After you update the collection metrics, use any 1 of the metrics to develop calculated fields for customer risk scores. Then, create additional fields to define high-risk, medium-risk, or low-risk bands. You can also create calculated fields from the D&B Commercial and composite scores provided on the customer profile. You can create risk scores based on a combination of:

- Customer category.
- Invoice and payment history.
- Location.
- Revenue category.
- Sales item.
- Weighted average days late.

The risk score that you create for each customer invoice indicates the likelihood of a customer paying the invoice after the due date. You can use these scores in custom reports and add the reports as a worklet to the Customer Collections dashboard.

## **Related Information**

### **Reference**

[The Next Level: Customer Collections Overview](#)

## Reference: Collections Dashboard Metrics Calculations

Workday delivers several collections metrics. Workday performs all calculations only for open invoices as of the schedule run date.

- [Average Days Late Metrics](#) on page 901
- [Days Sales Outstanding \(DSO\) Metrics](#) on page 901

### Average Days Late Metrics

To understand how Workday calculates the average days late, consider this scenario for 4 past due customer invoices:

Invoice Number	Past Due Invoice Amount	Days Late	Weighted Invoice Amount
#1	\$350	30	$350 \times 30 = \$10,500$
#2	\$5,000	25	$5000 \times 25 = \$125,000$
#3	\$200	15	$200 \times 15 = \$3,000$
#4	\$600	10	$600 \times 10 = \$6,000$
<b>Sum</b>	<b>4 invoices</b>	<b>\$6,150</b>	<b>80 days late</b>
			<b>\$144,500</b>

Workday includes only those invoices paid in full and when the paid date isn't null. Workday determines average days late using these calculations:

Metrics	Formula	Description	Scenario
<b>Average Days Late (ADL)</b>	Sum (days late) ÷ number of invoices paid late	Days late are the number of days between the invoice due date and the invoice paid date.  This value is an important indicator of your collections performance and can help you identify the customers that are taking longer to make payments.	$80 \div 4 = 20$ ADL  Your customers are paying you 20 days late on an average.
<b>Weighted Average Days Late (WADL)</b>	Sum (Each invoice amount × Days late) ÷ Sum (Past due invoice amount)	It's the average number of days for invoices paid late, weighted by the total amount due.  Use this value when you want to assess delinquent customers with large invoice amounts.	$\$144,500 \div \$6,150 = 23$ WADL  Customers are paying you 23 days late on an average.

### Days Sales Outstanding (DSO) Metrics

DSO helps you determine the number of days that it takes on average to collect payments from credit sales during a specific time period. Use this measure to assess your cash flow for that period and identify

collection issues. In these examples, you have an AR balance of \$75,000 and credit sales revenue of \$100,000.

Workday uses these calculations for DSO metrics:

Metrics	Formula	Description	Example
<b>Days Sales Outstanding (30 Days)</b>	(Sum of open Account Receivables (AR) amount) ÷ (Credit sales revenue in last 30 days) × 30	Workday considers invoices that have an invoice date in the last 30 days from your last run date.	$(75,000 \div 100,000) \times 30 = 22.5$ Your AR balance is 75 percent of the revenue. In the last 30 days, you take on average 23 days to collect payment after making a sale.
<b>Days Sales Outstanding (60 Days)</b>	(Sum of open Account Receivables (AR) amount) ÷ (Credit sales revenue in last 60 days) × 60	Workday considers invoices that have an invoice date in the last 60 days from the last run date.	$(75,000 \div 100,000) \times 60 = 45$ In the last 60 days, you take on average 45 days to collect payment after making a sale.
<b>Days Sales Outstanding (90 Days)</b>	(Sum of open Account Receivables (AR) amount) ÷ (Credit sales revenue in last 90 days) × 90	Workday considers invoices that have an invoice date in the last 90 days from the last run date.	$(75,000 \div 100,000) \times 90 = 68$ In the last 90 days, you take on average 68 days to collect payment after making a sale.

### Tasks

[Steps: Set Up the Customer Collections Dashboard](#) on page 898

### Reference

[The Next Level: Customer Risk Assessment](#)

### Reference: Collections Dashboard Worklets

You can add the listed worklets to the Customer Collections dashboard (secured to the *Manage Dashboard: Customer Collections* domain in the System functional area).

Worklet	Use Case	Security
<b>Invoice Follow-up Dates</b>	Displays invoices that you need to follow up on. Or to see when you last contacted the customer and any notes you took.	<i>Reports: Customer Accounts</i> domain in the Customer Accounts functional area.
<b>Invoices Missing Purchase Orders</b>	Identifies invoices that are missing purchase order numbers, which could delay receiving the customer payment.	<i>Reports: Customer Accounts</i> domain in the Customer Accounts functional area.
<b>My Writeoff Amount</b>	Keeps track of your write off amounts for the current and previous period, ensuring that you are within the assigned limits.	<i>Reports: Customer Accounts</i> domain in the Customer Accounts functional area.

Worklet	Use Case	Security
<b>Payments Applied</b>	Identifies the top collections by comparing all the applied payments against the total number of invoices due in a period.	Reports: <i>Customer Accounts</i> domain in the Customer Accounts functional area.

[Steps: Set Up the Customer Collections Dashboard](#) on page 898

## Dunning and Customer Statements

### Steps: Set Up Customer Statements

#### Context

You can print customer statements for regular mail delivery, or email them as PDF attachments to customers. To do so, first configure the document delivery method, delivery type, and define the print layout.

Workday also enables you to:

- Set up delivery options and recipients.
- Configure statement types to filter statements based on balance and activity.
- Schedule the print job.

#### Steps

1. Access the **Edit Tenant Setup - Notifications** task and enable automatic email notifications.

In the **Notification Delivery Settings** section, select *Email* for the **Custom Business Process Notifications** row of the Business Processes parent notification type.

Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

2. Configure the *Customer Statement Event* business process and security policy in the Customer Accounts functional area. Make sure to include the custom notification on the business process definition.

3. Configure the recipient primary mailing address, email addresses of the customer contact, bill-to contacts, and document delivery options for the customer statement.

See [Steps: Configure Workflow Notifications to Email Customer Invoices and Attachments](#).

4. [Create Customer Statement Print Layout](#).

5. [Print Customer Statements](#).

6. (Optional) Access the **Schedule Print Customer Statements** task to schedule the printing of customer statements automatically.

#### Result

You can print customer statements for regular mail or email delivery. When you email the customer statement, Workday first routes the statement to the *Customer Invoice Email Event* business process for review and approval.

#### Next Steps

To view the print and email request status, access the **Find Customer Statement Print Runs** report.

## Concept: Customer Statements

Customer statements remind your customers about their outstanding invoices and provide details of their account activity, including information about:

- Outstanding Balance
- Open Amount
- On Account Amount
- Unapplied Payments

You can also define aging groups on the business form layout to display the total amount due by aging days. There's no accounting impact from generating statements.

Workday provides 2 **Statement Types**:

- *Balance Forward* to summarize the balance due from the start date you enter.
- *Open Item* to include invoices that aren't yet paid in full. It displays only open invoices and adjustments regardless of the date.

You can print a single or multiple statements at once for a company and download the PDF. You can also schedule the print job to deliver the statements automatically to the customers.

## Reports

Workday provides these reports for viewing statements and the associated PDF:

- **Find Customer Statement Print Runs**
- **Find Customer Statement Printing Run Groups**
- **View Customer Statements**

To report by aging days, you must specify the aging groups on the business form layout.

You can also access these reports and tasks to edit or view the print configurations of your customer statements:

- **Edit Customer Statement Print layout**
- **View Customer Statement Print layout**

## Related Information

### Reference

[The Next Level: Customer Collections Overview](#)

## Interest and Late Fees

### Setup Considerations: Interest and Late Fees

You can use this topic to help make decisions when planning your configuration and use of interest and late fees. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to calculate interest charges and late fees on past-due invoices and then apply them to the original invoice. To generate finance charges automatically, you can schedule the process after

you configure the rules. We also enable you to report on the finance charges and print the finance charge invoices.

### **Business Benefits**

The interest and late fee functionality:

- Streamlines how you set up, calculate, and process finance charges on past due invoices.
- Eliminates the need to calculate interest and late fees manually on invoices for each customer.
- Enables you to recover costs incurred by carrying unpaid bills on your books.

### **Use Cases**

You can configure interest and late fee rules to:

- Calculate one-time or recurring finance charges on past-due invoices.
- Print separate finance charge invoices to send to your customers.
- Generate a report only without processing the finance charge calculations.
- Apply the on-account amounts to finance charge invoices.

### **Questions to Consider**

Questions	Considerations
What invoice types do you need to assess finance charges on?	When you want to generate finance charges for different invoice types, configure the default rules or the overrides at the individual customer level.
How do you want to configure your finance charges for direct intercompany transactions?	When you have direct intercompany transactions, Workday processes the finance charge as usual. When you want to exclude these charges, set the customer to <b>Exempt</b> on their profile.
Do you need to post interest charges and late fees to separate accounts?	To post finance charges to 2 different ledger accounts, specify revenue categories by company or customer.
How do you want to generate your finance charge documents?	After you calculate the interest and late fees, you can create: <ul style="list-style-type: none"> <li>• A new invoice document for finance charges.</li> <li>• A new invoice adjustment document for finance charges.</li> <li>• Two separate invoice adjustment documents: One for interest charges and another for late fee charges.</li> <li>• A report, without generating any documents or accounting.</li> </ul>
How do you want to configure your worktags for finance charges?	When you set up calculation options, Workday enables you to: <ul style="list-style-type: none"> <li>• Copy the worktags from the header of a past-due invoice.</li> <li>• Copy customer worktags from the customer profile to the header of the finance charge invoice or invoice adjustment document.</li> <li>• Copy header worktags from a past-due invoice to the new finance charge adjustment document.</li> </ul>

Questions	Considerations
	<ul style="list-style-type: none"> <li>When you've worktag balancing enabled, you must specify a worktag for processing finance charges.</li> </ul>

## Recommendations

- Run the **Maintain Interest and Late Fees** report to set up interest and late fees in the correct order.
- Security: Configure the *Set Up: Interest Rate and Late Fee Rule* domain in the Common Financial Management functional area for unconstrained security groups.
- When you want to apply the finance charge for a full month even if 30 days aren't complete, set the calculation option to monthly.
- To make any changes to the original invoice, first cancel the associated finance charge invoices.
- To view invoice adjustments from the customer invoice, access the **Late Fees** tab on the **View Customer Invoice** report and drill into the calculation runs.

## Requirements

- Configure at least 1 interest rule and late fee rule.
- Specify a rule to define the default behavior for interest and late fee calculations. Determine if you want to override the default calculations for a customer.
- Set up calculation options for generating finance charges.
- To print the finance charge document, set the **Customer Invoice Layout Rule** to *Finance Charges*. Also, set the **Business Form Layout** to *Customer Finance Charge Invoice Printing Form*.
- When you enable worktag balancing, you must define the primary worktag in case the original invoice or the customer profile is missing the primary worktag.
- Configure the *Interest and Late Fee Event* business process and approve the charges so that Workday can display the finance charges.

## Limitations

- Workday doesn't support these calculations:
  - Compound interest.
  - Interest charges for late payments.
  - Tiered interest rates and charges.
- This feature doesn't support invoices originating from Grants or Student sponsors.
- Once you generate a finance charge document, you can't change the company customer or currency fields.
- When you process the finance charge for the same customer and company multiple times in the same period, the on-account amount doesn't change for the subsequent calculation runs.
- You can apply only 1 interest rule and 1 late fee rule to the same invoice.
- You can't use the auto-application process to distribute the customer payment between the original invoice and the related finance charge invoice.
- The late fee can only be a flat amount. You can't specify the late-fee value as a percentage of the past due amount.
- You can't collect tax on finance charges automatically.

## Tenant Setup

To enable interest and late fees, select the **Enable Interest and Late Fees** check box in the **Customer Accounts** section on the **Edit Tenant Setup – Financials** task.

## Security

Configure the *Set Up: Interest Rate and Late Fee Rule* domain in the Common Financial Management functional area for workers who need to:

- Configure finance charge rules, calculations, output options, and overrides for individual companies or customers.
- View individual company or customer reports.

## Business Processes

Configure the *Interest and Late Fee Event* business process to define who can initiate, approve, and view the finance charges. When you revise the calculations or deny the business process event, Workday also cancels the calculation event.

## Reporting

To review the details of the finance charges, access the **Find Interest and Late Fee Calculation Runs** report.

You can also create a custom report using the **Interest and Late Fee Calculation Run** report data source. When your reports are on **Customer Invoices** report data source, include the **Generated Customer Invoice** report field to view interest invoice adjustments.

## Integrations

You can use these web services to upload or retrieve data through an EIB:

Web Services	Considerations
<i>Get Finance Charge Rules</i> <i>Put Finance Charge Rule</i>	Adds, retrieves, or updates a finance charge rule. When a rule doesn't exist, Workday creates it. If the rule is already in use, you can't update it.
<i>Get Interest and Late Fee Calculation Options</i> <i>Put Interest and Late Fee Calculation Option</i>	Retrieves or updates the interest and late fee calculation rules at tenant and company level. When a calculation rule doesn't exist for the tenant, Workday creates a new one. The Days in Year field value must be greater than zero. When Minimum Days for Partial Month has a value, set the Include Partial Month flag to true.  There's only 1 interest and late fee calculation rule for the tenant, but you can create any number of rules for a company, with the lowest order value taking precedence.
<i>Get Interest and Late Fee Defaults and Overrides</i> <i>Put Interest and Late Fee Defaults and Overrides</i>	Retrieves or updates the interest and late fee rule default and override configurations. Default application rules are applicable to all customers. Workday applies override rules based on the company and customer category combination.
<i>Get Interest and Late Fee Output Options</i> <i>Put Interest and Late Fee Output Option</i>	Adds, retrieves, or updates the rules for generating interest and late fees invoice document for a company. These rules set the output options when you process the finance charges. Customer-level rules override the tenant rule for the company.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Steps: Set Up Interest and Late Fees Charges

#### Prerequisites

Review setup considerations for interest and late fees.

#### Context

You can automatically calculate interest or late fees on past-due invoices and apply them to the original invoice.

To provide flexibility in how you set up your finance charges, Workday enables you to configure these options:

- Charge a one-time or recurring late fees.
- Charge daily or monthly interest.
- Apply a grace period.
- Set the default calculation rules for a company, customer, billing schedule, or customer invoice.
- Override a rule for a customer.
- Define when to generate the finance charge document.
- Verify your configuration by running the process without generating a document.

#### Steps

1. Access the **Edit Tenant Setup – Financials** task.

Select the **Enable Interest and Late Fees** check box in the **Customer Accounts** section.

*Security: Set Up: Tenant Setup - System* domain in the System functional area.

2. [Set Up Finance Charge Rules](#) on page 909.

3. Access the **Maintain Interest and Late Fee Defaults and Overrides** task.

Specify rules as defaults for all customer. When you select both **Interest Rule** and **Late Fee Rule** as defaults, ensure that both the rules have the same **Calculation Option** of *Daily* or *Monthly*.

You can also specify 1 interest rule and 1 late fee rule as an override for a given company, customer category, and customer group. You can't combine 2 interest rates rules or 2 late fees rules for a company by adding them in different rows.

- Workday processes rules in the order they display in the grid. Once a field meets the conditions for a rule, Workday ignores any remaining rules in the grid.
- To retrieve past due invoices for certain customers in a company, define specific rules first.
- When none of the rules in the Override grid meet the specified conditions, Workday uses the default rules for all customers. If you haven't set default rules, Workday doesn't process any finance charges.
- You can also create a separate customer group just for interest and late fee functionality. Later, when you define the override rules, you can easily assign them to the customers in this group.

*Security: Set Up: Interest Rate and Late Fee Rule* domain in the Common Financial Management functional area.

4. [Set Up Calculation Options for Interest and Late Fees](#) on page 912.

#### Next Steps

- Configure customer invoice layout for finance charges so that you can print interest and late fees documents.

- Process interest and late fees to generate finance charges.

## Related Information

### Reference

[The Next Level: Interest and Late Fees Guide](#)

## Set Up Finance Charge Rules

### Prerequisites

Security: *Set Up: Interest Rate and Late Fee Rule* domain in the Common Financial Management functional area. See [Steps: Enable Functional Areas and Security Policies](#) and [authentication-and-security/configurable-security/configurable-security-basics/kqi1577400592841.dita](#).

### Context

You can configure interest or late fee rules to calculate finance charges automatically for overdue invoices. When you set the rules to run on a recurring basis, Workday continues to calculate the finance charge until the customer pays the invoice.

### Steps

1. Access the **Maintain Finance Charge Rules** task.
2. As you complete the task, consider:

Option	Description
<b>Rule Type</b>	When you configure an <b>Interest Rate</b> rule type, Workday doesn't process compound interest.
<b>Calculation Options</b>	Workday displays this field only when the <b>Frequency</b> is <i>Recurring</i> . <ul style="list-style-type: none"> <li>• <b>Daily</b>: (APR/365 * # of Days Past Due * Amount Due)</li> <li>• <b>Monthly</b>: (APR/12 * # of Months Past Due * Amount Due)</li> </ul>
<b>Currency</b>	Workday converts the late fee currency to the invoice currency when they differ.
<b>Inactive</b>	When you select this check box and set a rule to inactive, Workday prevents you from saving changes to the payment or invoice that are part of finance charge calculations.
<b>Days to Generate Interest Document</b>	Enter the number of days by which you want to delay generating a finance charge invoice. Workday applies this value to only the first calculation run.

### Example

You want to charge interest for invoices that are past due as of October 24.

Configuration	Value
<b>Rule Type</b>	<i>Interest Rate</i>

Configuration	Value
<b>Annual Percentage Rate</b>	12%
<b>Calculation Option</b> <ul style="list-style-type: none"><li>• <i>Daily</i></li><li>• <i>Monthly</i></li></ul>	Assume that the past due amount is \$10,000, Workday uses these calculations for the interest charge amount: <ul style="list-style-type: none"><li>• \$100.19 for daily option: <math>(.12/365)*31*10,000</math></li><li>• \$100 for monthly option: <math>(.12/12)*1 *10,000</math></li></ul>
<b>Grace Period Days</b>	5 When you process interest charges by: <ul style="list-style-type: none"><li>• Daily calculation rules: Workday doesn't include invoices with a due date of October 24 until after the October 29 processing date.</li><li>• Monthly calculation rules: Workday processes the finance charge on October 31 and includes all invoices with a due date of October 24 in the calculations.</li></ul>
<b>Days to Generate Interest Document</b>	6 When you process interest charges by: <ul style="list-style-type: none"><li>• Daily calculation rules: Workday doesn't generate a finance charge invoice until after the October 30 processing date.</li><li>• Monthly calculation rules: Workday processes the finance charge on October 31, and generates a new finance charge document.</li></ul>

## Next Steps

You can set interest rate and late fee rules as defaults. You can also define rule overrides for a company, or customer group and category.

### Set Up Interest and Late Fee Defaults and Overrides

#### Prerequisites

- Configure interest and late fee rules.
- Security: *Set Up: Interest Rate and Late Fee Rule* domain in the Common Financial Management functional area.

#### Context

After you create finance charge rules, assign them to companies and customers so that you can automatically apply the interest or late fees to overdue invoices. You can also override these configurations by specifying the rules on a customer profile or on an invoice.

#### Steps

1. Access the **Maintain Interest and Late Fee Defaults and Overrides** task.

2. As you complete the task, consider these sections:

Option	Description
<b>Apply To All Customers</b>	When you specify both interest and late fee rules as default for all customers, ensure that both the rules have the same <b>Calculation Option</b> of <i>Daily</i> or <i>Monthly</i> . You can't combine a monthly rule with a daily rule.
<b>Interest and Late Fee Overrides</b>	<p>Configure an interest rule or late fee rule for a given company, customer category, and customer group. You can't combine 2 interest rates rules or 2 late fees rules for a company by adding them in different rows.</p> <ul style="list-style-type: none"> <li>Workday processes rules in the order they display in the grid. Once a field meets the conditions for a rule, Workday ignores any remaining rules in the grid.</li> <li>To retrieve past due invoices for certain customers in a company, define specific rules first.</li> <li>When none of the rules in the Override grid meet the specified conditions, Workday uses the default rules for all customers. If you haven't set default rules, Workday doesn't process any finance charges.</li> <li>You can also create a separate customer group just for interest and late fee functionality. Later, when you define the override rules, you can easily assign them to the customers in this group.</li> </ul>

## Result

When you process finance charges, Workday applies these rules as defined.

## Example

You configure default interest and late fee rule for all your customers. You also set override rules for Company A. For Customer X, you define a different interest rule on the customer profile.

<b>Apply To All Customers</b> section	<b>Interest Rule:</b> 2% monthly <b>Late Fee Rule:</b> \$25 monthly
<b>Interest and Late Fee Overrides</b> section	For company A, <b>Interest Rule:</b> 1% monthly <b>Late Fee Rule:</b> \$5 monthly.
On Customer X profile: <b>Customer &gt; Overview &gt; Payment Details</b>	<b>Interest Rule:</b> 3% monthly

When you process finance charges for Company A, Workday uses the:

- Override late fee rule of \$5 for all customers in Company A.
- Interest rule of 3% for Customer X, and a rule of 1% for the rest of the customers in Company A.

## Next Steps

Set up calculation options to specify how you want to calculate finance charges.

### Set Up Calculation Options for Interest and Late Fees

#### Prerequisites

- Configure interest and late fee rules.
- Define default behavior and set the overrides for interest and late fee calculations.
- Security: *Set Up: Interest Rate and Late Fee Rule* domain in the Common Financial Management functional area.

#### Context

To define when and how Workday calculates the finance charges, configure additional parameters as defaults, or add rules for specific companies to override the defaults.

You can also specify the type of finance charge document you want to generate. To view the finance charge calculations before you process them, specify the reporting only option.

#### Steps

- Access the **Maintain Interest and Late Fee Calculation Options** task.
- As you complete the **Calculation Options** section, consider:

Option	Description
<b>Use On-Account Amount</b>	Select the check box to use the on-account amount to pay for finance charges. Workday applies this amount to the oldest invoice first.  When you process finance charges again in the same period, for a company or customer, Workday doesn't use the on-account amount for subsequent payments.  You can configure it at the tenant level or for specific companies as an override.
<b>Include Partial Month</b>	Select the check box to charge a full month of interest on invoices that are only partially past due in a 30-day period.  This option is valid when the finance charge rules use a monthly calculation option.
<b>Minimum Days</b>	Enter a value to add buffer days to the partial month. Workday calculates finance charges for full month after the specified minimum days.  Workday displays this field only when you select the <b>Include Partial Month</b> check box.  Example: Your payment terms are net 30, and the invoice period is from September 30 to October 30. You enable including partial month and specify 10 minimum days as your buffer. When you run the process on: <ul style="list-style-type: none"> <li>October 5, Workday doesn't charge interest or late fees on past due invoices.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>October 11, Workday charges full month of interest or late fee on all customer invoices past due from this date onwards.</li> </ul> <p>When you don't include partial month option, and process finance charges on any of these dates, Workday excludes the invoice from incurring an interest fee until after October 31.</p>
# of Days In a Year	Workday automatically sets it to 365. Enter another value that you want to use for calculating daily finance charge rates.

3. As you complete the **Output Options** section, consider:

Option	Description
<b>Document Output Options</b>	<p>Specify the type of finance charge invoice document that you want to generate.</p> <ul style="list-style-type: none"> <li><i>Create New Invoice Adjustment for Finance Charges:</i> Workday creates 1 finance charge invoice adjustment document for each past due customer invoice.</li> <li><i>Create New Invoice for Finance Charges:</i> Workday creates 1 finance charge invoice per customer for all past due invoices. Each line on the invoice corresponds to 1 past due customer invoice.</li> <li><i>Create Separate Invoice Adjustment for Finance Charges:</i> Workday creates 2 separate invoice adjustment documents, 1 for interest charges and 1 for late fee charges.</li> <li><i>Reporting Only:</i> Workday updates report fields only and doesn't generate any accounting, enabling you to review your configuration before you process finance charges.</li> </ul>
<b>Invoice Adjustment Reason</b>	Select an option for Workday to add the reason to your finance charge invoice adjustment document.
<b>Revenue Category</b>	<p>Select a category so that Workday can populate this value automatically on the finance charge invoice or adjustment line.</p> <p>To post finance charges to a different ledger account, use this revenue category as a condition in the revenue account posting rule.</p>
<b>Copy Header Worktags from Original Invoice</b>	When you select this check box Workday copies the worktags from the original past due invoice to the new finance charge invoice.
<b>Copy Customer Worktags</b>	Select this check box to copy worktags from the customer profile to the finance charge invoice adjustment when the original invoice doesn't include worktags.

Option	Description
<b>Worktags</b>	<p>Select worktags for the finance charge invoice. Workday uses these values only when the invoice header or the customer profile don't have worktags.</p> <p>When you've worktag balancing enabled, ensure to define a primary worktag. It prevents processing errors when the original invoice or the customer profile don't have worktags configured.</p>
<b>Target Company</b>	Specify the company from which you want to generate the finance charge invoices.

4. As you complete the **Company Overrides** section, consider:

Option	Description
<b>For Customer Category</b>	When you define a category, Workday disables the <b>Company</b> option and you must specify a <b>Target Company</b> .
<b>Revenue Category</b>	You can define this category as a condition in your revenue account posting rule to post finance charges to a different ledger account.

## Result

When you process finance charges, Workday calculates them according to the specified options.

## Next Steps

Run the **Process Interest and Late Fees** task to generate a report or create a finance charge document.

### Steps: Process Interest and Late Fees Charges

#### Prerequisites

- Create interest and late fee rules.
- Assign the rules as defaults or configure rule overrides for companies and customers to suit your business needs.
- Set up finance charge calculation options and specify the document output options.

#### Context

To generate the finance charges, you can schedule the process job or run it manually.

#### Steps

1. Access the **Edit Customer Invoice Layout Rule** task.

To create a finance charge document when you print the invoice, set:

- **Customer Invoice Layout Rule to Finance Charges**.
- **Business Form Layout to Customer Finance Charge Invoice Printing Form**.

Security:

- *Set Up: Customer Accounts* domain in the Customer Accounts functional area.
- *Set Up: Sponsor Accounts* domain in the Grants Management functional area.

2. Specify the criteria for processing finance charges and run the calculations.

See [Generate Finance Charges](#) on page 915.

3. (Optional) Access the **Schedule Process Interest and Late Fees** task.

You can create multiple schedules for the same processing configuration.

To run the process after another action completes, select **Frequency** of *Dependent* and specify dependency, trigger status, trigger delay configurations.

To schedule the process at a specific time, in a certain time zone select **Frequency** of *Custom Recurrence*.

When you select the **Only Include Invoices Eligible As Of Run Date** check box, Workday includes the grace period while determining invoice eligibility.

Security: *Process: Customer Invoice - Collections* subdomain in the Customer Accounts functional area.

## Next Steps

- Email the printed finance charge documents.
- View finance charge details for a given calculation run on the **Find Interest and Late Fee Calculation Runs** report. You can also view the rules used for processing the charges on a customer profile, billing schedule, and a given customer invoice.

## Related Information

### Tasks

[Steps: Set Up Interest and Late Fees Charges](#) on page 908

## Generate Finance Charges

### Prerequisites

- Configure the *Interest and Late Fee Event* business process and security policies in the Common Financial Management functional area.
- Configure interest and late fee rules.
- Define defaults and overrides for interest and late fee rules.
- Set up calculation options for generating interest and late fees.
- Security: *Set Up: Interest Rate and Late Fee Rule* domain in the Common Financial Management functional area.

### Context

After you configure finance charge rules and calculations, you can process interest and late fees to generate finance charges on past due invoices. You can specify the:

- Processing date and output options.
- Invoice company, currency, date, or due date.
- Customer parameters.

Workday retrieves invoices that meet the criteria. You can select specific invoices to include in the calculation run. When you process the invoices, Workday:

- Generates a new interest customer invoice document, or generates only a report so that you can view the calculations before you process the finance charges.
- Displays the finance charges only after you approve the *Interest and Late Fee Event* business process. When you configure conditional approvals in your business process, and the approver denies the transaction, Workday doesn't create the finance charge document.

Once you generate a finance charge document, you can't change the company, the customer, or the currency fields. Workday also prevents these actions on the original invoice:

- Cancel.

- Change.
- Credit and rebill.
- Edit
- Update lines.

To take these actions, you must cancel all prior finance charge invoices related to the original invoice.

However, when you use a future **Process Date**, Workday includes past due invoices until that period and charges interest and late fees on them. Once, you generate a finance charge, you cancel the finance charge invoice but can't process further charges again until after that period.

To generate finance charges automatically, you can access the **Schedule Process Interest and Late Fees** task instead. It enables you to process large volumes of customer invoices easily. To generate a full month finance charge, set the schedule to run daily.

**Note:** When you process fees manually, Workday retrieves a maximum of 1,000 invoices per run.

## Steps

1. Access the **Process Interest and Late Fees** task.
2. As you complete the task, consider:

Option	Description
<b>Process By</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Daily Calculation Rules</i> to process fees for the current month.</li> <li>• <i>Monthly Calculation Rules</i> to process fees for the previous month.</li> </ul> <p>Workday only includes rules that have the <b>Calculation Option</b> of <i>Monthly</i> regardless of the processing frequency. Based on the processing rule you select, Workday displays additional fields for further defining the process dates.</p>
<b>Process Month</b>	<p>Workday displays this option only when the <b>Process By</b> prompt is <i>Monthly Calculation Rules</i>. Workday automatically sets it to the current month.</p> <p>You can modify the month but Workday sets the <b>Process Date</b> to the last date of the specified month. The last date generates a new finance charge invoice each month, given you set the <b>Days to Generate Interest Document</b> to <i>0</i> in the associated late fee rule.</p> <p>When you use the <b>Schedule Process Interest and Late Fees</b> task, Workday displays <b>Process Month Option</b> prompt instead. You can specify current month, month before or after the schedule date options to define when the scheduler is run.</p> <p>Example: You set the <b>Process Month</b> to <i>Month Before Schedule</i>. When you schedule the process to run on July 2, Workday calculates finance charges on June 30th, as it's the last date of the prior month.</p>

Option	Description
<b>Process Date</b>	<p>Workday displays this option only when the <b>Process By</b> prompt is <i>Daily Calculation Rules</i> and automatically sets it to the current date.</p> <p>When you use the <b>Schedule Process Interest and Late Fees</b> task, Workday displays <b>Process Date Option</b> prompt instead and enables you to specify current date, first day of current or previous month, last day of current or previous month, or number of days before or after the schedule date.</p> <p>When you process finance charges, the interest and late fee calculation run looks at all open invoices and determines invoice eligibility based on the process date specified. Workday also verifies if eligible invoices have prior interest and late fee charges. If they do, Workday retrieves only invoices that have a calculation run before the process date specified.</p>
<b>Next Process Date</b>	<p>When you process interest and late fees on a schedule, Workday automatically populates this field to let you know when we next process the finance charges.</p>
<b>Only Include Eligible Invoice as of Run Date</b>	<p>Workday displays this option only when the <b>Process By</b> prompt is <i>Monthly Calculation Rules</i>.</p> <p>Select this check box when you want to run the finance charge process daily but have the <b>Process By</b> prompt set to <i>Monthly Calculation Rules</i> option. If you process interest and late fee in the middle of the month, then Workday includes only those invoices that are eligible on the run date, including the grace period. Workday excludes any invoice that has a due date after the run date even if the date is within this month.</p> <p>When you process interest and late fee again on another day within the same month, Workday ignores invoices that already have a finance charge.</p>
<b>Output Options</b>	<p>Select 1 option:</p> <ul style="list-style-type: none"> <li>• <i>Reporting Only</i>: Generates only a calculation that you can use in custom reports, enabling you to view the finance charges before you process them.</li> <li>• <i>Create a Finance Charge Invoice</i>: Processes finance charge on customer invoices with the same company, customer, and currency and groups them in lines to generate 1 invoice. Generates only 1 finance charge invoice for a given month. Once you generate a second</li> </ul>

Option	Description
	<p>finance charge invoice, you can't modify the first invoice.</p> <ul style="list-style-type: none"> <li>• <i>Create a Finance Charge Invoice Adjustment:</i> Creates an adjustment with 2 lines, one each for both interest and late fees.</li> <li>• <i>Create a Separate Finance Charge Invoice Adjustment:</i> Creates 2 adjustments, one each for only interest charge and another for late fee charge.</li> </ul> <p>You can pay the finance charge or write it off. Once Workday generates the finance charge invoice or an adjustment, you can't modify the original invoice.</p> <p>Workday excludes sponsor invoices, student invoices, and invoices that are part of in-progress payments, write-offs, adjustments, or credit-rebills.</p>
<b>Finance Charge Invoice Date</b>	<p>Workday displays this field only when you set the output option to generate a finance charge document. By default, Workday sets the date on the finance charge invoice to the <b>Process Date</b> and generates a document when you run the process.</p> <p>When your finance rules use a monthly calculation option, Workday sets this invoice date to the last day of the process month. You can enter a different date to meet your business needs.</p> <p>When you schedule the process, you can also specify days before or after the schedule date to generate the finance charge invoice document. You can view the exact date that displays on the invoice document in the <b>Next Finance Charge Invoice Date</b> field.</p>
<b>Invoice Date Criteria</b>	<p>You can further filter the calculation output by specifying invoice date and invoice due date ranges that are on, after, or before the process run date.</p>

## Result

Workday generates a report, a finance charge invoice, or an invoice adjustment document based on the specified output option. Every time you run this process, Workday provides a snapshot of the rule and the calculation configurations.

## Next Steps

View finance charge details for an invoice on the **Find Interest and Late Fee Calculation Runs** report. When you charge both interest rate and late fee, Workday displays a separate line for each charge.

Ensure to include the <b>Generated By Interest And Late Fee Calculation Run</b> field to identify finance charge invoices.</li> <li data-bbox="855 1812 1449 1909">4. From the related actions menu of the original customer invoice, click <b>Change</b> to change the desired fields.</li> </ol>

Cause	Solution
	<p>5. Access the <b>Process Interest and Late Fees</b> task to generate a finance charge invoice.</p> <p>Under the <b>Calculation Process Options</b> section, set the <b>Output Options</b> prompt to <i>Create New Invoice for Finance Charges</i>.</p>

## Steps: Write Off Receivables

### Context

Workday enables you to write off customer invoices and customer invoice adjustments so that you can account for unpaid amounts. To post them to the appropriate ledger, create account posting rules to identify write-offs by the specified reason. You can:

- Write off all or part of a customer invoice.
- Apply multiple write-off reasons with different amounts for the same invoice.
- Inactivate write-off reason that's not in use.
- Write off small amounts during payment application but you can't add worktags.
- Use the *Submit Bad Debt Writeoff* web service for bulk write-offs.
- Create write-off rules to clear remaining balances after the automatic payment application process completes.

