></li> <li>Customer Invoice: <i>Tax Type = Tax Paid.</i></li> </ul>
Payment	Supplier Invoice	<ul style="list-style-type: none"> <li>Supplier Invoice: No accounting for withholding tax.</li> <li>Payment of Invoice: Credit - Withholding tax liability.</li> </ul>	<i>Tax Type = Tax Collected.</i>
Customer Invoice Self-Withholding	Customer Invoice	<ul style="list-style-type: none"> <li>Debit - Withholding tax expense.</li> <li>Credit - Withholding tax liability.</li> </ul>	<ul style="list-style-type: none"> <li>Debit - <i>Tax Type = Tax Paid.</i></li> <li>Credit - <i>Tax Type = Tax Collected.</i></li> </ul>

### Related Information Tasks

[Set Up Tax Rates for Withholding Tax on page 674](#)

[Set Up Account Posting Rules on page 84](#)

## Tax Declarations

---

### Setup Considerations: E-Filing VAT Returns (UK)

You can use this topic to help make decisions when planning your configuration and use of e-filing for Value Added Tax (VAT) returns in the UK. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

The e-filing functionality enables you to submit VAT returns electronically to HM Revenue and Customs (HMRC).

### Business Benefits

E-filing helps you:

- Streamline the process of creating and submitting VAT returns.
- Comply with the Making Tax Digital initiative, which requires businesses to submit VAT returns electronically.

## Use Cases

You can use the Workday e-filing functionality to:

- Grant Workday permission to access your UK Government Gateway.
- Submit VAT returns for a company or a VAT or Goods and Services Tax (GST) group.
- Correct errors on e-filed VAT returns.

## Questions to Consider

Questions	Considerations
Have you already configured a VAT number on your company tax details?	<p>E-filing requires a 9-digit VAT registration number with no alphabetical characters. You can configure this VAT registration number using the <i>E-File VAT Registration Number</i> tax ID type for the UK.</p> <p>When you e-file for a VAT or GST group, Workday uses the VAT registration number of the primary company in the group.</p>
Have you already configured Workday to create VAT returns?	<p>E-filing requires you to change your existing tax declaration definitions. Also, ensure that your tax declaration components produce information in the correct format for e-filing, as you can't change the format manually after creating the VAT return.</p> <p>Example: Configure rounding and truncation options for the appropriate boxes on the VAT 100 form.</p>
How many companies do you plan to e-file VAT returns for?	<p>Workday supports e-filing for multiple companies or VAT or GST groups. When you submit for more than 1 company, ensure that you:</p> <ul style="list-style-type: none"> <li>• Maintain a valid VAT registration number for each company.</li> <li>• Sign in to the UK Government Gateway for each company in your browser before you submit.</li> </ul>

## Recommendations

Access the **Test HMRC Authentication** report to test the connection between Workday and HMRC when setting up this feature.

## Requirements

- Register your company for Making Tax Digital.
- Configure tax declaration components and a tax declaration definition to gather the data required by the VAT 100 form.
- Enable e-filing on your tax declaration definition.

## Limitations

- Workday supports e-filing for VAT returns in the UK only.
- HMRC doesn't accept amendments through e-filing.
- On the **Test HMRC Authentication** report, Workday doesn't explicitly confirm successful authorization. When authorization is successful, the browser redirects you back to Workday.
- You can't test e-filing in Sandbox tenants as HMRC doesn't provide a test facility.

## Tenant Setup

No impact.

## Security

Domains	Considerations
These domains in the Common Financial Management functional area: <ul style="list-style-type: none"> <li>• <i>Reports: Create Tax Declaration</i></li> <li>• <i>Set Up: Tax</i></li> </ul>	You can configure either domain to enable users to e-file. Ensure that security groups that e-file tax declarations have: <ul style="list-style-type: none"> <li>• <i>View and Modify</i> access for tasks and reports.</li> <li>• <i>Get and Put</i> integration permissions.</li> </ul>
<i>Reports: Transaction Tax</i> domain in the Common Financial Management and Customer Accounts functional areas	Users secured to this domain can view transaction tax reports, enabling them to: <ul style="list-style-type: none"> <li>• Find tax declarations to e-file.</li> <li>• Check the e-file status of submitted tax declarations.</li> </ul>

When you submit a VAT return using HMRC's e-filing process, certain information about your device (including a unique cookie ID) will be sent to HMRC for its anti-fraud purposes. See HMRC's mandatory fraud prevention requirements for more information.

Workday sends these headers when you e-file:

Headers	Considerations
<i>Gov-Client-Browser-Do-Not-Track</i>	Indicates whether the user has selected the Do Not Track option on their browser.
<i>Gov-Client-Browser-JS-User-Agent</i>	Provides a JavaScript-reported user agent string from the device used to e-file.
<i>Gov-Client-Browser-Plugins</i>	Identifies any browser plugins that the user submitting the VAT return has installed.
<i>Gov-Client-Connection-Method</i>	Identifies the connection method used for the request.
<i>Gov-Client-Device-ID</i>	Identifies the user's device uniquely and permanently.
<i>Gov-Client-Local-IPs</i>	Lists all local IP addresses (IPv4 and IPv6) available to the device.
<i>Gov-Client-Local-IPs-Timestamp</i>	Records the time that <i>Gov-Client-Local-IPs</i> is collected.
<i>Gov-Client-Public-IP</i>	Provides the public IP address of the device.

Headers	Considerations
<i>Gov-Client-Public-IP-Timestamp</i>	Records the time that <i>Gov-Client-Public-IP</i> is collected.
<i>Gov-Client-Public-Port</i>	Provides the public TCP port that the device uses when initiating the request.
<i>Gov-Client-Screens</i>	Provides information about the screen of the device.
<i>Gov-Client-Timezone</i>	Provides the local time zone of the device.
<i>Gov-Client-User-IDs</i>	Provides the username of the person who submits the VAT return.
<i>Gov-Client-Window-Size</i>	Provides the size of the window on the device.
<i>Gov-Vendor-Forwarded</i>	Provides details about any hops over the internet between services that terminate TLS.
<i>Gov-Vendor-Product-Name</i>	Identifies Workday as the product used to submit the VAT return.
<i>Gov-Vendor-Version</i>	Identifies the Workday version used to submit the VAT return.

## Business Processes

Configure the *Tax Declaration Event* business process and security policy to enable separate users to create and approve tax declarations before e-filing.

## Reporting

Reports	Considerations
<b>Test HMRC Authentication</b>	You can use this report to grant Workday authority to access your UK Government Gateway and test the connection between Workday and the HMRC APIs.
<b>View Tax E-File Template</b>	You can use this report to determine whether a tax e-file template is appropriate for your tax declaration definition.

You can use the **Tax Declaration Results** report data source to create custom reports on e-filed VAT returns.

## Integrations

The **Submit E-File** task uses these web services to share information with HMRC APIs:

- *Get Mapped Tax Declaration E-Filing Results*
- *Put Tax Declaration E-Filing Result*

## Connections and Touchpoints

Features	Considerations
Banking and Settlement	Workday populates tax declarations using tax-relevant data from transactions in these areas.

Features	Considerations
Customer Accounts Expenses Projects Supplier Accounts	
Transaction Taxes	<p>E-filing interacts with the tax declaration framework, consisting of:</p> <ul style="list-style-type: none"> <li>• Tax declaration components.</li> <li>• Tax declaration definitions.</li> <li>• Tax declarations.</li> </ul>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Preconfigured Content: Financials Delivered Configurations](#)

## Steps: Create Tax Declarations

### Context

You can configure tax declarations to extract information about transaction taxes from your accounts to report to a tax authority. You can export the information to submit it or, in the United Kingdom, submit it electronically.

### Steps

1. (Optional) Configure the *Tax Declaration Event* business process.

Use this business process when the person who creates a tax declaration doesn't have authority to finalize it. Example: A GL accountant creates tax declarations and a tax manager approves them.

2. Create a tax authority.

See [Steps: Set Up Transaction Taxes](#) on page 644.

3. [Create Tax Declaration Components](#) on page 689.

4. [Create Tax Declaration Definitions](#) on page 692.

5. [Create Tax Declarations](#) on page 693.

6. Submit your tax declaration to the tax authority.

7. (Optional) Access the **Update Tax Filing Date** task from the related actions menu of the tax declaration.

When you e-file a tax declaration, Workday populates the tax filing date for you.

### Next Steps

Create custom reports to gain insight into tax declaration results.

## Create Tax Declaration Components

### Prerequisites

Security: *Set Up: Tax domain* in the Common Financial Management functional area.

## Context

You can configure tax declaration components to use on tax declaration definitions. These components determine how:

- Workday returns values on tax declaration lines.
- Different tax declaration components function and relate to each other.

Example: You create a *Calculation*-type component to calculate the difference between the values of 2 other tax declaration components:

Option	Description
Name	VAT Collected Minus VAT Paid
Tax Declaration Component 1	VAT Collected
Operator	Subtract
Tax Declaration Component 2	VAT Paid

You can't change some fields on a component when:

- A tax declaration definition uses the component.
- A tax declaration that uses that definition is *In Progress* or *Approved*.

## Steps

1. Access the **Create Tax Declaration Component** task.

2. As you select a **Component Type**, consider:

Option	Description
Accumulation	Select to accumulate total amounts from tax-relevant transactions.
Calculation	Select to perform a mathematical operation on 2 other tax declaration components.
Numeric Constant	Select to enter a number to either: <ul style="list-style-type: none"> <li>• Display directly on a tax declaration line.</li> <li>• Use in a <i>Calculation</i>-type component to modify the value of another component.</li> </ul>
Text Constant	Select to enter a text string that you can use on a tax declaration definition.  Example: You use a <i>Text Constant</i> -type component on the tax declaration definition to display <i>Sales Tax Collected</i> as a section header on a tax declaration.
Total	Select to calculate the sum of 1 or more <i>Accumulation</i> -, <i>Calculation</i> -, or <i>Total</i> -type components.

3. As you complete the task, consider:

Option	Description
Tax Type	( <i>Accumulation</i> -type components only.)  Determines your options in these prompts:

Option	Description
	<ul style="list-style-type: none"> <li>• <b>Transaction Type</b></li> <li>• <b>Amount to Accumulate</b></li> </ul>
<b>VAT on Payment</b>	<p>(Accumulation-type components only.)</p> <p>Select to accumulate transactions that use <b>VAT on Payment</b>.</p> <p>Leave unchecked to accumulate transactions that don't use <b>VAT on Payment</b>.</p>
<b>Tax Declaration Report Date</b>	<p>(Accumulation-type components only.)</p> <p>Select the type of date Workday uses to determine which transactions to include when you run the tax declaration.</p> <p>To use the tax point date, select the <b>Enable Tax Point Date Configuration for Transaction Taxes</b> check box on the <b>Edit Tenant Setup - Financials</b> task.</p>
<b>Tax Declaration Time Frame</b>	<p>(Accumulation-type components only.)</p> <p><i>Current Period</i> includes transactions that are within the start and end dates of the tax declaration.</p> <p><i>Prior Periods</i> includes transactions that are within the <b>Number of Intervals Prior</b> and <b>Date Interval</b> on the tax declaration definition. Workday includes transactions through the last day of the period before the start date of the tax declaration run.</p> <p>Example:</p> <ul style="list-style-type: none"> <li>• On the tax declaration component, you select <i>Prior Periods</i> as the <b>Tax Declaration Time Frame</b>.</li> <li>• On the tax declaration definition, you select <i>Month</i> as the <b>Date Interval</b> and 2 as the <b>Number of Intervals Prior</b>.</li> <li>• When you create a tax declaration, you select 2018-03-01 as the start date.</li> <li>• The tax declaration includes transactions from 2018-01-01 to 2018-02-28.</li> </ul>
<b>Reverse Sign When Result is Negative</b>	<p>(Calculation-type components only.)</p> <p>To e-file VAT returns in the United Kingdom, select this check box on the component corresponding to box 5 on the VAT 100 form.</p>
<b>Rounding</b> <b>Truncate to Whole Number</b>	<p>To e-file VAT returns in the United Kingdom, select <b>Truncate to Whole Number</b> and a <b>Rounding</b> option for the components corresponding to boxes 6 through 9 on the VAT 100 form.</p>

Option	Description
	<p>Rounding determines how Workday converts decimals to whole numbers:</p> <ul style="list-style-type: none"> <li>• <i>Round up</i>: Round away from zero.</li> <li>• <i>Round down</i>: Round toward zero.</li> <li>• <i>Round</i>: Round to the nearest value, rounding up from .5.</li> <li>• <i>Round half down</i>: Round to the nearest value, rounding down from .5.</li> </ul>

## Create Tax Declaration Definitions

### Prerequisites

- Create tax declaration components.
- Security: *Set Up*: Tax domain in the Common Financial Management functional area.

### Context

You can configure a tax declaration definition to compile the data required by a tax form. You create a tax declaration definition using a combination of tax declaration components, then create a tax declaration using the definition.

You can't delete a tax declaration definition after you create a tax declaration from it. When you edit a tax declaration definition after you create a tax declaration from it, Workday reflects your changes when you:

- Rerun a *Draft* tax declaration.
- Amend or replace an *Approved* tax declaration.

### Steps

1. Access the **Create Tax Declaration Definition** task.
2. As you complete the task, consider:

Option	Description
<b>Number of Intervals Prior Date Interval</b>	<p>These fields apply only to <i>Accumulation</i>-type tax declaration components that use <i>Prior Periods</i> as the <b>Tax Declaration Time Frame</b>.</p> <p>Workday uses these fields to determine which transactions dated before the start of the tax declaration to include in the tax declaration.</p>
<b>Enable E-File</b>	<p>Select to enable VAT e-filing for the United Kingdom.</p> <p>When you select this check box, Workday:</p> <ul style="list-style-type: none"> <li>• Displays the <b>Tax E-File Template</b> prompt.</li> <li>• Enables the <b>Tax E-File Template Line</b> column on the <b>Definition Component Lines</b> grid.</li> </ul>
<b>Tax E-File Template</b>	<p>Select <i>UK VAT 100 Template</i> to e-file a VAT return in the United Kingdom.</p>
<b>Report Line Reference</b>	<p>Enter a value to refer to box or line numbers on the tax form.</p>

Option	Description
<b>Tax Declaration Component</b>	Select a <b>Tax Declaration Component</b> to represent each box or line on the tax form.
<b>Tax E-File Template Line</b>	Map each tax declaration component to a <b>Tax E-File Template Line</b> .
<b>E-File Disclosure</b>	Enter a message that users must acknowledge before they e-file a tax declaration.
<b>Enable XML Creation</b>	<p>Select to enable ELSTER XML VAT returns for Germany.</p> <p>When you select this check box, Workday:</p> <ul style="list-style-type: none"> <li>• Displays the <b>Integration System</b> and <b>VAT Return Year</b> prompts.</li> <li>• Enables you to map tax declaration definition lines to integration system fields using the <b>Tax Declaration Result Line Amount</b> report field.</li> </ul> <p>After you create and approve a tax declaration using this tax declaration definition, you can generate the XML file by accessing the <b>Create XML File</b> task from the related actions menu of the tax declaration.</p>
<b>Integration System</b>	Select the integration system you configured to submit ELSTER VAT returns for Germany.

## Create Tax Declarations

### Prerequisites

- Create a tax declaration definition.
- Security: Reports: *Create Tax Declaration* domain in the Common Financial Management functional area.

### Context

You can create a tax declaration to extract tax information for a specific period from your accounts to report to the tax authority.

You can't edit tax declarations, but from the related actions menu you can:

- Cancel or rerun *Draft* tax declarations.
- Amend or replace *Approved* tax declarations.
- Delete *Canceled* tax declarations.

An amendment only includes transactions that weren't part of the original tax declaration. A replacement includes all transactions.

After you create a tax declaration, you can't change ad hoc payments that you included on the declaration. To change those payments, cancel the tax declaration while it's in *Draft* status and then delete it.

### Steps

1. Access the **Create Tax Declaration Run** task.

2. As you complete the task, consider:

Option	Description
<b>Tax Grouping</b>	<p>When you select a Value Added Tax (VAT) or Goods and Services Tax (GST) group, Workday:</p> <ul style="list-style-type: none"> <li>• Compares the date range of the tax declaration with any effective dates on the VAT or GST group.</li> <li>• Includes transactions from any company that was part of the group during the date range.</li> </ul> <p>When a company wasn't in the group for the full date range, Workday only includes transactions from dates on which it was part of the group.</p> <p><b>Note:</b> You must have access to all companies within the VAT group.</p>
<b>Primary Company</b>	<p>Displays when you select:</p> <ul style="list-style-type: none"> <li>• A VAT or GST group in the <b>Tax Grouping</b> prompt.</li> <li>• An e-filing enabled tax declaration definition.</li> <li>• An XML enabled tax declaration definition.</li> </ul> <p>You can select a different primary company from the one assigned on the VAT or GST group.</p>
<b>Report by Ledger Currency</b>	<p>Select to accumulate transactions by base currency. Otherwise, Workday accumulates transactions by tax currency.</p>

3. (Optional) Drill down on the **Tax Declaration** on the **Tax Declaration Result** tab to ensure it's correct.
4. (Optional) If you configured the *Tax Declaration Event* business process, select **Tax Declaration > Send for Approval** from the related actions menu of the tax declaration.

## Steps: E-File VAT Returns (UK)

### Prerequisites

- Review setup considerations for e-filing VAT returns.
- Confirm that your Making Tax Digital registration is active.
- Enable e-filing on a tax declaration definition that meets HMRC requirements.
- Create and approve a tax declaration using this definition.
- Security: Either of these domains in the Common Financial Management functional area:
  - *Reports: Create Tax Declaration*
  - *Set Up: Tax*

### Context

E-filing enables you to submit VAT returns electronically, as required by HMRC.

You can't e-file:

- Tax declaration amendments, as HMRC doesn't accept them through e-filing.
- Tax declarations for which an adjustment exists. To e-file the original, delete the adjustment then e-file the tax declaration.

## Steps

**1.** Access the **Edit Company Tax Details** task.

Enter a 9-digit number as the *E-File VAT Registration Number* tax ID type for the UK.

Workday uses the VAT registration number of your company to connect to the HMRC APIs. When you e-file for a VAT or GST group, Workday uses the VAT registration number of the primary company in the group.

See also: [Set Up Company Tax IDs for Financial Transactions](#).

**2.** Sign in to the UK Government Gateway for your company in your browser.

**3.** Access the **Submit HMRC Credentials** report from the related actions menu of your tax declaration.

Select **I'm Signed in to HMRC** to ensure that Workday authenticates correctly.

Workday redirects you to the HMRC site, where you can grant Workday permission to view and change your VAT return data.

**Note:** When Workday indicates that the process is finishing in the background, don't go back in your browser or refresh the page.

See also: [Setup Considerations: E-Filing VAT Returns \(UK\)](#).

**4.** Access the **Submit E-File** task from the related actions menu of the tax declaration.

When the HMRC APIs respond, Workday stores the response on the tax declaration and updates the e-file status.

**5.** (Optional) If HMRC returns an error, select 1 of these options from the related actions menu of the tax declaration and make the necessary corrections:

- For date range errors: **Correct E-File Errors**.
- For other errors: **Create Replacement**.

See also: [Troubleshooting: E-Filed VAT Return Fails to Submit \(UK\)](#).

**6.** (Optional) Send the corrected tax declaration for approval.

**7.** (Optional) Resubmit the corrected tax declaration.

## Troubleshooting: E-Filed VAT Return Fails to Submit (UK)

When e-filing fails, Workday populates the **E-File Error Code** field on the tax declaration to indicate why the submission failed. You can use this information to diagnose and resolve common problems that prevent you from submitting your VAT return.

Cause	Solution
<i>Authorization Required</i> <i>CLIENT_OR_AGENT_NOT_AUTHORISED</i> <i>INVALID_CREDENTIALS</i> <i>invalid_grant</i> <i>MISSING_CREDENTIALS</i> <i>Missing Tax ID</i> <i>UNAUTHORIZED</i> <i>VRN_INVALID</i>	<p><b>1.</b> Access the <b>Edit Company Tax Details</b> task.</p> <p>Configure the <i>E-Filing VAT Registration Number</i> tax ID type for the United Kingdom.</p> <p>Enter the 9-digit numeric VAT number that you registered for Making Tax Digital.</p> <p><b>Security:</b></p> <ul style="list-style-type: none"> <li>• <i>Set Up: Company General</i> domain in the Common Financial Management functional area.</li> <li>• <i>Set Up: Tax</i> domain in the Common Financial Management functional area.</li> <li>• <i>Set Up: Payroll - Company Specific (Accounting)</i> domain in the Core Payroll functional area.</li> </ul>

[Set Up Company Tax IDs for Financial Transactions](#) on page 650

## Tax Reporting

---

### Setup Considerations: SAF-T

You can use this topic to help make decisions when planning your configuration and use of the Standard Audit File for Tax (SAF-T) functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to create an integration that generates a SAF-T XML file to submit to auditors or tax authorities.

### Business Benefits

The Workday SAF-T functionality helps you to:

- Create SAF-T quickly without manually processing the data.
- Comply with tax auditing requirements.

## Use Cases

Security administrators can:

- Configure integrations to create SAF-T for Norway.
- Assign security to enable users to launch SAF-T integrations.

Integration consultants can:

- Configure integrations to create SAF-T using the OECD SAF-T v2.0 schema.
- Add or disable fields within the structure of OECD SAF-T v2.0, override field mappings, and set maximum lengths for fields.
- Configure custom integrations to transform the output for schemas that have a different structure than OECD SAF-T v2.0.

Tax managers or accounting managers can:

- Create tax master records to populate the *TaxTable* element in SAF-T.
- Map ledger accounts to the standard account IDs required for Norway.
- Create SAF-T to submit to tax authorities.

## Questions to Consider

Questions	Considerations
Which users do you want to create SAF-T?	<p>Consider that users who can create SAF-T can view sensitive information about:</p> <ul style="list-style-type: none"> <li>Bank accounts.</li> <li>Customers.</li> <li>Ledger accounts.</li> <li>Payments.</li> <li>Suppliers.</li> <li>Transaction taxes.</li> </ul> <p>Users can view this information even when they don't have access to the relevant domains.</p>
Which SAF-T schema do you plan to use?	<p>The <i>SAF-T Norway</i> integration template produces an output file based on the Norwegian SAF-T financial schema v1.10. You can configure a document retrieval step to use a newer version of the schema.</p> <p>The <i>SAF-T Core</i> integration template produces an output file based on the OECD SAF-T v2.0 schema, including a subset of the optional fields. You can configure field overrides to include optional fields that Workday doesn't populate by default.</p> <p>When your country uses a schema that:</p> <ul style="list-style-type: none"> <li>Uses the OECD SAF-T v2.0 structure but changes fields, you can use the <i>SAF-T Core</i> integration template and configure a document retrieval step to provide your schema.</li> <li>Changes the OECD SAF-T v2.0 structure, you can use the <i>SAF-T Core</i> integration template and then use the output file as a data source for a custom integration to transform the structure and add fields as required.</li> </ul>

Questions	Considerations
	See also: <a href="#">Concept: SAF-T Integrations</a> .
What transaction data does the tax authority require you to include in SAF-T?	<p>With the <i>SAF-T Core</i> integration template, you can include approved accounts payable or accounts receivable transactions in the output.</p> <p>Before you enable these integration services, consider how your schema differs from OECD SAF-T v2.0, as you might need to configure your integration to support those differences. Example: To include canceled invoices in the output, as Workday doesn't include these by default.</p>
How do the fields and structure of your schema differ from the OECD SAF-T v2.0 schema?	<p>When your schema:</p> <ul style="list-style-type: none"> <li>Adds fields to the <i>TaxTable</i> element, you can configure the fields on the tax master template for a country. Workday populates this element using tax master records that you create when you set up the SAF-T functionality.</li> <li>Changes fields in other elements but follows the same structure as OECD SAF-T v2.0, you can configure field overrides and extensions on your integration.</li> <li>Adds fields outside the designated extension points, you can configure a custom integration to transform the output file as required.</li> </ul>
(Norway only) Which set of standard account IDs do you plan to use?	Your choice determines the number of ledger account summaries required to map your ledger accounts to the Norwegian standard account IDs. The 2-digit set requires less setup but the 4-digit set enables more granular reporting.

## Recommendations

When you:

- Create ledger account summaries for Norway, include the corresponding standard account ID in the name to make each summary easy to identify.
- Set up a tax master template, enter default values to save time when you populate the tax master records.
- Configure field overrides or extensions, use calculated fields to populate static values or enumerations. Calculated fields are the easiest way to populate these values.

See also:

- [Steps: Set Up SAF-T](#).
- [Set Up Integration Field Overrides for DIS](#).

## Requirements

When you plan to provide your own schema, ensure that the schema is available for integration document retrieval using a supported transport protocol.

## Limitations

On the *SAF-T Core* integration template, Workday supports a subset of the optional fields in the OECD *SAF-T v2.0* schema.

## Tenant Setup

No impact.

## Security

The *SAF-T* output contains sensitive financial data and is unencrypted, as required by tax authorities.

Domains	Considerations
In the Integration functional area: • <i>Integration Build</i> • <i>Integration Configure</i> • <i>Integration Event</i>	Enable users to configure and run integrations using <i>SAF-T</i> templates.
<i>Process: Audits and Corrections</i> in the Financial Accounting functional area	Enables users to assign journal line numbers to posted journals.
<i>Process: Tax Master</i> in the Common Financial Management functional area	Enables users to maintain tax master data and view related reporting.
<i>Set Up: Accounts</i> in the Common Financial Management functional area	Enables users to configure ledger account summaries. Required to configure <i>SAF-T</i> for Norway only.
<i>Set Up: Company Accounting</i> in the Common Financial Management functional area <i>Set Up: Payroll - Company Specific (Accounting)</i> in the Core Payroll functional area	Enable users to configure company accounting settings to meet <i>SAF-T</i> requirements. Ensure that users who set up the <i>SAF-T</i> functionality have access to 1 of these domains.
<i>Set Up: Tax</i> in the Common Financial Management functional area	Enables users to view and modify information relevant to tax auditing.

## Business Processes

No impact.

## Reporting

You can use the **Tax Masters** report data source to create custom reports.

See also: [Concept: Tax Master Records](#).

## Integrations

Integration Templates	Considerations
<i>SAF-T Core</i>	Enables you to create <i>SAF-T</i> using the OECD <i>SAF-T v2.0</i> schema.
<i>SAF-T Norway</i>	Enables you to create <i>SAF-T</i> using the Norwegian <i>SAF-T v1.10</i> schema.

## Connections and Touchpoints

Features	Considerations
Banking and Settlement Customer Accounts Person Supplier Accounts Transaction Taxes Worktags	You can use the SAF-T functionality to extract tax-relevant data from these areas to submit to tax authorities.
Financial Accounting	You can use the SAF-T functionality to extract data relating to: <ul style="list-style-type: none"><li>• Companies.</li><li>• Journals.</li><li>• Ledger accounts.</li></ul>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Reference

[Workday Community: Global Financials Reference Book](#)

[Workday Community: SAF-T OECD Version 2 - Supported Fields](#)

## Steps: Set Up SAF-T

### Prerequisites

- Review setup considerations for Standard Audit Files for Tax (SAF-T).
- In your company accounting details, enable automatic journal line numbering and disallow changes to operational transactions in closed periods.

### Context

You can:

- Prepare data required to create SAF-T.
- Extract tax-relevant data and create SAF-T.

See [Setup Considerations: SAF-T](#).

### Steps

1. (Optional) Access the **Assign Line Numbers to Previously Posted Journals** task.

Use when you have posted journals that don't have line numbers.

Security: *Process: Audits and Corrections* domain in the Financial Accounting functional area.

2. (Optional) For Norway, map ledger accounts to standard account IDs.

See [Steps: Assign Standard Account IDs to Ledger Accounts \(Norway\)](#) on page 702.

3. Access the **Set Up Tax Master Template** task.

Enable any additional fields required by your SAF-T schema.

Security: *Set Up: Tax* domain in the Common Financial Management functional area.

See also: [Concept: Tax Master Records](#).

**4. Access the Create Tax Master task.**

Workday generates tax master records then displays the **Maintain Tax Master** task. Enter values for any incomplete fields.

Workday recommends that you complete this task each time you want to run your SAF-T integration to ensure that your tax master records are up to date.

Security: *Process: Tax Master* domain in the Common Financial Management functional area.

**5. Create SAF-T.**

See [Steps: Set Up SAF-T Integration](#).

## Steps: Assign Standard Account IDs to Ledger Accounts (Norway)

### Prerequisites

Create ledger accounts.

### Context

You can map the standard account IDs required for SAF-T in Norway to your ledger accounts. Use:

- Ledger account summaries to group ledger accounts that relate to the same standard account ID.
- Integration reference IDs to specify which standard account ID applies to each ledger account summary.
- A ledger account summary hierarchy to store the mappings in 1 structure.

You direct your SAF-T integration to the top-level summary in the hierarchy to access the mappings.

When you add or remove ledger accounts from your account set, update the mappings to continue generating valid SAF-T.

### Steps

**1. Access the Create Ledger Account Summary As Of task.**

Create ledger account summaries for each standard account ID. Assign the relevant ledger accounts to each summary.

Create another ledger account summary as the top-level summary and include the other summaries you created as subordinates.

See [Steps: Manage Ledger Account Summaries](#) on page 90.

**2. Access the Maintain Reference IDs task.**

For each subordinate ledger account summary, enter a reference ID that contains the relevant standard account ID.

Example: Enter *CompanyGL\_3020* to assign the standard account ID 3020 to the ledger accounts in a particular summary.

**Note:** Don't include any digits other than the standard account ID. Workday only interprets 1 set of digits when identifying the standard account ID.

See [Set Up Reference IDs](#).

### Example

You create a ledger account summary hierarchy with this configuration:

Ledger Account Summary	Contains Ledgers	Reference ID Value	Maps to Standard Account ID
CompanyGL (top level)	None	None	None

Ledger Account Summary	Contains Ledgers	Reference ID Value	Maps to Standard Account ID
CompanyGL_15 (subordinate)	1200: Accounts Receivable	15	15 (Short-term receivables)
CompanyGL_30 (subordinate)	4000: Revenue 4260: F&A Revenue	30	30 (Sales revenue, subject to VAT)

When you run the integration system, the output file includes the standard account ID:

- 30 for ledger accounts 4000 and 4260.
- 15 for ledger account 1200.

### Next Steps

Set up a tax master template for Norway.

## Concept: Tax Master Records

Workday generates tax master records from transaction tax information to populate the *TaxTable* element in Standard Audit Files for Tax (SAF-T).

Workday derives tax master records from these fields on tax-relevant transactions for a company:

- **Country**
- **Effective Tax Recoverability Percentage**
- **Tax Applicability**
- **Tax Code**
- **Tax Rate**
- **Tax Rate Percentage**
- **Tax Recoverability**
- **Tax Recoverability Percentage**
- **Tax Type**

Each unique combination of values for these fields is 1 tax master record.

On the **Set Up Tax Master Template** task, you can:

- Create a tax master template for a country.
- Enable additional fields that your SAF-T schema requires.
- Enter default values for fields with no corresponding data in Workday.

On the **Create Tax Master** task, you can select a company to create tax master records for. Workday then:

- Generates tax master records from your taxable documents and assigns a tax master tax code to each record.
- Populates the tax master records on a tax master template.
- Displays the **Maintain Tax Master** task.

On the **Maintain Tax Master** task, you can:

- Review data that Workday populated from taxable documents.
- Enter or change values for fields that you enabled on the tax master template.

To change values that Workday populates from taxable documents, change the information on your taxable documents or configure field overrides on your SAF-T integration.

See also:

- [Setup Considerations: SAF-T](#)

- Steps: Set Up SAF-T

## 1099 Reporting

---

### Setup Considerations: 1099 Reporting

You can use this topic to help make decisions when planning your configuration and use of 1099 reporting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

The 1099 reporting feature generates IRS 1099 forms from your payments to suppliers, contingent workers, investors, ad hoc payees, and miscellaneous payees.

### Business Benefits

- Helps you maintain IRS compliance when filing 1099-MISC and 1099-NEC forms.
- Reduces the administrative burden of exporting payment data to third-party applications.
- Supports data integrity by automatically calculating the federal and state income and tax withheld amounts from your Workday data.

### Use Cases

As your organization prepares for 1099 processing:

- You run the **1099 Audit Report** to ensure that you've correctly configured your 1099 payees. You find 1099 payees who are missing a primary address or tax ID number. You update these payees and rerun the **1099 Audit Report**.
- You preview 1099 payment details. You identify that a reportable payment that happened in a legacy system is missing. You create a 1099 adjustment so that the 1099-NEC form issued to the payee reflects everything your organization has paid them this year. You preview 1099 payment details again and continue to make corrections to your configuration, payees, and payments as necessary.
- You generate a test file from Workday and upload it to the IRS FIRE test system during the test period.

As your organization starts 1099 processing:

- You generate 1099-MISC and 1099-NEC forms that you print and mail to all your 1099 payees. You select Copy B and print on blank paper with truncated tax IDs.
- You generate electronic 1099-MISC and 1099-NEC forms in Workday and upload them to the IRS FIRE system.

After you mail the 1099 forms to payees and file with the IRS:

- A supplier contacts you because they never received their 1099 form. You reprint the 1099 for this individual payee.
- A supplier calls your organization to let you know that their 1099 form erroneously reports them as FATCA. You create a supplier change in Workday, print a corrected form for the payee, and generate a corrected file that you submit to the IRS.

- You realize that you missed a payee. You create an additional 1099 run, print a 1099 form that you mail to the payee, and generate an electronic 1099 file for the missed payee only, which you upload onto the IRS FIRE system.

### Questions to Consider

Questions	Considerations
What 1099-MISC and 1099-NEC boxes do you report on?	<p>With the <b>Update 1099 Configuration</b> task, you can:</p> <ul style="list-style-type: none"> <li>• Map spend categories or spend category hierarchies to boxes on the 1099 forms.</li> <li>• Specify threshold amounts across 1 or more categories.</li> </ul>
How do you submit your 1099 information returns to the IRS?	<p>Workday enables you to:</p> <ul style="list-style-type: none"> <li>• Generate electronic 1099 forms that you can download and manually e-file with the IRS FIRE system.</li> <li>• Print 1099 forms for your payees.</li> </ul> <p>You can file for multiple companies under a single transmitter control code.</p>
Do you file 1099 returns to states that participate in the Combined Federal/State Filing (CF/SF) Program?	Workday can generate electronic 1099 returns that meet the CF/SF Program requirements.
When you consolidate supplier payments on behalf of multiple companies to the same supplier, which company issues the 1099 form?	Workday populates the payer on 1099 forms with the company that pays the invoice or creates the settlement run.

### Recommendations

- When you migrate to Workday midyear and load initial 1099 balances with 1099 adjustments:
  - Create 1 adjustment in Workday for each legacy payment.
  - Enter the legacy payment information in the memo field so you can refer to it later.
- Use 1099 adjustments only when you can't correct the original transaction in Workday.

### Requirements

To file electronically with the IRS:

- Obtain a tax ID transmitter control code issued by the IRS for the company that's filing.
- Set up an *Electronic Filing 1099* integration. See [Steps: Set Up Electronic Filing 1099 Integration](#).

Set up transaction and withholding tax codes that contain tax rates for these tax authorities:

- The IRS.
- States where you report 1099 income.

See [Steps: Set Up Transaction Taxes](#) on page 644 and [Steps: Set Up Withholding Taxes](#) on page 673.

For Workday to include a payment in a 1099 form for a reporting year and a federal or state tax authority, you must:

- Include the payment in 1 of these transactions:
  - 1099 adjustments.
  - Ad hoc payments.
  - Miscellaneous payments.
  - Supplier invoices.
- Set up the recipient of your payment as a 1099 payee.
- Select spend categories and amounts that you've mapped to IRS 1099 categories.
- Use a tax code that you've mapped to:
  - A federal tax rate.
  - A state tax rate, when you report to the state.

Workday uses the tax code on your payment to determine the tax authority to which you report the payment. Example: You report payments with no withholding tax to California. You use a tax code that contains the federal tax rate and a California state tax rate of zero percent.

- Pay or settle the transaction during the reporting year.

Workday uses the payment date for 1099 reporting, not the transaction date. Example: An independent contingent worker submits a supplier invoice on December 25 and your company pays it on January 2. The payment applies to 1099 reporting for the new year.

- Ensure that the payment has a status of *Accepted* when you use the payment acknowledgment feature.

## Limitations

Workday doesn't support e-filing 1099 forms with the Information Returns Intake System (IRIS).

Workday supports 1099 reporting only for companies with a base currency of USD.

Workday only supports these forms:

- 1099-MISC.
- 1099-NEC.
- 1096.

## Tenant Setup

No impact.

## Security

Domains	Considerations
<i>Reports: Supplier Accounts 1099 - USA and Set Up: Payee Tax Authority Information</i> in the Supplier Accounts functional area.	Users with access on both domains can select 1099 and 1096 form layouts.
<i>Reports: Supplier Accounts 1099 - USA</i> in the Supplier Accounts functional area.	Users can: <ul style="list-style-type: none"> <li>Use the <b>1099 Work Area</b>.</li> <li>Run the <b>1099 Report</b>.</li> <li>Run the <b>1099 Audit Report</b>.</li> <li>Create 1099 runs.</li> <li>Create corrected 1099 runs.</li> <li>Print 1099 and 1096 forms.</li> </ul>
<i>Reports: Supplier Accounts</i> in the Supplier Accounts functional area.	Users can run the <b>Duplicate Supplier Taxpayer ID Number Report</b> .

- [Workday Community: 1099 Processing](#)

## Setup Considerations: Combined Federal/State Filing Program

You can use this topic to help make decisions when planning your configuration and use of the Combined Federal/State Filing (CF/SF) Program in Workday. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can generate electronic 1099 returns that meet the IRS CF/SF Program requirements.

### Business Benefits

The CF/SF Program eliminates the need to report your 1099 federal and state returns separately, simplifying your annual 1099 processing.

### Use Cases

You report 1099 payments to state tax authorities. You've already obtained IRS approval to participate in the CF/SF Program. You opt in to the CF/SF Program in Workday and select the participating states to which you report. You file:

- A combined return to the IRS, which includes the payments reportable to the participating states.
- A return to each of the nonparticipating states.

### Questions to Consider

Questions	Considerations
To which states do you submit your 1099 returns?	<p>When you opt in to the CF/SF Program in Workday, you can select the states to include in your combined returns.</p> <p>For Workday to include payments in combined returns, you must use state withholding tax rates. When you don't withhold tax, you can set up a zero-percent tax rate. As a result, for each state that you include in your combined returns, you need to set up a:</p> <ul style="list-style-type: none"> <li>• Tax authority.</li> <li>• Withholding tax rate with a realization point of invoice.</li> <li>• Withholding tax code that you use on the 1099 payments.</li> </ul> <p>Then, map your state tax authorities to 1099 state withholding.</p> <p>Also add the state tax IDs in the tax details of your companies that file combined returns.</p>
How do you pay your 1099 payees?	Workday supports withholding tax codes on supplier invoices only. For Workday to include ad

Questions	Considerations
	hoc payments in combined returns, create 1099 adjustments.

### Recommendations

When you opt in to the CF/SF Program midyear, you might have 1099 payments with tax rates that you haven't mapped to the state tax authority. To include these amounts in your combined returns, we recommend that you create 1099 adjustments with:

- Spend categories that you've mapped to IRS boxes.
- The state income and state tax withheld amounts.

We also recommend that you add default withholding tax codes to your 1099 suppliers. Default withholding tax codes make data entry easier and help ensure that Workday includes all 1099 payments in your combined returns.

We recommend that you configure withholding tax rates with a realization point of invoice, as this enables you to:

- Process supplier refunds without the need for adjustments.
- Override tax amounts on supplier invoices.

To process supplier refunds when you configure withholding tax rates with a realization point of payment, you can:

- Access the **Supplier Invoice Adjustment > Change** task from the related actions menu on supplier invoice adjustments to remove the withholding tax code.
- Record supplier refunds against supplier invoice adjustments.
- Create 1099 adjustments for state taxable amounts. You don't need to adjust federal amounts.

### Requirements

- Obtain IRS approval to participate in the CF/SF Program.
- Verify if your state has additional filing requirements.
- Set up 1099 Reporting for all the states that you include in your combined returns.
- For Workday to include a payment for a given state, the payment must contain tax rates that you've mapped to the state tax authority.

### Limitations

No impact.

### Tenant Setup

No impact.

### Security

Users with access on both of these domains can opt in to the CF/SF Program and select participating states:

- *Set Up: Tax* in the Common Financial Management functional area.
- *Reports: Supplier Accounts 1099 - USA* in the Supplier Accounts functional area.

### Business Processes

No impact.

## Reporting

No impact.

## Integrations

Web Services	Considerations
<i>Put Company Tax Details</i>	Enables you to: <ul style="list-style-type: none"> <li>Opt in to participate in the CF/SF Program.</li> <li>Select the states to include in your combined returns.</li> <li>Add your state tax identifiers.</li> </ul>
<i>Put Tax Authority</i>	Uploads tax authorities for states that you include in your combined returns.
<i>Put Withholding Tax Code</i>	Uploads withholding tax codes for states that you include in your combined returns.
<i>Put Withholding Tax Rate</i>	Uploads withholding tax rates for states that you include in your combined returns.
<i>Submit 1099 Adjustment</i>	Enables you to update your 1099 federal and state amounts by payee.

## Connections and Touchpoints

### Related Information

#### Tasks

[Steps: Set Up Supplier Refunds](#) on page 1611

[Steps: Set Up Transaction Taxes](#) on page 644

[Steps: Set Up Withholding Taxes](#) on page 673

#### Reference

[2022R2 What's New Post: 1099-MISC and 1099-NEC Combined Federal and State Filing \(CF/SF\)](#)

## Steps: Set Up 1099 Reporting

### Prerequisites

- Review setup considerations for 1099 Reporting.
- Obtain an IRS tax ID transmitter control code for companies that file 1099 returns.
- Set up transaction and withholding tax codes and tax rates for the IRS and all the states where you report 1099 income. See [Steps: Set Up Transaction Taxes](#) on page 644 and [Steps: Set Up Withholding Taxes](#) on page 673.

### Context

You can set up and review your 1099 reporting configuration every year before you start processing your 1099 returns.

## Steps

**1. (Optional) Set Up Tax Authorities** on page 645.

When you opt in to the Combined Federal/State Filing (CF/SF) program, create tax authorities for all the states that you include in your combined return.

**2. Map 1099 Categories to Spend Categories and Hierarchies** on page 713.

Map 1 or more spend categories or spend category hierarchies to each category box on IRS forms 1099 MISC and 1099 NEC.

**3. Map a Tax Authority to 1099 Federal or State Withholding** on page 714.

Map:

- Your federal tax authority to federal withholding.
- Your state tax authorities to state withholding.

Workday supports the automatic withholding tax calculation only on supplier invoices.

**4. Set Up Company Tax Details for 1099 Reporting** on page 715.

Add the federal and state tax identification numbers for each company that files 1099 returns.

**5. (Optional) Access the Edit 1099 and 1096 Print Form Layout task.**

Change the print layouts for the reporting year.

Security: *Reports: Supplier Accounts 1099 - USA* domain in the Supplier Accounts functional area.

**6. Set up an integration system to generate 1099 files.**

See [Steps: Set Up Electronic Filing 1099 Integration](#).

**7. Set Up 1099 Payees** on page 715.

**8. Preview 1099 payment details.**

See [Steps: Preview 1099 Payment Details](#) on page 717.

**9. (Optional) Create 1099 Adjustments** on page 719.

When you migrate to Workday midyear, adjust your 1099 spend categories and opening balances.

## Result

Workday includes payments in your 1099 returns when they meet all these criteria:

- You issue these payments to 1099 payees.
- They include spend categories that you've mapped to IRS 1099 categories.
- They include a tax code that you've mapped to a federal tax rate.
- They include a tax code that you've mapped to a state tax rate, when you report to states. When you don't withhold state tax, use a tax rate of zero percent.
- You pay or settle these payments during the reporting year.
- They have a status of *Accepted*, when you use the payment acknowledgment feature.

## Next Steps

- Create 1099 runs.
- Print 1099 forms for your payees.
- Generate 1099 electronic files for the IRS.

## Related Information

### Concepts

[Concept: Single Legal Entities](#)

## Map 1099 Categories to Spend Categories and Hierarchies

### Prerequisites

- Review the IRS form 1099 MISC and 1099 NEC instructions for the current tax year to verify threshold amounts for each category.
- Security: Set Up: Payee Tax Authority Information domain in the Supplier Accounts functional area.

### Context

You can update your 1099 configuration when:

- You set up 1099 reporting.
- The IRS releases new versions of the 1099 forms with new or updated:
  - Boxes.
  - Threshold amounts.
- You change your spend categories and spend category hierarchies.

### Steps

#### 1. Access the **Update 1099 Configuration** task.

As you select a 1099 configuration, consider:

Option	Description
<b>Excluded Payment Types</b>	You can exclude the payment types on which you report separately.  Workday excludes the payment types that you select from all the 1099 form types and all the effective periods.
<b>Effective Period</b>	Workday adds effective periods as the IRS updates their 1099 forms.
<b>Category Mapping</b>	Click this option when you meet 1 of these conditions: <ul style="list-style-type: none"> <li>You don't need to set minimum threshold amounts for any IRS box.</li> <li>Each threshold applies to 1 IRS category.</li> </ul>
<b>Aggregate Category Mapping</b>	Click this option when you need to set at least 1 threshold amount across several IRS boxes combined.

#### 2. As you complete the task, consider:

Option	Description
<b>IRS 1099 Category</b>	Select an IRS 1099 box on which you report for your selected effective period.
<b>Spend Category or Hierarchy</b>	You can map 1 or more spend categories or spend category hierarchies to a single IRS 1099 category.  You can't select a spend category or spend category hierarchy that you've already mapped in either form type for your selected effective period.

Option	Description
<b>Threshold</b>	Enter the amount that your yearly payments to a 1099 payee in your selected IRS 1099 category must meet or exceed to be reportable.
<b>IRS 1099 Aggregate Threshold</b>	Enter the amount that your yearly payments to a 1099 payee across all your selected 1099 categories must meet or exceed to be reportable.

## Result

Workday includes in your 1099 returns the amounts:

- That meet or exceed the thresholds that you've defined.
- For spend categories or spend category hierarchies that you've mapped to IRS boxes.

## Example

In 2020, you pay a supplier invoice with a *Legal and Auditing Fees* spend category on the transaction line. When you pay the invoice, Workday reports the line amount in *Box 10: Gross proceeds paid to an attorney* on the IRS form 1099 MISC for that supplier.

## Next Steps

Run the **View 1099 Configuration** report to review your mapping of spend categories and spend category hierarchies to IRS boxes, including threshold amounts.

## Map a Tax Authority to 1099 Federal or State Withholding

### Prerequisites

Security: Set Up: Payee Tax Authority Information domain in the Supplier Accounts functional area.

### Context

You can map your tax authorities as federal or state withholding to report withheld tax amounts in the appropriate boxes of your 1099 returns.

### Steps

1. Access the **Maintain 1099/1042-S Withholding Configuration** task.
2. As you complete the task, consider:

Option	Description
<b>Tax Authority</b>	Select a tax authority that you use in the tax rates of your 1099 transactions.
<b>Federal Withholding / State Withholding</b>	Click <i>Federal Withholding</i> or <i>State Withholding</i> to report the withheld tax amount in the appropriate box of your 1099 returns.  When you click <i>State Withholding</i> , select the state to which you report the withheld amounts.

### Next Steps

To review your mapping of federal or state tax authorities to federal or state withholding, you can:

- Preview 1099 payment details.
- Run the **Find 1099 Adjustments** report.

## Set Up Company Tax Details for 1099 Reporting

### Prerequisites

Security:

- *Reports: Supplier Accounts 1099 - USA* domain in the Supplier Accounts functional area.
- *Set Up: Tax* domain in the Common Financial Management functional area.

### Context

You can enter the tax identification numbers that Workday includes on your 1099 forms for each company that files 1099 returns.

### Steps

1. Access the **Edit Company Tax Details** task.
2. On the **Tax IDs** tab, add or verify:
  - The federal taxpayer identification number.
  - The state income tax IDs.
3. Enter the IRS transmitter control code of the company:

Option	Description
<b>Country for Tax ID Type</b>	Select <i>United States of America</i> .
<b>Tax ID Type</b>	Select <i>Transmitter Control Code</i> .
<b>Identification #</b>	Enter the 5-character transmitter control code that the IRS issues to your organization.
<b>Primary Tax ID</b>	You can leave this check box clear. Workday only uses transmitter control codes for 1099 electronic files.