You can't write off invoices and adjustments:

- During on-behalf-of payment applications.
- When the VAT is in pending status due to the tax declaration run in progress.

### Steps

#### 1. Access the **Maintain Receivable Writeoff Reasons** task.

- Specify the reason and the usage of *Customer Accounts* or *Student Financials* to control the availability of the reason in the appropriate area.
- When you change the name of a write-off reason that's in use, adjust account posting rule that refers to the old reason name.
- To prevent selecting a write-off reason that's no longer valid for your organization, select the **Inactive** check box.

Security: Set Up: *Receivable Write-Off Categories* domain in the Common Financial Management functional area.

#### 2. Access the **Edit Customer Account Options** task.

- In the **Copy Invoice Header Worktags to Write-off Lines** prompt, select the invoice header worktags that you want to copy to the write-off lines.
- To populate the balancing worktags in the write-off lines, select the **Autofill Write-Off Lines and Balancing Worktags** check box when you've enabled worktag balancing.

- Access the **Write Off** task from the related actions menu of an invoice.

As you complete the task, consider:

**Note:** Some of the listed fields and functionality won't be applicable when you access write-offs through other tasks.

Option	Description
<b>Currency</b>	<p>Workday automatically populates the invoice currency for a customer. When you don't specify one, it uses the company currency.</p> <p>You can change the currency to any of the accepted currencies defined for the specified customer. You can only select invoices and adjustments that are in the same currency as the write-off.</p>
<b>Total Write-Off Amount</b>	<p>You can enter multiple write-off amounts per invoice by different write-off reasons.</p> <p>To write off a portion of the invoice amount, change the value in <b>Write-Off Amount</b> to a value less than the <b>Amount Due</b>.</p>
<b>Remaining Amount Due</b>	<p>When you change the <b>Write-Off Amount</b>, Workday updates the remaining amount due.</p>
<b>Write-Off Date</b>	<p>Select a transaction date that's on or after the invoice date.</p>
<b>Memo</b>	<p>Specify any relevant information that you want to share with an approver during the review and revise process. This memo will also display in the journal line of the associated write-off.</p>
<b>Write-Off Lines</b>	<ul style="list-style-type: none"> <li>• (Optional) With the customer invoice write-off data entry check enabled on the <b>Edit Tenant Setup - Financials</b> task, Workday displays an alert to review the value entered in the <b>Write-Off Amount</b> field when the machine learning model determines that the value is outside historical data.</li> </ul> <p><b>Note:</b> Workday needs at least 100 write-offs with these matching dimensions applied in the past 12 months for the machine learning model to analyze the values entered in the <b>Write-Off Amount</b> field:</p> <ul style="list-style-type: none"> <li>• Company.</li> <li>• Cost center.</li> <li>• Currency.</li> <li>• Current user.</li> <li>• Write-off reason.</li> <li>• Workday displays the balancing worktags and the worktags that you've selected to copy from</li> </ul>

Option	Description
	the invoice header. You can edit the worktags as necessary.

Security: *Process: Customer Writeoff - Core* and *Process: Customer Writeoff - Single Invoice* domains in the Customer Accounts functional area.

4. (Optional) Access the *Bad Debt Writeoff Event* business process.

Configure the review and revise steps to route write-offs to the appropriate managers for approval.

Security: Customer Accounts functional area.

5. (Optional) Access the **Find Customer Invoice Write-Offs** report and specify the **Company** to which the write-off accrued.

From the related actions menu of the write-off transaction:

- Select **Cancel Bad Debt Writeoff** to cancel the write-off.

**Note:** You can't cancel write-offs that are part of customer invoice maintenance transactions or customer payment applications.

- Select **Add/Change Attachment** to add or replace an attachment.

Security: *Process: Customer Writeoff - Cancel Process: Customer Writeoff - View*, and *Process: Customer Write-Off – Add/Change Attachment* domains in the Customer Accounts functional area.

6. (Optional) Access the **Perform Customer Invoice Maintenance** task.

Specify a **Transaction Date** that's before any of the selected invoice adjustment dates. Workday automatically sets it to the current date.

When you apply adjustments to invoices, you can also write off the small uncollectible amounts. But, you can't write off across more than 1 reason and can't include worktags.

Security: *Process: Customer Invoice - View* and *Process: Customer Writeoff - View* and *Process: Cash Sale Payment - View* domains in the Customer Accounts functional area.

## FAQ: How can I populate balancing worktags on write-off lines?

To populate balancing worktags on write-off lines, you must select the **Autofill Write-Off Lines and Balancing Worktags** check box on the **Edit Customer Account Options** task.

When you write off an amount on a customer invoice, you must manually select a balancing worktag for each allocation.

## Customer Portal

---

### Steps: Set Up the Customer Portal

#### Prerequisites

Security: *Self-Service: Customer Contact Tasks* domain in the Customer functional area.

#### Context

After you create customers for your company in Workday, you can provide them access to the Customer Portal for self-service. The portal enables you to manage customer information and your customer contacts

can view and download their business documents. You can configure the customer portal by adding or removing worklets from the dashboard, adding announcements, or customizing the menu.

## Steps

1. [Create Customers](#) on page 748.  
Create a customer contact.
2. [Create Workday Accounts for Customer Contacts](#) on page 923.
3. Access the **Maintain Dashboards** task and edit the **My Invoices and Payments** dashboard to give your customer contacts access to information on their accounts in Workday.  
Security: *Set Up: Tenant Setup - Worklets* domain in the System functional area.
4. [Set Up Worklets](#).  
Use the **Worklets** section on the **Content** tab of the dashboard to add any worklets that you want to display with graphics.
5. [Add Dashboard Menus](#).  
Use the **Menu** section on the **Content** tab of the dashboard to display a customized menu.
6. [Add Home and Dashboard Announcements](#).  
Use the **Announcement** tab to add customized announcements to the dashboard.

## Result

Your customers contacts can:

- Sign in to the Customer Portal and view the Invoices and Payments worklet on the landing page.
- They can view and download invoices, statements, and recent payments.

## Related Information

### Tasks

[Steps: Set Up Custom Dashboards](#)

## Create Workday Accounts for Customer Contacts

### Prerequisites

- The customer is in Workday and has a contact person.
- Enable the **My Invoices and Payments** dashboard.
- Security: *Self-Service: Customer Contact Tasks* domain in the Customers functional area.

### Context

You can create Workday accounts for your customer contacts, so they can access the Customer Portal and view their invoices, statements, and payments. This capability helps reduce the time you spend making collection calls and addressing customer inquiries.

## Steps

1. Access the **Create Workday Account for Customer Contact** task.
2. As you complete the task, consider:

Option	Description
<b>Generate Random Password</b>	When checked, Workday automatically generates a random account password and requires a new password the next time your contact signs in to Workday. The <b>Require Password Reset at Next Sign In</b> check box becomes display only.

Option	Description
<b>Session Timeout Minutes</b>	Regulates when unused sessions expire. The zero default represents 20 minutes.

3. (Optional) To create multiple customer contact accounts at once, access the *Add Workday Account* web service.

Security: *Workday Accounts* domain in the System functional area.

### Result

- Workday secures the customer contact to the *Customer Contact as Self* security group.
- Workday emails the username, a temporary password, and the Customer Portal URL to the customer contact.
- The customer contact can sign in to Workday and view the standard reports.

## Concept: Customer Portal Dashboard

The Customer Portal gives your customer contacts access to the Workday-delivered **My Invoices and Payments** dashboard. The portal enables them to retrieve information from their accounts in Workday, reducing the time you spend addressing inquiries.

From the Customer Portal, your customer contacts can:

- View and download PDFs for invoices and statements.
- View recent payments.
- Filter any delivered reports by currency, start date, or end date.
- Search and select customer invoices to pay through a credit card.

### Considerations:

- To view the PDF file output, you must first print the invoices.
- To process payments in the customer portal through a credit card, you must:
  - Create and host a web application.
  - Create an external URL to establish a secure connection between the third-party payment service provider and Workday tenant.
- When the payment session is successful, Workday uploads a payment record back into the tenant. You can then apply the payment and create a manual deposit.

Workday also delivers the **Pay Customer Invoices** task to the Customer Portal that enables your customers to pay their invoices directly through a credit card. Your customers can select the invoices to pay based on the credit limit of the credit card for a given session. However, they can't change the amount to pay to make partial payment for a specific invoice.

Workday delivers these reports to the Customer Portal:

- View Customer Statements**
- View Open Invoices**
- View Customer Invoices in Dispute**
- View Customer Invoices in Collection**
- View Recent Payments**

The Customer Portal is a configurable workspace that contains visualization and multidimensional reports. You can customize:

- Announcements.**
- Menu**
- Worklets**

**Related Information****Concepts**[Concept: Dashboards](#)**Tasks**[Add Dashboard Menus](#)[Add Home and Dashboard Announcements](#)**Examples**[Example: Configure Customer Portal Dashboard on page 925](#)

## Example: Configure Customer Portal Dashboard

This example demonstrates how you can configure the Customer Portal so that your customer contacts can view their information on the **My Invoices and Payments** dashboard.

**Context**

You're a Setup Administrator for Global Modern Services (USA). Your customer Atlas International has large volumes of invoices and payments. Bob Smith who is an AP specialist at Atlas International, sends you many inquiries regarding invoices, payments, or invoices in dispute. To reduce the time you spend on addressing these inquiries, you want to provide direct access to Bob Smith to the relevant reports and tasks.

You first create a Workday sign-in account for Bob Smith. You now want to:

- Enable Bob to view the invoices, statements, and recent payments directly.
- Provide a quick visualization of the reports.
- Communicate important information and updates to Bob.

Workday provides several options to customize the portal. You can add:

- Reports as Worklets when you want to provide data visualization.
- Reports and tasks to the Menu section enabling your customer contacts to view the specific details or download the report. They can filter these reports by date, and currency.
- To communicate with your customers, add Announcements, videos, links, or graphics.

**Prerequisites**

- Create Workday account for your customer contacts.
- Secure the contacts to *Self-Service: Customer Contact Tasks* domain in the Customers functional area.
- Security: *Set Up Tenant Setup - Worklets* domain in the System functional area.

## Steps

- Customize My Invoices and Payments Dashboard by adding Worklets, Menu, and Announcements.
- a) Access the **Maintain Dashboards** task.
- b) Click **Dashboard**, and enter **My Invoices and Payments**.
- c) Click **Filter**.
- d) Click **Edit**.
- e) Click **Worklets** on the **Content** tab.
- f) Click **+** sign and enter these values:

Worklet	Required for Groups	Required	Worklet Size	Workday Worklet Title	Worklet Title	Invalid Landing Page Admin Configuration
<b>Welcome!</b>	Customer Contact as Self Implementers	Select the check box.	1x			
<b>Invoice Aging</b>	Customer Contact as Self Implementers	Select the check box.	2x			

- g) Click **Menu** on the **Content** tab.
- h) Click **+** sign for each new section that you want to add and enter these values:

Section Label	+	Item
Enter Reports	Click +	From the <b>Task</b> prompt select: <ul style="list-style-type: none"> <li>• <i>Customer Statements</i></li> <li>• <i>Invoices in Collection</i></li> <li>• <i>Invoices in Dispute</i></li> <li>• <i>Open Invoices</i></li> <li>• <i>Recent Payments</i></li> </ul>
Enter Tasks	Click +	From the Task prompt, select <i>Pay Customer Invoices</i> .

- i) On the **Announcements** tab, click **+** and enter these values:

Rule	Expiration Date	Message From/ Message Title	Show Current Photo/ Upload Custom Image	Message	Video	Action / Custom Report / External Link
		Message Title: Download PDF Files	None of the above	You can now download a copy of your invoices, statements, and payments		None of the above

Rule	Expiration Date	Message From/ Message Title	Show Current Photo/ Upload Custom Image	Message	Video	Action / Custom Report / External Link
				as PDF files.		

- j) Click **Done**.
- Include Adjustments in Invoice Aging Report.
    - Access the **Configure Receivables Aging Worklet** task.
    - Select the **Include Adjustments in Aging Report for Customer Portal** check box.
    - Click **OK**.
  - Add Worklets to the Home Dashboard.
    - Access the **Maintain Dashboards** task.
    - Click **Dashboard**, and enter **Home**.
    - Click **Filter**.
    - Click **Edit**.
    - Click **Worklets** on the **Content** tab.
    - Click **+** and enter these values:

Worklet	Required for Groups	Required	Worklet Size	Workday Worklet Title	Worklet Title	Invalid Landing Page Admin Configuration
<b>My Invoices and Payments</b>	Customer Contact as Self Implementers					
<b>View Open Invoices</b>	Customer Contact as Self Implementers					
<b>View Customer Statements</b>	Customer Contact as Self Implementers					
<b>View Recent Payments</b>	Customer Contact as Self Implementers					

## Result

When the customer portal user accesses the Customer Portal, Workday now displays your customized **My Invoices and Payments** dashboard along with the new worklets.

## Customer Portal Payments

### Steps: Pay Invoices Through Customer Portal

#### Prerequisites

- Create and host a web application to integrate the customer portal with an external payment provider.
- Set up the security configuration for the web application.
- To integrate Workday with the web application, define the web application URL by accessing the **Create External URL** task.

#### Context

Workday enables your customers to pay their invoices directly using a credit card, providing you convenience and time savings.

To use this functionality, set up:

- Payment type for customer portal transactions and enable it for your tenant.
- Bank account.
- Payment provider and merchant account to process the credit card payments.
- Invoices eligibility rules.
- Pay Customer Invoices worklet on the customer portal.

When your end customers sign in to the customer portal, they can:

- Access the **Pay Customer Invoices** task and search for invoices by various criteria including invoice date, due date, total invoice amount for a given company and currency.
- Select the invoices to pay based on the credit limit of the credit card for a given session. However, you can't change the amount to pay for a specific invoice.

If the credit card payment is successful, Workday displays a confirmation page for your customers. Workday also records the customer payment automatically and you can:

- Apply the payment manually or use the auto apply functionality.
- Enter a discount amount when you apply the payment manually.
- Create a deposit.

#### Steps

1. [Steps: Set Up Payment Type](#) on page 929.
2. [Add Payment Service Provider](#) on page 930.
3. [Create Merchant Account for Payment Service Provider](#) on page 931.
4. [Create Invoice Eligibility Rules for Customer Portal Payments](#) on page 932.
5. Access the **Maintain Dashboards** task.

Select **Home** or **My Invoices and Payments** dashboard. Click **Edit** to add the **Pay Customer Invoices** worklet to the dashboard for your customer contacts.

Security: *Set Up: Tenant Setup - Worklets* domain in the System functional area.

6. Click **Menu** on the **Content** tab to add the **Pay Customer Invoices** worklet as a task option on the **My Invoices and Payments** dashboard.

#### Result

When your customers access the **Pay Customer Invoices** worklet in the customer portal, they can:

- View the invoices eligible for credit card payment.

- Search for invoices by using the **Invoice Search Filters**.
  - Workday returns the oldest 500 approved and open invoices.
  - The invoices that your customers select must match the minimum and maximum limits set by the payment provider.
  - For each portal payment session, your customers must select invoices that are in the same currency.
  - The credit card payment is in the same currency as the invoice currency.

## Next Steps

You can access the **Find Customer Portal Payment Sessions** report to view:

- Payment session details.
- Customer payment information along with the associated invoice.

## Related Information

### Tasks

[Register API Clients](#)

[Edit Domain Security Policies](#)

### Steps: Set Up Payment Type

#### Prerequisites

- Create and host a web application to integrate Workday with the payment service provider.
- Create an external URL.
- Update the domain security policy.
- Register API client.

#### Context

Create a payment type for processing credit card payments in the customer portal. Use the **Payment Method** of *Manual* to process payments outside of Workday environment. You can't use the method of Credit Card payment because it's linked to the Cybersource integration.

Then, enable the payment type in your tenant and configure your bank accounts to use this payment type.

#### Steps

1. Access the **Maintain Payment Types** task and create a payment type for customer portal transactions.  
The payment type must have a payment method of *Manual*.  
Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.
2. Access the **Edit Tenant Setup – Financials** task option to enable the functionality.  
In the **Customer Portal Options** section, set the **Customer Portal Payment Type** to *Manual*.  
Workday uses this payment type to record customer payments generating from the customer portal.  
Once you enable it, you can't leave the value blank.  
Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.
3. Update the bank accounts you want to use for receiving the credit card payments.  
See [Configure Bank Accounts for Customer Portal Payment](#) on page 930.

#### Result

To avoid conflict with other payment types, Workday uses the customer portal payment type for transactions in the portal.

## Next Steps

Set up the third-party payment service provider to process credit card payments.

### Configure Bank Accounts for Customer Portal Payment

#### Prerequisites

- Define bank accounts and payment types.
- Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

#### Context

Your bank account must support the Payment Type you've defined for the customer portal. The merchant account uses this bank account to receive credit card payments from the payment service provider. You can configure multiple bank accounts for 1 merchant account.

You can't delete a bank account if the company it's associated with has an invoice eligibility rule. You can only change it to those bank accounts that are valid for the company.

#### Steps

1. Access the **Edit Bank Account** task and select the bank you want to configure for customer portal payment.
2. Under the general **Account Information** section, add **Customer Portal Payment Type** to the **Allowed Payment Types**.  
This configuration enables the bank to accept the payments originating from customer portal.
3. Under the **Bank Account Usage** section, set *Customer Payment* as a **Primary Account Usage**, or select the **Allow Additional Usage** check box.  
This setup enables the bank account to receive customer payments.

#### Result

- You can use the bank account to configure merchant accounts for receiving payments from payment service providers.
- Access the **View Bank Account** report to determine if the bank account is linked to a merchant account for customer portal.

## Next Steps

Set up a merchant account.

### Add Payment Service Provider

#### Prerequisites

- Create and host a web application to integrate Workday with the payment service provider.
- Create an external URL.
- Update the domain security policy.
- Set up the payment type for the customer portal.
- Add payment type to the bank accounts.
- Security: *Set Up: Credit Card* domain in the Common Financial Management functional area.

#### Context

Set up the payment provider for the credit card to process customer payments in the customer portal by integrating it with the web application. You can set up more than 1 payment provider.

## Steps

1. Access the **Create Payment Service Provider for Customer Portal** task.
2. As you complete the task, consider:

Option	Description
<b>Payment Service Application URL</b>	Enter the web application URL address that integrates with the payment provider. Workday redirects the customer portal to this URL for processing credit card payments.

## Result

Workday will route your end customers to the payment service provider to submit payments through a credit card for the selected invoices.

## Next Steps

- Configure merchant accounts for the payment service provider.
- You can use these tasks to edit, view, or delete the payment service providers:
  - [Edit Payment Service Provider for Customer Portal](#)
  - [View Payment Service Provider for Customer Portal](#)
  - [View Payment Service Providers for Customer Portal](#)
  - [Delete Payment Service Providers for Customer Portal](#)

## Create Merchant Account for Payment Service Provider

### Prerequisites

- Create and host a web application to integrate Workday with the payment service provider.
- Set up the payment type for the customer portal transactions.
- Add payment type to the bank accounts.
- Set up a credit card payment provider.
- Security: *Set Up: Credit Card* domain in the Common Financial Management functional area.

### Context

To establish a connection with the payment service provider and the bank accounts, create merchant accounts for a company. Make sure that the bank accounts are:

- Open.
- Support the payment type you've defined for the customer portal.
- Support receiving customer payments.

Workday enables you to identify the bank accounts that are:

- Setup as merchant accounts for customer portal payments
- Set to receive credit card payments from the payment provider.

If you use separate bank accounts, you can create multiple merchant accounts for a single payment provider.

## Steps

1. Access the **Maintain Merchant Accounts for Customer Portal** task.  
Select the URL of the payment service provider you've configured.

2. As you complete the task, consider:

Option	Description
<b>Merchant Account ID</b>	You define this merchant account in your web application and the payment service provider.
<b>In Use</b>	<p>Workday sets the Merchant Account to <b>In Use</b> when the company it's associated with has an invoice eligibility rule.</p> <p>To delete a merchant account, you must delete all invoice eligibility rules for the associated company. You can do so by accessing the <b>Delete Invoice Eligibility Rules for Customer Portal Payment</b> task.</p>
<b>Bank Account</b>	<p>Select at least 1 bank account of a company. Workday displays only those bank accounts that are open, and have Customer Payment configured for account usage.</p> <p>You can't delete a bank account if the company it's associated with has an invoice eligibility rule. You can only change it to those bank accounts that are valid for the company in the invoice eligibility rules.</p>
<b>Merchant Account Currency</b>	<p>Workday displays only those currencies that are on the associated bank account.</p> <p>Make sure to select a currency when you define payment amount limits.</p>
<b>Minimum Payment Amount</b>	If you don't define a minimum payment limit, Workday applies the limit set by the payment service provider, given it has one.
<b>Maximum Payment Amount</b>	If you don't define a maximum payment limit, Workday applies the limit set by the payment service provider, given it has one.

## Next Steps

Create invoice eligibility rules to identify the invoices that your customers can pay through a credit card in the customer portal.

### **Create Invoice Eligibility Rules for Customer Portal Payments**

#### **Prerequisites**

- Create and host a web application to integrate Workday with the payment service provider.
- Set up the payment type for the customer portal.
- Add payment type to the bank accounts.
- Set up a credit card payment provider.
- Create merchant accounts for each payment service provider.
- Security: *Set Up: Customer domain* in the Customers functional area.

## Context

You can create rules to determine which invoices are eligible for credit card payments in the customer portal. You can define them for companies that have a bank account associated with a customer portal merchant account.

When you create each rule, specify at least 1 customer or invoice attribute for a given merchant account.

Example: You've set up *Company A* with the merchant account associated with the payment service provider. When you select this company for creating the rule, Workday automatically populates the **Merchant Account** value. You must then either specify a criteria from **Customer Selection** option, or select 1 criteria from **Invoice Type**, **Payment Type**, **Invoice Currency**, or **Invoice Total Amount Limit**.

- Example: You select *Customer 1* as the only attribute for your rule, Workday will retrieve all open invoices for *Customer 1* regardless of the invoice type, payment type, currency, or amount.
- If you select only the **Customer Category** of *Business Services*, Workday will retrieve all open invoices for any customer that is part of the *Business Services* category.
- If you select only the **Invoice Total Amount Limit** of \$50,000, Workday will retrieve all open invoices with an amount of \$50,000 or less. When you submit the rule, Workday also validates this amount against the **Maximum Payment Amount** limit you've set on the merchant configuration.

Workday evaluates rules in the specified order from top to bottom, and uses the first matched rule to retrieve invoices for payments. Make sure to list more specific rules first.

## Steps

1. Access the **Create Invoice Eligibility Rules for Customer Portal Payment**.
2. As you complete the task, consider:

Option	Description
<b>Merchant Account</b>	Select the account that you've setup with the third-party payment service provider. When you've only 1 merchant account, Workday uses that account as the default value.
<b>Customer Selection</b>	When you select 1 customer, Workday automatically populates the: <ul style="list-style-type: none"> <li>• <b>Customer Category</b> and <b>Customer Group</b> values and you can't edit them.</li> <li>• <b>Payment Type</b> value you set on the customer.</li> </ul>
<b>Invoice Currency</b>	Select a currency associated with the customer. When you don't select a currency, payments are eligible in all currencies. Create separate rules for specific customer and currency combination.
<b>Invoice Total Amount</b>	Enter the maximum total amount of all invoices that Workday retrieves.

## Result

Select at least 1 invoice to pay.

Once a rule is in use by the merchant account, you can't delete the merchant account until you delete that rule.

## Next Steps

- You can test the rules by customer, customer invoice, and other criteria for a company.
- The test result displays the invoices that match the rules and the search criteria.
- You can edit, view, and delete the invoice eligibility rules by accessing these tasks and reports:
  - **Delete Invoice Eligibility Rules for Customer Portal Payment**
  - **Edit Invoice Eligibility Rules for Customer Portal Payment**
  - **View Invoice Eligibility Rules for Customer Portal Payment**

## Document Printing and Emailing

---

### Concept: Customer Document Delivery

Workday enables you to print and deliver documents to your customers when you configure document delivery methods, types, and recipients.

#### Delivery Methods and Types

Workday supports these document delivery methods for you to select when you create delivery types on the **Maintain Document Delivery Types** task:

- *Email*
- *Integration*
- *Mail*

Workday automatically associates the delivery method of *Mail* and *Email* to delivery types of *Mail* and *Email* respectively. You can't change or deactivate these default settings. The *Integration* delivery method is available only for customer invoices.

#### Document Types

Accounts receivable specialists and collectors can configure ad hoc or scheduled delivery for these types of documents on the customer profile:

- **Dunning Letter**
- **Customer Invoice**
- **Customer Statement**

You can select to deliver all these documents by mail or email. You can also associate customer invoices with external integration systems.

The **Customer Invoice** document type includes customer invoice adjustments and consolidated customer invoices.

#### Primary Contact

When you add customer contact information on the **Addresses and Contacts > Contact Information** profile group on the customer profile, you can set a primary contact by selecting the **Primary** check box. You can only have 1 primary contact.

When you select a primary email address for a customer, Workday automatically delivers all customer documents to the primary email address unless you either:

- Select other email recipients for a specific document on the **Document Delivery** profile group.
- Omit a specific document on the **Use For** prompt when you edit customer email contact information, while manually adding other types of documents on this prompt.

## Email Recipients

Workday emails customer documents to customer contacts based on the option you select on the **Email Recipients** prompt on the **Addresses and Contacts > Document Delivery** profile group of the customer profile.

To email customer documents to multiple recipients, you must set up customer contacts on the **Customer Contacts** profile group.

You can select these email recipient types for all types of documents:

- *All Customer Contact Emails*
- *All Parent Customer Contact Emails*
- *All Remit-from Customer Contact Emails*
- *Customer Primary Email*
- *Parent Customer Primary Email*
- *Remit-from Customer Primary Email*

You can select these email recipient types for specific customer documents:

Option	Description
<i>Bill-To Contact Emails on Invoice and Invoice Contact Emails</i>	Select for customer invoices.
<i>Statement Contact Emails</i>	Select for customer statements.
<i>Dunning Letter Contact Emails</i>	Select for dunning letters.

## Troubleshooting: Unable to Email Customer Documents

You printed a customer document, but when you want to email it, Workday doesn't include the intended email recipients. This topic provides strategies for resolving issues related to emailing customer invoices, statements, and dunning letters to your customer contacts.

Cause	Solution
<p>You need to email a customer document to the primary email address. However, the usage for the primary email contact doesn't include the documents you want to email.</p>	<ol style="list-style-type: none"> <li>Access the <b>Addresses and Contacts &gt; Contact Information</b> profile group on the customer profile.</li> <li>Click <b>Edit</b> to access the <b>Edit Customer Contact Information</b> task.</li> <li>In the <b>Email</b> section, check if the <b>Use For</b> contains any customer documents, such as <i>Customer Invoice</i>, <i>Customer Statement</i>, or <i>Dunning Letter</i>. On this prompt, you can either:             <ul style="list-style-type: none"> <li>Remove all customer documents.</li> <li>Add all customer documents.</li> </ul> </li> </ol> <p>Workday includes the primary email contact when you print and email a specific customer document, except when you set up customer contacts for specific documents.</p>
<p>You need to email customer documents to multiple email addresses, but you don't set up email documents for customer contacts.</p>	<p>To email customer documents to multiple email recipients, you must set up customer contacts on the <b>Addresses and Contacts</b> profile group of the customer profile.</p> <p>See <a href="#">Set Up Customer Contacts and Addresses</a>.</p>
<p>You need to email customer documents to your customer email address, but you encounter an error message prompting you to configure a business process custom notification with a valid repeat-on instance.</p>	<ol style="list-style-type: none"> <li>Access the <b>Find Notifications With Invalid Repeat-On</b> report to view the notifications with invalid repeat-on.</li> <li>Security:             <ul style="list-style-type: none"> <li><i>Business Process Administration</i></li> <li><i>Manage: Business Process Definitions</i></li> <li><i>Set Up: Customer Accounts</i></li> </ul> </li> <li>From the related actions menu of the custom notification that you want to correct, access the <b>Edit Notifications</b> task.</li> <li>On the <b>Related Instances</b> prompt in the <b>Repeat On</b> section of the task, select a valid option for</li> </ol>

Cause	Solution
	your business process type. See: <a href="#">Reference: Repeat-On Instances for Customer Document Business Process Events.</a>

## Troubleshooting: Unable to Print Customer Documents

You create a business form layout for a customer document with Report Designer and deploy it to Workday. You then schedule printing for this business form layout but Workday displays an error in the print run. This topic provides a strategy to resolve issues related to the customer document print runs.

Cause	Solution
Your report design file contains errors.	<ol style="list-style-type: none"> <li>1. Ensure that you correctly create your business form layout. See <a href="#">Steps: Create Business Form Layouts with Report Designer</a>.</li> <li>2. <a href="#">Preview Report Designs as PDFs</a>.</li> <li>3. <a href="#">Deploy Report Designs to Workday</a>.</li> </ol>
Your business form layout is inactive.	<ol style="list-style-type: none"> <li>1. Access the <b>Edit Business Form Layout</b> task.</li> <li>2. Select your <b>Business Form Layout</b>.</li> <li>3. Select the <b>Active</b> check box.</li> <li>4. Click <b>OK</b>.</li> </ol>

## Print and Email Invoices

### Steps: Set Up Email for Customer Invoice Documents

#### Context

After printing customer invoice documents, you can email the customer invoice document on its own, or with its associated attachments. To make emailing a seamless process, you need to:

- Enable emailing in your tenant.
- Enable attachments for email in your tenant.
- Enable automatic emailing of invoices.

Workday automatically sends emails to the primary contact of a customer. When you want to email documents to specific billing contacts, and use document delivery types other than the default, complete these steps to configure your environment.

- Configure document delivery types for a given delivery method.
- Create document delivery rules to map the delivery type to desired integration system if you've one.
- Assign customer documents to billing contacts of that customer.
- Assign document delivery type to customer documents on the customer profile.

#### Steps

1. (Optional) [Set Up Mail Servers for Email Notifications](#).

**2. Access the **Edit Tenant Setup - Notifications** task.**

For the **Custom Business Process Notifications** row of the Business Processes parent notification type, select *Immediate Email* in the **Default Notification Channels** field.

Security: *Set Up: Tenant Setup - BP and Notifications* in the System functional area.

**3. Access the **Edit Tenant Setup - System** task.**

In the **System Setup** section, select the **Allow Attachments within Emails** check box.

Security: *Set Up: Tenant Setup - System* in the System functional area.

**4. Steps: Configure Workflow Notifications to Email Customer Invoices and Attachments** on page 939.

**5. (Optional) Access the **Maintain Document Delivery Types** task.**

Create document delivery types and associate them to the desired Workday delivered document delivery methods.

When your **Delivery Type** is associated with the **Delivery Method** of *Integration*, set the Document Types to only *Customer Invoice*.

Workday automatically associates the **Delivery Method** of *Mail* and *Email* to **Delivery Types** of *Mail* and *Email* respectively. You can't change these default settings or set them to inactive.

Security:

- *Set Up: Customer Accounts* domain in the Customer Accounts functional area.
- *Set Up: Sponsor Accounts* domain in the Grants Management functional area.

**6. (Optional) Access the **Maintain Document Delivery Rules** task.**

For electronic invoices, create document delivery rules and map the **Document Delivery Type** to the desired **Integration System**.

To apply the external tax codes to electronic invoices, specify the **External Tax Code List** for the integration system.

Workday displays the document delivery details on the **View Integration Document Delivery Rule** report.

Security: *Set Up: Customer Accounts* domain in the Customer Accounts functional area.

**7. (Optional) When electronic invoices have a third-party tax code impact, create external tax code lists, and map them to internal tax codes in Workday.**

See [Steps: Create External Tax Codes and Map to Internal Tax Codes](#) on page 942.

**8. (Optional) Set Up Bill-To Contacts** on page 762.

Configure billing contacts and then the document delivery for a given customer so that they can receive the customer invoice documents.

When you don't configure billing contacts, Workday sends the email to the primary contact.

## Next Steps

Print customer invoices and email them.

## Related Information

### Reference

[The Next Level: Customer Invoicing](#)

[Reference: Email Recipients for Document Delivery](#) on page 948

## Steps: Configure Workflow Notifications to Email Customer Invoices and Attachments

### Context

Workday enables you to configure workflow notifications for the customer invoice and consolidated invoice email event business process definitions, so that you can send your customers emails and attachments to suit your business needs.

### Steps

- [Set Up Workflow Notifications for Customer Invoice Emails.](#)

- (Optional) [Set Up Mail Servers for Email Notifications.](#)

To display custom email address in the business process notifications, configure a *Customer SMTP*.

- (Optional) Access the **Consolidated Invoice Email Event** business process definition.

In the **Attachments** section, select 1 of these options:

- Attachments Linked to Customer Invoices*: Workday emails attachments associated with the individual customer invoices as separate files in the email.
- PDFs for Individual Customer Invoices*: In addition to the consolidated invoice PDF file, Workday emails the individual customer invoices in 1 PDF as a separate file.
- PDF for Printing Run Business Process Notifications*: Sends the Workday invoice as a PDF file.

[2023R1 What's New Post: Send Emails From Multiple From Addresses](#)

[The Next Level: Delivering Customer Invoices with Confidence](#)

## Set Up Workflow Notifications for Customer Invoice Emails

### Prerequisites

Configure these business processes and security policies in the Customer Accounts functional area:

- Customer Invoice Email Event*
- Consolidated Invoice Email Event*

See:

- [Steps: Enable Functional Areas and Security Policies](#)
- [Steps: Set Up Security Permissions](#)

### Context

To review, approve, and email invoices to customers, you can configure the workflow notifications in the business process. You can also create segment-based security groups so that only authorized users can create or edit templates.

Workflow notifications enable you to define:

- Email template.
- Time to trigger the email event.
- Conditions and rules for emailing to suit your business needs.
- Security groups that can access this task.
- Email options and recipients.
- Email or SMS message.
- Attachments behavior.

## Steps

1. Access the **Business Process Definition for Business Object** report.
2. From the **Business Object** prompt, select your organization.
3. Click **OK**.
4. From the **Business Process Definition** column, access **Customer Invoice Email Event**.
5. On the **Notifications** tab, access **Business Process > Edit Notification** from the related actions menu on the **Notification** column in the **Custom Notifications** grid.
6. Click **OK**.
7. Complete the **Edit Workflow Notification** task:

Option	Description
<b>Override Email Template</b>	Select the custom invoice email template that defines the appearance and content of your email.
<b>Triggers</b>	Select the business process status or the time to launch the event.
<b>Conditions and Rules</b>	You can configure rules to determine whether or when Workday should send the notification.
<b>Repeat On</b>	<p>Workday automatically sets this prompt to <i>Customer Invoices to Be Emailed</i>.</p> <p>Workday prevents you from emailing your invoices when you:</p> <ul style="list-style-type: none"> <li>• Have more than 1 customer in the print run group.</li> <li>• Leave this prompt blank.</li> <li>• Select options other than <i>Customer Invoices to Be Emailed</i>.</li> <li>• Use a calculated field on the Customer Invoice Printing Run business object where the business object doesn't match the respective business process definition.</li> </ul>
<b>Repeat On Conditions and Rules</b>	<p>You can configure conditions to filter the related instances for external fields, only sending notifications for the filtered instances.</p> <p>Example: You print customer invoices for a company hierarchy for Global Modern Service (GMS) North America. You need to use multiple custom email configurations for companies under the hierarchy, such as GMS US East, GMS US West, GMS Canada, and GMS Mexico. You modify the <i>Customer Invoice Email</i></p>

Option	Description
	<i>Event</i> business process definition for the North America company hierarchy to create custom notifications with the repeat on condition rule based on a company in the print run and the email configuration based on the company email preferences. You then use an appropriate email configuration for the <b>From Mailbox</b> , <b>From Display Name</b> , and <b>Reply To</b> in the print run.
<b>Recipients</b>	<p>Select 1 or more <b>Recipients</b> to send the emails to. You can specify additional emails in the <b>Email Addresses</b> section.</p> <p>Workday sends emails to the bill-to contacts you define on the customer profile, and to any email addresses you enter here.</p>
<b>Groups</b>	Select 1 or more security groups that can execute this task.
<b>Email Option</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Default</i> to send emails to both home and work email addresses for a billing contact.</li> <li>• <i>First Work, then Home</i> to first send a notification to the work email address. If you don't set any work email address but have at least 1 home email address, Workday sends the notification to the home email address.</li> <li>• <i>Home Only</i> to send 1 notification only to the home email address. If you haven't defined a home email address, Workday doesn't send the notification. When you have more than 1 home email addresses, Workday sends the email to the primary home email address.</li> <li>• <i>Work Only</i> to send 1 notification only to the work email address. If you haven't defined a work email address, Workday doesn't send the notification. When you have more than 1 work email, Workday sends the email to the primary work email address.</li> </ul>

8. Complete the **Attachment(s)** section of the task:

Attachment Option	Attachment Flag Specified on an Invoice	Result
<i>Attachments Linked to Invoice</i>	N/A	<p>Workday includes all attachments associated with the customer invoice in the email and ignores the attachment flag you specify on the invoice.</p> <p>Select this option if you generate your invoices using third-party software.</p>

Attachment Option	Attachment Flag Specified on an Invoice	Result
<i>Attachments Not Provided To Customers</i>	N/A	Workday doesn't provide any direct or referenced attachments to customers.
<i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>True</i></li> </ul>	Includes all attachments in the PDF file when you print the invoice.
<i>Attachments provided To Customers But Not Included In Printing Run</i> and <i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	Prints all the invoices in 1 PDF file and includes all attachments separately in the email notification for each invoice.
<i>Attachments Not Provided To Customers</i> and <i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	<p>Prints an invoice and includes only those attachments in the resulting pdf that have the <b>Print with Invoice</b> flag on.</p> <p>Workday sends the attachments that don't have the flag on separately in the email notification.</p>
<i>Attachments Not Provided To Customers</i> and <i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>False</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	Prints all invoices in 1 PDF file and includes attachments flagged for internal purposes separately in the email notification.

The attachment output depends on the flag that you specify while adding an attachment to an invoice.

## 9. Click **OK**.

[2025R1 Feature Release Note: Custom Business Process Notifications for Customer Documents](#)

## Steps: Create External Tax Codes and Map to Internal Tax Codes

### Context

Various countries prescribe standard tax codes and tax exempt reason codes in electronic invoices to bypass different national tax code standards. Workday enables you to:

- Create a tax code list of external codes for a given country.

- Add subclasses for reason codes and exemption codes associated with each tax code.
- Map the external codes to internal tax code values.
- Configure document delivery rules so that you can map the document delivery types to desired integration system and external tax codes.

With this configuration, you can easily adjust the codes when tax rules change and send electronic customer invoices with external tax data to different third parties in European countries.

## Steps

### 1. Access the **Create External Tax Code List** task.

Create a list of external tax codes and tax code subclassifications for a given country. The subclassifications map to tax applicability in Workday. Ensure to validate that all external tax codes are correct.

Security: *Set Up: Tax domain* in the Common Financial Management functional area.

### 2. Access the **Maintain External Tax Code List Mappings** task.

- Specify the external tax code list you configured along with associated subclasses and map it to internal tax values.
- To use this external tax code list in an integration system, ensure to enable the tax-mapping attribute on that integration. After you enable the attribute in your integration system, Workday no longer uses the internal transaction tax codes for electronic customer invoices.

Security: *Set Up: Tax domain* in the Common Financial Management functional area.

## Next Steps

Workday displays the details of your tax code configurations on these reports:

- [View External Tax Code List](#)
- [View External Tax Code List Mappings](#)

## Steps: Print and Email Customer Invoices

### Prerequisites

- Enable email notifications and attachments at the tenant level.  
See [Steps: Set Up Customer Invoices](#) on page 778.
- [Set Up Customer Contacts and Addresses](#).  
On the customer profile, configure primary mailing address and email addresses for the recipients.
- Configure document delivery options for the customer.  
See [Reference: Email Recipients for Document Delivery](#).
- Configure the *Customer Invoice Email Event* business process and security policy in the Customer Accounts functional area.

### Context

Workday enables you to print customer invoices as PDF files and then email them to the customers or use standard mail for paper invoices. You can also create a schedule to automate the print and email process as a recurring job. Workday only prints invoices that are part of a given customer security segment.

## Steps

1. (Optional) Create a custom form for the print layout with customized printing report, company logo, or messages before printing the customer invoice document.  
See [Steps: Create Custom Invoice Print Layouts](#) on page 946.

## 2. Access the **Edit Customer Invoice Layout Rule** task.

Specify the printed filename options, and create rules to map the business form layouts to invoice types for the desired company.

To exclude the automatic prefix in the printed filename, select the **Remove Adjustment Prefix** check box.

Security:

- *Set Up: Customer Accounts* domain in the Customer Accounts functional area.
- *Set Up: Sponsor Accounts* domain in the Grants Management functional area.

## 3. Access the **Print Customer Invoices** task.

- You can only view the 20,000 most recent invoices, but you can filter the list on company, status, and other criteria.
- Select the **Group Invoices** check box to group invoices into a single PDF file. Workday only includes invoices with a regular mail delivery method or with an undefined delivery type.
- Select the **Include Attachments for Grouped Invoices** check box to include invoice attachments in the single grouped PDF file. Workday only includes invoices defined for standard delivery. When the grouped invoice PDF file exceeds the 500 MB limit, Workday splits it into multiple PDF files. When a single customer invoice includes attachments exceeding the 500 MB limit, Workday doesn't include that invoice in the printed PDF.
- Select the invoices that you want to print in the **Customer Invoices Eligible for Email** tab. After Workday generates the PDF files, click **Email Customer Invoice** to send selected invoices to customers. You can print or email up to 10,000 customer invoices at a time.

Security: *Reports: Customer Documents* domain in the Customer Accounts functional area

## 4. (Optional) [Schedule Print Customer Invoices](#).

## 5. (Optional) [Print and Email Customer Invoices Automatically](#).

## Result

Workday prints the invoices and emails them to the selected customers.

## Next Steps

View the print details on these reports:

- [Find Customer Invoice Print Runs](#)
- [Customer Invoice Printing Report](#)
- [View Customer Invoice Printing Run Group](#)

## Related Information

[2022R2 What's New Post: Customer Invoice Email and Print Process](#)

[2022R2 What's New Post: Include Invoice Attachments in Printed PDF](#)

## Print and Email Customer Invoices Automatically

### Prerequisites

- Configure the *Customer Invoice Email Event* business process and security policy in the Customer Accounts functional area.
- Configure business process security permissions to approvers.

### Context

Workday enables you to print and email customer invoices automatically using the *Customer Invoice Event* business process. This business process inherits the security of the initiator, enabling automation of print and email processes. Example: When an AR Specialist creates the invoice and sends it for approval to a Project Manager or a Cost Center Manager, the business process uses the security of the AR Specialist to launch the print and email services.

### Steps

- Access the *Customer Invoice Event* business process.
- In the **Business Process Steps** grid:

- To enable invoice printing, set **Type** to Service, and **Specify** to *Print Customer Invoice Service*. To print the invoice with a print run type of *Final*, add this service step after the approval step and set the approval step as final. When you have another step instead of the approval step, set it as *Completion*.
- To enable electronic invoicing, set **Type** to Service and **Specify** to *Electronic Invoicing via Document Delivery Rules*. When you have an *Email* service step after this step, grant the integration permissions for the *Access Customer (segmented)* domain. Also, grant *Get* and *Put* access to the *Integration Event* domain in the Integration functional area and *Process: Electronic Invoices* domain in the Customer Accounts functional area.
- To email a customer invoice PDF file automatically as soon as you print the document, set the **Type** to Service and **Specify** to *Email Customer Invoice service*.

### Related Information

[Edit Business Process Security Policies](#)

### Schedule Print Customer Invoices

### Prerequisites

- Set up customer invoices for print and email. See [Steps: Print and Email Customer Invoices](#).
- Security: *Reports: Customer Documents* domain in the Customer Accounts functional area.

### Context

You can set up a schedule to automate the print and email process for customer invoices.

### Steps

- Access the **Schedule Print Customer Invoices** task. Select the print run frequency.
- As you complete the task, consider:

Option	Description
<b>Invoice Date</b>	When you select the <i>Range</i> option, enter a number of the days before or after the schedule.

Option	Description
<b>Auto Start Email Process</b>	Select this check box to email the invoices after the print run completes.
<b>Exclude Invoices that are Consolidated</b>	To schedule print of consolidated invoices, access the <b>Schedule Print Consolidated Customer Invoices</b> task.
<b>Group Invoices</b>	<p>Select this check box to group PDFs when your delivery method:</p> <ul style="list-style-type: none"> <li>• Includes the mail option.</li> <li>• Isn't configured.</li> </ul>
<b>Include Attachments for Grouped Invoices</b>	Select this check box to include attachments for grouped invoices. This check box is only available when you select the <b>Group Invoices</b> check box.

## Result

Workday schedules printing or emailing of customer invoices with the selected frequency.

## Next Steps

To edit, delete, or suspend the print schedule, run the **Scheduled Future Processes** report.

### Steps: Create Custom Invoice Print Layouts

#### Prerequisites

- Download and install Workday Studio, including Report Designer.
- Familiarize yourself with the Workday Studio documentation and tutorials for Report Designer.
- Include the **.rptdesign** file type in the **File Type Setup Instructions** section on the **Edit Tenant Setup - System** task.

#### Context

Workday delivers a customer invoice BIRT layout and a standard printing report with the fields needed to print a customer invoice. You can customize the layout to meet your business needs.

When customizing the customer invoice layout, you can add:

- Fields that you want to include in the printed customer invoice.
- Your company logo, by using tokens. You can find tokens in your XSL stylesheet or Report Designer business form layout.
- Supplementary content, including financial messages.

#### Steps

1. Download the report design attachments from your **Customer Central** tenant and upload them in Workday Studio to make a custom copy.

2. (Optional) To create a copy of the standard delivered print report for adding fields, access the **Copy Standard Report to Custom Report** task.
- a) Select the **Customer Invoice Printing Report - Report Design** report from the **Standard Report Name** prompt and rename the report.

Workday automatically sets **Data Source** to *Customer Invoices for Print Run*. Select the *Customer Invoices for Print Run as of Approval Date* option to print customer invoice documents with data as of the most recent invoice approval date.

- b) [Create Custom Reports](#).

Customize the report fields.

**Note:** Workday automatically adds the **Print Run** prompt. If you add other prompts or filters, the report might not provide the desired results.

- c) [Set Up Share Options for Custom Reports](#).

Security: *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.

3. From the related actions menu of your **Customer Invoice Printing Report - Report Design** report, select **Web Service > View URLs**.

Import the data from the custom print report into Workday Studio.

- a) In the **Workday XML** section, for the REST field, click **Workday XML**.
- b) Save the file with an XML extension to your local drive.
- c) In the **Workday XML** section, for the XSD field, click **XSD**.
- d) Save the file with an XSD extension to your local drive.

4. Access the **Create Business Form Layout** task.

Associate your custom report with all the desired fields in the copy of the report layout that you downloaded from Workday Studio.

- a) Select the **Active** check box.
- b) In the **Resulting Document Expiration Offset (in days)** field, specify the number of days to retain the reports before they expire.

**Note:** Ensure that the expiration offset complies with your organization's document retention policy. Workday automatically deletes documents after the offset number of days. You can't recover these documents.

- c) From the **Report Design** prompt, select **Create Custom Business Form Report Design Attachment**.

Select the report design layout that you downloaded from Workday Community.

**Note:** You can create your own report design layout. See [Steps: Create Business Form Layouts with Report Designer](#).

- d) From the **Custom Report** prompt, select the delivered *Customer Invoice Printing Report - Report Design* or your custom report.
- e) Add *company\_logo* for the **Token Name**.

When you have multiple companies and want to use different logos, create a separate layout for each company.

Use the **View Business Form Layout** report to view the tokens used in a specific customized business form layout.

Security: *Custom Report Creation* domain in the System functional area.

5. (Optional) [Add a Logo to Customer Documents](#) on page 948.
6. (Optional) [Include Messages in Customer Statement Documents](#) on page 957.

## Next Steps

On the **Edit Customer Invoice Layout Rule** task, create rules to map your customized invoice print layouts to invoice types for the desired company.

[Customer Invoice](#)

## Add a Logo to Customer Documents

### Prerequisites

- Create a business form layout for customer invoice document.
- Security: *Custom Report Creation* domain in the System functional area.

### Context

When you want to use a custom logo on the printed invoice documents, Workday enables you to add the desired company logo to a given business form layout.

### Steps

1. Access the **Configure Business Form Layout** task.
2. Select the delivered *Customer Invoice Printing Form* layout or a custom layout form.
3. Upload an image of the company logo.

Workday uses this logo only for the selected business form layout since you can apply only 1 logo for each layout. When you want to configure a different logo for multiple companies, create a layout for each company, and then add the logo to each layout.

### Result

When you print and email customer invoices, statements, or dunning letters, Workday includes the company logo and signature images in the PDF file.

### Reference: Email Recipients for Document Delivery

You can configure document delivery of various document types on the **Addresses and Contact > Document Delivery** tab of the customer profile. Workday emails the customer invoice documents to the customer contacts based on:

- The option you select from the **Email Recipients** prompt for each document type.
- The document type that you specify for each contact when you configure the bill-to contacts.
  - When you don't specify a document type or the email recipient, Workday sends the email to the primary contact.
  - You can only set customer invoice as document type for your bill-to contact.

To email:

- Specify an email address on the **Addresses and Contact > Contact Information** tab of the customer.
- The document type must have the document delivery method of *Email*.

Email Recipients	Description
<i>All Customer Contact Emails</i>	Sends email to all email addresses of the contacts defined on the <b>Addresses and Contact &gt; Customer Contacts</b> tab of the customer profile.
<i>All Parent Customer Contact Emails</i>	Sends email to all contacts defined for the parent customer that you specify on the <b>Overview &gt; Summary</b> tab of the customer profile.

Email Recipients	Description
	When you select this option but don't specify a parent on the customer profile, Workday doesn't send an email.
<i>All Remit-from Customer Contact Emails</i>	Sends email to all contacts defined for the remit-from customer that you specify on the <b>Overview &gt; Payment Details</b> tab of the customer profile.  When you select this option but don't specify a remit-from customer on the payment details, Workday doesn't send an email.
<i>Customer Primary Email</i>	Sends email only to the primary email address set on the <b>Addresses and Contact &gt; Contact Information</b> tab of the customer profile.  To send emails to multiple email addresses, set up customer contacts first.
<i>Parent Customer Primary Email</i>	Sends email only to the primary email address set on the parent customer that you specify on <b>Overview &gt; Summary</b> tab.
<i>Remit-from Customer Primary Email</i>	Sends email only to the primary email address defined for the remit-from customer that you specify on the <b>Overview &gt; Payment Details</b> tab.
<i>Statement Contact Emails</i>	Sends email to all the customer contacts that have the <b>Email Document</b> option set to <i>Customer Statement</i> when you configure your <b>Bill-To Contacts</b> .
<i>Bill-To Contact Emails on Invoice</i>	Sends email to the <b>Bill-To Contact</b> you specify on the invoice header when you create a customer invoice.
<i>Invoice Contact Emails</i>	Sends email to all the customer contacts that have the <b>Email Document</b> option set to <i>Customer Invoice</i> when you configure your <b>Bill-To Contacts</b> .
<i>Dunning Letter Contact Emails</i>	Sends email to all the customer contacts that have <b>Email Document</b> option set to <i>Dunning Letter</i> when you configure your <b>Bill-To Contacts</b> .

### Example: Configure Customer Contacts for Email

This example illustrates how to set up customer contacts so that you can email the invoice documents to them easily.

## Context

As a Setup Administrator, you've created a customer profile in Workday. You now want to set up bill-to contacts so that you can automatically email various documents after you print them. When you don't configure billing contacts, Workday sends the email to the primary contact.

## Prerequisites

- Configure your tenant for email and attachments.  
See [Steps: Set Up Customer Invoices](#) on page 778.
- Configure the *Customer Invoice Email Event* business process to define conditions and rules for emailing and attachments.  
See [Steps: Configure Workflow Notifications to Email Customer Invoices and Attachments](#).
- Ensure that your tenant has the default email and mail document delivery types along with the delivery method.
- For electronic invoices, create document delivery rules to map the integration document delivery type to the desired integration system and an external tax code list if applicable.
- Security: *Set Up: Customer Contacts* domain in the Customers functional area.

## Steps

- From the **Addresses and Contacts** profile group on a customer profile, access **Customer Contacts**.
- Click **Add**.
- In the **Name** tab, enter or select these values:

Option	Description
Country	United States of America
First Name	John
Last Name	Doe

- In the **Contact Information** tab, click **Email**.

- Enter or select these values:

Option	Description
Email Address	john.doe@workday.com
Type	Work

- Click **OK** and **Done**.
- Click **Set Up Bill-To Contacts**.
- Enter or select these values:

Option	Description
Default Bill-To Contact	Select this check box.
Email Documents	Select these options: <ul style="list-style-type: none"> <li><i>Customer Invoice</i></li> <li><i>Customer Statement</i></li> <li><i>Dunning Letter</i></li> </ul>

## Result

Workday sends customer invoices, customer statements, and dunning letters to the default bill-to contact.

## Print and Email Customer Statements

### Steps: Create Customer Statement Print Layout

#### Prerequisites

- Upload the business form layout for customer statements.
- Security: These domains in the Customer Accounts functional area:
  - Set Up: Customer Accounts*.
  - Reports: Customer* to use the delivered *Customer Statement* business form layout.

#### Context

You can create layouts for a company to use when printing and emailing customer statements. You can:

- Create a custom layout for your report design to meet your business needs. You can have more than 1 layout for your company.
- Customize the Workday delivered standard statement layout with your company logo and financial messages.
- Specify a statement type, aging group, and remittance option for the company.

#### Steps

- Access the **Create Customer Statement Print Layout** task. Complete the task:

Option	Description
<b>Statement Type</b>	Select: <ul style="list-style-type: none"> <li><i>Balance Forward</i> to include a consolidated balance on the customer statement. This balance carries over to each subsequent billing period.</li> <li><i>Open Item</i> to include individual customer invoices on the statement that aren't yet paid in full.</li> </ul>
<b>Business Form Layout</b>	Select: <ul style="list-style-type: none"> <li>Workday-delivered customer statement layout.</li> <li>A custom layout if you require more flexibility than the delivered print layout.</li> </ul> From the <i>All</i> prompt filter, you can select custom business forms that use: <ul style="list-style-type: none"> <li><b>Document Layout</b></li> <li><b>Report Design</b></li> </ul> Workday only displays active business forms on this prompt.
<b>Include Company Logo</b>	Select to display your company logo on the standard business form layout.
<b>Aging Group</b>	Specify the number of days for each aging group. Workday aggregates the invoice amounts by the aging group in your output file.
<b>Customer Statement Remittance Option</b>	Select: <ul style="list-style-type: none"> <li><i>Credit Card</i></li> <li><i>Standard</i></li> </ul>

Option	Description
<b>Financial Message</b>	Enter a message to display on each sponsor statement that you generate with this layout. You can include up to 3 financial messages per company.

Security: These domains in the Customer Accounts functional area:

- *Set Up: Customer Accounts.*
- *Reports: Customer* to use the delivered *Customer Statement* business form layout.

2. (Optional) To create a copy of the standard delivered print report for adding fields, access the **Copy Standard Report to Custom Report** task.

- a) Select the **Customer Statement to Print - Report Design** report from the **Standard Report Name** prompt and rename the report.

Workday automatically sets **Data Source** to *Customers for Customer Statement Printing Run*.

- b) [Create Custom Reports](#).

Customize the report fields.

**Note:** Workday automatically adds the **Print Run** prompt. If you add other prompts or filters, the report might not provide the desired results.

- c) [Set Up Share Options for Custom Reports](#).

Security: *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.

## Result

Workday uses this print layout when you generate the statement PDF.

## Next Steps

- Configure delivery method to email or regular mail.
- Print and email customer statements. Workday routes the customer statements to the *Customer Invoice Email Event* business process for review and approval before you email them.

## Related Information

### Tasks

[Create a Business Form Layout in Workday Studio](#)

[Upload a Business Form Layout and Attach It to a Custom Report](#)

## Print Customer Statements

### Prerequisites

- [Create Customer Statement Print Layout](#).
- Security: *Reports: Customer Documents* domain in the Customer Accounts functional area.

### Context

Workday enables you to print customer statements that you can use to mail to your customers by regular mail or send as PDFs by email. When you print customer statements, you can:

- Specify the preferred delivery type.
- Filter out blank statements and retrieve only those statements that have open items.
- Exclude balance forward statements that have no balance or no account activity.
- Group statements that don't have the bill-to contact email addresses.

## Steps

1. Access the **Print Customer Statements** task.
2. As you complete the task, consider:

Option	Description
<b>Override Statement Type</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Balance Forward</i> to summarize the balance due from the start date you enter.</li> <li>• <i>Open Item</i> to include invoices that aren't yet paid in full.</li> </ul>
<b>Balance And Activity Options</b>	<ul style="list-style-type: none"> <li>• For <i>Balance Forward</i>, exclude statements that have zero balance, no account activity, or both. You can also select to exclude statements that are either zero balance, or no account activity.</li> <li>• For <i>Open Item</i>, exclude statements with zero balance only, or zero balance and fully paid.</li> </ul>
<b>Balance Forward Start Date</b>	<p>Summarizes balances from the selected start date. The balance forward start date can't be after the statement date.</p> <p>Workday doesn't display this calendar prompt when you select the <i>Open Item</i> option on <b>Override Statement Type</b>.</p>
<b>Aging Days Greater Than Or Equal To</b>	<p>When you specify the number of aging days, Workday includes all invoices, as long as at least 1 of the invoices meets the maximum aging days for the customer.</p> <p>Example: Customer A has 3 outstanding invoices that belong to these invoice aging groups: <b>Current</b>, <b>1-30</b>, and <b>91+</b>. When you enter <b>91</b> in the <b>Aging Days Greater Than Or Equal To</b> field, Workday includes all 3 invoices for Customer A in the customer statement print run. Customer B has 1 outstanding invoice that belongs to the <b>1-30</b> invoice aging group. When you enter <b>91</b> in the <b>Aging Days Greater Than Or Equal To</b> field, Workday doesn't return any invoices for Customer B in the print run.</p>
<b>Group non Email Delivery Statements</b>	<p>Select the check box to group statements without a bill-to contact email address.</p>

## Result

Workday generates customer statements for the selected customers.

## Next Steps

You can:

- Print the generated PDFs and send customer statements by regular mail.

- Click **Email Customer Statements** to send customer statements by email.
- Access the **Schedule Print Customer Statements** task to schedule customer statements for automatic printing.

## Related Information

### Tasks

[Steps: Set Up Customer Statements](#) on page 903

## Set Up Workflow Notifications for Customer Statement Emails

### Prerequisites

Security: Configure the *Customer Statement Event* business process and security policies in the Customer Accounts functional area.

See:

- [Steps: Enable Functional Areas and Security Policies](#)
- [Steps: Set Up Security Permissions](#)

### Context

You can configure workflow notifications in the business process to email customer statements to your customers.

Workflow notifications enable you to define:

- Email template.
- Time to trigger the email event.
- Conditions and rules for emailing to suit your business needs.
- Security groups that can access this task.
- Email options and recipients.
- Email or SMS message.
- Attachments behavior.

### Steps

1. Access the **Business Process Definition for Business Object** report.
2. From the **Business Object** prompt, select your organization.
3. Click **OK**.
4. From the **Business Process Definition** column, access **Customer Statement Event**.
5. On the **Notifications** tab, access **Business Process > Edit Notification** from the related actions menu on the **Notification** column in the **Custom Notifications** grid.
6. Click **OK**.
7. Complete the **Edit Workflow Notification** task:

Option	Description
<b>Override Email Template</b>	Select the notification template that defines the appearance and content of your email.
<b>Triggers</b>	Select the business process status or the time to launch the event.
<b>Conditions and Rules</b>	You can configure rules to determine whether or when Workday should send the notification.
<b>Repeat On</b>	Workday automatically sets this prompt to <i>Customer Statements to Be Emailed</i> .

Option	Description
	<p>Workday prevents you from emailing your statements when you:</p> <ul style="list-style-type: none"> <li>• Have more than 1 customer in the print run group.</li> <li>• Leave this prompt blank.</li> <li>• Select options other than <i>Customer Statements to Be Emailed</i>.</li> <li>• Use a calculated field on the Customer Statement Printing Run business object where the business object doesn't match the respective business process definition.</li> </ul>
<b>Repeat On Conditions and Rules</b>	<p>You can configure conditions to filter the related instances for external fields, only sending notifications for the filtered instances.</p> <p>Example: You print customer statements for the company Global Modern Services (GMS) USA. You need to use multiple custom email configurations based on customers in the printing run group. You modify the <i>Customer Statement Event</i> business process definition for Global Modern Services (GMS) USA to create custom notifications with the repeat on condition rule based on the <b>Customers</b> field. You may override email settings to use an appropriate email configuration for the custom notification that Workday sends to the customers.</p>
<b>Recipients</b>	<p>Select 1 or more <b>Recipients</b> to send the emails to. You can specify additional emails in the <b>Email Addresses</b> section.</p> <p>Workday sends emails to the bill-to contacts you define on the customer profile, and to any email addresses you enter here.</p>
<b>Groups</b>	<p>Select 1 or more security groups that can execute this task.</p>
<b>Email Option</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Default</i> to send emails to both home and work email addresses for a billing contact.</li> <li>• <i>First Work, then Home</i> to first send a notification to the work email address. If you don't set any work email address but have at least 1 home email address, Workday sends the notification to the home email address.</li> <li>• <i>Home Only</i> to send 1 notification only to the home email address. If you haven't defined a home email address, Workday doesn't send the notification. When you have more than 1 home email addresses, Workday sends the email to the primary home email address.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>Work Only</b> to send 1 notification only to the work email address. If you haven't defined a work email address, Workday doesn't send the notification. When you have more than 1 work email, Workday sends the email to the primary work email address.</li> </ul>

8. Complete the **Attachment(s)** section of the task:

Attachment Option	Attachment Flag Specified on an Invoice	Result
<i>Attachments Linked to Invoice</i>	N/A	<p>Workday includes all attachments associated with the customer invoice in the email and ignores the attachment flag you specify on the invoice.</p> <p>Select this option if you generate your invoices using third-party software.</p>
<i>Attachments Not Provided To Customers</i>	N/A	<p>Workday doesn't provide any direct or referenced attachments to customers.</p>
<i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>True</i></li> </ul>	<p>Includes all attachments in the PDF file when you print the invoice.</p>
<i>Attachments provided To Customers But Not Included In Printing Run</i> and <i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	<p>Prints all the invoices in 1 PDF file and includes all attachments separately in the email notification for each invoice.</p>
<i>Attachments Not Provided To Customers</i> and <i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	<p>Prints an invoice and includes only those attachments in the resulting pdf that have the <b>Print with Invoice</b> flag on.</p> <p>Workday sends the attachments that don't have the flag on separately in the email notification.</p>
<i>Attachments Not Provided To Customers</i> and <i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>False</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	<p>Prints all invoices in 1 PDF file and includes attachments flagged for internal purposes separately in the email notification.</p>

9. Click **OK**.

## Include Messages in Customer Statement Documents

### Prerequisites

Security: Set Up: *Financial Messages* domain in the Common Financial Management functional area.

### Context

You can add financial messages to the customer statement documents that you print in PDF format.  
Example: Add a message to remind that the payments are due at the end of the month.

You can't add financial messages to these customer documents:

- Consolidated customer invoices.
- Customer invoices.
- Dunning letters.
- Netting statements.

### Steps

1. Access the **Maintain Financial Messages** task.
2. Add a new financial message.
3. Complete the grid:

Option	Description
<b>Restrict Type to</b>	Select 1 or more financial documents for the financial message. Examples: <ul style="list-style-type: none"> <li>• <i>Customer Statement</i></li> <li>• <i>Expense Report</i></li> <li>• <i>Supplier Contract</i></li> </ul> When you don't select any option, Workday includes the message for all documents that support financial messages.
<b>Financial Message Name</b>	Enter the name for your financial message. Example: <i>Service Charge</i> .
<b>Financial Message</b>	Enter the financial message. Example: <i>Please submit your payment by the end of the month</i> .
<b>Usage Count</b>	Displays how many documents use this message. You can delete financial messages only when their usage count is zero.

4. Click **OK**.

### Result

You can add or remove the customer statement financial messages on these tasks:

- **Create Customer Statement Print Layout**
- **Edit Customer Statement Print Layout**

### Next Steps

Access the **View Customer Statement Print Layout** report to view the financial messages for customer statements.

## Print and Email Dunning Letters

### Print Dunning Letters

#### Prerequisites

- Set up customer contacts, email addresses, and document delivery preferences.
- Security: *Reports: Customer Documents* domain in the Customers Accounts functional area. See [Steps: Enable Functional Areas and Security Policies](#).

#### Context

You can create dunning letters to remind customers about the status of past-due invoices, improving the collections process. Example: Sending your customer a dunning letter that includes all overdue invoices.

You can:

- Select from 3 dunning letter templates of increasing severity, or create your own dunning letters from these templates.
- Include invoice adjustments, invoices with negative amount, invoices in dispute, or on hold when you print the dunning letters.
- Include latest interest and late fee calculations for past-due invoices in the dunning PDF when you haven't yet generated finance charges.
- Configure specific customer profiles to exclude them from receiving dunning letters.
- Email letters to customers that have *Email* configured as a preferred delivery method.
- Print letters for customers who prefer to receive them by mail.

Workday doesn't:

- Include consolidated invoices in dunning letters.
- Generate a dunning letter PDF for multiple currencies in a single print run.

#### Steps

1. (Optional) To enable emailing of dunning letters, select the *Email* channel on your routing rule for custom business process notifications.

When you edit **Custom Notifications** on the *Dunning Letter Email Event* business process, ensure that the **Repeat On** prompt is set to *Dunning Letters to be Emailed*. If you leave this field blank, Workday sends all the dunning letters to everyone.

2. Access the **Print Dunning Letters** task.
3. As you complete the task, consider:

Option	Description
<b>Dunning Level Group</b>	Access the <b>Create Dunning Level Group</b> task from this prompt to configure dunning levels.
<b>Customers to Exclude</b>	You can specify 1 or more customers to exclude from this print run.
<b>Generate Associated Invoice PDFs</b>	When invoices use different business form layouts, Workday generates 1 file for each business form layout.  To include associated invoices when you email dunning letters, configure the <i>Dunning Letter Email Event</i> business process.

Option	Description
<b>Group Dunning Letters for Mailing</b>	<p>In addition to creating individual dunning letters, Workday groups letters by dunning level and customer locale for customers with:</p> <ul style="list-style-type: none"> <li>• <i>Mail</i> configured as a delivery method.</li> <li>• No configured delivery method.</li> </ul>
<b>Override Dunning Level Setting</b>	<p>To override the dunning level selection, you can include:</p> <ul style="list-style-type: none"> <li>• <b>All Open Invoices</b></li> <li>• <b>All Overdue Invoices</b></li> </ul> <p>Workday will ignore the aging days you specified in the <b>Dunning Levels</b> option, but will continue to use the <b>Business Form Layout</b> associated with the selected dunning level.</p>

## Next Steps

- Access the **Schedule Print Dunning Letters** task to configure a recurring print job.
- Exclude specific invoices from dunning letters with the **Manage Customer Invoices** task.
- View dunning letters on the **Find Dunning Letter Print Runs** report.

## Related Information

## Set Up Workflow Notifications for Dunning Letter Emails

### Prerequisites

Security: Configure the *Dunning Letter Email Event* business process and security policies in the Customer Accounts functional area.

See:

- [Steps: Enable Functional Areas and Security Policies](#)
- [Steps: Set Up Security Permissions](#)

### Context

You can configure workflow notifications in the business process to email dunning letters to your customers. Workflow notifications enable you to define:

- Email template.
- Time to trigger the email event.
- Conditions and rules for emailing to suit your business needs.
- Security groups that can access this task.
- Email options and recipients.
- Email or SMS message.
- Attachments behavior.