4. As you complete the **1099 Reporting** tab, consider:

Option	Description
<b>Participate in Combined Federal/State (CF/SF) Filing?</b>	Select this check box when you participate in the CF/SF Program.
<b>Participating States</b>	Select the participating states to include in your electronic return.

## Set Up 1099 Payees

### Prerequisites

- Configure the *Supplier* business process and security policy in the Suppliers functional area.
- Security:
  - *Process: Ad Hoc Payee* domain in the Banking and Settlement functional area.
  - *Process: Miscellaneous Payee - Edit* domain in the Miscellaneous Payments functional area.
  - *Self-Service: Miscellaneous Payee* domain in the Miscellaneous Payments functional area.
  - *Set Up: Assign Contingent Worker* domain in the Suppliers functional area.
  - *Set Up: Investor* domain in the Financial Accounting functional area.

## Context

You can configure these payee types to include in your 1099 returns:

- Ad hoc payees.
- Independent contingent workers.
- Investors.
- Miscellaneous payees.
- Suppliers.

## Steps

1. Access 1 of these tasks:

- **Assign Tax Authority Form Type to Contingent Worker.**
- **Edit Ad Hoc Payee.**
- **Edit Investor.**
- Select **Miscellaneous Payee > Edit** from the related actions menu of the miscellaneous payee.
- Select **Supplier > Create Supplier Change** from the related actions menu of the supplier.

2. Select the **1099 (MISC/NEC)** option from the **Tax Authority Form Type** prompt.

3. As you verify the tax information of your 1099 payee, consider:

Option	Description
<b>Report 1099 with Parent</b>	Select <b>Supplier &gt; Create Supplier Change</b> from the related actions menu of the child supplier. In the <b>Supplier Hierarchy</b> section, select the check box to consolidate 1099 reporting for parent and child suppliers.
<b>Default Withholding Tax Code</b>	Select <b>Supplier &gt; Create Supplier Change</b> from the related actions menu of the 1099 supplier. When you opt in to the Combined Federal/State Filing Program, default withholding tax codes: <ul style="list-style-type: none"> <li>• Make data entry easier.</li> <li>• Help ensure that Workday includes all 1099 payments in your combined returns.</li> </ul>
<b>National ID Type or Tax ID Type or TIN Type</b>	Workday only displays tax identifiers on 1099 forms that have a United States: <ul style="list-style-type: none"> <li>• <b>Tax ID Type</b> for suppliers and miscellaneous payees.</li> <li>• <b>National ID Type</b> for contingent workers.</li> <li>• <b>TIN Type</b> for ad hoc payees and investors.</li> </ul>
<b>Tax ID or Identification #</b>	Workday only displays the primary tax identifier of the payee for suppliers or miscellaneous payees. Leave blank when 1099 suppliers report with their parent supplier.
<b>FATCA</b>	You can report on your 1099 forms that suppliers or miscellaneous payees are subject to the Foreign Account Tax Compliance Act.
<b>Alternate Name Usage</b>	You can enter an alternate name for all payee types except contingent workers.

Option	Description
	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>1099 Recipient</i> to replace the legal name on 1099 forms.</li> <li>• <i>Doing Business As</i> to add the alternate name after the legal name on 1099 forms.</li> </ul>
<b>Address</b>	<p>Enter an address to use for <i>Tax Reporting</i>. When payees don't have a tax-reporting address, Workday uses their primary address.</p> <p>For contingent workers, Workday displays the primary home address on 1099 forms.</p>

### Next Steps

- Run the **1099 Audit Report** to identify 1099 payees with missing tax information.
- Run the **Duplicate Supplier Taxpayer ID Number Report** to identify suppliers with duplicate taxpayer ID numbers.

## Steps: Preview 1099 Payment Details

### Prerequisites

- Set up 1099 reporting for the reporting year. See [Steps: Set Up 1099 Reporting](#) on page 711.
- Settle payment transactions for 1099 payees.
- Security: *Reports: Supplier Accounts 1099 - USA* domain in the Supplier Accounts functional area.

### Context

You can review 1099 payment details to ensure that 1099 payees and their payment data are accurate and complete before creating 1099 runs.

### Steps

#### 1. Access the **Create 1099 Payment Details** task.

When you create 1099 payment details, Workday saves a snapshot of your 1099 payment information for the selected tax year and company or company hierarchy.

You can select:

- Companies with a base currency of USD.
- Company hierarchies where at least 1 company has a base currency of USD.

#### 2. To locate a snapshot of 1099 payment details for a tax year and company, run the **Find 1099 Payment Details** report.

#### 3. To review 1099 payment information for a tax year and company, run the **View 1099 Payment Details** report from the **Find 1099 Payment Details** report.

As you review the **View 1099 Payment Details** report, consider:

Option	Description
<b>Reportable Amount</b>	<p>Workday calculates the reportable amount for payments made to 1099 payees based on the spend category options.</p> <p>Workday also includes:</p>

Option	Description
	<ul style="list-style-type: none"> <li>Freight amount.</li> <li>Other charges.</li> <li>Nonrecoverable allocated transaction tax.</li> </ul>
<b>Total Amount</b>	The total payment amount, including uncategorized and excluded payments, and any federal income on 1099 adjustments.
<b>1099 Payment Details</b>	<p>You can click this button to review all payment transactions to 1099 payees, including payments:</p> <ul style="list-style-type: none"> <li>Below 1099 thresholds.</li> <li>With spend categories and spend category hierarchies that you haven't mapped to any IRS box.</li> <li>With payment types that you exclude from our 1099 reporting.</li> </ul>

As you review 1099 payment transactions, consider:

Option	Description
<b>Payee</b>	<p>Workday includes payees that have:</p> <ul style="list-style-type: none"> <li>Payment activity for the specified tax year.</li> <li>A <b>Tax Authority Form Type</b> of 1099 (<i>MISC/NEC</i>).</li> </ul> <p>See <a href="#">Set Up 1099 Payees</a> on page 715.</p>
<b>Tax Reportable Payee Name</b>	The payee name that Workday displays on 1099 reports. See <a href="#">Set Up 1099 Payees</a> on page 715.
<b>Tax ID</b>	To correct or enter missing tax IDs, update the payee. See <a href="#">Set Up 1099 Payees</a> on page 715.
<b>Account Number</b>	The Workday ID for the payee.
<b>Reportable</b>	Workday only includes reportable payment amounts in 1099 forms. To change which payments are reportable, update your 1099 configuration. See <a href="#">Steps: Set Up 1099 Reporting</a> on page 711. Amounts below thresholds might be reportable when there's federal withholding tax to report for payees.
<b>Meets Threshold</b>	Displays whether the payment total for a given category meets or exceeds the minimum amount that you configure in the <b>Update 1099 Configuration</b> task.
<b>Uncategorized Payment</b>	Uncategorized payments don't map to any of the 1099 categories and don't display on 1099 forms. See <a href="#">Map 1099 Categories to Spend Categories and Hierarchies</a> on page 713.
<b>Excluded Payment</b>	Excluded payments have payment types that your 1099 configuration excludes. See <a href="#">Map 1099</a>

Option	Description
	<a href="#">Categories to Spend Categories and Hierarchies on page 713.</a>

## Next Steps

Create 1099 runs.

When you record new 1099 payment transactions or update 1099 payment transactions, access the **Create 1099 Payment Details** task again to update 1099 payment details.

## Related Information

### Reference

[2024R2 Feature Release Note: 1099 Payment Details](#)

## Create 1099 Adjustments

### Prerequisites

- Set up 1099 payees.
- Configure the *1099 Adjustment* business process and security policy in the Supplier Accounts functional area.

### Context

When you can't update transactions directly in Workday, you can create 1099 adjustments with positive or negative amounts to:

- Correct 1099 amounts:
  - Federal and State.
  - Income and tax withheld.
- Move amounts from an IRS category to another.
- Move amounts from a 1099 form to another 1099 form.
- Include balances in your 1099 forms for payments that you've made in third-party applications.

**Note:** 1099 adjustments don't impact accounting. You can make 1099 adjustments regardless of the status of your ledger periods.

### Steps

1. Access the **Create 1099 Adjustment** task.
2. As you complete the task, consider:

Option	Description
<b>Adjustment Date</b>	The <b>Adjustment Date</b> that you enter determines in what calendar year Workday reports the 1099 adjustment.
<b>Memo</b>	<p>Include a memo that describes the adjustment, such as:</p> <ul style="list-style-type: none"> <li>• A reclassification of spend categories.</li> <li>• A reclassification of spend category hierarchies.</li> <li>• An opening balance for a 1099 recipient that you added to Workday midyear.</li> </ul>

Option	Description
<b>Federal Tax Withheld</b>	You can enter a positive or negative amount.

3. Complete the **Federal Income**, **State Income**, and **Attachments** tabs as applicable.

#### Example

- You realize that you've reported travel expenses in the *Legal and Auditing Fees* spend category on a supplier invoice that you've already paid. You don't need to report travel expenses in 1099 forms, so you create a 1099 adjustment with:
  - A negative **Federal Income** amount.
  - The *Legal and Auditing Fees* spend category.
  - A memo that indicates why you created the adjustment.
  - A copy of the receipt in the **Attachments** tab, for auditing purposes.
- You want to move amounts from the 1099 MISC form to the 1099 NEC form. You create:
  - A negative adjustment on the 1099 MISC form.
  - A positive adjustment on the 1099 NEC form.

#### Next Steps

- Preview 1099 payment details to verify your 1099 amounts and categories after adjustment.
- Run the **Find 1099 Adjustments** report to locate adjustments that you need to change or cancel.
- When you're ready, create 1099 runs.

## Steps: Process 1099 Returns

#### Prerequisites

Set up 1099 Reporting. See [Steps: Set Up 1099 Reporting](#) on page 711.

#### Context

You can generate 1099 forms or electronic files from payments to 1099 payees in Workday.

#### Steps

1. Preview 1099 payment details.  
See [Steps: Preview 1099 Payment Details](#) on page 717.
2. [Create 1099 Runs](#) on page 721.
3. [Print 1099 and 1096 Forms](#) on page 722.  
You can print 1099 forms and mail them to 1099 payees.
4. [Generate 1099 Electronic Files](#) on page 724.  
You can generate:
  - Test files for submission during the IRS test period.
  - Original 1099 returns to e-file with the IRS.
5. Access the **1099 Work Area** report.  
You can download 1099 electronic files from the 1099 electronic filing run for a tax year, company, and 1099 form type. Then, you can manually submit 1099 electronic files to the IRS FIRE web site.

Security: *Reports: Supplier Accounts 1099 - USA* domain in the Supplier Accounts functional area.

**6. (Optional) Access the **Create 1099 Run** task.**

You can create additional runs for payees missing from original 1099 runs. From additional runs, you can:

- Print 1099 forms.
- Generate 1099 electronic files for missed payees only and submit them manually to the IRS.

Before you print or generate 1099 electronic files from additional 1099 runs, ensure you don't have a more recent original 1099 run.

Security: *Reports: Supplier Accounts 1099 - USA* domain in the Supplier Accounts functional area.

**7. (Optional) From the related actions menu of original or additional 1099 runs, select **1099 Run > Regenerate**.**

To update 1099 run data without adding new payees to 1099 runs, you can regenerate 1099 runs.

Security: *Reports: Supplier Accounts 1099 - USA* domain in the Supplier Accounts functional area.

**8. (Optional) [Create Corrected 1099 Runs](#) on page 725.**

From corrected runs, you can:

- Print corrected 1099 forms for your payees.
- Generate corrected 1099 electronic files and submit them manually to the IRS.

[The Next Level: 1099 Processing](#)

[2024R2 Feature Release Note: Additional 1099 Payees](#)

## Create 1099 Runs

### Prerequisites

- Set up 1099 reporting for the reporting year. See [Steps: Set Up 1099 Reporting](#) on page 711.
- Security: *Reports: Supplier Accounts 1099 - USA* domain in the Supplier Accounts functional area.

### Context

You can create original or additional 1099 runs. See [Concept: 1099 Runs](#) on page 726.

### Steps

1. Access the **Create 1099 Run** task.
2. As you complete the task, consider:

Option	Description
<b>1099 Run Selection</b>	Select: <ul style="list-style-type: none"> <li>• <i>Initial Run</i> to create or modify an original 1099 run for a given form type, tax year, and company.</li> <li>• <i>Additional Run</i> to create an additional 1099 run that only includes data for payees missing from existing 1099 runs for the same form type, tax year, and company.</li> </ul>
<b>1099 Run</b>	Displays when you create additional runs. Select the original 1099 run that's missing payees.

Option	Description
<b>1099 Form Type</b> <b>Tax Year</b>	When you create additional 1099 runs, Workday populates the form type and tax year from the 1099 run that you select.
<b>Company</b>	<p>You can select:</p> <ul style="list-style-type: none"> <li>Companies with a base currency of USD.</li> <li>Company hierarchies where at least 1 company has a base currency of USD.</li> </ul> <p>When you create additional 1099 runs, Workday populates the company from the 1099 run that you select.</p>
<b>Modify Existing 1099 Data</b>	<p>Displays when you create initial 1099 runs.</p> <p>You can select this check box:</p> <ul style="list-style-type: none"> <li>When there's already an original 1099 run for the same form type, tax year, and company.</li> <li>To confirm that you want to replace the original 1099 run and merge additional runs.</li> </ul>

## Result

Workday saves the 1099 processing run and displays a report of 1099 payees and amounts:

- 1099 runs only include payees with reportable federal payment amounts greater than zero. Payees with reportable state payments whose federal payments amount to zero don't show in 1099 runs.
- You can drill down on payees for an overview of their 1099 run data for the selected company.

When you create additional runs, Workday:

- Saves 1 additional 1099 run with payees that you set up for 1099 processing and who aren't already included in original or additional 1099 runs for the same form type, tax year, and company.
- Doesn't update the original 1099 run.

## Next Steps

- Print 1099 forms for your payees and 1096 forms for your records.
- Generate 1099 electronic files for the IRS.

## Related Information

### Reference

[2024R2 Feature Release Note: Additional 1099 Payees](#)

## Print 1099 and 1096 Forms

### Prerequisites

- Confirm form, printing, and mailing instructions with the IRS.
- [Create 1099 Runs](#) on page 721 or [Create Corrected 1099 Runs](#) on page 725.
- Ensure that the 1099 data reported in the 1099 run is complete and accurate.
- Security: *Reports: Supplier Accounts 1099 - USA* in the Supplier Accounts functional area.

### Context

You can print 1096 and 1099 forms that you either keep for your records, or mail to your payees.

## Steps

1. Access the **Print 1099 and 1096 Forms** task.
2. As you complete the task, consider:

Option	Description
<b>Filters</b>	<p>To locate the run that you want to print more easily, you can filter the options in the <b>1099 Run</b> prompt by:</p> <ul style="list-style-type: none"> <li>• 1099 form type.</li> <li>• Tax year.</li> <li>• Company.</li> </ul>
<b>Print Layouts</b>	<p>Workday delivers display-only layouts for each tax year, enabling you to print your reporting details onto blank paper for review and record keeping.</p> <p>For tax years 2022 and earlier, Workday delivers preprinted layouts that you can print with a specialized magnetic ink and mail to the IRS.</p> <p>You can change how Workday populates these layouts with the <b>Edit 1099 and 1096 Print Form Layout</b> task.</p>
<b>Contact</b>	<p>Workday uses the details of this contact to populate payer information on 1096 and 1099 forms:</p> <ul style="list-style-type: none"> <li>• Location.</li> <li>• Phone number.</li> <li>• Email address.</li> </ul>
<b>Correction</b>	<p>You can change this option on 1099 runs that you've already printed. You can't change this option when you print a corrected 1099 run.</p> <p>When you select this check box, Workday generates forms in the corrected format required by the IRS.</p>
<b>Print One Payee per Page</b>	<p>You can only change this option when you print 1099 forms for payees (Copy B display-only layouts).</p> <p>When you don't select this option, Workday generates a file with:</p> <ul style="list-style-type: none"> <li>• 2 forms per page for 1099-MISC forms.</li> <li>• 3 forms per page for 1099-NEC forms.</li> </ul>
<b>Truncate Tax ID on Payee Statement</b>	<p>You can only change this option when you print 1099 forms for payees (Copy B display-only layouts).</p> <p>Select for Workday to only display the last 4 digits of payees' tax IDs.</p>

3. As you review the print run summary in the **1099s** grid, consider:

Option	Description
<b>Payee</b>	Lists 1099 payees with payment activity in the 1099 run.
<b>Tax ID</b>	When the tax ID of a 1099 payee is missing or incorrect, you can update the payee.
<b>Address Exists</b>	Make sure that you have an address on file for each 1099 payee.
<b>Total of All Box Values</b>	Verify the total payment amount of all 1099 categories for each payee. To review payment details, you can access the <b>Create 1099 Payment Details</b> task. See <a href="#">Steps: Preview 1099 Payment Details</a> on page 717.

## Result

Workday:

- Creates 1 PDF file per company.
- Saves a 1099 Printing Run Group from which you can reprint 1096 or 1099 forms.

## Next Steps

Print the IRS form layout and reporting details onto blank paper. For tax years 2022 and earlier, based on the layout you select, you can also load preprinted IRS forms into your printer and print the reporting details onto IRS preprinted stock. The Workday-delivered layouts ensure that amounts print in the correct position onto the preprinted forms.

You can reprint 1099 and 1096 forms with the **Print 1096 and 1099 from existing Print Run Group** task, saving you the effort to generate a new print run group. Workday enables you to reprint 1096 and 1099 forms:

- For all payees or a selection of payees.
- With or without truncating tax IDs on payee statements.

## Generate 1099 Electronic Files

### Prerequisites

- Set up 1099 reporting and ensure that you've configured:
  - A company tax ID with the 5-character transmitter control code the IRS has issued to your organization.
  - An electronic filing 1099 integration.
- [Create 1099 Runs](#) on page 721 or [Create Corrected 1099 Runs](#) on page 725.
- Configure the *1099 Electronic Filing Run* business process in the Supplier Accounts functional area.

### Context

From 1099 runs, Workday can produce these types of electronic 1099 MISC or 1099 NEC files, which you can upload to the IRS FIRE system:

ORIG	An original 1099 return.
------	--------------------------

CORR	A correction designation of a previously processed 1099 return.
TEST	A test file to submit during the IRS test period.
REPL	A replacement file for an original or corrected 1099 return with processing errors.

The IRS file format enables you to upload a single file that includes multiple companies.

### Steps

1. Access the **Generate 1099 Electronic Filing** task.
2. As you complete the task, consider:

Option	Description
<b>Filters</b>	To locate a 1099 run more easily, you can filter the options in the <b>1099 Run for Generate Electronic Filing</b> prompt by: <ul style="list-style-type: none"> <li>• 1099 form type.</li> <li>• Tax year.</li> <li>• Company.</li> </ul>
<b>1099 Run for Generate Electronic Filing</b>	When you select a corrected 1099 run, Workday automatically produces a CORR file.
<b>Transmitter Company</b>	Select a company that has a transmitter control code from the IRS.

3. (Optional) When you opt into the Combined Federal/State Filing (CF/SF) program, review and update the list of participating states to include in your return.

### Result

Workday creates a 1099 electronic filing run from the data in the 1099 run that you select.

### Next Steps

- To download the electronic 1099 file, access the electronic filing run on the **1099 Work Area**.
- Upload the file to the IRS FIRE system.

### Related Information

#### Reference

[2022R2 What's New Post: 1099-MISC and 1099-NEC Combined Federal and State Filing \(CF/SF\)](#)

## Create Corrected 1099 Runs

### Prerequisites

Security: *Reports: Supplier Accounts* in the Supplier Accounts functional area.

### Context

To correct 1099 returns that the IRS has already processed, you can create corrected 1099 runs. When you print or generate electronic 1099 forms from corrected runs, Workday generates corrected forms that follow IRS requirements for:

Correction Type	Considerations
1-transaction corrections	<p>Errors requiring a single record (or form, for paper filing) to make the correction. Examples:</p> <ul style="list-style-type: none"> <li>• Incorrect amounts, codes, or check boxes.</li> <li>• Returns that shouldn't have been filed.</li> </ul>
2-transaction corrections	<p>Errors requiring multiple records (or forms, for paper filing) to make the correction. Examples:</p> <ul style="list-style-type: none"> <li>• Incorrect payee name.</li> <li>• Missing or incorrect taxpayer identification number.</li> <li>• Incorrect return type.</li> </ul>

## Steps

1. Access the **Create Corrected 1099 Run** task.
2. As you complete the task, consider:

Option	Description
<b>Filters</b>	<p>To locate your run more easily, you can filter the options in the <b>1099 Run</b> prompt by:</p> <ul style="list-style-type: none"> <li>• Form type.</li> <li>• Tax year.</li> <li>• Company.</li> </ul>
<b>1099 Run</b>	<p>You can select an original, additional, or corrected 1099 run.</p>
<b>Report All Zero</b>	<p>Select this check box for Workday to populate blank amounts as zero.</p>

## Result

Workday creates a corrected 1099 run for the selected payees, which you can access from the **1099 Work Area** report.

## Example

To correct a 1099-NEC return that shouldn't have been filed for a payee, you:

- Create negative 1099 adjustments to zero out all 1099-NEC amounts for that payee.
- Create a 1099 corrected run for the payee.

## Next Steps

- Print and mail corrected 1099 forms to 1099 payees for tax filing purposes.
- Generate corrected 1099 electronic files to resubmit to the IRS FIRE web site manually.

## Concept: 1099 Runs

### 1099 Runs

1099 runs are snapshots of your 1099 data for a given tax year, company, and form type. You can:

- Access 1099 runs from the **1099 Work Area** report.

- Generate printable and electronic 1099 returns from 1099 runs.

You can create these types of 1099 runs:

1099 Run Type	Task	Enables You to Generate
Original	Create 1099 Run with the <i>Initial Run</i> option.	Original returns that you e-file with the IRS for the first time.
Additional	Create 1099 Run with the <i>Additional Run</i> option.	Original returns containing only payees who aren't included in earlier filings for the same tax year, company, and form type.
Corrected	Create Corrected 1099 Run.	Corrected returns for a selection of previously processed payees.

1099 runs only contain payment information for payees that you set up for 1099 processing. See [Set Up 1099 Payees](#) on page 715.

Workday doesn't update 1099 runs when you modify payees or payment information. To refresh data in 1099 runs, you can either:

- Modify original 1099 runs by creating new 1099 runs and selecting the **Modify Existing 1099 Data** option.
- Regenerate additional 1099 runs.

### Modify 1099 Runs

When you create an original 1099 run for a tax year, company, and form type that already have an original 1099 run, Workday:

- Prompts you to select the **Modify Existing 1099 Data** check box.
- Replaces the original 1099 run with a new original 1099 run from the current 1099 payees and their payment information.

When you create additional 1099 runs and later modify an original 1099 run for the same form type, tax year, and company, Workday creates a new original 1099 run for all 1099 payees, including payees from additional runs. You can still print or generate 1099 electronic files from additional 1099 runs that you've created from the original 1099 run, but you can no longer:

- Access the additional 1099 runs from the **1099 Work Area** report.
- Regenerate the additional 1099 runs.

### Regenerate 1099 Runs

To update 1099 run data without adding new payees to an original or additional 1099 run, you can regenerate 1099 runs. Example: After correcting the tax ID for a payee included in an additional 1099 run, you regenerate the additional 1099 run.

You can't regenerate:

- Corrected runs.
- Additional runs, after you modify their original 1099 run. You can find more current payment information on additional payees in the latest original 1099 run.

## Concept: 1099 Report

You can run the **1099 Report** as an alternative to previewing 1099 payment details.

**Note:** Workday recommends that you preview 1099 payment details instead of running the **1099 Report**, as the **View 1099 Payment Details** report offers filtering and sorting capabilities. See [Steps: Preview 1099 Payment Details](#) on page 717.

The **1099 Report** summarizes payment activity for the selected **1099 Form Type, Company, and Tax Year**:

- The total reportable amount.
- The total number of payments made to 1099 payees; this number includes nonreportable amounts, such as amounts with spend categories that you haven't mapped to 1099 boxes.
- The total number of 1099 payees.

When you drill down on the number of payees, Workday displays their payment activity, including:

Option	Description
<b>Payee</b>	The report only includes 1099 payees with payment activity for the specified tax year.
<b>Categorized Payments</b>	The total amount for payments made to a payee in the <b>1099 Category</b> . The amount includes transactions with lines having spend categories mapped to 1099 categories.
<b>Meets Threshold</b>	Displays whether the payment total for a given category meets or exceeds the minimum amount that you configure in the <b>Update 1099 Configuration</b> task.
<b>Uncategorized Payments</b>	The total amount for payments made to the payee that doesn't display on 1099 forms. These payments don't map to any of the 1099 categories.
<b>Total Payments</b>	You can drill into total payment amounts to review details about all categorized and uncategorized payments.

You can run the **1099 Report** for:

- Companies with a base currency of USD.
- Company hierarchies where at least 1 company has a base currency of USD.

#### Related Information Reference

[2024R2 Feature Release Note: 1099 Payment Details](#)

## Concept: 1099 Work Area

The **1099 Work Area** report enables you to manage your 1099-MISC and 1099-NEC reporting across companies and view where you are in your 1099 filing process.

You can view, for a reporting year and company:

- The work you still have to complete.
- The number of 1099-MISC and 1099-NEC payees you did business with for the calendar year.
- Original, additional, and corrected 1099-MISC and 1099-NEC runs with their payees and payment activity.
- How many 1099-MISC and 1099-NEC files you've produced.
- A list of 1099-MISC and 1099-NEC printing runs from which you can access PDF printable files.

From the **1099 Work Area** report, you can:

- Change the calendar year from the prior year.
- Create 1099 runs.
- Create corrected 1099 runs.
- Print 1099-MISC, 1099-NEC, and 1096 forms.
- Generate 1099-MISC and 1099-NEC electronic files.

### **Related Information**

#### **Concepts**

[Concept: Single Legal Entities](#)

## **Example: Set Up a Contingent Worker as a 1099 Payee**

This example illustrates how you can set up a contingent worker as a 1099 payee.

### **Context**

You want to include a new contingent worker in your 1099 processing.

### **Prerequisites**

- You've created a contingent worker named *Abby Brennan*.
- You've entered the information on *Abby Brennan* in Workday.
- The social security number of *Abby Brennan* is 318-33-2345.
- You've paid 1099-reportable amounts to *Abby Brennan* during the calendar year.
- Security:
  - *Person Data: ID Information* domain in the Personal Data functional area.
  - *Set Up: Assign Contingent Worker* domain in the Suppliers functional area.
  - Configure the *Home Contact Change* business process and security policy in the Contact Information functional area.
  - Configure the *Edit Government IDs* business process and security policy in the Personal Data functional area.

### **Steps**

1. Access the **Assign Tax Authority Form Type to Contingent Worker** task.
2. Select the *Abby Brennan* option from the **Contingent Worker** prompt.
3. Click **OK**.
4. Select the *1099 (MISC/NEC)* option from the **Tax Authority Form Type** prompt.
5. Click **OK**.
6. Click **Done**.
7. Access the **Edit Government IDs** task.
8. Select the *Abby Brennan* option from the **Person** prompt.
9. When you haven't already entered a Social Security Number or U.S. Individual Taxpayer Identification Number for your contingent worker, add a new row to the **National IDs** grid with these values:

Country	National ID Type	Add/Edit ID
<i>United States of America</i>	<i>Social Security Number (SSN)</i>	<i>318-33-2345</i>

10. Click **Submit**.

11. Access the **Change Home Contact Information** task.

12. Select the *Abby Brennan* option from the **Contingent Worker** prompt.

13. Click **OK**.

**14.** Verify that the contingent worker has a primary home address and that it's correct.

### Result

- When you preview 1099 payment details, you can find Abby Brennan as a payee and verify:
  - The payments that you've made to Abby Brennan.
  - Abby Brennan's tax ID in the **Tax ID** column.
- When you create a 1099 run and drill down on *Federal Payees*, you find the address that you entered for *Abby Brennan*.

## Troubleshooting: 1099 Reporting Problems

### 1099 payment details don't include expected payments.

**Cause:** Check to ensure that these required configuration items and payment statuses are correct.

**Solution:**

#### Steps

1. Preview 1099 payment details.

See [Steps: Preview 1099 Payment Details](#) on page 717.

2. Ensure that:

- The 1099 payment details include a **1099 Category**.
- You're running the report for the correct year and any excluded payment types are appropriate.
- Supplier invoices are paid.
- When you're using payment acknowledgments, they are in *Accepted* status from the financial institution; this ensures that the payments are complete and reportable.
- You've marked supplier tax IDs (EIN, SSN, and ITIN) as *Primary*.
- Suppliers have a primary address.
- Suppliers have a *1099 (MISC/NEC)* tax authority form type.

3. If you're missing payments from a legacy system, you can create them in Workday using the **Create 1099 Adjustment** task.

### Data doesn't align properly in preprinted forms.

**Cause:** You didn't select the correct form for the reporting year.

**Solution:**

#### Steps

- From the **Edit 1099 and 1096 Print Form Layout** task, ensure that you have the correct form for the reporting year you select.
- For alignment issues, ensure that you don't select scaling or **Fit to page**.

### The IRS rejected a 1099 form.

**Cause:** The 1099 form contains an error.

**Solution:** Create a corrected 1099 run. This enables you to issue a corrected 1099 form to the payee and to submit a corrected electronic file for the corrected payee to the IRS.

## 1042-S Reporting

---

### Steps: Perform 1042-S Reporting

#### Prerequisites

- Create *spend categories* and spend category hierarchies for mapping to 1042-S income codes.
- Configure account posting rules for ledger accounts that map to spend categories and spend category hierarchies for 1042-S spend and withholding.

#### Context

Define 1042-S tax income codes for the spend and withholding your organization reports to the IRS for 1042-S payees.

#### Steps

1. [Create Spend Categories.](#)

- 1042-S Spend
- 1042-S Fed Withholding
- 1042-S State Withholding

2. [Create 1042-S Income Codes](#) on page 731.

You can define 1042-S income codes and map them to spend categories or spend category hierarchies.

3. Designate 1042-S payees for your organization.

For suppliers, investors, and ad hoc payees.

- [Create Suppliers.](#)
- [Define Investors](#) on page 438.
- [Create Ad Hoc Payments](#) on page 1964.

For contingent workers.

- [Assign a Tax Authority Form Type to Contingent Workers](#) on page 732.

## Create 1042-S Income Codes

#### Context

Create income codes and map them to spend categories and spend category hierarchies for 1042-S income and withholding reporting.

#### Steps

1. Access the **Maintain 1042-S Income Codes** task.

2. Select, modify, or create a 2-digit **Income Code and Description**.

3. Specify one or more spend categories or spend category hierarchies for each income code.

2-digit income codes must be unique and cannot be mapped to spend categories or spend category hierarchies linked to other income codes.

- Select the **Federal Withholding** and **State Withholding** spend categories or spend category hierarchies to withhold amounts on 1042-S spend.

### Result

You cannot delete 1042-S income codes once they are used in transactions, but you can edit the spend categories and spend category hierarchies attached to them.

## Assign a Tax Authority Form Type to Contingent Workers

### Prerequisites

- Create and contract contingent workers.
- Access the **Edit Government IDs** task to assign the contingent worker's Federal ID:
  - Social Security Number (SSN).
  - U.S. Individual Taxpayer Identification Number (ITIN).
  - Employer ID Number (EIN).
- Configure the *Edit Government IDs* business process and security policy in the Personal Data functional area.

### Context

You can assign a tax authority form type to contingent workers for reporting income and withholding amounts to the IRS.

### Steps

- Access the **Assign Tax Authority Form Type to Contingent Worker** task.
- Select a **Tax Authority Form Type** for the contingent worker:

Option	Description
1042-S	The worker is a non-resident alien and the U.S. source of income is subject to withholding.
1099 (MISC/NEC)	The worker is a 1099 payee and you report 1099 income to the IRS. 1099 payees are responsible for reporting Federal and State withholding to the IRS.
Tax Deducted at Source (TDS)	Your organization is liable to deduct withholding.

### Next Steps

Report income and withholding amounts for independent contingent workers to the IRS based on their tax authority form type.

### Related Information

#### Tasks

[Steps: Perform 1042-S Reporting](#) on page 731

[Contract Contingent Workers](#)

## Third-Party Tax Service Integrations

---

### Steps: Set Up Third-Party Tax Service Integrations

#### Prerequisites

- Ensure that your third-party tax service provider deploys the third-party tax integration to your Workday tenant.
- Add the third-party tax service integration as a step on 1 of these business processes:
  - *Customer Invoice*
  - *Supplier Invoice*
- Set up a tax authority.
- Security: *Set Up: Tax domain* in the Common Financial Management functional area.

#### Context

You can use a third-party tax service integration to calculate, import, and store tax details on customer or supplier invoices.

#### Steps

1. Access the **Third-Party Tax Options** tab on the **Edit Company Tax Details** task.
2. When you use an integration with the reporting option, add a row to the **Third-Party Tax Options** grid.
3. As you complete the task, consider:

Option	Description
<b>Operational Transaction Source</b>	Select the type of documents for which you want to use a third-party tax service.
<b>Tax Service Name</b>	The tax service name displays on customer or supplier invoices to let you know which third-party tax service the document uses.
<b>Enabled</b>	Select to enable the third-party tax service provider at the company level.
<b>Transaction Tax</b>	You can't clear this check box. All third-party tax service providers that you configure are enabled for transaction tax.
<b>Withholding Tax</b>	Select to enable the third-party tax service provider for withholding tax.

4. When you use a nonreporting integration for customer invoices, complete the **Customer Invoice Non-Reporting Option** section.
5. Set up a tax category for your third-party transaction tax rates.  
See [Set Up Tax Categories](#) on page 646.
6. Set up empty third-party transaction tax rates for your third-party tax codes.  
The number of tax rates that you set up depends on your tax jurisdiction and country.  
See [Set Up Transaction Tax Rates](#) on page 647.
7. Set up empty third-party transaction tax codes that Workday uses to store the tax details from the integration.  
See [Set Up Transaction Tax Codes](#) on page 648.

**8.** (Optional) When you enable the integration for withholding tax, set up:

- A withholding tax category.
- Empty withholding tax rates.
- Empty withholding tax codes.

See [Steps: Set Up Withholding Taxes](#) on page 673.

### Result

When you create a customer or supplier invoice, leave the tax code and tax applicability fields empty. When you submit the customer or supplier invoice, Workday starts your third-party tax integration, which imports the tax details onto your invoice. You can view the tax amounts on the **Tax** tab of the invoice and drill down to the line level.

### Next Steps

After the third-party tax service provider calculates and imports tax details into Workday, you can view tax details in these reports:

- The **Transaction Tax Detail for Tax on Invoice Transactions** report lists all invoices and their tax details.
- The **Tax Declaration** report lists all tax declarations.

### Related Information

#### Reference

[2024R2 Feature Release Note: Third-Party Integration for Withholding Tax](#)

## Concept: Third-Party Tax Service Integrations

You can use third-party tax service integrations to calculate, import, and store tax details on customer or supplier invoices. Using a third-party tax service integration reduces the need to:

- Maintain tax configurations in Workday, such as:
  - Tax rates.
  - Tax rules.
- Select tax codes and applicabilities on your transaction lines.

### Reporting and Nonreporting Options

When configuring third-party tax, follow instructions from your third-party tax provider to complete either of these sections on the **Edit Company Tax Details** task:

Section	Integration Option	Considerations
<b>Third-Party Tax Options</b>	Reporting	<p>Workday supports the reporting option for:</p> <ul style="list-style-type: none"> <li>• Customer invoices.</li> <li>• Supplier invoices.</li> </ul> <p>With the reporting option, you can use Workday to report on the transaction or withholding taxes that your third-party tax service calculates.</p> <p>You can enable third-party tax for:</p> <ul style="list-style-type: none"> <li>• Transaction tax.</li> </ul>

Section	Integration Option	Considerations
		<ul style="list-style-type: none"> <li>Transaction and withholding tax.</li> </ul> <p>When using third-party integrations for withholding tax, Workday only supports these realization point types:</p> <ul style="list-style-type: none"> <li><i>Customer Invoice Self Withholding</i></li> <li><i>Invoice</i></li> </ul> <p>When you enable third-party tax for transaction tax only, you can use Workday to calculate withholding tax amounts on your customer or supplier invoices.</p>
<b>Customer Invoice Non-Reporting Option</b>	Nonreporting	<p>Workday supports the nonreporting option only for transaction tax on customer invoices.</p> <p>We recommend that you use the reporting option, as you can't use Workday's reporting framework and withholding tax calculations with the nonreporting option.</p>

On customer invoices, you can configure either integrations with the reporting option or integrations with the nonreporting option, but not both.

### Withholding Tax Calculations

When you use an integration with the reporting option for transaction tax only, you can still use Workday to calculate withholding tax amounts:

1. You enter the withholding tax code on your transaction lines.
2. Workday populates the withholding tax amount on your document at the same time that the integration imports the tax details from your third-party tax service into Workday.

### Example: Set Up Third-Party Tax for Customer Invoices

This example illustrates how to configure Workday when you use a third-party tax service integration to populate transaction tax details on customer invoices, but not withholding tax details.

## Context

Your company, Global Modern Services, Inc. (USA), uses a third-party tax service provider to import transaction tax details onto your customer invoices.

Your third-party tax service provider maintains 3 different tax rates for city, county, and state tax.

To import the tax details from the third-party tax service provider onto your customer invoices, you:

- Enable your company for third-party tax on customer invoices.
- Configure a tax category for the third-party tax rates.
- Configure 3 empty tax rates as a placeholder to store the taxes that your third-party tax service provider imports into Workday.
- Group these 3 tax rates into 1 tax code that your third-party tax service provider references.

## Prerequisites

- Set up a *Third-Party Tax Service* integration, following the instructions from your third-party tax service provider.
- Add the third-party tax service integration as a step on the *Customer Invoice* business process.
- Create a tax authority that you name *Tax Authority*.
- Security:
  - *Set Up: Tax domain* in the Common Financial Management functional area.
  - *Business Process Administration* domain in the System functional area.

## Steps

1. Access the **Edit Company Tax Details** task.
2. Select the *Global Modern Services, Inc. (USA)* option from the **Company** prompt.
3. Click **OK**.
4. On the **Third-Party Tax Options** tab, add a new row with these values:

Operational Transaction Source	Tax Service Name	Enabled	Transaction Tax	Withholding Tax
<i>Customer Invoice</i>	<i>Third-Party Tax Service</i>	Select the check box.	Leave the check box checked.	Leave the check box unchecked.

5. Click **OK and Done**.
6. Access the **Maintain Tax Categories** task.
7. Add a new row with these values:

Tax Category Name	Use Third-Party Tax Service
<i>Third-Party Tax Category</i>	Select the check box.

8. Click **OK and Done**.
9. Access the **Create Transaction Tax Rate** task.
10. Enter these values:

Field	Value
<b>Country</b>	<i>United States of America</i>
<b>Tax Rate Name</b>	<i>Third-Party City Tax Rate</i>
<b>Tax Authority</b>	<i>Tax Authority</i>

Field	Value
Transaction Tax Category	<i>Third-Party Tax Category</i>

11.Click **OK** and **Done**.

12.Access the **Create Transaction Tax Rate** task.

13.Enter these values:

Field	Value
Country	<i>United States of America</i>
Tax Rate Name	<i>Third-Party County Tax Rate</i>
Tax Authority	<i>Tax Authority</i>
Transaction Tax Category	<i>Third-Party Tax Category</i>

14.Click **OK** and **Done**.

15.Access the **Create Transaction Tax Rate** task.

16.Enter these values:

Field	Value
Country	<i>United States of America</i>
Tax Rate Name	<i>Third-Party State Tax Rate</i>
Tax Authority	<i>Tax Authority</i>
Transaction Tax Category	<i>Third-Party Tax Category</i>

17.Click **OK** and **Done**.

18.Access the **Maintain Transaction Tax Codes** task.

19.Add a new row with these values:

Tax Code Name	Country	Tax Rate
<i>US Third-Party Tax Code</i>	<i>United States of America</i>	Select these 3 tax rates: <ul style="list-style-type: none"> <li>• <i>Third-Party City Tax Rate</i></li> <li>• <i>Third-Party County Tax Rate</i></li> <li>• <i>Third-Party State Tax Rate</i></li> </ul>

20.Click **OK**.

21.Verify that you've correctly configured your *US Third-Party Tax Code*.

The **Tax Code Rate Total** percentage for third-party taxes displays as zero.

22.Click **Done**.

## Result

When you create a customer invoice for *Global Modern Services, Inc. (USA)*, leave the tax code and tax applicability fields empty. When you submit the customer invoice, Workday starts your third-party tax integration, which imports the transaction tax details onto your customer invoice. You can view the tax amounts on the **Tax** tab of the customer invoice and drill down to the line level.

## Entity Activity Codes

---

### Steps: Set Up Entity Activity Codes

#### Prerequisites

Security: *Set Up: Customer Accounts* domain in the Customer Accounts functional area.

#### Context

Entity activity codes help you categorize the activities of companies, customers, and suppliers in tasks and reports. You can configure different entity activity code types by country. Example: You create entity activity code types and codes that follow the National Classification of Economic Activities (CNAE) for Brazil, and then assign them to your companies, customers, or suppliers.

#### Steps

1. [Create Entity Activity Code Types](#).
2. [Create Entity Activity Codes](#).
3. Assign entity activity codes to your companies, customers, or suppliers.
  - On the company profile, access the **Entity Activity Codes** tab on the **Edit Company Tax Details** task from the **Company** related actions menu.
  - On the customer profile, click **Edit on Overview > Tax Information** to access the **Entity Activity Codes** tab.
  - On the supplier profile, click **Edit Entity Activity Codes** on the **Tax Information** tab to access the **Edit Entity Activity Codes for Suppliers** task.

You can only add 1 active entity activity code per code type.

#### Result

You can configure entity activity code details, such as country, type, or description, in your custom reports for categorization and reporting.

#### Next Steps

- Access these reports to view available entity activity codes and code types:
  - [View Entity Activity Code Types](#)
  - [View Entity Activity Codes](#)

#### Related Information

##### Examples

[2024R2 Feature Release Note: Configurable Entity Activity Codes](#)

## Create Entity Activity Code Types

#### Prerequisites

Security: *Set Up: Customer Accounts* domain in the Customer Accounts functional area.

#### Context

Workday enables you to configure entity activity code types for countries and entities. You can:

- Configure multiple entity activity code types per country.
- Edit or delete entity activity code types that aren't in use.

## Steps

1. Access the **Maintain Entity Activity Code Types** task.
2. As you complete the task, consider:

Option	Description
<b>Usage</b>	Select the entities that use this code type.
<b>In Use</b>	Workday selects this check box when you assign codes of this type to companies, customers, or suppliers. When the code type is in use, you can't: <ul style="list-style-type: none"> <li>• Edit the code type country.</li> <li>• Delete the code type.</li> </ul>

## Result

Click **Maintain Entity Activity Codes** to add entity activity codes to each code type that you create.

## Next Steps

You can:

- Access the **View Entity Activity Code Types** report to view available entity activity code types.
- Click **View Entity Activity Codes** on the report to view entity activity codes available for each code type.

## Create Entity Activity Codes

### Prerequisites

- Configure entity activity code types.
- Security: *Set Up: Customer Accounts* domain in the Customer Accounts functional area.

### Context

Workday enables you to configure entity activity codes based on code types for a country to simplify entity activity classifications and reporting. You can configure multiple entity activity codes per entity activity code type.

## Steps

1. Access the **Maintain Entity Activity Codes** task.
2. Select an **Entity Activity Code Type**.
3. Add a row in the **Entity Activity Code** grid. As you complete the row, consider:

Option	Description
<b>Code</b>	Enter a unique code name.
<b>In Use</b>	Workday selects this check box when you assign entity activity codes to companies, customers, or suppliers. When the code is in use, you can't: <ul style="list-style-type: none"> <li>• Edit the code name, but you can edit the description.</li> <li>• Delete the code.</li> </ul>
<b>Inactive</b>	Select this check box to deactivate the code.

## Next Steps

You can access the **View Entity Activity Codes** report to view available entity activity codes for each code type.

## Concept: Entity Activity Codes

Workday helps you classify your entities by creating, maintaining, and assigning entity activity codes. You can use these classifications in your business entity reports. Before you assign entity activity codes to your entities, you must first create entity activity code types for countries and entities, and then add entity activity codes to these code types.

You can create and maintain entity activity code types and codes on these tasks:

- **Maintain Entity Activity Code Types**
- **Maintain Entity Activity Codes**

Workday also enables you to create, edit, or return entity activity codes and code types using these web services:

- *Get Entity Activity Code Types*
- *Get Entity Activity Codes*
- *Put Entity Activity Code*
- *Put Entity Activity Code Type*

## Entities

Once you've created the entity activity codes, you can assign them to companies, customers, or suppliers. You can only add the codes to the entities that you've selected for code type usage. Example: You select *Customer* on the **Usage** prompt when you add a code type on the **Maintain Entity Activity Code Types** task, and then add entity activity codes to this code type. You can assign these codes to a customer but you can't assign them to companies or suppliers.

You can assign entity activity codes to companies, customers, and suppliers using these web services:

- *Get Company Tax Details*
- *Get Customer Tax Information*
- *Get Supplier Tax Information*
- *Put Company Tax Details*
- *Put Customer Tax Information*
- *Put Supplier Tax Information*

## Reporting

You can access these reports:

- **View Entity Activity Code Types**, to view all available entity activity code types.
- **View Entity Activity Codes**, to view available entity activity codes by the code type that you select.

To view entity activity code details, you can create an advanced custom report. You can use the:

- *Company*, *Customer*, and *Supplier* business objects to add the **Assigned Entity Activity Code** report field to custom reports.

- *Entity Activity Code* business object to drill down on the entity activity code details with these report fields:
  - Entity Activity Code
  - Entity Activity Code Country
  - Entity Activity Code Description
  - Entity Activity Code Type
  - Inactive Entity Activity Code

## Concept: Effective Dating for Transaction and Withholding Tax Rates

---

When you create new transaction or withholding tax rates, you must specify an effective date. You can specify multiple effective dates on a transaction or withholding tax rate. Workday sets all tax rates created before the effective dating feature release with the effective date of 1900-01-01.

When you configure multiple effective dates on a transaction or withholding tax rate, Workday doesn't display the percentage (%) on the name of a:

- Transaction tax rate.
- Transaction tax code.
- Withholding tax rate.

For transaction tax rates, Workday determines which tax rate percentage to apply based on the transaction date. Workday uses this date to determine the tax rate for the type of operational transaction.

For withholding tax rates with a **Realization Point** of:

- *Invoice or Customer Invoice Self Withholding*: Workday applies the tax rate percentage, threshold, and progressive rate tiers based on the effective date and the invoice date.
- *Payment*: Workday uses the payment date to determine which effective dated tax rate percentage, threshold, and progressive rate tiers to apply.

### Example: Effective Dating a Transaction Tax Rate

Your local tax jurisdiction increases the transaction tax rate from 8% to 9% with the effective date 2019-01-01. You can use the **Edit Transaction Tax Rate** task to configure a new effective date on the existing tax rate. Enter 2019-01-01 as the effective date with a tax rate percentage of 9%. Workday uses 9% to calculate the tax rate for transactions after 2018-12-31 and 8% for transactions before 2019-01-01.

### Related Information

## Customer Accounts

---

### Setup Considerations: Customer Accounts

You can use this topic to help make decisions when planning your configuration and use of Customer Accounts. It explains:

- Why to set it up.

- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

Customer Accounts is Workday's customer account management, invoicing, and collections solution.

## Business Benefits

You can:

- Assign workers to customers and give them roles.
- Create intercompany or other relationships with your customers.
- Create profiles and accounts for your customers.
- Invoice customers and conduct business with them through Workday.
- Manage customer contact and shipping information.

When used with Project Billing and Customer Contracts in Workday, you can manage receivable credit and collection, maintain customer accounts, and automate your billing.

## Use Cases

You can combine Customer Accounts with Workday's Billable Projects and Revenue solutions to:

- Bill your customers for project time and expense.
- Create customer contracts and use them to bill customers.
- Manage invoice settlement.
- Recognize your revenue.

## Questions to Consider

Questions	Considerations
Do you want to assign customer roles for your workers on an individual basis, or by position?	You can assign customer roles to your workers so you know who's responsible for what. You can assign roles to individual workers, or to specific positions, so workers can change positions without the need to reassign roles. See <a href="#">Mass Assign Worker Roles to Multiple Customers</a> on page 759.
How do you want to search for your customers in Workday?	You can assign your customers to categories and groups, to help you streamline your searches. See <a href="#">Create Customers</a> on page 748.
Who do you want to be able to access customer information?	You can create segmented security groups to control access to customer information. See <a href="#">Steps: Maintain Access to Customer Information</a> on page 764.
Do you need to track customer information that doesn't apply to a Workday-delivered field on the customer profile?	You can create custom fields on customer profiles. See <a href="#">Create Custom Fields for Customer Information</a> on page 758.

Questions	Considerations
How will you communicate with your customers about billing?	You can identify a primary contact, as well as separate contacts for separate document types. See <a href="#">Set Up Bill-To Contacts</a> on page 762.
How do you want Workday to number your invoices?	You can configure Workday at the tenant level to generate a unique invoice ID sequence for all your companies, or optionally configure Workday to generate separate sequences at the company level. You can also configure Workday to generate unique gapless invoice numbers. See <a href="#">Setup Considerations: Gapless Sequencing</a> on page 770.

## Recommendations

None.

## Requirements

Consider any integration requirements in and out of Workday.

## Limitations

When a customer invoice has more than 1000 lines, you can't use the **Change Customer Invoice** or **Edit Customer Invoice** tasks to update it. Use the **Update Invoice Lines** task instead.

When you access the **Print Customer Invoices** task, you can:

- View only the 20,000 most recent customer invoices.
- Select up to 10,000 customer invoices to print at once.

## Tenant Setup

You can use the **Edit Tenant Setup - Financials** task to apply a tenant-level setting to generate unique IDs for:

- Cash sales
- Consolidated customer invoices
- Customer contracts
- Customer payments
- Customer invoices
- Customer invoice adjustments and rebills
- Customer refunds
- Netting transactions

## Security

**Note:** You can further control security within these domains by granting access to their various subdomains.

This list isn't complete. For a complete list of reporting domains and subdomains, access the **Functional Area and Domain Descriptions** report, then filter by functional area.

Workday provides these domains in the Customer Accounts functional area:

Domains	Considerations
<i>Manage: Customer Invoice</i>	Manage customer invoices and view related reporting. To create customer invoices, you'll need access to the <i>Process: Customer Invoice</i> domain.
<i>Process: Cash Sale Payment</i>	Process cash sale payments and view related reporting.
<i>Process: Customer Deposit</i>	Process customer payment deposits and view related reporting.
<i>Process: Customer Invoice</i>	Manage customer invoices if you have a company-based or unconstrained role.
<i>Process: Customer Invoice Payment</i>	Process customer invoice payments and view related reporting.
<i>Process: Customer Invoice Payment/Settlement</i>	Process customer direct debit payments and view related reporting.
<i>Process: Customer Overpayment</i>	Process customer overpayments.
<i>Process: Customer Payment</i>	Process customer payments and view related reporting.
<i>Process: Customer Payment Auto-Application</i>	Manage customer payment automatic application.
<i>Process: Customer Refund Escheatment</i>	Perform customer refund escheatment and view related reporting.
<i>Process: Customer Refund/Payment</i>	Process customer refunds and payment and view related reporting.
<i>Process: Customer Refund Settlement</i>	Perform customer refund settlement and view related reporting.
<i>Process: Customer Writeoff</i>	Process customer write-offs.
<i>Process: Direct Debit Mandate</i>	Process direct debit mandates.
<i>Process: Electronic Customer Invoice</i>	View electronic customer invoices and access related tasks.
<i>Process: Electronic Invoices</i>	Generate electronic invoices.
<i>Process: Opportunity</i>	Process opportunities and view related reporting.

Workday provides these domains in the Customers functional area:

Domains	Considerations
<i>Access Customer (Segmented)</i>	Control which users can access which customers.
<i>Process: Customer Request</i>	Process customer requests and view related reporting.
<i>Set Up: Customer</i>	Set up and maintain customers and view related reporting.
<i>Set Up: Customer Contacts</i>	Set up and maintain customer contact information and view related reporting.

Domains	Considerations
<i>Set Up: Customer Maintenance</i>	Set up and maintain customer information other than contact information, and view related reporting.
<i>Set Up: Customer Notes</i>	Set up customer notes.
<i>Set Up: Customer Settlement</i>	Set up customer bank routing and credit card settlement information, and view related reporting.
<i>View: Customer</i>	View a specific customer.
<i>View: Prospect</i>	View a specific prospect.

You can create segmented security groups to control who can access your customer information. You can further restrict access to include only workers from a chosen company or company hierarchy. See [Steps: Maintain Access to Customer Information](#) on page 764.

## Business Processes

In the Customer Accounts functional area:

Business Processes	Considerations
<i>Bad Debt Writeoff Event</i>	Create and approve bad debt write-offs.
<i>Cash Sale Event</i>	Create and approve cash sales.
<i>Cash Sale Intercompany Event</i>	As the receiving company, process and approve intercompany cash sales.
<i>Consolidated Invoice Email Event</i>	Send consolidated customer invoices by email.
<i>Customer Deposit Event</i>	Process and approve customer deposits.
<i>Customer Invoice Email Event</i>	Send customer invoices by email.
<i>Customer Invoice Event</i>	Create and approve customer invoices.
<i>Customer Invoice Intercompany Event</i>	As the receiving company, process and approve intercompany invoices.
<i>Customer Invoice Maintenance Event</i>	Apply and approve adjustments to customer invoices.
<i>Customer Overpayment Event</i>	Record customer overpayments.
<i>Customer Payment Application Event</i>	Record customer payments.
<i>Customer Refund Document Event</i>	If you opted in to the <i>Customer Refunds Optimization</i> feature: create and approve customer refund documents. You'll need to settle the refund later using the <i>Settlement Run Event</i> business process in the Banking and Settlement functional area.
<i>Customer Refund Event</i>	If you didn't opt in to the <i>Customer Refunds Optimization</i> feature: process and approve customer refunds.
<i>Customer Statement Event</i>	Send a customer statement by email.
<i>Dunning Letter Email Event</i>	Send dunning letters by email.

Business Processes	Considerations
<i>Interest and Late Fee Event</i>	Calculate and approve interest and late fees for customer invoices.
<i>Netting Transaction Event</i>	Create and approve netting transactions.

In the Customers functional area:

Business Processes	Considerations
<i>Customer Banking Change Event</i>	Make and approve changes to customer banking information.
<i>Customer Credit Change Event</i>	Make and approve changes to customer credit information.
<i>Customer Event</i>	Create and approve customer profiles.
<i>Customer Payment Change Event</i>	Make and approve changes to customer payment information.
<i>Customer Request</i>	Create a request to add a new customer profile.
<i>Customer Summary Change Event</i>	Make and approve changes to customer summary information.
<i>Customer Tax Change Event</i>	Make and approve changes to customer tax information.

## Reporting

You can use standard reports and tasks to build your Customer Accounts dashboard.

## Integrations

Web Services	Considerations
Cancel Cash Sale	Cancels cash sales.
Cancel Customer Invoice	Cancels customer invoices.
Cancel Customer Invoice Adjustment	Cancels customer invoice adjustments.
Cancel Customer Invoice Write-Off	Cancels customer invoice write-offs.
Get Bad Debt Writeoffs	Retrieves all bad debt write-offs.
Get Cash Sales	Retrieves all cash sales.
Get Customer Invoices	Retrieves all customer invoices.
Get Customer Invoice Adjustments	Retrieves all customer invoice adjustments.
Get Customer Payments	Retrieves all customer payments.
Get Entity Activity Code Types	Retrieves all entity activity code types.
Get Entity Activity Codes	Retrieves all entity activity codes.
Import Customer Invoices	Adds or updates customer invoices. Ideal for invoices with many lines.
Put Customer Payment	Adds or updates customer payments.

Web Services	Considerations
Put Entity Activity Code	Adds or updates entity activity codes.
Put Entity Activity Code Type	Adds or updates entity activity code types.
Submit Bad Debt Writeoffs	Adds or updates bad debt write-offs
Submit Cash Sale	Adds or updates cash sales.
Submit Customer Invoice	Adds or updates customer invoices. Ideal for invoices with fewer lines.
Submit Customer Invoice Adjustment	Adds or updates customer invoice adjustments.

## Connections and Touchpoints

Customer Accounts interacts with these other areas in Workday:

Features	Considerations
Banking and Settlement	Invoices paid by direct debit or credit card and refunds flow to Banking and Settlement.
Customer Contracts	Approved billing transactions flow from Customer Contracts.
Financial Accounting	Customer invoice and payment journals and revenue recognition schedule information flow to Financial Accounting.
Project Billing	Approved project time and expenses for invoicing flow from Project Billing.
Supplier Accounts	Netting transactions flow to Supplier Accounts. Direct intercompany supplier and customer invoices flow from Supplier Accounts.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Customers

---

### Steps: Set Up and Manage Customer Information

#### Prerequisites

- Define customer categories.
- Configure the *Customer Event* business process and security policy.

#### Context

A customer profile gives you a comprehensive and actionable view of information on your customer. You can create customers directly in Workday or use a web service to upload the information from external sources. Workday enables you to:

- Use the customer profile to create or edit customers in Workday.
- Create custom fields on a customer profile that supports your organizational requirements.

- Assign customer roles to positions rather than individual workers making it easier to support organizational changes.
- Configure security on your customers to control worker access to your customer data through security segments.
- Manage relationships between business entities and addresses through Connection Maps.
- Assign your customers to various groups or categories for easier search and management.

## Steps

1. [Create Customers](#) on page 748
2. (Optional) For intercompany transactions, configure your companies to operate as customers and suppliers.  
See [Steps: Set Up Customers and Suppliers for Direct Intercompany Transactions](#) on page 46.  
A company isn't available for selection when specified as a **Restricted to Companies** on the customer profile.
3. [Steps: Configure Customers](#) on page 750.
4. [Create Custom Fields for Customer Information](#) on page 758.
5. [Mass Assign Worker Roles to Multiple Customers](#) on page 759.
6. Configure security to restrict access to customer information.  
See [Steps: Maintain Access to Customer Information](#) on page 764.
7. [Set Up Bill-To Contacts](#) on page 762.
8. [Set Up Shipping Connection Map](#) on page 763.

## Related Information

### Concepts

[Concept: Customers](#) on page 766

## Create Customers

### Prerequisites

- Define customer categories.
- Configure the *Customer Event* business process and security policy.
- Security: *Set Up: Customer Maintenance* and *Set Up: Customer Notes* domains in the Customers functional area.

### Context

You can create customers directly in Workday, create them from worktags, or use web services to upload data from external sources. You can add most of the customer profile information during record creation. You can also edit these profile attributes for a customer.

### Steps

1. Access the **Create Customer** task.

As you complete the task, consider:

Option	Description
<b>Customer Name</b>	Workday uses this name for search purposes. Specify a full legal name for integration, billing, or remittance usage in the <b>Alternate Name</b> grid on the <b>Document Delivery</b> report of the <b>Addresses and Contacts</b> profile group.

Option	Description
<b>Customer Phonetic Name</b>	<p>Enter the correct pronunciation of the customer name.</p> <p>Displays when:</p> <ul style="list-style-type: none"> <li>• You enable phonetic names on the <b>Edit Tenant Setup - Global</b> task.</li> <li>• Users select the relevant locale and display language in their preferences.</li> </ul>
<b>Customer Category</b>	<p>Workday uses both the customer category and the receivables account posting rule to determine the appropriate ledger account.</p> <p>All customers must have only 1 customer category. You can set up customer categories with the <b>Maintain Customer Categories</b> task.</p>
<b>Customer Group</b>	<p>Workday uses this value for reporting and analysis, and to aid in selection. Example: You can group customers by industry, region, salesperson, or alphabetical segment, such as <i>Customers A through L</i>.</p> <ul style="list-style-type: none"> <li>• You can place the same customer in multiple groups.</li> <li>• For companies configured as customers, use either an intercompany customer group or category to identify all intercompany customers.</li> <li>• You can set up customer groups with the <b>Maintain Customer Groups</b> task.</li> </ul>
<b>Default Tax Code</b>	<p>Select if you want Workday to populate tax code fields automatically on all transactions. You can override the tax code on individual transactions.</p>
<b>Customer Security Segment</b>	<p>Select or create a segmented security option if you want to restrict customers based on their security group.</p> <p>Once you enable it, anyone who isn't part of this security segment, won't be able to view the customer data.</p>

2. (Optional) You can enable **Activity Stream** for the *Customer* object, on the **Edit Tenant Setup - System** task, to post a comment related to this customer.

To route a comment to a specific person, you can use the tag feature. Workday sends them a notification.

## Result

When you click **OK**, Workday initiates the *Customer Event* business process.

You can continue to enter further details for the customer you've created or click **Submit** to access the customer in the future.

## Next Steps

Access these tasks and reports to edit or view specific information for the customer:

- Edit Customer
- Change Customer Summary
- Change Customer Credit Details
- Change Customer Payment Details
- Change Customer Banking
- Edit Contact Information
- Edit Tax Information
- Edit Document Delivery options.
- Manage Attachments
- Navigate Customer Hierarchy
- Print Customer Statements
- Print Dunning Letter
- Update Logo
- View Contacts

## Related Information

### Tasks

[Steps: Enable Activity Stream](#)

[Steps: Maintain Access to Customer Information on page 764](#)

## Steps: Configure Customers

### Prerequisites

- Define customer categories and customer groups.
- Define payment terms and payment types.
- Configure the *Customer Event* business process and security policy.
- Security: *Set Up: Customer Maintenance* domains in the Customers functional area.

### Context

After you create an account for your customers in Workday, you can configure default attributes for each customer to conduct business with them.

### Steps

1. [Set Up Customer Overview on page 751](#)
2. [Set Up Customer Contacts and Addresses on page 756](#)
3. (Optional) You can use the **Contracts** profile group of a customer to create, edit, and view a summary of all projects, contracts, and related reports.  
See [Create Customer Contracts on page 1034](#).
4. (Optional) You can view, edit, and pay invoices from the **Invoices and Payments** profile group.  
You can also use this profile group to record and apply payments, as well as view the invoice aging information.  
See:
  - [Configure Receivables Aging Worklets](#)
  - [Create Customer Invoices on page 780](#)
  - [Record Customer Payments on page 828](#)

5. (Optional) You can use the **Assigned Roles** profile group to view or assign workers to roles. As you assign roles, note that:
  - Assigned roles inherit down through customer hierarchies when applicable.
  - You can restrict individual assignments to 1 worker per role by selecting **Restricted to Single Assignment** check box in the **Maintain Assignable Roles** task.
6. (Optional) You can add custom reports relevant to a specific customer on the **Custom Reports** profile group. See [Configure the Customer Profile](#) on page 761.

## Result

When you click **Submit**, Workday initiates the *Customer Event* business process.

You can view the changes made to the customer and associated approver on the **Process History** profile group. The grid displays only the first 10 business processes. Click **View All** to see more entries.

## Next Steps

After configuring your customer, you can start generating customer invoices.

## Set Up Customer Overview

### Prerequisites

- Define customer categories.
- Configure the *Customer Event* business process and security policy.
- Configure the *Customer Banking Change Event* business process and security policy.
- Configure the *Customer Credit Change Event* business process and security policy.
- Configure the *Customer Payment Change Event* business process and security policy.
- Configure the *Customer Summary Change Event* business process and security policy.
- Security: *Set Up: Customer Maintenance* and *Set Up: Customer Notes* domains in the Customers functional area.

### Context

After you create customers in Workday, you can edit the various customer attributes for convenient transaction processing.

### Steps

Access the customer you've created and click **Overview** profile group to enter additional details.

As you complete the information, consider:

Option	Description
<b>Summary</b>	<ul style="list-style-type: none"> <li>• <b>Related Worktags:</b> The customer is an object in Workday that you can also use as a worktag. Set up related worktags for this object using the related worktag types that you configure on</li> </ul>

Option	Description
	<p>the <b>Maintain Related Worktag Usage</b> task. Workday automatically populates transactions with the values in the <b>Default Worktag</b> column when you select the object on the transaction.</p> <ul style="list-style-type: none"> <li>• <b>Restricted to Companies:</b> Select 1 or multiple companies, or company hierarchies that you want to associate with the customer.</li> </ul> <p>Later, when you create a transaction and select a company, the <b>Bill-To Customer</b> and <b>Sold-To Customer</b> prompts display only those customers that you have access to and are in your selection.</p> <p>Workday behavior:</p> <ul style="list-style-type: none"> <li>• When you select multiple companies from the <b>Restricted to Companies</b> prompt, you can't remove a company from the customer while a transaction is in progress.</li> <li>• When you select only 1 company from the prompt, you can remove it even when a transaction is in progress between the company and the customer.</li> <li>• When the prompt field is blank, Workday includes all companies for transactions with that customer.</li> </ul> <p>When you have companies configured as customers, you can use the <b>Initiate Only</b> field on the <b>View Intercompany Profiles</b> report to determine the companies that can do transactions.</p>
<b>Credit &amp; Collections</b>	<ul style="list-style-type: none"> <li>• <b>DUNS Number:</b> The Dun &amp; Bradstreet number is a unique 9-digit identification number for each physical location of your business.</li> <li>• <b>Credit Limit Currency:</b> Required if <b>Credit Limit</b> or <b>Hierarchy Credit Limit</b> contain values above zero.</li> <li>• <b>Hierarchy Credit Limit:</b> The total amount of credit for this customer, plus all associated child customers in the hierarchy.</li> <li>• <b>D&amp;B and Customer Satisfaction</b> information: Add credit, risk, and customer satisfaction information manually or with the <i>Put Customer</i> web service.</li> <li>• <b>Dunning Options:</b> Select the <b>Exempt From Dunning</b> check box when you don't want the customer to receive a dunning letter.</li> </ul>
<b>Payment Details</b>	<ul style="list-style-type: none"> <li>• <b>Default Reference Type:</b> A country that you do business in might require a reference type to support additional invoice reference numbers.</li> </ul>

Option	Description
	<p>If so, select a <b>Reference Type</b> to populate the field on a customer invoice.</p> <p>This field displays on the invoice when the address of the Company matches the bill-to-address of a customer.</p> <ul style="list-style-type: none"> <li>• <b>Separate Payments &gt; Customer Invoices:</b> Separates payments for direct debit or credit card customer invoices and credit adjustments for the same company, payee, and payment type. When you:           <ul style="list-style-type: none"> <li>• Clear the check box, Workday groups all customer invoices and adjustments for the same customer into a single payment on the settlement run.</li> <li>• Select the check box, Workday groups customer invoices and adjustments into separate payments on the settlement run. Example: The settlement run creates a separate payment for an invoice and adjustments #1, #2, and #3, as long as they have the same company, payee, and payment type.</li> </ul> </li> <li>When invoices and credit adjustments have a printed direct debit mandate pre-notification, Workday groups them into the same payment even if you select to always separate payments.</li> <li>• <b>Separate Payments &gt; Customer Refunds:</b> Creates separate payments for customer refunds in a settlement run. When you don't select the check box, Workday continues to group customer refunds for the same bank account, company, currency, payee, payee remit-to address, and payment type into a single refund payment.</li> <li>• <b>Remit-From-Customer:</b> When you select a customer, Workday:           <ul style="list-style-type: none"> <li>• Enables you to use the value in configuring document delivery for the customer.</li> <li>• Retrieves invoices for both bill-to and remit-from customers during the payment application.</li> </ul> </li> <li>This value can be different from bill-to customer.</li> <li>• <b>Interest and Late Fees Rule Overrides:</b> You can select an active interest rule or a late fee rule on the invoice. The selection you make here will override any other specifications.</li> <li>When you select the <b>Exempt</b> check box, Workday excludes all past-due customer invoices from the calculation run. Only exception</li> </ul>

Option	Description
	is when you override the rules on the billing schedule or customer invoice.
<b>Banking Information</b>	<p>Manage and view banking details for a customer.</p> <ul style="list-style-type: none"> <li><b>Settlement Bank Account:</b> Specify details for processing electronic payments. You can create any combination of accepted payment types and a settlement bank account of the company.</li> <li><b>Intermediary Bank Accounts:</b> Click to link to settlement bank accounts when the local government requires intermediaries for their banking.</li> <li><b>Requires Pernote:</b> Select the check box for a given prenote payment type when you want the settlement bank to have preauthorization.</li> <li><b>Credit Card Profile:</b> Maintain information on the customer credit card when you process payments through Cybersource during settlement. Once you use a credit card for a payment, you can't delete or deactivate that credit card.</li> <li><b>Remit-To Lockbox:</b> Configure to ensure that the customers remit the payment to the correct lockbox for a bank of a company.</li> </ul> <p>Select the <b>For Supplier Connections Only</b> check box to:</p> <ul style="list-style-type: none"> <li>Create multiple bank accounts with the same payment types.</li> <li>Enable any combination of accepted payment types and settlement bank accounts.</li> </ul> <p>For intercompany transactions, ensure to enable <i>Intercompany Payment</i> for bank account usage on the specified bank account.</p>
<b>Tax Information</b>	<p>Add <b>Tax IDs</b> and <b>Tax Statuses</b> for the countries in which you do business with this customer.</p> <p><b>Note:</b> You can have multiple tax IDs per country, but you can only have 1 tax ID for each unique combination of country and tax ID type. Also, you can only mark 1 tax ID as the <b>Transaction Tax ID</b>.</p>
<b>Notes</b>	<p>Notes are useful for:</p> <ul style="list-style-type: none"> <li>Recording conversations with customers.</li> <li>Accounting research.</li> </ul> <p>Workday records the name of the person adding the note along with a time stamp. You can enable the use of notes in the <i>Set Up: Customer Notes</i> subdomain as part of the <i>Set Up: Customer</i> domain in Customers functional area.</p>

Option	Description
	<p>To track when you need additional contact with this customer, you can use the <b>Followup Date</b> field. Workday displays this date in the customer profile header to remind workers to follow up. You can also create a custom report filtered by <b>Followup Date</b>, which enables you to track when you need to follow up.</p> <p>You can remove a <b>Followup Date</b> by creating a new note and deleting the date.</p>
<b>Additional Data</b>	<p>You can provide additional customized information on this report. Access the <b>Configure Profile Group</b> task to display custom objects and field data.</p>

## Result

When you click **Submit**, Workday initiates the relevant business processes and updates the details you edit.

## Next Steps

After defining the default attributes for your customer, you can configure customer contacts, billing address, shipping address, and set up a connection map.

## Upload Customer Logos

### Prerequisites

- [Create Customers](#).
- Security: *Set Up: Customer Maintenance* domain in the Customers functional area.

### Context

You can upload a customer logo on your customer profile to display on customer tasks and transactions.

### Steps

1. From the **Customer** related actions menu on the customer profile, access **Update Logo**.

**2.** On the **Update Customer Logo** task, select 1 of these options:

- From the **Business Entity Image** prompt, select an image from the list of available files.
- In the **Primary Image** section, drag and drop an image or click **Select files** to select the file.

**Note:** When you select an image on the **Business Entity Image** prompt, Workday displays the selected image in the **Primary Image** section. To upload a new image, clear the **Business Entity Image** prompt first.

#### Result

Workday displays the logo on the customer profile, as well as the relevant tasks and transactions.

## Set Up Customer Contacts and Addresses

#### Prerequisites

- [Create Customers](#).
- Security: *Set Up: Customer Contacts* domain in the Customers functional area.

#### Context

On the customer profile, you can add customer contact information and create contacts to use for emailing customer documents. You can also define addresses for billing and shipping purposes.

When you set up addresses and contacts, you can:

- Add customer contact information.
- Identify a primary contact.
- Define contact types and usage.
- Set up customer contacts for specific customer documents, such as customer invoices, statements, and dunning letters.
- Add ship-to business connections.

#### Steps

- Access the customer profile.
- As you enter contact and delivery details on the **Addresses and Contacts** profile group, consider:

Option	Description
<b>Contact Information</b>	<ul style="list-style-type: none"> <li>Enter customer contact details, such as address, email, instant messenger, phone, and web address. You can add multiple contact details in each section, but you can set only 1 as primary per section.</li> <li>Select the <b>Use For</b> prompt to specify various uses for the contact.</li> <li>When you add a contact and set <b>Usage</b> to: <ul style="list-style-type: none"> <li><i>Home</i>, Workday automatically sets the <b>Visibility</b> field to <i>Private</i>. But, if you have access to the <i>Customer</i> domain, you can see the contact information even if it's</li> </ul> </li> </ul>

Option	Description
	<p>private. Workday recommends that you don't rely on this field for custom reporting.</p> <ul style="list-style-type: none"> <li>• <i>Work</i>, Workday automatically sets the <b>Visibility</b> field to <i>Public</i>, making the contact information public.</li> <li>• <i>Remit To</i>, Workday automatically uses addresses associated with this usage type to populate the <b>Remit-To Address</b> report field for outgoing customer payments. This report field doesn't consider the <i>Primary</i> flag specified for an address.</li> <li>• You can restore deleted contact information from the <b>Recover Deleted Addresses</b> option by selecting specific address references.</li> </ul>
<b>Customer Contacts</b>	<p>a. Click <b>Add</b> to enter contact names for specific individuals.</p> <p>You can select a contact type from the <b>Contact Type</b> prompt. Workday only displays this prompt when you add a <i>Customer Contact</i> type on the <b>Maintain Contact Types</b> task.</p> <p>b. From the <b>Contact Information</b> tab, add contact details of a specific contact within the company. Select <b>Type</b> to specify if the contact information is for work or home. When you select the type of contact, Workday automatically sets it as a primary work or home contact.</p> <p><b>Note:</b> You can only have 1 primary contact.</p> <p>c. <a href="#">Set Up Bill-To Contacts</a>.</p> <p>You can override the default settings on the billing schedule and invoice to suit your business needs.</p>
<b>Connection Map</b>	<ul style="list-style-type: none"> <li>• Click <b>Edit</b> to add ship-to customers on the <b>Connection Map</b> report. You can select a shipping address of your customer as the default <b>Ship-To</b> address on the invoice.</li> <li>• When you use tax defaulting rules, the ship-to address determines the default tax code based on country, region, and zip code.</li> <li>• You can only select 1 address for the same customer as the default value.</li> </ul>
<b>Document Delivery</b>	<p>Click <b>Edit</b> to access the <b>Edit Document Delivery Options</b> task. Then, set up a default document delivery method and email recipients for specific customer documents.</p> <ul style="list-style-type: none"> <li>• When you don't set up <b>Email Recipients</b>, Workday automatically populates the customer</li> </ul>

Option	Description
	<p>primary email address for document email delivery.</p> <ul style="list-style-type: none"> <li>• You can override the document email settings when you run the email delivery task.</li> <li>• (Optional) To translate the labels in the customer documents, select a language from the <b>Preferred Locale</b> field.</li> </ul> <p>The document settings for customer invoices also apply to consolidated customer invoices.</p> <p><b>Note:</b></p> <p>To email electronic invoices, you must first configure the document delivery type for delivery method of <i>Integrations</i>. See <a href="#">Steps: Set Up Email for Customer Invoice Documents</a>.</p>

3. (Optional) Access the **Edit Tenant Setup - Notifications** task to configure the **Notification Delivery Settings**. The **Notification Delivery Settings** trigger email notifications if you have a related business process step.
4. (Optional) To create or update large volumes of contacts and addresses, use these web services.
  - *Submit Customer*, for any contact data related to the customer itself.
  - *Put Business Entity Contact*, for contact data for each of the customer contacts.
  - *Put Business Connection*, for the connection map data.

## Result

When you generate customer invoices, Workday displays the default bill-to contacts in the **Bill-To Contact** field on the invoice.

When you configure:

- Only a *Primary* email contact and don't set up **Customer Contacts**, Workday sends the customer documents to the primary email.
- Both the specific **Customer Contacts** and the *Primary* contact, Workday doesn't send the customer documents to the primary email.

## Create Custom Fields for Customer Information

### Prerequisites

Security: *Custom Object Management* domain in the System functional area.

### Context

You can create a custom field on the customer profile to store information that is specific to your organization. Example: Create a numeric field to track risk scores of your customer collection.

## Steps

1. Access the **Create Custom Object** task.
2. Select *Customer* in the **Workday Object** field.
3. As you complete the **Field Definitions** section, consider:

Option	Description
<b>Field Type</b>	The field type that you select determines the type of information you can store in the field. Example: Select <i>Date</i> if you want users to select from a calendar for data entry, or select <i>Text</i> for less restrictive data entry.
<b>Validations</b>	Select the <i>Required</i> option to make the custom field mandatory.

4. You can select 1 or more security domains to secure the new custom field to under the **Permissions** section.

## Result

The information you store in the custom field displays on the **Overview > Additional Data** tab on the customer profile.

### Related Information

#### Tasks

[Create and Edit Custom Object Definitions](#)

## Mass Assign Worker Roles to Multiple Customers

### Prerequisites

- Enable *Customer* for specific worker roles, such as *Collector* and *Collections Manager*, with the **Maintain Assignable Roles** task.
- Security: *Set Up: Customer Maintenance* domain in Customers functional area.

### Context

To save time with role assignments for your customers, you can assign positions to multiple customers at once. You can then tie customer roles to positions rather than individual workers. In this way, when an individual contributor leaves a position, the role stays with the customer assignment. When you refill the position, Workday automatically places the new worker in the role assigned to the customer.

## Steps

1. Access the **Mass Assign Customer Roles** task.
2. Select the customers that you want to assign worker roles.  
You can select customers individually or by group, category, status, or worktag. When using worktag, you can select customers by a category such as region, product area, or project.
3. Select the **Role to Assign**.  
Your options are limited by the roles you enable on the **Maintain Assignable Roles** task. This field is required, and you can only select 1 role to assign.
4. Select the **Effective Date** that you want the worker to become active in this role.
5. (Optional) Save your filter criteria by entering a name and clicking **Save**.

- Select the actions you want to take.

As you complete the **Action** section, consider:

Option	Description
<b>Replace Any Existing Role Assignments</b>	Overwrites any workers already assigned to this customer with the new assignment.
<b>Add to Existing Role Assignments</b>	Adds new worker assignments to existing assignments.
<b>Assign To</b>	<p>The prompt offers these options for finding assignees:</p> <ul style="list-style-type: none"> <li><i>Search for Position</i> - Search for a specific position and then select a worker holding that position.</li> <li><i>Job Profile Prompt</i> - Drill down to workers by job profile.</li> <li><i>By Organization</i> - View workers by organization assignment.</li> </ul>

Before you submit the assignments, you can make edits to the **Assigned To** column for each customer as needed.

- (Optional) Enter comments relating to these assignments. Workday displays your comments on the customer profiles.

## Result

You can view the job roles and workers that you assigned to customers on the **Assigned Roles** tab of the customer profile.

## Configure Receivables Aging Worklets

### Prerequisites

Security: *Reports: Customer Accounts* in the Customer Accounts functional area.

### Context

You can configure receivables aging groups that Workday displays on the customer profile.

### Steps

- Access the **Configure Receivables Aging Worklet** task.
- Complete the task:

Option	Description
<b>Aging Group</b>	<p>When you select the <i>Standard</i> option, Workday automatically populates these aging groups based on the number of days a customer invoice is overdue:</p> <ul style="list-style-type: none"> <li>• 1-30</li> <li>• 31-60</li> <li>• 61-90</li> <li>• 91+</li> </ul>

Option	Description
	<p>When you create more than 6 aging groups, Workday displays only the first 6 on aging reports, aging worklets, and customer statements.</p> <p>To include all invoices beyond a certain age, enter 9999 in the <b>To Days</b> field on the <b>Create Aging Group</b> task. Example: Your last aging group is for customer invoices overdue by 90 days. When you enter 9999 as its upper limit, Workday includes all invoices that are overdue by 91 days or more in this group.</p>
<b>Include Adjustments in Aging Report for Customer Portal</b>	Select to include adjustments in the customer invoice aging report.

3. Click **OK**.

### Result

Workday displays the invoice aging group information on the:

- **Invoices and Payments > Aging** profile group on the customer profile.
- **Receivables Aging Detail Standard Report** and **Receivables Aging Summary Standard Report** reports.

### Next Steps

You can add the receivables aging worklet to your customer collections dashboard.

## Configure the Customer Profile

### Prerequisites

Security: Set Up: System domain in the System functional area.

### Context

The customer profile gives you a comprehensive view of your customers. It displays these profile groups:

- Overview
- Addresses and Contacts
- Contracts
- Invoices and Payments
- Financial Snapshot
- Assigned Roles
- Custom Reports
- Change History
- Process History

Workday provides you the option to configure the profile for a given customer based on your business requirements. You can hide or reorder the profile group tabs and add custom reports as needed.

### Steps

1. Access the **Configure Profile** task to determine the profile groups that will display on the Customer profile.

2. Select *Customer Composite View Profile*.

3. Clear the **Display in Profile** check box for any profile group tab that you want to hide on the customer profile.

**Note:** The **Overview** tab contains all of the customer data, and provides access to multiple **Edit** tasks. If you hide this tab, users can only view and edit customer information from the related actions menu of the customer.

4. Access the **Configure Profile Group** task and select one of the customer profile groups that you want to configure.

5. You can add, remove, or reorder the reports that Workday delivers for the profile group.

Workday defines the selection list and includes all standard and custom reports that are available to display on the customer profile. For best display, don't select more than 10 groups. Keep in mind that security determines the tabs that display for each individual.

Repeat steps 4 and 5 for each of the profile groups that you want to configure.

## Next Steps

Set up security for your users to view the customer profile and the reports in each profile group.

### Related Information

#### Tasks

[Steps: Set Up Profiles and Profile Groups](#)

## Set Up Bill-To Contacts

### Prerequisites

- [Create Customers](#).
- On the **Addresses and Contacts** customer profile group of the customer profile, add customer contacts.
- Security: *Set Up: Customer Contacts* domain in the Customers functional area.

### Context

Workday helps you manage the process of emailing customer documents to the correct contacts. Once you set up bill-to contacts for your customers, you can:

- Email various documents to more than 1 contact at once.
- Use the default bill-to contacts in the billing schedule and customer documents.
- Identify a primary bill-to contact.
- Define bill-to contacts for different documents like customer invoices, statements, and dunning letters.

### Steps

1. Access the customer profile.

2. Select the **Addresses and Contacts > Customer Contacts** profile group.

3. From **Set Up Bill-To Contacts**, access the **Edit Bill-To Contacts** task.

- Set the primary and default bill-to contacts for customer invoices, statements, and dunning letters.
- From the **Email Documents** prompt, select customer documents that you want to email to each contact. You can select multiple documents for 1 contact.
- Add comments related to your contacts. Example: You have different contacts for different customer contracts. You can note the contract associated with each contact in the **Comment** field.

4. (Optional) Access the **Edit Tenant Setup - Notifications** task and configure the **Notification Delivery Settings** to trigger email notifications automatically if you have a related business process step.

## Result

When you generate customer invoices, Workday displays the default bill-to contacts in the **Bill-To Contact** field on the invoice.

## Related Information

### Tasks

[Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085

[Steps: Set Up Email for Customer Invoice Documents](#) on page 937

### Reference

[Reference: Edit Tenant Setup - Notifications](#)

## Set Up Shipping Connection Map

### Prerequisites

- Security: *Set Up: Customer Maintenance* domain in Customers functional area.
- Add at least 1 shipping address on the customer profile.

### Context

The Connection Map on the customer profile enables you to conveniently manage the relationships between business entities and addresses. Here you can:

- Add or remove ship-to customers.
- Select a default ship-to customer for the customer invoice or contract.
- Select an optional default ship-to address for each combination of bill-to and ship-to customers.
- Send customer invoices to a single billing customer that includes multiple ship-to customers.

### Steps

1. From the customer profile, navigate to **Addresses and Contacts > Connection Map**.
2. Add, edit, or remove business connections from the **Ship-To Business Connections** grid.

As you complete the task, consider:

Option	Description
<b>Ship-To Customer</b>	<p>Select a customer to add to the <b>Connection Map</b>.</p> <ul style="list-style-type: none"> <li>• The customer you add is now available as a <b>Ship-To Customer</b> on customer contracts, customer contract lines, and customer invoice lines.</li> <li>• For each customer, you can add multiple shipping addresses on the <b>Contact Information</b> tab. Designate 1 address as <i>Shipping</i> on the <b>Contact Information</b> tab. Add it to the <b>Connection Map</b> to display in the prompt on the customer contract or invoice.</li> <li>• If you don't assign a shipping address, Workday uses the shipping address with the most recent effective date.</li> <li>• You can assign multiple ship-to customers that are different from the primary bill-to customer.</li> </ul> <p><b>Note:</b> If the ship-to customer is different from the customer, a ship-to address defaults on the</p>

Option	Description
	customer contract and invoice. It happens only if you add the address to the Connection Map.
<b>Default Ship-To Customer</b>	<p>Select the check box for the customer that you want as the default shipping connection on the customer contract or invoice.</p> <p>The customer that you select as the default displays in the <b>Default Ship-To Customer</b> field on the contract and invoice headers. The address associated with the default customer displays in the <b>Default Ship-To Address</b> field.</p>
<b>Default Ship-To Address</b>	<p>Select an address from the prompt to designate as the default ship-to address for the customer. The prompt displays only those addresses that you identified as <i>Shipping</i> on the <b>Contact Information</b> tab.</p>
<b>Address Reference ID</b>	<p>Workday introduces IDs through integrations with external applications. For new customers that you enter manually, you can define the address ID in the <b>Address Reference ID</b> field on the <b>Contact Information</b> tab. The ID syncs customer data with external applications.</p>

Workday applies your existing segmented security to ship-to customer names and addresses to protect customer privacy. It masks the names and addresses throughout Workday.

## Result

The **Ship-To Business Connections** are now available for use in the **Ship-To Customer** and **Ship-To Address** fields on the customer contract and invoice.

## Next Steps

To verify that tax rules exist for the ship-to addresses you add, use the **View Tax Rule for Country** report. Workday enables default tax code on the invoice line. The tax code is based on the tax rule for the country or locale by:

- Country.
- Region.
- Zip code ranges.

[Create Customer Contracts](#) on page 1034

### Reference

[Reference: Ship-To Connection in Customer Invoices](#) on page 807

## Steps: Maintain Access to Customer Information

### Prerequisites

- Understand segment-based security groups and segmented security.

- Determine whether you need to restrict segments of data to groups of workers.

## Context

You can control worker access to your customer data through configurable customer security segments. Customer segmented security restricts access to designated customers and visibility to customer information so that workers can't:

- Select customers that they don't have access to when creating, editing, or searching for transactions.
- See customer information in search results. Workday masks the customer name with asterisks and doesn't display other important information.
- Print or view customer documents, such as invoices, statements, and refunds.
- See the printed versions of these documents.
- See the customer's name in transaction reporting. Workday masks the customer name with asterisks when you view customer transaction details in a report.

## Steps

### 1. Access the **Create Customer Security Segment** task.

- To restrict access to the customers in this security segment to just the workers in specific companies, select **Company** and **Company Hierarchy** values in the **Company** field.

Leave the **Company** field blank to enable workers in any company to access the customers you select.

- Select the **Customer** or customers that are part of the segment.

Create enough segments to cover each unique security access requirement. Included values can span across multiple segments, or be mutually exclusive. Workday recommends that you build from least to most restrictive.

Security: *Customer Segmented Setup* domain in the System functional area.

### 2. Access the **Create Security Group** task.

Create the security groups to associate with the security segments, if existing groups don't meet your business requirements. You can create groups based on criteria such as location, role, job, or organization. Or, you can assign specific users to a user-based security group.

### 3. [Create Segment-Based Security Groups](#).

- Select *Segment-Based Security Group* in the **Type of Tenanted Security Group** field.
- Select the customer security segment that you created in the **Access to Segments** field.

### 4. [Edit Domain Security Policies](#).

- Select the **Customers Functional Area**.
- Select the *Access Customer (Segmented)* security policy. This policy controls the access to customer information.
- Remove the *All Users* security group.
- Add the desired security groups. You can include your customer segment-based security groups to restrict their members to the values included in their security segments.

### 5. [Activate Pending Security Policy Changes](#).

### 6. Test the security policy changes.

Sign in as a different user for each segment and verify that you can access only the customers associated with your segment-based security group. Example: View the customers in the **Customer** field to validate which ones display.

## Result

Workers can view or select from only the customers that they have access to based on their segment-based security groups.

## Example

- To access EMEA customers, enable only members of your EMEA sales team.
- To access only the customers that are their responsibility, enable your collectors.

### Concepts

[Concept: Security Groups](#)

## Example: Create a Condition Rule to Prevent Creating Duplicate Customers

### Context

You want to create a condition rule so that you can't accidentally create 2 customer profiles for the same customer. You'll create and apply a condition rule to the *Customer Event* business process that checks whether a customer profile with the same tax ID already exists.

### Steps

1. Access the *Customer Event* business process definition.
2. From the related actions menu of the **Initiation** step, select **Business Process > Maintain Step Conditions**.
3. On the **Maintain Step Conditions** task, add a new row, and in the **Rule** column, select **Create Condition Rule**.
4. Enter these values:

Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
<i>Customer Primary Tax ID Exists</i>	<i>Not equal to</i>	<i>Value specified in this filter</i>	Select the check box.

### Result

Workday displays a critical validation if you try to create 2 customers with the same tax ID.

## Concept: Customers

In most cases, your customers don't belong to a specific company, but can have multiple business relationships with other companies. Workday enables you to set up and manage these relationships with Ship-To Connections, Remit-From Customers, Customer Hierarchies, and Customer Groups. You can find a comprehensive view of contact information, reports, and other common data in the customer profile.

### Customer Profile

Access the customer profile by searching for a customer's name in the **Revenue** search category. With the customer profile, you can view and maintain customer information in a central location, as well as access customer-related tasks and reports.

You can configure the tabs and custom reports Workday displays on the customer profile with the **Configure Profile** and **Configure Profile Group** tasks.

From the customer profile, you can:

- Access recent transactions and related reports.
- Add customer contact information.
- Assign individual workers to job roles for a customer.
- Create and manage customer contracts, invoices, and adjustments.
- Record and apply payments, create deposits, and write off bad debt.
- View and edit the **Connection Map**.

You can also configure the information displayed to match your company business requirements:

- Add custom reports that identify *Customer* as the **Data Source**.
- Reorder or remove the sub-tabs that display on each tab.

### **Roles for Customer**

To help you track which workers support each of your customers, Workday provides role assignments. Once you enable *Customer* for Assignable Roles with the **Maintain Assignable Roles** task, you can assign the customer role to specific positions like *Collector* or *Collections Manager*. Workday enables you to assign roles directly from the related actions menu of the customer. You can also make multiple role assignments by position using the **Mass Assign Customer Roles** task, or individually on the **Assigned Roles** tab on the customer profile.

Workday assigns roles to positions, not specific employees, making the new hire process convenient. When you terminate an employee and hire a replacement, the new worker automatically inherits the defined role. If a customer is part of a customer hierarchy, the worker inherits the role for their position from the customer hierarchy.

### **Customer Hierarchies**

Customer hierarchies allow you to create parent/child relationships between your customers, streamlining some aspects of your workflow. Examples: you can apply payments made by a parent to the invoice of the child, or report on all customers within a hierarchy.

### **Customer Groups**

Optionally, you can assign your customers to groups, making the reporting and searching process more convenient. 1 customer can be in multiple groups.

### **Customer Categories**

Each customer must have 1 customer category. You can assign a customer to a customer category when you create or edit the customer.

In addition to customer-specific account posting rules, you can use customer categories to apply accounting for a given industry. When processing a transaction, Workday finds the customer category and applies the accounting based on that category. You can't override this category for individual transactions.

Customer categories also make it more convenient to find customers when you use the dropdown menu in certain fields.

### **Customer Portal**

The Customer Portal provides your customers with access to information related to their accounts in Workday. They can view and print invoices, recent payments, and statements. You can create multiple account sign-ins by using the web service.

### **Customer Statuses**

Workday delivers these customer statuses:

- *Active*

- *Hold*
- *Inactive*

To change the status, you must specify a reason for change. You can manage customer statuses on the **Maintain Reasons for Customer Status Change** task.

Customer statuses determine what tasks and reports you can include your customers in.

## Concept: Create Basic Customers

Workday provides the flexibility to create new customers in a few different ways to suit your business needs. You can add most of the customer profile information during record creation. You can also edit the various profile attributes for a customer later.

### Directly in Workday

Use this option when your AR team is solely responsible to create customer profiles in your organization independent of other business departments. Access the **Create Customer** task to create the complete profile. Then configure the *Customer Event* business process to complete this task.

### Basic Customer

Use this option when you only want to create customers as worktags. It enables you to use the customer with other operational transactions such as supplier invoices, expense reports, or projects. Access the **Maintain Basic Customers** task to create a customer profile just with a name.

To convert the basic customer to a customer with complete profile, you can access the **Customer > Create Customer from Customer Worktag** task.

To view the customers, make sure that you disable the *Access Customer (Segmented)* security for the customer object.

### Upload External Data

Use this option when you don't want to give access to the **Create Customer** task to your other business departments for security reasons. Access the *Put Basic Customer* web service to create a basic customer profile. Also, configure the *Customer Request* business process to complete the required approval process before creating the customer profiles.

### Related Information

#### Tasks

[Convert Basic Worktags to Full Definitions](#)

## Concept: Purge Customer Data

Create purge plans to delete personally identifiable information related to customers. Purge plans help you comply with privacy regulations and General Data Protection Regulation (GDPR) requirements.

When you purge data, you permanently remove it from your tenant. Workday can't reverse a data purge and can't retrieve purged data.

### Security

Workday recommends that you only grant the ability to purge data to users who understand the purging process and its consequences.

In order to purge customer data, you need access to the *Purge Customer* subdomain in the *Purge Person Data* domain.

When you create a security policy for the *Purge Customer* subdomain, users with the HR Administrator or Data Privacy Administrator roles automatically inherit access from the *Purge Person Data* domain. You can remove them manually.

## Considerations

Workday recommends that you test the purge in your Sandbox environment before you purge any data in your tenant.

Workday purges certain personally identifiable information for inactive customers that you select using the **Purge Customers** report data source with the **Create Custom Report** task. The report data source only returns inactive customers without an in-progress summary change event.

Workday doesn't support scheduled purges for customer data.

Ensure you have contextual access to the secured items you wish to purge.

You need to purge child customers independently of their parents. Purging a parent customer doesn't purge its children.

When you purge a customer name, Workday also purges the name from existing worktags that use it. Example: The customer name is purged from the worktag on existing journals.

## Reference: Customer Status Results

The status of a customer determines the tasks and operations that you can perform.

This table illustrates actions available in customer accounts for these customer statuses:

- *Active*
- *Hold*
- *Inactive*

Action	Active	Hold	Inactive
Create a customer invoice or invoice adjustment.	Yes	Yes	No
Create a consolidated customer invoice.	Yes	Yes	No
Schedule to create a consolidated customer invoice.	Yes	Yes	Yes
Manage customer invoices.	Yes	Yes	Yes
Perform customer invoice maintenance.	Yes	Yes	Yes
Maintain the customer invoice dispute.	Yes	Yes	Yes
Create credit and rebill on an unpaid customer invoice.	Yes	Yes	No
Record a customer payment.	Yes	Yes	Yes

Action	Active	Hold	Inactive
Mass record customer payments.	Yes	Yes	Yes
Apply a customer payment.	Yes	Yes	Yes
Automatically apply customer payments.	Yes	Yes	Yes
Schedule to automatically apply customer payments.	Yes	Yes	Yes
Create a customer refund.	Yes	Yes	No
Refund a customer payment in a settlement run.	Yes	Yes	Yes
Record a cash sale.	Yes	Yes	No
Create a customer deposit.	Yes	Yes	Yes
Print a customer statement.	Yes	Yes	Yes
Process interest and late fees.	Yes	Yes	Yes
Schedule to process interest and late fees.	Yes	Yes	Yes
Write off a customer invoice.	Yes	Yes	Yes
Print a dunning letter.	Yes	Yes	Yes
Print a customer invoice.	Yes	Yes	Yes
Purge a customer.	No	No	Yes

## Customer Invoices

---

### Invoicing

#### Setup Considerations: Gapless Sequencing

You can use this topic to help make decisions when planning your configuration and use of gapless sequence numbers on invoices. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

Gapless sequencing enables you to create and assign sequential gapless invoice numbers in 1 or more ledger year or ledger period for a company. This number displays in place of the standard invoice number on both customer and supplier invoices. You can sequence the numbers by:

- Approval date of a customer invoice.
- Posting date of a supplier invoice.
- Accounting date.