## Steps

1. Access the **Business Process Definition for Business Object** report.
2. From the **Business Object** prompt, select your organization.
3. Click **OK**.
4. From the **Business Process Definition** column, access **Dunning Letter Email Event**.
5. On the **Notifications** tab, access **Business Process > Edit Notification** from the related actions menu on the **Notification** column in the **Custom Notifications** grid.
6. Click **OK**.
7. Complete the **Edit Workflow Notification** task:

Option	Description
<b>Override Email Template</b>	Select the notification template that defines the appearance and content of your email.
<b>Triggers</b>	Select the business process status or the time to launch the event.
<b>Conditions and Rules</b>	You can configure rules to determine whether or when Workday should send the notification.
<b>Repeat On</b>	<p>Workday automatically sets this prompt to <i>Dunning Letters to Be Emailed</i>.</p> <p>Workday prevents you from emailing your dunning letters when you:</p> <ul style="list-style-type: none"> <li>• Have more than 1 customer in the print run group.</li> <li>• Leave this prompt blank.</li> <li>• Select options other than <i>Dunning Letters to Be Emailed</i>.</li> <li>• Use a calculated field on the Dunning Letter Printing Run business object where the business object doesn't match the respective business process definition.</li> </ul>
<b>Repeat On Conditions and Rules</b>	<p>You can configure conditions to filter the related instances for external fields, only sending notifications for the filtered instances.</p> <p>Example: You print dunning letters for the company Global Modern Services (GMS) USA. You need to use multiple custom email configurations based on customers in the printing run group. You modify the <i>Dunning Letter Email Event</i> business process definition for Global Modern Services (GMS) USA to create custom notifications with the repeat on condition rule based on the <b>Customers</b> field. You may override email settings to use an appropriate email configuration for the custom notification that Workday sends to the customers.</p>
<b>Recipients</b>	Select 1 or more <b>Recipients</b> to send the emails to. You can specify additional emails in the <b>Email Addresses</b> section.

Option	Description
	Workday sends emails to the bill-to contacts you define on the customer profile, and to any email addresses you enter here.
<b>Groups</b>	Select 1 or more security groups that can execute this task.
<b>Email Option</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Default</i> to send emails to both home and work email addresses for a billing contact.</li> <li>• <i>First Work, then Home</i> to first send a notification to the work email address. If you don't set any work email address but have at least 1 home email address, Workday sends the notification to the home email address.</li> <li>• <i>Home Only</i> to send 1 notification only to the home email address. If you haven't defined a home email address, Workday doesn't send the notification. When you have more than 1 home email addresses, Workday sends the email to the primary home email address.</li> <li>• <i>Work Only</i> to send 1 notification only to the work email address. If you haven't defined a work email address, Workday doesn't send the notification. When you have more than 1 work email, Workday sends the email to the primary work email address.</li> </ul>

8. Complete the **Attachment(s)** section of the task:

Attachment Option	Attachment Flag Specified on an Invoice	Result
<i>Attachments Linked to Invoice</i>	N/A	<p>Workday includes all attachments associated with the customer invoice in the email and ignores the attachment flag you specify on the invoice.</p> <p>Select this option if you generate your invoices using third-party software.</p>
<i>Attachments Not Provided To Customers</i>	N/A	Workday doesn't provide any direct or referenced attachments to customers.
<i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>True</i></li> </ul>	Includes all attachments in the PDF file when you print the invoice.
<i>Attachments provided To Customers But Not Included In Printing Run</i> and	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	Prints all the invoices in 1 PDF file and includes all attachments separately in the email notification for each invoice.

Attachment Option	Attachment Flag Specified on an Invoice	Result
<i>PDF for Printing Run Business Process Notifications</i>		
<i>Attachments Not Provided To Customers</i> and <i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>True</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	<p>Prints an invoice and includes only those attachments in the resulting pdf that have the <b>Print with Invoice</b> flag on.</p> <p>Workday sends the attachments that don't have the flag on separately in the email notification.</p>
<i>Attachments Not Provided To Customers</i> and <i>PDF for Printing Run Business Process Notifications</i>	<ul style="list-style-type: none"> <li>• <b>Provide to Customer</b> is <i>False</i></li> <li>• <b>Print with Invoice</b> is <i>False</i></li> </ul>	Prints all invoices in 1 PDF file and includes attachments flagged for internal purposes separately in the email notification.

9. Click **OK**.

## Reference: Invoicing and Receivables Reports

This table lists a number of useful customer-related reports.

Report	Description
<b>Customer Activity Details</b>	View the transactions for this customer or hierarchy that fall within the specified time range. Details include the transaction, date, type, number, due date, state, increase or decrease, and balance.
<b>Customer Activity Summary</b>	<p>View the total transaction amounts for the specified customers that fall within the specified time range.</p> <p>Details include:</p> <ul style="list-style-type: none"> <li>• Adjustments total</li> <li>• Beginning balance</li> <li>• Currency</li> <li>• Ending balance</li> <li>• Invoices total</li> <li>• Payments total</li> <li>• Refunds total</li> <li>• Write-off total</li> </ul>
<b>Customer Balance Details</b>	<p>View the open balance for each customer.</p> <p>Details include currency, reporting transaction, type, number, and date, due date, aging days, original amount, payments applied, discounts, write off, and open balance.</p>
<b>Customer Balance Summary</b>	View the currency, invoices total, adjustments, unapplied payments, and balance for each customer.

Report	Description
<b>Customer Invoices Requiring Action</b>	View invoices that might require action. Only returns invoices that are late, on hold, in collection, or in dispute. Use this report as the basis for custom reports that meet your specific criteria for invoices that require attention.
<b>Customer Payment Detail</b>	<p>View all customer payment activity for your company or company hierarchy. Enables you to check the status and details of your customer payments. You can narrow your report results to specific customers, a payment date range, and other criteria. Example: Payment date, status, type, and amount.</p> <p>You can also see payment application details including customer invoices and adjustments paid, write off, and payment amount on account. As related actions you can cancel, return, or unapply payments as necessary.</p>
<b>Customer Statements</b>	<p>View customer statements for the specified customer or hierarchy that apply to the specified company.</p> <p>Details on the <b>Transactions</b> tab include each transaction date, type, number, due date, state, increase or decrease, and balance. These transactions are sorted by currency.</p> <p>Details on the <b>Aging Report</b> tab include, for each customer, the current amount and amounts for different ages, depending on the selected aging group.</p>
<b>Find Customer Deposits</b>	<p>View all deposits in the specified period.</p> <p>Details on both the <b>Deposits</b> tab and the <b>Payments Included in Deposit</b> tab include the status, customer, date, bank account, deposit amount, and currency.</p>
<b>Find Customer Invoices</b>	View the number, company, status, customer, date, memo, discount date, due date, invoice amount, amount due, currency, adjustment, and adjustment reason for each invoice.
<b>Find Customer Invoices for Billable Projects</b>	For the <b>Billable Projects</b> and <b>Company</b> standard reports, you can save and refine your searches after Workday displays your results.
<b>Find Customer Invoices for Company</b>	
<b>Find Customer Write-Offs</b>	<p>View the status, customer, write-off date, and amount for each bad debt write-off.</p> <p>View the status, customer, payment date, and amount for each customer invoice write-off included in a payment.</p>

Report	Description
<b>Receivables Aging</b>	<p><b>Note:</b> We plan to retire these 2 receivables aging reports in March 2026. For better performance and configurability, Workday recommends that you use the Receivables Aging Detail Standard Report and Receivables Aging Summary Standard Report.</p>
<b>Receivables Aging Detail</b>	<p>You can select to run these reports as operational aging based on the invoice date, or financial aging based on the accounting date by accounting period. For each customer, view the current amount and invoice amounts for different ages, depending on the selected aging group. For operational aging, the reports display outstanding customer receivable amounts in user-defined aging buckets. Supports up to 6 aging buckets. Workday displays a warning if an aging group has more than 6 aging buckets.</p>
	<p>If you run the aging report as financial aging by accounting period, you can filter by <i>Ledger Period for Receivables Aging</i>. Select either the current period or a specific ledger period by ledger year.</p>
	<p><b>Note:</b> Both the operational and financial aging are cumulative in capturing total invoice amounts. Operational aging is useful for tracking your receivables from a collections perspective. Financial aging is helpful for closing your accounting period.</p>
	<p>Example: A customer invoice with an invoice date of 1/31/15, but an accounting date of 2/1/15, won't display in a financial aging report for January of 2015. It displays in February 2015. An operational aging report displays that invoice in January 2015.</p>
	<p>Includes only transactions with an invoice date that is before the selected report date. The most common aging report displays: Current, 1-30, 31-60, 61-90 and &gt;90.</p>
	<p>The Detail report breaks down aging by specific invoice transaction.</p>
<b>Receivables Aging Detail Standard Report</b>	<p>View aggregated past due amounts by company for a given period. When you run the report for <b>Financial Aging</b>, you can specify any reporting date, instead of defaulting to the last day of a month. You can also report in a different currency than the company currency. Copy these reports to create custom reports for using calculated fields to:</p>
<b>Receivables Aging Summary Standard Report</b>	<ul style="list-style-type: none"> <li>• Specify the desired aging periods.</li> <li>• Report on other invoice attributes such as invoice types, or billable projects.</li> </ul>
	<p>When you run the report in the financial aging mode, Workday doesn't display customer payments that are recorded but not applied.</p>
	<p>You can also use the <b>Customer Payment for Invoices</b> report data source to create custom reports for viewing your receivables aging data based on payment balances in reporting currency, transaction currency, or company currency.</p>

Report	Description
<b>Sub-Receivables Aging Customer Invoice</b>	View past due amounts based on on-account and unapplied payments balances by company for a given period. It includes information about original transaction amount, transaction balances in transaction currency, company currency, and reporting currency, on-account balance in reporting currency, and unapplied balance in reporting currency.
<b>Sub-Receivables Aging Customer Payment On-Account And Unapplied</b>	These matrix reports have required prompts to filter the data by:
<b>Sub-Receivables Aging Summary Customer Invoice</b>	<ul style="list-style-type: none"> <li>• <i>Aging Report Mode</i></li> <li>• <i>Aging Basis Date</i></li> <li>• <i>Reporting Date</i></li> </ul>
<b>Sub-Receivables Aging Summary Customer Payment On-Account</b>	<ul style="list-style-type: none"> <li>• <i>Reporting Currency</i></li> <li>• <i>Currency Rate Type</i></li> </ul>
<b>Sub-Receivables Aging Summary Customer Payment Unapplied</b>

## Reference: Separate Ledger Accounts for Account Posting Rules

This table includes the common Account Posting Rules (APR) used in revenue transactions and scenarios where Workday recommends creating a separate ledger account for each use case instead of using the original AR ledger account for improved reconciliation.

APR Rule	Ledger Account Type	Operational Use Case Transaction	APR Debit	APR Credit	Use Instead	Reason	
Deferred Revenue	Liability	Customer invoice or adjustment	Record the accumulated deferred revenue so that you can recognize the revenue in the next period.	Receivables	Deferred Revenue	None	No exception scenario.
Receivables	Asset	Customer Payment	Record the value of receivables due from customers in a customer payment.	Cash	Receivables	None	No exception scenario.

APR Rule	Ledger Account Type	Operational Use Case Transaction	APR Debit	APR Credit	Use Instead	Reason
<b>Receivables Overpayment</b>	Income Customer Payment	Record the value of a customer payment with a record of overpayment.	Unapplied On-Account Payments	Receivables Overpayment	A separate Revenue or P&L Account	When you record an overpayment during payment application, the AR ledger will be understated compared to the <b>Receivables Aging</b> reports as the overpayment is not applied to customer balance. Hence, using a separate ledger account will help you reconcile the two.

APR Rule	Ledger Account Type	Operational Use Case Transaction	APR Debit	APR Credit	Use Instead	Reason	
<b>Receivable Writeoff</b>	Expense	Bad debt write off	Record the value of customer invoice writeoff for unrecoverable balances.	Receivables Writeoff	Receivables	A separate Expense or Revenue Account. When you write off a small amount during payment application or through an independent write off task, the AR ledger will be overstated compared to the Receivables Aging reports as the same AR ledger account is debited and credited. Hence, using a separate ledger account will help you reconcile the balance sheet.	
<b>Revenue</b>	Income	Customer Invoice	Record the sale value of an item in a customer invoice.	Receivables	Revenue	None	No exception scenario.

APR Rule	Ledger Account Type	Operational Use Case Transaction	APR Debit	APR Credit	Use Instead	Reason
<b>Transaction Tax</b>	<b>Either:</b> <ul style="list-style-type: none"> <li>• Asset</li> <li>• Liability</li> </ul>	Record the value of tax on sales transactions in a customer invoice.	Receivables - <b>Transaction Tax</b>	- Receivables - <b>Revenue</b>	2 separate ledger accounts	<b>Workday uses Transaction tax on Payment in countries or type of businesses where the tax point date is at payment on cash basis. For example, in south of Europe and North Africa, we recommend that you have 2 separate ledger accounts - 1 for pending collected tax and 1 for pending deductible tax.</b>

APR Rule	Ledger Account Type	Operational Use Case Transaction	APR Debit	APR Credit	Use Instead	Reason	
<b>Unapplied On-Account Payments</b>	Liability	Deposit on-account payments	Record the value of customer payments deposited but not applied to a customer invoice.	Cash	Unapplied On-Account Payments	A separate Liability Account	When you place a payment amount on account, we credit the AR ledger account. However, it's a liability as it could require a refund in the future. Hence, using a separate ledger account will help you reconcile the ledger account as Workday shows on-account amounts as reductions to a customer balances on the Receivables Aging reports.

APR Rule	Ledger Account Type	Operational Use Case Transaction	APR Debit	APR Credit	Use Instead	Reason	
<b>Unapplied Recorded Payments</b>	Liability	Customer Deposit	Record the value of customer payments deposited but unapplied so it doesn't display as part of the customer balance.	Cash	Unapplied Recorded Payments	A separate Liability Account	When you record a customer payment but don't apply it and create a deposit separately, the payment application understate the AR ledger account compared to the Receivables Aging report. Hence, using a separate ledger account will help you reconcile the two.

APR Rule	Ledger Account Type	Operational Use Case Transaction	APR Debit	APR Credit	Use Instead	Reason
Unbilled Receivables	- Asset - Liability	<p>No customer invoice is posted but revenue has been recognized.</p> <p>Or, customer invoice is posted before revenue recognition.</p> <p>Or, record deferred revenue for a billed invoice.</p> <p>For example, Subscription billing when revenue is recognized at the beginning of the period and billing is done at the end of the period.</p>	<p>Record the value of receivables not yet billed. For example based on percentage of completion when the Customer Contract Asset and Liability Reclassifications task is used.</p>	Receivables	<p>Unbilled Receivable Asset clearing Account</p>	<p>Create a separate ledger account when revenue recognition is separate from billing because you can have both deferred and accrued revenue for the same contract in a given period.</p> <p>When you've billed but not recognized the revenue, the AR balance on the ledger will be understated while the Receivables Aging reports will show a higher balance because the customer invoice has been issued.</p> <p>When you've recognized the revenue but not billed, the AR balance on the ledger</p>

APR Rule	Ledger Account Type	Operational Use Case Transaction	APR Debit	APR Credit	Use Instead	Reason
Undeposited Asset Payments	On-account payment application	Record the value of an on-account customer payment not yet deposited into a bank account.	Undeposited Payments	Unapplied On-Account Payments	A separate Asset Account	When you apply the customer payment but don't record the deposit, the AR ledger account balance will be overstated compared to the Aging report as Workday shows the applied amounts as reductions to a customer balances on the Receivables Aging reports. Hence, using a separate ledger account will help you reconcile the two.

## Services CPQ

---

### Setup Considerations: Services CPQ

---

You can use this topic to help make decisions when planning your configuration and use of Workday Services CPQ functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### **What It Is**

Services Configure, Price, Quote (CPQ) automates the quote to cash process. It offers an accurate and easily repeatable way to scope and price deals. Services CPQ leverages Professional Services Automation (PSA) and Revenue price list configurations to populate the grid data automatically in the quote. You can:

- Create quotes for services with duration, phases, roles, items, and expenses based on customer needs.
- Copy and paste values from external tools, or enter values manually in the quote grid.
- Add third party costs.
- View discount and margin percentages easily and set price targets to suit your business needs.
- View a quote by time period such as weeks, months, phases, contract years, or summary. You can also view them by amounts such as quantity, price, cost, or FTE.
- Define service catalogs with pre-configured services, roles, and expenses.
- Set up document templates and generate documents for quotes dynamically.

### **Business Benefits**

Services CPQ simplifies the process of creating quotes in Workday from opportunities in Salesforce (SFDC) and converting them to contract when you win and close the opportunity. It provides:

- Access to the latest sales data and 1 source of truth for pricing, resourcing, and billing data.
- Better visibility between SFDC and Workday.
- Flexibility in configuring various service offerings for a given quote.
- Accurate quotes and quote documents, replacing error-prone disconnected spreadsheets or word documents.
- Timely insight into resource forecasting and resource management.
- Faster quote creation with price granularity to suit your business needs.

### **Use Cases**

As a CPQ Specialist, you can:

- Create quotes for services that include phases, roles, items, and expenses based on customer needs.
- Copy existing quotes to create multiple iterations for various what-if scenarios.
- Send the quote document to customers for review and negotiation.
- Configure business processes for internal approvals based on quote data.
- Automatically create opportunity projects, projects, resource plans, and resource forecasts from approved quote data.
- Automatically create customer contracts, billing schedules, and revenue recognition schedules from internally approved quotes for closed and won opportunities.

### **Questions to Consider**

Questions	Considerations
Do you need to iterate and create multiple options of a quote?	You can copy quotes within an opportunity. Workday copies all details into the draft quote.
Do you need rates to default in for project roles on a quote?	You can edit and create project billing rate sheets to populate the unit list prices for specific roles on your quote.
Do you need costs to populate the labor and items on a quote?	You can set up the standard cost rate sheet by company to populate the unit price for roles and

Questions	Considerations
	define the sales item as quotable to add unit cost for items.
Do you need to record and bill worker expense reports against the project?	You can add expense lines to the quote for a billable project time and expense line with a transaction source of time on the customer contract.
Do you need to record and bill supplier invoices against the project?	You can add third party cost lines to the quote for a billable project time and expense line with a transaction source of supplier invoice on the customer contract.
Do you need to have dynamic approvals based on the quote data?	Workday provides a configurable business process framework for Quotes that you can set up to include approvals and condition rules to suit your business needs.
Do you need to create documents automatically from the quote details?	You can create document templates from within a quote configuration based on the quote data. During quote creation, when you select a quote configuration that includes a document template, Workday creates the customer contract document based on that document template and populates values with specific details from the quote instance.

## Recommendations

When you use Project Billing Rate sheets in a quote, don't configure project rate category members as it returns a \$0 unit list price for roles under a service that references this project billing rate sheet.

## Requirements

- Ensure that you have the Workday Projects, Customer Contracts and Revenue, and Services CPQ SKUs.
- Ensure that your validations align between Quote, Project, and Customer Contract. Example: If the custom validation requires a unique project name on projects, ensure that the custom validation you create for services also requires a unique service name on quotes.
- Ensure to set these business processes to auto complete when initiated by quote approval:
  - Convert Opportunity Project to Project.
  - Edit Project.
  - Opportunity Project.
- Ensure to configure quote to contract mapping.

## Limitations

- You can only add 1 worker to the resource plan for an opportunity project generated from Services CPQ at this time.
- Only approved and primary quotes create an opportunity project.
- We limit the services on a quote to a maximum of 5 years in duration.
- Quote duration can be a maximum of 10 years.
- You can copy and paste a maximum of 500 cells in the quote grid.
- You can only edit an approved quote when the opportunity is in open status.
- Copying a quote doesn't copy downstream attributes.

- We don't support approvals on *Convert Opportunity Project to Project*, *Edit Project*, and *Opportunity Project* business processes at this time.

## Tenant Setup

Access the **ID Generator for Quotes** prompt under the **Business Document Sequence ID** section, on the **Edit Tenant Setup - Financials** task to configure the quote sequence generator.

## Security

Configure these security domains in the Services CPQ functional area:

Domain	Considerations
<i>Process: Quotes</i>	<p>Access this security domain to create, edit, and delete quotes, and to view the related reporting.</p> <p>Allowed Security Group Types:</p> <ul style="list-style-type: none"> <li>• <i>Roles - Company</i></li> <li>• <i>Roles - Company Hierarchy</i></li> <li>• <i>Roles - Customer</i></li> <li>• <i>Unconstrained Groups</i></li> </ul> <p>Allowed Security Groups:</p> <ul style="list-style-type: none"> <li>• <i>CPQ Administrator</i></li> <li>• <i>CPQ Specialist</i></li> <li>• <i>Customer Contract Specialist</i></li> <li>• <i>Implementers</i></li> </ul>
<i>Set Up: Quotes</i>	<p>Access this security domain to setup quote functionality.</p> <p>Allowed Security Group Types:</p> <ul style="list-style-type: none"> <li>• <i>Implementers</i></li> <li>• <i>Unconstrained Groups</i></li> </ul>
<i>View: Quote Project Hierarchies</i>	<p>Access this security domain to select project hierarchies when creating quotes.</p> <p>Allowed Security Group Types:</p> <ul style="list-style-type: none"> <li>• <i>Public Groups</i></li> <li>• <i>Roles - Project Hierarchy</i></li> <li>• <i>Unconstrained Groups</i></li> </ul>

## Business Processes

Business Process	Considerations
<i>Quote Event</i>	<p>Configure to route quotes for approve and deny actions. You can also initiate it by the Submit web service.</p> <p>Allowed Services:</p> <ul style="list-style-type: none"> <li>• <i>Document Delivery</i></li> <li>• <i>Document Retrieval</i></li> </ul>

Business Process	Considerations
	<ul style="list-style-type: none"> <li>Submit web service</li> </ul>
Convert Opportunity Project to Project	Configure for converting any opportunity projects created from a quote to standard projects. Workday initiates this business process when you win and close an opportunity.
Edit Project	Configure to edit existing projects and approve changes. Workday initiates this business process when you close a lost opportunity and it inactivates the associated opportunity project.

## Reporting

Report or Dashboard	Considerations
Find Opportunities	View opportunities in <i>Open</i> status to create a quote.

We suggest using these report data sources to build custom reports for reporting on quotes and quote lines:

- Quote** on business object: Use it to report on quotes and summary information.
- Quote Lines**: Use it to report on role lines and item lines included in a quote.
- Quote Configurations**: Use it to report on various quote configurations, snapshots, usage, status, and associated document templates.

## Integrations

Web Service	Considerations
Get Quote Configurations	Retrieves quote configurations.
Put Quote Configurations	Creates and updates quote configurations. You can only edit a configuration if it's not in use.
Get Quote Change Reasons	Retrieves all quote change reasons.
Put Quote Change Reason	Creates, edits, and deletes quote change reasons.
Get Quote Document Snippet Categories	Retrieves all snippet categories.
Put Quote Document Snippet Category	Creates, edits, or deletes snippet categories
Get Services Catalog Items	Retrieves all service catalog items.
Put Services Catalog Item	Creates, edits, or deletes service catalog items.

## Connections and Touchpoints

Features	Considerations
Salesforce Opportunity	When an opportunity has an <i>Open</i> status, you can bring it into Workday to build a quote.
Projects	Once you approve a primary quote, Workday creates an opportunity project with resources, resource plan, and resource forecast.

Features	Considerations
	<ul style="list-style-type: none"> <li>Workday creates a weekly forecast at the project level.</li> <li>The role from a quote maps to an unnamed resource on the opportunity project. You can assign only 1 worker to this role.</li> <li>You can't edit a project role, allocation type, start and end date, and estimated hours on the resource plan lines until the opportunity has a status of closed.</li> <li>When you change a quote from <i>Primary</i> to <i>Not Primary</i>, Workday inactivates the associated opportunity project.</li> <li>When the given opportunity in Salesforce changes to closed and won status, Workday automatically converts the opportunity project to a standard project.</li> </ul>
Revenue	<p>After an opportunity has a status of <i>Closed/Won</i>, Workday automatically creates a customer contract and populates:</p> <ul style="list-style-type: none"> <li>Revenue Category from <b>Maintain Services CPQ Settings</b> task. If you haven't configured the mapping, the contract creation will fail.</li> <li>Billing Schedule Template based on the price model.</li> <li>Revenue Schedule Template based on the price model.</li> <li>Worktags from the quote header.</li> <li>Effective date from the quote start date.</li> </ul> <p>When any required fields are missing from the quote, Workday creates the Contract in draft status.</p>
Sales Items	<p>When you set a sales item as <i>Quotable</i>, Workday makes that item available for use during quote creation.</p>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

#### Other Impacts

No impact.

## Set Up Quote

---

### Steps: Set Up Quote

#### Context

You can configure quote parameters and projects and contracts objects to define the quote creation process.

## Steps

1. (Optional) Access the *Quote Event* business process and configure conditional approvals related to quote change reasons or differences between original and proposed quote total values for price, cost, margin, discount, billing model, company, currency fields.
  2. [Configure Services CPQ Tenant](#) on page 978.
  3. (Optional) Access the **Maintain Quote Change Reason** task.  
Add or edit reasons for changing a quote. You can view what reasons are in use and change to inactive at any time. You can also report on quote change reasons.  
Security: *Set Up: Quotes* domain in the Services CPQ functional area.
  4. (Optional) Access the **Maintain Custom Validations** task.  
Create custom validations for the quote and opportunity to prevent future errors. Ensure that the custom validations align among quote, opportunity project, and customer contract.  
Security: *Set Up: Custom validations* domain in the Common Financial Management functional area.
  5. Configure Quote IDs so that Workday can assign unique numbers to quote documents in the desired sequence. If you don't specify an ID definition, Workday generates its own internal ID codes.
    - a) Access the **Edit Tenant Setup - Financials** task.
    - b) In the **Business Document Sequence ID > ID Generator for Quotes** prompt, select *Create ID Definition/Sequence Generator* option.
    - c) In the **Increment Sequence ID By** field, enter a nonzero value by which the sequence number increases each time Workday generates a new ID.
    - d) In the **Padding** field, enter the number of digits present in the sequence. Ensure to specify a large enough padding value so that the sequence doesn't encounter an overflow condition.  
To determine the next number in the sequence, specify the **Sequence ID Overflow Behavior** option.
    - e) In the **Sequence ID Format** field, enter the format for the identifier preceding with Q.
    - f) In the **Time-Based Reset Settings** section, specify when you want to restart the sequence. It can be at the beginning of the day, month, or year, and time zone.  
To restart the quote sequence number from a specific digit, enter the value for **Restart Number**.
    - g) (Optional) If you previously used a different ID generation pattern and you want Workday to continue that sequence, enter a number for **Last Sequence Used** and **Last Date Used** from your previous ID generation system.
    - h) (Optional) Select the **Low Volume** check box to ensure that sequences generated by the sequence generator don't have gaps.
    - i) (Optional) In the **Web Service** section, enter a meaningful name in the **Reference ID** field. You can use this ID to identify specific sequences in Workday.
- Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.
6. (Optional) [Configure Projects and Contracts Objects](#).
  7. (Optional) [Configure the services catalog](#).
  8. (Optional) [Set up the Spreadsheet](#).
  9. (Optional) [Configure custom objects](#).
  10. [Configure Document Template](#).

## Next Steps

You can create quotes.

## Configure Services CPQ Tenant

### Prerequisites

Security: *Set Up: Quotes* domain in the Services CPQ functional area.

## Context

You can configure several parameters to manage the quote creation and downstream processing behavior.

## Steps

1. Access the **Maintain Services CPQ Settings** task.
2. Complete the **General Quote Settings** section:

Option	Description
<b>Allow Role Unit Cost Overrides</b>	<p>Select the checkbox to enable overriding the default role unit cost for a service.</p> <p>All quote calculations will use this override value. We don't allow negative values.</p> <p>Based on the security access to view or modify this field, the Standard Cost Override will be reflected on Resource Plan Lines created from quotes.</p>
<b>Allow Item Unit Cost Overrides</b>	<p>Select the checkbox to enable overriding the default item unit cost for a service.</p> <p>All quote calculations will use this override value. We don't allow negative values.</p> <p>Consideration:</p> <p>This override value is used only in the quote and is not anywhere outside of the quote.</p>
<b>Allow Unit List Price Overrides</b>	<p>Select the check box to allow users to manually enter a unit list price for a role or an item that has a default unit list price of zero in the quote.</p> <p>Consideration:</p> <p>This override value is used only in the quote and is not anywhere outside of the quote.</p>
<b>Manage Multiple Services as a Single Project</b>	<p>Select the check box to merge multiple services into a single project downstream.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>• Workday merges services with the same project hierarchy into a single project downstream, even if they have different billing models.</li> <li>• When there are no common project hierarchies across services in a quote, Workday creates individual projects for each.</li> <li>• The merge services behavior is determined by the flag setting at the time of quote creation.</li> </ul> <p>Any changes to the flag tenant setting will only impact how newly created quotes merge their services into downstream projects.</p>

Option	Description
<b>Include Project ID in ~Project~ Name</b>	Select the check box to automatically append a generated sequential ID to the project names created downstream from a quote.
<b>Allow Paste from Spreadsheets into Quote</b>	Select the check box to enable pasting data from external spreadsheets into the quote grid to build out your quote.

3. Complete the **Contract and Contract Lines** section:

Option	Description
<b>Use Standard Rate Sheet</b>	Select the check box to ensure that contracts created from quotes will price the role rates based on the standard rate sheet by default, instead of the rates from the quote. This supports billing based on workers staffed for the project.
<b>Revenue Adjustment Reason</b>	Select a default reason to populate on the contract rate sheet created from CPQ. This is most applicable when you <b>Use Standard Rate Sheet</b> .  Considerations: <ul style="list-style-type: none"><li>• When you change or override a rate in the billing process, Workday uses the default revenue adjustment reason.</li><li>• You can configure additional reasons using the <b>Maintain Revenue Adjustment Reasons</b> task.</li></ul>
<b>Contract Type for Quote</b>	Workday uses this contract type for the contracts created from CPQ when the opportunity status is <i>Won/Closed</i> .
<b>Role Revenue Category</b>	Workday uses this value to populate the <b>Revenue Category</b> field for contract lines created from role lines of the quote.
<b>Discount Revenue Category</b>	Workday uses this value to populate the <b>Revenue Category</b> field for contract lines created from discount lines of the quote.
<b>Expense Revenue Category</b>	Workday uses this value to populate the <b>Revenue Category</b> field for contract lines created from expense lines of the quote.
<b>Third Party Cost Revenue Category</b>	Workday uses this value to populate the <b>Revenue Category</b> field for contract lines created from third party cost lines of the quote.

4. Complete the **Billing Schedule Templates** section:

Option	Description
<b>Role Billing Schedule Template</b>	Workday populates the Billing Schedule Template that you specify here on the contract line for roles.

Option	Description
<b>Discount Billing Schedule Template</b>	Workday populates the Billing Schedule Template that you specify here on the contract line for discount.
<b>Expense Billing Schedule Template</b>	Workday populates the Billing Schedule Template that you specify here on the contract line for expense.
<b>Third Party Cost Billing Schedule Template</b>	Workday populates the Billing Schedule Template that you specify here on the contract line for third party cost.

5. Complete the **Revenue Treatment** section:

Billing Model	Quote Line	Revenue Treatment for Customer Contract Line	Revenue Schedule Template for Customer Contract Line
<b>Fixed Fee</b>	When the quote has this billing model, Workday applies your selections as default values in the contract.		
	<b>Expense</b>	Select an option to populate the revenue treatment of the expense contract line:	Select an option to default the Revenue schedule template for the contract line.
		<ul style="list-style-type: none"> <li>• <i>Accrued</i></li> <li>• <i>Deferred</i></li> <li>• <i>Invoice</i></li> </ul>	
	<b>Role</b>	Select an option to populate the revenue treatment of the role contract line:	Select an option to default the Revenue schedule template for the contract line.
		<ul style="list-style-type: none"> <li>• <i>Accrued</i></li> <li>• <i>Deferred</i></li> <li>• <i>Invoice</i></li> </ul>	
	<b>Third Party Cost</b>	Select an option to populate the revenue treatment of the third party cost line:	Select an option to default the Revenue schedule template for the contract line.
		<ul style="list-style-type: none"> <li>• <i>Accrued</i></li> <li>• <i>Deferred</i></li> <li>• <i>Invoice</i></li> </ul>	
<b>Time and Expense</b>	When the quote has this billing model, Workday applies your selections as default values in the contract.		

Billing Model	Quote Line	Revenue Treatment for Customer Contract Line	Revenue Schedule Template for Customer Contract Line
	<b>Expense</b>	Select an option to populate the revenue treatment of the expense contract line: <ul style="list-style-type: none"> <li>• <i>Accrued</i></li> <li>• <i>Deferred</i></li> <li>• <i>Invoice</i></li> </ul>	Select an option to default the Revenue schedule template for the contract line.
	<b>Role</b>	Select an option to populate the revenue treatment of the expense contract line: <ul style="list-style-type: none"> <li>• <i>Accrued</i></li> <li>• <i>Deferred</i></li> <li>• <i>Invoice</i></li> </ul>	Select an option to default the Revenue schedule template for the contract line.
	<b>Third Party Cost</b>	Select an option to populate the revenue treatment of the expense contract line: <ul style="list-style-type: none"> <li>• <i>Accrued</i></li> <li>• <i>Deferred</i></li> <li>• <i>Invoice</i></li> </ul>	Select an option to default the Revenue schedule template for the contract line.

See [Projects and Contracts Downstream Impact](#) and [Projects and Contracts Downstream Behavior for Merged Services](#)

### Next Steps

- You can create quotes.
- Use these web services to create, update, or retrieve all fields for default settings for Services CPQ:
  - [Get Services CPQ Settings](#)
  - [Put Services CPQ Settings](#)
- You can also generate an EIB spreadsheet template using the **Put Maintain Services CPQ Settings** template for mass uploads.

## Steps: Configure Projects and Contracts Objects

### Context

Configure these parameters to populate values in the quote line:

- Billing schedule templates
- Project roles
- Project billing rate sheet
- Project standard cost rate sheet
- Rate categories
- Contract types

- Project hierarchy
- Project phases
- Project tasks
- Revenue schedule templates
- Sales items
- Sales item price list

## Steps

### 1. Access the **Create Project Hierarchy** task.

When you don't have a pre-existing project hierarchy in your environment, specify projects to include in the hierarchy. The hierarchy you create and select on the primary quote, defines the project hierarchy of opportunity projects. See [Create Project Hierarchies](#).

Security: Create ~Project~ Hierarchy business process and its domain in the Project Tracking functional area.

### 2. Access the **View ~Project~ Billing Rates** task.

If you don't have a pre-existing project billing rate sheet in your environment, create one to define default unit list prices for roles. See [Create Project Billing Rate Sheets](#). You can also add dimensions such as company, customer and worktags to create quotes with prices based on the specified dimensions.

When you assign roles to projects, rates populate automatically on the quote grid. You don't need to configure a project billing rate sheet when you build the quote using the Create Quote from Spreadsheet functionality because the unit list price is specified in the spreadsheet.