When you enable the functionality, Workday creates a sequence generator. You can configure the sequence generator to:

- Reset every ledger period, ledger year, or calendar year to match with the posting period of a given invoice type.
- Define the sequence pattern of the invoice numbers.

## Business Benefits

Using gapless sequencing:

- Increases visibility of your transaction details and reduces auditing concerns.
- Helps you comply with local tax authority reporting requirements.
- Enables you to meet the statutory invoicing requirements.

## Use Cases

- Your company bills in a country that requires a gapless sequence number on invoices.
- When there's an audit of your company, auditors can select a random invoice number to test and not find that number, causing concerns. They would then require additional evidence to prove that the invoice really doesn't exist.

## Questions to Consider

Questions	Considerations
When do you want to start assigning gapless numbers to your invoices?	Workday creates gapless sequence generators after the start of a new period or a fiscal year when no sequence generators exist for a company.
When can you change the rule configuration or the sequence generator lifespan?	Changes only apply to: <ul style="list-style-type: none"> <li>• New sequence generators in the next open period.</li> <li>• Unused generators in the existing open period.</li> </ul>
Do you want to continue using auto-application rules with remittance advice type?	You can continue to use the auto-application rules. The remittance advice type has the option to reference a <i>Gapless Invoice Number</i> , if it exists.
Do you need to enforce any date restrictions on customer invoices?	Workday assigns the gapless invoice number to customer invoices upon invoice approval. Invoices can be out of order based on if you're using invoice dates or accounting dates in arrears. If you want the gapless sequence to be chronological by either of these dates, use custom validations to restrict the dates to the current day.

## Recommendations

- You can't change the sequence generators once they are in use. Verify the pattern in your sandbox first to ensure that the sequence numbers are as per your expectations.
- When you want to sequence each invoice document type together, use the same sequence generator rule. To have a separate sequence for each invoice document, create different rules.
- To avoid creating gaps, don't reopen a closed period when you want to apply the gapless document number to newly approved supplier invoices and adjustments. When the accounting date is before the accounting date of the last document, the sequence can have a gap.
- To avoid confusion, give your gapless invoice numbers a different format than the existing invoice numbers. You can use your company and country-specific sequencing rules to determine the pattern of gapless numbers.
- To meet local statutory reporting requirements for operational transactions, you can configure your companies to allow accounting by the customer invoice approval date.

## Requirements

- To create gapless sequence generators, enable the functionality for a desired company.
- Specify the gapless sequencing start period to determine when Workday will start creating generators.
- To have a gapless number, the customer invoices must be in approved status. However, for supplier invoices, you must close the period.
- Configure or select a sequence generator rule for each invoice, credit adjustment, debit adjustment, and credit-rebill. Workday assigns the gapless invoice number based on these rules.
- To include the gapless invoice number on an invoice, update your custom BIRT layout because it's a separate attribute from the standard invoice number.

## Limitations

- After Workday assigns a gapless sequence number to an invoice, you can't cancel or change that invoice anymore. Instead, use invoice adjustments to make modifications.
- When you change an existing configuration rule, the updates apply to only new sequence generators.
- You can edit or replace the sequence generators only if they aren't in use.

## Tenant Setup

No impact.

## Security

Configure these security domains for gapless sequencing:

Domain	Considerations
<i>Set up:</i> Company General domain in the Common Financial Management functional area.	Users secured to this domain can enable the gapless sequence functionality and configure sequence generator rules.
<i>Set Up:</i> Tax domain in the Common Financial Management functional area.	Users secured to this domain can configure gapless sequence generator rules on approved customer or supplier invoices by statutory invoice type.
<i>Public Reporting Items</i> domain.	Users secured to this domain can create custom reports to display the invoice number or gapless document number.

## Business Processes

To configure a chronological gapless sequence number on customer invoices when the invoice document date isn't the current date, you can add custom validations in your business process rule conditions.

## Reporting

If the gapless number exists in a given period, you can use all the existing standard reports to track invoices with a gapless document number for a company.

You can use the **Invoice date is in Closed Period** custom report field on the *Customer Invoice Document* business object in your custom validations to configure chronological gapless sequence number on customer invoices.

## Integrations

You can use these web services for gapless sequencing:

Web Service	Considerations
<i>Get Company ID Definitions</i> <i>Put Company ID Definitions</i>	Retrieves the required IDs to let you enable gapless sequencing for a company.
<i>Get Customer Invoices</i> <i>Get Customer Invoice Adjustments</i>	Update your EIB templates for these web services to support gapless invoice numbers.
<i>Import Customer Invoice</i>	Enables you to add or update customer invoices with gapless sequence number.
<i>Submit Customer Invoice</i> <i>Submit Customer Invoice Adjustment</i>	Enables you to create customer invoices and adjustments with gapless sequence number.

When you enable this functionality, update your integration templates to use the gapless invoice number instead of the standard invoice number.

## Connections and Touchpoints

When you enable the gapless sequencing for a company, it extends to all invoices and adjustments originating from awards, billing schedules, and billable projects.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Gapless Invoice Number Sequencing

### Prerequisites

- Set up the company you want to create gapless sequence generators for.
- Set up the ledger periods you want to assign the sequence to.
- Review setup considerations for gapless sequencing.

### Context

You can assign unique gapless invoice numbers to approved invoices based on a ledger period. Gapless invoice numbers help you comply with transaction tax reporting requirements in countries that require chronological gapless sequencing by invoice type for operational transactions.

To maintain a continuous sequence, after Workday assigns gapless numbers to invoices you can't:

- Cancel or make changes to the invoices.
- Disable the gapless sequencing functionality.

## Steps

1. [Configure Invoice Sequence Generator Rules](#) on page 774.

2. Access the **Edit Company ID Definitions** task.

On the **Gapless Document Sequence Settings** tab, select the check box for the type you want to configure:

- **Enable Gapless Sequencing for Customer Invoices**
- **Enable Gapless Sequencing for Supplier Invoices**

Security: *Set Up: Company General* domain in the Common Financial Management functional area.

3. Select a sequence generator rule configuration for each invoice type.

- Select the same sequence generator rule configuration for each invoice type to sequence all invoice types together. For multiple companies, Workday assigns separate sequences for their invoices even if they have the same sequence generator rule configured.
- To sequence invoice types separately, select a different rule configuration for the sequence generator.

4. For customer invoices, select a ledger period from the **Customer Invoice Gapless Sequencing Start Period** prompt. Workday assigns the sequence number when you approve the invoices.

For supplier invoices, select a ledger period from the **Supplier Invoice Gapless Sequencing Start Period** prompt. Workday assigns the sequence number when you close the period.

When you open a ledger period, Workday creates sequence generators for the customer or supplier invoice types you select.

5. (Optional) To order gapless sequence numbers by accounting date for customer invoices and adjustments, access the **Edit Company Accounting Details** task.

Set the **Allow Accounting by Approval Date** prompt to *Customer Invoice*.

Security: *Set Up: Company Accounting* domain in the Common Financial Management functional area.

## Result

When you post invoices in a period with a gapless sequence generator, Workday automatically assigns a **Gapless Sequence Number** and displays it instead of the **Invoice Number** field on the invoices.

After Workday creates the sequence generators, you can view the details in the **Invoice Gapless Sequence Generators** grid on the same task.

## Configure Invoice Sequence Generator Rules

### Prerequisites

Security: *Set up: Company General* domain in Common Financial Management functional area.

### Context

To comply with global auditing standards, you can:

- Define rules for the sequence generators so that Workday can assign gapless sequence numbers to invoice documents in the desired format.
- Configure separate sequence rules for each invoice, invoice adjustment, and invoice rebill documents.
- Create separate rules for Statutory Invoices in the **Sequence Generator Rule Conditions** section.

These sequencing rules determine the:

- Order of the sequence.

- Lifespan of each sequence generator.
- Timeframe when Workday sequences your documents.

Workday creates gapless sequence generators for each invoice document type when you close and reopen a period for the specified company. When the period already has an active generator, Workday doesn't create a new generator.

After a sequence generator assigns a sequence number to an invoice, you can't:

- Disable gapless sequencing for the company.
- Change the lifespan.

Though, Workday enables you to edit the format string.

## Steps

1. Access the **Create Invoice Sequence Generator Rule Configuration** task.
2. As you complete the task, consider:

Option	Description
<b>Sequence Generator Lifespan</b>	Select a value to specify the duration for the sequence generator. <ul style="list-style-type: none"> <li>• The sequence generator only assigns gapless sequence numbers to invoices posted in your selected lifespan.</li> <li>• The sequence number resets at the beginning of each new period or year.</li> <li>• Workday starts and stops a new sequence based on the lifespan you select.</li> </ul>

3. As you complete the **Default Sequence Generator Rule** and **Sequence Generator Rule Conditions** sections, consider:

Option	Description
<b>Sequence Start Number</b>	Enter any number that you want to begin the sequence with. You can also enter a number that is in continuation of an existing sequence from another ID generator.
<b>Sequence Increment</b>	Workday automatically sets the value to 1 so that the sequence numbers are in gapless order.
<b>Sequence Length</b>	Enter a number to specify the length of the gapless sequence number string. Workday sorts invoice sequences based on this configuration when you generate reports. <p>Example: When you enter a <b>Sequence Length</b> of 3, Workday displays the sequence number:</p> <ul style="list-style-type: none"> <li>• 1 as 001.</li> <li>• 321 as 321.</li> </ul>
<b>Sequence Format String</b>	Enter custom text and these variables rules to ensure that Workday doesn't duplicate sequence numbers across multiple generator lifespans: <ul style="list-style-type: none"> <li>• <b>[aa]</b>: Inserts only the last 2 digits of the calendar year.</li> <li>• <b>[aaaa]</b>: Inserts the 4-digit calendar year.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>[A]</b>: Inserts a 1- or 2-digit calendar month.</li> <li>• <b>[AA]</b>: Inserts a 2-digit calendar month.</li> <li>• <b>[f]</b>: Inserts the entire fiscal year number.</li> <li>• <b>[ff]</b>: Inserts the fiscal year name.</li> <li>• <b>[pp]</b>: Inserts the fiscal period name.</li> <li>• <b>[seq]</b>: Inserts the next sequence number.</li> </ul> <p>Include <b>[seq]</b> in the format string of any rule configuration to populate the sequence number.</p> <p>When you select <i>Ledger Year</i> as the sequence generator lifespan, the format string can include:</p> <ul style="list-style-type: none"> <li>• <b>[f]</b></li> <li>• <b>[ff]</b></li> </ul> <p>When you select <i>Ledger Period</i> as the sequence generator lifespan, the format string can include:</p> <ul style="list-style-type: none"> <li>• <b>[f]</b></li> <li>• <b>[ff]</b></li> <li>• <b>[pp]</b></li> </ul>
<b>Statutory Invoice Type</b>	<p>Select a country-specific statutory invoice type when you use invoice types to categorize your invoices in compliance with government requirements.</p> <p>Workday displays options in this field only when you configure a statutory invoice for the company in a specific country.</p>

## Result

Workday creates a gapless sequence generator for each invoice document type, for the specified period, for a given company.

## Example

You want to create a sequence generator for the May 2019 ledger period or ledger year and the November 2019 calendar month or calendar year:

### Default Sequence Generator Rule Values

Field	Value
<b>Sequence Start Number</b>	1
<b>Sequence Length</b>	3
<b>Sequence Format String for a Ledger Period</b>	INV-[f]-[pp]-[seq]
<b>Sequence Preview</b>	INV-2019-05-001
<b>Sequence Format String for a Ledger Year</b>	INV-[f]-[seq]
<b>Sequence Preview</b>	INV-2019-001

Field	Value
<b>Sequence Format String for a Two Digit Calendar Year</b>	<i>/INV-[aa]-[seq]</i>
<b>Sequence Preview</b>	<i>/INV-19-001</i>
<b>Sequence Format String for a Four Digit Calendar year and a Two Digit Calendar Month</b>	<i>/INV-[aaaa]-[AA]-[seq]</i>
<b>Sequence Preview</b>	<i>/INV-2019-11-001</i>

## Set Up Customer Invoice Options for a Company

### Prerequisites

Security:

- *Set Up: Company General* domain in the Common Financial Management functional area.
- *Set Up: Customer Accounts* domain in the Customer Accounts functional area.

### Context

Workday enables you to change customer invoice preferences for your company to suit your business needs. You can:

- Set up a default commodity code type for sales items, so that you don't have to select it manually on customer invoices and adjustments.
- Enable the bill-from and ship-from address options on customer invoices and adjustments for compliance with local tax regulations.

### Steps

1. Access the **Edit Customer Account Options** task.
2. Complete the **Invoice Options** section:

Option	Description
<b>Default Commodity Code Type</b>	Select to automatically populate this commodity code type for associated sales items at the invoice lines on these tasks: <ul style="list-style-type: none"> <li>• <b>Create Customer Invoice</b></li> <li>• <b>Create Customer Invoice Adjustment</b></li> <li>• <b>Record Cash Sale</b></li> </ul> To display options on this prompt, first configure commodity code types. See <a href="#">Steps: Create Commodity Codes</a> .
<b>Enable Bill-From Address and Ship-From Address on Customer Invoice</b>	Select this check box to opt into displaying these prompts when you create or edit customer invoices, invoice adjustments, and customer contracts: <ul style="list-style-type: none"> <li>• <b>Bill-From Address</b></li> <li>• <b>Ship-From Address</b></li> </ul>

### Related Information

#### Reference

## Set Up Unique Invoice Numbering for a Company

### Prerequisites

Security:

- *Set Up: Company General* domain in the Common Financial Management functional area.
- *Set Up: Customer Accounts* domain in the Customer Accounts functional area.

### Context

Workday enables you to create unique IDs for invoices, credits, debits, and rebills to comply with global accounting standards. You can configure unique invoice numbering for both the tenant and for individual companies.

The tenant-level setting applies to all companies automatically. When you configure a company-level setting, it overrides the tenant-level setting for that company.

### Steps

1. Access the **Edit Customer Account Options** task.
2. As you complete the **Enable Unique Invoice IDs for Credits, Debits, and Rebills** prompt, consider:
  - *Inherit From Tenant*: Use the tenant-level setting. Access the **Edit Tenant Setup - Financials** task to configure tenant-level settings.
  - *No*: Use standard invoice numbering, regardless of the tenant-level setting.
  - *Yes*: Generate unique invoice numbers, regardless of the tenant-level setting.

### Result

When you create a customer invoice adjustment, Workday processes the adjustment with a unique invoice ID.

### Next Steps

If you enabled unique invoice numbering, assign definitions for credit, debit, and rebill invoices on the **Edit Company ID Definitions** task.

### Related Information

#### Reference

[Reference: Edit Tenant Setup - Financials](#)

### Steps: Set Up Customer Invoices

### Prerequisites

- Configure the *Customer Invoice Event* business process and security policy in the Customer Accounts functional area.

### Context

You can streamline invoice creation by configuring customer invoices to populate payment details, review invoice matching, apply budget check, route to an assigned approver, and more.

### Steps

1. (Optional) [Edit Domain Security Policies](#).

Configure the *Process: Customer Invoice (NEW)* security domain in the Customer Accounts functional area. This domain grants access to users with company-based or unconstrained roles to manage

customer invoices. For more granular control on customer invoice actions, you can grant permissions on various subdomains.

**2. (Optional) [Edit Business Processes](#).**

Configure the *Customer Invoice Event* business process to ensure processing accuracy for invoicing, printing, and emailing.

a) [Edit Business Process Security Policies](#).

On the *Customer Invoice Event* business process security policy, add the Approvers security group to the Approval and Review actions. This configuration enables you to route a customer invoice to a designated approver in your organization.

Ensure that the initiator has access to these security domains:

- *Access Customer (Segmented)* domain
- *Process: Customer Invoice - Core* domain
- *Roles - Company Security Group Types*
- *Roles - Customer Security Group Types*

Also, grant the Integration Permissions for the *Access Customer (segmented)* domain along with Get and Put access to these domains:

- *Integration Event*
- *Process: Electronic Invoices*

b) Edit the *Customer Invoice Event* business process and set up the *Initiate Customer Invoice Intercompany Event* action step for intercompany transactions.

Workday applies the approval only to the company specified on the invoice header. When you deny the approval, Workday terminates the process.

c) Set up the *Print Customer Invoice Service* step on the *Customer Invoice Event* business process for printing customer invoices automatically.

To print the invoice with a print run type of *Final*, add the service step after the approval step and set the approval step as final.

d) Set up the *Electronic Invoicing via Document Delivery Rules* service step on the *Customer Invoice Event* business process for electronic invoicing.

e) Set up the *Email Customer Invoice* service step on the *Customer Invoice Event* business process for emailing a customer invoice PDF file automatically as soon as you print the document.

f) Set up the *Integration* service step on the *Customer Invoice Event* business process for launching the electronic invoice integration automatically.

Set up a condition rule on the Integration step to ensure that the electronic invoice integration launches only when Workday generates an invoice PDF after the last printing run.

**3. (Optional) [Define Intercompany Profiles](#) on page 36.**

To settle intercompany transactions, establish the relationship between companies.

**4. (Optional) [Set Up Unique Invoice Numbering for a Company](#) on page 778.**

To create unique IDs for invoices, credits, debits, and rebills, configure unique invoice numbering either at the tenant level or for individual companies. When you configure a company-level setting, it overrides the tenant-level setting for that company.

**5. (Optional) [Steps: Set Up Gapless Invoice Number Sequencing](#) on page 773.**

When using gapless invoice number, configure sequence generator rules and enable the gapless sequencing functionality.

**6. (Optional) Access the [Maintain Invoice Types by Country](#) task to configure country-based statutory invoice type with the **Invoice Type Usage** option of **Customer Invoices**.**

Security: *Set Up: Tax* domain in the Common Financial Management functional area.

**7. (Optional) Access the [Edit Company Accounting Details](#) task and select *Customer Invoice* option for **Allow Accounting by Approval Date** prompt to use approval date as the accounting date on**

your customer invoices and adjustments, or when you want to order document sequence numbers by accounting date.

Security: *Set Up: Company Accounting* domain in the Common Financial Management functional area.

8. (Optional) Access the **Edit Customer Account Options** task and select *Prevent Changes to Invoice after Final Print Run* check box for a desired company to prevent changes to an approved and printed invoice.

Once you enable this feature, you can't disable it if you've generated invoices.

After an invoice has a *Approved* status and the print run type has a *Final* status, you can no longer cancel, change the invoice, or update the invoice lines for the given company. Workday also sets a **Finalized Date** field on the **View Customer Invoice** page.

Security: *Set Up: Customer Accounts* domain in Customer Accounts functional area and *Set Up: Company General* in the Common Financial Management functional area.

## Next Steps

After invoice setup, you can:

- Create single or consolidated invoices.
- Adjust, copy, change, or cancel invoices.
- Edit approved invoices.
- Use the create credit and rebill functionality to create 1 corrected invoice when you bill an invoice incorrectly
- Manage invoices and place them in dispute, in collection, or hold from payment.
- Print and email invoices.

## Related Information

### Tasks

[Steps: Set Up Netting](#) on page 821

## Create Customer Invoices

### Prerequisites

- Configure the *Customer Invoice Event* business process and security policy in the Customer Accounts functional area.
- To route the invoice to a designated approver, configure the *Approvers* security group on the Approval and Review steps of the *Customer Invoice Event* business process.
- If using invoice types, configure statutory invoice types by country.
- If using gapless invoice number, configure sequence generator rules and enable the gapless sequencing functionality.
- For intercompany transactions, configure intercompany profiles. See [Define Intercompany Profiles](#) on page 36.
- Security: *Process: Customer Invoice - Core* and *Reports: Customer Invoice Referenced Attachments – Supplier Invoice* domain in the Customer Accounts functional area.

### Context

A customer invoice enables you to record a sales event and create receivables accounting. You can create a customer invoice for:

- Shipment of goods.
- Delivery of a service.
- Billing schedule.
- Projects, subscriptions, or memberships.

## Steps

1. Access the **Create Customer Invoice** task.
2. As you complete the **Invoice Information**, consider:

Option	Description
<b>Company</b>	The company is the invoice owner. You can use it as a parameter to assign default withholding tax.
<b>Bill-From Address</b> <b>Ship-From Address</b>	<p>Workday only displays these prompts when you've enabled bill-from and ship-from address options on the <b>Edit Customer Account Options</b> task for the invoice company.</p> <p>Workday automatically populates the:</p> <ul style="list-style-type: none"> <li>• Bill-from address when the company's primary address is currently in use for billing.</li> <li>• Ship-from address when the company's primary address is currently in use for shipping.</li> </ul> <p>When you:</p> <ul style="list-style-type: none"> <li>• Remove the company, Workday hides the prompts.</li> <li>• Change the company, Workday repopulates the prompts based on the new company configurations.</li> <li>• Edit the address that's displayed on the bill-from or ship-from address prompt on the company profile, Workday repopulates the prompts based on the new address.</li> </ul>
<b>Customer</b>	Your customer selection populates other invoice information based on the customer definition, such as tax code, payment terms, and payment type. For awards, you can select a sponsor in this field instead of a customer.
<b>Invoice Date</b>	Workday uses this date to post the invoice to the first open ledger period. If Workday doesn't find an open ledger period, it sets the invoice status to <i>Error</i> .
<b>Accounting Date</b>	<p>The Accounting Date that you enter must be in a current or previous open accounting period. Example: You provide a service, but you don't create the invoice until the next accounting period. Then you can select the service date as the accounting date.</p> <p>Depending on how you configure the company accounting, Accounting Date can be optional or required.</p> <p>This date is same as the <b>Invoice Date</b> by default. You can also configure it to use:</p> <ul style="list-style-type: none"> <li>• <b>Approval Date</b> by accessing the <b>Edit Company Accounting Details</b> task.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>Accounting in Arrears</b> by accessing the <b>Edit Company Accounting Details</b> task and setting the <b>Allow Accounting in Arrears</b> prompt to <i>Customer Invoice</i>.</li> </ul>
<b>Statutory Invoice Type</b>	<p>Select a country-specific statutory invoice if you use invoice types to categorize your invoices in compliance with government requirements.</p> <p>The field displays only if you've configured a statutory invoice for the company in a specific country.</p>
<b>Invoice Type</b>	<p>If you've configured the <b>Edit Customer Invoice Layout Rule</b> task to vary the layout by invoice type, your selection can determine the invoice layout. Example: You might want project invoices to have a different layout than goods invoices.</p>
<b>Bill-To Address</b>	<p>This field displays when you enter a customer. Workday automatically populates the primary business address from the tab <b>Addresses and Contacts &gt; Contact Information</b> of the customer profile. If you don't define a primary business address, this field remains blank.</p>
<b>Bill-To Contact</b>	<p>This field populates from the <b>Addresses and Contacts &gt; Customer Contacts</b> tab on the customer profile. If you don't define a default bill-to contact here, this field remains blank.</p> <p>These contacts are the email recipients for customer invoices.</p> <p>You can override the defaults with other options in the prompt, if available.</p>
<b>Ship-To Customer</b> <b>Ship-To Address</b>	<p>These fields display only if the invoice customer has <b>Ship-to Business Connections</b> set on the <b>Connection Map</b> in the customer profile.</p> <p>Once you select a ship-to customer, the <b>Ship-To Address</b> prompt displays all shipping addresses from the ship-to customer <b>Contact Information</b> that:</p> <ul style="list-style-type: none"> <li>• Have an effective date of on or before the current date.</li> <li>• You have access to.</li> </ul> <p>Workday applies the <b>Ship-To Address</b> along with the tax rule for the destination country for tax default application. If no address has a shipping usage, the prompt returns the primary business address.</p> <p>This feature doesn't apply to sponsors.</p>

Option	Description
<b>Related Invoices</b>	The prompt displays all credited invoices that don't yet have a rebill for this company and customer combination. You can only select 1 invoice at a time.
<b>Adjustments</b>	Displays if you select a <b>Related Invoice</b> . This field contains the corresponding credit adjustment to that related invoice.

3. As you enter **Additional Information** for the invoice, consider:

Option	Description
<b>Billable Project</b>	(Optional) Select a billable project related to the company or customer. Workday automatically populates the <b>Worktags</b> field in the header with the worktags related to the project. Workday also automatically populates the <b>Billable Project</b> field on the invoice line.  If you leave this field blank, you can associate an invoice with more than 1 project at the invoice line level.
<b>Reference Type</b>	Select a reference type based on the country requirement of where you conduct business.  Workday displays this field dynamically when the address of the company and the bill-to-address of the customer are both in 1 of these countries: <ul style="list-style-type: none"><li>• Boleto Bancário (Brazil)</li><li>• BPAY (Australia)</li><li>• ESR (Switzerland)</li><li>• FIK-nummer (Denmark)</li><li>• KID-nummer (Norway)</li><li>• OCR-nummer (Sweden)</li><li>• OGM-VCS (Belgium)</li><li>• Viitenumber (Estonia)</li><li>• Viitenumero (Finland)</li></ul>
<b>Reference Number</b>	When you select an international reference type, you must enter a supporting <b>Reference Number</b> .
<b>Due Date</b>	Workday automatically calculates this date based on the invoice date and payment terms. You can manually override this date by entering a new one in the <b>Due Date Override</b> field.
<b>Document Link</b>	If you store supporting documents or images in an external repository, then enter the URL to that location. Once you save the transaction, Workday displays the URL as a live hyperlink to the image. Approvers can reference this document before approving the transaction.  Workday validates the link to ensure that it has a valid Uniform Resource Identifier (URI) pattern,

Option	Description
	<p>as defined by your security administrator. This process provides additional security to help avoid malicious content in external links.</p> <p>To add a valid URI, set the <b>Link Type</b> to <i>Customer Invoice Document Link</i> on the <b>Maintain External Link Validation</b> task. When the location of the external content changes, ensure to update the URL in Workday.</p>

4. As you complete the **Amount Information**, consider:

Option	Description
<b>Currency</b>	<p>If you've defined a specific currency on the customer profile, Workday automatically populates the field with the assigned currency.</p> <p>You have the option to change it to any of the accepted currencies.</p>
<b>Prepaid Amount Applied</b>	<p>Lists the amount already applied to this invoice. This amount is the prepaid amount offset against the installment invoices created within the billing schedule. Workday automatically offsets the prepaid amount and creates a negative amount on the invoice line.</p>
<b>Tax Service Name</b>	<p>Displays when you configure a third-party tax service integration with the nonreporting option for the invoice company. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>
<b>Tax Amount</b>	<p>The total tax amount for the customer invoice, either calculated by Workday or imported from a third-party tax service integration.</p>
<b>Less Withholding Amount</b>	<p>Calculates when the <b>Withholding Tax Code</b> has a <b>Realization Point of Invoice</b>.</p>
<b>Default Tax Code</b>	<p>Displays when you don't configure a third-party tax integration for the invoice company.</p> <p>You can select a tax code for Workday to populate on invoice lines override. You can also override the default tax code that Workday populates from your tax configuration and invoice information.</p> <p>On invoices with no ship-to customer, Workday automatically populates the tax code from the bill-to customer.</p> <p>When you select a ship-to customer and address, Workday applies the tax code from the default transaction tax rule for the destination country.</p> <p>You can configure exception rules to override the default selection for companies and customers on customer invoices.</p>

Option	Description
<b>Update Tax</b>	Displays when you don't configure a third-party tax integration for the invoice company. Click to recalculate taxes. Clicking <b>Submit</b> also calculates taxes.

5. As you complete the **Invoice Lines** tab, consider:

Option	Description
<b>Company</b>	If you enable intercompany transactions, you have more than 1 choice.
<b>Sales Item</b>	When you select a sales item, Workday automatically populates some of the other fields based on the sales item definition.  Workday automatically populates up to 5 recommendations for sales items on the <i>Recommended</i> prompt filter when you enable machine learning recommendations for <b>Sales Item</b> on the <b>Maintain Machine Learning Prompt Recommendations</b> task.
<b>Commodity Code</b>	To display options on this prompt, first configure commodity code types and add commodity codes. See <a href="#">Steps: Create Commodity Codes</a> .  You can select only 1 active code per commodity code type.
<b>Revenue Category</b>	The revenue category links item to corresponding accounting posting rules that drives the accounting behavior. It also provides additional details for reporting.  When you select a sales item, Workday populates this field automatically.  Workday automatically populates up to 5 recommendations for revenue categories on the <i>Recommended</i> prompt filter when you enable machine learning recommendations for <b>Revenue Category</b> on the <b>Maintain Machine Learning Prompt Recommendations</b> task.
<b>Unit Price</b>	Populates from the sales item. If the currencies for the sales item and invoice differ, Workday automatically converts this value to the currency of the invoice.  Workday uses the current currency conversion rate as defined in your tenant.
<b>Released on Invoice Lines</b>	The invoice lines that describe released retention amounts on a customer invoice. See <a href="#">Steps: Create Retention for Customer Invoices</a> on page 1077.

Option	Description
<b>Extended Amount</b>	<p>The quantity multiplied by the unit price. For sales items with bulk pricing, Workday uses this calculation: (Unit Price x Quantity)/ UOM Priced at Quantities of = Extended Amount.</p> <p>For prepaid invoices, when you enter an amount that's greater than the advanced payments received, Workday prevents you from creating the invoice.</p>
<b>Contract Line</b>	<p>If you generate the invoice from a contract or a project, Workday provides various options for the contract line type. It drives the billing and revenue cycle.</p>
<b>Deferred Revenue</b>	<p>For invoices associated with a contract, Workday automatically selects the check box if there's deferred revenue on the associated <b>Contract Line</b>.</p> <p>Workday also automatically selects the check box when the <b>Sales Item</b> has deferred revenue.</p>
<b>Revenue Recognition Schedule Template</b>	<p>This field displays if you select the <b>Deferred Revenue</b> check box on the invoice line. Select an option to associate the line with an existing <b>Revenue Recognition Schedule Template</b> for generating installments.</p>
<b>Ship-From Address</b>	<p>Workday displays this prompt when you've enabled bill-from and ship-from address options on the <b>Edit Customer Account Options</b> task for the invoice company.</p> <p>Workday automatically populates the ship-from address when the primary address of the invoice line company is currently in use for shipping.</p> <p>When you:</p> <ul style="list-style-type: none"> <li>• Select the same company in the <b>Invoice Information</b> section and in <b>Invoice Lines</b>, Workday populates the same ship-from address.</li> <li>• Remove the ship-from address from the <b>Invoice Information</b> section, Workday populates a blank <b>Ship-From Address</b> prompt for every new invoice line that you add.</li> <li>• Remove the company from <b>Invoice Lines</b>, Workday hides the prompt.</li> <li>• Change the invoice line company, Workday repopulates the prompt based on the new company configurations.</li> </ul>
<b>Ship-To Customer and Ship-To Address</b>	<p>For each invoice line, you can change the shipping customer and the associated address</p>

Option	Description
	<p>to any connection you define in the <b>Connection Map</b> for a given customer.</p> <p>Ship-to addresses that display in the prompt come from the ship-to customer.</p> <p>If you apply segmented security, the ship-to customers and addresses display only to users with access to the customers.</p> <p>If you reference a <b>Contract Line</b> on the invoice line, Workday clears the ship-to customer and address from that line.</p> <p>This feature doesn't apply to sponsors.</p>
<b>Tax Applicability</b>	<p>Indicates whether the invoice line is taxable or not. When you configure tax applicability as part of a tax rule for a sales item, Workday automatically populates this field. When there's no applicability associated with the item, Workday applies the tax rule for the destination country. If you haven't configured the tax rules for sales item and country, Workday automatically populates the tax applicability from the sales item or revenue category.</p> <p>When you enable third-party tax for the invoice company, Workday populates the tax applicability when the integration runs.</p>
<b>Tax Code</b>	<p>Workday populates the tax code value from the invoice header. You can override this value manually, or by selecting:</p> <ul style="list-style-type: none"> <li>• A <b>Sales Item</b> that has a tax code.</li> <li>• A <b>Ship-To Customer</b> and <b>Ship-To Address</b> on the invoice line. These fields display only if the bill-to customer has a <b>Ship-to Business Connections</b> configured on the <b>Connection Map</b> for the customer.</li> </ul> <p>If you haven't configured the <b>Connection Map</b> or transaction tax rules for a country, Workday automatically populates the tax code from the <b>Bill-To Customer</b>.</p> <p>When you enable third-party tax for the invoice company, Workday populates the tax code when the integration runs.</p>
<b>Calculated Tax Amount</b>	<p>Displays the tax amount calculated by a third-party tax integration service, when you configure the nonreporting option.</p> <p>Workday populates the calculated tax amount when the third-party tax integration runs.</p>

Option	Description
<b>Withholding Tax Code</b>	<p>You can select from tax codes with realization points of <i>Invoice</i> or <i>Customer Invoice Self Withholding</i>. Workday automatically populates this field when you configure withholding tax codes on these rules:</p> <ul style="list-style-type: none"> <li>Withholding Tax Rule for Country</li> <li>Withholding Tax Rule for Item</li> </ul> <p>When you enable third-party withholding tax for the invoice company, Workday populates the withholding tax code when the integration runs.</p> <p>You can't select a withholding tax code when you configure a third-party tax integration with the nonreporting option for the invoice company. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>
<b>Tax Point Date Type</b>	<p>Select the type of tax point date for the invoice line. Workday requires the tax point date type when you specify a <b>Transaction Tax Code</b> on an invoice line.</p> <ul style="list-style-type: none"> <li>To display this field, select <b>Enable Tax Point Date Configuration for Transaction Taxes</b> check box on the <b>Edit Tenant Setup - Financials</b> task.</li> <li>Workday automatically populates tax point date type with <b>Invoice/Adjustment Date</b> and uses regular transaction tax.</li> <li>When you select the <b>VAT on Payment</b> check box on the <b>Edit Company Tax Details</b> task, Workday automatically: <ul style="list-style-type: none"> <li>Sets the tax point date type to <b>Payment Date</b></li> <li>Uses transaction tax on payments.</li> </ul> </li> </ul>
<b>Tax Point Date</b>	<p>Enter a tax point date to determine the tax period of the transaction.</p> <p>This field displays when you select <b>Goods/Service Delivery Date</b> as the tax point date type.</p>
<b>Worktags</b>	<p>Add worktags to the invoice line to:</p> <ul style="list-style-type: none"> <li>Make it easier to find.</li> <li>Make its business purpose clear.</li> <li>Enable multidimensional reporting.</li> </ul> <p>Related worktags default from data selected on the invoice. When related worktags of the same type exists on both sales items and revenue categories, the one from the sales item takes precedence because it's more specific. The latest default for a worktag type overrides any preceding value.</p>

Option	Description
	For intercompany transactions, Workday automatically adds the <i>Intercompany Affiliate</i> worktag to help you track revenue and expenses between intercompanies.
<b>Billable Project</b>	<p>Must match the billable project in the header if you selected one. Otherwise, you can associate different billable projects with different invoice lines.</p> <p>You can also select the specific <b>Phase</b> and <b>Task</b> for the project to attribute the transaction to. When you associate an invoice line with a contract line, any phase and task must match with phases and tasks on the contract line.</p>

6. (Optional) Use the **Tax** tab to review a summary of all the tax codes and their applicability as specified on the invoice lines.

If several lines share the same tax code, this tab consolidates them and provides a total taxable amount.

**Note:** To update this tab, click **Update Tax** in the **Amount Information** section of the invoice header to populate with tax information from the invoice lines.

7. (Optional) Enter currency rate overrides on the **Currency Rate** tab.

For foreign currency invoices, you can adjust the conversion rate to suit your business needs. Workday displays the changes on the **Effective Currency Rate** field. The value in this field is the historic rate used by revenue recognition accounting to convert installment amounts to ledger currency. Any overrides that you enter trigger the selection of the **Rate Override** check box.

Option	Description
<b>Currency Rate Type Override</b>	Override the rate type used to look up the exchange rate.
<b>Currency Rate Date Override</b>	Override the date used to look up the exchange rate.
<b>Currency Rate Manual Override</b>	To override the exchange rate or provide a rate when a default rate isn't available, enter a currency rate.
<b>Defaults</b>	This section displays the default currency rate for your tenant based on the invoice date.

8. (Optional) Access the **Attachments** tab to add the supporting documents to the customer invoice. Select the **Provide To Customer** check box if you want to share the attachment with your customers.

If you also want to include the attachment in the PDF file, select the **Print With Invoice** check box as well.

To add referenced attachments from your expense reports or supplier invoice charges on the customer invoice, select the **Include Attachments on Invoice** prompt on the **Create Billing Schedule for Customer Contract** task. The prompt displays when you select *Transaction* as the billing type.

Workday supports the file types for attachments listed in the **Edit Tenant Setup - System** task.

After you submit the invoice, you can view these details on the attachments tab:

Option	Description
<b>Sum of Print With Invoice Attachments Size</b>	<p>Displays the total size of all attachments that you print with the invoice.</p> <p>You can use this field on the <b>Customer Invoice Email Event</b> business process for configuring email notifications.</p>
<b>Attachment Reference</b>	<p>Displays the related expense report or expense report line for the source of the attachment.</p> <p>To drill into this link, you need to be able to access the expense report.</p>

## Result

- When you submit the invoice:
  - Workday initiates the *Customer Invoice Event* business process for review and approval. If the business process definition includes an approval step, reviewers can modify the customer invoice before they approve it.
  - Workday tags the invoice as a direct intercompany invoice when the **Bill-To Customer** is a company operating as a customer.
- For intercompany transaction, Workday also launches the *Initiate Customer Invoice Intercompany Event* business process when it's configured as step on the *Customer Invoice Event* business process. Workday applies the approval only to the company specified on the invoice header. When you deny the approval, Workday terminates the process.
- To print the customer invoice automatically after you generate a customer invoice in Workday, edit the *Customer Invoice Event* business process and add a new step.
  - Set the **Type** to *Service* and **Specify** to *Print Customer Invoice Service*.
  - To print the invoice with a print run type of *Final*, add the service step after the approval step and set the approval step as final.
  - For electronic invoicing, set **Specify** to *Electronic Invoicing via Document Delivery Rules* as the service step to trigger the desired electronic invoice integration.
- You can also launch the electronic invoice integration automatically by adding the *Integration* service step to the *Customer Invoice Event* business process. This option requires you set up a condition rule on the Integration step to ensure that the electronic invoice integration launches only when Workday generates an invoice PDF after the last printing run.
- To email a customer invoice PDF file automatically as soon as you print the document, add a new step and set the **Type** to *Service* and **Specify** to *Email Customer Invoice service*.
- Use of the deferred revenue flag triggers the deferred revenue account posting rule.
- Workday automatically creates operational journals in the company currency for approved transactions. If the transaction and company currencies differ, Workday converts the amounts to the company currency.
- Workday processes accounting after the business process completes and uses the Receivables account posting rule to record customer payments due.

- When you print the invoice, Workday includes the attachment information on the print run that you can drill-down on to view the details.

## Next Steps

After invoice approval:

- Use the **Find Customer Invoices** report to access and update existing invoices that you save or submit.
- If the invoice isn't associated with a contract and has deferred revenue, create a revenue recognition schedule.
- You can modify the customer invoice by using the Create Adjustment, Change, Cancel, Edit Approved Invoice, Print, or Write Off tasks from the related action menu.
- Consolidate customer invoices.
- Record customer payment.
- Email invoices.
- To view the list of Workday-provided reports and their descriptions, access **Workday Standard Reports**, and select the *Customer Accounts* option.
- Settle customer invoices. The settlement process creates and settles the invoiced payments. When the process completes, Workday updates the accounting entries for each payment.

## Create Customer Invoice Adjustments

### Prerequisites

- You must have a customer invoice that is active.
- Configure the *Customer Invoice Event* business process and security policy in the Customer Accounts functional area.
- Security: *Process: Customer Invoice - Core domain* in the Customer Accounts functional area.
- (Optional) [Set Up Unique Invoice Numbering for a Company](#) on page 778. Unique invoice ID enables you to comply with global accounting requirements. If you enable unique invoice IDs for credits, debits, and rebills in your tenant, Workday creates the adjustment with a unique invoice ID.

## Context

You can create a customer invoice adjustment to decrease or increase the amount due from a customer. An adjustment is a new transaction with its own document number that is separate from, but linked to, the original invoice.

You can create 1 adjustment and apply it to multiple invoices using the **Perform Customer Invoice** maintenance task, so long as you don't select *Apply Adjustment Immediately*.

You can also copy an existing invoice adjustment as long as:

- It's not associated with an award.
- The customer is active.

You can continue to make changes to the new invoice adjustment until you apply it. You can copy the fields to a new adjustment except:

- *Adjustment Date*
- *Apply Adjustment Immediately* (When you leave it blank on the original adjustment.)
- *Attachments*
- *Billing Installment*
- *Billing Schedule*
- *Currency Overrides*
- *Notes*
- *Related Invoices*

**Note:** If you're adjusting a billable transaction invoice, you can only create a full credit. You can't create a debit adjustment or a partial credit.

## Steps

1. Access the **Create Customer Invoice Adjustment** task.

- If the desired adjustment reason isn't available in the prompt, create invoice adjustment reasons with the **Maintain Invoice Adjustment Reasons** task.
- You can also access the **Copy Customer Invoice Adjustment** task from the related actions menu of an existing customer invoice adjustment.

2. As you complete the **Invoice Adjustment Information** section, consider:

Option	Description
<b>Bill-From Address</b> <b>Ship-From Address</b>	<p>Workday only displays these prompts when you've enabled bill-from and ship-from address options on the <b>Edit Customer Account Options</b> task for the invoice adjustment company.</p> <p>Workday automatically populates the:</p> <ul style="list-style-type: none"> <li>• Bill-from address when the company's primary address is currently in use for billing.</li> <li>• Ship-from address when the company's primary address is currently in use for shipping.</li> </ul> <p>When you:</p> <ul style="list-style-type: none"> <li>• Remove the company, Workday hides the prompts.</li> <li>• Change the company, Workday repopulates the prompts based on the new company configurations.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Edit the address that's displayed on the bill-from or ship-from address prompt on the company profile. Workday repopulates the prompts based on the new address.</li> </ul>
<b>Bill-To Customer and Sold-To Customer</b>	Your selection populates other adjustment information based on the customer definition, such as tax code, payment terms, and payment type.
<b>Adjustment Date</b>	Workday uses this date to post the adjustment to the first open ledger period. If Workday doesn't find an open ledger period, we set the adjustment status to <i>Error</i> .
<b>Statutory Invoice Type</b>	Select a country-specific statutory invoice if you use invoice types to categorize your invoices in compliance with local government requirements. The field displays only if you've configured a statutory invoice for the company in a specific country.
<b>Bill-To Address</b>	Displays when you enter a customer. It automatically populates to the primary business address defined on the tab <b>Addresses and Contacts &gt; Contact Information</b> of the customer profile. If you don't define a primary business address, this field remains blank. You can override the default with other options in the prompt, if available.
<b>Bill-To Contact</b>	Populates from the default contacts defined on <b>Addresses and Contacts &gt; Customer Contacts</b> tab of the customer profile. If you don't define a default bill-to contact, this field remains blank. These contacts are the email recipients for customer invoices. You can override the defaults with other options in the prompt, if available.
<b>Ship-To Customer</b> <b>Ship-To Address</b>	<p>Displays only if the invoice customer has <b>Ship-to Business Connections</b> set on the <b>Connection Map</b> in the customer profile.</p> <p>After you select a ship-to customer, the <b>Ship-To Address</b> prompt displays all shipping addresses defined on the <b>Contact Information</b> report with an effective date that's on or before the current date.</p> <p>Workday applies the <b>Ship-To Address</b> with the tax rule for the destination country for tax automatically populating. If no address has a shipping usage, the prompt displays the primary business address.</p> <p>This feature doesn't apply to sponsors.</p>

Option	Description
<b>Related Invoices</b>	Select the customer invoice related to this adjustment. For credit or rebill invoice, Workday displays both the original and rebill invoice. Use the invoice preview to access the originating and rebill invoice.
<b>Apply Adjustment Immediately</b>	<p><b>Note:</b> To apply your adjustment to multiple invoices in bulk, leave this option blank.</p> <p>Select if:</p> <ul style="list-style-type: none"> <li>• The adjustment decreases liability.</li> <li>• The originating invoice uses the same currency as the adjustment.</li> <li>• You use worktag balancing.</li> <li>• The adjustment references the original customer invoice.</li> </ul> <p>Workday applies credit amounts from the invoice adjustment to the matching lines on the original invoice. The credit amount applies only up to the open receivable amount for each line, by matching worktag balancing values within the 2 documents.</p>

3. As you complete the **Additional Information** section, consider:

Option	Description
<b>Billable Project</b>	<p>(Optional) Select a billable project related to the company or customer. Workday also automatically populates the <b>Billable Project</b> field on the invoice line.</p> <p>If you leave this field blank, you can associate an invoice with more than 1 project at the invoice line level.</p>
<b>Reference Type</b>	<p>Select a reference type based on the country requirement of where you conduct business.</p> <p>Workday displays this field dynamically when the address of the company and the bill-to-address of the customer are both in 1 of these countries:</p> <ul style="list-style-type: none"> <li>• Boleto Bancário (Brazil)</li> <li>• BPAY (Australia)</li> <li>• ESR (Switzerland)</li> <li>• FIK-nummer (Denmark)</li> <li>• KID-nummer (Norway)</li> <li>• OCR-nummer (Sweden)</li> <li>• OGM-VCS (Belgium)</li> <li>• Viitenumber (Estonia)</li> <li>• Viitenumero (Finland)</li> </ul>
<b>Reference Number</b>	When you select an international reference type, you must enter a supporting <b>Reference Number</b> .

Option	Description
<b>Due Date</b>	Workday automatically calculates this date based on the invoice date and payment terms. You can override the date by entering a new one in the <b>Due Date Override</b> field.
<b>Document Link</b>	<p>If you store supporting documents or images in an external repository, then enter the URL to that location. Once you save the transaction, Workday displays the URL as a live hyperlink to the image. Approvers can reference this document before approving the transaction.</p> <p>Workday validates the link to ensure that it has a valid Uniform Resource Identifier (URI) pattern, as defined by your security administrator. This process provides additional security to help avoid malicious content in external links.</p> <p>You can add valid uniform resource identifier (URI) by selecting <b>Customer Invoice Document Link Type</b> on the <b>Maintain External Link Validation</b> task. If the location of the external content changes, you must update the URL in Workday.</p>

4. As you complete **Amount Information** section, consider:

Option	Description
<b>Currency</b>	<p>Currency in which the adjustment bills and the payment is due.</p> <p>If you've specified one, the default comes from the currency of the customer; otherwise, it's the company currency. You can change the currency to any of the accepted currencies defined for the customer.</p>
<b>Default Tax Code</b>	<p>Displays when you don't configure a third-party tax integration for the invoice company.</p> <p>You can select a tax code for Workday to populate on invoice lines. You can also override the default tax code that Workday populates from your tax configuration and invoice information.</p> <p>On invoices with no ship-to customer, Workday automatically populates the tax code from the bill-to customer.</p> <p>When you select a ship-to customer and address, Workday applies the tax code from the default transaction tax rule for the destination country.</p> <p>You can configure exception rules to override the default selection for companies and customers on customer invoices.</p>

Option	Description
<b>Tax Amount</b>	The total tax amount for the customer invoice, either calculated by Workday or imported from a third-party tax service integration.
<b>Tax Service Name</b>	Displays when you configure a third-party tax service integration with the nonreporting option for the invoice company. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.
<b>Less Withholding Amount</b>	Calculates when the <b>Withholding Tax Code</b> has a <b>Realization Point of Invoice</b> .