Configure these security domains in the Project Billing functional area:

- *Process: Project Billing - View*
- *Set Up: Project Billing - Rate Sheet*

### 3. (Optional) Access the **Maintain Project Rate Category and Members** task.

Defining rate categories allows you to configure more granular pricing for role prices by defaulting in the unit list price for roles on quotes. Workday supports a maximum of 5 categories per tenant. Once you have configured rate categories, you can include these values on a Project Billing Rate Sheet.

You can view the rate categories from the **View Project Billing Rates** task under the **Rate Dimensions** tab.

When you add a service that has a Project Billing Rate Sheet with Rate Categories, Workday displays additional prompt fields to enter the Rate Category values when you add or edit a role. We only display the Rate Categories that are configured on the Project Billing Rate Sheet.

### 4. Access the **Create ~Project~ Standard Cost Rate Sheet** task.

When you don't have a pre-existing cost rate sheet in your environment, create one to define the default unit cost for roles. You can define standard project cost rate sheets for a company and currency. See [Create Project Standard Cost Rate Sheets](#). Currently, the role cost rates in a quote use the values from only the **Project Role** tab. The values in the **Project Rate Rule** tab are not supported.

You don't need to configure a cost rate sheet when you build the quote using the Create Quote from Spreadsheet functionality because the unit list price is specified in the spreadsheet.

Security: *Set Up: Project Billing - Rate Sheet* domain in the Project Billing functional area.

### 5. Access the **Edit Sales Item** task.

To be able to quote on an existing sales item in your catalog, select the **Quotable** check box under the **Sales Item Attribute** section.

To automatically populate the unit cost of the sales item in a quote, specify a value for the unit cost on the sales item.

**6. (Optional) Access the **Maintain Sales Item Price List** task.**

When you don't have a pre-existing price list, create one to define default unit list prices for items used in a quote. Click **Add** to create a sales item price list and define the default prices for the sales items for a specific company and currency. You can also edit a pre-existing list. See [Create Sales Item Price Lists](#).

Configure these security domains:

- *Set Up: Sale Item* domain in the Customer Accounts functional area.
- *Set Up: Customer Contracts - Price Lists* domain in the Project Billing and Customer Contracts functional area.

**7. (Optional) Access the **Set Up Sales Item Pricing Configuration** task.**

Map a sales item price list to a company or multiple companies. You can also set a default sales item price list. See [Concept: Sales Items](#). When preconfigured, Workday populates the sales item price list in the service for the company on the quote.

Security: *Set Up: Sale Item* domain in the Customer Accounts functional area.

**8. (Optional) Access the **Maintain Project Roles** task.**

If you don't have pre-existing project roles in your environment, then ensure to create them. You select these roles when you create quote role lines. See [Create Project Roles](#).

**9. (Optional) Access the **Maintain Project Phases** task.**

If you don't have pre-existing project phases in your environment, then create the phases. You select these phases when you create phases in your quote that categorize and sequence the work for your projects. Example: Plan and Strategize.

Security: *Set Up: Project Details* domain in the Project Tracking functional area.

**10.(Optional) Access the **Maintain Project Tasks** task.**

If you don't have pre-existing project tasks in your environment, then create them. You select these tasks when you create tasks in your quote. See [Create Project Tasks](#)

**11.(Optional) Access the **Create Billing Schedule Template for Customer Contract** task.**

If you don't have pre-existing billing schedule template in your environment, then create one to define the billing details. Workday uses the terms that you specify to create the billing schedule on the contract automatically. See [Create Billing Schedule Templates for Customer Contracts](#).

**12.(Optional) Access the **Create Revenue Recognition Schedule Template** task.**

If you don't have pre-existing revenue recognition schedule template in your environment, then create one to define the revenue recognition method and schedule for the line item. Workday uses the terms that you specify to create the revenue recognition schedule on the contract automatically. See [Create Customer Contracts](#).

**13.(Optional) Access the **Maintain Customer Contract Types** task.**

If you don't have pre-existing customer contract type in your environment, define customer contract types to capture the details of customer sales agreements. See [Steps: Create Customer Contract Templates](#)

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

## Result

When you create quotes, the required data for project hierarchy, roles, sales items, and the associated rates is available to use.

## Example

See [CPQ Pricing and Costing for Quoting](#) document.

## Next Steps

You can:

- Configure the CPQ tenant.
- Build the quote.

## Set Up Spreadsheet

### Context

Workday enables you to copy data from a table in a spreadsheet and paste it into the quote grid to add services and roles. This functionality requires you to set up the table with the table tokens and matching column names.

### Steps

1. The 1st row in each of the tables that you copy must be the table token for table identification, and the 2nd row must be a header row with the column names.
2. A token is a label that you add in the row on top of the table. Services table will have <SERVICES> token and roles will have <ROLES> token.
3. For nested tables, start with the service table first. Then you can nest the entire roles table set under each service line. The last row of each Roles table must have a <LINES END> token to signify the end of the data.
4. For large data sets, when you want to delete all existing data in your quote grid and paste new data from your spreadsheet, then add a <REPLACE ALL> token on the very top row above the table from where your data set begins.
5. Ensure to match your column names to the Workday predefined column names. This match is case-sensitive. When the names don't match the provided template, then we ignore that column data in the paste process.

#### Note:

- When there are duplicate column names, we paste the data from the last column with the same name.
- We do not support blank rows in between multiple Services, or Roles tables in the spreadsheet. When there is a blank row between 2 services, Workday ignores all data after the blank row.

### Example

See the sample spreadsheet setup[Example for Create Quote from Spreadsheet](#).

### Next Steps

Once your table is set up correctly, you can copy the data from the table and paste it in the quote grid.

When you encounter any errors, the entire paste process doesn't execute. You will need to first fix the errors, and then try pasting the entire data set again.

## Steps: Create Custom Objects for Quotes

### Context

Workday enables you to add custom objects and fields on the Opportunity and the Quote Header so that you can bring external fields into Workday. You can create custom objects with up to 100 active custom fields and configure the security domains for each custom object. After creating and activating the custom objects, you can:

- Specify the custom field values for the opportunity or quote header.

- Add the custom fields in the document editor to include in an existing or new document template.
  - When you edit the document template, search for the custom object field under **Dynamic Data** tab in the right panel of the editor.
- Add the custom fields to new or existing custom reports.
- Edit or view all custom fields for a quote by accessing the **Additional Data** from the related actions menu in the **View Opportunity** report.
- Report on custom objects using the **Custom Object Definitions** report.

Once you add a custom object in a quote, consider this behavior:

- You can't change the field type and label after you activate the custom object.
- We don't support effective dated custom objects.
- When you select a decimal field type, we support only up to 3 decimal places. Also, the default value is 0 until you edit it.
- Ensure to specify **Quote for Workday Object** and specify a value for the **Custom Object Name**.

## Steps

### 1. Access the Create Custom Field Type task.

- Select the custom field type you want to create and specify values for the required fields. Options are Currency, Decimal, Integer, List, Text, and Paragraph Text. Use this custom field type to define a custom field in an extendable Workday business object.
- Workday automatically populates the **Web Service Alias** name for the fields. Workday uses this alias to refer to the custom object in web services.
- Security: Configure the *Custom Object Management* domain in the System functional area.

### 2. Access the Create Custom Object task.

- Specify **Quote for Workday Object**. Specify a value for the **Custom Object Name**. Click **Next**.
- Specify object name, web service alias, and **Allow Multiple Instances per Object?** check box on the next page.

You can only edit the fields while in a draft custom object state. You can't change them after activation. Click **Next**.

- Click **Add** under the **Proposed New Fields** section on the next page.

Specify the report field label. Workday uses this label as the report field name when you use it in custom reports or calculated fields.

Select the custom field type you created earlier from the **Field Type** prompt to associate the custom report field to the custom object. Click **Next**.

- Edit the **Domain** on the next **Security** page. Add Process: Quotes security domain to the custom object. Click **Next**.
- (Optional) Review and make changes as necessary on the **General Settings** page. You can also continue to add more fields to the custom object by clicking **Add** under the **Field Definitions** section. When done, click **Ok**.
- On the **Activate Custom Object** page, click **OK** to activate the custom object.

For multi instance objects, select the created field label for **Display Value**.

- Review the summary of the activated custom object. Click **Done**.

Security: Configure the *Custom Object Management* domain in the Systems functional area.

### 3. Access the View Opportunity report and select an opportunity.

From the related actions menu of the desired quote, select **Additional Data**. You can edit or view all custom fields for that quote.

### 4. Access the Maintain Quote Configuration task.

Click **Edit** for the desired document template and search for the custom object field under **Dynamic Data** tab in the right panel of the editor. You can add the custom fields created from custom objects to an existing or new document template.

## Result

You can use the custom field in a quote.

## Next Steps

You can:

- Add additional data to an active custom object, or edit any field for a draft custom object using the **Edit Custom Object** task.
- View custom object details by running the **Custom Object Definitions** report.
- Access the **View Custom Field Types** report to view the added custom field types.

# Services Catalog

---

## Create Services Catalog

### Prerequisites

Security: Configure these domains in the Services CPQ functional area:

- *Set Up: Quotes*
- *Process: Quotes*

### Context

The services catalog enables you to add a service to the quote from a pre-configured list. This capability allows you to pre-define the duration, roles, items, expenses, and third-party costs for a service type and then default all the data into the quote.

When you have a large number of services in a catalog, you can use the search facets to filter for the desired service. For mass processing, you can use the *Get Services Catalog Items* and *Put Services Catalog Item* web services.

### Steps

1. Access the **Maintain Services Catalog** task.
2. Click **Create Service**.

Options	Description
<b>Company</b>	You can select a company that you want to create the service for.
<b>Search Tags</b>	Allows you to search within the catalog and are not the same as the worktags.
<b>Project Hierarchy</b>	Select an existing project hierarchy.

Options	Description
<b>Duration in Weeks</b>	Specify the duration of the service.

- a) Specify a referenceable name and add these service details:
  - b) Click **Next**.
  - c) Add roles and specify the hours.
  - d) Click **Next**.
  - e) (Optional) Add items and specify quantity.
  - f) Click **Next**.
  - g) (Optional) Add expenses. It's automatically prohibited from discount.
  - h) Click **Next**.
  - i) (Optional) Add third party costs and specify the quantity and unit of measure. It's automatically prohibited from discount.
  - j) Click **Next**.
  - k) Review the service and adjust as needed.
  - l) Click **Ok**.
3. To enable the sales specialists to add the service catalog to quotes, click **Action** for the desired service row and select **Activate**.

**Note:** The services defined in the catalog are created with an effort estimation of **High Level** service on the quote and the pricing for the services happen in the quote grid, not in the catalog.

## Result

When creating a quote, you can now select an active catalog service to automatically populate the service and role details including the allocation for the specified time period.

## Next Steps

After adding a service from the catalog to a quote, you can:

- Edit, copy, or deactivate services defined in the catalog.
- Further edit the service and the roles, split the duration into phases, copy the service, delete the service, or continue to add sales item, expenses, and third party costs in the quote grid. See **Create Quote** topic.
- When you add another role, it must exist in the project billing rate sheet. You can click **Advanced Role Details** to further refine it by additional parameters or edit the **Unit Price** to suit your business needs.
- You can build a custom report using the **Quote Services** data source to report on service catalog items and their usage in quotes by status.

## Related Information

### Reference

[2025R1 Feature Release Note: Services Catalog in Services CPQ](#)

## Steps: Create Snippets in Service Catalog

### Prerequisites

Create a quote.

Create a service catalog.

### Context

Snippets enable your CPQ Administrator to create pre-configured service related content that you can embed into quote documents to generate business-wide service agreements automatically as part of

the quote document. For example, you can define snippets for service agreements that have standard business language such as Terms & Conditions, Scope, Legal Disclaimers.

You must first define snippet categories, then add it to a service in the catalog to be able to create snippets for a category. To include snippet content in the printed PDF file, ensure to place the snippet in the desired location of the document template while reviewing the quote document.

**Note:** You can add multiple snippets but only 1 snippet category to each service catalog item.

For mass processing, you can use the *Get Quote Document Snippet Categories* and *Put Quote Document Snippet Category* web services.

## Steps

1. Access the **Maintain Quote Document Snippet Categories** task.

Security: *Set Up: Quotes* and *Process: Quotes* domain in the Services CPQ functional area.

2. Click **+** to add a snippet category.

We recommend adding the name of the Service to the start of each Snippet so as to easily identify them when they are retrieved in the quote document.

3. Access the **Maintain Services Catalog** task.

- a) Click **Action** for a desired service and select **Add Snippet**.
- b) On the **Create Snippet** page, select a **Document Snippet Category** and draft the content for this snippet.
- c) Click **Add**.
- d) (Optional) To edit or delete a snippet, click **Action** for a desired service and select **Edit Snippet**.
- e) On the **Edit Snippet** page, click **Save** for retaining the changes, or **Delete** to remove the snippet.

**Note:** You can add each snippet category only once to the service in the services catalog. After you add all snippet categories to a service, the **Add Snippet** option is not available anymore.

## Result

The snippets are embedded in the services defined in the services catalog.

## Next Steps

After creating and adding a snippet to the service, include the snippet category in the document template.

1. Access the **Maintain Quote Configuration** task.
2. Click the existing quote configuration or create a new one.
3. On the **View Quote Configuration** page, click **Add Document Template** button for new quote configuration, or click **Edit** button for an existing configuration.
4. On the document editor page, search the snippet category under the **Dynamic Data** tab in the right pane.
5. Click the snippet and place the cursor in the desired location of the template to insert the snippet. To delete, select the snippet in the document template, click **Edit -> Delete Element**.
6. Click **Publish** to retain the changes.

After adding a snippet to the service when you print the quote on this document template, it will also include the snippet content. Select **Print** from the related actions menu of the approved quote. The printed document will be accessible from the quote grid on the opportunity page.

You can access the **View Quote Document Snippet Categories** report to view category status and usage.

## Document Generator

---

### Create and Publish Document Template

#### Prerequisites

Security: Configure these domains in the Services CPQ functional area:

- *Process: Quotes*
- *Set Up: Quotes*

#### Context

Workday enables you to configure a document template that you can use to generate documents dynamically in PDF and DocX file formats from quote data.

You can use data sources, snippets, custom reports and fields in the quote document editor to design the template. When you're editing a document template we constantly auto-save your changes in a draft mode and display an **Unpublished Changes** indicator. This prevents the changes from being incorporated when you print the document. To print the latest changes, you must first publish the document template. You can also copy an existing document template to configure another template.

You can also use the *Get Quote Configurations* and *Put Quote Configuration* web services to create, update, or retrieve quote configurations. The quote document templates created from Put service are read-only and once created you can't update them.

#### Steps

1. Access the **Maintain Quote Configurations** task.

2. Click **Create Quote Configuration** button.

To use an existing configuration, click **Copy Templates From** on the **View Quote Configuration** page.

3. Click **Add Document Template** to create a new quote document template.

- Type a name for the document template. We recommend using fewer than 100 characters, and avoiding special characters such as the ampersand (&), to ensure cross-product compatibility.
- Select a custom report to use as the source for adding dynamic content. The report defines which data fields and condition rules are available and will be included in the generated document.

4. Specify the layout for the content. For more details on this step, see the **Design Document Layout** topic.

5. Click **Publish** to make the current content active in the template.

- After you publish the template, it becomes available for selection when printing documents. A quote configuration can have multiple document templates.
- New quotes will use the most recently published version of the document template.

#### Result

The active and published document template becomes available for selection when you create a quote.

#### Next Steps

- You can edit the existing document template.
- You can print the quote document. See the **Print Quote Document** topic.
- You can access the reports to view, edit, and remove document templates:
  - **View Quote Configuration**
  - **View Quote Configuration Snapshot**

- You can upload or integrate the quote documents back to your CRM solution by creating a custom report that includes these report fields on the **Quote Generated Document** business object:
  - **Base64 Image Data**
  - **File Content Type**
  - **File Name**
  - **File Size**

#### **Related Information**

##### **Examples**

[2025R1 Feature Release Note: Quote Document Generation in Services CPQ](#)

## **Edit Document Template**

#### **Prerequisites**

Security: Configure these domains in the Services CPQ functional area:

- *Process: Quotes*
- *Set Up: Quotes*

#### **Context**

After you publish the document template, you can use it in a quote. Once a quote creation is complete, Workday displays the selected document template. when you click **Review Documents** button. You can also edit the document template.

#### **Steps**

1. From the related actions menu of a document template, click **Edit**.

To update the dynamic data fields with the changes made while editing a quote, click the **Refresh Document Data** button on the **Review Documents** page. For example, if you change the Price, Quote Start Date, or Discount line amount in a quote, click the **Refresh Document Data** button to retrieve the new price, date, and discount amount in the quote document. When you refresh the document:

- Manual edits made to data in repeater rows of a table that's built with the dynamic data fields will be lost as the table must regenerate upon refresh.
- Condition rules configured on the document template will not be re-evaluated.

2. Click **Reset to Template**.

You can click the button to:

- Undo the changes made to the quote document.
- Include all updates made to the original document template.
- Retrieve all the latest quote data changes made while editing the quote.
- Include changes made to a service catalog or snippet.
- Retrieve a new catalog service added to the quote with snippets.
- **Note:** When you use this option, all manual changes made to the quote document will be lost.

## **Print Quote Document**

#### **Prerequisites**

Security: Configure these domains in the Services CPQ functional area:

- *Process: Quotes*
- *Set Up: Quotes*

## Context

You can generate and download the quote documents as Word or PDF files. When you print in PDF format, first ensure that the tables are not too wide to avoid spilling to the next page with blank data in the printed PDF file.

## Steps

1. From the related actions menu of an approved quote, select **Print**.
  - On the **Print Documents** page, select either the PDF or DOCX file type for printing. You can print each document type only once.
  - Workday automatically adds the [Document Template Name]\_[Quote Number]\_[Quote Name]\_[Customer Name]\_[Date Generated] name to a printed file. You can edit the file name or append text to the default name.
2. (Optional) From the related actions menu of the *Quote Event* business process, click **Edit Definition**.
  - a) Click **+** under the **Business Process Steps** tab, add a **Service Type** step and select *Print Quote Documents PDF* for **Specify**.
  - b) Click **+** under the **Business Process Steps** tab, add a **Service Type** step and select *Print Quote Documents DocX* for **Specify**.
    - To print quote documents automatically, you can configure the steps in any order.
    - If you want the documents to be available to the approvers during the **Review** step, ensure to configure either 1 or both of the print service steps to run before the **Approval** step in the business process definition.
    - During the review step, the approver can see the document only if it's printed.
    - When the approver makes manual edits to the quote document during the review process, click **Save** to save the changes and then click **Submit for Approval**. To undo the changes, click **Reset to Template**.
    - If a document has already been printed, this setup will prevent you from printing the document again. Workday allows the document to be reprinted only if it has been changed.
    - If your configuration is set up to print after the approval is given, then the approver won't be able to view the document table prior to giving approval.

## Next Steps

- You can access the printed document from the quote grid on the **View Opportunities** page.
- You can view the number of printed documents in the **Submitted Document** column on the **View Opportunity** page. Click the number to access the printed document.
- **Note:** When you print a **DOCX** file type, some of the formatting might be lost. Ensure to review the downloaded file and update as necessary. Known incompatibilities include:
  - Components (such as images, text boxes, tables) placed adjacent to each other will not display correctly.
  - Tables with spacing are not supported.

## Design Document Layout

You can edit the document template to include header, footer, images, background, add new pages, and adjust page settings.

### Pages

Workday automatically adds extra pages as needed. To insert a new page manually, you can:

- Use **Insert > Add new page** tab on the top.
- Scroll down to the end of the document you are working on and click **Add new page**.

## Page Settings

Workday enables you to define various page size, units, orientation, margins, header height and margins, and footer height and margins. You can:

- Use **File > Document Settings** tab on the top bar.
- Click the **Page Settings** icon on the left side of the editor to open the page settings panel.
- Use **File > Document Settings** tab on the top bar of the editor to open the page settings panel.

## Headers and Footers

You can add several headers and footers, and use condition rules to control which one displays in your resulting document. Header and footer settings apply to all pages. You can't control individual header and footer values per page. When the document prints, the first header and footer with a true condition rule (or if there's no condition rule) displays.

- To add a header, click the **Manage Headers** icon, click **Insert Header** and select an element (text, image, or table). Use the right panel for formatting the element. After you insert the first element, you can insert more elements by using the icons in the left panel.
- To add a footer, click the **Manage Footers** icon, then click **Insert Footer**. and select an element (text, image, or table). Use the right panel for formatting the element. After you insert the first element, you can insert more by using the icons in the left panel.
- To delete a header or footer, click the header without selecting any elements inside it. Then in the right panel, click the actions (three-dot) menu and select **Delete Header** or **Delete Footer**.
- To move a header or footer up or down, click an arrow to the left of the header or footer, or click the actions (three-dot) menu in the right pane and select **Move Up** or **Move Down**.
- To view and adjust the content layout, click **Document Settings** icon and specify the page setting, orientation, and margins.

## Page Numbers

You can add automatic page numbering by inserting one or two data fields into a text or table element inside the header or footer. You can:

- Click the **Insert Page Numbers** icon on the end of the top toolbar of the editor.
- If you want only the current page number, select **Current Page**. If you also want the page total to display, select **Total Pages**.

**Note:** When you insert both, the page numbers will look like this: Page Current Page of Total Pages.

## Managing Text

The document template editor uses a grid-like structure for text elements, similar to a table, that helps you precisely align the content you add to the template. You can insert a text element above, below, or to the right or left of an existing element.

- To add text, click the **Insert Text** icon.
- Move the cursor to hover at the edge of an existing element. You can insert a text element along the top, bottom, and sides of an existing element. An orange indicator displays to show the location where you will be inserting the text. Click to insert the text element.
- To align and edit the text, use the tool bar.
- To delete content inside the text box, use the **Delete** key on your device.
- To delete the entire text box, click it and navigate to the right panel. Select **Delete** under the **Format** tab.

**Note:** When you copy and paste from a text block to the document template, Workday doesn't preserve condition rules and data fields. You need to recreate them.

## Background and Images

Workday enables you to insert both images and background image. You can insert an image above, below, or to the right or left of an existing element. You can also add them to the header or footer. You can apply a different background images to each page.

- To insert an image, click the **Insert Image**  icon and navigate to the image that you want to insert.
- Move the cursor to hover at the edge of an existing element. An orange indicator displays to show the location. Click to insert the image. Use the right panel to adjust the size, alignment, and other image settings.
  - The maximum size for each image is 7MB.
  - You can upload up to 22MB of images to a document template.
- To delete an image, click it and navigate to the right panel. Select **Delete** under the **Format** tab.
- To insert a background image, navigate to the top menu bar and select **Insert > Background Image**. On the pop-up page, specify the page number where you want to insert the background image.
  - Click **Select Image** and navigate to the image. Click **Save**.
- To delete a background image, navigate to the top menu bar and select **Insert > Background Image**. On the pop-up page, specify the page number of where the background image is and click **Delete Background Image > Save**.

## Tables

You can insert a table element above, below, or to the right or left of an existing element. Document template doesn't support condition rules on table cells. However, you can set a condition rule on a full row, a full column, or on the entire table.

- To insert a table, click the **Insert Table**  icon and choose the number of columns and rows to start with.
- To delete the table, click the circle in the top left table corner, then click the **Delete** (trash can) icon in the right pane. Use the right panel to format the cells, the table, and set row-column headers.
- Add a column or row, click a column or row heading, then click the + icon where you want to insert a new column or row.
- To resize table columns, hover over the column edge, click the resize indicator, and drag.
- To delete content in the table fields, use the **Delete** key on your device.
- To delete the entire table, click it and navigate to the right panel. Select **Delete** under the **Format** tab.

**Note:** The tables with repeater rows in the document follow the row order in the quote grid.

## Data Fields

To insert a data field:

1. Ensure that the **Data Fields** tab is active in the right panel. Any previously added data fields display in the panel.
2. Make sure your cursor is in a text area (text element or table cell).
3. To add the data field, scroll to the right panel and click the + icon next to the data field that you want to add. The data field displays as highlighted element.
  - Use the **Search** field to find additional data fields that you want to add, then click the + icon.
4. To delete a data field, click it and then press the **Delete** key.

**Note:** You can update dynamic data fields and tables in a quote document without losing other manual edits you made directly in the document by using the **Refresh Document Data** button.

## Condition Rules

When the report associated with the layout has boolean (true or false) fields, you can use those fields as condition rules and apply to the document template. If the condition is true when the report runs, the conditionalized content displays. If the condition is false, the content is hidden.

To apply a condition rule:

1. Make sure the **Conditions** tab is active in the right panel.
2. Select the text or the element that you want to apply a condition to. Condition rules that were applied already, display in the right pane.
3. To apply a rule that you used already elsewhere, click the + icon next to the rule that you want to apply. The condition rule displays in the element as highlighted text or element.
4. To find and apply a condition rule that you haven't used yet, click **Apply Condition Rule**, search for the rule to use, and click the + icon next to the rule.
5. To delete an individual rule, select the content with the rule, then click the actions (three-dot) menu next to the rule in the panel and click **Remove Instance**. If you applied this rule to other content in the layout, those rules are preserved; only the rule on the selected content is removed.

### Notes:

- The right panel updates to show all the conditions that have been applied to your layout.
- You can insert a condition rule to all content types, including data fields.
- The document template doesn't support condition rules on table cells; however, you can set a condition rule on a full row or a column.
- Click the eye indicator to display or hide content that has an applied condition rule.

## Create Quote

---

### Steps: Create Quote

#### Prerequisites

- See setup considerations topic for Services CPQ.
- Set up integration with your existing Customer Relationship Management (CRM) source to sync customer and opportunity records.
- Set up ID Generators for quote, quote configuration with document templates, and quote to contract mapping.
- Configure the *Quote Event* business process.
- Configure these business processes to skip approvals conditionally when projects and customer contracts are created from Services CPQ:
  - *Create Project*
  - *Edit Project*
  - *Project Resource Plan Line*
  - *Customer Contract Event*
  - *Convert Opportunity Project to Project*
- Set up Project Hierarchies, Project Roles, Project Billing Rate Sheets, Project Standard Cost Rate Sheets, and Sales Items.
- (Optional) Set up Project Phases and Project Tasks when building a quote with phases and tasks.
- Ensure that custom validations align between quotes, projects, and customer contracts.
- Ensure that required worktags align between quotes, projects, and customer contracts.

- Security: Configure these domains in the Services CPQ functional area:
  - Process: Quotes
  - View: Quote Project Hierarchies

## Context

Workday enables you to create quotes from the **Create Quote** task or from an opportunity that's in open status. You can create multiple quotes for an opportunity based on different combinations of services.

You can view the quote summary in the **Summary** view. You can also view quotes by:

- Time periods such as weeks, months and contract years in the **Timeline** view.
- Amounts such as quantity (in days or hours), price, cost, or FTE in the **Timeline** view.

A quote can be in *Draft*, *In Progress*, *Approved*, *Denied* or *Canceled* status. A quote with a designation of **Primary** identifies that it's intended to be shared with the customer.

- When a quote is in draft or waiting for approval, it displays as **Proposed Primary**.
- After approval, a proposed primary quote becomes the **Primary** quote for the opportunity.
- There can only be 1 primary quote per opportunity at a single point in time.
- When another primary quote exists, designating a new quote as Primary changes the existing Primary quote to **Not Primary**.
- The Opportunity Project is linked to a Primary quote.

**Note:** A Project Manager who doesn't have access to the project hierarchy used in a service, won't be able to view the quote even if they are part of the *Process: Quote* domain.

## Steps

1. (Optional) Create quote from an existing or a new opportunity.
  - a) To create a new opportunity in Workday, access the **Create Opportunity** task. Specify the opportunity name and currency and click **Ok**. Make sure to select a **Customer** in order to begin quoting. You can edit the Opportunity and add the Customer while the Opportunity is open.
  - b) Access the **View Opportunity** report, select an opportunity, and click the **Create Quote** button.
  - c) (Optional) Access the **Find Opportunities** report. From the related actions menu of the open opportunity, select **Quote -> Create**. Select a **Quote Configuration** and navigate to **Step 3**.
  - d) (Optional) To designate a quote as primary, access the related actions menu of an approved quote and select **Mark as Primary Quote**.
2. Access the **Create Quote** task.
3. Complete these options:

Option	Description
<b>Opportunity</b>	Specify an opportunity that you want to create the quote for. Workday automatically populates the customer and company values. The prompt displays open opportunities.
<b>Customer</b>	The value populates automatically from the customer specified on the opportunity. You can change the customer on the opportunity but can't edit it on the quote.
<b>Company</b>	The value populates automatically from the company specified on the opportunity. You can change the company on the quote that you have

Option	Description
	security access to. When the opportunity converts to a project, we create a downstream contract for this company.
<b>Quote Configuration</b>	Select a quote configuration that you've set up. Ensure that this quote configuration is available for the company specified on the quote.
<b>Copy From Existing Quote</b>	Select a preexisting quote to start from.
<b>Quote Name</b>	Specify a relevant name for the quote.
<b>Billing Model</b>	<p>Specify a billing model that you want to use for the customer contract. Options are:</p> <ul style="list-style-type: none"> <li>• <i>Fixed Fee</i>: Bills a predefined amount based on the quote details.</li> <li>• <i>Time and Expense</i>: Bills labor time, expense, and third party cost incurred for the project.</li> </ul> <p>Considerations:</p> <ul style="list-style-type: none"> <li>• When you change the billing model for an existing quote, we don't change the billing models for the various services.</li> <li>• When you add a new service, the billing model value will default from the quote header.</li> <li>• When you copy a service, the billing model value will default from the service being copied.</li> </ul>
<b>Currency</b>	<p>The value populates automatically from the default currency specified for the customer.</p> <p>You can change it to any currency that's configured for the customer.</p>
<b>Worktags</b>	Workday automatically populates the values from the opportunity header. You can edit these worktags or specify additional worktags.

4. Create quote using one or more of these options:
  - a) [Add Custom Service Manually](#)  
 (Optional) [Add Phases and Tasks from Work Breakdown](#) to a custom service.
  - b) [Add Service from Services Catalog](#).
  - c) [Add Service from Spreadsheets](#).
5. (Optional) Set the quote designation to **Primary** by clicking **Edit Quote Details** button in the quote header and check the **Primary Quote** check box.  
 Workday automatically defaults the first approved quote for an opportunity to the primary designation.

6. Click **Review Documents** to view the quote document before submitting it for approval.

Options	Description
<b>Document</b>	Select the relevant quote document template that your CPQ Administrator configured for the quote. Workday hydrates the selected document with quote data.
<b>Save</b>	Click to retain the changes when you make manual edits to the quote document during the review process.
<b>Refresh Document Data</b>	Click the button to update the dynamic data fields with the latest quote data. Most manual edits made to the content are also retained.
	Considerations:
	<ul style="list-style-type: none"> <li>• Manual edits made to repeater rows of a table that's built with dynamic data fields are lost and the table will regenerate.</li> <li>• Condition rules on the document template will not be re-evaluated.</li> </ul>
<b>Reset to Template</b>	Click the button to:
	<ul style="list-style-type: none"> <li>• Revert all edits on the quote document.</li> <li>• Retrieve all updated published changes to the original document template.</li> </ul>

7. Click **Submit for Approval**.

## Result

Workday initiates the business process for the quote event.

## Next Steps

After creating a quote, you can:

- Change or cancel the quote.
- View change and process history for the quote.
- Manually print the quote document.
- Approve a primary quote. Workday creates an Opportunity Project including a resource plan, and resource forecast with details from the quote. It also appends an [O] suffix to the name of the Opportunity Project. You can't edit certain data for this project.
- Change the **Opportunity Status** to *Closed/Won* or *Closed/Lost*. When an opportunity is changed to *Closed/Won*, Workday converts the opportunity project to a project and creates the customer contract.

When you have multiple rates for 1 role, Workday creates the downstream customer contract in draft status with errors. To make the role unique on the contract line, ensure to fix the errors by adding either Phase/Task, Worktag, or Worker using a Billing Rate Rule.

## Add Custom Service Manually

### Context

You can create a custom quote and add each quote component separately.

## Steps

1. Access the **Create Quote** task.
2. On the **Create Quote** page, access the related actions menu under the **Action** column in the quote line and click **Add Custom Service**.
3. Complete these options:

Options	Description
<b>Billing Model</b>	The value is automatically populated from the value you select during the start of quote creation.
<b>Project Hierarchy</b>	<p>Select an existing project hierarchy.</p> <p>If you don't have one in your environment, access the <b>Create Project Hierarchy</b> task and define at least 1 primary project hierarchy. You can't change this value in a quote after adding a role to the quote.</p>
<b>Worktag</b>	<p>The value automatically populates from the opportunity.</p> <p>You can later edit worktags from the <b>Quote Actions</b> button in the quote header.</p>
<b>Effort Estimation</b>	<p>Select the type of service. Options are:</p> <ul style="list-style-type: none"> <li>• <i>High Level</i>: A duration based service. Workday defaults to this option. You must specify the <b>End Date</b>.</li> <li>• <i>With Phases</i>: A phase based service. You must add phases before you can allocate hours to roles.</li> <li>• <i>With Phases and Tasks</i>: A task based service. You must add phases and tasks before you can allocate hours to roles.</li> <li>• See <a href="#">Add phases and tasks from Work Breakdown</a>.</li> </ul>
<b>Rate Type</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Hours</i></li> <li>• <i>Days</i></li> </ul> <p>Considerations:</p> <ul style="list-style-type: none"> <li>• Workday derives the FTE calculations from the specified <b>Rate Type</b>.</li> <li>• Based on your selection, you can view role allocations by Days or Hours option in the <b>View By</b> drop down.</li> <li>• <b>Billing Model</b> of <i>Fixed Fee</i> requires <b>Rate Type</b> of <i>Hours</i>.</li> <li>• You can't change the rate type from Days to Hours when a service has role lines associated with it.</li> <li>• When the Rate Type is Days, select a <b>Project Billing Rate Sheet</b> with <b>Unit of Time</b> of <i>Days</i>.</li> </ul>

Options	Description
<b>Project Billing Rate Sheet</b>	<p>Select a project billing rate sheet to automatically populate the unit list price for roles.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>Based on the combination of customer, company, and worktags specified, the system filters out any non-applicable Project Billing Rate Sheets from the prompt.</li> </ul>
<b>Sales Item Price List</b>	<p>Select a sales item price list to automatically populate the unit price for items.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>Based on the quote company, the system filters out any non-applicable sales item price list from the prompt.</li> <li>When you haven't defined a sales item price list, or a price is not found for the sales item, the price will default from the item itself and the prompt will be blank.</li> </ul>

4. (Optional) You can click the related actions menu under the **Action** column for the service to copy, edit, move, or delete it.