5. As you complete the **Adjustment Lines** grid, consider:

Option	Description
<b>Company</b>	If you enable intercompany transactions, you can select more than 1 option.
<b>Sales Item</b>	<p>Your selection populates other line details from the sales item definition, such as, unit price, and tax applicability.</p> <p>Workday automatically populates up to 5 recommendations for sales items on the <i>Recommended</i> prompt filter when you enable machine learning recommendations for <b>Sales Item</b> on the <b>Maintain Machine Learning Prompt Recommendations</b> task.</p>
<b>Commodity Code</b>	<p>To display options on this prompt, first configure commodity code types and add commodity codes. See <a href="#">Steps: Create Commodity Codes</a>.</p> <p>You can select only 1 active code per commodity code type.</p>
<b>Unit Price</b>	<p>If the currency for the sales item and adjustment differs, Workday automatically converts this value to the currency of the adjustment.</p> <p>Workday uses the current currency conversion rate as defined for the default currency rate type, which is part of the tenant setup.</p>
<b>Extended Amount</b>	<p>Enter a positive number.</p> <p>For sales items that enable bulk pricing, Workday calculates the extended amount as: (Unit Price x Quantity)/UOM Priced at Quantities.</p>
<b>Ship-From Address</b>	<p>Workday displays this prompt when you've enabled bill-from and ship-from address options on the <b>Edit Customer Account Options</b> task for the invoice adjustment company.</p> <p>Workday automatically populates the ship-from address when the primary address of the adjustment line company is currently in use for shipping.</p>

Option	Description
	<p>When you:</p> <ul style="list-style-type: none"> <li>Select the same company in the <b>Invoice Adjustment Information</b> section and in <b>Adjustment Lines</b>, Workday populates the same ship-from address.</li> <li>Remove the ship-from address from the <b>Invoice Adjustment Information</b> section, Workday populates a blank <b>Ship-From Address</b> prompt for every new adjustment line that you add.</li> <li>Remove the company from <b>Adjustment Lines</b>, Workday hides the prompt.</li> <li>Change the adjustment line company, Workday repopulates the prompt based on the new company configurations.</li> </ul>
<b>Ship-To Customer</b> <b>Ship-To Address</b>	<p>You can change the shipping customer and shipping address to any ship-to connection that you configure for this customer profile in the <b>Connection Map</b>. If you configure segmented security, only users that have access to the customer domain can view the ship-to customers and addresses.</p> <p>If you reference a <b>Contract Line</b> on the invoice line, Workday clears the ship-to customer and address from that line.</p> <p>This feature doesn't apply to sponsors.</p>
<b>Tax Applicability</b>	<p>Indicates whether the invoice line is taxable or not. When you configure tax applicability as part of a tax rule for a sales item, Workday automatically populates this field. When there's no applicability associated with the item, Workday applies the tax rule for the destination country. If you haven't configured the tax rules for a sales item and country, Workday automatically populates the tax applicability from the sales item or revenue category.</p> <p>When you enable third-party tax for the invoice company, Workday populates the tax applicability when the integration runs.</p>
<b>Tax Code</b>	<p>Workday populates the tax code value from an invoice header. You can override a value manually, or by selecting:</p> <ul style="list-style-type: none"> <li><b>Sales Item</b> that has a tax code.</li> <li><b>Ship-To Customer</b> and <b>Ship-To Address</b> on the invoice line. These fields display only if the bill-to customer has <b>Ship-to Business Connections</b> configured on the <b>Connection Map</b> in the customer profile.</li> </ul>

Option	Description
	<p>If you don't have the <b>Connection Map</b> or transaction tax rules for country configured, Workday automatically populates the tax code from the <b>Bill-To Customer</b>.</p> <p>When you enable third-party tax for the invoice company, Workday populates the tax code when the integration runs.</p>
<b>Withholding Tax Code</b>	<p>You can select from tax codes that have realization points of <i>Invoice</i> or <i>Customer Invoice Self Withholding</i>. Workday automatically populates this field when you configure withholding tax codes on these rules:</p> <ul style="list-style-type: none"> <li>• Withholding Tax Rule for Country</li> <li>• Withholding Tax Rule for Item</li> </ul> <p>When you enable third-party withholding tax for the invoice company, Workday populates the withholding tax code when the integration runs.</p> <p>You can't select a withholding tax code when you configure a third-party tax integration with the nonreporting option for the invoice company. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>
<b>Tax Point Date Type</b>	<p>Select the type of tax point date for the invoice line. Workday requires the tax point date type when you specify a <b>Transaction Tax Code</b> on an invoice line.</p> <ul style="list-style-type: none"> <li>• This field displays only if you've selected <b>Enable Tax Point Date Configuration for Transaction Taxes</b> check box on the <b>Edit Tenant Setup - Financials</b> task in your tenant.</li> <li>• Workday automatically populates tax point date type with <b>Invoice/Adjustment Date</b> and uses regular transaction tax.</li> <li>• When you select the <b>VAT on Payment</b> check box on the <b>Edit Company Tax Details</b> task, Workday automatically: <ul style="list-style-type: none"> <li>• Sets the tax point date type to <b>Payment Date</b>.</li> <li>• Uses transaction tax on payments.</li> </ul> </li> </ul>
<b>Tax Point Date</b>	<p>Enter a tax point date to determine the tax period of the transaction.</p> <p>This field displays when you select <b>Goods/Service Delivery Date</b> as the tax point date type.</p>
<b>Worktags</b>	<p>Add worktags to the invoice line to:</p> <ul style="list-style-type: none"> <li>• Make it easier to find.</li> <li>• Make its business purpose clear.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Assist multidimensional reporting.</li> </ul> <p>Related worktags automatically populate from data selected on the invoice. When related worktags of the same type exist on both sales items and revenue categories, the 1 from the sales item takes precedence because it's more specific. The latest default for a worktag type overrides any preceding value.</p>

#### 6. (Optional) Verify the information on the **Tax** tab.

The tab displays a transaction tax grid that contains information about tax codes along with associated tax rates. You'll also see a withholding tax grid if you entered a withholding tax code in the adjustment line. A **Company Tax ID** and **Customer Tax ID** also displays on this tab, if configured during customer setup.

#### 7. (Optional) Access the **Currency Rate** tab. As you complete it, consider:

For foreign currency invoices, you can make adjustments to achieve the desired conversion rate. Any changes you make to the settings on the **Currency Rate** tab are reflected in the **Effective Currency Rate** field. The value in this field is the historic rate used by revenue recognition accounting to convert installment amounts to ledger currency. Any overrides trigger the selection of the **Rate Override** check box.

Option	Description
<b>Currency Rate Type Override</b>	Override the rate type used to look up the exchange rate.
<b>Currency Rate Date Override</b>	Override the date used to look up the exchange rate.
<b>Currency Rate Manual Override</b>	Enter a currency rate to override the exchange rate, or provide a rate when a default rate isn't available.
<b>Defaults</b>	This section displays the default currency rate defined in your tenant. It's based on the invoice date.

### Result

Workday launches the *Customer Invoice Event* business process.

If this customer invoice adjustment is an *On Behalf of* intercompany transaction, Workday also launches the *Customer Invoice Intercompany Event* business process.

If you created a credit memo, you can apply the amount across multiple invoices, including other customers' invoices, in the **Perform Customer Invoice Maintenance** task. Don't select the **Auto-Apply Adjustment to Invoice** check box. Workday prevents overapplication of credit memos.

### Next Steps

After invoice adjustment completes:

- Workday creates operational journals in the company currency for approved transactions. When the transaction and company currencies differ, Workday converts the amounts.

- You can cancel a customer invoice adjustment when:
  - You haven't applied the payment.
  - You've canceled the applied payment.
  - You don't have the adjustment included in a customer refund in *Draft* status.
- You can't access the **Cancel Customer Invoice Adjustment** task from the related actions menu when a customer invoice adjustment has a revenue recognition schedule attached. To do so, you'll first need to cancel the revenue recognition schedule, and the schedule must be in a *Draft* status.
- You can settle the unpaid credit card and direct debit invoice adjustments. The settlement process creates and settles the invoiced adjustments. When the process completes, Workday updates the accounting entries for each payment.
- You can access the **Edit Customer Invoice Layout Rule** task and select the **Remove Adjustment Prefix** check box to remove the hard-coded prefix from the filename of the printed invoice adjustment.

## Steps: Set Up Intelligent Prompt Recommendations for Customer Invoices

### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

To train the intelligent recommendations model, you need a minimum of 3,000 customer invoices with the revenue category and sales item fields.

### Context

You can enable intelligent prompt recommendations for the invoice lines prompts on customer invoices and adjustments. The intelligent recommendations model uses insights from historical data to provide up to 5 relevant recommendations for each of these prompts:

- Revenue Category
- Sales Item

This feature improves data accuracy and expedites creating customer invoices and adjustments.

## Steps

1. (Optional) [Enable Innovation Services Features and Machine Learning Data Contributions](#).

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

2. Access the **Maintain Machine Learning Prompt Recommendations** task.

Select the **Accounts Receivable** product area.

In the **Customer Invoices** grid, select the **Enable Machine Learning Recommendations** check boxes for the **Revenue Category** and **Sales Item** fields.

## Result

Workday displays a *Recommended* prompt filter on the **Revenue Category** and **Sales Item** invoice lines prompts, when you create customer invoices and adjustments on these tasks:

- **Create Customer Invoice**
- **Create Customer Invoice Adjustment**

## Steps: Consolidated Customer Invoices

### Prerequisites

Enable generation of unique IDs for consolidated customer invoices:

- At the tenant level with the **Edit Tenant Setup - Financials** task.
- At the company level with the **Edit Company ID Definitions** task.

### Context

You can consolidate up to 1,000 individual invoices into 1 invoice, simplifying presentation and payment. When a customer makes a payment, they can reference the consolidated invoice. You can then apply the payment to the individual invoices that make up the consolidated invoice. You can consolidate invoices that are:

- For the same customer.
- In the same currency.
- For a parent customer and any of its child customers.
- From different billing schedules.
- In approved, unpaid status.
- Not already consolidated.
- Not part of another consolidated invoice.

This task doesn't support:

- Consolidating customer invoices that use retention.
- Direct intercompany invoices.

You can also include invoice adjustments and negative invoices to display an accurate balance. After you include an invoice adjustment in an approved consolidated invoice, you can't cancel, change, or update adjustment lines.

## Steps

1. Access the **Create Consolidated Customer Invoice** task.
  - Specify the customer, sponsor, invoice, and payment criteria. When you use more than 1 prompt, Workday creates consolidated invoices only for the customers that match all selected prompts.
  - You can't consolidate more than 1000 invoices at once.

Security: *Process: Customer Invoice* - Core domains in the Customer Accounts functional area.
2. (Optional) Access the **Schedule Create Consolidated Customer Invoice** task to schedule the creation of consolidated customer invoices.
  - This task enables you to consolidate more than 1000 invoices.
  - To view the details of consolidated invoices for a given customer, select the **Preview Invoices** flag. You can also exclude specific customers before submitting.
  - To set a run date that's before the customer invoice date, specify an **Invoice Date** under the **Number of Days the Run Date is Before** section.
  - You can find and edit scheduled jobs using the **Scheduled Future Processes** report.

Security: *Process: Customer Invoice* - Core domains in the Customer Accounts functional area.
3. Configure email settings, notifications, and attachments to email the consolidated customer invoice automatically.
 

See [Steps: Set Up Email for Customer Invoice Documents](#) on page 937.
4. (Optional) Access the **Create Consolidated Customer Invoice Print Layout** task.
 

Select the business form layout. You can also specify a company logo.

Security: *Set Up: Customer Accounts* domains in the Customer Accounts functional area.
5. Access the **Print Consolidated Customer Invoice** task to print and email the consolidated customer invoice, with or without its individual customer invoices.
 

When you select the **Include Individual Customer Invoices** option, Workday generates a single PDF with the individual customer invoices, in addition to the consolidated customer invoice PDF.

After Workday generates the PDF files, click **Email Consolidated Invoices** to send them to customers.

Security: *Reports: Customer Documents* domain in the Customer Accounts functional area.
6. (Optional) Access the **Schedule Print Consolidated Customer Invoices** task.
 

Set up a schedule to print consolidated invoices automatically.

Security: *Reports: Customer Documents* domain in the Customer Accounts functional area.

## Result

- You can use the **Find Consolidated Invoice Printing Run Groups** reports to:
  - View a summary and status of your print runs.
  - View the invoices in a print run.
  - Reprint and email PDF files of invoices.
- To view all print and email activity for a consolidated invoice, you can access the **Printing Runs** tab on the **View Consolidated Invoice** report.

## Next Steps

You can apply customer payments to the consolidated customer invoice and any of its individual invoices.

### Manage Multiple Customer Invoices at Once

#### Prerequisites

Security: *Manage: Customer Invoice* domain in the Customer Accounts functional area.

## Context

As a collector, you might want to perform operations on several customer invoices at once to save time. This task enables you to take these actions for multiple company and customers:

- Add a follow-up date and note. You can later use this field as a filter in any of the delivered collections report. You can also use follow-up date to create a custom report for internal notification purposes.
- Add or remove holds from payment application.
- Exclude all or specific invoices from dunning.
- Put all or specific invoices in collection. You can also specify the collection date, collection code, and payment amount promised.
- Put all or specific invoices in dispute. You can also specify the partial or full dispute amount, dispute date, and dispute reason.

## Steps

1. Access the **Manage Customer Invoices** task.

You can search for all invoices in your tenant, or specify any criteria to filter them for 1 or multiple customers. You can also save your filters for future use.

2. Select the action that you want to perform on the retrieved invoices.

When you use the *Hold from Payment* option, it applies to invoices with electronic payment types and invoices that aren't processed by settlements.

3. Enter details for your action choice in the **Updates to Apply** section as needed.

4. Select all or specific invoices that you want to apply the changes to.

You can edit fields directly in the grid after selection to override the default values inherited by the **Updates to Apply** section.

## Result

Workday displays a confirmation page with the details of the invoices impacted by your action.

## Next Steps

You can access these reports to view overdue invoice details:

- **Customer Invoices Requiring Action**
- **View Customer Invoices in Collection**
- **View Customer Invoices in Dispute**

## Perform Customer Invoice Maintenance

### Prerequisites

- Configure the *Customer Invoice Maintenance Event* business process in the Customer Accounts functional area, to manage approvals.
- Security: Process: *Customer Invoice - Core* domain in the Customer Accounts functional area.
- [Create Customer Invoice Adjustments](#) on page 791.

## Context

This task enables you to process both related and unrelated customer invoices in bulk for a given company and customer. You can:

- Apply partial or full adjustments.
- Write off small amounts simultaneously.

Workday excludes negative invoices from these transactions. To perform customer invoice maintenance across multiple customers:

- Ensure that the customer invoice currency and the invoice adjustment currency is the same.
- Have security access to the customers that you want to process.

You can also use any of the receivables aging report to determine invoices that need attention.

## Steps

1. Access the **Perform Customer Invoice Maintenance** task.
2. As you complete the first page of the task, consider:
  - If your filtered results contain invoices for which you've created related adjustments, Workday automatically populates them on the next page. You'll still have the option not to apply the adjustments.
  - Select the **Include Invoice Adjustments from Other Customers** check box to apply adjustments you created for other customers.
3. Select the button in the **Invoice Adjustments** column for the invoices that you want to apply the adjustment to.
4. Use the grid to add the adjustments that you want to apply to each invoice. Select **Done** to return to the main grid.
5. When you return to the main grid, Workday displays the total adjustment amount and the number of unique adjustments on the button in the **Invoice Adjustments** column.
6. Continue applying adjustments to your invoices, until you're ready to **Submit**.

## Result

Workday routes the adjustment to the account you specify on the *Receivables* account posting rule.

## Next Steps

Access the **Find Customer Invoice Maintenance Transactions** report to view transaction details.

[2023R1 What's New Post: Apply Multiple Adjustments to a Single Invoice](#)

## Place a Customer Invoice in Dispute

### Prerequisites

- Create a customer invoice.
- Security: *Process: Customer Invoice - Collections* domain in the Customer Accounts functional area.

### Context

After creating and issuing a customer invoice, customers might dispute collection on the invoice for various reasons. In Workday, you can track and manage disputes in the customer profile.

## Steps

1. Access the **Maintain Customer Invoice Dispute** task.

From the **Invoice List** on the customer profile, select **Customer Invoice > Maintain Dispute** from the related actions menu of the invoice you want to place in dispute.

**Note:** You can place multiple invoices in dispute at once using the **Manage Customer Invoices** task.

**2. (Optional) Select On Hold** to place a hold on payment of the invoice.

Workday displays a warning message if you try to change an invoice that is on hold. You can control whether payments are applied to the invoice with the **Do Not Apply Payment to Invoices on Hold** option on the **Apply Customer Payment** and **Record Customer Payment** tasks.

**3. Select the In Dispute check box.**

As you complete the task, consider:

Option	Description
<b>Followup Date</b>	Enter a date as a reminder if followup is required. For visibility, this date displays as the first column of the <b>Invoice List</b> on the Customer profile.
<b>Dispute Date</b>	Workday populates the current date by default, but you can change this date.
<b>Dispute Amount</b>	Enter the amount that is in dispute. This can be all or a portion of the invoice.
<b>Dispute Reason</b>	You can enter multiple reasons for disputing the invoice. Manage the reasons for disputes on the <b>Maintain Dispute Reasons</b> task.

**4. (Optional) Enter Note Content.**

## Result

Workday displays the invoice as being in dispute for easy identification by collections specialists in these places:

- On the invoice header with the dispute date.
- On the **Invoices and Payments > Invoice List** tab, which displays an **Invoice Followup Date**, if you entered one, as the first column in the grid.
- On the **Customer Invoice Dispute/Collection** tab, which includes all dispute details including any change history on the dispute. This tab displays only for invoices that are in dispute.

## Set Up Security for Credit and Rebill Invoices

### Context

To credit and rebill your unpaid customer invoices, you first need to define security groups for creating invoices and invoice adjustments.

### Steps

1. Access the **Edit Business Process Security Policy** task from the related actions menu of the *Customer Invoice Event* business process.
2. In the **Who Can Start the Business Process** section, select or create security groups for the *Create Credit and Rebill Initiating Action*.
3. Access the **Activate Pending Security Policy Changes** task.

4. As you complete the task, consider:

Option	Description
<b>Comment</b>	Enter a description for the security policy changes that you want to apply.
<b>Confirm</b>	Select this check box on the next page.

## Result

You can access the **Create Credit and Rebill** task from the related actions menu of your customer invoice.

## Related Information

### Tasks

[Edit Business Process Security Policies](#)

## Steps: Credit and Rebill Customer Invoices

### Prerequisites

- [Create Customer Invoices](#).
- Configure the *Customer Invoice Event* business process and security policy in the Customer Accounts functional area.

### Context

When you bill a customer invoice amount incorrectly and you want to create 1 corrected invoice, you can use the **Create Credit and Rebill** task to credit the original invoice and create a new rebill invoice.

**Note:** To correct direct intercompany invoices, either create an invoice adjustment or a new invoice.

### Steps

- (Optional) [Set Up Unique Invoice Numbering for a Company](#) on page 778.

Unique invoice IDs enable you to comply with global accounting requirements. When you enable unique invoice IDs for credits, debits, and rebills in the tenant setup, Workday creates and processes an adjustment with a unique invoice ID.

- Select **Customer Invoice > Create Credit and Rebill** from the related actions menu of a customer invoice.

The task is only available for invoices with an unpaid payment status. The task isn't available if Workday created the invoices from billing installments or billable transactions.

As you complete the task, consider:

Option	Description
<b>Invoice Lines To Copy</b>	When you select to copy all the invoice lines, you can delete any unneeded invoice lines when you create the rebill.
<b>Bill-To Customer</b>	To prevent users from changing the <i>Bill-To Customer</i> , create a custom validation.

For all other fields, the considerations remain the same as when you create customer invoices.

## Result

Workday creates and applies a credit adjustment to the original invoice and creates a rebill invoice. The new rebill invoice goes through the same business process approval as new invoices.

If you enabled unique invoice IDs, Workday creates and processes the adjustment with a unique invoice ID to comply with global accounting requirements.

If not, Workday uses this naming convention so that you can easily track credited and rebilled invoices:

- The credit adjustment appends *CR* to the original invoice number. If there are multiple credit adjustments, Workday numbers them sequentially. Example: 9531CR, 9531CR2, 9531CR3.
- The rebill invoice appends *RB* to the original invoice number. Example: 9531RB. Multiple rebill invoices follow the same naming convention as multiple credit adjustments.

## Concept: Electronic Invoicing

To support global requirements for sending invoices electronically, you can store electronic invoicing details on the customer profile on **Addresses and Contacts > Document Delivery** tab.

Once you uptake the functionality, you can use your custom integration to send invoices electronically to third-party providers or tax authorities.

You can also track when you decide to start electronic invoicing by entering an **Electronic Invoicing Agreement Date** for a company.

## Electronic Invoicing Acknowledgements

You can receive acknowledgments sent back by third-party provider or tax authorities. The acknowledgments provide full visibility to the invoice status, processing date, and related messages.

You can use these web services to process the acknowledgments:

- *Get Electronic Invoicing Acknowledgments*
- *Put Electronic Invoicing Acknowledgment*

## Reference: Ship-To Connection in Customer Invoices

Workday takes the most relevant information first and then moves down the hierarchy of address entries. It applies those values to ship-to customer and ship-to address fields as applicable. You can override the default values at any point. These tables detail the behavior for shipping connections on the customer invoice header and invoice lines.

On the customer invoice header:

Customer Invoice Header Fields	Applied Order of Values
<b>Default Ship-To Customer</b>	1. The <b>Ship-To Customer</b> identified as the default on the Connection Map.
<b>Default Ship-To Address</b>	1. The <b>Default Ship-To Address</b> for the Business Connection. 2. The most current <b>Ship-To Customer</b> address with a shipping usage. When there's more than 1 address with the same date, Workday randomly selects one. 3. Finally, Workday uses the primary business address for the <b>Ship-To Customer</b> on the Connection Map.

Customer Invoice Header Fields	Applied Order of Values
<b>Default Tax Code</b>	<ol style="list-style-type: none"> <li>1. The <b>Tax Code</b> from <b>Tax Rule for Country</b> if a rule exists, based on the <b>Default Ship-To Address</b> you select.</li> <li>2. The <b>Tax Code</b> specified on the Invoice Customer, if specified.</li> </ol>

On the customer invoice line:

Customer Invoice Line Fields	Applied Order of Values
<b>Ship-To Customer</b>	<ol style="list-style-type: none"> <li>1. <b>Default Ship-To Customer</b> in the customer invoice header.</li> <li>2. <b>Ship-To Customer</b> from the Connection Map defined as default.</li> </ol>
<b>Ship-To Address</b>	<ol style="list-style-type: none"> <li>1. Workday uses <b>Default Ship-To Address</b> from the customer invoice header for new invoice lines if the ship-to customers are the same.</li> <li>2. If the <b>Ship-To Customer</b> on the invoice line is different from the customer invoice header, Workday uses the default address on the Connection Map.</li> <li>3. Workday uses the primary address for the invoice line's <b>Ship-To Customer</b> on the Connection Map that has a shipping usage.</li> <li>4. Workday uses the highest effective-dated <b>Ship-To Customer</b> address specified on the Connection Map that has a shipping usage. When there are multiples with the same date, Workday randomly selects one.</li> <li>5. Finally, Workday uses the primary business address for the invoice line's <b>Ship-To Customer</b> on the Connection Map.</li> </ol>
<b>Tax Code</b>	<ol style="list-style-type: none"> <li>1. If there's a <b>Ship-To Customer</b> on the invoice line, Workday applies the tax code for the <b>Ship-To Address</b>. It's applicable only when a tax rule exists.</li> <li>2. If there's a <b>Ship-To Customer</b> on the invoice line, and no match on the tax rule, the field remains blank.</li> <li>3. Workday pulls the tax code from the billing customer when you: <ul style="list-style-type: none"> <li>• Haven't configured a business connection.</li> <li>• Don't have a <b>Ship-To Customer</b> specified on the invoice line.</li> </ul> </li> </ol>

#### Reference: Invoice Fields Restricted for Edits

When you enable **Restrict Invoice Field Editing** functionality in your tenant, Workday prevents you from editing these fields on customer invoices or adjustments that inherit values from awards or contracts:

Customer Document	Report Data Source	Fields
<b>Customer Invoice or Invoice Adjustment Header</b>	<b>Contracts</b>	<ul style="list-style-type: none"> <li>• Bill-To Customer</li> <li>• Billable Project</li> <li>• Company</li> <li>• Currency</li> <li>• Ship-To Address</li> <li>• Ship-To Customer</li> <li>• Sold-To Customer</li> </ul>
<b>Customer Invoice or Invoice Adjustment Line</b>	<b>Contracts</b>	<ul style="list-style-type: none"> <li>• Analytical Amount</li> <li>• Company</li> <li>• Contract Line</li> <li>• Deferred Revenue</li> <li>• Extended Amount</li> <li>• Quantity</li> <li>• Quantity 2</li> <li>• Sales Item</li> <li>• Ship-To Customer</li> <li>• Ship-To Address</li> <li>• Transaction Date</li> <li>• Unit Price</li> </ul>
<b>Customer Invoice or Invoice Adjustment Line</b>	<b>Awards or Prepaid Schedule</b>	<ul style="list-style-type: none"> <li>• Billable Project</li> <li>• Contract Line</li> <li>• Deferred Revenue</li> <li>• Phase</li> <li>• Task</li> <li>• Unit of Measure</li> <li>• Unit of Measure 2</li> </ul>

When you select the check box, we also prevent you from deleting invoices or invoice adjustment lines on these transactions:

- Award billable transactions.
- Billing installments.
- Grants.
- Prepaid schedules.
- Revenue.

#### Reference: Invoicing and Receivables Reports

This table lists a number of useful customer-related reports.

Report	Description
<b>Customer Activity Details</b>	View the transactions for this customer or hierarchy that fall within the specified time range. Details include the transaction, date, type, number, due date, state, increase or decrease, and balance.

Report	Description
<b>Customer Activity Summary</b>	<p>View the total transaction amounts for the specified customers that fall within the specified time range.</p> <p>Details include:</p> <ul style="list-style-type: none"> <li>• Adjustments total</li> <li>• Beginning balance</li> <li>• Currency</li> <li>• Ending balance</li> <li>• Invoices total</li> <li>• Payments total</li> <li>• Refunds total</li> <li>• Write-off total</li> </ul>
<b>Customer Balance Details</b>	<p>View the open balance for each customer.</p> <p>Details include currency, reporting transaction, type, number, and date, due date, aging days, original amount, payments applied, discounts, write off, and open balance.</p>
<b>Customer Balance Summary</b>	<p>View the currency, invoices total, adjustments, unapplied payments, and balance for each customer.</p>
<b>Customer Invoices Requiring Action</b>	<p>View invoices that might require action. Only returns invoices that are late, on hold, in collection, or in dispute. Use this report as the basis for custom reports that meet your specific criteria for invoices that require attention.</p>
<b>Customer Payment Detail</b>	<p>View all customer payment activity for your company or company hierarchy. Enables you to check the status and details of your customer payments. You can narrow your report results to specific customers, a payment date range, and other criteria. Example: Payment date, status, type, and amount.</p> <p>You can also see payment application details including customer invoices and adjustments paid, write off, and payment amount on account. As related actions you can cancel, return, or unapply payments as necessary.</p>
<b>Customer Statements</b>	<p>View customer statements for the specified customer or hierarchy that apply to the specified company.</p> <p>Details on the <b>Transactions</b> tab include each transaction date, type, number, due date, state, increase or decrease, and balance. These transactions are sorted by currency.</p> <p>Details on the <b>Aging Report</b> tab include, for each customer, the current amount and amounts for different ages, depending on the selected aging group.</p>
<b>Find Customer Deposits</b>	<p>View all deposits in the specified period.</p> <p>Details on both the <b>Deposits</b> tab and the <b>Payments Included in Deposit</b> tab include the status, customer, date, bank account, deposit amount, and currency.</p>

Report	Description
<b>Find Customer Invoices</b>	View the number, company, status, customer, date, memo, discount date, due date, invoice amount, amount due, currency, adjustment, and adjustment reason for each invoice.
<b>Find Customer Invoices for Billable Projects</b>	For the <b>Billable Projects</b> and <b>Company</b> standard reports, you can save and refine your searches after Workday displays your results.
<b>Find Customer Invoices for Company</b>	
<b>Find Customer Write-Offs</b>	View the status, customer, write-off date, and amount for each bad debt write-off.
	View the status, customer, payment date, and amount for each customer invoice write-off included in a payment.
<b>Receivables Aging</b>	<b>Note:</b> We plan to retire these 2 receivables aging reports in March 2026. For better performance and configurability, Workday recommends that you use the Receivables Aging Detail Standard Report and Receivables Aging Summary Standard Report.
<b>Receivables Aging Detail</b>	You can select to run these reports as operational aging based on the invoice date, or financial aging based on the accounting date by accounting period. For each customer, view the current amount and invoice amounts for different ages, depending on the selected aging group. For operational aging, the reports display outstanding customer receivable amounts in user-defined aging buckets. Supports up to 6 aging buckets. Workday displays a warning if an aging group has more than 6 aging buckets.
	If you run the aging report as financial aging by accounting period, you can filter by <i>Ledger Period for Receivables Aging</i> . Select either the current period or a specific ledger period by ledger year.
<b>Note:</b>	Both the operational and financial aging are cumulative in capturing total invoice amounts. Operational aging is useful for tracking your receivables from a collections perspective. Financial aging is helpful for closing your accounting period.
	Example: A customer invoice with an invoice date of 1/31/15, but an accounting date of 2/1/15, won't display in a financial aging report for January of 2015. It displays in February 2015. An operational aging report displays that invoice in January 2015.
	Includes only transactions with an invoice date that is before the selected report date. The most common aging report displays: Current, 1-30, 31-60, 61-90 and >90.
	The Detail report breaks down aging by specific invoice transaction.

Report	Description
<b>Receivables Aging Detail Standard Report</b>	<p>View aggregated past due amounts by company for a given period. When you run the report for <b>Financial Aging</b>, you can specify any reporting date, instead of defaulting to the last day of a month. You can also report in a different currency than the company currency. Copy these reports to create custom reports for using calculated fields to:</p> <ul style="list-style-type: none"> <li>• Specify the desired aging periods.</li> <li>• Report on other invoice attributes such as invoice types, or billable projects.</li> </ul>
<b>Receivables Aging Summary Standard Report</b>	<p>When you run the report in the financial aging mode, Workday doesn't display customer payments that are recorded but not applied.</p> <p>You can also use the <b>Customer Payment for Invoices</b> report data source to create custom reports for viewing your receivables aging data based on payment balances in reporting currency, transaction currency, or company currency.</p>
<b>Sub-Receivables Aging Customer Invoice</b>	<p>View past due amounts based on on-account and unapplied payments balances by company for a given period. It includes information about original transaction amount, transaction balances in transaction currency, company currency, and reporting currency, on-account balance in reporting currency, and unapplied balance in reporting currency.</p>
<b>Sub-Receivables Aging Customer Payment On-Account And Unapplied</b>	<p>These matrix reports have required prompts to filter the data by:</p>
<b>Sub-Receivables Aging Summary Customer Invoice</b>	<ul style="list-style-type: none"> <li>• <i>Aging Report Mode</i></li> <li>• <i>Aging Basis Date</i></li> <li>• <i>Reporting Date</i></li> </ul>
<b>Sub-Receivables Aging Summary Customer Payment On-Account</b>	<ul style="list-style-type: none"> <li>• <i>Reporting Currency</i></li> <li>• <i>Currency Rate Type</i></li> </ul>
<b>Sub-Receivables Aging Summary Customer Payment Unapplied</b>

[The Next Level: Customize the Receivables Aging Standard Reports](#)

## Concept: Taxes in Customer Invoice and Cash Sale Web Services

In Workday, you can retrieve and store tax amounts calculated from billing systems outside of Workday. When you create customer invoices, invoice adjustments, and cash sale through web services, Workday enables you to:

- Override Workday tax calculations.
- Import third-party tax details to Workday.

## Override Tax Amounts

**Note:** The functionality described in this section applies to web service versions 41 and above.

You can edit fields in the **Taxable Code Application Data** element on these web services:

- *Import Customer Invoices*
- *Submit Cash Sale*

- *Submit Customer Invoice*
- *Submit Customer Invoice Adjustment*

When you don't have **Third Party Tax Options** enabled on the **Edit Company Tax Details** task, you can use the **Tax Amount** field on the **Tax Rate Application Data** subelement to override Workday tax calculations. If you:

- Leave all fields in the **Taxable Code Application Data** element blank, Workday doesn't override the tax amount.
- Specify values for the other fields, but leave the **Tax Amount** field blank, Workday overrides the tax amount as zero.

Workday always calculates the withholding tax, and you can't override it.

**Note:** If you edit an invoice, adjustment, or cash sale, or if any of these transactions pass through a business process review step, Workday recalculates your tax amount. This applies even if you don't make any changes. Workday recommends that you reconfigure your business process to remove the review step when populating tax amounts using web services.

Before you call our web services, group the lines on the **Tax Code Application Data** element, by **Tax Applicability**, **Tax Code**, and **Tax Point Date Type**.

### Third-Party Tax Details

**Note:** The functionality described in this section applies to web service versions 41.1 and above.

When you enable the **Third Party Tax Options** functionality from the **Company > Edit Company Tax Details** related actions menu on the company profile, Workday populates third-party tax details in the **Customer Invoice Line Third Party Tax Rate Data** field on these web services:

- *Bulk Import Customer Invoice*
- *Get Customer Invoices*
- *Get Customer Invoice Adjustments*
- *Import Customer Invoice*
- *Submit Customer Invoice*
- *Submit Customer Invoice Adjustment*

### FAQ: Customer Invoices

#### How do I cancel an unpaid customer invoice?

From the related actions menu of an invoice, select **Customer Invoice > Cancel**.

You can't cancel a customer invoice if:

- You've applied a customer payment to it. Cancel any customer payment applied to the invoice first.
- You've partially written off the invoice.
- The invoice has a credit adjustment against it.
- The invoice is prepaying other invoices.

#### How do I edit an unsubmitted customer invoice or adjustment?

From the related actions menu of an invoice that you haven't submitted yet, select **Customer Invoice > Edit**.

The fields you can change are the same as when you created the invoice.

**How do I change a submitted customer invoice?** From the related actions menu of an invoice, select **Customer Invoice > Change**. For customer invoice adjustments, select **Customer Invoice Adjustment > Change** from the related actions menu of an adjustment.

You can also select **Customer Invoice > Update Invoice Lines** from the related actions menu of an invoice. This task makes it easier for you to manage invoices with large numbers of lines.

You can't change a submitted customer invoice or adjustment if:

- You've applied a customer payment to it. Cancel any customer payment applied to the invoice first.
- You've partially written off the invoice or adjustment.
- The invoice has a credit adjustment against it.

After you change the invoice, the business process starts over as if you submitted the invoice for the first time.

The fields you can change are the same as when you created the invoice.

**Note:** There's an accounting impact if you change an invoice from a prior period. For the current period, Workday creates journal entries that reverse the previous entries and create a new set.

**How do I cancel a customer invoice adjustment?**

Select **Customer Invoice Maintenance > Cancel** from the related actions menu of a maintenance transaction for a customer invoice. Workday then reverses the operational journal entries and updates the amount due on the invoice.

This option is available for invoice adjustments that you created using these tasks:

- **Perform Customer Invoice Maintenance.**
- **Create Customer Invoice** using the **Auto-Apply Adjustment to Invoice** check box.

You can't cancel a submitted customer invoice adjustment if:

- You've applied a partial customer payment to it. Cancel any customer payment applied to the adjustment first.
- You've partially written off the adjustment.

**How do I prevent changes to customer invoices after the final print run?**

Access the **Edit Customer Account Options** task, then select the **Prevent Changes to Invoice after Final Print Run** check box.

**How do I change an existing customer invoice that didn't have the third-party tax enabled initially, but I later opt in the functionality?**

1. From the related actions menu of an invoice that's unpaid, select **Customer Invoice > Cancel**.

2. If you haven't changed the tax setting, access the **Third Party Tax Options** tab on the **Edit Company Tax Details** task. You can configure the setting under:
  - **Third Party Tax Options** section: This option extends to both customer and supplier invoices. You must have an integration with the third-party tax service to import all tax calculations.
  - **Customer Invoice Non-Reporting Option** section: This option applies to only customer invoices. Select the **Use 3rd Party Tax Service** check box.

Enter the third-party tax service name in either of the selection you make.

3. Depending on the use case, copy or create a new customer invoice.

You can't enable the third-party tax services for an existing invoice. Such a change would alter the tax calculations and impact invoice totals. Workday wants to ensure that the tax calculations are the same throughout the life of the invoice.

### **How do I create a customer refund when a payment has been fully applied and then unapplied?**

When you fully apply a payment but later unapply it, Workday enables you to put only a partial payment amount on-account. To create a refund, you must first create a debit memo to clear the on-account amount, then create a credit memo to offset the debit memo. You can now refund the entire amount through the credit memo.

Example: You want to refund the USD \$100.00 that you first applied to a payment and then later unapplied the entire amount.

1. From the related actions menu of an invoice, select **Customer Invoice > Create Adjustment**.
2. Select **Debit (Increase Amount Due)** option in the invoice header section.
3. Add an adjustment line with a **Revenue Category**, **Tax Applicability**, and enter USD \$0.01 for the **Extended Amount**.
4. From the related actions menu of an invoice, select **Customer Invoice > Create Adjustment**.
5. Select **Credit (Decrease Amount Due)** option in the invoice header section and add an adjustment line with a USD \$0.01 for the **Extended Amount**.
6. Access the payment you've unapplied and from the related actions menu of the payment, select **Apply**.

7. On the **Apply Customer Payment** page:
  - Enter USD \$99.99 in the **Amount to Place On-Account** field.
  - Select the debit invoice adjustment for USD \$0.01 from the invoice line.
8. Access the **Create Customer Refund** task. Select the customer payment for USD \$99.99 under the **On-Account Payments** section and the credit invoice adjustment for USD \$0.01 under the **Invoice Adjustments** section.
9. Click **Submit** to process the refund.

## Invoice Netting

### Setup Considerations: Invoice Netting

You can use this topic to help make decisions when planning your configuration and use of invoice netting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

When you have external or direct intercompany customers that are also your suppliers, you can net their invoices and settle the balance as a single payable or receivable amount. Example: A food service organization sells goods to its customers and also buys certain goods from them, making them suppliers too.

To use netting functionality, you need to configure the netting rules to establish relationships between the customers, sponsors, and suppliers for a given company. Workday enables you to create invoice eligibility criteria to determine which customer and supplier invoices can net. This functionality doesn't extend to multicompny netting.

You can:

- Schedule the netting transactions for automatic processing.
- Print a netting statement that you can add as an attachment to the supplier payment email.
- Customize netting statement layout using the netting Business Intelligence and Reporting Tools (BIRT) form in Workday Studio Report Designer.

### Business Benefits

When you uptake netting functionality, Workday enables you to:

- Eliminate the workaround of calculating the differences between supplier invoice and customer invoice amounts, records the payment in the journals automatically, and offsets the appropriate transactions.
- Simplify your settlement process by eliminating the need to process supplier and customer invoices separately, improving efficiency.
- Reduce your operational costs by eliminating multiple bank settlements.
- Improve your financial cash forecasting because you can now appropriately fund relevant accounts.
- Improve your collections risk because you can now offset overall receivables with payables at once.

## Use Cases

- Suppliers and customers are the same business entity, but have different profiles who have an agreement to net the consolidated payables and receivables amount. They can record the invoices and generate a netting transaction at the end of each period that nets everything.
- Suppliers and customers are the same business entity who have an agreement to net the transactions. The customer sends an invoice for each sale. The supplier contacts the customer to offset the amount of the purchase order at the end of the payment term. When the customer agrees, the supplier makes payment for the offset amount by bank transfer.
- Suppliers and Customer are different business entities and you can net the transaction as per your agreement.

## Questions to Consider

Question	Considerations
Do you have contracts or external agreements with your business entities?	<p>Ensure you finalize the netting agreements first as they determine how you configure your netting rules. For a single company, you can configure netting rules to establish relationships between specific:</p> <ul style="list-style-type: none"> <li>Customers and suppliers.</li> <li>Award sponsors and suppliers.</li> <li>Customers plus sponsors and suppliers.</li> </ul>
Do you need to net specific invoices when older invoices are still open?	<p>You can manage which invoices to net by:</p> <ul style="list-style-type: none"> <li>Defining the netting priority of invoices when you configure invoice eligibility rules.</li> <li>Selecting specific invoices and adjustments when you run the netting process manually.</li> </ul>
Can you net any customer and supplier invoice?	<p>You can only include those invoices in a netting transaction that have open balances, even if only the partial amount is eligible for netting.</p>
Do you have past due invoices that are part of dunning?	<p>Even when an invoice is part of a netting transaction, Workday includes that invoice in the dunning as long as the netting transaction is in a draft status. To exclude that invoice from dunning, first complete the netting transaction.</p>
Does the netting process also include invoices that aren't yet due?	<p>Netting functionality uses the invoice date to determine if an invoice is eligible for netting transaction. Therefore, it can include invoices that aren't yet due.</p> <p>Once the netting transaction is complete, Workday settles the net payable on the due date of that invoice as per the payment terms.</p>
Do you have payment discounts as part of your payment terms?	<p>When you net supplier and customer invoices, Workday calculates the payment discount only on the balance remaining after the netting transaction is complete.</p>
Do you need to cancel a netting transaction and what is the impact?	<p>When you cancel a netting transaction, Workday:</p>

Question	Considerations
	<ul style="list-style-type: none"> <li>Reverts the payment status on the supplier and customer invoices.</li> <li>Reverses the accounting entries for the transaction amount on the same ledger period as long as the period is open. Otherwise, Workday reverses the accounting entries in the next open period.</li> <li>Releases the supplier invoices and customer invoices. You can then include those invoices in another netting transaction or a settlement run.</li> </ul>
Can you edit a netting transaction?	You can edit a netting transaction but can't change the header information. You can, however, add or remove invoices, change invoice amounts, and add attachments.
Can you net invoices in different transaction currency?	<p>You can net in a different transaction currency but both the supplier invoices and customer invoices must be in the same currency.</p> <p>When the netting transaction currency is different from the invoice currency, the difference between the 2 exchange rates creates a realized exchange gain or loss journal entry.</p>
Do you have worktag balancing enabled in your tenant?	<p>When you define netting rules, Workday enables you to specify the worktags, including optional worktag balancing.</p> <p>Workday uses the worktag you specify to calculate interworktag balancing entries when netting customer and supplier invoices.</p>
Do you need to net invoices originating from awards?	When you run netting, Workday enables you to bill both indirect and direct award costs to the sponsor.
Do you use scheduled settlement runs for remittance?	Workday recommends that you process your netting transactions before the scheduled settlement runs. Once you start the netting run, the included invoices aren't available for settlement or payment until after the netting transaction is complete.
Do you need to void a check after the settlement is complete?	When you void a check after the settlement is complete, then the associated invoices become eligible again for netting.
Can you send netting statements to your suppliers?	<p>Workday enables you to print a netting statement from the related actions menu of the netting transaction that you can later add as an attachment to the remittance email.</p> <p>You can only include those netting statements that have a print run type of <i>Final</i>.</p>
Do you have a large number of customers that are also your suppliers?	Workday provides web services to mass load the netting rules instead of manually creating 1 rule at a time .

## Recommendations

- Configure your business policy to include a review step. It enables you to correct netting errors, add or remove invoices before the netting transaction is complete because you can't change the transaction once it's approved.
- When there are errors in the netting transaction, cancel the transaction and create a new transaction, or create an adjustment.
- Use detailed descriptive netting rule names to identify the company, customer, and supplier relationship that you want to net for. It helps you easily identify the rule to use when you create a netting transaction.
- When configuring netting rules, select company hierarchy, or multiple customers and suppliers to include invoices from several entities within the same 1 company.
- To determine which invoices to net first, specify a netting priority when configuring the invoice eligibility rules.
- When you create invoice eligibility rules, you can make the rules more restrictive by specifying invoice type or dates to exclude certain invoices from netting, such as sponsor.

## Requirements

- Enable generation of unique IDs for netting transactions at tenant or company level.
- Configure at least 1 netting rule to define the netting relationship between the desired customers and suppliers for a given company.
- Configure invoice eligibility rules to define which customer invoices can be part of the netting transaction.
- To attach a netting statement to the supplier remittance email, first settle the netted invoice and generate a final netting statement.
- To enable direct intercompany invoice netting, access the **Maintain Companies as Customers or Suppliers** task, and select **Enable Netting** for every business entity that you want to be able to net direct intercompany transactions for.

## Limitations

- Netting doesn't include 1099 suppliers.
- You can only net 1 company at a time.
- Netting doesn't include discount calculations. Workday applies the discount to the final balance during the settlement process.
- You can't net supplier invoices with customer invoices when they have different transaction currencies. Though, the netting transaction currency can be different than the company currency.
- You can't select the invoices that are part of a settlement run. You can settle the remaining balance on the invoices after approving the netting transaction.
- Workday doesn't include invoices that have pending activity, are on hold, or in dispute.
- You can't change a netting transaction once it's approved. However, you can create an additional supplier or customer invoice adjustment when the netting transaction is incorrect.

## Tenant Setup

Use the **Edit Tenant Setup - Financials** task to enable the netting transaction ID sequence generator in your tenant.

## Security

Domains	Considerations
<i>Setup: Netting Rule</i> in the Common Financial Management functional area.	Enables you to create netting rules.

Domains	Considerations
<i>Process: Netting Transaction</i> in the Customer Accounts and Supplier Accounts functional area.	<p>Enables you to create netting transactions. Workday uses netting rules and invoice eligibility rules to retrieve invoices for netting. In Workday, all netting transactions occur by netting relationships.</p> <p>You can only view customers and suppliers that you have access to.</p>
Subdomains for <i>Process: Netting Transaction</i> in the Customer Accounts and Supplier Accounts functional area: <ul style="list-style-type: none"> <li>• <i>Process: Netting Transaction – Add Attachment</i></li> <li>• <i>Process: Netting Transaction – Cancel</i></li> <li>• <i>Process: Netting Transaction – Change</i></li> <li>• <i>Process: Netting Transaction – Reporting</i></li> <li>• <i>Process: Netting Transaction – View</i></li> </ul>	Enables you to secure access to a specific netting feature, giving you more control over users' activities.

## Business Processes

Configure the *Netting Transaction Event* business process to review, edit, and approve netting transactions.

## Reporting

- Use the **Find Netting Transactions** report to view the:
  - Netting transactions completed in a given period.
  - Netting rule used for each transaction.
  - Number of supplier and customer invoices netted.
 You can drill down on all the parameters to access the details.
- Workday provides these report data sources for creating custom reports:
  - **Netting Customer Invoice Application**
  - **Netting Rules**
  - **Netting Supplier Application Activity**
  - **Netting Transactions**
  - **Netting Transaction for Netting Transaction Printing Run**

Workday also includes netting activity in these existing customer and supplier reports:

- Customer Activity Details and Summary
- Customer Balance Details and Summary
- Customer Open Items
- Customer Statements
- Invoice Aging - Composite View
- Receivables Aging Detail and Summary
- Sponsor Statements
- View Customer Invoices
- Payables Aging
- Payables Aging Detail
- Payables to Supplier Balance Reconciliation and Exception Summary
- Retention Payables to Supplier Balance Reconciliation
- Supplier Activity Details and Summary

## Integrations

Web Service	Considerations
<ul style="list-style-type: none"> <li>• <i>Get Invoice Eligibility Rules for Netting Transaction</i></li> <li>• <i>Put Invoice Eligibility Rule for Netting Transaction</i></li> </ul>	Use to create, update, or retrieve invoice eligibility rules for netting transactions.
<ul style="list-style-type: none"> <li>• <i>Get Netting Rules</i></li> <li>• <i>Put Netting Rule</i></li> </ul>	Use to create new netting rules, update or delete existing rules, and retrieve rules.
<ul style="list-style-type: none"> <li>• <i>Cancel Netting Transaction</i></li> <li>• <i>Get Netting Transactions</i></li> <li>• <i>Submit Netting Transaction</i></li> </ul>	<p>Use to cancel, retrieve, or mass load netting transactions in Workday.</p> <p>When you submit the web service, we create an in progress netting transaction.</p>

The **SAF-T Core** and **SAF-T Norway** integration templates support invoice netting and account for netting in arrears.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Other Impacts

- The netting transaction period close activity group enables you to categorize operational transactions and accounting activity. You can close the group independently from procurement or customer accounts groups.
- When the netting transaction currency is different from the invoice currency, the difference between the 2 exchange rate creates a realized exchange gain or loss journal entry.