You can also view services by Quantity (Hours or Days), Price, Cost or FTE values, and by weeks, months, or contract years in the **Timeline** view.

5. Access the related actions menu under the **Action** column in the service line and select **Add Role**.  
 6. Click **Advanced Role Details** and complete these options:

Options	Description
<b>Role</b>	<p>Select a role.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>Workday filters out any roles from the prompt that are not allowed for the specified project hierarchy of the service.</li> <li>When there are multiple rates for a role, each role displays in a separate line with rates as quoted.</li> </ul>
<b>Unit Price</b>	<p>Specify a value that you want to charge the customer for the role. Workday defaults this value from the <b>Unit List Price</b>.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>This value can't be more than 12 digits.</li> <li>When you don't specify a value, it results in 0% margin</li> </ul>
<b>Billable</b>	<p>When unchecked, Workday excludes this role line from the total price of the quote.</p>

Options	Description
<b>Prohibit Discount</b>	<p>Select the check box to prevent discounting the role line.</p> <p>The unit price becomes uneditable as it can't be different from the unit list price.</p> <p>Note: Workday doesn't adjust the price of this line when you edit discount, margin, or target price defined at the quote or service level.</p>
<b>Override Unit Cost</b>	<p>Select the check box for overrides.</p> <p>Workday displays a <b>Unit Cost Override</b> field where you can specify a different value from the standard cost.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>• Workday displays this option when you enable the tenant for role unit cost overrides.</li> <li>• Workday uses the modified cost to calculate the margins for this item.</li> </ul>
<b>Number of Hours Per Day</b>	<p>Specify the number of hours you want to allocate in the day.</p> <p>This field displays only when the <b>Rate Type</b> is <i>Days</i>.</p>
<b>Reference Data Panel</b>	<i>Displays uneditable data.</i>
<b>Unit List Price</b>	<p>Workday defaults this value from the project billing rate sheet (PBRS) selected for the service.</p> <p>If there is no unit list price for a role in the PBRS selected for the service,, this field displays <i>0</i>.</p> <p>Exception:</p> <ul style="list-style-type: none"> <li>• When you enable the tenant to allow unit list price overrides, you can change the <i>0</i> value and specify the price manually.</li> <li>• This ensures that the discount and margin percentages for the service and the quote are not inaccurately affected by the <i>0</i> unit list price.</li> </ul>

Options	Description
<b>Unit Cost</b>	<p>Workday defaults this value from the project standard cost rate sheet for the role.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>When the quote currency is not the same as the currency of the standard cost rate sheet, we convert the hourly rate value in the project standard cost rate sheet to the currency specified in the quote.</li> <li>When the quote currency is not the same as the currency of the standard cost rate sheet, we convert the hourly rate value in the project standard cost rate sheet to the currency specified in the quote.</li> </ul>
<b>Quantity</b>	The hours you specify for the role.
<b>Unit of Measure</b>	The rate type you specify for the service.
<b>Price</b>	The value is equal to <b>Quantity * Unit Price</b> you specify.
<b>Cost</b>	<p>The value is equal to <b>Quantity * Unit Cost</b>.</p> <p>When you enable cost overrides, the value is <b>Quantity * Unit Cost Override</b>.</p>
<b>Margin</b>	<p>Workday calculates this value as: <b>((Unit Price - Unit Cost)/Unit Price) *100%</b></p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>This value is 100% when the Unit Cost is 0.</li> <li>This value is 0% when the Unit Price is 0.</li> </ul>
<b>Discount</b>	Workday calculates this value as: <b>(Unit list price - Unit price)/ Unit list price * 100%</b>
<b>Dynamic Fields</b>	

Options	Description
<b>Rate Categories a, b, c, d, e</b> (User configured categories)	<p>Workday displays these additional fields when the selected Project Billing Rate Sheet has rate categories. Rate categories provide additional dimensions for defining the rate for a project role.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>• Workday supports a maximum of 5 rate categories per tenant.</li> <li>• These are optional fields. When you select 1 or more categories, Workday automatically populates the role unit list price based on the selections and what is set up on the Project Billing Rate Sheet.</li> <li>• The rate categories don't result in downstream projects or contracts fields.</li> <li>• You can access the <b>View Project Billing Rates</b> task to view the rate categories on the <b>Rate Dimensions</b> tab.</li> </ul>

7. (Optional) You can click the related actions menu under the **Action** column for the role line to copy, edit, move, or delete it.

You can also edit and view roles by Quantity (Hours or Days), Price, Cost or FTE values, and by weeks, months, or contract years in the **Timeline** view.

8. Access the related actions menu under the **Action** column in the service line and select **Add Item**.
9. Click **Advanced Item Details** and complete these options:

Options	Description
<b>Item</b>	<p>Specify an item. Workday only displays sales items that are set as Quotable.</p> <p>Each sales item converts to a goods and services line item on the contract.</p>
<b>Notes</b>	Add an optional note.
<b>Unit Price</b>	<p>Specify a value that you want to charge the customer for the item. Workday defaults this value from the sales item price list selected for the service, or the unit price on the sales item if there is no sales item price list on the service.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>• This value can't be more than 12 digits.</li> <li>• When you don't specify a value, it results in 0% margin</li> <li>• When you change the unit price for an item but select a different sales item price list afterwards, the system overrides the manual changes and sets the price based on the new price list selected.</li> </ul>
<b>Quantity</b>	Specify a number for the items.

Options	Description
<b>Billable</b>	When unchecked, Workday excludes this item line from the total price of the quote. This item line will also not be included on the customer contract.
<b>Prohibit Discount</b>	<p>Select the check box to prevent discounting the item line.</p> <p>The unit price becomes uneditable as it can't be different from the unit list price.</p> <p>Note: Workday doesn't adjust the price of this line when you edit discount, margin, or target price defined at the quote or service level.</p>
<b>Override Unit Cost</b>	<p>Select the check box for overrides.</p> <p>Workday displays a <b>Unit Cost Override</b> field where you can specify a different value from the standard cost.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>• Workday displays this option when you enable the tenant for item unit cost overrides.</li> <li>• Workday uses the modified cost to calculate the margins for this item.</li> </ul>
<b>Recurring Item</b>	<p>Select the check box to include items of a recurring nature in the quote.</p> <p>When you enable this flag, Workday displays these additional fields:</p> <ul style="list-style-type: none"> <li>• <b>Recurrence:</b> Select the frequency.</li> <li>• <b>Length of Recurrence:</b> Specify a number for the recurring period.</li> </ul> <p>Considerations:</p> <ul style="list-style-type: none"> <li>• The number of recurrences cannot exceed more than 5 years in duration.</li> <li>• The service <b>End Date</b> changes based on the number of periods.</li> <li>• Make sure to add recurrence details to the <b>Notes</b> field.</li> </ul>
<b>Reference Data Panel</b>	<i>Displays uneditable data.</i>

Options	Description
<b>Unit List Price</b>	<p>Workday defaults this value from the sales item price list selected for the service.</p> <p>When the sales item price list is not set up or a unit price is not found, the value defaults from the sales item itself.</p> <p>Exception:</p> <ul style="list-style-type: none"> <li>When you enable the tenant to allow unit list price overrides, you can change the 0 value and specify the price manually if there is no price for an item in the sales item price list selected for the service.</li> <li>This ensures that the discount and margin percentages for the service and the quote are not inaccurately affected by the 0 unit list price.</li> <li>When you change the unit price for an item but select a different sales item price list afterwards, the system overrides the manual changes and sets the price based on the new price list selected.</li> </ul>
<b>Unit Cost</b>	<p>Workday defaults this value from the Sales Item configuration.</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>If unit cost is blank, sales item unit cost will default to 0 on the quote.</li> <li>When the unit cost for the sales item doesn't have a value, this field displays 0 and results in 100% margin.</li> <li>When the quote currency is not the same as the cost currency, we convert the cost value to the currency specified in the quote.</li> </ul>
<b>Price</b>	<p>The value is equal to Quantity * Unit Price you specify.</p> <p>When the item is recurring, the value is equal to Quantity * Unit Price * Length of Recurrence.</p>
<b>Cost</b>	<p>The value is equal to Quantity * Unit Cost.</p> <p>When you enable cost overrides, the value is Quantity * Unit Cost Override.</p> <p>When the item is recurring, the value is equal to Quantity * Unit Cost * Length of Recurrence.</p>
<b>Margin</b>	<p>Workday calculates this value as: ((Unit Price - Unit Cost)/Unit Price) *100%</p> <p>Considerations:</p> <ul style="list-style-type: none"> <li>This value is 100% when the Unit Cost is 0.</li> <li>This value is 0% when the Unit Price is 0.</li> </ul>

Options	Description
<b>Discount</b>	Workday calculates this value as: (Unit list price - Unit price)/ Unit list price * 100%
<b>Item Identifier</b>	Automatically populates from the catalog item.

10.(Optional) You can click the related actions menu under the **Action** column for the item line to copy, edit, move, or delete it.

You can also view items by Quantity, Price, or Cost values and by weeks, months, or contract years in the **Timeline** view.

11.Access the related actions menu under the **Action** column in the service line and select **Add Discount**.

12.Complete these options:

Options	Description
<b>Date</b>	Specify a value that's between the service <b>Start Date</b> and <b>End Date</b> .
<b>Discount Amount</b>	Specify the discount you want to provide your customer. The amount value can't be zero or more than 12 digits.
	The amount you specify displays as a negative value and is deducted from the total price. We prevent further discounts on this amount.
<b>Billable</b>	Workday automatically sets the discount as billable item.
	This field is uneditable.
<b>Prohibit Discount</b>	Workday automatically sets it as non-discountable and doesn't adjust this line when you edit discount, margin, or target price as defined for the quote or the service.

- The discount amount can't be zero.
- When you view the quote by **Quantity**, we display a value of 1 for each discount line. The **Price** view displays the discount values for each discount line.

13.(Optional) You can click the related actions menu under the **Action** column for the discount line to copy, edit, move, or delete it.

14.Access the related actions menu under the **Action** column in the service line and select **Add Expense**.

15.Complete these options:

Options	Description
<b>Amount</b>	Specify a name for the additional costs that you want to pass to the customer.
<b>Currency</b>	Specify the number of third party costs. The value can't be more than 12 digits.
<b>Date</b>	Specify a value that's between the service <b>Start Date</b> and <b>End Date</b> .

Options	Description
<b>Billable</b>	Workday automatically selects the check box and includes this line value to the total price of the quote.  The higher the expense, the lower the margins.
<b>Prohibit Discount</b>	Workday automatically sets it as non-discountable and doesn't adjust this expense line when you edit discount, margin, or target price as defined for the quote or the service.

**16.**(Optional) You can click the related actions menu under the **Action** column for the expense line to copy, edit, move, or delete it.

**17.**Access the related actions menu under the **Action** column in the service line and select **Third Party Cost**.

**18.**Complete these options:

Options	Description
<b>Third Party Cost Name</b>	Specify a name for the additional costs that you want to pass to the customer.
<b>Quantity</b>	Specify the number of third party costs. The value can't be more than 12 digits.
<b>Unit of Measure</b>	Select the appropriate unit of measure.
<b>Unit Cost</b>	Specify a value.  Ensure to configure revenue category for third party costs.
<b>Cost</b>	This is a read only field.  Cost value = Unit Price x Quantity
<b>Unit Price</b>	Specify a value.
<b>Price</b>	This is a read only field.  Price value = Unit Price x Quantity
<b>Date</b>	Workday defaults it to the service start date.  Specify a value that's between the service Start Date and End Date.
<b>Billable</b>	Workday automatically selects the check box and includes this line value to the total price of the quote.  If you unselect it, then Price becomes 0

Options	Description
<b>Prohibit Discount</b>	<p>Workday automatically sets it as non-discountable and excludes this third party cost from discount, margin, or target price defined for the quote or the service.</p> <p>Note: The third party cost is included in the total price of the quote.</p>

**19.**(Optional) You can click the related actions menu under the **Action** column for the third party cost line to copy, edit, move, or delete it.

**20.**(Optional) To edit quote, click **Quote Actions** button in the quote header.

- a) Select the **Edit Quote Details** option.
- b) You can edit, quote name, billing model, currency, and the Primary Quote designation flag. You can also edit the Start Date.
- c) Click **Save**.
- d) Select the **Edit Worktags** option.
- e) In the **Worktags** prompt, select 1 or more new worktags for the quote.
- f) In the **Quote Service Worktags** grid, select 1 or more new worktags for the desired services.
- g) Click **OK**.

**21.**(Optional) To edit quote totals, Click **Totals** button in the quote grid header.

- a) Select the **Quote Totals or Service Totals** option.
- b) Select the **Quote Totals** option.

In the **Edit By** prompt, select the value type of *Price, Margin, or Discount* Specify the new value.

We display **Projected Values** for Margin, Discount, and Cost, providing a preview of the expected values after you apply the new values.

To update all 3 values of price, margin, and discount, select a value type, change the values for the quote, and repeat for each type.

- c) Click **Save**.
- d) Select the **Service Totals** option.

In the **Edit By** prompt, select the value type of *Price, Margin, or Discount*

We display a collapsable summary of all the services in the quote. Specify the new value for the service you want to update.

We display **Projected Values** for Margin, Discount, and Cost, providing a preview of the expected values after you apply the new values.

To update all 3 values of price, margin, and discount, select a value type, change the values for the services, and repeat for each type.

- e) Click **Save**.
  - You can only edit either the service total or a quote total at a given time, but not both simultaneously.
  - The quote totals reflect the result of the last entered target value, whether it's for the quote or the service. For example, you specify a new price for a service, apply the changes, but later decide to specify a new price for the quote. The quote will then reflect the last price you specified for the quote.

## Result

Workday builds a quote as per your specification.

## Next Steps

You can:

- Add phases and tasks to relevant services.
- View quote summary.
- Edit quote totals and service totals.
- Edit an approved quote for opportunities with open status by selecting **Change** from the related actions menu of a quote. Specify the reason for changing the quote.

**Note:** We prevent you from editing a canceled or denied quote but you can copy it and create a brand new quote.

- Edit quote worktags.
- Cancel or copy the quote.
- Create a custom reports that include quote documents and quote document file detail to view and extract quote documents en masse.

## Add Phases and Tasks from Work Breakdown

### Prerequisites

Set up quote configurations. See [Steps: Set Up Quote](#) on page 977 topic.

Security: Configure these domains in the Services CPQ functional area:

- *Process: Quotes*
- *View: Quote Project Hierarchies*

### Context

When you add a custom service to the quote, you can specify the effort estimation. When the effort estimation is *With Phases* or *With Phases and Tasks*, use the **Work Breakdown** view to add phases and tasks to a service in the quote. The phases and tasks can have gaps or they can overlap.

In the **Work Breakdown** view, you can't:

- Edit or delete roles.
- View a duration based service.
- View or allocate non-labor items.

In the **Timeline** view, you can't:

- Add phases or tasks. You must navigate to the work breakdown view to perform these actions.
- Add hours for the roles. Though, you can edit the hours when it's already allocated through the work breakdown view.

**Note:** Once you configure an effort estimation for the service and allocate the hours in the service, you can't change the **Effort Estimation** type.

### Steps

1. Access the **Create Quote** task and complete the options.
2. On the **Create Quote** page, access the related actions menu under the **Action** column in the quote line and select **Add Custom Service**.
3. On the **Add Custom Service** page, select *With Phases* or *With Phases and Tasks* option under the **Effort Estimation** section.
  - a) Specify other required values.
  - b) Click **Add Service**.

4. Click **Work Breakdown** to add phases or tasks to the service.
  - a) Select a service with phases or phases and tasks in the **Service** prompt.
  - b) Access the related actions menu under the **Action** column in the service line and select **Add Phase** for service with phases.
    - Select a phase.
    - Specify the dates if the **Effort Estimation** is *With Phases*.

**Note:** If the Effort Estimation is With Phases and Tasks, you can't specify the dates because they are derived from the task. The earliest Task Start Date becomes the Phase Start Date and the latest Task End Date becomes the Phase End Date.

    - Click **Add Phase**.
    - (Optional) You can click the related actions menu under the **Action** column in the phase line to edit, copy, or delete a phase. You can add 1 or more phases.
  - c) If the **Effort Estimation** is *With Phases and Tasks*, access the related actions menu under the **Action** column in the phase line and select **Add Task** for service with phases and tasks.
    - Select a task.
    - Specify the display name.
    - Specify the dates.
    - Click **Add Task**.
    - (Optional) You can click the related actions menu under the **Action** column in the task line to edit, copy, or delete a task. You can add 1 or more tasks.
  - d) Access the related actions menu under the **Action** column in the phase line and select **Add Role**.
    - Select a role.
    - (Optional) Click **Advanced Role Details** to specify additional parameters.
    - Click **Add Role**.
  - e) Specify the hours under the role column:
    - In the phase line when **Effort Estimation** is *With Phases*.
    - In the task line when **Effort Estimation** is *With Phases and Tasks*.
  - f) (Optional) To view the phases and tasks in the **Timeline** view, slide the **Show Phases and Tasks** toggle.

**Note:** If you allocate hours to a role that is aligned to more than 1 phase or task for a given time-period, Workday splits the hours evenly across the overlapping phases or tasks.

## Result

Workday adds the service with phases or tasks to the quote.

## Next Steps

1. You can continue to build the quote and take these actions in the quote grid:
  - Edit, copy, move, or delete the service.
  - Add roles, items, discounts, expenses, and third party costs. See **Add Custom Service Manually** topic.
  - Add phases and tasks in the **Work Breakdown** view.
  - Modify Quantity and FTE values for roles.
  - Edit totals.
  - Edit worktags.
  - Edit, cancel, or copy the quote.

## 2. Once approved, you can:

- Change the quote.
- Print the quote document.

# Add Services from Services Catalog

## Prerequisites

Set up quote configurations. See [Steps: Set Up Quote](#) on page 977 topic.

Create services catalog. See [Create Services Catalog](#) on page 987 topic.

Security: Configure these domains in the Services CPQ functional area:

- *Process: Quotes*
- *View: Quote Project Hierarchies*

## Context

You can add a pre-configured service to the quote from a catalog that can contain roles, non-recurring items, expenses, and third party costs, project hierarchy, and duration of a service. You can't add phases and tasks to services you add from the catalog.

## Steps

1. Access the **Create Quote** task.
2. On the **Create Quote** page, access the related actions menu under the **Action** column in the quote line and click **Add Service from Catalog**.

You can search by keywords or filter by Project Hierarchy, Company and other configured search tags such as Business Unit or Region to find specific services.

You can click the ellipses -> **View Details** on the service to view specific details before adding to the quote.

- a) On the **Services Catalog** page, Click the **Add To Quote** button to on the service card to add that service to the quote.

Once added, the button changes to **Added to Quote** with green checkmark helping you identify cards that have already been added to the quote.

You can review or modify **Basic Details** and **Pricing** options.

- b) Click the **Go To Quote** button to navigate back to the quote page.

3. (Optional) On the **Create Quote** page:

- a. Enter the amounts for the expense and third party cost lines.
- b. Enter the sales item price list and the project billing rate sheet.

## Result

Workday adds the selected services to the quote.

## Next Steps

- You can continue to build the quote and take these actions in the quote grid:
  - Edit, copy, move, or delete the service.
  - Add roles, items, discounts, expenses, and third party costs. See [Add Custom Service Manually](#).
- Edit totals.
- Edit worktags.
- Modify Quantity and FTE values for roles.

- Copy or cancel the quote.
- Once approved, you can:
  - Change the quote.
  - Print the quote document.
- [Add phases and tasks](#).
- **Note:** Currently, services in the catalog are configured as High Level. To build services with Phases or Tasks, you can create a service manually.

## Add Services from Spreadsheets

### Prerequisites

- Enable the tenant setting to allow pasting from a spreadsheet.
- Set up quote configurations. See [Steps: Set Up Quote](#) on page 977 topic.
- Set up the spreadsheet. See [Set Up Spreadsheet](#) topic.

### Context

You can copy data from a Google spreadsheet or Excel file and paste it in the quote grid in the **Timeline** view. After enabling the opt-in feature flag, you can copy and paste:

- Roles under services, including rate categories.
- Service or multiple services under the quote.
- Nested table with both roles and services at the same time, as long as the role is under a service with an effort estimation of *High Level*.

You can paste a maximum of 500 role rows and 500 service rows each.

### Note:

- When you have a service with phases and tasks in your spreadsheet table, leave the hours blank for the roles under the service in a nested table.
- Since you can paste the unit list price and the unit cost for roles, these values can differ from the standard rates defined in Workday on the Project Billing Rate Sheet or the Project Standard Cost Rate Sheet.

### Steps

1. Access the **Create Quote** task.

For existing quotes, access the desired quote, from the related actions menu, click **Edit Quote**.

2. To copy, access the spreadsheet, select the data table, and press **CTRL/CMD+C**.

3. To paste services or multiple tables, select the **Quote** name cell in the **Timeline** view, and press **CTRL/CMD+V** in the quote grid.

4. To paste roles, select the **Service** name cell where you want to add the roles and press **CTRL/CMD+V** in the quote grid.

- Pasting the data honors the calculations and cross-sheet references within your spreadsheet tabs, but doesn't support reference between different spreadsheets.
- When you encounter any errors, the entire paste process doesn't execute. You will need to first fix the errors, and then try pasting the entire data set again.
- When you paste, if there is a blank row between 2 services or roles in the table, Workday ignores all data after the blank row.

5. (Optional) To delete and replace all existing data in the quote:

a) Add **<REPLACE ALL>** token in the top left cell above the table.

b) Select the **Quote** name cell in the **Timeline** view, and press **CTRL/CMD+V** in the quote grid.

## Result

The new data you add in the quote appears below the existing data.

## Example

Watch the video.

## Next Steps

1. You can continue to build the quote and take these actions in the quote grid:
  - Edit, copy, move, or delete the service.
  - Add roles, items, discounts, expenses, and third party costs. See **Add Custom Service Manually** topic.
  - Add phases and tasks in the **Work Breakdown** view when the service is With Phases, or With Phases and Tasks type. See **Add Phases and Tasks** topic.
  - Modify Quantity and FTE values for roles.
  - Edit totals.
  - Edit worktags.
  - Edit, cancel, or copy the quote.
2. Once approved, you can:
  - Change the quote.
  - Print the quote document.

## Concept: Opportunity in Quotes

---

When you don't have a CRM solution or integration, you can use the **Create Opportunity** task to create an opportunity. You can specify the opportunity name, company, customer, currency, associated salesperson, expected close date, and any worktags or notes. Worktags enable you to tag dimensions specific to the opportunity and these worktags will default in on any quotes created for this opportunity. For mass transactions, you can use the *Put Opportunity* web service.

When you create an opportunity, ensure:

- To specify a Customer to be able to create quotes for an opportunity.
- The customer is not a worktag customer.
- The opportunity currency is valid for the specified customer.

Workday automatically creates the opportunity in Openstatus with a **Source** of *Manual* and displays the **View Opportunity** page. Other opportunity status are *Closed/Won* and *Closed/Lost*. To view opportunity details and sources, you can use the **Find Opportunities** report.

**Note:** When you import opportunity data created in a third-party software application like Salesforce.com, you can configure your integration to map the **Source** field to display the name of the CRM solution.

You can edit an opportunity to change any or all data when the Opportunity has a **Source** of *Manual*. When you change opportunity fields after creating a quote:

- The new quotes will reflect the new data.
- The old quotes will retain existing fields and data prior to the change.

You can use the opportunity worktag to tag on expense reports and purchase orders, in order to track pre-sales labor costs and expenses for a specific sales deal. The amount for these transactions will be accumulated in the **Opportunity Cost** field.

Each Opportunity should only associate with 1 primary quote. You won't be able to use an opportunity to create a quote if:

- The status is not *Open*.
- It has line items.
- It has no customer.

These reports can help you track opportunities and cost to close in Workday:

- **Find Opportunities**
- **Opportunities**
- **Opportunity Statuses**
- **View Opportunity**
- **View Opportunity Summary**

## Concept: Calculations for Set Target Discount and Price

---

Workday allocates the Target Price based on the Unit Price to distribute the new price or discount amount proportionally across line items and roles based on the weight of the line.

When you change the **Target Price**:

- **New Unit Price** =  $(\text{Target price} * (\% \text{ of Price})) \div \text{Quantity}$
- When a role or item line unit price is 0, Workday can't calculate a new price for that specific line, therefore the unit price for the role or item will remain 0 for any subsequent calculations (unless the user manually edits the unit price for this role or item).

When you change the **Target Discount**:

- **New Target Price** =  $(\text{Total Unit List Price} * (1 - \text{target discount})) \div \text{Quantity}$
- **New Unit Price** =  $(\text{New Target Price} * (\% \text{ of Price})) \div \text{Quantity}$
- The **Discount** becomes 0 when the **Unit List Price** changes to 0.

### Note:

- Calculation for **Target Margin** remains the same. Workday continues to use the same unit cost base for calculations. MarginTarget price =  $(\text{cost} / (1 - \text{margin}))$
- If you have 2 role lines with the same role in the same service, but the role lines have different unit prices, then Workday automatically sets the unit price to be the same for both the roles when you set/ change the target price because a contract doesn't allow 2 different unit prices for the same r

### Example

Refer to this example table for the distributed unit price calculation when you change the **Target Price** or **Discount** at the header.

Example: You set the existing unit price for a role or item as:

Role or Item Line	Quantity	Unit Price	% (Percentage of Total Price)	Unit List Price
A	1	200	$200 \div 300 = 66.67\%$	400.00
B	1	100	$100 \div 300 = 33.33\%$	400.00
<b>Total</b>		<b>\$300</b>	<b>100.00%</b>	<b>\$800</b>

When you change the **Total Target Price** on the quote header from \$300 to \$500 then Workday automatically recalculates the **Unit Price** as:

Role or Item Line	Quantity	New Unit Price (calculated proportionally)	Unit List Price
A	1	$66.67 * (500) = \$333.34$	400

Role or Item Line	Quantity	New Unit Price (calculated proportionally)	Unit List Price
B	1	33.33 * (500) = \$166.67	400
<b>New Total</b>		<b>333.34 + 166.67 = \$500</b>	<b>\$800</b>

When you add a **Target Discount** on the quote header of **10%**, the new values are:

- Discount Amount: 10% of 800 = \$80
- New Target Price after discount: (800 - 80) = \$720

Workday automatically recalculates the new **Unit Price** as:

Role or Item Line	Quantity	New Unit Price (calculated proportionally)	Unit List Price
A	1	66.67 * (720) = \$480	400
B	1	33.33 * (720) = \$240	400
<b>New Total</b>		<b>480 + 240 = \$720</b>	<b>\$800</b>

## Reference: Quote Line to Contract Line Mapping

Workday uses this logic to default values from various quote lines to contract lines and billing schedules.

Quote Line	Quote Billing Model	Contract Line Type	Revenue Category	Billing Schedule (Optional)	Revenue Schedule (Optional)
Role Line	Fixed Fee	Fixed Fee Project Line	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Not created automatically. Default Accounting Treatment = Invoice.
	Time and Expense	Project Time and Expense Line  With Transaction Source = Time	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Not created automatically. Default Accounting Treatment = Invoice.
Expense Line	Fixed Fee	Fixed Fee Project Line	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Not created automatically. Default Accounting Treatment = Invoice.

Quote Line	Quote Billing Model	Contract Line Type	Revenue Category	Billing Schedule (Optional)	Revenue Schedule (Optional)
	Time and Expense	Project Time and Expense Line With Transaction Source = Expense	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Not created automatically. Default Accounting Treatment = Invoice.
Third Party Cost Line	Fixed Fee	Fixed Fee Project Line	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Not created automatically. Default Accounting Treatment = Invoice.
	Time and Expense	Project Time and Expense Line With Transaction Source = Supplier Invoice	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Defaulted from <b>Maintain Services CPQ Settings</b> task.	Not created automatically. Default Accounting Treatment = Invoice.
Item Line	<ul style="list-style-type: none"> <li>• Fixed Fee</li> <li>• Time and Expense</li> </ul>	Defaults from the sales item.	Defaults from the sales item.	Defaults from the sales item.	Defaults from the sales item.

## Revenue

---

### Sales Items

---

#### Steps: Manage Revenue Categories

##### Prerequisites

Security:

- *Set Up: Basic Revenue Category Worktag domain in the Common Financial Management and Worktags functional areas.*
- *Set Up: Revenue Categories domain in the Common Financial Management functional area.*

##### Context

Create revenue categories to classify the types of goods and services available to sell to customers. You can group similar categories into hierarchies as needed. You can then use the categories to:

- Create reports.

- Simplify searches.
- Route transactions to ledger accounts when the posting rule conditions use categories.
- Function as worktags.

Example: When you create a journal, you can tag it with a spend category or a revenue category.

## Steps

### 1. Access the **Create Revenue Category** task.

As you complete the task, consider:

Option	Description
<b>Default Tax Applicability</b>	Select a tax applicable code that you configure on the <b>Maintain Tax Applicability</b> task. The tax applicable code displays as the designated value when you create customer invoices using the revenue category. Workday applies the tax applicable code on customer invoices to calculate related taxes based on the tax rates for the customer.
<b>Spend Category Mapping</b>	Select to map a revenue category to a spend category for direct intercompany transactions. You can only select a revenue category on direct intercompany customer invoices when you map a revenue category to a spend category.
<b>Classification</b>	Select Goods or Services to classify revenue categories as either goods or services. Use this for tax reporting and tax defaulting rules.
<b>Inactive</b>	When you select this check box, Workday disables this entry from search results, prompt lists, and worktag lists for new transactions.
<b>Related Worktags</b>	A revenue category is an object in Workday that you can use as a worktag. Set up related worktags for this object using the related worktag types that you configure on the <b>Maintain Related Worktag Usage</b> task. Workday automatically populates transactions with the values in the <b>Default Worktag</b> column when you select the object on the transaction.

### 2. Access the **Create Revenue Category Hierarchy** task.

Group similar revenue categories into hierarchical groups for reporting purposes and account determination in posting rules.

You can't delete revenue category hierarchies after you create them, but you can rename obsolete hierarchies to prevent users selecting them by mistake.

## Result

You can use revenue categories to:

- Assign as characteristics to accounting objects. Workday requires that you assign a category to every customer, supplier, item, business asset, and write-off.

- Write transactions against a category without having to specify items. Example: When you create an invoice, you can write a line and its amount to a general category.

#### **Related Information**

##### **Concepts**

[Concept: Intercompany Transactions](#) on page 51

[Concept: Sales Items](#) on page 1021

##### **Tasks**

[Steps: Set Up Customers and Suppliers for Direct Intercompany Transactions](#) on page 46

[Create Customer Contracts](#) on page 1034

## **Steps: Set Up Taxes for Revenue Transactions**

#### **Context**

You can configure default tax applicability and tax codes for customer sales transactions. Tax applicability and tax codes populate on customer contracts, customer invoices, customer invoice adjustments, and cash sales.

#### **Steps**

1. Configure a default tax applicability for each revenue category.

See [Steps: Manage Revenue Categories](#) on page 1016.

2. (Optional) [Create Sales Items](#) on page 1018.

Select a default tax applicability for individual sales items. The default tax applicability for the sales item overrides the tax applicability that you define for the revenue category.

3. [Create Customers](#) on page 748.

On the **Tax Information** report on the **Overview** profile group:

- Select the default tax code for each customer.
- Enter tax identification numbers by country.
- Specify the **Transaction Tax ID** used to report transaction tax for each country.
- Enter transaction and withholding tax status by country.

#### **Related Information**

##### **Tasks**

[Steps: Set Up Transaction Taxes](#) on page 644

## **Create Sales Items**

#### **Prerequisites**

- Create revenue categories. See [Steps: Manage Revenue Categories](#) on page 1016.
- Security: *Set Up: Sale Item* domain in the Customer Accounts and Learning Core functional areas.

#### **Context**

You can create sales items to define the types of goods and services that you sell. You can then categorize sales items by revenue category for billing and revenue accounting purposes.

#### **Steps**

1. Access the **Create Sales Item** task.

2. As you complete the task, consider:

<b>Sales Item Tab</b>	
<b>Commodity Code</b>	Select a commodity code to associate with the sales item. You can select only 1 active code per commodity code type.
<b>Revenue Category</b>	Select a revenue category to associate with the sales item. When you add the sales item to a customer contract or an invoice line, Workday automatically populates the <i>revenue category</i> .
<b>Sales Item is a Bundle</b>	Select to create a sales item bundle. When you add the bundle to a customer contract line, you can bill for the entire line and recognize revenue for each individual sales item in the bundle.
<b>Quotable</b>	Select to enable the sales item to be available when creating a quote in Services CPQ.
<b>Fulfillment Required</b>	Select to track orders fulfilled against a customer contract line. You can recognize revenue and generate billing for both partially and completely filled orders.
<b>Purchase Item Mapping</b>	Select to map a sales item to a purchase item for direct intercompany transactions.  You can only select a sales item on direct intercompany customer invoices when you map a sales item to a purchase item.
<b>Classification</b>	Select Goods or Services to classify sales items as either goods or services. Use this for tax reporting and tax defaulting rules.

<b>Sales Item Pricing Tab</b>	
<b>Enable Bulk Quantity Pricing</b>	Select to price the sales item in bulk quantities and reflect the extended amount on items sold in bulk.
<b>UOM Priced at Quantities of</b>	Enter the unit of measure for the price of the sales item.  Displays when you select the <b>Enable Bulk Quantity Pricing</b> check box.
<b>Currency</b>	When you add a sales item to a customer invoice or invoice adjustment line, Workday converts the price to the transaction currency based on your defined rate type.

<b>Sales Item Defaults Tab</b>	
<b>Contract Line Type</b>	Select to identify the type of sales item pricing used on customer contracts.
<b>Billable Project Template</b>	Select a template for sales items that are project driven to help you quickly generate a project.
<b>Billing Template</b>	Select a template for consolidated billing schedules when using the sales item.
<b>Revenue Treatment</b>	The revenue treatment that you select on the sales item determines the account posting rule and ledger account when you create invoices and recognize revenue.

<b>Sales Item Defaults Tab</b>	
	Workday automatically populates the deferred revenue selection on the customer contract line when you select the sales item. Your selection on the customer contract line also displays on the customer invoice line.
<b>Exclude from Multiple-Element Revenue Allocation</b>	Select to automatically exclude sales items from multiple-element revenue allocation. You can change your selection at any time. When you leave the prompt blank, Workday uses the selection that you make on the sales item group.  See <a href="#">Setup Considerations: Multiple-Element Revenue Allocation</a> on page 1059 and <a href="#">Steps: Create Multiple-Element Revenue Allocation</a> on page 1064.

<b>Related Worktags Tab</b>	
<b>Related Worktags</b>	A sales item is an object in Workday that you can use as a worktag.  Set up related worktags for this object using the related worktag types that you configure on the <b>Maintain Related Worktag Usage</b> task. Workday automatically populates transactions with the values in the <b>Default Worktag</b> column when you select the object on the transaction.  When the sales item and revenue category worktags are the same type, the value from the sales item takes precedence because it's more granular.

## Next Steps

- Add an image to the sales item.
- Add sales items on your customer contracts.

## Create Sales Item Price Lists

### Prerequisites

#### Security:

- *Set Up: Customer Contracts - Price Lists* domain in the Customer Contracts and Project Billing functional areas.
- *Set Up: Sale Item* domain in the Customer Accounts and Learning Core functional areas.

### Context

You can create dynamic price lists and apply effective dates to manage sales items. You can create price lists based on company size, region, and other dimensions such as sales channel.

## Steps

1. Access the **Maintain Sales Item Price List** report.
2. Click **Add** to create a new price list.

As you complete the task, consider:

Option	Description
<b>Worktag Type</b>	Defines the available price rule worktags.
<b>Tiered Price</b>	Select this option to create different pricing based on quantities sold.

3. (Optional) Access the **Set Up Sales Item Pricing Configuration** task.

Define a price list at the tenant level. You can also override the tenant option by adding a price list at the company level.

## Next Steps

Use the **Sales Item Price List** report data source and **Sales Item Price Rule** report field to create a custom report.

## Concept: Sales Items

Sales items are goods and services that you sell to customers. You can configure goods and services for use in customer contracts, billing, customer invoices, and revenue accounting.

### Sales Items

You can manage your sales items using the **Create Sales Item** and **Edit Sales Item** tasks. To drive accounting and analysis, you can organize sales items into revenue categories, sales item groups, and sales item bundles. You can also maintain pricing for *Standalone Selling Price* (formerly VSOE Price), *Third Party Evidence*, and *Estimated Selling Price* for use in custom reporting. Sales items can have 2 units of measure, such as the number of users and time (day, hours, month, week, or year). Workday uses the units of measure to determine how to package and sell sales items to customers. When you select sales items on customer contract lines, Workday populates the lines with the sales item information you specify.

### Revenue Categories

You can categorize sales items by revenue category and automatically assign them during accounting using the **Create Revenue Category** task. Associate each sales item with 1 revenue category. You can also group your revenue categories for reporting purposes using the **Create Revenue Category Hierarchy** task. You then can use revenue categories to create account posting rules for revenue and drive the accounting related to the sales item to particular ledger accounts.

### Revenue Allocation Rules

You can:

- Create sales item relationships using the **Maintain Fair Value Price List** report and then calculate your fair value pricing based on the relationship.
- Configure revenue allocation rules to handle exceptions at the sales item level using the **Set Up Revenue Allocation Configuration** task.

## Sales Item Groups

Sales item groups enable you to search for sales items more easily. A sales item can belong to more than 1 group. Example: A laptop can belong to both the *Office Supplies* and *Laptops and Desktops* sales item groups.

You can use these tasks to configure sales item groups:

- **Maintain Sales Item Groups**
- **Assign Sales Items to Item Group**

You can associate sales item groups with 1 of these group types:

- *General*
- *FV Pricing* (Use with fair value price lists.)
- *Sales Item Pricing* (Use with price lists for multidimensional pricing.)

## Sales Item Bundles

You can create sales item bundles by selecting the **Sales Item is a Bundle** check box on the **Create Sales Item** task. When you include a sales item bundle on customer contract lines, you can:

- Bill for the entire contract line.
- Recognize revenue for individual sales items in the bundle.

When you invoice customers, Workday:

- Displays the sales item bundle as 1 line item on the invoice with a single grouped price.
- Uses the individual sales items within the bundle for revenue allocation.

You can change which sales items are in a bundle using these tasks:

- **Create Customer Contract**
- **Create Customer Contract Amendment**
- **Create Customer Contract Change**

## Sales Item Price Lists

You can configure separate sales item price lists based on dimensions, such as company size, location, or channel using the **Maintain Sales Item Price List** report.

## Fair Value Price Lists

You can associate sales items and sales item groups with a fair value price list using the **Maintain Fair Value Price List** report. For each sales item, you can configure the fair value price list based on a percentage or amount value. When you add a sales item on the customer contract line, Workday populates information from the fair value price list on the contract line. You can also associate a fair value price list with your customer contracts by selecting the **Multiple-Element Revenue Allocation** check box on the contract.

## Direct Intercompany Transactions

You can map sales items to purchase items and revenue categories to spend categories for use on direct intercompany transactions. When you map sales items to purchase items and revenue categories to spend categories, there must be a 1-to-1 relationship.

When you need to map multiple spend categories to a single revenue category, you must create:

- Additional revenue categories so that you can maintain a 1-to-1 relationship.
- Multiple sales items that map to a single intercompany revenue category and map each sales item to a purchase item in a 1-to-1 relationship. You can then map each purchase item to the appropriate spend category.

Workday creates direct intercompany supplier invoices at the lowest level of detail. Example: If a revenue category maps to spend category X, but the sales item on the invoice maps to a purchase item that maps to spend category Y, Workday uses the spend category associated with purchase item Y on the supplier transaction.

### **Commodity Codes**

You can configure commodity codes for your code types on the **Create Commodity Code** task and associate them with your sales items on the **Create Sales Item** and **Edit Sales Item** tasks. You can link multiple commodity codes to 1 sales item, but you can select only 1 code for each commodity code type.

#### **Related Information**

##### **Tasks**

[Steps: Manage Revenue Categories](#) on page 1016

[Create Sales Items](#) on page 1018

### **Concept: Sales Item Currencies**

The sales items that you add to Workday have their own defined currencies.

If the item and transaction currencies differ, Workday automatically converts the item currency into the transaction currency for both customer invoices and invoice adjustments, using the default currency rate type. You can check your company's default currency rate type using the **Maintain Currency Rate Types** task.

The value of item currencies can change between invoice and payment, leading to realized gains and losses.

Example: You sell an item with a price of \$5 US to a UK customer and agree to invoice in British pounds. When you create the customer invoice, Workday converts the item value to the current transaction value of £2.5. Exchange rates change over time and can result in a foreign currency exchange difference. When the customer pays the £2.5, the amount could convert to \$4.50 or \$5.15.

You can use these tasks to set item currencies:

- [Create Sales Item](#)
- [Maintain Sales Item Price List](#)

### **Example: Create Professional Services Sales Items**

This example illustrates how you can configure your sales items for use with customer contracts and invoices. To drive both accounting and analysis, organize sales items into revenue categories and sales item groups. You can include informational pricing fields for standalone selling price (formerly VSOE Price), third-party evidence, and estimated selling price on sales items. You can use these additional pricing fields for custom reporting and multiple-element arrangements contracts.

#### **Context**

Global Modern Services creates a sales item for hourly contract technical writing services.

#### **Prerequisites**

Security: Set Up: *Sale Item* domain in the Customer Accounts and Learning Core functional areas.

#### **Steps**

Access the **Create Sales Item** task.

- a. Create a new sales item using this information:

Field Name	Entry Value
Sales Item Name	Technical Writer
Revenue Category	Services
Sales Item Description	Technical writing services for software development team.
Unit of Measure	Hour
Unit Price	95
Currency	USD
Contract Line Type	Project Time and Expense

- b. Create another new sales item using this information:

Field Name	Entry Value
Sales Item Name	Technical Editor/Project Manager
Revenue Category	Services
Sales Item Description	Technical editing and Project Management services for software development team.
Unit of Measure	Hour
Unit Price	105
Currency	USD
Contract Line Type	Project Time and Expense

- c. Click **OK** and **Done**.

### Next Steps

Assign Sales Item to Item Group.

Create Sales Item Price List.

---

## Customer Contracts

### Steps: Configure Customer Contracts

#### Context

Customer contracts enable you to capture the details of customer sales agreements. These details include sales items or projects, important dates, payment schedules, milestones, and retention. Workday uses the details that you specify to calculate billing and determine revenue recognition. You can configure each step of the contract lifecycle from draft to completion, and you can route customer contracts for automatic approval. Workday can also integrate data from third-party vendors to support contract management.

## Steps

**1. Edit Business Process Security Policies.**

Configure the business processes and security policies for the Customer Contracts and Project Billing functional areas.

**2. Edit Business Processes.**

Make changes as needed to these business processes:

- *Billing Schedule Event*
- *Carve In Carve Out or Foreign Currency Adjustment Journal Event*
- *Contract Rate Sheet Event*
- *Customer Contract Alternate Event*
- *Customer Contract Amendment Event*
- *Customer Contract Asset and Liability Reclassification Journal Event*
- *Customer Contract Event*
- *Deferred Cost Installment Event*
- *Percent Complete Project Event*
- *Project Transaction Adjustment Event*
- *Revenue Recognition Installment Event*
- *Revenue Recognition Schedule Event*

**3. Create ID Definitions and Sequence Generators.**

Create an ID definition that Workday can use to assign sequence numbers to new customer contracts.

**4. Access the **Edit Tenant Setup - Financials** task.**

- In the **Business Document Sequence IDs** section, select the ID definition that you created from the **ID Generator for Customer Contracts** prompt.
- In the **Customer Contracts Options** section, configure your tenant-wide settings for customer contracts.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

See [Reference: Edit Tenant Setup - Financials](#).

**5. Access the **Maintain Customer Contract Types** task.**

(Optional) To link your contracts, enable **Linked Contract** for at least 1 contract type.

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

**6. [Create Sales Items](#) on page 1018.**

**7. (Optional) [Create Billing Schedule Templates for Customer Contracts](#) on page 1078.**

**8. (Optional) [Create Consolidated Billing Schedule Templates for Customer Contracts](#) on page 1079.**

**9. Access the **Maintain Schedule Types** task.**

(Optional) To use a consolidated billing schedule, enable **Consolidated Billing Schedule** for at least 1 schedule type.

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

**10. Create a billing schedule for the customer contract.**

(Optional) To withhold a percentage of the customer invoice, click **Edit Retention Terms**.

See:

- [Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080
- [Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085

**11. [Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110.**

**12.(Optional) Access the **Maintain Journal Sources** task.**

Security:

- *Set Up: Journal Source* domain in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

**13. Set Up Account Posting Rules on page 84.**

Configure these account posting rules:

- *Deferred Revenue*
- *Revenue*
- *Unbilled Receivables*

**14. Create customer contract templates.**

See [Steps: Create Customer Contract Templates on page 1029](#).

## Next Steps

- Set up milestones. See [Concept: Billing on page 1090](#).
- Set up customer contract amendment types, contract line fees, and discounts and premiums. See [Concept: Customer Contracts](#).

## Related Information

### Reference

[Reference: Contract Line Types for Customer Contracts on page 1054](#)

## Steps: Upload Customer Contracts

### Context

You can add new customer contracts or update existing, unapproved customer contracts in Workday from a spreadsheet using Enterprise Interface Builder (EIB). The spreadsheet includes sections for customer contract and contract line data. You can also assign worktags to specific business objects like locations, cost centers, or projects.

You can submit the contracts or save them in draft mode. In addition, you can optionally lock the contracts in Workday to prevent editing or cancellation. However, Workday doesn't recommend locking customer contracts because it prevents you from amending the contracts in Workday. After you approve contract, you can't make contract amendments through web services, either.

When successfully completed, the upload automatically triggers the *Customer Contract Event* business process. Workday can complete approvals automatically, bypass reviews and To Do tasks, and skip Notifications in the *Customer Contract Event* business process. To enable these options, select the **Auto Complete** option when you prepare the spreadsheet.

After you successfully load the data into Workday, you can view the customer contracts by accessing the **View Customer Contract** report.

### Steps

**1. Set Up Inbound EIB.**

Enter *Submit Customer Contract (Web Service)* at the **Template from Web Service Operation** prompt.

2. From the related actions menu of the integration system for the upload, select **Template Model > Generate Spreadsheet Template**.

To maintain the correct spreadsheet format, don't change the .xml file extension.

Security: *Integrations: EIBs*, *Integration Configure*, and *Integration Event* domains in Integration functional area.

3. [Customize EIB Spreadsheet Template](#).

To customize the template, edit the template model of the EIB.

4. [Set Up EIB Spreadsheet](#).

Workday determines whether to add or update customer contracts based on your entries in the **Add Only** and **Customer Contract** spreadsheet columns:

- To add a new contract, enter **Y** in the **Add Only** field and leave the **Customer Contract** field blank. In the *Customer Contract Data* section, enter a new **Customer Contract ID** value. Enter this value if you want to assign a customer contract reference ID instead of Workday generating it during the upload.
- To update an existing contract, enter **N** in the **Add Only** field. Specify the reference ID of the existing contract in the **Customer Contract** field. Leave the **Customer Contract ID** field blank, unless you want to update the existing customer contract ID to a different value.

5. [Launch EIB Spreadsheet Upload](#).

Confirm that you are in a security group that has these permissions:

- Access to the *Submit Customer Contract* web service initiating action.
- Modify permission on the Integrations: EIBs domain.

[Concept: Enterprise Interface Builder](#)

## **Steps: Amortize Customer Contract Costs**

#### **Prerequisites**

- Create 1 or more customer contracts.

#### **Context**

You can incrementally amortize contract costs, such as commissions, for your customer contracts over time.

#### **Steps**

1. (Optional) Access the **View Account Posting Rule Set** report to manage your deferred cost assets and amortization expenses posting rules.

Security:

- *Set Up: Accounting Rules* domain in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

2. (Optional) Access the **Maintain Cost Types** task.

Create 1 or more cost types.

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

3. Access the **Create Deferred Cost Transactions** task.

Create at least 1 deferred cost transaction for amortization.

Security: *Process: Deferred Cost Schedule - Core* domain in the Customer Contracts and Project Billing functional areas.

4. [Create Deferred Cost Schedules](#) on page 1043.

5. Access the **Create Deferred Cost Accounting** task.

To generate accounting, select 1 or more deferred cost installments.

Configure the *Deferred Cost Installment Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

6. (Optional) Access the **Update Deferred Cost Installment Status** task.

Select the installments to change manually to *Closed* status to stop the amortization and accounting.

Security: *Process: Deferred Cost Schedule - Core* domain in the Customer Contracts and Project Billing functional areas.

## Next Steps

You can create custom reports that pull transaction statuses and amounts to determine installment lines for manual accounting entries.

## Steps: Create Intercompany Contracts

### Context

Intercompany contracts document the details of business relationships between legal entities of global organizations. These contracts offer different transaction rates for worker time and expenses, and supplier invoices between the companies under negotiated transfer pricing. You can invoice these transactions separately through direct intercompany invoices.

### Steps

1. [Maintain Companies as Customers or Suppliers](#) on page 48.

Set up the customer and supplier relationships between your companies.

2. [Create Transfer Pricing Rate Sheets](#) on page 1407.

Create standard or custom rate rules for your intercompany project workers to apply to the intercompany contract.

3. Access the **Create Intercompany Contract** task.

Set up an evergreen 1-way contract between your companies.

Select any accepted currency of the customer on the intercompany contract.

**Note:** You can change the intercompany contract currency until you create either an:

- Intercompany Billing Schedule. When you have an intercompany billing schedule and need to change your currency, cancel your billing schedule. Change your currency, then recreate your billing schedule.
- Invoice for the contract. Once you've created an invoice for your intercompany contract, you can't change the currency.

Configure the *Intercompany Customer Contract Event* business process and security policy in the Projects functional area.

4. Access the **Create Billing Schedule for Intercompany Contract** task.

Create your schedule for intercompany contract billing.

Security: *Process: Transfer Pricing* domain in the Projects functional area.

5. [Review Intercompany Billable Transactions](#) on page 1033.  
Update and approve the transaction associated with this intercompany contract.
6. Access the **Create Intercompany Invoices for Intercompany Transactions** task.  
Create a direct intercompany invoice.  
Security: *Process: Intercompany Contract* domain in the Customer Contracts and Project Billing functional areas.

**Related Information****Concepts**[Concept: Intercompany Transactions](#) on page 51**Steps: Create Customer Contract Templates****Context**

Customer contract templates simplify customer contract creation, maintain consistency, and reduce errors. You can use templates to populate common options when you create customer contracts.

**Steps**

1. (Optional) Access the **Maintain Worktag Usage** report.  
To track revenue and expenditures between intercompanies on customer contract lines, configure the *Intercompany Affiliate* worktag type for customer contracts.  
Security: *Set Up: Enable Worktags* domain in the Common Financial Management and Worktags functional areas.
2. Access the **Create Customer Contract Template** task.  
Define template details, including the contract type, billing schedule information, sales items, and worktags. When you create a customer contract from a template with intercompany affiliate worktags, Workday populates the *Intercompany Affiliate* worktag from the template onto the customer contract lines.  
Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.
3. (Optional) Access the **Maintain Customer Contract Types** task.  
Assign a contract template to each of your contract types.  
Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.
4. (Optional) [Configure the Create Project Business Process](#) on page 1200.  
Add the *Create Customer Contract* service step after the completion step on the *Create Project* business process. This service step creates a customer contract in *Draft* status from your Project.

**Next Steps**

Create customer contracts using templates.

**Related Information****Concepts**[Concept: Customer Contracts](#) on page 1048**Tasks**[Create Customer Contracts](#) on page 1034

## Steps: Set Up Customer Contract Checklist Templates

### Context

You can create a checklist template to define a list of requirements to complete for each customer contract type. Once you enable the checklist template on a customer contract type, the checklist displays on the customer contract. You can use the checklist to ensure that you complete each requirement for the customer contract.

### Steps

1. Access the **Create Customer Contract Checklist Template** task.

You can add comments and attachments for each checklist requirement. Example: Attach PDFs or Excel spreadsheets that define internal procedures or company policies.

Security: *Set Up: Customer Contracts - Checklist Templates* domain in the Customer Contracts and Project Billing functional areas.

2. Access the **Maintain Customer Contract Types** task.

Select the checklist template that you created from the **Checklist Template** prompt. You can only assign 1 checklist template to each customer contract type.

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

3. [Create Customer Contracts](#) on page 1034.

Workday displays a **Checklist** tab that you can use to view the list of requirements to complete for the customer contract.

4. Access the **Find Customer Contracts** report.

From the approved customer contract that you created, click **Edit** on the **Checklist** tab.

Select the **Complete** check box for each checklist requirement that you complete on the customer contract. You can complete checklist requirements throughout the duration of the contract term. You can also add comments and attachments for each checklist requirement.

Security: *Process: Customer Contract - View* domain in the Customer Contracts and Project Billing functional areas.

### Result

When you view the customer contract, Workday displays:

- All the checklist requirements for the contract.
- The completed checklist requirements.
- The date and time that you marked the checklist requirement as complete.
- The user who completed the checklist requirement.

### Related Information

#### Concepts

[Concept: Customer Contracts](#) on page 1048

## Steps: Link Customer Contracts for Revenue Allocation

### Context

You can associate multiple related customer contracts with a single parent customer contract. With linked contracts, you can consolidate all of your revenue in a common currency, display it in a single report, and reallocate revenue across the linked contracts.

## Steps

- Access the **Maintain Customer Contract Types** task.

Select the **Linked Contract** check box for 1 or more contract types.

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

- (Optional) [Set Up Revenue Allocation Configurations](#) on page 1067.

Select the **Allocate Revenue at Summary and Prorate at Line** check box. This check box includes all linked contracts at the summary level and prorates the allocation of revenue on the customer contract lines.

- [Create Customer Contracts](#) on page 1034.

As you complete the task, consider:

Option	Description
<b>Contract Type</b>	Select a contract type that you enabled for linked contracts.  Workday populates the <b>Line Type</b> field for all contract lines with <i>Fixed Amount - Revenue Only</i> .
<b>Revenue Override Amount</b>	Complete the contract line information, including the amount of revenue that you want to recognize for each contract line.

## Next Steps

- Create a custom report that:
  - Consolidates information for your linked contracts.
  - Displays the balances of all linked contracts in the currency of the parent contract.
  - Organizes contract lines by revenue category.
- Perform multiple-element revenue allocation for your linked contracts.
- Create a billing schedule.
- Create a revenue recognition schedule.

## Related Information

### Tasks

[Steps: Create Multiple-Element Revenue Allocation](#) on page 1064

## Steps: Manage Billable Projects on Usage-Based Transactions

### Prerequisites

Create a billable project.

### Context

You can associate a billable project with usage-based customer contract lines and transactions, enabling you to review all your project billing activity at once.

## Steps

**1. Create Customer Contracts** on page 1034.

In the **Line Details** tab of the **Usage-Based** grid, select a project from the **Billable Project** prompt to associate with the usage-based customer contract line.

You can't change the billable project on a usage-based customer contract line when the line is associated with:

- A billing schedule.
- A revenue recognition schedule.
- An invoice.
- Usage-based transactions.

**2. Create Consolidated Billing Schedules for Customer Contracts** on page 1080.

Create a consolidated billing schedule for the usage-based customer contract line that you associated with a billable project.

**3. Access the Record Usage-Based Transactions task.**

Select the:

- Usage-based customer contract from the **Customer Contracts** prompt.
- Project from the **Billable Projects** prompt.

Workday only displays customer contract lines from approved customer contracts in the **Contract Line** prompt.

Security:

- *Process: Project Billing - Usage* domain in the Project Billing functional area.
- *Process: Usage* domain in the Customer Contracts and Project Billing functional areas.

**4. Manage Project Billing Transactions** on page 1417.

Select the project from the **Billable Projects** prompt to view usage-based transactions associated with the billable project.

**5. Manage customer invoice proposals.**

Modify usage-based transactions associated with the billable project before invoicing.

See **Steps: Manage Customer Invoice Proposals** on page 1094.

**6. (Optional) Create Customer Invoices from Contracts** on page 1099.

Create customer invoices for usage-based transactions associated with the billable project.

**7. (Optional) Access the Create Customer Invoices for Billable Transactions task.**

Create customer invoices for usage-based transactions associated with the billable project.

When you generate customer invoices from contracts with a negative amount due, Workday automatically creates credit adjustment documents linked to the billing schedule. If an invoice has retention, Workday instead creates a customer invoice with the negative amount.

Security:

- *Process: Billing - Invoicing* domain in the Customer Contracts and Project Billing functional areas.
- *Process: Project Billing - Invoicing* domain in the Project Billing functional area.

**8. (Optional) Access the Find Billable Project Transactions report.**

Select *Usage Based* from the **Transaction Source** prompt to view usage-based transactions associated with the billable project.

Security:

- *Manage: Billable Projects* domain in the Projects functional area.
- *Reports: Project Billing* domain in the Project Billing functional area.

## Next Steps

Access the **View Project** report to review amounts and drill down on usage-based transactions associated with the billable project.

## Review Intercompany Billable Transactions

### Prerequisites

An intercompany contract with billable transactions.

Security: *Process: Transfer Pricing* domain in the Projects functional area.

### Context

You can review your intercompany billable transactions that occur between:

- A parent company and a subsidiary.
- Divisions.
- Subsidiaries.

Using the Review Intercompany Billable Transactions task, you can also:

- Approve transactions.
- Change billable amounts.
- Recalculate billing rates.
- Place transactions on hold.
- Hold transactions from billing.

### Steps

1. Access the **Review Intercompany Billable Transactions** task.

Workday displays the last search criteria you used.

2. Review and process your transactions.

As you complete the task, consider:

Option	Description
<b>Billing Status</b>	Use this prompt to change the billing status for 1 or multiple lines at once.
<b>Pending Pricing</b>	<p>Displays when you've completed both of these actions:</p> <ul style="list-style-type: none"> <li>• Approved the worker time block using standard cost rates.</li> <li>• Created the advanced labor cost calculation assignment.</li> </ul> <p>Workday displays the billable amount as zero until you complete the <b>Schedule Project Advanced Labor Costing</b> task. This task calculates prorated cost amounts for worker hours.</p>

Option	Description
<b>Unbillable</b>	<p>Displays when your transactions are missing either or both of the intercompany:</p> <ul style="list-style-type: none"> <li>• Billing schedule.</li> <li>• Contract.</li> </ul>
<b>Modify Fields</b>	<p>You can update these fields:</p> <ul style="list-style-type: none"> <li>• Billing Status for all transaction types.</li> <li>• Hours to Bill for time transactions only.</li> <li>• Rate to Bill for time transactions only.</li> <li>• Amount to Bill for expense and supplier invoice transactions only.</li> <li>• Reason for Change for all transaction types.</li> </ul> <p><b>Note:</b> You can't modify fields for transactions with a status of:</p> <ul style="list-style-type: none"> <li>• <i>Do Not Bill</i>.</li> <li>• <i>Pending Pricing</i>.</li> <li>• <i>Unbillable</i>.</li> </ul>
<b>Recalculate Rates</b>	<p>Select to clear changes you make to any of your transactions.</p> <p><b>Note:</b> You can't recalculate rates for transactions with a status of:</p> <ul style="list-style-type: none"> <li>• <i>Do Not Bill</i>.</li> <li>• <i>Pending Pricing</i>.</li> <li>• <i>Unbillable</i>.</li> </ul>

## Next Steps

Create invoices for intercompany transactions.

### Related Information

#### Tasks

[Steps: Create Intercompany Contracts on page 1028](#)

[Steps: Manage Project Advanced Labor Costs on page 1329](#)

## Create Customer Contracts

### Prerequisites

Configure the *Customer Contract Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

### Context

You can create customer contracts to specify the rules, terms, and conditions that govern the contract with your customer. Workday uses the terms that you specify to create:

- Billing schedules.
- Revenue recognition schedules.
- Customer invoices.
- Accounting.

## Steps

- Access the **Create Customer Contract** task.

When you create your contract from a template and your worktag values conflict, the customer or company-specific worktags take precedence.

- Complete the header:

Option	Description
<b>Bill-From Address</b>	<p>This field is automatically populated from the Company information, and propagates through to customer invoice proposals and customer invoices.</p> <p>Displays when the <b>Enable Bill-From Address and Ship-From Address on Customer Invoice</b> option on the <b>Edit Customer Account Options</b> task is selected.</p>
<b>Ship-From Address</b>	<p>This field is automatically populated from the Company information, and propagates through to customer invoice proposals and customer invoices.</p> <p>Displays when the <b>Enable Bill-From Address and Ship-From Address on Customer Invoice</b> option on the <b>Edit Customer Account Options</b> task is selected.</p>
<b>Contract Type</b>	<p>Select a contract type that you created on the <b>Maintain Customer Contract Types</b> task.</p>
<b>Related Customer Contract</b>	<p>Select to associate 1 related customer contract with this customer contract for reporting purposes.</p>
<b>Linked Customer Contracts</b>	<p>Select to associate multiple child customer contracts with this parent customer contract for revenue purposes.</p> <p>Displays when you select a <b>Contract Type</b> enabled for linked contracts.</p>
<b>Parent Customer Contract</b>	<p>Select to associate this customer contract with a parent customer contract for revenue purposes. When you view the parent customer contract, Workday displays this customer contract as a linked contract.</p>
<b>Multiple-Element Revenue Allocation</b>	<p>Select when the contract has lines that require different revenue allocations.</p> <p>Workday then enables you to select a <b>Fair Value Price List</b> and define the fair value unit price and extended amount on the contract lines.</p>
<b>Fair Value Price List</b>	<p>Displays when you select the <b>Multiple-Element Revenue Allocation</b> check box.</p>
<b>Default Tax Code</b>	<p>Select a tax code when the contract lines contain items that are taxable. Workday populates contract lines with the tax code based on the</p>

Option	Description
	<p>values that you enter on the <b>Create Customer</b> task for:</p> <ul style="list-style-type: none"> <li>• Company.</li> <li>• Customer.</li> <li>• Revenue Category.</li> <li>• Ship-From Address.</li> <li>• Ship-To Address.</li> </ul>
<b>Worktags</b>	<p>To track revenue and expenditures between intercompanies on customer contract lines, select the <i>Intercompany Affiliate</i> worktag that you configured for customer contracts on the <b>Maintain Worktag Usage</b> report. Workday populates the <i>Intercompany Affiliate</i> worktag onto the customer contract lines. Workday also populates the <i>Intercompany Affiliate</i> worktag from the customer contract lines onto:</p> <ul style="list-style-type: none"> <li>• Ad hoc project transactions.</li> <li>• Billing installments.</li> <li>• Installment-type transactions.</li> <li>• Project-based transactions.</li> <li>• Revenue installments.</li> <li>• Usage-based transactions.</li> </ul>
<b>Billing Template</b>	<p>Select to create consolidated billing schedules. You can't include a billing template when you also include an installment or transaction billing schedule template.</p>

3. Complete the **Line Details** tab:

Option	Description
<b>Commodity Code</b>	<p>The commodity code you select here propagates through to customer invoice proposals and customer invoices.</p>
<b>Revenue Category</b>	<p>Workday populates this field based on your selection from the <b>Sales Item</b> prompt.</p>
<b>Bundle</b>	<p>Workday populates this field when you select a bundled sales item from the <b>Sales Item</b> prompt.</p> <p>Click to update the bundled sales item information.</p> <p>To allocate revenue for bundled sales items, click the <b>Bundle</b> button and enter amounts in the <b>Revenue Override Amount</b> field.</p> <p>When you change the quantity on a contract line on the <b>Goods and Services</b> tab, or the quantity per bundle on a bundled sales item line, Workday populates these fields on the bundled sales item line:</p>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>Total Quantity</b> = (Quantity per Bundle x Quantity on contract line)</li> <li>• <b>List Extended Amount</b> = (Total Quantity x List Unit Price)</li> <li>• <b>FV Extended Amount</b> = (Total Quantity x FV Unit Price)</li> </ul>
<b>Line Type</b>	<p>When you select <i>Prepaid</i> from the <b>Line Type</b> prompt on the <b>Goods and Services</b> tab and create customer invoices or customer invoice proposals, Workday displays the billable project on the customer invoice lines.</p>
<b>Billable Project</b>	<p>When you select a project from the <b>Billable Project</b> prompt on the <b>Usage-Based</b> tab, Workday associates the billable project with the usage-based customer contract line.</p> <p>You can't change the billable project on a usage-based customer contract line when the line is associated with:</p> <ul style="list-style-type: none"> <li>• A billing schedule.</li> <li>• A revenue recognition schedule.</li> <li>• An invoice.</li> <li>• Usage-based transactions.</li> </ul>
<b>Quantity 2</b> <b>Unit of Measure 2</b>	<p>Displays when you select <i>Subscription</i> from the <b>Line Type</b> prompt.</p> <p>Use when you need to display the quantity of items sold on your billing installments and customer invoices.</p> <p>Example: Your customer decides to purchase 20 hours of your service per month.</p>
<b>Contract Line Amount</b>	<p>Workday uses the contract line amount on the billing schedule.</p>
<b>FV Unit Price</b>	<p>Calculation: Fair Value Extended Amount ÷ Total Number of Units.</p>
<b>FV Extended Amount</b>	<p>Workday uses this value as the revenue override amount when you run multiple-element allocation.</p> <p>Workday updates the extended amount and the unit price when you change either value.</p>
<b>Phases</b> <b>Tasks</b> <b>(Projects only)</b>	<p>Select to include 1 or more phases and tasks on Project Time and Expense, Fixed Fee Project, and Value-Based Project contract lines.</p>
<b>Standard Rate Sheet (Projects only)</b>	<p>Select to use the tenant-wide rules that you created on the <b>Create Project Standard Cost Rate Sheet</b> task, such as:</p>

Option	Description
	<ul style="list-style-type: none"> <li>• Project cost rate rules.</li> <li>• Worker-specific rates.</li> <li>• Project role rates.</li> </ul>
<b>Contract Rate Sheet (Projects only)</b>	<p>When you select both a standard rate sheet and a contract rate sheet, Workday applies the rates from the standard rate sheet first.</p> <p>To add a contract rate sheet to any project line type, select an option from the <b>Project Transaction Source</b> prompt.</p> <p>To compare fixed fee amounts to time and material amounts, associate a billing rate sheet to:</p> <ul style="list-style-type: none"> <li>• <i>Project Time and Expense</i> line types for transaction-based billing projects.</li> <li>• <i>Fixed Fee Project</i> and <i>Value-Based Project</i> line types for installment-based billing projects.</li> </ul>

4. Complete the **Revenue and Billing** tab:

Option	Description
<b>Revenue Treatment</b>	<p>Workday uses the revenue treatment to determine which ledger account in your account posting rules to credit and debit when you create invoices and recognize revenue.</p> <p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Accrued</i> to credit the Unbilled Receivables ledger account during invoicing and debit the Unbilled Receivables ledger account during revenue recognition.</li> <li>• <i>Deferred</i> to credit the Deferred Revenue ledger account during invoicing and debit the Deferred Revenue ledger account during revenue recognition.</li> <li>• <i>Invoice</i> to credit the Revenue ledger account.</li> </ul>
<b>Revenue Override Amount</b>	<p>Workday uses the revenue override amount on the revenue recognition schedule.</p> <p>You can also use this field to record the revenue amount you allocate on a multiple-element arrangement contract.</p>
<b>Revenue Template</b>	<p>Displays when you select <i>Accrued</i> or <i>Deferred</i> from the <b>Revenue Treatment</b> prompt. You can associate the line with a revenue recognition template in your tenant.</p> <p>Depending on your template settings, and after contract line approval, Workday:</p> <ul style="list-style-type: none"> <li>• Generates installments.</li> <li>• Submits the revenue recognition schedule for approval.</li> </ul>

5. Complete the **Additional Information** tab:

Option	Description
<b>Worktags</b>	When you select a billable project on usage-based customer contract lines, select a project plan phase or project plan task that's associated with the billable project.

### Result

Workday routes the customer contract to the *Customer Contract Event* business process for review and approval.

### Next Steps

Create:

- Customer billing schedules.
- Revenue recognition schedules.

## Copy Customer Contracts

#### Prerequisites

- Approve a customer contract.
- Security: *Process: Customer Contract - Core* domain in the Customer Contracts and Project Billing functional areas.

#### Context

You can copy existing customer contracts when you want to create multiple contracts for the same customer. Copying customer contracts helps to save you time by automatically populating fields on the customer contract.

## Steps

From the related actions menu of the approved customer contract that you want to copy, select **Customer Contract > Copy**.

Workday copies:

- Contract lines as numbered on the original customer contract.
- Billing and customer contract notes.
- Tax codes using the current tax rate.
- The billable project and any phases and tasks on the original customer contract lines.
- Only the current approved version of the customer contract for contracts with multiple amendments.
- Worktags on the original customer contract lines.

Workday doesn't copy:

- Canceled or terminated customer contract lines.
- Associated billing or revenue recognition schedules.

## Result

Workday duplicates the original contract in *Draft* status.