## Related Information

### Concepts

[The Next Level: An Introduction to the Netting of Invoices between Suppliers and Customers](#)

### Steps: Set Up Netting

### Prerequisites

- Enable generation of unique IDs for netting transactions:
  - At the tenant level with the **Edit Tenant Setup - Financials** task.
  - At the company level with the **Edit Company ID Definitions** task.
- Configure the *Netting Transaction Event* business process and security policy in the Customer Accounts and Supplier Accounts functional areas.
- Review setup considerations for invoice netting.

### Context

You can configure invoice netting to calculate a single net balance payable or receivable for third-party companies that are both a customer and a supplier. This process eliminates the workaround of calculating the differences between supplier invoice and customer invoice amounts, simplifies settlement, reduces operation costs, and improves collections risk.

To set up invoice netting, you need to:

- Configure netting rules to establish relationships between customers, sponsors, and suppliers for a company or company hierarchy.
- Define invoice eligibility rules to identify which customer invoices can net against which supplier invoices.

When you create a netting transaction, Workday:

- Automatically calculates Value Added Tax (VAT) on a payment when applicable.
- Excludes on hold or in dispute invoices.
- Doesn't net invoices across different companies or direct intercompany invoices.

## Steps

### 1. Access the **Create Invoice Eligibility Rule for Netting Transaction** task.

- Specify a value for **# of Days Invoices are Open before Netting** to determine the period from when to retrieve the open invoices. When you schedule a netting transaction, calculate the days open from the scheduled date.
- When you have an uneven amount of customer and supplier invoices, Workday uses the **Invoice Netting Priority** to determine which invoices will net first.

Security: *Setup: Netting Rules* domain in the Common Financial Management functional area.

### 2. Access the **Maintain Netting Rules** task.

Define which customers or sponsors can net against which suppliers for a given company and select an invoice eligibility rule. Select a company hierarchy to be able to net across all companies in that hierarchy.

Once a netting rule is **In Use**, you can deactivate the rule but can't delete it.

Security: *Setup: Netting Rules* domain in the Common Financial Management functional area.

### 3. [Create Netting Transactions](#) on page 823.

### 4. (Optional) Access the **Schedule Netting Transaction** task.

Select a schedule based on your netting recurrence requirements. Workday populates the **Transaction Date** and the **Invoice Date on or Before** fields on the netting transaction based on the option you select:

- Daily Recurrence*
- Weekly Recurrence*
- Monthly Recurrence*

Security: *Process: Netting Transaction* domain in the Customer Accounts and Supplier Accounts functional areas.

### 5. Access the **Create Netting Statement Print Layout** task.

Security: *Setup: Netting Rules* domain in the Common Financial Management functional area.

### 6. Access the **Print Netting Statement** task from the related actions menu of a netting transaction to print the netting statement.

- You can print only 1 *Final* statement for each netting transaction. The print run type becomes final after you approve the netting transaction.

Security: *Process: Netting Transaction* and *Process: Netting Transaction – Reporting* domains in the Customer Accounts and Supplier Accounts functional area.

### 7. (Optional) [Set Up Remittance Release Event for Suppliers](#) on page 1713

To attach netting statements to your supplier emails, add the **Netting Statements** report field to the *Attachment(s)* section of the *Remittance Release Event* business process.

## Related Information

### Concepts

[Concept: Accounting and Netting Transactions](#) on page 826

## Create Netting Transactions

### Prerequisites

- Configure the *Netting Transaction Event* business process and security policy in the Supplier Accounts and Customer Accounts functional areas.
- Create Invoice Eligibility Rules for netting transactions.
- Configure Netting Rules.
- Configure these domain security policies on 1 or both functional areas according to your business needs:
  - Security: *Process: Netting Transaction* domain in the Supplier Accounts and Customer Accounts functional areas.
  - Security: *Set Up: Netting Rules* domain in the Common Financial Management functional area.

### Context

You can't use this feature to net direct intercompany transactions, instead see [Create Direct Intercompany Netting Transactions](#) on page 824.

You can use netting transactions to net the amount payable and amount receivable on these documents:

- Customer invoice
- Customer invoice adjustment
- Supplier invoice
- Supplier invoice adjustment

Invoices and adjustments are eligible to net based on the netting rules and invoice eligibility rules configured. Both rules apply to customers and suppliers on a company or company hierarchy. Workday displays invoices:

- With negative and positive balances.
- Based on the days you configure on the **# of Days Invoices are Open Before Netting** field on the invoice eligibility rule. From the field, we populate and lock down the **Invoice Date On or Before** field on the transaction.

We don't display invoices:

- With a balance of zero.
- From suppliers marked for 1099 MISC reporting.

### Steps

1. Access the **Create Netting Transaction** task.
2. Select the **Currency**. We populate the field from the **Company**, but you can change it to view and net invoices in a different currency.

We support multicurrency on netting transactions, where the currency on the invoices is different from the ledger currency. For a valid netting transaction, both supplier invoices and customer invoices selected must be on the same currency.

3. Select the **Netting Rule** that you want to apply to the transaction.
4. Enter a **Transaction Date**.

Enter a date on or after the invoice date.

5. (Optional) For tenants with **Balancing Worktag** configured:

- Select the **Balancing Worktag** on the netting rule to calculate interworktag balancing entries when you net customer and supplier invoices that have different balancing worktags.
- Select the **Optional Balancing Worktag** on the netting rule to calculate interworktag balancing entries.

- From the Supplier Invoices and Customer Invoices tabs, select the invoices or adjustments that you want to net. Consider that selecting an invoice doesn't guarantee netting.

You're able to net invoices based on:

- The available total supplier invoice amount and customer invoice amount.
- The invoice eligibility rules. The oldest invoice nets first, based on invoice date.

## Result

After you approve a netting transaction, we generate accounting that reverses the accounts payable and accounts receivable balances of the individual supplier invoices and customer invoices.

## Next Steps

- Settle any balance due left on the invoices after you netted.
- Print a netting statement.
- Send a netting statement along with the payment remittance information to the supplier.

## Create Direct Intercompany Netting Transactions

### Prerequisites

- Access the **Maintain Companies as Customers or Suppliers** task and select **Enable Netting** for all companies that you want to include. You can't net direct intercompany transactions for a company unless you select **Enable Netting**.
- Create intercompany transactions.

### Context

When you have companies that issue direct intercompany customer and supplier invoices, you can net the total amount and settle all their transactions at once.

Workday can't net negative amounts, so you must settle as the company that has a net payable amount. You can check which company owes more using the Intercompany Work Area report.

If you're using Auto Record Intercompany receipt, Workday automatically generates a receipt for the intercompany payment. Otherwise, you can create one manually.

### Steps

- Access the **Create Settlement Run Task**.
- Select the company you want to net for that owes a net payable amount.
- Leave the **Intercompany Payable/Receivable Transactions** field blank, to include all transactions needed for netting.
- Set the **Intercompany Invoice Type** to *Direct*.
- Select the transactions you want to net.

Workday displays amounts due to the company you're settling for as positive amounts, and amounts due from the company as negative amounts.

- Process the settlement run.

From the **Background Process in Progress View**, you can use the **Payment Groups** and **Intercompany Items** tabs to review the transactions included in the settlement run.

7. (Optional) To record an intercompany receipt for the settlement run: access the **Record Intercompany Receipt** task, and:
  - a) In the **Company Receiving Payment** field, enter the company that was owed a net receivable amount in the settlement run.
  - b) In the **Companies making Payments** field, enter the company that owed a net payable amount in the settlement run.
  - c) Set the **Intercompany Invoice Type** to *Direct*.
  - d) Select the intercompany payment from the settlement run.

## Create Custom Business Form Layout for Netting Statements

### Prerequisites

- Security: *Custom Report Creation* in the System functional area.
- Security: *Setup: Netting Rules* domain in the Common Financial Management functional area.

### Context

Workday delivers a standard business form layout for netting called *Netting Transaction Printing Form*.

If the delivered business form layout doesn't meet your needs, you can create your own custom business form layouts. You can associate them with netting statement print layouts and in some cases, replace a delivered layout using *Report Designer in Workday Studio*.

### Steps

1. Create your own XSL stylesheet or design a business form layout using *Report Designer in Workday Studio*.
2. Create a custom business form layout.

- a) Access the **Create Business Form Layout** task.
- b) Check the **Active** box.
- c) Enter the number of days for retaining netting statements before they expire in **Resulting Document Expiration Offset (in days)**. The maximum value allowed is 25,000.

**Note:** Ensure that the expiration offset you specify here complies with your organization's document retention policy. Workday automatically deletes documents after the offset number of days. You can't recover these documents.

- d) Select a business form layout from one of these prompts:

- *XSL Attachment*
- *Report Design*

Use Workday Community to download the netting statement *rptdesign* file at <https://community.workday.com/node/721452>.

- e) Select a **Custom Report**.
- f) Add the **Token Name** for the company logo and signature as follows:

*company\_logo*  
*po\_signature*

These tokens are in your XSL stylesheet or Report Designer business form layout.

3. Access the **Configure Business Form Layout** task to upload images for the company logo and signature tokens.

4. Associate your custom layout with the netting statement print layout.
  - a) Access the **Create Netting Statement Print Layout** task.
  - b) Select the custom form you created for the **Custom Business Form Layout for Netting Statement**.
  - c) Check the applicable **Include Company Logo** and **Include Signature** options.
5. (Optional) Include financial messages for *Netting Statement* business documents.

### Result

When you print netting statements, Workday uses the custom business form layout.

### Concept: Accounting and Netting Transactions

Netting transactions enable you to net the amount payable and amount receivable on supplier and customer invoices and adjustments. Workday generates accounting for the transaction amount and creates reversals of accounts payables and accounts receivables.

We display a simultaneous summary at the header while you create the transaction:

Field	Description
<b>Net Payable and Net Receivable</b>	The difference between the Total Payable and Total Receivable amounts.
<b>Total Payable</b>	The total amount to net from supplier invoices.
<b>Total Receivable</b>	The total amount to net on customer invoices.
<b>Transaction Amount</b>	The netting transaction amount, that displays as total debits/credits in the journal entry.

When a netting transaction is in progress or in draft status:

- We record the netting rule and invoice eligibility rule applicable when you submit or save for later.
- You can't select the invoices on a settlement run. You can settle the remaining balance on the invoices after approving the netting transaction.

When you submit or save for later a netting transaction, we lock down the selected invoices to prevent them from being available:

- For another netting transaction.
- For a settlement run.
- To cancel or change.

When you approve a netting transaction:

- We mark the supplier or customer invoice or invoice adjustment as paid or partially paid accordingly.
- We generate accounting for the transaction amount and create reversals of accounts payables and receivables ledgers of the supplier and customer invoices respectively.
- Where the exchange rate differs from the exchange rate for the invoice (at creation), the difference creates a realized exchange gain or loss journal entry.
- We populate and display the **Accounting Date** on the **View Accounting for Netting Transaction** report.
- In tenants with balancing worktags configured, we generate the corresponding accounting entries. You can specify the balancing worktag in the netting rule. Workday creates due to and due from entries for the balancing worktags in the netting transaction journal.
- We don't display the Adjust Accounting related action on supplier invoice documents included in a netting transaction that is fully or partially paid.

When you cancel a netting transaction, we:

- Revert the payment status on the supplier and customer invoice documents.
- Reverse the accounting entries on the same ledger period as long as the period is open. If the ledger period closed, we reverse the accounting entries in the next open period.
- Populate and display the **Cancel Accounting Date** on the **View Netting Transaction** report.
- Release the supplier or customer invoices and invoice adjustments selected. You can then include the invoices in another netting transaction or settlement run.

We hide suppliers with Segmented Security configured. However, you can select the netting rule related to the supplier or search for the invoices, and create a netting transaction.

#### Related Information

##### Concepts

[Setup Considerations: Invoice Netting](#) on page 816

#### Reference: Netting Rules

You can configure Netting Rules to define which customer invoices and supplier invoices can net against each other. You can maintain rules between customers and suppliers for 1 or more companies or company hierarchy. Workday identifies the invoices to net using the criteria in the Netting Rule and Invoice Eligibility Rule.

Option	Description
<b>Rule Name</b>	Enter a unique name for each netting rule.
<b>Company</b>	Any company or company within the hierarchy that you specify on the netting rule can initiate a netting transaction using that rule.
<b>Customer</b>	You can't select companies that operate as customers or suppliers on netting rules. You can select customers and sponsors.
<b>Supplier</b>	You can't select supplier invoices from suppliers with 1099 MISC reporting.
<b>Balancing Fund</b>	This field displays for tenants with worktag balancing enabled. Select the worktag used to calculate interworktag balancing entries when netting customer invoices and supplier invoices that have different balancing worktags.
<b>Optional Balancing Worktags</b>	This field displays for tenants with optional worktag balancing enabled. Select the <i>Optional Balancing Worktag</i> to generate due to and due from entries to balance the netting transaction.
<b>In Use</b>	Once a netting rule is <b>In Use</b> , you can mark it inactive, but can't delete it.
<b>Inactive</b>	Select to block the netting rule for future netting transaction.

##### Tasks

[Steps: Set Up Netting](#) on page 821

# Customer Payments

---

## Record Customer Payments

### Prerequisites

Configure the *Customer Payment Application Event* business process and security in the Customer Accounts functional area.

### Context

Record the receipt of customer payments, and apply them to invoices and invoice adjustments. You can also record deposits at the same time.

As you record customer payments:

- If a customer overpays the amount of an invoice, you can apply the overpayment to another open invoice or place it on account.
- If you place it on account, you can apply it to another invoice later, or refund it.
- If you enter a zero payment amount, you can offset multiple invoices and adjustments that net to zero.

### Steps

1. Access the **Record Customer Payment** task.

As you enter the **Payment Information**, consider:

Option	Description
<b>Remit-From Customer</b>	Required if you want to apply a payment or if you select <b>Ready to Auto-Apply</b> .
<b>Payment Currency</b>	Workday automatically populates the currency when you specify a <b>Default Currency</b> on the customer profile.
<b>Total Payment Amount</b>	You can set the payment amount to 0 to clear open items without including a payment amount on the customer payment.
<b>Payment Reference</b>	A reference you can use to identify this payment during bank reconciliation. Example: For payment by check, enter the check number.
<b>Create Deposit</b>	Select this check box to automatically create a deposit for the recorded payment. Specify the <b>Bank Account</b> and <b>Deposit Reference</b> values.  When you create a deposit for a single payment, Workday creates the payment application and deposit as 1 receivables transaction.  When the company on the deposit differs from the company on the customer invoice for on behalf of customer payments, Workday doesn't create a deposit at the time of recording the payment. You need to record the deposit separately.  You can't create customer deposits when you record a zero-amount customer payment.

Option	Description
<b>Document Link</b>	<p>If you store supporting documents or images in an external repository, then enter the URL to that location. Once you save the transaction, Workday displays the URL as a live hyperlink to the image. Approvers can reference this document before approving the transaction.</p> <p>Workday validates the link to ensure that it has a valid Uniform Resource Identifier (URI) pattern, as defined by your security administrator. This process provides additional security to help avoid malicious content in external links.</p> <p>To add a valid URI, set the <b>Link Type</b> to <i>Customer Invoice Document Link</i> on the <b>Maintain External Link Validation</b> task. When the location of the external content changes, ensure to update the URL in Workday.</p>

**2.** (Optional) As you select **Payment Options**, consider:

Option	Description
<b>Ready to Auto-Apply</b>	<p>Select this check box for payments that you want to apply against invoices using the <b>Auto-Apply Customer Payments</b> task. You can record multiple payments one after another, and then run the auto-apply task to apply them all at once.</p> <p>You can't select this check box when you record zero-amount payments.</p>
<b>Do Not Apply Payment to Invoices on Hold</b>	<p>When you select this check box, Workday won't display invoices that are on hold in the <b>Apply Customer Payments</b> grid.</p>
<b>Show Only Matched Invoices When Applying</b>	<p>Select this check box to filter the grid on the <b>Apply Customer Payments</b> task to display only those invoices that match the references in the <b>Remittance Advice</b>.</p>

**3.** (Optional) As you enter **Remittance Advice**, consider:

**Note:** You can't enter remittance advice for a zero-amount payment.

Option	Description
<b>Invoice</b>	Search for a specific invoice for this customer.
<b>Amount to Pay</b>	Pay a partial amount on the invoice, or apply the full payment against the amount due.
<b>Other Remittance Information</b>	<p>You can reference an invoice to pay using the <b>Remittance Advice Type</b> field to identify an invoice by:</p> <ul style="list-style-type: none"> <li>• <i>Consolidated Invoice</i></li> <li>• <i>Customer ID</i></li> <li>• <i>Customer Name</i></li> <li>• <i>Invoice Number</i></li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <i>Other</i></li> <li>• <i>PO Number</i></li> </ul> <p>Also enter the corresponding text value in the <b>Details</b> field.</p>
<b>Currency Rate</b>	<p>When your invoice currency is different from the payment currency, you can manually override currency rate in the <b>Currency Rate Manual Override</b> field on the <b>Currency Rate</b> tab of the remittance advice.</p>

4. (Optional) Create critical validations and warning messages by accessing the **Maintain Custom Validations** task to prevent processing errors when you record or edit a payment.

### Result

You're able to record, apply, and deposit the payment based on the options you select.

When you configure:

- **ID Generator for Customer Payments** on the **Edit Tenant Setup - Financials** task, Workday generates a unique ID number that displays as the **Payment Number** when you view the payment.
- Critical custom validations, Workday saves a payment in *Draft* status and prevents you from applying it or linking it to a deposit.

Workday only generates accounting journals for applied and deposited payments.

### Next Steps

- Edit a customer payment by accessing the **Update Remittance Advice** task from the related actions menu of the customer payment. After your edits, access the **Auto-Apply Customer Payment** task to match the payment to the correct invoices.
- You can also cancel, return, unapply a payment, or record an overpayment except when the payment has an associated customer refund in *Draft* status.
- Settle unpaid credit card and direct debit customer payments. The settlement process creates and settles the invoiced payments. When the process completes, Workday updates the accounting entries for each payment.

[2024R2 Feature Release Note: Clear Open Accounts Receivable with Customer Payments](#)

## Steps: Apply Customer Payments

### Prerequisites

- Record customer payment.
- Configure the *Customer Payment Application* business process and security policy in the Customer Accounts functional area. See [Edit Business Process Security Policies](#).

## Context

After you record a customer payment, you can apply the payment to the appropriate customer invoices, place a certain amount on account, record an overpayment, add attachments and notes. You can't record an overpayment when the payment has an associated customer refund in *Draft* status. Workday also enables you to:

- Apply write-offs during the payment application process.
- Search for additional invoices before you apply the payment.

You can also cancel, return, or unapply a payment. To unapply large volumes of customer payments that are in error, you can use the *Unapply Customer Payment* web service. To view all the transaction history, you can create an advanced custom report using the *Customer Transaction History* business object.

## Steps

**1. (Optional) Access the **Maintain Receivables Reasons** task.**

- Add reasons for placing the payment on-account. Ensure that at least 1 reason is active.
- When you don't define on-account reasons, the **On-Account Reason** and **On-Account Description** fields won't be visible when you place a payment on-account during payment application.
- For a customer payment that's already applied with a portion of the amount placed on-account, you can access the **Add/change On-Account Reason** task from the related actions menu of the customer payment to add a reason.
- For bulk updates, you can use the *Put On-Account Reason* web service.

Security: *Set Up: Customer Accounts* in the Common Financial Management functional area.

**2. (Optional) Access the **Edit Customer Payment Application Configuration** task.**

To search through large volume of open invoices, select the *Do Not Preselect Invoices* option from the **Configure Preselected Invoices** prompt under the **Manual Application Settings** section.

- **Do Not Preselect Invoices:** Workday doesn't selects invoices that were previously selected.
- **Preselect Remittance Advice Invoices and Previously Unapplied Invoices:** Workday preselect all invoices that were previously selected, including those that were manually selected.
- **Preselect Remittance Advice Invoices Only:** Workday preselects only invoices identified on the remittance grid of the payment.

Security: *Set Up: Company General* in the Common Financial Management functional area.

**3. (Optional) From the related actions menu of the customer payment, select **Apply Update Remittance Advice**.**

- When you receive a customer payment without any remittance advice, you can first add the **Remittance Advice Type** and associated details in the **Remittance Advice** grid for multiple invoices.
- Ensure to add a separate row for each remittance advice type.
- Workday prevents you from updating the remittance advice type when the customer payment is already applied, placed on-account, canceled, or returned.
- You can also use the *Put Customer Payment* web service for large volume of updates. Ensure to specify the **Remittance Advice Type** with identical instance ID as the invoice. Set the **Ready to Auto-Apply** flag to true and ensure that **Amount to Pay** isn't greater than the payment.

Security: *Process: Customer Invoice Payment* in the Customer Accounts functional area.

**4. Access the **Apply Customer Payment** task.**

Select the **Customer Payment** that you want to apply.

Configure these security domains in the Customer Accounts functional area:

- *Process: Cash Sale Payment - View*
- *Process: Customer Invoice - View*
- *Process: Customer Writeoff - View*

See [Steps: Set Up Security Permissions](#).

**5. As you complete the task, consider:**

Option	Description
<b>Remittance Advice Lines</b>	Click to view the remittance advice lines from the recording of the customer payment. Workday automatically selects the invoices from the remittance advice and populates their payment amount to assist payment application.
<b>Apply to Oldest First</b>	<p>When you select this check box, Workday sorts the <b>Invoices</b> grid by <b>Due Date</b>, listing the oldest invoices first. Workday then selects invoices with amounts that can be paid in full with the <b>Payment Amount to Apply</b>. When the next invoice amount is greater than the amount remaining to apply, Workday assigns only the remaining amount to pay for that invoice.</p> <p>Example: There's a recorded payment of 1000.00 EUR. The oldest invoice for the customer is 600.00 EUR and the next is for 1500.00 EUR. Workday selects both invoices, applies the payment to first invoice in full and remainder to the next invoice. The outstanding 1100.00 EUR on the second invoice remains in the queue of unpaid invoices.</p>
<b>Recall Last Payment Application</b>	When you select this check box, Workday automatically selects the applicable invoices in the results.
<b>Amount to Place On-Account</b>	When your payment amount is greater than the total amount applied to 1 or more invoices, you can place the overpayment amount on account. To balance and submit the payment, enter an amount that is equal to the <b>Remaining Amount to Apply</b> value. Workday then updates the <b>Remaining Amount to Apply</b> to zero, which means your payment is balanced and ready to submit.

**6. Select the invoices for payment application.**

- For consolidated invoices, apply the payment towards invoices for the parent or for the child customers.
- Workday doesn't support on-behalf-of payments and write-offs that include invoices with term discount.

**7.** To search through large volume of open invoices, click **Search for Invoices**.

You can continue to search and add invoices multiple times. Each time you search, Workday saves the previous changes including payment amounts, discount amounts, and write-offs.

**8.** As you enter the payment information for each invoice line, consider:

<b>Option</b>	<b>Description</b>
<b>Payment Amount</b>	<p>Apply a full or partial amount of the recorded payment towards the selected invoice. For partial amounts, put the remaining balance on-account.</p> <p>When you apply zero-amount customer payments, ensure that the customer invoices and credit adjustments that you select net to 0.</p>
<b>Discount Amount</b>	<p>When you apply the payment within the discount date from the customer invoice, Workday applies the discount based on the payment amount applied, not the invoice balance. You set the discount terms on the customer invoice in the <b>Payment Terms</b> field.</p> <p>Workday applies discount amounts as part of the payment application process. Discount amounts aren't part of the payment amount itself, and display in a separate field on reports.</p>
<b>Write-Off Lines</b>	<p>Click the write-off value and specify the amount. You can also:</p> <ul style="list-style-type: none"> <li>• Add a memo and attachments to the write-off.</li> <li>• Select a default write-off reason.</li> <li>• Split the write-off amount by write-off reason and balancing worktag if your tenant has worktag balancing enabled.</li> </ul> <p>Workday updates the journal line accounting to reflect the debit and credit amounts to the correct ledger accounts.</p>
<b>Amount Due Remaining</b>	<p>Workday updates this value dynamically when any of these amounts change:</p> <ul style="list-style-type: none"> <li>• <b>Amount Due</b></li> <li>• <b>Discount Amount</b></li> <li>• <b>Payment Amount</b></li> <li>• <b>Write-Off Amount</b></li> </ul>

## Result

Workday initiates the *Customer Payment Application Event* business process to route the payment for approvals, and then creates the operational journal lines. If you save for later, Workday saves the payment in *Draft* status, and doesn't generate any operational journal lines. For zero-amount payments, Workday creates a fully applied customer payment in *Complete* status.

For intercompany transactions:

- Workday automatically populates the intercompany affiliate between the 2 companies for the generated journal lines. You can view the intercompany accounting details under the **Payment Application > View Accounting > Intercompany** tab of the customer transaction.

- Create a settlement run to transfer the payment and to clear the intercompany payable and receivable entries.

## Next Steps

You can unapply and edit customer payments to update the:

- Invoice currency and remit-from customer for payments that were previously *Fully Applied*.
- Invoice currency for payments that were previously *Applied with On Account*.

## Related Information

### Concepts

[Concept: Customer Payments](#) on page 837

### Reference

[The Next Level: Customer Collections Overview](#)

## Reapply an Unapplied Customer Payment

### Prerequisites

Security: *Process: Customer Invoice* domain in the Customer Accounts functional area.

### Context

Sometimes, you need to edit customer payments that you have already applied. Examples:

- When applying payments to multiple invoices, you accidentally select invoices that you don't mean to include in the payment.
- You issue invoices in multiple currencies and accidentally apply a payment using an incorrect invoice currency.
- You enter an incorrect remit-from customer and now you want to correct it.

To rectify, you can unapply the customer payment and then reapply it. When you reapply the payment, Workday automatically recalls the last payment application. It enables you to edit the payment application or correct the invoices selected in error without having to reselect all the invoices.

### Steps

1. Access the **Find Customer Payments** report.
2. From the related actions menu of the customer payment you want to unapply, select **Customer Payment > Unapply**.
3. From the related actions menu of the customer payment you unapplied, select **Customer Payment > Edit**.  
Select different options from the prompts you want to edit.
4. From the related actions menu of the customer payment, select **Customer Payment > Apply**.  
Workday displays the last payment application, with the same invoices selected automatically.  
**Note:** If you don't want Workday to select invoices automatically, you can clear the **Recall Last Payment Application** check box.
5. Make any necessary corrections to the selected invoices, and select any new invoices that you want to include in your payment application.

### Result

Workday applies the customer payment to the invoices you selected in your most recent payment application.

## Cancel Customer Payments

### Prerequisites

- Verify that you haven't deposited the payment you want to cancel.
- Security: *Process: Customer Payment* domain in the Customer Accounts functional area.

### Steps

- Access the **Find Payments** report.
- From the related actions menu of the customer payment, select **Customer Payment > Cancel**.

## Steps: Return Customer Payments

### Prerequisites

- Configure the *Payment Return Event* business process and security policy in the Banking and Settlement functional area.
- Security:
  - Process: Ad Hoc Payment Reporting* domain in the Banking and Settlement functional area.
  - Process: Bank Account Transfer for Settlement - Reporting* domain in the Banking and Settlement functional area.
  - Process: Customer Invoice Payment* domain in the Customer Accounts functional area.
  - Process: Customer Refund/Payment* domain in the Customer Accounts functional area.
  - Process: Settlement* domain in the Banking and Settlement functional area.

### Context

You can return a customer payment that a bank rejects or returns due to various errors such as insufficient funds. Payment returns differ from refunds. You can create a refund only when there's a credit adjustment or on-account balance for a customer payment.

When you return a payment, Workday automatically unapplies it, and then creates 2 journals entries that reverse the original payments. One entry is for the return and a separate entry to unapply the payment.

You can return:

- Both unreconciled and reconciled payments.
- Unreconciled checks and reconciled checks.
- A payment even when it has a **Stopped** status.

When the payment return is unreconciled and you haven't paid the original payment, you can also cancel the return.

### Steps

- Access the **Find Payments** report.
- Select **Return** from the related actions menu of the settled payment that you want to return.  
Enter the return date and code.

- (Optional) Access the **Create Payment Return Statement** task to return multiple customer payments at once.

You can only access this task when your payment type is *Direct Debit*. The process also requires you to match each payment individually for the return.

- (Optional) Access the **Record Voided Checks** task to void a related check when the payment isn't reconciled.

## Result

When you return a customer payment, Workday sets the **Payment Status** to *Returned* and **Application Status** to *Unapplied*.

The payment returns generate journal entries that reverse the original payments. Once you resolve the issues, you can settle the expense reports and supplier invoices with the payments. For returned ad hoc payments and bank account transfer payments, you must create new payments.

## Next Steps

- To view payment return details, access the **Find Payment Returns** report.
- When you haven't paid the original payments, from the related actions menu of the unreconciled payment return, select **Cancel** or **Unmatch**. Workday cancels any related accounting entries and the payment status of the original payment changes to *Complete*.
- To view payment reversals as separate line item, access these reports:
  - **Cash Receipts**
  - **Customer Activity Details**

## Steps: Set Up VAT on Customer Payments

### Prerequisites

- Create a VAT tax category and VAT code for tax applicability.
- Define the VAT ledger account on the Transaction Tax account posting rule for customer payments to process correctly.

### Context

You can configure Workday to calculate and automatically post the accounting for recognizing the Value Added Tax (VAT) when you apply the payments. On-Account payments use the default tax rate of the company for VAT. You can also record unrecognized VAT when you approve an invoice and book VAT receivables.

Workday displays VAT as **Tax Amount** on invoice header and as **Transaction Tax** at line level. Workday also supports VAT on:

- Cash sales.
- Customer invoice and customer invoice adjustments with different rates per invoice line.
- Prorated tax amounts for partial payments.

When you don't configure VAT, the payments you apply use general accounting.

### Steps

1. [Steps: Set Up a Single Legal Entity](#).
2. To enable VAT, access the **Edit Company Tax Details** task from the related actions menu of your company.

Select the **VAT on Payment** check box, and select VAT options from these prompts:

- **Default Tax Applicability**
- **Default Tax Code**

Security:

- *Set Up: Company General* domain in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.
- *Set Up: Tax* domain in the Common Financial Management functional area.

3. To configure VAT Payable as the default ledger account for automatically posting the accounting, access the **View Account Posting Rule Set** report.

Select these account posting rules:

- Transaction Tax
- Transaction Tax on Payment

Click **Edit Posting Rule** and select the VAT option from the **Default Ledger Account** prompt.

Security:

- *Set Up: Account Rules* domain in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

## Related Information

### Tasks

[Set Up Account Posting Rules](#) on page 84

[Set Up Company Tax ID](#)

[Steps: Configure Transaction Tax Rules](#) on page 663

[Steps: Set Up Transaction Taxes](#) on page 644

[Set Up Tax Applicability for Financial Transactions](#) on page 649

## Concept: Customer Payments

When you receive a customer payment, you can:

- Record the payment and deposit it.
- Apply it to customer invoices or invoice adjustments. During payment application, you can:
  - Apply the full amount or partial payment and place the balance on account.
  - Write off full or partial invoice amounts.
  - Apply or override defaulted discount amounts.
- Record overpayment and place it on account.

After submitting the payment, you can:

- Unapply the full payment and edit it to make corrections.
- Cancel the payment if it's in error before the deposit is reconciled.
- Return the payment that's already deposited in the bank.

When you cancel payments:

- Pending payments are no longer available for settlement.
- Workday no longer includes those payments when you print checks or generate the bank file for completed settlement runs.
- If you already printed the check or sent the bank file, canceling stops those payments. Ensure to void the check using the **Record Voided Checks** task.

When you cancel or return payments, Workday generates journal entries to reverse the original payments, unapplies them, and makes the invoice available again for payment application. You can access the **Find Payments** report to view issued and canceled payments in a single location and reconcile your payments.

You can configure cash balance checking to prevent outbound payments from processing when you have insufficient funds. See [Steps: Configure Advanced Cash Balance Checking](#) on page 2123.

You can use these tasks to perform the various actions:

- **Record Customer Payments**
- **Mass Record Customer Payments**
- **Apply Customer Payment**
- **Auto-Apply Customer Payments**

- **Create Customer Deposit**
- **Create Customer Refund**

When you have payments with large volumes of remittance lines, you can use the web services to upload them, and then process using the **Auto-Apply Customer Payments** task.

### **Mass Record Customer Payments**

When you need to record large amounts of payments coming in at once, you can process them with the **Mass Record Customer Payment** task. Use this task when the payments reference only 1 or a few invoices each. You can record payments for different customers as well.

Keep in mind that the task only records payments, and doesn't apply them. Therefore, Workday doesn't create operational journals. If you want Workday to create operational journals to record the cash, you can create a deposit as part of the task. Workday then creates the journals from the deposit.

### **Intercompany Payments**

Workday enables you to centralize the receipt of customer payments so that a single company can pay invoices for its related companies. A company can receive payments from a customer on behalf of other related companies, and pay their invoices. This functionality makes it faster and easier for you to recognize the receipt of payments and accelerates the cash remittance to banks. However, Workday doesn't support payment application for on-behalf-of payments and write-off transactions that include invoices with term discount.

Setup for intercompany payments:

- Use the *Process: Customer Invoice* domain security policy to enable your accounts receivable specialist to see more details of another company invoice.
- For companies to have intercompany relationships, select **Initiate Allowed** in the **Edit Company Intercompany Profile** task.

Other areas of Workday that support intercompany payments include:

- The **View Accounting for Customer Transaction** report contains an **Intercompany** tab that displays intercompany accounting lines, including payables and receivables.
- Customer statements give a description of payments to or from another company, if applicable.
- To process intercompany payments when worktag balancing is active for either company, ensure that the company paying on your behalf uses the same currency as your company, invoice, and payment currency.
- To find invoices in other companies, use *Same Bill-To* or *Remit-From - By Company* prompt categories on these tasks:
  - **Record Customer Payment**
  - **Apply Customer Payment**

### **Zero-Amount Payments**

You can record and apply customer payments with a payment amount of 0. This helps you clear multiple open invoices and adjustments that aren't tied in a single transaction.

When you apply an amount of 0, Workday creates a customer payment with a payment status of *Complete* and application status of *Fully Applied*.

When you record zero-amount customer payments, you can't:

- Record a deposit.
- Have a different payment and invoice currency.
- Enter the remittance advice information.
- Select the payment for auto-apply.

When you apply zero-amount customer payments, you can't:

- Record overpayments.
- Place an amount on account.

If you don't want to record customer payments with a payment amount of 0, you can create custom validations for **Customer Payment** on the **Maintain Custom Validations** report.

**Note:** Workday doesn't support this functionality on the **Put Customer Payment** web service.

## Payment Transfers

Payment transfers record the customer payment application activity and don't generate accounting. Workday saves these transactions as either *Payment transfer In* or *Payment transfer Out* depending on the customer that you run the report for. You can access the **Customer Activity Details** or the **Customer Activity Summary** report to view the details. Intercompany invoices don't generate payment transfers.

Payment transfers happen when the payment application is for invoices where:

- The **Remit-From Customer** is different from the payment customer.
  - For example, under Company A, you record a customer payment where the **Remit-From Customer** is **John Doe** but you apply this payment to **Customer Bluemoon**.
  - **Payment Transfer Out:** When you access the **Customer Activity Summary** report for **John Doe** and click the value in the **Payment Total** column, Workday displays a transaction details grid with 2 rows for each payment transaction. One row displays the **Transaction Type** of *Payment*, including **Payment Amount** and the associated **Decrease** value. The second row displays the **Transaction Type** of *Payment Transfer Out* and the associated **Increase** value for the removal of the payment amount.
  - **Payment Transfer In:** When you access the **Customer Activity Summary** report for **Bluemoon** and click the value in the **Payment Total** column, Workday displays a transaction details grid with only 1 row for each payment transaction. The row displays the **Transaction Type** of *Payment Transfer In*, and the associated **Decrease** value as it reduces the receivables.
- The payment company is different from the invoice company.
  - For example, you record a customer payment for **Company A** to customer **John Doe**, but apply it to an invoice for **Company B** to customer **John Doe**.
  - **Payment Transfer Out:** When you access the **Customer Activity Summary** report for **Company A** and click the value in the **Payment Total** column for customer **John Doe**, Workday displays a transaction details grid with 2 rows for each payment transaction. One row displays the **Transaction Type** of *Payment*, including the **Payment Amount** and the associated **Decrease** value. The second row displays the **Transaction Type** of *Payment Transfer Out* and the associated **Increase** value for the removal of the payment amount.
  - **Payment Transfer In:** When you access the **Customer Activity Summary** report for **Company B** and click on the value in the **Payment Total** column for customer **John Doe**, Workday displays a transaction details grid with only 1 transaction row. The row displays the **Transaction Type** of *Payment Transfer In*, and the associated **Decrease** value as it reduces the receivables.

## Student Sponsor Contract Payments

Student sponsor contracts enable educational institutions, corporations, and governmental bodies to pay educational expenses for 1 or more students. Access the **Record Student Sponsor Payment** task to record student sponsor payments and apply them specifically to invoices for student sponsor contracts.

## VAT on Payments

In certain countries, companies can elect to pay Value Added Taxes (VAT) on payments instead of on invoices. Upon configuration, you can record VAT pending upon invoice and VAT payable upon collection.

of payment. Workday calculates and posts VAT on payment automatically. When you configure VAT on payments for a company:

- Customer invoices that you haven't paid will still use the original accounting. Workday doesn't apply the tax accounting to the payment.
- Customer invoices you create after configuring VAT, will use the VAT on payment accounting.

VAT considerations in Workday include:

- Customer invoice and customer invoice adjustments support different rates per invoice line.
- Support for prorated tax amounts for partial payments.
- On-Account payments use the default tax rate of a company.
- On-Account payments apply to a customer invoice.

## **Payment Terms**

You can configure payment terms in Workday to define:

- Due dates for a customer invoice.
- Discounts based on when your customer pays the invoice.
- Customer-specific payment terms.

## **Payment Methods**

Payment methods determine the account that Workday uses for various transactions. Workday provides several payment methods that you can use to configure payment types in your environment using the **Maintain Payment Types** task. Some of the payment methods are electronic, which have additional processing considerations. You can use payment method of direct debit for electronic payment types.

When you use a third-party vendor to process payments outside of Workday, we recommend mapping your payment type to **Payment Method** of *Manual*.

## **Payment Types**

A payment type is a valid form of payment that you use to make payments. Workday enables you to configure each Payment Type and map it to a valid Workday delivered Payment Method. Electronic payment types, such as direct debit or credit card, process through settlement runs. Workday automatically creates a combined deposit and payment. Once the settlement engine completes the payments, it generates the accounting entries associated with each payment.

For other payment types, record the payments with the **Record Customer Payment** task and apply them to the associated invoices. Example: You can map a *Credit Card Payment Method* to the *Visa Payment Type*.

## **Payment Reporting**

Workday provides several reports to give you a clear view of the payment process, including:

- **Customer Accounts Requiring Action**
- **Customer Activity Detail**
- **Customer Activity Summary**
- **Customer Balance Detail**
- **Customer Balance Summary**
- **Customer Deposits Requiring Action**
- **Customer Open Items**
- **Customer Payments Requiring Action**
- **Find Payments**

To view customers payment transactions details, you can create an advanced custom report. Use the *Customer Transaction History* business object from the **Customer Payment for Invoices Report** data source and select relevant report fields:

- **Accounting Date**
- **Customer Payment Applications**
- **Invoice Currency**
- **On-Account Amount**
- **Overpayment Amount**
- **Overpayment Reason**
- **Overpayment Worktags**
- **Total Payment Applied**
- **Transaction Date**

[The Next Level: Customer Payments Overview](#)

## **Concept: Foreign Currency Customer Payments**

In Workday, you can create customer invoices and payments in currencies other than the base currency of your company. You can also process invoices in a base currency but receive payments in a different currency.

Example: Your Canadian company creates an invoice for a customer in France who wants their billing in EUR. Their default currency of EUR overrides your default currency of CAD. Workday displays the billing amounts on accounting journals in EUR and converts the amounts into CAD.

#### **Customer Invoices and Invoice Adjustments**

When you create a customer invoice, Workday posts the invoice amount to a ledger account and converts the currency at that time. Workday still displays the invoice in the currency of the customer, but displays the accounting in the base currency of the company.

When you create a customer invoice adjustment, the currency for the adjustment must match the currency on the related invoice. For credit and rebill, the company and customer must be the same on the original invoice and the rebill.

#### **Customer Payments**

You can pay a customer invoice in a different currency except when you:

- Automatically apply payments.
- Enable worktag balancing functionality in your tenant.

#### **Foreign Currency Scenarios for Customer Payments**

Workday supports these foreign currency scenarios for payment processing:

Currency	Description	Example	Apply Customer Payments Manually	Automatically Apply Customer Payments (Workday-delivered rules)	Automatically Apply Customer Payments (Advanced custom rules)
<b>Single Currency</b>	Your company currency, invoice currency, and payment currency are the same.	Company currency is = USD, Invoice currency is = USD, Payment currency is = USD	Yes	Yes	Yes
<b>Single Currency with WTB (Worktag Balancing) Enabled</b>	The company currency, invoice currency, and payment currency are the same and you have worktag balancing enabled.	Company currency is = USD, Invoice currency is = USD, Payment currency is = USD	Yes	Yes	Yes
<b>Multicurrency</b>	The invoice and payment currency are the same but the company currency differs.	Company currency is = USD, Invoice currency is = EUR, Payment currency is = EUR.	Yes	Yes	Yes
<b>Multicurrency with WTB Enabled</b>	The invoice and payment currency are the same but the company currency differs.	Company currency is = USD, Invoice currency is = EUR, Payment currency is = EUR.	Yes	Yes	Yes
<b>Cross-Currency</b>	The company currency is the same as the payment currency but the invoice currency differs.	Company currency is = USD, Payment currency is = USD, Invoice currency is = EUR	Yes	No	No
<b>Cross-Currency On-Behalf-Of</b>	The company currency is same as the currency of the company receiving the payment on your behalf	Company currency is = USD, Payment currency is = USD, Invoice currency is = EUR	Yes	No	No

Currency	Description	Example	Apply Customer Payments Manually	Automatically Apply Customer Payments (Workday-delivered rules)	Automatically Apply Customer Payments (Advanced custom rules)
	but the invoice currency differs.				
<b>Single Currency On-Behalf-Of</b>	The company receiving the payment on your behalf uses the same currency as your company currency, invoice currency, and payment currency.	Company currency is = USD, Receiving Company currency is = USD, Invoice currency is = USD, Payment currency is = USD.	Yes	Yes	Yes
<b>Single Currency On-Behalf-Of with WTB Enabled</b>	The company receiving the payment on your behalf uses the same currency as your company currency, invoice currency, and payment currency.	Company currency is = USD, Receiving Company currency is = USD, Invoice currency is = USD, Payment currency is = USD.	Yes	Yes	Yes
<b>Multicurrency On-Behalf-Of</b>	The base currencies for both the companies are different but the invoice currency is same as the payment currency.	Invoicing Company currency is = GBP, Invoice currency is = USD, Receiving Company currency is = EUR, Payment currency is = USD	Yes	Yes	Yes
<b>Multicurrency On-Behalf-Of with Cross Currency Payment</b>	The company receiving the payment on your behalf uses the same currency as your company currency, but the invoice currency is	Invoicing Company currency is = GBP, Receiving Company currency is = USD, Invoice currency is = USD, Payment	Yes	No	No

Currency	Description	Example	Apply Customer Payments Manually	Automatically Apply Customer Payments (Workday-delivered rules)	Automatically Apply Customer Payments (Advanced custom rules)
	different from the payment currency.	currency is = EUR			
<b>Multicurrency On-Behalf-Of with WTB Enabled</b>	The company receiving the payment on your behalf uses the same currency as your company currency, but it differs from the invoice currency and the payment currency.	Company currency is = USD, Receiving Company currency is = USD, Invoice currency is = EUR, Payment currency is = EUR.	Yes	Yes	Yes

## Reference: Customer Payment Process Flows and Account Posting Rules

In Workday, you can record payments, apply payments, and deposit them either in a single step or individually. The scenarios in this table demonstrate the ways to approach customer payments along with the corresponding account posting rules.

Scenario	Step	Debit	Credit
Process each of these transactions separately in the specified order: <b>Record Payment &gt; Apply Payment &gt; Create Deposit</b>	Record Payment.	N/A	N/A
	Apply Payment.	Undeposited Receipts	Receivables
	Create Deposit.	Cash	Undeposited Receipts
Process each of these transactions separately in the specified order: <b>Record Payment &gt; Create Deposit &gt; Apply Payment</b>	Record Payment.	N/A	N/A
	Create Deposit.	Cash	Unapplied Recorded Payments
	Apply Payment.	Unapplied Recorded Payments	Receivables
Record and apply the payment in the same	Record and Apply Payment.	Undeposited Receipts	Receivables

Scenario	Step	Debit	Credit
step. Then create deposit later.			
	Create Deposit.	Cash	Undeposited Receipts
Record the payment, create a deposit, and apply the payment in same single step.	Record, Deposit, and Apply.	Cash	Receivables

**Troubleshooting: Unable to Edit Customer Payment After Searching for Invoices**

Sometimes you can't edit a customer payment when you search for invoices during the payment application process. Example: You record a payment for your customer, then save and apply the payment. You then search for more invoices to add to your payment before submitting the payment application. After you've added invoices to pay, you need to edit some of the payment application information. However, you can't edit the required fields on the **Edit Customer Payment Application** task.

**Solution:** You can cancel the customer payment and apply it again.

**Steps**

Security: Process: *Customer Invoice Payment* domain in the Customer Accounts functional area.

1. On the **Edit Customer Payment Application** task, select invoices and apply your payment.
2. Access the customer payment that you've submitted.
3. From the **Customer Payment** related actions menu of your payment, select **Cancel**.
4. Record and apply your customer payment again.

Security: *Customer Invoice Payment*, Process: *Customer Invoice: View*, and Process: *Customer Writeoff: View* domains in the Customer Accounts functional area.

**Solution:** You can edit the payment application to remove the payments in draft status.

**Steps**

Security: Process: *Customer Invoice Payment* domain in the Customer Accounts functional area.

1. On the **Record Customer Payment** task, save your payment for later.
2. From the **Customer Payment** related actions menu of your payment saved for later, select **Edit**.
3. Edit your payment application and apply the payment.

**FAQ: Customer Payments**

- [What happens when I use auto apply rules but Workday can't apply those payments?](#) on page 846
- [Is there an option to change the fields in the Auto Apply Customer Payment task?](#) on page 846
- [When the payment amount is greater than the invoice amount, is it possible to create a rule that can put the remaining amount on account?](#) on page 846
- [Does the Auto Apply Customer Payment functionality consider payments with discount terms?](#) on page 846
- [Can you automatically apply a customer payment to a customer invoice that has a status of Canceled or Paid?](#) on page 846
- [Does Mass Record Customer Payment task also apply the payments?](#) on page 846

- How does Workday sort and apply payments when there are multiple payments in the same day for the same customer and invoice? on page 847
- Does the Auto Apply Customer Payment functionality consider partially paid customer invoices? on page 847
- Why can't I use the Last Customer Statement Balance (Workday) rule to create an advanced rule? on page 847
- Can I clear open invoices and adjustments without including a payment amount in the customer payment? on page 847

**What happens when I use auto apply rules but Workday can't apply those payments?**

When you run the auto application rules, Workday applies payments to the corresponding customer invoice depending on the criteria you've set up. When there's no match, Workday sets the payment to an *Unapplied* status. When the payment only covers a portion of the invoice, Workday sets the invoice status to *Partially Paid*.

**Is there an option to change the fields in the Auto Apply Customer Payment task?**

You can't edit or customize the **Auto Apply Customer Payment** task.

**When the payment amount is greater than the invoice amount, is it possible to create a rule that can put the remaining amount on account?**

You can edit your Customer Payment Application Rule and select one of these 2 options:

- **Put Remaining Balance on Account**
- **Put Unapplied Payments Fully On Account**

However, you can't define a threshold for the remaining amount. For more information, see [Create Customer Payment Application Rule](#) on page 853.

**Does the Auto Apply Customer Payment functionality consider payments with discount terms?**

You can use the rule *Referenced Invoices without Amount to Pay (Workday)* to process payments with these discount term scenarios:

- The customer is eligible for the discount and applies it.
- The customer is ineligible for the discount but applies it.

When the customer is eligible for the discount but doesn't apply it, Workday rules will process those payments and set:

- The payment to *Unapplied* and in *Draft* status.
- The invoice to *Unpaid*.

**Can you automatically apply a customer payment to a customer invoice that has a status of Canceled or Paid?**

The **Auto Apply Customer Payment** task only checks for invoice that has an outstanding balance with a status of *Approved and Unpaid*, or *Approved and Partially Paid*. When you need to record another payment that's linked to the same invoice, first unapply the initial payment.

**Does Mass Record Customer Payment task also apply the payments?**

Mass Record Customer Payment task only creates payments and sets them *In Progress*. It doesn't impact the operational journal until you create a deposit. To apply these payments, find the

**How does Workday sort and apply payments when there are multiple payments in the same day for the same customer and invoice?**

customer payments in progress and apply each payment individually. You can also run the **Auto Apply Customer Payment** task to process these payments.

Workday delivered rules match a payment to the oldest invoices first. When there are several invoices with the same date, we sort them by the index or the ID number generated by the sequence generator. When there are multiple payments for the same date, and same customer:

- The automatic application processes the payment application in a random fashion.
- After the rule identifies an invoice match, that invoice becomes ineligible for any further payment matches.
- When the rules don't find an invoice match, Workday ignores the payments and skips the invoice for further rematch.

For advanced rules, you can define your own order and conditions.

**Does the Auto Apply Customer Payment functionality consider partially paid customer invoices?**

Workday applies the payments to invoices based on the amount due. When there's no match, Workday leaves the invoice as *Partially Paid*.

**Why can't I use the Last Customer Statement Balance (Workday) rule to create an advanced rule?**

The Last Customer Statement Balance (Workday) rule requires additional custom report fields. These fields aren't available to all.

**Can I clear open invoices and adjustments without including a payment amount in the customer payment?**

You can set the total payment amount to 0 when you record or edit a customer payment, and then apply this zero-amount payment on the **Apply Customer Payment** task.

## Auto Apply Customer Payments

### Steps: Apply Customer Payments Automatically

#### Context

Workday enables you to apply a large volume of payments automatically against multiple invoices. You have 2 options:

- Use the Workday-delivered customer payment application rules.
- Define your own set of rules and conditions that you can use in a custom rule set.

**Note:** To use your custom rules and conditions, enable the **Advanced** option on the **Edit Customer Payment Application Configuration** task.

This functionality includes 3 types of processes:

- Apply payments against invoices.
- Write off invoices.
- Apply invoice adjustments.

You can run the automatic payment application process through these 2 tasks:

- **Auto-Apply Customer Payments:** Enables you to execute a single run instantaneously. You can also schedule a one-time run in the future.
- **Schedule Auto-Apply Customer Payments:** Enables you to schedule the process to run at regular intervals.

For on-behalf-of transactions:

- Workday uses the payment application rules associated with the company receiving the payment.
- You can apply payments from 1 company to invoices in another company when the invoice currency is different than the payment currency or the company currency, even with worktag balancing enabled for the invoice company.

Workday doesn't support the auto-application process for:

- Invoices with cross-currency payments.
- Negative invoices.
- On-behalf-of payments and write-offs that include invoices with term discount.
- Overpayments.

## Steps

1. Apply payments automatically using the Workday delivered rule set.

See [Auto-Apply Customer Payments](#) on page 848.

2. Apply payments automatically using the custom rule set you define.

See [Steps: Configure Advanced Automatic Application Rules for Customer Payments](#) on page 851.

## Result

When invoices match the rules that you've configured, Workday automatically:

- Applies payment to those customer invoices.
- Processes credit adjustment against the customer invoices.
- Creates a write-off against the customer invoices.

## Auto-Apply Customer Payments

### Prerequisites

- Record customer payments and mark them as **Ready to Auto-Apply**. Workday automatically selects this option when you select **Remit-From Customer**.
- (Optional) To use Workday-delivered rules, clear the **Advanced** check box on the **Edit Customer Payment Application Configuration** task.
- Security: *Process: Customer Payment Auto-Application* domain in Customer Accounts functional area.

### Context

Workday delivers 8 predefined rules that find and match invoices based on each criteria. You can then run the **Auto-Apply Customer Payments** task to:

- Apply adjustments to the matched invoices.
- Apply either on-account payments, or unapplied payments.

Workday extends this functionality to global transactions as well where the invoices are in the same currency but the company currency is different.

Workday processes:

- All payments in the numeric sequence from zero to 7, rule by rule rather than payment by payment.
- Older payments first.

You can see these rules by running the **Workday Delivered Customer Payment Application Rules** report.

## Steps

1. Access the **Auto-Apply Customer Payments** task.
2. As you complete the task, consider:

Option	Description
<b>Customer Payment Auto-Application Criteria</b>	On the <b>Company</b> prompt, select the company or company hierarchy to which you want to apply payments.
<b>Advanced Customer Payment Application Rule Set</b>	<ul style="list-style-type: none"> <li>• Workday automatically populates the <b>Configured</b> field when you configure the advanced customer payment application rule set on the <b>Edit Customer Payment Application Configuration</b> task. Workday uses this rule set as a default rule set if you don't define any other rule sets to override it for the company.</li> <li>• Workday uses Workday-delivered customer payment application rules when the <b>Configured</b> field is empty.</li> <li>• You can select or create a different rule set to override the default rule set on the <b>Override</b> prompt.</li> </ul> <p><b>Note:</b> Workday doesn't display the <b>Configured</b> field when you select a company hierarchy on the <b>Company</b> prompt.</p>
<b>Customer Selection</b>	On the <b>Remit-from Customers</b> prompt, select the customers that you want to apply the payments to.
<b>Other Criteria &gt; Transaction Date Options</b>	<p>Select this prompt to schedule auto-apply customer payments.</p> <p>When you select <i>Current Date</i>, Workday uses today's date as the transaction date.</p> <p>When you select <i>Default Transaction Date</i>, Workday sets the transaction date to:</p> <ul style="list-style-type: none"> <li>• Adjustment date for customer invoice credits.</li> <li>• Current date for customer invoice write-offs.</li> <li>• Payment date for unapplied and on-account customer payments.</li> </ul>

Option	Description
	<p>You can also select a date from the <b>Transaction Date to Use</b> calendar prompt when you set <b>Transaction Date Options</b> to <b>Selected Date</b>.</p> <p>When processing customer payments, invoice credits, and write-offs, Workday sets the transaction date according to the transaction date option selected. You can't schedule auto-apply customer payment jobs for customer payments, invoices, or invoice adjustments dated after the transaction date.</p>
<b>Run Once in the Future</b>	<p>You can have Workday run auto-apply payments once more in the future by setting a future <b>Start Date</b> and <b>Start Time</b>. Enter the applicable <b>Time Zone</b>.</p>

## Result

Workday opens the **View Background Process** page displaying the **Customer Payment Auto-Application Results** including processed payments, invoice write-offs, and adjustments.

To view the associated transactions, click any of the numbers in these columns:

- **Payments Processed**
- **Transactions Created**

You can drill into the **Overall Results** for more details about the payments and invoices.

## Next Steps

- You can unapply a payment, or reapply it, cancel the payment, or return it.
- You can use these reports to find the payments that are still in process:
  - **Customer Accounts Requiring Action**
  - **Customer Deposits Requiring Action**
  - **Customer Payments Requiring Action**
- When the automatic application process doesn't apply certain payments, you can use these reports to identify the unapplied payments:
  - **Customer Activity Detail**
  - **Customer Activity Summary**
  - **Customer Balance Detail**
  - **Customer Balance Summary**
  - **Customer Open Items**
- You can also copy the **Find Customer Payments** report and make changes to suit your business needs.

## Related Information

[The Next Level: An Introduction to Auto-Application Rules for Customer Payments](#)

[2024R1 What's New Post: Auto-Apply Transaction Date Options](#)

## Steps: Configure Advanced Automatic Application Rules for Customer Payments

### Context

The advanced rules offer additional functionality that the Workday delivered rules don't, enabling you to create custom rules and rule sets. You can also create conditions that specify exactly how to perform a match to:

- Apply credit adjustments against invoices.
- Apply unapplied payments.
- Apply on-account payments.
- Process write-offs against invoices.

Example: You can create a condition rule to write off invoices where the **Invoice Amount Due** is less than 1 USD and over 30 days past due. When you set the **Application Type** to *Write-Off* and select this condition rule, Workday finds the matching invoices and writes off the amount due.

Ensure to configure advanced rules in the specified order.

### Steps

1. Create or edit the reasons for applying adjustments, payments, or write-offs by accessing the **Maintain Customer Payment Application Reasons** task.
  - *Security: Set Up: Customer Accounts* in the Customer Accounts functional area.
  - *Security: Set Up: Sponsor Accounts* in the Grants Management functional area.
2. Define a condition rule.  
See [Create Customer Payment Application Condition Rule](#) on page 852.
3. Create payment application rules using the reasons and the condition rules that you set up.  
See [Create Customer Payment Application Rule](#) on page 853.
4. Create a rule set for a company by accessing the **Create Customer Payment Application Rule Set** task.
  - *Security: Set Up: Customer Accounts* in the Customer Accounts functional area.
  - *Security: Set Up: Sponsor Accounts* in the Grants Management functional area
5. As you complete the task, consider:

Option	Description
<b>Rule Set</b>	<b>Note:</b> You can create many rule sets, but you can use only 1 default rule set.
<b>Match Referenced Invoice Credits First</b>	Select this check box to first process credit adjustments that you didn't apply immediately. Make sure that you don't select the <b>Auto-Apply Adjustment to Invoice</b> check box on the customer invoice adjustment for Workday to pick up these invoices.
<b>Default Advanced Rule Set Used by Companies</b>	Workday automatically populates this field with 1 or more companies when you define it as a default rule set on the <b>Company &gt; Edit Customer Payment Application Configuration</b> task.
<b>Allowed Override Rule Set Used by Companies</b>	Select 1 or more companies that can use the customer payment application rule set as an override rule set.

- Configure Workday to use the advanced rule set you've created by accessing the **Company > Edit Customer Payment Application Configuration** task.

*Security: Set Up:* Company General domain in the Common Financial Management functional area

- Select the **Advanced** check box and a rule set from the **Customer Payment Application Rule Set** option.

**Note:** To add an applicable option for **Customer Payment Application Rule Set**, you must remove the company from **Allowed Override Rule Set Used by Companies** first.

## Result

When you run the **Auto-Apply Customer Payment** task, Workday uses the advanced payment application rules you configured to process payments and opens the **View Background Process** page. The resulting page displays:

- The status of the payment application and the information about the associated invoices for each rule.
- Any transactions generated by the rule.

## Related Information

### Reference

[Reference: Customer Payments Advanced Automatic Application Rules Criteria](#) on page 859

[The Next Level: An Introduction to Auto-Application Rules for Customer Payments](#)

## Create Customer Payment Application Condition Rule

### Prerequisites

- Create reasons for applying invoice adjustments, on-account payments, unapplied payments, and writing off invoices.
- Security: Set Up:* Customer Accounts in the Customer Accounts functional area.
- Security: Set Up:* Sponsor Accounts in the Grants Management functional area.

### Context

You can create:

- Invoice condition rules to retrieve invoices for credit application, or for processing write-offs.
- Payment condition rules to retrieve invoices for payment application.

Workday uses a combination of the condition rules and **Application Type** to match invoices that are eligible for automatic payment application.

### Steps

- Access the **Create Customer Payment Application Condition Rule** task.
- As you complete the task, consider:

Option	Description
<b>Description</b>	Enter a meaningful description for identifying the rule. This description displays in prompts when you select from available rules.
<b>Source External Field or Condition Rule</b>	The source data for which you're defining a rule condition. You can select from delivered Workday sources, or condition rules and custom worktags that you've already defined.

Option	Description
<b>Relational Operator</b>	Select how you want to compare the source data to the next value in your condition. The options depend on the data type of the source.
<b>Comparison Type</b>	Specify whether Workday will compare the source to another field or to a value that you enter in the <b>Comparison Value</b> column.
( )	<p>Use parentheses to group one or more conditions together.</p> <p>Example: (A and B) or C.</p>

### Example

You can create a condition rule where the on-account payment amount matches the invoice amount due. When you set **Application Type** to *On-Account Payments*, Workday retrieves all invoices where:

- The amount to pay is the same as the on-account payment amount.
- The invoices have a status of *Unpaid* or *Partially Paid*.

And/Or	(	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And		Invoice is Unpaid	equal to	Value specified in this filter	Select the check box
And		On-Account Remaining Amount	equal to	Value from another field	Amount Due with Sign

### Next Steps

To find relevant rules, you can run the **All Condition Rules** report, and specify *Customer Payment Application Rule* for the **View Condition Rules used as** field.

### Create Customer Payment Application Rule

#### Prerequisites

- Security: Set Up: Customer Accounts* in the Customer Accounts functional area.
- Security: Set Up: Sponsor Accounts* in the Grants Management functional area.
- Create payment application reasons.
- Create condition rules to set the criteria for identifying invoices eligible for automatic application.

#### Context

You can create custom rules by configuring the payment application reason, the condition rules, and other parameters to retrieve specific invoices.

#### Steps

- Access the **Create Customer Payment Application Rule** task.

2. As you complete this task, consider:

Option	Description
<b>Payment Application Reason</b>	<p>Select a reason that you've configured to identify the rule Workday uses for payment application.</p> <p>You can use the <b>Customer Payment Auto Application By Reasons</b> report to view your payment applications by the payment application reason.</p> <p>When you share the same application reason across different payment application rules, Workday groups the various applications under that 1 reason.</p>
<b>Application Type</b>	<p>Select a type of application with this rule.</p> <ul style="list-style-type: none"> <li>• <i>Invoice Credit</i>: Applies credit adjustments to invoices.</li> <li>• <i>On-account Payment</i>: Applies payments to invoices with a payment application status of <i>Applied with On Account</i>.</li> <li>• <i>Unapplied Payment</i>: Applies payments to invoices with a payment application status of <i>Unapplied</i>.</li> <li>• <i>Write-Off</i>: Creates bad debt write-off.</li> </ul> <p>Workday determines the transactions to process by using a combination of <b>Application Type</b> and <b>Condition Rule</b>.</p>
<b>Allow Application for Different Customers</b>	<p>Select this check box to enable Workday to apply a payment where the <b>Remit-From Customer</b> doesn't match the <b>Bill-To Customer</b> on the invoice.</p>
<b>Allow Application for Different Company Invoices</b>	<p>Select this check box to process on-behalf-of payments that have different companies on the customer payment header and the customer invoice header.</p> <p>You can use this check box only when you've enabled one of these options:</p> <ul style="list-style-type: none"> <li>• <b>Limit to Referenced Invoices</b>.</li> <li>• <b>Remittance Advice Type</b>.</li> <li>• A <b>Condition Rule</b> that contains a report field used on the customer payment remittance.</li> </ul>
<b>Leave Application as Draft</b>	<p>Select this check box if you want to review the payment applications performed by the payment rule before submitting them manually.</p>
<b>Limit to Referenced Invoices</b>	<p>Select this check box if you want auto-application to match only against the referenced invoices on the remittance advice.</p>

Option	Description
	<ul style="list-style-type: none"> <li>When you don't select the check box, auto application process tries to match the payment against all open invoices.</li> <li>This option is available only when the application rule type is either <b>On-Account Payment</b> or <b>Unapplied Payment</b>.</li> <li>When this flag is set, <b>Condition Rule</b> becomes optional, and the <b>Remittance Detail Match Conditions</b> section becomes disabled.</li> <li>When you select this check box, Workday processes customer payments referencing a consolidated invoice instance in the <b>Invoice</b> column in the <b>Remittance Advice</b> grid.</li> </ul>
<b>Put Remaining Balance On Account</b>	Select this check box when the payment amount that you apply is less than the payment total and you want to place the remaining amount on account.
<b>Put Unapplied Payments Fully On Account</b>	Select this check box to place the entire recorded payment amount on account.
<b>Condition Rule</b>	<p>Select a rule that you've created to retrieve specific invoices for automatic payment processing.</p> <p>Workday determines the transactions to process by using a combination of <b>Condition Rule</b> and <b>Application Type</b>.</p>
<b>Remittance Detail Match Conditions section</b>	<p>This option is available only when the <b>Application Type</b> is either <i>On-Account Payment</i> or <i>Unapplied Payment</i>.</p> <ul style="list-style-type: none"> <li><b>Remittance Advice Type:</b> Use this option to match payments to invoices by a <i>PO Number</i>, <i>Invoice Number</i>, a <i>Reference Number</i>, or process payments referencing the <i>Consolidated Invoice</i> number entered in the <b>Other Remittance Information</b> section in the <b>Remittance Advice</b> grid. When there's no remittance advice, Workday ignores this rule.</li> <li><b>Match by Amount to Pay for Remittance Detail Matching Rule:</b> Use this option for auto-apply to match a payment to an invoice where the amount to pay on the remittance line equals the invoice amount due. When the payment amount isn't sufficient to fully pay the invoice, Workday pays the invoice partially. You can use this option along with <b>Remittance Advice Type</b>, or by itself.</li> </ul>

## Result

Workday finds invoices that match the rules you've created.

## Next Steps

You can now create a rule set for a company by adding these rules in the desired order.

[2024R1 What's New Post: Auto Apply Customer Payments for Consolidated Invoices](#)

### Reference: Customer Payment Automatic Application Options

Workday provides 2 options for automatic application of customer payments. This table provides an overview of both the options to help you determine the one that best suits your business needs.

Criteria	WD Delivered Automatic Payment Application Rules	Advanced Automatic Payment Application Rules
Are the rules predefined?	Yes	No Configure your own rules to suit your business needs.
Configuration level	Tenant	Company
Is setup required?	None  Use the <b>Auto-Apply Customer Payments</b> task to initiate the automatic application rules.	Yes  You need to enable the <b>Advanced</b> option on the <b>Edit Customer Payment Application Configuration</b> task.
Can you edit the rules?	No	Yes
Rule order logic	Workday processes all 8 rules in the numeric sequence from zero to 7, rule by rule until it finds a match rather than payment by payment.	NA
Can you use this functionality for payments imported from external source?	Yes  Ensure to enable the <b>Ready to Auto-Apply Flag</b> on the <i>Put Customer Payment</i> web service before importing the external payments in Workday. You can then run the <b>Auto-Apply Customer Payments</b> task to apply the payments.  When you use the Customer Payment Lockbox integration, Workday automatically enables the flag if the Remit-From Customer value exists.	Yes

Criteria	WD Delivered Automatic Payment Application Rules	Advanced Automatic Payment Application Rules
Can you schedule the auto application job?	Yes. Use the <b>Schedule Auto-Apply Customer Payments</b> task.	Yes. Before using the <b>Schedule Auto-Apply Customer Payments</b> task, first access the <b>Edit Customer Payment Application Configuration</b> task for a Company and configure: <ul style="list-style-type: none"><li>• The advanced rule set you've created.</li><li>• Enable the <b>Advanced</b> check box option.</li></ul>
Workday delivered report to view the automatic application rules.	<b>Workday Delivered Customer Payment Application Rules</b>	None
Workday delivered report to view the customer payments applied automatically.	Yes <b>Customer Payment Auto-Application by Reason</b>	Yes <b>Customer Payment Auto-Application by Reason</b>
<i>Application Types &amp; Remittance Types supported for each rule set</i>		
<b>Application Type</b>	Unapplied only	Unapplied and On-account
<b>Amount to Pay</b>	Yes	Yes
<b>Referenced Invoices</b>	Yes	Yes
<b>Remittance Advice Types</b>	None	Invoice Number PO Number Reference Number
<b>Condition Rule</b>	None	Yes

### Reference: Customer Payment Automatic Application Rules

You can use the **Auto-Apply Customer Payments** task to initiate the automatic application rules. Workday processes each rule in the numeric order from zero to 7.

Rule Number	Rule Name	Description	Considerations
<b>Zero</b>	Referenced Invoice Credits (Workday)	Matches customer invoice adjustments with those customer invoices that are specifically referenced by the invoice adjustment.	Excludes adjustments that have the <b>Apply Adjustment Immediately</b> check box selected.
1	Referenced Invoices with Amount to Pay (Workday)	Matches those customer payments that have a <b>Remittance Advice</b> referencing specific customer invoices with an <b>Amount to Pay</b> value.	Workday retrieves the payments based on these parameters you specify in the auto application task: <ul style="list-style-type: none"><li>• <b>Company</b></li></ul>

Rule Number	Rule Name	Description	Considerations
			<ul style="list-style-type: none"> <li>• <b>Remit-from Customers</b></li> <li>• <b>Transaction Date to Use</b></li> </ul>
<b>2</b>	Non-Invoice Remittance Advice with Amount to Pay (Workday)	Matches those customer payments that have <b>Bill-To Customer</b> and <b>Amount to Pay</b> values in the remittance line information.	Excludes customer payments that reference specific invoices.
<b>3</b>	Referenced Invoices without Amount to Pay (Workday)	Matches those customer payments that have the <b>Remittance Advice</b> referencing specific invoices with bill-to customer, and no <b>Amount to Pay</b> value.	Excludes customer payments that have an <b>Amount to Pay</b> value.
<b>4</b>	Non-Invoice Remittance Advice without Amount to Pay (Workday)	Matches those customer payments that have a remittance advice other than referenced customer invoices, and no <b>Amount to Pay</b> value.	When recording a customer payment, you only enter the other remittance information such as PO Number in the remittance advice type.
<b>5</b>	Invoice Amount Due (Workday)	Matches the <b>Total Payment Amount</b> on the <b>Record Customer Payment</b> task to the <b>Amount Due</b> on a customer invoice.	There's no remittance information on the invoice.
<b>6</b>	Last Customer Statement Balance (Workday)	Matches the <b>Total Payment Amount</b> to the last statement balance for a customer that has the <b>Remit-From Customer</b> provided on the payment.	Matches the total payment amount on the <b>Record Customer Payment</b> task to the <b>Total Balance</b> on the last customer statement. There's no remittance information on the invoice.
<b>7</b>	Current Customer Balance (Workday)	Matches the <b>Total Payment Amount</b> to the current balance for a customer that has the <b>Remit-From Customer</b> provided on the payment.	Matches the payment amount on the <b>Record Customer Payment</b> task to the <b>Balance in Reporting Currency</b> amount on the current <b>Customer Balance Summary</b> .

Rule Number	Rule Name	Description	Considerations
			There's no remittance information on the invoice.

### Reference: Customer Payments Advanced Automatic Application Rules Criteria

When you configure a rule, consider the options on the **Create Customer Payment Application Rule** task and associated Workday behavior.

#### Rule Criteria and Options

Fields	Considerations
<b>Payment Application Reason</b>	Select a reason that you've configured to identify the rule Workday uses for payment application.  You can use the <b>Customer Payment Auto Application By Reasons</b> report to view your payment applications by the payment application reason.
<b>Writeoff Reason</b>	This option is available and required when your <b>Application Type</b> is <b>Write-Off</b> .
<b>Application Type</b>	Select a type of payment transaction to process with this rule. There are 4 options: <ul style="list-style-type: none"> <li><i>Invoice Credits</i>: Applies payments to invoice adjustments.</li> <li><i>On-account Payment</i>: Applies payments to invoices with a payment application status of <b>On Account</b>.</li> <li><i>Unapplied Payment</i>: Applies payments to invoices with a payment application status of <b>Unapplied</b>.</li> <li><i>Write-Off</i>: Creates bad debt write off.</li> </ul> Workday determines the transactions to process by using a combination of <b>Application Type</b> and <b>Condition Rule</b> .
<b>Allow Application for Different Customers</b>	Select this check box to apply a payment where the <b>Remit-To</b> customer doesn't match the invoice's <b>Bill-To</b> customer.
<b>Allow Application for Different Company Invoices</b>	Select this check box to process on-behalf-of payments that have different companies on the customer payment header and the customer invoice header.  You can use this check box only when you've enabled one of these options: <ul style="list-style-type: none"> <li><b>Limit to Referenced Invoices</b>.</li> <li><b>Remittance Advice Type</b>.</li> <li>A <b>Condition Rule</b> that contains a report field used on the customer payment remittance.</li> </ul>

Fields	Considerations
<b>Leave Application as Draft</b>	Select this check box to leave payments in <b>Draft</b> status. It enables you to review your payment application before submitting them.
<b>Limit to Referenced Invoices</b>	<p>Select this check box to match only the referenced invoices on the remittance advice line.</p> <p>When you don't select the check box, auto application process tries to match the payment against all open invoices.</p> <p>This option is available when the application type is either <i>On-Account Payment</i> or <i>Unapplied Payment</i>.</p>
<b>Put Remaining Balance On Account</b>	Select this check box to place those payments on account that have a remaining balance after you've applied a certain amount to an invoice.
<b>Put Unapplied Payments Fully On Account</b>	Select this check box to place the entire recorded payment on account.
<b>Condition Rule</b>	<p>Select a rule that you've created to retrieve specific invoices for payment processing.</p> <p>Example: You can configure a condition rule to write off bad debt for all invoices that are less than a dollar and over 30 days past due.</p> <p>Workday determines the transactions to process by using a combination of <b>Condition Rule</b> and <b>Application Type</b>.</p>
<b>Remittance Detail Match Conditions</b> section	<p>Use this option to match a payment by either invoice number, PO number, or reference number instead of associating a condition rule.</p> <p>Workday applies the rule that you've created and performs a match only if there's a remittance advice with the payment. When there's no remittance advice, Workday ignores this rule.</p> <p>When 2 payments for the same customer and the same remittance advice exist, Workday processes the older payment first.</p> <p>This option is available only when the <b>Application Type</b> is either <i>On-Account Payment</i> or <i>Unapplied Payment</i>.</p>

As you configure a rule, consider Workday behavior for each available option based on the payment **Application Type** you select under the **Application Rule Details** section.

Application Type/ Other Fields	Invoice Credit	On-Account Payment	Unapplied Amount	Write-Off
<b>Allow Application for Different Customers</b>	No	Yes	Yes	No

Application Type/ Other Fields	Invoice Credit	On-Account Payment	Unapplied Amount	Write-Off
Leave Application as Draft	Yes	Yes	Yes	No
Limit to Referenced Invoices	No	Yes	Yes	No
Put Remaining Balance On Account	No	Yes	Yes	No
Put Unapplied Payments Fully On Account	No	No	Yes	No
Only Applies to Payments with Remittance Advice	No	Yes	Yes	No
Remittance Advice Type	No	Yes	Yes	No

[The Next Level: An Introduction to Auto-Application Rules for Customer Payments](#)

## Customer Payment from Bank Statement Lines

### Steps: Set Up Customer Payments and Deposits from Bank Statements

#### Context

This functionality enables you to automate the process of recording customer payments and deposits from bank statement lines and reconciling the deposits.

After you record a bank statement, you can configure rule sets to define the criteria for mapping the bank statement line to the customer payment. You can then link the rule sets to a bank account and run the schedule job that checks if the bank statement line matches the defined rules.

#### Steps

1. [Create Customer Payment Rule Set](#) on page 862

## 2. Access the **Create Bank Account** or **Edit Bank Account** task.

Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

- Select a payment rule set in the **Customer Payment Rule Set** prompt under the **Reconciliation Configuration** section. Ensure that it's for the **Bank Statement Format** defined for the bank account.
- Ensure that the **Primary Account Usage** has a *Customer Payment* type when using a payment rule set.
- Ensure that you have a *Company* in the **Organization** prompt and not *Company Hierarchy* when using a payment rule set.
- The business process approval initiates only during a new bank account creation.
- For mass transactions, you can use these web services:
  - *Get Bank Accounts*
  - *Put Bank Account*
  - *Submit Bank Account*
  - See [Define Bank Accounts](#)

## 3. [Schedule Customer Payment from Bank Statement Line](#) on page 864

## 4. (Optional) Access the **Auto-Apply Customer Payments** task.

Security: *Process: Customer Payment Auto-Application* domain in the Customer Accounts functional area.

Run the auto-apply job to apply the recorded customer payment for an unpaid customer invoice. This functionality will work only if there is a remit-from customer information with an exact match and the **Ready for Auto-Apply** flag is enabled. See [Steps: Apply Customer Payments Automatically](#) on page 847

### Related Information

#### Examples

[2024R1 What's New Post: Create Customer Payments and Deposits from Bank Statements](#)

### Create Customer Payment Rule Set

#### Prerequisites

- Configure bank accounts for the company.
- Security: *Set Up: Customer Accounts* domain in the Customer Accounts functional area.

#### Context

You can define rules to filter bank statement lines, copy the lines to customer payment, and auto populate the payment and deposit fields. We recommend that you:

- Arrange the rule lines in the desired processing order.
- Refrain from making the rule sets too restrictive for easier matching.
- Don't set up a separate rule for every remit-from customer.

Configure your customer payment rule set so as to exclude these items:

- Intercompany receipts.
- Lockbox payments.
- Sponsor payments recorded through the *Letter of Credit Draw Down Event* business process.

For a bank statement line to be eligible for creating a customer payment and deposit, ensure that:

- The bank statement line is a credit.
- The bank statement line is unreconciled.
- The bank statement line matches the criteria on the schedule task.

- The bank statement line matches to a rule in the associated payment rule set for the bank account.

## Steps

- Access the **Create Customer Payment Rule Set** task.
- (Optional) To associate a customer mapping table to the customer payment rule set, from the **Remit-From Customer Mapping** prompt, select the mapping table.

You can add lookup mapping tables and the values associated with the tables for your remit-from customers or sponsors on the *Put Remit-From Customer Lookup Mapping Table* web service.

- Add the invoice lookup prefixes.
  - Enter a unique prefix value that's 3 or more characters.
  - You can add a maximum of 500 prefix values for each rule set.
- Complete the **Rule Information** section.  
In the **Order** field, enter the processing order number for each rule in the rule set.

- Complete the **Bank Statement Filter Criteria** section:

Option	Description
<b>Bank Statement Field</b>	Select a value to filter the bank statement lines.  You can use each bank statement field as a criteria for multiple rows in each rule set.  When you add more than 1 filter row, a bank statement line is eligible for customer payment creation only when all row conditions are met.
<b>Relational Operator</b>	Select an option to either include or exclude the values in the filter.
<b>Criteria Value</b>	Specify a value.  Example: When you select the <b>Statement Line Type Code</b> for the bank statement field, you can select multiple values from the provided list of codes for a given bank statement format.

- Complete the **Copy Bank Statement Lines to Customer Payment** section:

Option	Description
<b>Bank Statement Line</b>	Select a value to copy from the bank statement line to the remittance advice type on the customer payment.  Click <b>+</b> to add more than 1 lines to copy.  We can't provide a unique match when a string of text includes several invoices. You need to record the payment manually based on the remittance information copied into the customer payment.
<b>Customer Payment Remittance Advice Type</b>	Select a value for the customer payment where you want to copy the information from the bank statement line.  Example: You can copy the <i>Statement Line Reference Number</i> from the bank statement line as an <b>Invoice Number</b> on the customer payment remittance advice.

**7. Complete the Payment and Deposit Defaulting section:**

Option	Description
<b>Payment Type</b>	Select a payment type to populate on the payment when the rule condition is met.
<b>Payment Date</b>	By default, we set this date to <b>Bank Statement Line Date</b> . You can also select 1 of the options.
<b>Deposit Date</b>	By default, we set this date to <b>Bank Statement Line Date</b> . You can also select 1 of the options.
<b>Remit-From Customer</b>	<p>When there is an exact match, Workday adds this customer to the <b>Remit-To Customer</b> field on the payment.</p> <p>When the rule is specific to a particular customer, select that same customer.</p> <p>When you select a different lookup field such as <i>Invoice Number</i>, or a <i>Reference Number</i> in the <b>Customer Payment Remittance Advice Type</b> prompt under the <b>Copy Bank Statement Lines to Customer Payment</b> section, the customer value specified here takes precedence.</p>

**8. Click OK.**

### Result

Workday creates the rule sets that you can use in a bank account to automate the process of recording payments and deposits and reconciling the deposits.

### Next Steps

- You can access the **Maintain Customer Payment Rule Set** task to view all the customer payment rule sets created, bank accounts using the rule sets, and the number of rules in each rule set. You can also manage the status of the rule set and create new rule sets.
- Access the desired bank account and configure an appropriate payment rule set.

### Related Information

#### Examples

[2024R2 Feature Release Note: Create Customer Payments and Deposits from Bank Statements with Invoice Prefixes](#)

### Schedule Customer Payment from Bank Statement Line

#### Prerequisites

Configure customer payment rule sets and link them to bank accounts.

Security: Process: *Customer Invoice Payment* domain in the Customer Accounts functional area.

#### Context

You can configure the schedule job to:

- Process customer payment rule sets.
- Create payments and deposits.
- Reconcile the customer deposit back to the bank statement automatically.

Consider these processing behavior:

- The schedule job matches the bank statement lines based on the order of the rules defined in the applicable rule set.
- Each bank statement line creates 1 payment and 1 deposit.
- The invoice, payment and deposit currency will always be the same as the bank statement currency.
- You can run this job for 1 bank account per schedule.
- When the look up value is an exact match, Workday populates the **Remit-To Customer** field on a payment.
- When you create a payment in error or, re-process a bank statement line, you will need to first unreconcile deposit against the bank statement line. Then cancel the deposit, and then the payment. You can't cancel the customer payment while it's still attached to a customer deposit.
- When the approver rejects a deposit during the *Customer Deposit Event* business process approval, it cancels the customer payment and unreconciles the bank statement line.

## Steps

1. Access the **Schedule Customer Payment from Bank Statement Line** task.

Select a desired frequency of running the job. For frequency other than *Run Now*, complete the associated criteria or configurations on the **Schedule** tab.

2. As you complete the task, on the **Customer Payment From Bank Statement Line Criteria** tab consider:

Option	Description
<b>Bank Account</b>	From these prompts, select 1 or more bank accounts that you want to run the job for: <ul style="list-style-type: none"> <li>• <b>Accounts by Bank</b></li> <li>• <b>Accounts by Company</b></li> </ul> If you don't see an option for selection, ensure that you have linked payment rule sets to the bank accounts.
<b>Last X Days from Bank Statement Date</b>	Specify a value for number of days from the bank statement header date that you want to include when the scheduler runs.
<b>Only Include Auto-Reconciled Bank Statements</b>	Select the check box to include only those bank statements that have run through the bank statement auto-reconciliation job in the past.
<b>Exclude Unreconciled Bank Statement Lines with Canceled Payments and Deposits</b>	Select the check box to exclude bank statement lines that you use to create a payment and deposit but later don't reconcile and cancel the deposit and payment.

## Result

When the job completes, Workday:

- Records the customer payment with a status of *In Progress* and application status of *Unapplied* and creates a separate deposit.
- Creates the customer payment and deposit that meets the filter criteria in the rule of the customer payment rule set, but doesn't populate the remit-from, mark for auto-apply, or populate the left-hand side of the remittance advice if it doesn't find a match.
- Populates Invoice instances with matching prefix values from the associated rule set and remit-from customers from these invoices.

- Automatically selects the **Ready for Auto Apply** check box.
- When you run the task with the relevant information copied to the remittance advice on the customer payment, Workday populates the remit-from customer on the customer payment and selects it for auto-apply if the lookup field from the mapping table matches to a value in the payment remittance advice text.

## Next Steps

You can view the matched payments in the **Customer Payments from Bank Statement Lines** background process page:

- From the **Process Info** tab, you can click on the number in **Result Instances** column to view the payments created.
- From the **Customer Payments and Deposits Generated** field, you can drill down to view details of the customer payments and deposits created.

Access the **Find Customer Payments** and **Find Customer Deposits** reports to view payments and deposits created from bank statements.

## Customer Payment Matching

### Steps: Set Up Machine Learning for Customer Payment Matching

#### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- *UMSA*, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- *MSA*, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.
- Record customer payments. You must have at least 1 customer payment recorded in the last 30 days to complete the opt-in process for this feature and have a model trained for your tenant.

#### Context

You can enable machine learning to get recommendations for matching payments to customer invoices and adjustments that have little or no remittance advice associated with the payment. The machine learning model uses insights from historical payment application data and also learns from current payment applications to determine invoice recommendations for a given payment. The model ignores:

- Payments missing the remit-from customer on the payment header.
- Consolidated invoices.
- Invoices with term discounts.
- Invoices that don't add up to the payment amount when making recommendations.

This feature provides beneficial recommendations only when you're processing customer payments in Workday. The recommendations:

- Address how to apply prepayments.
- Address how to apply on-account payments.
- Identify mis-applied payments.
- Prevent write-off of a payment or invoice that should be a payment application.

Workday doesn't include cross-currency payments in the recommendations.

## Steps

### 1. (Optional) [Enable Innovation Services Features and Machine Learning Data Contributions](#).

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

- a) On the **Innovation Services Opt-In** task, select the **Financial Management Machine Learning GA Features** service on the **Available Services** tab in the **Financials** category.
- b) On the **Maintain Innovation Services Data Selection Opt-In** task, select the **Customer Payment Data** category for the **Financial Management Machine Learning GA Features** service.

### 2. (Optional) Access the **Run On-Demand Machine Learning Activation for Implementation Tenant** task to set up testing on Implementation Tenants.

After setting up the task, it can take up to 2 weeks to view the machine learning feature functionality in your tenant. Then, you have 2 weeks to complete testing.

**Note:** Workday recommends using a Preview tenant to test this functionality because compared to Implementation tenant, you have unlimited time to test. Also, you can more easily enable Financials machine learning.

### 3. Access the **Edit Tenant Setup - Machine Learning** task.

Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

## Result

When you enable the feature for the first time, it takes up to 2 weeks to train the machine learning model using your data.

When you opt out of the data contribution, Workday purges your data within 30 days.

## Next Steps

Run the **Schedule Cash Application Insights** task to schedule cash application recommendations.

### Related Information

#### Reference

[Workday Community: Workday AI Factsheets](#)

### Schedule Cash Application Insights

#### Prerequisites

- Set up Customer Payment Matching.
- Security: *Process: Customer Invoice Payment* domain in the Customer Accounts functional area.

#### Context

The **Schedule Cash Application Insights** task enables you to request cash application recommendations for payment application exceptions. You can schedule the task to run:

- Daily after your normal payment application process.

- Automatically after your last customer payment auto-application job completes.

You can also use the Process Monitor to view the process status of the job.

You can create a schedule for multiple entities and multiple currencies when you have more than 1 company or currency, to run with the specified frequency.

## Steps

### 1. Access the **Schedule Cash Application Insights** task.

- To schedule this task to run after the automatic payment application job completes for a given company, select *Dependent* from the **Run Frequency** prompt. For dependency configuration, specify the job and set **Trigger on Status** to *Completed*.
- To schedule this task to run after the daily manual payment application job, select *Daily Recurrence* from the **Run Frequency** prompt.

### 2. As you select the prompts under **Criteria**, consider:

Option	Description
<b>Company</b>	To get on-behalf-of customer payment recommendations, set up intercompany profiles to establish the relationships between organizations on the <b>Edit Company Intercompany Profile</b> task.
<b>Payment Date</b>	Workday provides recommendations for payments created as of the specified date. To get recommendations for older payments, select <i>Days Before Schedule</i> from the prompt.  Example: To get recommendations for payments created in the last 30 days, set the <i>Days Before Schedule</i> to 30.  Workday automatically populates the payment date with the current date.

### 3. As you select the prompts under **Customer Selection**, consider:

- Workday provides payment recommendations for all customers if you leave the prompts under **Customer Selection** empty.
- For payments applied to multiple customers, set up customer relationships on a customer profile under the **Payment Details** tab. Workday automatically populates the **Remits for Customer** field when you select a customer in the **Remit-From Customer** field.

## Next Steps

To view recommended invoices for payment applications, run the **View Cash Application Insights** report.

## Related Information

### Reference

[2023R1 What's New Post: Recommendations for Cross Customers and On-Behalf-Of Payments for Customer Payment Matching](#)

## Review and Dismiss Payment Application Recommendations

### Prerequisites

- Set up Customer Payment Matching.

- Schedule the cash application insights job.
- Configure the *Customer Payment Application Event* business process for applying payment recommendations.
- Security: Process: *Customer Invoice Payment* domain in the Customer Accounts functional area.

## Context

The **View Cash Application Insights** report provides recommendations for payments that couldn't be fully applied during the auto-apply process. The actionable report helps you make a more informed decision. You can:

- Use the prompt filters to identify payments missing remittance advice by multiple companies, multiple currencies, or by payment status.
- View recommendations for regular payments, payments on-behalf-of different customers, payments on-behalf-of different companies.
- Provide feedback on Cash Application Insights by dismissing invalid recommendations or reviewing and applying valid recommendations for a payment.

To make payment recommendation, the customer payment data model evaluates these criteria:

- Invoice Age
- Invoice Amount Due
- Invoice Number
- Memo
- Payment Age
- Payment Amount
- Payment Reference
- Payment Remittance Advice
- Ratio of Invoice Amount to Payment Amount

## Steps

1. Access the **View Cash Application Insights** report.
2. As you select the prompts, consider:

Option	Description
<b>Company</b>	Specify 1 or more companies. You can also specify company hierarchies to view the payment recommendations. You can view partially applied payments on-behalf-of different companies.  When you apply a payment for a company that's different from the invoice company, Workday routes the transaction as an intercompany payment application. Ensure that you have intercompany profiles configured.
<b>Payment Date</b>	Specify a date that you want to view the recommendations for. Workday finds eligible payments created as of the specified date and requests recommendations for those payments.  Example: You specify 2023-01-01 for the payment date. The schedule job looks for eligible payments created on or after 2023-01-01.

Option	Description
	The schedule job automatically uses the current date and processes payments created as of that date value.
<b>Remit-from Customers</b>	Specify a remit-from customer to receive recommendations for cross-customer payments.

3. After you run the report, to act upon recommendations, consider:

Option	Description
<b>Recommended Invoices</b>	<p>Displays open and approved invoices for the payment recorded with or without remittance for a given company.</p> <p>You can view the details of each recommended invoice from the related actions menu of the invoice.</p> <p>Workday doesn't include canceled invoices, or invoices that's part of another payment in process in its recommendations.</p> <p>Workday doesn't provide a recommendation when there's no exact match for the payment.</p>
<b>Dismiss</b>	<p>Click to dismiss 1 or all recommendations. Once you dismiss a recommended invoice, Workday doesn't recommend it again for that payment. However, it can recommend the same invoice for another payment as long as the invoice is still open.</p>
<b>Review</b>	<p>Click to review the recommended invoice. Workday automatically accesses the <b>Apply Customer Payment</b> task, preselects the recommended invoices, and populates the <b>Payment Amount</b> with the recommended amount.</p> <p>When you select <b>Save for Later</b> on the <b>Apply Customer Payment</b> task and review the payment recommendations again in the <b>View Cash Application Insights</b> report, Workday will route you to the <b>Edit Customer Payment Application</b> task where you can apply the recommended payment amount or edit it.</p>

- The report might list recommendations from past Schedule Cash Application Insights jobs when:
  - You didn't take action on the recommendation.
  - The model didn't generate new recommendations for previously recommended payments.
- Workday doesn't display any customer payment that's:
  - Fully applied, or applied then unapplied.
  - Canceled or has a payment application in progress.
  - Has a customer refund, overpayment, or payment return in progress.

## Result

We collect the feedback that you provide to Workday by dismissing, reviewing, or accepting the recommendations to train and improve the Customer Payment Matching machine learning model for future recommendations.

## Next Steps

Run the **Customer Payment Recommendation Activity** report to view:

- All payment applications.
- Dismissed recommendations activity for multiple customers, payment types, payment statuses, and application statuses.
- Accepted recommendations and count of recommended invoices per payment.
- Manual and automatic payment applications using the recommendations.

### Reference: Customer Payment Recommendation Activity

Workday provides a Customer Payment Recommendation Activity report that enables you to view payment application and recommendation activity. It returns 1 row per payment. You can also remove these fields from the report and use them in custom reports. The report uses the **Customer Payment for Invoices** report data source.

We also provide additional report fields to track the count of approved payment applications for both automatic and manual applications, with and without recommendations, along with the count of recommended invoices you accept or dismiss. Workday tracks the count value cumulatively.

Option	Description
<b>Count of Remittance Advice Invoices</b>	The total number of customer invoices referenced in the remittance advice of a customer payment.
<b>Count of Remittance Advice Invoices with Recommendation</b>	The total number of customer invoices referenced in the remittance advice of a customer payment with an intelligent recommendation.
<b>Count of Other Remittance Information Entries</b>	The total number of entries added to the <b>Other Remittance Information</b> section of the customer payment's remittance advice.
<b>Count of Approved Manual Payment Applications</b>	The total number of approved manual payment applications in the customer payment.  Example: Count of 1 in this column and count of zero in the <b>Count of Approved Manual Payment Applications with Recommendation</b> column indicates that you applied 1 payment manually for an invoice and Workday didn't recommend that invoice.
<b>Count of Approved Manual Payment Applications with Recommendation</b>	The total number of approved manual payment applications with an intelligent recommendation in the customer payment.  Example: Count of 2 in this column and count of 2 in the <b>Count of Approved Manual Payment Applications</b> column indicates that you applied 2 payments manually and Workday recommended both of those invoices.

Option	Description
<b>Count of Approved Automatic Payment Applications</b>	The total number of approved automatic payment applications in the customer payment.
<b>Count of Approved Automatic Payment Applications with Recommendation</b>	The total number of automatic payment applications processed from the provided recommendation you approved.
<b>Count of Recommended Invoices</b>	The total number of recommended customer invoices for the customer payment since the last <b>Schedule Cash Application Insight</b> run. It includes latest recommendations and any accepted plus dismissed recommendations from the prior runs.
<b>Count of Recommended Invoices Accepted</b>	The total number of recommended customer invoices accepted in a customer payment.
<b>Count of Recommended Invoices Dismissed</b>	The total number of recommended customer invoices that you dismiss for customer payment application.

## Direct Debit Mandate Payments

### Steps: Set Up Direct Debit Mandate Payments

#### Prerequisites

- Define the financial institution for a company including the IBAN number and Bank Identification Code.
- Ensure that the bank account allows payment type of direct debit.

#### Context

Direct Debit mandate is a legally binding document that allows banks and payment providers to simplify international payments. You first need a written consent from the customer accepting the conditions of the mandate. After signing and submitting, the customer can automatically pay invoices and direct debits using their bank account, or the business can submit direct debits to their bank using the mandate reference and creditor identifier number. Once issued, a mandate stays valid indefinitely unless canceled, but expires if unused for 36 months.

You can process direct debit payments for customers conforming with SEPA (Single Euro Payment Area) requirements to collect the amount from the customer's bank account on the payment due date. To be able to process direct debits, ensure to configure the bank account, customer profile, creditor identifier, and set up prenotes if applicable.

#### Steps

##### 1. Access the **Edit Company Creditor Identifiers** task.

Add direct debit mandate and pre-notifications business form layouts for a company. Add the creditor identification information. See [Workday Report Design for SEPA Mandate and SEPA Mandate Pre-notifications](#) for report design files.

- Each Creditor Identifier can have 1 active Credit Identification # per country and company combination.
- You can't deactivate a creditor identifier that's associated with a mandate.

Security: *Set Up: Company General* domain in the Common Financial Management functional area.

## 2. Access the **Create ID Definition / Sequence Generator** task.

Define the sequence name, the ID increment, and the **Sequence ID Format**. You can add SEPA prefix for easier identification. Example: A format of **SEPA-[yyyy]-[seq]** displays as *SEPA-2024-10* in the Sequence Preview. See [.../manage-workday/tenant-configuration/tenant-setup/dan1370796358261.dita](https://.../manage-workday/tenant-configuration/tenant-setup/dan1370796358261.dita).

When you don't specify an ID definition, Workday generates its own internal ID codes.

Security: Set up these domains:

- *Set Up: Company General* domain in the Common Financial Management functional area.
- *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.
- *Set Up: System* domain in the System functional area.

## 3. Access the **Edit Tenant Setup - Financials** task.

Select the SEPA sequence generator in the **ID Generator for Direct Debit Mandates** prompt under the **Business Document Sequence IDs** section.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

### Next Steps

You can create a direct debit mandate, print it to share with customers, and after receiving the signed form back, create an invoice and settle it.

### Steps: Create Direct Debit Mandates for Direct Debit Customer Payments

#### Prerequisites

See [Steps: Set Up Direct Debit Mandate Payments](#) on page 872

#### Context

Direct debit mandates enable you to request approval from customers to collect debit payments. With direct debit mandates, a payee can collect both recurring and one-off payments from customers who provide a signed mandate to the payee.

With Workday, you can create and store direct debit mandates, and then associate them with customer invoices. You can also send prenotifications to inform customers of future settlements.

#### Steps

##### 1. Access the **Create Direct Debit Mandate** task.

- Complete all fields under the **Creditor Information** section. Select the type of payment for the mandate. The banking details you configured on the customer profile, display under the **Debtor Information** section.
- When you select *Recurring* payment type, the **Sequence** is set to *First* automatically. After the payment is generated, the sequence will automatically change to *Recurring*. When your next payment is the last direct debit for the mandate, you can change the **Sequence** to *Final*. Workday automatically inactivates the mandate once the last payment completes.
- (Optional) Select the **Pre-notification Required** check box. Workday then displays the **Minimum Days for Pre-notification** field. For invoices associated with the mandate to be available for settlement, you must pre-notify them for at least the number of specified days.
- Workday creates the mandate in a *Draft Status*. To change to *Active*, IBAN value on customer profile is required.

Security: *Process: Direct Debit Mandate* domain in the Customer Accounts functional area.

2. Select **Direct Debit Mandate > Print Direct Debit Mandate** from the related actions menu of the direct debit mandate.

Send the direct debit mandate draft to your customer for completion of debtor information, payment information, and signature. Workday doesn't include the Debtor information in the printed file.

Security: *Reports: Direct Debit Mandate* domain in the Customer Accounts functional area.

3. (Optional) Access the **Print Direct Debit Mandate Pre-notifications** task.

Workday generates PDF files that you can send to your customers.

Security: *Reports: Direct Debit Mandate* domain in the Customer Accounts functional area.

4. Access the **Overview** profile group of the customer.

a) To display the direct debit mandate reference number on customer invoices, select the **Mandate Required** check box on the **Payment Details** report.

b) Add settlement bank account details from the completed direct debit mandate draft to the **Banking** report. Select **Requires Pernote** checkbox when you have mandates.

5. Access the **Edit Direct Debit Mandate** task.

After you receive the signed mandate back from the customer, verify that all fields are complete and change the **Mandate Status** to *Active*. You can't edit any fields in this status.

Once a mandate is associated with an approved or in-progress invoices, or with invoices that are unpaid or partially paid, you can't change the status.

(Optional) Upload a copy of the completed direct debit mandate to the **Attachments** tab.

Security: *Process: Direct Debit Mandate* domain in the Customer Accounts functional area.

6. [Create Customer Invoices](#) on page 780.

When the **Payment Type** you select on the invoice matches the payment type on the direct debit mandate, Workday populates these fields:

- **Direct Debit Mandate**
- **Pre-notification Date**

To send the customer invoices electronically to the bank, configure the Electronic Invoice Connector for your region. See [../../../../integrations/financials-connectors/electronic-invoice-connector/awh1578525591339.dita](#)

## Result

After you create the direct debit mandate and create the related invoices, Workday initiates the *Customer Invoice Event* business process for review and approval. Workday processes accounting after the business process completes and uses the Receivables account posting rule to record customer payments due.

## Next Steps

- You can create a settlement run to settle the customer invoices.
  - Workday groups all eligible customer invoices and adjustments for the same company, payee, and with the same direct debit mandate into a single payment. See [Create Manual Settlement Runs](#). You can also select **Pay via Direct Debit** from the related actions menu of the customer invoice to create settlement run for one-off payment.
  - When the customer invoice with a mandate is 14 days past the pre-notification date, Workday includes it in the settlement run.
  - When the settlement run task completes, Workday automatically records and applies the payment, creates a deposit, and creates operational journals in the company currency for approved

transactions. If the transaction and company currencies differ, Workday converts the amounts to the company currency. Auto Apply process is not run.

- Accounting for direct debit transactions.

Transaction	Debit	Credit
Customer Invoice	Receivables	Revenue
Settlement Run	Cash	Receivables
Cancel Customer Payment	Receivables	Cash

- Workday updates these direct debit mandate fields after the settlement run completes:
  - **Last Settlement Date**
  - **Mandate Status:** To *Inactive* for *One-Off* mandate and for *Recurring* mandate with a **Sequence** of *Final*. When you can cancel the payment, the status changes back to *Active*.
  - **Sequence:** To *First*, *Second*, and so on, or *Final*. When you cancel the 1st payment for a customer invoice associated with a *Recurring* mandate type, the sequence changes from *Recurring* back to *First*.
- If the customer bank account has insufficient funds, you can return the direct debit customer invoice by accessing the related actions menu of the customer payment and selecting **Return**.
- You can access these reports to obtain further details:
  - **Find Direct Debit Mandate**
  - **Find Direct Debit Mandate Pre-notifications Printing Runs**
- For bulk transactions, you can use these web service:
  - *Get Company Creditor Identifiers*
  - *Put Company Creditor Identifier*
  - *Set Up: Company General*
  - Submit Customer Invoice

## Customer Overpayments

---

### Setup Considerations: Overpayments

You can use this topic to help make decisions when planning your configuration and use of overpayment functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Overpayment functionality enables you to write off small balances when:

- When you apply a payment.

- After you apply a payment that has on-account balance.

When you record an overpayment Workday creates a new journal entry to credit the ledger account defined in the account posting rule with the on-account amount.

This feature doesn't track overpayment by invoices.

### **Business Benefits**

The overpayment functionality:

- Eliminates the manual steps to record and apply invoice debit adjustment.
- Improves global tax compliance and auditing capabilities.
- Enables you to identify customer overpayments easily.

### **Use Cases**

When you receive a payment that is greater than the invoice amount, the overpayment functionality enables you to:

- Record, apply, and put the additional amount on account in 1 single step during the payment application.
- Record an overpayment by accessing the **Record Overpayment** task from the related actions menu of the payment.

You can also:

- Cancel an overpayment.
- Add an approval step to the overpayment event business process to limit the overpayment amount. When you record only a portion of the on-account amount as overpayment, after the overpayment event completes, the on-account amount reduces.
- When an on-account amount reaches zero:
  - Payment status changes to *Complete*.
  - Application status changes to *Fully Applied*.

### **Questions to Consider**

Question	Considerations
Do you want to write off an overpayment at the payment level?	When you have an existing payment with an on-account amount, then you can use the <b>Record Overpayment</b> task to write off the amount.
How do you calculate an overpayment on a transaction where the payment currency and company currency are different?	Workday uses the transaction currency to calculate the overpayment amount. When the company and customer payment currencies are different, Workday populates the <b>Overpayment Currency Rate</b> for the overpayment date on the <b>Record Customer Overpayment</b> task.  You can override the rate but doing so can cause a foreign exchange gain or loss.
What happens if you cancel or unapply a customer payment?	Workday cancels all associated overpayments.

### **Recommendations**

- Add attachments or notes when you're recording an overpayment because you can't change or edit overpayment information afterward.

- Click **Submit** to record an overpayment on the **Apply Customer Payment** task.
- Configure condition rules on the overpayment business process to set approvals based on the overpayment amount.

## Requirements

- Create at least 1 overpayment reason.
- Configure the **Receivables Overpayment** account posting rule (APR) to set up the ledger account to record overpayments. You can configure the APR using these dimensions:
  - **Company**
  - **Company Hierarchy**
  - **Receivables Overpayment Reason**
- Specify a worktag while recording an overpayment on the **Apply Customer Payment** task if you've worktag balancing.

In addition, ensure:

- The total overpayment amount is less than the on-account amount.
- The Payment status is *In Progress* and application status is *Applied with On-Account* for you to record an overpayment.
- Overpayment date is on or after the customer payment date.

## Limitations

You can't process overpayments for:

- Credit adjustments.
- Write-offs at invoice level.
- In flight refunds with full on-account amount.
- Canceled payments.
- Payments with journal in error.

When an approver denies a payment application, any associated overpayment event terminates and you have to create a new overpayment.

When you cancel or unapply a customer payment, all associated overpayments also cancel.

You can't cancel an overpayment if:

- The approver denies the overpayment.
- The associated payment is returned or unapplied.

## Tenant Setup

No impact.

## Security

Users with access to these domains can set up, manage, and record overpayments:

Domains	Considerations
<i>Set Up: Receivable Overpayment</i> in the Common Financial Management functional area.	<p>These domains enable you to use the:</p> <ul style="list-style-type: none"> <li>• <b>Maintain Receivables Overpayment Reasons</b> task.</li> <li>• <b>View Receivables Overpayment Reason</b> report.</li> </ul>

Domains	Considerations
	<ul style="list-style-type: none"> <li>• <i>Get Receivables Overpayment Reasons</i> web service.</li> <li>• <i>Put Receivables Overpayment Reason</i> web service.</li> </ul>
<p><i>Process: Customer Overpayment (Parent Domain)</i> in Customer Accounts functional area.</p> <p><i>Process: Customer Overpayment - Cancel</i> in Customer Accounts functional area.</p> <p><i>Process: Customer Overpayment - Core</i> in Customer Accounts functional area.</p> <p><i>Process: Customer Overpayment - View</i> in Customer Accounts functional area.</p>	<p>These domains enable you to access these tasks and reports:</p> <ul style="list-style-type: none"> <li>• <b>Cancel Customer Overpayment</b></li> <li>• <b>Edit Customer Overpayment</b></li> <li>• <b>View Accounting for Customer Overpayments</b></li> <li>• <b>View Customer Payment Overpayment</b></li> </ul>
<p><i>Reports: Customer Overpayment</i> in Customer Accounts functional area.</p>	<p>Enables you to access the:</p> <p><b>Customer Overpayment</b> report data source.</p> <p><b>Customer Overpayment for Company Filter</b> data source filter.</p>

## Business Processes

Business Process	Considerations
<p><i>Customer Overpayment Event</i></p>	<p>To enable approvals for specific overpayment amounts, you can add the <i>Customer Overpayment Event</i> business process step to the existing <i>Customer Payment Event</i> business process.</p> <p>If the approver denies the overpayment event, the overpayment status updates to <i>Rejected</i>. Restart the process and create a new overpayment.</p>
<p><i>Customer Payment Application Event</i></p>	<p>Workday cancels all associated overpayments when you:</p> <ul style="list-style-type: none"> <li>• Cancel a customer payment.</li> <li>• Unapply a customer payment.</li> </ul>

Consider these as you configure the *Customer Overpayment Event* business process:

- When an approver denies the *Customer Payment Application Event* business process, and you've recorded overpayments, the *Customer Overpayment Event* business process also terminates.
- When both the business processes have the same approver, Workday approves the overpayment and the customer payment application in 1 single step.

## Reporting

You can use these Workday delivered reports to view the overpayment data:

Reports	Considerations
<b>View Customer Payment for Invoices</b>	Enables you to view the overpayment information on the <b>Customer Overpayment Activity</b> and the <b>Payment History</b> tabs.
<b>Customer Activity Details</b>	Enables you to view a <b>Customer Overpayment</b> transaction at the line level.
<b>Customer Activity Summary</b>	Includes a <b>Customer Overpayment Total</b> column that you can click to drill down for overpayment details.
<b>Customer Balance Details</b>	Includes a <b>Total Approved Overpayment</b> column that enables you to view the sum of all overpayment amounts.
<b>Customer Balance Summary</b>	Includes an <b>On-Account Payments</b> column that includes overpayments in the calculated amount. You can drill down on the column to view the total overpayment amount.
<b>Find Customer Payments</b>	Includes an <b>Overpayment Amount</b> column.
<b>Receivables Financial Aging Detail Report</b>	<p>Enables you to view:</p> <ul style="list-style-type: none"> <li>• Balance in the transaction currency.</li> <li>• Balance in the company currency.</li> <li>• Customer overpayment.</li> <li>• On-account amount.</li> <li>• Original payment amount in the transaction currency.</li> </ul> <p>When the customer payment status is <b>Complete</b> and the application status is <b>Fully Applied</b>, the payment doesn't display on the report.</p>
<b>Receivables Aging Summary by Financial Aging for Accounting Period</b>	Enables you to view the overpayment amount when you drill down on the <b>On-account Payments</b> column.
<b>Receivables to Customer Balances Reconciliation</b>	Includes customer overpayment amount in the On-Account Payments drill down column.
<b>Receivables to Customer Balances Reconciliation Exception Summary</b>	Includes a <b>Difference in Company Currency</b> column that automatically calculates customer overpayments.

You can use the **Customer Overpayment** report data source in custom reports to view attachments for customer overpayments and determine:

- An Overpayment currency conversion rate.
- Remaining amount on account when you record an overpayment.
- Total amount of the approved customer overpayments.
- Whether an overpayment exists for a customer payment.

## Integrations

Use these web services to upload, retrieve, or edit overpayment reasons data and view customer activity:

- *Get Overpayment Reasons*
- *Put Overpayment Reason*
- *Get Customer Activity*

Use these web services to retrieve, record, or cancel multiple overpayments at once:

- *Cancel Overpayment*
- *Get Customer Overpayments*
- *Submit Customer Overpayment*

### **Connections and Touchpoints**

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### **Related Information**

#### **Tasks**

[Record Customer Payments](#) on page 828

## **Steps: Record Customer Overpayments**

### **Prerequisites**

- Record a customer payment that is greater than the invoice amount.
- Place a payment amount on account.
- Configure an account posting rule set for receivables overpayment.  
See [Set Up Account Posting Rules](#).
- Security: *Process: Customer Overpayment* domain in the Customer Accounts functional area.

### **Context**

You can record customer overpayments to write off small balances without creating an invoice debit adjustment.

You can use overpayments as a transaction type to write off small balances either:

- At the time, of payment application.
- After you apply a payment with on-account balance.

Workday creates a new journal entry for overpayments to:

- Reverse the amount placed on-account.
- Credit the ledger account defined in the account posting rule.

Workday doesn't track overpayment by invoices.

### **Steps**

1. Access the **Maintain Receivables Overpayment Reasons** task.

Create at least 1 overpayment reason.

You can't delete an overpayment reason that's in use. But, you can change its status to *Inactive*.

Security: *Set Up: Receivable Overpayment* domain in the Customer Accounts functional area.

2. (Optional) [Edit Business Processes](#).

Configure the *Customer Overpayment Event* business process if you want to add a step for approving or rejecting an overpayment.

3. Apply the customer payment.

See [Steps: Apply Customer Payments](#).

As you complete the task, consider:

Option	Description
<b>Amount to Place On-Account</b>	Enter an amount greater than zero.
<b>Record Overpayments</b>	Select the check box.
<b>Overpayments tab</b>	<p>When you enter an overpayment amount, Workday uses machine learning to display recommendations for the overpayment reason, as well as the cost center and location worktags.</p> <p>Workday automatically populates the top recommendation for the overpayment reason in scenarios of high prediction accuracy.</p> <p><b>Note:</b> You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this <a href="#">Community</a> article.</p>

## Result

Workday can route the overpayment for approvals.

Workday adds a **Customer Overpayment Activity** tab on the customer payment transaction page to help you track overpayment details. You can also cancel the customer overpayment by accessing it from the related actions menu.

## Next Steps

- Edit a customer overpayment. You can do so only when it's in a draft status.
- Cancel an approved customer overpayment from the **Customer Payment Overpayment** related actions menu on the **Customer Overpayment Activity** tab of your payment transaction. When you cancel a customer payment, Workday automatically cancels all associated overpayments.
- When you cancel an overpayment, Workday reverses the journal entry and recalculates the on-account amount associated with the payment.

[Configure Rule-Based Business Processes](#)

## Steps: Set Up Machine Learning Recommendations for Customer Overpayments

### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.

3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- UMSA, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- MSA, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.
- To train the overpayment reason and worktag recommendation model, you need a minimum of 3,000 historical customer overpayments.

## Context

You can enable customer overpayment recommendations for an overpayment reason, as well as cost center and location worktags. This functionality improves data accuracy and expedites the recording of overpayments.

## Steps

1. (Optional) [Enable Innovation Services Features and Machine Learning Data Contributions](#).  
**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.
2. Access the **Edit Tenant Setup - Machine Learning** task.  
Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.  
Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. Access the **Maintain Machine Learning Prompt Recommendations** task.  
Select the **Accounts Receivable** product area.  
In the **Customer Overpayments** grid, select the **Enable Machine Learning Recommendations** check boxes for the **Overpayment Reason** field, along with the worktags where you want to receive recommendations.  
Select the **Enable Machine Learning Defaulting** check box if you want Workday to automatically populate an overpayment reason.  
Security: *Manage: Innovation Services* domain in the System functional area.
4. Access the **Maintain Worktag Usage** report.  
Select **Customer Invoice Writeoff and Overpayment**.  
As you edit worktag usage, add these worktag types in the **Primary Worktag Types** grid:
  - *Cost Center*
  - *Location***Note:** You can only add a worktag type in either the **Primary Worktag Types** or **Additional Worktag Types** grid. To add a worktag type in 1 grid, you must first remove it from the other grid.  
Security: *Set Up: Enable Worktags* in these functional areas:
  - Common Financial Management
  - Worktags

## Result

Workday recommends up to 5 payment reasons, as well as the cost center and location worktags when you enter an overpayment amount on these tasks:

- **Apply Customer Payment.**
- **Record Customer Overpayment**, when you access the **Record Overpayment** related actions menu of a customer payment applied on account.

When you select the **Enable Machine Learning Defaulting** check box, Workday automatically populates the top recommendation for the overpayment reason in scenarios of high prediction accuracy.

## Credit Card Payments

### Steps: Set Up Cybersource Credit Card Payment Processing

#### **Prerequisites**

To process credit card payments in Workday through Cybersource, you must contract with Cybersource to be your payment partner.

#### **Context**

Through a packaged integration with Cybersource, Workday enables you to authorize and bill credit cards for customer invoice payments. The Cybersource PCI-certified data centers securely store the credit card data of the customers. Data flows between Workday and Cybersource through integrations. Workday triggers the integrations when you:

- Add or update the credit card information of your customers.
- Record and settle customer payments.

You can use Cybersource to process payments in more than 190 countries and in multiple currencies.

#### **Steps**

1. **Steps: Set Up Credit Card Payment Integrations.**

Build 2 Cybersource integrations for:

- Creating and maintaining customer profiles in Cybersource.
- Transferring data for credit card payments to Cybersource.

2. **Set Up Bank Account for Credit Card Payments** on page 884.

Associate the bank account that you use to process credit card transactions with the Cybersource payment integration. Enable this bank account to receive payment acknowledgment messages so that you can verify payment status.

3. **Establish a Merchant Account** on page 885.

Create a merchant account for credit card processing with Cybersource. Then associate it with the bank account that receives payment deposits. The merchant account has a production mode setting that you select when you're ready to go into production.

4. **Concept: Customer Credit Card Profiles** on page 885.

- Create multiple profiles in Cybersource with the **Upload Customer Credit Card Profiles** task.
- You can also click **Add Credit Card Information** in an individual customer record to create a single profile. Workday then sends the customer data to Cybersource and provides a link for you to complete the profile with the credit card number. However, once you use a credit card for a payment, you can't delete or deactivate that credit card.
- Workday maintains the customer information and synchronizes with Cybersource whenever you add or update customers who pay by credit card.

## Set Up Bank Account for Credit Card Payments

### Prerequisites

- Configure the credit card payment type in the **Maintain Payment Types** task.
- Create a standard bank account.
- Create a payment integration with Cybersource. See [Steps: Set Up Cybersource Credit Card Payment Processing](#).

### Context

If you want to settle a customer invoice in Workday through a credit card, you must use a payment integration. To receive credit card payments, you need to first configure your bank account with the integration, and then map the bank account to the Merchant Account.

Example: You use Chase bank for your transactions and you have a payment integration with Cybersource. To receive credit card payments from your customer, configure your bank account with Cybersource and map Chase bank to the Merchant Account.

You can also enable the bank account to receive payment acknowledgment messages. This helps you check payment status and handle rejected payments.

### Steps

- Access the **Edit Bank Account** task.
- As you complete the task, consider:

Option	Description
<b>Bank Account</b>	Select the bank account to receive credit card payments.
<b>Allowed Payment Type</b>	Select <i>Credit Card</i> .

- Add a row to the **Settlement Setup** grid.
- As you complete the grid, consider:

Option	Description
<b>Payment Type</b>	Select <i>Credit Card</i> .
<b>Payment Category</b>	Select 1 or more values to restrict credit card payments to specific payment categories.
<b>Country</b>	Select 1 or more values to restrict credit card payments to specific countries.
<b>Integration System</b>	Select the integration to Cybersource that you created for payment processing.
<b>Technical Settings</b>	(Optional) Specify <b>Maximum Payments per Group</b> and <b>Cut Off Time</b> .  The <b>Cut Off Time</b> field is informational only. Workday doesn't use this field value.  .
<b>Receives Acknowledgement</b>	Select this check box to indicate that the bank account can receive payment status messages for credit card payments.

## Next Steps

Establish a merchant account and assign this bank account to the merchant account for payment deposits.

## Establish a Merchant Account

### Prerequisites

Set up a bank account to accept credit card payments.

### Context

Create a merchant account to establish CyberSource as your payment service provider and specify the bank accounts that receive payment deposits.

If you use separate bank accounts for different payment types, you can create more than 1 merchant account with CyberSource. Assign the same CyberSource payment integration to each bank account that receives payment deposits.

### Steps

1. Access the **Maintain Merchant Accounts** task.
2. At the **Payment Service Provider** prompt, keep the default value of *CyberSource* and click **OK**.
3. Add a row to the **Merchant Accounts** grid.
4. If you are in test mode with CyberSource, leave the **Production Mode** check box cleared. Select the check box only when you're ready to put the account into production.  
This check box determines whether the links from Workday to CyberSource take you to the CyberSource test or production URL. This setting doesn't affect the integration endpoints.
5. Enter your **Merchant Account ID** as provided by CyberSource.
6. At the **Financial Account** prompt, select the bank account that receives credit card payments.

### Next Steps

- When you're ready to put this merchant account into production, select the **Production Mode** check box. Workday then provides links to the CyberSource production URL.
- Create multiple profiles in CyberSource with the **Upload Customer Credit Card Profiles** task. You can also click **Add Credit Card Information** in an individual customer record to create a single profile.

## Concept: Customer Credit Card Profiles

Workday provides 2 methods to create customer credit card profiles for your CyberSource merchant account:

- A bulk upload for initial profiles.
- An individual upload for new or updated customers.

After you send customer data to CyberSource, access your CyberSource account to complete the customer profiles by entering the full credit card information. Workday stores only the credit card type, the expiration date, and the last 4 digits of the card number.

### Before You Begin

Before creating merchant customer profiles, configure a customer profile integration with CyberSource.

**Note:** The integration must subscribe to the *Customer Change - Event Lite Type* transaction to trigger an upload of individual customer profiles. You can configure this subscription after you load initial customer profiles into CyberSource.

## Upload Customer Credit Card Profiles

To load customer profiles into CyberSource, complete the **Upload Customer Credit Card Profiles** task. The customer records must already include credit card information.

## Add Credit Card Information

Workday launches an integration when you create or edit the credit card information of a customer. The integration uploads the profile information in CyberSource. The customer record must include a billing address, billing phone number, and primary email address. A customer can have multiple credit cards, but you must designate 1 card as the primary credit card. After you save the customer record, the **Credit Card Information** page displays the pending customer profile transaction.

## Complete Customer Profiles

After the initial upload of customer information, Workday provides a link for you to access CyberSource to complete the credit card information for that customer. The Customer Profile ID in Workday corresponds to the Subscription ID in CyberSource. You can specify the full credit card number to save the customer profile for future authorization and payment processing.

## Concept: Credit Card Payments

You can authorize credit card payments when you record them, but final credit authorization and payment capture take place during a settlement run. Workday offers a packaged integration with Cybersource for credit card processing.

### Credit Card Authorization

Credit card authorization is an optional step in the **Record Customer Payment** task. After you save and apply a payment where the payment type is credit card, you can:

- Authorize the credit card by selecting the credit card profile for that customer and clicking **Authorize Credit Card**. This process sends the payment data to your Cybersource for approval.
- Continue without authorization until the settlement run completes.

If the payment authorization fails, you can:

- Record the customer payment and reauthorize during the payment capture process.
- Authorize outside of Workday and add the authorization ID manually.

To enter an authorization manually, click the magnifying glass in the **Credit Card Authorization** field. Select **Manually Enter Credit Card Authorization ID** from the related action menu of **Credit Card Authorization**.

- Create a new payment with a different credit card or payment method.

After you apply a customer payment with the **Record Customer Payment** task, the payment is available for settlement.

### Payment Settlement

Credit card payments are part of the Workday settlement run process, which accommodates 2 types of electronic payments:

- Recorded customer payments, with or without authorization.
- Customer invoices.

Once you complete a settlement run, Workday triggers the **Payment Release Event** business process that sends the credit card payment data to Cybersource for authorization and capture. Payments go to the bank account associated with your Cybersource merchant account.

Separate payment deposits are made for each credit card type unless you select the **Batch Customer Payments in Deposits** check box for bank account reconciliation.

### **Payment Acknowledgment**

Cybersource automatically sends payment acknowledgments after a settlement run.

[Steps: Use Settlement](#) on page 2155

---

## **Customer Refunds**

### **Steps: Create a Customer Refund**

#### **Prerequisites**

**Note:** We plan to retire Customer Refunds 1.0 in September, 2025. Workday recommends that you opt into the **Customer Refunds Optimization** feature to separate payments from refund documents so that the payment date reflects the date you settle the refund. See [Steps: Create Customer Refund Payments in Settlement Runs](#).

Configure the *Customer Refund Event* business process and security in the Customer Accounts functional area.

#### **Context**

Customers can overpay their invoices for various reasons, such as an error or a change in transaction. Workday enables you to refund that amount.

Example: A customer pays for an invoice with no remittance advice. You put the payment on account. Later, when the customer cancels the order, you can use the on-account payment to process a refund.

To create refund for a payment, make sure that:

- The payment either has a credit adjustment or has an amount on account.
- A deposit exists for the on account payment.

#### **Steps**

1. Determine whether you want to create the customer refund from On-Account Payments or Invoice Adjustments.

<b>Option</b>	<b>Description</b>
<b>On-Account Payments</b>	<ul style="list-style-type: none"> <li>• Access the customer payment on the <b>Invoices and Payments</b> tab on the <b>Customer</b> profile.</li> <li>• Select <b>Customer Payment &gt; Apply</b> from the related actions menu of the payment and put it on-account by entering the amount in the <b>Amount to Place On-Account</b> field.</li> </ul>
<b>Invoice Adjustments</b>	<ul style="list-style-type: none"> <li>• Access the customer invoice on the <b>Invoices and Payments</b> tab on the customer profile.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Select <b>Customer Invoice &gt; Create Adjustment</b> from the related actions menu of the invoice.</li> </ul>

## 2. Access the **Create Customer Refund** task.

- Select the customer you're creating the refund for, as well as the currency, date, and payment type of the refund.
- Configure a payee remit-to address. The **Payee Remit-To Address** prompt is available only if you opt into the customer refund optimization.

## 3. Select the invoice adjustment or on-account payment for the refund.

- To issue partial refunds, you can specify a **Refund Amount** that's greater than zero or less than the amount available to refund.
- You can continue to create refunds from an on-account payment as long as there's sufficient on-account balance.
- Workday prevents you from selecting any on account payment when it's already part of a refund.

## 4. Access the **Create Settlement Run** task to issue the refund.

When you issue the outgoing payment check for the customer refund, the **Remit-To Address** report field uses the most recent effective-dated address of the customer contact where the **Usage** is *Remit To*. This report field doesn't consider the **Primary Address** flag when determining the address for the check.

## Result

The bank issues funds back to the customer.

## Steps: Create Customer Refund Payments in Settlement Runs

### Prerequisites

- Settle all customer refunds in progress.
- Set up custom validations for customer refund documents.
- Set up the *Customer Refund Document Event* business process for customer refund documents.

### Context

Workday can generate customer refund payments in the settlement run to reflect your refund settlement date. Example: You create a customer refund with a specified refund date and then select a different date to settle the refund. Workday then generates a refund payment with the payment date set to the settlement date.

This enables you to:

- Separate the refund payments from the refund documents.
- Use the existing refund document when you cancel the refund payment.
- Create more accurate journal entries.
- Group the refund payments into 1 when you settle multiple customer refunds with the same company, payee, payment type, currency, and bank account.

## Steps

**1.** Access the **Maintain Feature Opt-Ins** report.

Opt in to the **Customer Refunds Optimization** feature.

**Note:** After you opt in, you can no longer opt out of the customer refunds optimization to use the previous feature. We suggest you test this functionality before you opt in.

Security: *Set Up*: System domain in the System functional area.

**2.** (Optional) To create and retrieve customer refund documents, update your integrations to use the *Get Customer Refund Documents* and *Submit Customer Refund Document* web services.

Security:

- *Process: Customer Refund/Payment* domain in the Customer Accounts functional area.
- *Process: Settlement* domain in the Banking and Settlement functional area.
- *Process: Customer Refund Settlement* domain in the Customer Accounts functional area.
- *Customer Refund Document* business process in the Customer Accounts functional area.

**3.** Create a customer refund.

- See [Steps: Create a Customer Refund](#) on page 887.

**4.** Access the **Create Settlement Run** task to issue the refund payment.

- When you select the settlement run date, Workday automatically sets this date as the payment date.
- When you cancel the customer refund payment from the related actions menu, you don't have to cancel and recreate the customer refund document.
- Select the **Include Payments on Behalf of Other Companies** check box to settle customer refunds on behalf of your affiliate companies. You can select companies to return customer refund documents for from the **Company(s)** prompt in the **Search Criteria** section on the **Select Customer Refunds** page of your settlement run.

## Result

You can view and link customer refund payments to the original refund documents on the **View Customer Refund Payment** report.

## Next Steps

Create custom reports from these standard reports:

- [Find Customer Refunds](#)
- [Find Customer Refund Payments](#)
- [Find Customer Payments](#)
- [Payments to Print - Report Design](#)

## Related Information

### Reference

[2023R2 What's New Post: On-Behalf-Of Customer Refund Payments](#)

[2025R1 Feature Release Note: Customer Refund Reporting](#)

## Concept: Customer Refunds

Workday provides the ability to create a customer refund for a credit on a customer account. You can create a customer refund only if:

- The payment received is on-account and there's a deposit.
- The payment has a credit adjustment.

## Refund from Payment on Account

When you receive a payment for an already paid invoice, you can place it fully on-account. When you receive a refund request from the customer, you can access the **Create Customer Refund** task to process the refund. The payment that the customer has on account displays as an option for sourcing the refund.

## Refund as Credit Adjustment

You might have a customer who paid in full for an order, but then requires a refund because of an issue with an order.

Example: The customer receives and pays for 1000 chairs. Upon inspecting the entire order, the customer discovers damage to some of the chairs and submits a refund request. You can then access the **Create Adjustment** task from the related actions menu of the customer invoice to begin the refund process.

## Payment of Refunds

Once you create a refund, you can process it with the **Create Settlement Run** task. The Workday settlement engine creates the accounting for the refund, and enables you to print and send out a refund check. When you refund a direct debit payment, the settlement engine creates both the deposit and the payment. For credit card refunds, the settlement engine creates the deposit and payment through Cybersource.

When you settle intercompany transactions originating from customer refund payments processed by the settlement company on behalf of its affiliate company, you can view these details on the **Intercompany** tab of the customer refunds journal:

- The cash account of the settlement company to record the impact of the refund payment on cash.
- The intercompany receivables account of the settlement company to record the amounts due from its affiliate.
- The intercompany payables of the affiliate company to record the amounts due to the settlement company.

## Separate Refund Payments in Settlement Runs

**Note:** Some of this functionality is only available when you opt in to the **Customer Refunds Optimization** feature on the **Maintain Feature Opt-Ins** report.

When you process customer refund payments in a settlement run, Workday groups the refund payments for the same:

- Bank account.
- Company.
- Currency.
- Payee.
- Payee remit-to address.
- Payment type.

You can also create separate payments for the customer refunds in a settlement run by selecting the **Customer Refunds** check box when you create or edit customer payment details. When the payee's profile is configured to separate payments for refunds, Workday processes approved customer refund payments separately. In the settlement run, you can view the:

- Customer refund count in the **Payment Information** section.
- Customer refund payment details on the **Customer Refund Payments** tab.

You can also use an **Always Separate Refund Payments** option:

- In custom reports.
- On the *Get Customers* and *Submit Customer* web services.

You can view customers that always separate refund payments when you create a copy of the **Find Customers with Facet Search** standard report.

## Cash Sales

---

### Record Cash Sales

#### Prerequisites

- Configure the *Cash Sale Event* business process and security policy in the Customer Accounts functional area.
- Security: *Process: Cash Sale Payment - Core* domain in the Customer Accounts functional area.

#### Context

You can record cash sales when you receive customer or sponsor payments without invoices. Cash sales aren't restricted to cash; you can select any payment type available.

#### Steps

- Access the **Record Cash Sale** task.
- As you complete the **Cash Sale Information** section, consider:

Option	Description
<b>Customer</b>	You can select customers or sponsors. To record revenue on awards, select a sponsor.
<b>Currency</b>	Workday automatically populates the currency from the customer when you specify a <b>Default Currency</b> on the customer profile.  When you record cash sales for sponsor payments on awards, select the award currency.
<b>Cash Sale Date</b>	Workday automatically populates this field with the current date. You can change this date to any date in an open ledger period.
<b>Memo</b>	Workday displays the <b>Memo</b> on the invoice header.

- As you complete the **Payment Information** section, consider:

Option	Description
<b>Reference</b>	Enter a value to identify the payment during bank reconciliation. Example: For payment by check, enter the check number.
<b>Control Total Amount</b>	Use this field to compare your estimated total to the total of the invoice lines in the <b>Total Payment Amount</b> field.

Option	Description
<b>Create Deposit</b>	Select this check box to add a bank account and complete a deposit.

4. As you complete the **Invoice Lines** tab, consider:

Option	Description
<b>Company</b>	You can change the company if you've configured the header company for intercompany transactions with the line level company.
<b>Commodity Code</b>	To display options on this prompt, first configure commodity code types and add commodity codes. See <a href="#">Steps: Create Commodity Codes</a> . You can select only 1 active code per commodity code type.
<b>Contract Line</b>	When you record sponsor payments, you can select the award contract line on which to record revenue. You can record cash sales only on fixed amount award lines without deferred revenue. Workday populates the revenue category from the award line that you select.
<b>Tax Applicability</b>	Workday requires this field when you have a value in the <b>Tax Code</b> field.
<b>Worktags</b>	When you record sponsor payments, Workday populates the grant worktag and related worktags from the contract line that you select.

5. (Optional) Review the information on the **Tax** tab. This tab provides a summary of all tax codes and applicability from the **Invoice Lines** tab. If several lines share the same tax, Workday consolidates and summarizes the information.

## Result

If you've set up the **ID Generator for Cash Sales** on the **Edit Tenant Setup - Financials** task, Workday generates a unique ID number that displays as the **Cash Sale Number** when you view the sale.

## Next Steps

After you approve cash sales for sponsor payments, you can access the award line summary on the award and confirm that Workday adds the cash sale amount to the **Non-Billed Amount** column.

## Related Information

### Reference

[Reference: Edit Tenant Setup - Financials](#)

[The Next Level: Customer Invoicing](#)

[2024R1 What's New Post: Record Sponsor Payments for Awards Without Invoice](#)

## Manage Cash Sales

### Prerequisites

These security domains in the Customer Accounts functional area:

- [Process: Cash Sale Payment - Cancel](#)

- *Process: Cash Sale Payment - Change*
- *Process: Cash Sale Payment - Core*

## Context

Use the **Find Customer Payments** report to review your cash sales and manage them using the related actions menu. You can maintain separate security groups that can change or cancel cash sales after you've approved them.

## Steps

1. Access the **Find Customer Payments** report.
2. Select the **Include Cash Sales** checkbox.
3. (Optional) Specify any of the other filter options to limit the payments list.
4. From the related actions menu of the cash sale, select **Cash Sale**, then 1 of these:

Option	Considerations
<b>Cancel</b>	If the cash sale is part of a separate deposit, you must cancel the deposit before you can cancel the cash sale. You can only access this option when you have access to the <i>Process: Cash Sale Payment - Cancel</i> domain.
<b>Change</b>	You can change a cash sale after you've approved it. You can't change cash sales if they're part of a separate deposit. You can only access this option when you have access to the <i>Process: Cash Sale Payment - Change</i> domain.
<b>Copy</b>	You can copy cash sales to avoid manual work and automatically populate values, such as customer information, to a new cash sale.
<b>Edit</b>	You can edit a cash sale while it's in draft status.

## Deposits

---

### Steps: Deposit Customer Payments

#### Prerequisites

- [Record Customer Payments](#).
- Configure the *Process: Customer Deposit* security domain in the Customer Accounts functional area.
- Configure the *Customer Deposit Event* business process and security policy in the Customer Accounts functional area.

#### Context

When a customer makes a payment, you can create a deposit against an invoice while recording the payment. Alternatively, you can use the **Create Customer Deposit** task. You can also create a deposit while recording a cash sale through the **Record Cash Sale** task.

For bulk transactions you can use these web services:

- *Put Customer Payment* to first record the payment and then *Submit Customer Deposit* to create the deposit as the two actions are not combined in the web services.

- You can also use *Submit Cash Sale* web service to record the deposit for cash transactions.
- *Get Cash Sales* or *Get Customer Deposits* to retrieve deposit data.
- *Cancel Customer Deposit* to reverse the deposit.

Workday:

- Deposits the funds in the bank account you specify.
- Records the payments as a liability in your general ledger until the goods or services are delivered.
- Displays an instance ID with the transaction details. For example, Customer Deposit: BofA Checking on 01/24/2024 for \$626,250.00

You can also:

- Use account posting rules to configure a different general ledger for undeposited funds.
- Add attachments to a customer deposit to provide additional details.
- Configure custom validations and business process to route approvals.

## Steps

### 1. (Optional) Access the **Create ID Definition / Sequence Generator** task.

Configure the sequence generator for displaying customer deposit ID on the invoice. See [Create ID Definitions and Sequence Generators](#).

Adding a customer deposit ID:

- Improves the ability to find and report on customer deposits for customers with a high volume of transactions.
- Improves cash reconciliation by ensuring that the ID follows a format that's acceptable by the bank.
- Ensures that the reference ID isn't blank and no duplicate deposit numbers are created.

### 2. (Optional) Access the **Edit Tenant Setup - Financials** task.

Configure the **ID Generator for Customer Deposits** under the **Business Document Sequence IDs** section to activate customer deposit IDs.

Security: Set Up: Tenant Setup - Financials domain in the System functional area.

### 3. Access the **Create Customer Deposit** task.

- Specify the **Company** controlling the account in which you want to deposit the payment. Workday automatically uses the company currency for the deposit, but you can change the value to any currency.
- (Optional) Select other criteria to limit the size of the payments list.

### 4. Select the payments that you want to deposit.

The list represents payments that you recorded using the **Record Customer Payment** task.

As you complete the task, consider:

Option	Description
<b>Bank Account</b>	<p>The account for depositing the payment. Ensure that this account accepts the payment currency.</p> <p>When the payment currency isn't the same as the bank account currency, Workday uses the <b>Currency Rate Type</b> and <b>Currency Rate</b> to convert the deposited foreign-currency payments into the bank account currency.</p> <p>You can change the:</p> <ul style="list-style-type: none"> <li>• Default rate type on the <b>Maintain Currency Rate Types</b> task.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Default rate between the deposit and bank account currency on the <b>Maintain Currency Conversion Rates</b> task.</li> </ul>
<b>Deposit Reference</b>	Helps you identify this deposit during reconciliation.
<b>Control Total Amount</b>	Compare the <b>Total Deposit Amount</b> of the selected payments to the desired control amount that you specify.

5. (Optional) To add attachments when you're creating or editing a deposit, select a payment and click **Select Files** on the **Deposit Attachments** tab.

- To add attachments after a customer deposit has been already created, access the **Add/Change Attachment** task from the related actions menu of a customer deposit.
- To prevent invoking an approval business process, ensure to include the security groups that should have access to the **Add/Change Attachment** task in the security domain.
- To view attachments associated with the customer deposits, use the **Attachments for Customer Deposit** report field in a custom report.

Security: Process: *Customer Deposit – Add/Change Attachment* domain in the Customer Accounts functional area.

## Result

- Workday creates accounting for this transaction.
- When you submit the deposit, Workday initiates the *Customer Deposit Event* business process for review and approval. You can:
  - Review the deposit for details and edit as needed.
  - Add or delete attachments.
  - Send it back for revision.
  - Approve the deposit for adding the deposit to the defined bank account.

## Next Steps

After recording a deposit, you can:

- Reconcile the deposits by running the Schedule Auto-Reconciliation job for a desired bank account.
- Submit the unreconciled deposit with a status of *Awaiting Payment Application*.
- Cancel unreconciled deposits that are in Approved status.
  - When you cancel the deposit, we reverse the G/L entries.
  - You can add custom validations and configure the *Customer Deposit Event* business processes to manage cancellations.
  - When you have cancellation fees, we deduct it from the deposit.

To view details of a deposit, you can access:

- The **Deposits** tab on the customer invoices and payments record.
- The **Find Customer Deposits** report.
- The **Customer Payments and Deposits** report.
- The **Customer Deposit Awaiting Action** report.

## Related Information

### Concepts

[Concept: Rates, Rate Types, and Conversion](#) on page 28

## Tasks

[Steps: Create a Customer Refund](#) on page 887

## Reference

[2022R2 What's New Post: Enable Revise for Customer Deposits](#)

## Cancel Customer Deposits

### Prerequisites

- [Deposit Customer Payments](#).
- Security: *Process: Customer Deposit* domain in the Customer Accounts functional area.

### Context

Occasionally, you might need to cancel a customer deposit. Example: You need to cancel a deposit that was made to the wrong bank account.

You can only cancel customer deposits that you haven't reconciled.

### Steps

1. Access the **Find Customer Deposits** report.
2. Select the **Unreconciled** option from the **Reconciliation Status** prompt.  
You can refine your search by selecting other criteria.
3. Select **Customer Deposit > Cancel** from the related actions menu of the deposit you want to cancel.

### Result

- Once you cancel the deposit, Workday returns customer payments to the list of recorded payments available for deposit.
- When you cancel a deposit created together with a customer payment, Workday cancels the customer payment too.

## Customer Collections

---

### Collections Dashboard

#### Setup Considerations: Customer Collections Dashboard

You can use this topic to help make decisions when planning your configuration and use of the **Customer Collections** dashboard. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can configure your **Customer Collections** dashboard to include worklets for operational reports, charts, and tasks to manage payment collection from your customers.

## Business Benefits

The **Customer Collections** dashboard helps you convert accounts receivable to cash as quickly as possible. The dashboard worklets enable collectors to prioritize their collection activities and take appropriate actions for customer collections in 1 dashboard.

## Use Cases

**Customer Collections** dashboard uses vary, depending on roles. Review these example roles and use cases:

Role	Use Case
Collector	<p>Manage and act upon your collections tasks like:</p> <ul style="list-style-type: none"> <li>• Aging invoices</li> <li>• Collection letters</li> <li>• Disputes</li> <li>• Write-offs</li> </ul>
Collection Manager or Controller	<p>Forecast and budget your cash and bad debt.</p> <p>Evaluate your customers and accounts receivable.</p>

## Questions to Consider

Before creating a **Customer Collections** dashboard, identify the worklets to include:

Questions	Considerations
What operational information do your collection team members need to do their job?	<p>With Collections Dashboard you can:</p> <ul style="list-style-type: none"> <li>• Identify invoices that are missing purchase order numbers.</li> <li>• Manage which invoices they follow up on in the next 2 weeks.</li> <li>• Track their write-off amounts by current and prior periods.</li> </ul>

## Recommendations

A sample collector dashboard could include operational worklets like:

- **Invoice Follow-up Dates**
- **Invoices Missing Purchase Orders**
- **My Write-Off Amount**
- **Payments Applied**

## Requirements

No impact.

## Limitations

Workday doesn't provide any delivered risk scores for the Dashboard. You need to create your own scores using calculated fields.

## Tenant Setup

No impact.

## Security

To ensure proper access, review these team member roles and their included operational collections reports and task authorizations:

Domain Security Roles	Considerations
Collectors (Accounts Receivable Specialist)	<ul style="list-style-type: none"> <li>View and modify operations of the Customer Accounts functional area.</li> <li>Approval authority for business processes for customer accounts.</li> </ul>
Controllers	<ul style="list-style-type: none"> <li>View all financial configuration and operational data for their organizations.</li> <li>Approval authority for financial business processes.</li> </ul>

## Business Processes

The **Customer Collections** dashboard doesn't require business processes. However you should review role-based business processes associated with the worklets that you include in your dashboard.

## Reporting

No impact.

## Integrations

No impact.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Reference

[The Next Level: Customer Collections Overview](#)

### Steps: Set Up the Customer Collections Dashboard

#### Prerequisites

Review setup considerations for customer collections dashboard.

#### Context

You can set up the Customer Collections dashboard to manage payment collection from your customers and efficiently convert accounts receivable to cash. On the Customer Collections dashboard, you can also view reports on payments applied, write-offs, and invoices with missing purchase order information.

## Steps

1. Enable the domain security policy for the domain in the Customer Accounts functional area that secures the dashboard or landing page you want to make available.

See [Steps: Enable Functional Areas and Security Policies](#).

2. [Edit Domain Security Policies](#).

Grant your unconstrained security groups permission to the *Management Dashboard: Customer Collections* domain in the Worklet: Dashboard folder in the System functional area.

3. [Activate Pending Security Policy Changes](#).

4. Access the **Schedule Customer Collections Metrics Update** task.

Ensure to run this task to update the Workday delivered **Average Days Late** and **Days Sales Outstanding** collections metrics. You can also find these metrics on the **Customer** report data source.

Security: These domains in the Customer Accounts functional area:

- *Manage: Customer Invoice*
- *Process: Customer Invoice - Collections*

5. [Create Calculated Fields](#).

Create calculated fields to define low-risk, medium-risk, and high-risk bands based on the aging days.

- Specify a name for the calculated field. Select the second *Customer* from the **Business Object** prompt and **True/False Condition Function**.
- Define the comparison value for the **Aging Days Field** for a given risk band.

Create calculated fields to define a risk value for each band you created.

- Specify a name for the risk assessment. Select the second *Customer* from the **Business Object** prompt and the **Evaluate Expression Band Function**.
- Define a value for **Return Value If Condition is True** associated with each risk band **Condition** you created.

6. Access the **Create Custom Report** task.

Add the calculated fields that you created to the custom report.

Security: *Manage: All Custom Reports* domain in the System functional area.

7. [Create Analytic Indicators](#).

Add analytic indicators for risk scores that you created to your custom report.

8. Access the **Maintain Dashboards** report.

Edit the Customer Collections dashboard and enable custom reports as worklets.

Security: *Set Up: Tenant Setup - Worklets* in the System functional area.

9. [Set Up Worklets](#)

Configure additional custom reports as worklets.

10. [\(Optional\) Add Dashboard Menus](#).

11. [\(Optional\) Add Home and Dashboard Announcements](#).

## Related Information

### Reference

[Setup Considerations: Customer Collections Dashboard](#) on page 896

[The Next Level: Customer Risk Assessment](#)

## Concept: Customer Collections Dashboard

The Customer Collections dashboard offers insight into your outstanding receivables, billing, and payment transactions. It helps you to:

- Assess the aging distribution of current and past-due transactions.
- Determine the risk level of each customer.

- Evaluate the risk associated with each customer invoice.
- Get a more accurate forecast of cash and bad debt.
- Identify customers and invoices that are most at risk for late payment.
- Prioritize customer accounts for intervention by a collector to manage payment collection.

## **Building the Collections Dashboard**

To build the dashboard, you need to:

1. Identify the collection metrics to use.
2. Configure your own high, medium, or low customer risk scores using calculated fields.
3. Create a custom report using these metrics.
4. Add the custom reports to the dashboard as worklets. You can use any report on the Customer business object. For a complete list of reports to include on the dashboard, access the **Workday Standard Reports** and filter on the Customer Accounts report category.
5. Enable security for the dashboard.

The default menu for the dashboard includes tasks related to customers, invoices, payments, write-offs, and adjustments. You can also configure the dashboard to include worklets for operational reports, charts, and tasks.

## **Workday Delivered Collections Metrics**

Workday delivers these metrics that you can use to create your own risk scores:

- Average Days Late
- Weighted Average Days Late
- Days Sales Outstanding (30 Days)
- Days Sales Outstanding (60 Days)
- Days Sales Outstanding (90 Days)

Workday calculates the metrics across all invoices and all companies for a given customer. To update the metrics, run the **Schedule Customer Collections Metrics Update** report. You can set a schedule to update the metrics daily, weekly, or monthly.

## **Risk Scores for Expression Bands**