## Next Steps

Make the necessary changes to the customer contract and submit it for approval. Workday routes the customer contract copy to the *Customer Contract Event* business process for review and approval.

### Related Information

## Amend Customer Contracts

### Prerequisites

- Approve a customer contract.
- Configure the *Customer Contract Amendment Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

### Context

You can amend customer contracts when you need to make additions, changes, or corrections to approved contracts. Workday assigns the next version number to each new amendment, and you can specify an amendment number to associate with a legal document.

When any of these processes are in progress, you can't submit an amendment:

- An associated billing installment.
- An associated revenue recognition installment.
- An associated customer invoice or invoice adjustment.

## Steps

1. From the related actions menu of the approved customer contract that you want to amend, select **Customer Contract > Amend Customer Contract**.

2. As you complete the task, consider:

Option	Description
<b>Amendment Number</b>	Enter an amendment number to associate the customer contract with a legal document.
<b>New Contract Status</b>	<p>When you select:</p> <ul style="list-style-type: none"> <li>• <i>Active</i>, Workday updates the customer contract to an <i>Approved</i> status. There's no impact to the customer contract lines.</li> <li>• <i>Canceled</i>, Workday cancels the customer contract lines. You can't cancel a customer contract when at least 1 line has an installment in progress, billed amounts, or revenue recognized.</li> <li>• <i>Complete</i>, all customer contract lines must have a status of <i>Canceled</i>, <i>Complete</i>, or <i>Terminated</i>. A <i>Complete</i> status indicates that all activity is complete on the customer contract.</li> <li>• <i>Terminated</i>, Workday terminates the customer contract while retaining all completed installments. When the customer contract has lines associated with completed billing or revenue recognition installments, enter the billed amount in the <b>Contract Amount</b> field before terminating the contract. You can't terminate a customer contract when at least 1 line has a status of <i>Active</i>.</li> </ul>
<b>Sales Item</b>	<p>Workday enables you to edit the sales item when the customer contract line isn't associated with:</p> <ul style="list-style-type: none"> <li>• A billing schedule.</li> <li>• A revenue recognition schedule.</li> </ul>
<b>Revenue Category</b>	<p>Workday enables you to edit the revenue category when the customer contract line isn't associated with:</p> <ul style="list-style-type: none"> <li>• A billing schedule.</li> <li>• A revenue recognition schedule.</li> </ul>
<b>Line Type</b>	<p>Workday enables you to edit the line type when the customer contract line isn't associated with:</p> <ul style="list-style-type: none"> <li>• A billing schedule.</li> <li>• A revenue recognition schedule.</li> </ul>
<b>Billable Project</b>	<p>Workday enables you to edit the billable project for usage-based customer contract lines when the customer contract line isn't associated with:</p> <ul style="list-style-type: none"> <li>• A billing schedule.</li> <li>• A revenue recognition schedule.</li> <li>• An invoice.</li> <li>• Usage-based transactions.</li> </ul>

Option	Description
<b>Contract Rate Sheet</b>	When there are billed work in progress amounts, you can only edit the contract rate sheet when it's effective dated.
<b>Worktags</b>	When you select a billable project on usage-based customer contract lines, select a project plan phase or project plan task that's associated with the billable project.
<b>Attachments</b>	<p>Use the <b>Attachment Category</b> field to identify whether an attachment is part of the original contract or contract amendment.</p> <p>When you amend a contract and add or update attachments during the amendment, Workday associates the original attachments with the historical version of the contract.</p>

## Result

You can view a list of changes on the **Amendments** tab of the customer contract.

## Next Steps

When you configure the *Customer Contract Amendment Event* business process, your revenue recognition and billing schedules might not update. Verify that your schedules properly update when you enable the **Automatically Submit Schedule via Contract Amendment** check box.

## Change Customer Contracts

### Prerequisites

- Approve a customer contract.
- Configure the *Customer Contract Amendment Event* business process and security policy in the Customer Contracts and Project Billing functional areas.
- Security: Process: *Customer Contract - View* domain in the Customer Contracts and Project Billing functional areas.

### Context

You can change a customer contract without going through the full amendment process. When you change a customer contract, you have limited options if your contract is associated with a billing or revenue recognition schedule.

## Steps

1. (Optional) Access the *Customer Contract Amendment Event* business process.  
Add condition rules to route amendments and changes differently as needed.  
Example: Add 1 condition rule that routes amendments to the Controller, and another condition rule that routes changes to the Customer Contract Specialist.
2. From the related actions menu of the approved customer contract that you want to change, select **Customer Contract > Change Customer Contract**.
3. Make any necessary changes to the fields available for edit.

When the customer contract is associated with a billing or revenue recognition schedule, you can't change these fields:

- Billable Project
- Company
- Customer
- Currency
- Contract Amount
- Effective Date
- Phases
- Tasks
- Worktags

## Result

The **Customer Contract Change Event** displays on the **Process History** tab of the contract.

### Related Information

#### Tasks

[Edit Business Processes](#)

## Create Deferred Cost Schedules

### Prerequisites

- Create deferred cost transactions.
- Security: *Process: Deferred Cost Schedule* - Core domain in the Customer Contracts and Project Billing functional areas.

### Context

You can create a deferred cost schedule for 1 or more transaction lines to amortize. All lines you include in a schedule must use the same deferred cost amortization method and currency.

## Steps

1. Access the **Create Deferred Cost Schedule** task.
2. Add at least 1 transaction line to the deferred cost schedule.
3. Click **Save and Continue** to view the draft.
4. Click **Generate Installments** for amortization to occur.

## Next Steps

Optionally update the deferred cost installment status.

### Related Information

#### Tasks

[Steps: Amortize Customer Contract Costs](#) on page 1027

## Create and Edit Usage Billing Rates

### Prerequisites

Create or edit a customer contract with a usage-based contract line. See [Create Customer Contracts](#) on page 1034.

### Context

Create a usage billing rate to define the billing rate for usage-based transactions.

When you:

- Create a usage billing rate, Workday populates the effective date with the customer contract effective date.
- Edit a usage billing rate and change the effective date, Workday saves a snapshot of the usage billing rate. You can view saved usage billing rate snapshots on the **History** tab of the **Edit Usage Billing Rate** task.
- Edit a usage billing rate and keep the same effective date as an existing snapshot, Workday updates that existing snapshot.
- Recalculate usage-based transactions, Workday uses the transaction date to determine which effective dated usage billing rate snapshot to use for the calculation.
- Edit a usage billing rate, Workday updates all usage-based billable transactions on or after the effective date, that haven't been invoiced yet, for all usage-based customer contract lines that use that usage billing rate.

### Steps

1. Access the **Create Usage Billing Rate** task.

You can access the Create Usage Billing Rate task from the **Usage Billing Rate** prompt on usage-based customer contract lines.

2. As you complete the header information, consider:

Option	Description
<b>Effective Date</b>	Specify the effective date for the usage billing rate. The effective date enables you to price usage-based transactions based on that date, and report on usage billing rates based on that date. When you add an effective date on a usage billing rate and configure usage billing rate pricing tiers, Workday uses the reset frequency and effective date to reset the pricing on the usage billing rate.
<b>Pricing</b>	<ul style="list-style-type: none"> <li>• <b>Tiered:</b> Prices are assigned per unit based on quantity ranges.</li> <li>• <b>Volume:</b> A single price is assigned for all units based on total purchase quantity.</li> </ul> <p>See <a href="#">Concept: Usage-Based Contract Pricing</a> on page 1053 for examples and more information.</p>
<b>Reset By</b>	Resetting restarts the pricing at the lowest quantity level.

Option	Description
	<ul style="list-style-type: none"> <li><b>Period:</b> Pricing resets at the frequency and date you select; for example, on the first day of each month. Workday uses the reset frequency and effective date to reset the pricing on the usage billing rate.</li> <li><b>Transaction:</b> Each transaction is evaluated separately.</li> </ul> <p>See <a href="#">Concept: Usage-Based Contract Pricing</a> on page 1053 for examples and more information.</p>
<b>Minimum Count and Minimum Amount</b>	<p>You can enter a minimum count or minimum amount to specify a number of units that are to be deducted from the calculated amount to bill before invoicing.</p> <ul style="list-style-type: none"> <li><b>Minimum Count:</b> The number of units to be deducted.</li> <li><b>Minimum Amount:</b> An amount converted into a number of units to be deducted.</li> </ul>
<b>Minimum Commitment</b>	<p>To specify a minimum amount to be billed per period, select a <i>Recurring - Fixed Term</i> contract line that defines the amount.</p> <p>See <a href="#">Concept: Usage-Based Contract Pricing</a> on page 1053 and <a href="#">Steps: Create Customer Contracts for Minimum Commitments</a> on page 1077.</p>

### 3. Define your pricing tiers.

Select **Max Tier** to define a tier as the uppermost quantity tier.

### 4. (Optional) After creating a usage billing rate and submitting the contract, if you want to edit the usage billing rate, select **Usage Billing Rate > Edit** from the related actions menu of the usage billing rate on the usage-based contract line.

Keep the **Edit As Of** date the same as an existing usage billing rate snapshot if you want to update that snapshot, or change to a different date if you want to create another snapshot. You can view the usage billing rate snapshots on the **History** tab.

Workday applies usage billing rates to usage-based billable transactions according to the effective dates. See [Example: Reset Usage Billing Rates](#) on page 1046.

## Result

Workday creates the usage billing rate, which you can select on usage-based contract lines.

You can use these reports to view the effective date history of the usage billing rate:

- View Usage Billing Rate History:** View the effective date history for the usage billing rate. You can access the report from the **History** tab.
- View Usage Billing Rate as of Date:** View the usage billing rate as of an effective date. You can access the report from the related actions menu of a usage billing rate by selecting **Usage Billing Rate > View As Of**.

**Note:** Existing usage billing rates without effective dates are automatically converted to include an effective date of 1900-01-01. To prevent issues during conversion, when you edit any usage billing rate, use an effective date other than 1900-01-01.

## Related Information

[Concept: Usage-Based Contract Pricing](#) on page 1053

[Workday Community: Usage Billing Guide](#)

### Examples

[Example: Reset Usage Billing Rates](#) on page 1046

## Example: Reset Usage Billing Rates

This example illustrates how Workday resets usage billing rates based on the reset frequency and effective date.

### Context

You want to define:

- Usage billing rates with tiered pricing.
- When the pricing will reset to the lowest-quantity tier.
- Different usage billing rates that will be effective on a later date.

### Prerequisites

Create a customer contract with a usage-based contract line.

### Steps

1. On a usage-based contract line, select **Create Usage Billing Rate** from the **Usage Billing Rate** prompt.
2. Enter a name for the usage billing rate.
3. Change the **Effective Date** to January 1, 2024 (Workday uses the contract line's effective date by default).
4. Select:
  - *Tiered* pricing.
  - Reset by *Period*.
  - *Monthly* reset frequency.
  - Reset start date of January 1, 2024.
5. Create 2 pricing tiers:
  - From 0 to 10, enter a rate of 100.
  - From 10.01 (select **Max Tier**), enter a rate of 90.
6. Click **OK**, and submit the contract.

You've now created a usage billing rate with 2 pricing tiers, effective as of January 1, 2024, resetting to the lower-quantity tier on the 1st of each month.

Now you want to define different usage billing rates that will be effective starting in March 2024.

7. On the same usage-based contract line, select **Usage Billing Rate > Edit** from the related actions menu of the usage billing rate.
8. Select an **Edit As Of** date of March 1, 2024, and adjust the pricing tiers as follows:
  - From 0 to 10, change the rate to 110.
  - From 10.01, change the rate to 100.
9. Click **OK**, and select the **History** tab.

You've now created a usage billing rate with 2 snapshots, effective on January 1 and March 1.

### Result

Workday applies usage billing rates to usage-based billable transactions according to the effective dates of the snapshots. If we record these usage-based transactions, we get the following results:

Transactions	Result
January 10: 10 units	Workday applies the usage billing rate with an effective date of January 1:

Transactions	Result
January 20: 10 units	January transactions: $(10 \times 100) + (10 \times 90)$ . Total = 1900.
February 10: 10 units	Workday again applies the usage billing rate with an effective date of January 1, but the usage billing rate resets to the lower-quantity tier on February 1: February transactions: $10 \times 100$ . Total = 1000.
March 10: 10 units March 20: 10 units	The usage billing rate resets again on March 1, but now Workday also applies the usage billing rate with an effective date of March 1: March transactions: $(10 \times 110) + (10 \times 100)$ . Total = 2100.

## Related Information

### Tasks

[Create and Edit Usage Billing Rates](#) on page 1044

## Example: Route a Contract Rate Sheet for Approvals

This example illustrates how to configure Workday to route a contract rate sheet to specific roles for approval.

### Context

You're making changes to a contract rate sheet that's used in multiple customer contracts belonging to different projects, and you want the changes to be sent to specific roles for approval.

### Steps

1. Access 2 customer contracts that belong to different projects.
2. Specify the same contract rate sheet for contract lines in each project.
3. Define different project managers for the 2 projects.
4. Add the *Project Manager* security group to the **Approval** action in the *Contract Rate Sheet Event* business process policy:
  - a) Access the *Contract Rate Sheet Event* business process definition.
  - b) From the related actions menu, select **Business Process Policy > Edit**.
  - c) In the **Who Can Do Actions on Entire Business Process** section, for the **Approve** action, add the *Project Manager* security group.
  - d) Click **OK and Done**.
  - e) Run the **Activate Pending Security Policy Changes** task.
5. Add an approval step to the contract rate sheet business process:
  - a) Return to the *Contract Rate Sheet Event* business process definition.
  - b) From the related actions menu, select **Business Process > Edit Definition**.
  - c) Add an **Approval** step to the BP, and in the **Group** prompt enter the *Project Manager* security group.
  - d) From the related actions menu for the added step, select **Business Process > Set as Completion**.
  - e) Click **OK and Done**.
6. Edit the contract rate sheet and submit the changes:
  - a) On either contract, click the contract rate sheet.
  - b) From the related actions menu, select **Contract Rate Sheet > Edit**.
  - c) Change the **Adjustment %** value, and click **Submit**.

## Result

Approvals for the change to the contract rate sheet are sent to the project managers for both projects. You can see the managers listed on the **Process History** tab on the **Edit Contract Rate Sheet** page.

## Related Information

### Concepts

[Concept: Assign Roles](#)

### Tasks

[Create Customer Contracts](#) on page 1034

[Change Customer Contracts](#) on page 1042

[Create Role-Based Security Groups](#)

[Edit Business Processes](#)

## Concept: Customer Contracts

A customer contract is the agreement between you and your customer. You can define these agreement details on your customer contracts to determine how Workday generates billing and revenue recognition:

- Contract amount.
- Effective date.
- Line type.
- Revenue treatment.
- Sales items.
- Worktags.

You can manage each step of the contract lifecycle, including automatic routing for approval based on your business processes.

## Customer Contract Amendments and Changes

You can configure contract amendment types on the **Maintain Customer Contract Amendment Types** task. Amendments enable you to capture additions, changes, and corrections on approved customer contracts. You can change the status of an entire customer contract or specific customer contract lines. You can also configure amendment numbers to track changes made on amendments. Workday automatically assigns the next version number to each new amendment. You can also specify an optional amendment number to correlate to an amendment document if 1 exists. Once you create an amendment, you can view the amendment history of a customer contract or contract line for any version.

Changes enable you to update details on approved customer contracts. If the customer contract has a billing or revenue recognition schedule, you can only change nonamount details.

## Customer Contract Change Orders

Change orders enable you to update the quantity and amount on customer contract lines.

## Customer Contract Checklist Templates

You can use the **Create Customer Contract Checklist Template** task to customize a checklist of requirements for your contract specialists to use when they create customer contracts. You can then associate the checklist template with a contract type on the **Maintain Customer Contract Types** task. When you create a customer contract using the contract type you associated with the checklist template, Workday automatically adds a **Checklist** tab on the contract.

## Customer Contract Line Fees

You can set up and add administrative fees as a percentage of transaction amounts on your customer contracts. Example: A management fee of 3% of all time logged to a project.

You can add contract line fees to transactions with the *Project Time and Expense* contract line type.

To set up contract line fees, access the **Maintain Contract Line Fees** task. For each contract line fee, you can specify:

- A positive or negative percentage.
- Sales items or revenue categories to apply to the invoice line if required.
- Whether to inherit worktags from the contract line or the project.

When you add a fee to a contract line, Workday replaces the existing sales item or revenue category with those from the contract line fee configuration. If the **Sales Item** prompt for the line fee is empty and the **Revenue Category** prompt is populated, Workday leaves the **Sales Item** field blank on the contract fee customer invoice line. If the **Revenue Category** prompt on the contract line fee is empty, Workday uses the revenue category from the contract line.

### **Customer Contract Lines**

Each customer contract line includes a *revenue category* that you can enter or derive from a sales item.

To comply with Standalone Selling Price (SSP) requirements, you can distribute line amounts on customer contracts differently for billing and revenue. The customer contract header ensures that billing and revenue amounts remain equal. You can also capture discounts as negative customer contract lines.

### **Customer Contract Templates**

Customer contract templates reduce the time and effort needed to create customer contracts by populating commonly used fields and values. Once you create a template on the **Create Customer Contract Template** task, you can either:

- Assign the template to a contract type on the **Maintain Customer Contract Types** task.
- Create a customer contract using the template on the **Create Customer Contract** task.

### **Customer Contract Types**

You can manage your customer contracts based on the contract types that you define on the **Maintain Customer Contract Types** task. The contract types that you define help you to identify, manage, and approve your customer contracts based on your business needs. You can customize contract types to include:

- Checklist templates.
- Contract templates.
- Linked contracts.

### **Customer Contract Worktags**

Customer contract worktags enable you to:

- Analyze and report on revenue details by customer contract.
- Associate costs or transactions with the customer contract.
- Reconcile revenue by customer contract at the ledger level.

You can capture customer contract worktags on operational transactions that originate from a contract, such as:

- Accounting journals.
- Billing schedules and installments.
- Customer invoices from billing installments.
- Revenue recognition schedules and installments.

You can also associate a customer contract worktag with transactions that impact revenue. Workday displays the customer contract worktag as an implicit worktag on transactions that originate from the contract. You can also enable Workday to display the customer contract worktag as an explicit worktag on

transactions that relate to a customer contract. You can use the customer contract worktag on billing and revenue recognition installment lines, and you can view the worktag on resulting operational journals.

You can enable customer contract worktags on the **Maintain Worktag Usage** task.

### **Fair Values on Customer Contract Lines**

When you associate a fair value price list with your customer contract, Workday populates the fair value amounts on your customer contract lines.

### **Linked and Parent Customer Contracts**

Linked and parent customer contracts enable you to associate customer contracts together for allocation and revenue purposes. You can enable linked customer contracts on the **Maintain Customer Contract Types** task. When you create a customer contract, you can then associate multiple linked customer contracts with a single parent customer contract. The linked customer contracts display on the parent customer contract and the parent customer contract displays on each linked customer contract.

Workday consolidates the linked customer contract lines and displays 1 line per revenue category on the parent customer contract. You can also view linked customer contract lines by revenue category when you create a consolidated revenue recognition schedule. You can create a consolidated revenue recognition schedule from the related actions menu of the parent customer contract.

### **Pricing Discounts and Premiums**

You can set up and add discounts and premiums to fixed amount line types. You can base pricing rules on your customer contracts and apply them on the customer contract header or line.

To create pricing discounts and premiums, access the **Maintain Customer Contract Discounts and Premiums** task. Specify a positive **Percentage** for a premium, and a negative **Percentage** for a discount.

### **Related Customer Contract**

Related customer contracts enable you to associate customer contracts together for reporting purposes. When you create a customer contract, you can associate 1 related customer contract with it. Related customer contracts must share the same company and sold-to customer.

### **Concept: Customer Contract Renewals**

Workday enables you to create renewable sales items and manage renewal terms on the customer contract and customer profile. You can create custom reports to access renewal information and run a standard report to view customer contract lines that are up for renewal. Customer contract renewals are intended for reporting purposes only. Workday doesn't automatically renew expiring customer contracts.

## Sales Items

When you create or edit a sales item, you can mark the sales item as *Renewable*. When you add the sales item on a customer contract line, Workday automatically enables the **Renewable** check box. You can clear the check box at any time when the renewable sales item doesn't apply to the customer contract. You also have the option to mark a sales item as *Renewable* when you create a customer contract line.

## Renewal Terms

You can manage the renewal terms either on the customer contract line or on the **Renewal Base** report on the customer profile. To manage the renewal terms on the:

- Customer contract line, navigate to the **Renewal Terms** tab on either the **Goods and Services** tab or on the **Usage-Based** tab.
- **Renewal Base** report, configure the report to display on the *Contracts for Customer Composite View Profile* profile group on the customer profile. The **Renewal Base** report displays all of the renewable customer contract lines that are active for the current period. You can use the report to manage the renewal terms in mass.

You can:

- Add a customer bill-to contact.
- Add an opt-out period for the contract term.
- Enter a renewal quantity, renewal rate, renewal amount, and renewal percent. Example: You can add a 5 percent increase in price the next time the contract renews by entering 5 in the **Renewal Percent** field.
- Set a from date and a to date.

## Renewal Reports

You can:

- Create custom reports to access renewal information.
- Access the **Find Expiring Customer Contracts** report to view all of the customer contract lines that are expiring soon. By default, the report displays customer contracts that are expiring in the next 30 days, but you can configure the report to display customer contracts that are expiring in the next 60 days, 90 days, or a custom date range that meets the needs of your organization.

[Steps: Set Up Profiles and Profile Groups](#)

## Concept: Foreign Currency Customer Contracts

In Workday, each company has a ledger currency, but you have the ability to create customer contracts in a currency different than the company ledger currency. When you create a customer contract, currency conversion doesn't occur until there's billing or revenue recognition associated with the contract.

Example: A Canadian company creates a contract for a customer in France. The customer contract and billing are in the contract currency of EUR, and the revenue is in the company ledger currency of CAD.

## Billing

When you create a billing schedule and generate billing installments, the installments are in the contract currency. Currency conversion doesn't occur at this stage because there's no accounting.

When you create a customer invoice, Workday posts the invoice amount to a ledger account and currency conversion occurs. The invoice amounts display in the contract currency. The journal lines display both the contract currency amounts and the company ledger currency amounts in their respective currencies.

### **Revenue Recognition**

When you create a revenue recognition schedule for customer contracts with accrued or deferred revenue, the installments are in the contract currency. Currency conversion doesn't occur at this stage because there's no accounting.

When you recognize revenue, currency conversion occurs. The journal lines display both the contract currency amounts and the company ledger currency amounts in their respective currencies.

### **Currency Rates**

Workday provides these currency conversion rates that you can use when you create revenue recognition schedules and accounting for foreign currency customer contracts:

Currency Conversion Rate	Description
Blended rates	<p>Workday only supports blended rates on foreign currency revenue recognition schedules and accounting created before September 10, 2022. When you generate revenue recognition installments, the installments use the rate on the customer contract effective date as the foreign currency conversion rate. The conversion rate determines the revenue amount in the company ledger currency.</p> <p>When you:</p> <ul style="list-style-type: none"> <li>Generate invoices before recognizing revenue in the same period, Workday updates the conversion rate on the revenue recognition installment to the invoice rate. The revenue recognition accounting uses the updated installment rate.</li> <li>Recognize revenue before generating invoices in the same period, the revenue recognition accounting uses the customer contract rate that you used to generate the installment.</li> </ul> <p>You can manually override the conversion rate used to generate the original revenue installments by editing the revenue recognition schedule. The rate you set overrides all invoice rates, even when you invoice before recognizing revenue.</p>
Contract effective date	Workday uses the contract effective date to determine the foreign currency conversion rate.
Invoice rates	Workday only supports invoice rates on foreign currency revenue recognition schedules and accounting created before September 10, 2022. When you generate invoices before recognizing revenue in the same period, Workday uses the invoice rate to determine the foreign currency conversion rate.

Currency Conversion Rate	Description
Revenue recognition installment date	Workday uses the installment date to determine the foreign currency conversion rate. When there isn't a rate for the installment date, Workday uses the rate for the most recent date when you generate revenue recognition installments and accounting. After you generate revenue recognition accounting, the rates on the revenue recognition installment lines match the rates on the operational journal lines.
Schedule override rate	Workday uses the schedule override rate that you specify to determine the foreign currency conversion rate.

## Currency Adjustments

When there are variances between billed and recognized revenue amounts in ledger currency, you can create adjustments using these tasks to reconcile the variance:

- **Create Ledger Currency Adjustment Installment:** Create adjustments at the end of the customer contract term.
- **Create Customer Contract Foreign Currency Adjustment Journal:** Create adjustments at the end of the month or anytime during the customer contract term.

Example: At the end of the customer contract term, the sum of your ledger currency billed amount and your recognized revenue amount for the customer contract line reveals a difference of \$11.30 in your accounting. To create a currency adjustment installment, select **Revenue Recognition Schedule > Create Ledger Currency Adjustment Installment** from the related actions menu of the approved revenue recognition schedule with foreign currency.

## Concept: Usage-Based Contract Pricing

Workday enables you to charge a customer based on how much they use your product or service. You can create a usage-based customer contract and manage your pricing with a usage rate sheet.

### Minimum Commitments

Workday provides flexibility with rate sheets on your usage-based customer contracts to manage minimum commitments for your product or service.

Example: A customer contract requires a monthly minimum for support calls of \$10,000. You can bill the minimum amount for the month, if the monthly usage doesn't meet or exceed it, or the actual usage, if greater.

### Tiered and Volume Pricing

Tiered pricing assigns a price per unit based on quantity ranges. You can charge your customers different pricing based on purchase quantities.

Volume pricing assigns a price for all units based on the total amount within a price range.

Examples: Your customer purchases 150 units of your product. Your pricing per unit is:

- 1-100: \$10
- 101+: \$8

Tiered Pricing	Volume Pricing
You charge your customer \$10 for the first 100 units and \$8 for the remaining 50 units, for a total cost of \$1,400.	You charge your customer \$8 for all 150 units, for a total cost of \$1,200.
$(100 \times \$10) + (50 \times \$8) = \$1,400$	$150 \times \$8 = \$1,200$

### Tiered and Volume Pricing for Negative Usage-Based Transactions

You can load negative transactions using tiered and volume pricing reset by period or transaction.

For tiered and volume pricing reset by period, first record a usage-based transaction for the customer contract using a positive quantity. Then, record a second usage-based transaction for the customer contract using a negative quantity. Loading transactions in this order ensures that Workday prices negative transactions through the tiers correctly. When you load usage-based transactions with a negative quantity first, Workday prices them at zero.

For tiered and volume pricing reset by transaction, either:

- Record a usage-based transaction with a positive quantity, followed by a second transaction with a negative quantity ensuring that Workday prices negative transactions through the tiers correctly.
- Select the **Price Negative Units in First Tier** check box to ensure that Workday prices negative transactions at the lowest quantity tier rate.

Example: The billing rate sheet associated with your usage-based customer contract line resets by transaction and defines tiers for:

- 1-100 units at a rate of \$100 per unit.
- 101+ units at a rate of \$90 per unit.

When you record a usage-based transaction with a negative quantity, the billing rate sheet uses the \$100 per unit price.

### Reference: Contract Line Types for Customer Contracts

Workday provides these contract line types that you can use to create customer contracts:

Contract Line Type	Actions	Billing Options	Revenue Recognition
<i>Cost Reimbursable</i>	<ul style="list-style-type: none"> <li>Create installment billing schedules to deduct cost reimbursable amounts from prepayments.</li> <li>Create transaction billing schedules to bill direct costs and facilities and administration incurred throughout the billing cycle.</li> </ul> <p>Use this line type on award contracts only.</p>	<ul style="list-style-type: none"> <li>Installments for prepaid billing consumption</li> <li>Transactions</li> </ul>	Transaction completion or settlement
<i>Fixed Amount</i>	Set the amount for goods and services independent of activity or resources.	<ul style="list-style-type: none"> <li>Installments</li> <li>Transactions for order fulfillment</li> </ul>	<ul style="list-style-type: none"> <li>Installments</li> <li>Transactions for order fulfillment</li> </ul>
<i>Fixed Amount - Billing Only</i>	<p>Set the total amount to bill for a sales item bundle.</p> <p>Example: You sell a laptop bundled with a docking station and monitor.</p>	Installments	
<i>Fixed Amount - Revenue Only</i>	<p>Set the amount to recognize revenue for individual items in a sales item bundle.</p> <p>Use this contract line type with the <i>Fixed Amount - Billing Only</i> line type or for revenue recognition linked contracts.</p> <p>Example: You sell a laptop bundled with a docking station and monitor and want to recognize revenue on the individual items.</p>		Installments
<i>Fixed Fee Project</i>	Set the project value based on the scope and product when you create the contract.	<ul style="list-style-type: none"> <li>Installments</li> <li>Milestones</li> </ul>	<ul style="list-style-type: none"> <li>Installments</li> <li>Milestones</li> <li>Percent Complete</li> </ul>
<i>Intercompany Expense</i>	Set the expense rates between legal entities of	Intercompany transactions	

Contract Line Type	Billing Options	Revenue Recognition	
	global organizations for intercompany expenses.		
<i>Intercompany Supplier Invoice</i>	Set the supplier invoice rates between legal entities of global organizations for intercompany supplier invoices.	Intercompany transactions	
<i>Intercompany Time</i>	Set the worker rates between legal entities of global organizations for intercompany time.	Intercompany transactions	
<i>Prepaid</i>	Apply prepayments towards installment and transaction contract line amounts. When you select this option, Workday populates <i>Deferred</i> as the <b>Revenue Treatment</b> on the customer contract.	Installments	You don't need to create a revenue recognition schedule.
<i>Project Time and Expense</i>	Charge the project as you incur time and expenses.	<ul style="list-style-type: none"> <li>• Installments</li> <li>• Milestones</li> <li>• Transactions</li> </ul>	<ul style="list-style-type: none"> <li>• Milestones</li> <li>• Transactions</li> </ul>
<i>Recurring - Fixed Term</i>	<p>Use this contract line type with variable lines to manage minimum commitments that bill as a set amount on a recurring basis.</p> <p>Example: You create a contract for technical support with minimum monthly fees and other usage-based transaction lines.</p>	Installments	Installments
<i>Subscription</i>		Installments	Installments
<i>Usage-Based</i>	Process your transactions as they occur.	Transactions	<ul style="list-style-type: none"> <li>• Installments</li> <li>• Transactions</li> </ul>
<i>Value-Based Project</i>	Create revenue installment lines that are based on an estimated amount and aren't transaction driven. The revenue amount is an estimate. You'll need to balance the	<ul style="list-style-type: none"> <li>• Installments</li> <li>• Milestones</li> </ul>	<ul style="list-style-type: none"> <li>• Installments</li> <li>• Milestones</li> </ul>

Contract Line Type	Actions	Billing Options	Revenue Recognition
	<p>difference between final billed and revenue recognition amounts.</p> <p>Bill for projects with variable values based on external factors. Set the amount for the contract item, independent of resources used or time expended, and track the recurring transactions.</p> <p>Use this line type on projects contract lines. Use a revenue recognition method that isn't <i>Transaction</i>.</p>		
<i>Variable Amount - Non Project</i>	<p>Create revenue installment lines based on an estimated amount for goods and services. The revenue amount is an estimate. You'll need to balance the difference between final billed and revenue recognized amounts.</p> <p>Use this line type on goods and services contract lines.</p>	Installments	<ul style="list-style-type: none"> <li>• Installments</li> <li>• Milestones</li> </ul>

## FAQ: Customer Contracts

**How do I create multiple revenue recognition schedules for parent linked contracts?**

Select **Customer Contracts > Create Consolidate Revenue Recognition Schedule** from the related actions menu of a parent linked customer contract.

**Can I use the same Administrative Fee for multiple line types or contracts?**

Yes. Access the **Maintain Contract Line Fees** task to create your fee. You can add it to your Project Time and Expense contract lines. You can add the fee to other contracts as well.

**How do I search for and update external alternate contracts only?**

View the **Manage Alternate Customer Contract** report.

<b>How do I create alternate contracts without loading the originating contracts in Workday?</b>	Access the <b>Create Standalone Alternate Contract</b> task to create alternate contracts and then generate revenue installments and alternate revenue.
<b>How do I create a revenue recognition schedule with installments for future-dated contracts?</b>	Create ledger periods for the latest period that your installments require before loading your revenue recognition schedule.
<b>How do I load revenue recognition schedules and select specific installments to be available for accounting?</b>	Use the Enterprise Interface Builder (EIB) with the Submit Revenue Recognition Schedule web service. Specify an <i>Available</i> installment status for all installments that you want available for accounting, and <i>Closed</i> for all others.
<b>Under Accounting Standards Codification (ASC) Topic 606 and International Financial Reporting Standard (IFRS) 15, how does Workday handle deferred cost?</b>	Workday enables you to create Deferred Cost Schedules and related installments. You can also use the deferred cost account posting rules in the <b>View Account Posting Rule Set</b> report. These rules help you manage your deferred assets and amortized expenses and post the related journal entries.
<b>If I amend my customer contracts, do I need to update my billing and revenue schedules manually?</b>	You can automatically regenerate your installments, and submit your schedule as part of your billing and revenue schedule <b>Amendment Processing</b> sections.

## Troubleshooting: Unable to Create Custom Validations for Taggable Type Report Fields

Revenue category hierarchy is a taggable type report field that can either be on the:

- Customer contract header.
- Customer contract line.

**Cause:** Unable to create custom validations for the revenue category hierarchy taggable type report field on the customer contract header.

**Solution:** To create custom validations, first create a calculated field to specify that the revenue category hierarchy taggable type report field is on the customer contract header.

### Steps

1. Access the **Create Calculated Field** task.  
Security: *Custom Field Management* domain in the System functional area.
2. Enter *Revenue Category Hierarchy on the Header* in the **Field Name** field.
3. Select *Customer Contract* from the **Business Object** prompt.
4. Select *Lookup Related Value* from the **Function** prompt.
5. Click **OK**.
6. Select *Customer Contract* from the **Lookup Field** prompt.
7. Select *Revenue Category Hierarchies* from the **Return Value** prompt.
8. Click **OK**.
9. Click **Done**.

**10.** Add the calculated field as a condition rule on the **Maintain Custom Validations** report.

Security: *Set Up: Custom Validations* domain in the Common Financial Management and System functional areas.

**Cause:** Unable to create custom validations for the revenue category hierarchy taggable type report field on the customer contract line.

**Solution:** To create custom validations, first create a calculated field to specify that the revenue category hierarchy taggable type report field is on the customer contract line.

### Steps

1. Access the **Create Calculated Field** task.

Security: *Custom Field Management* domain in the System functional area.

2. Enter *Revenue Category Hierarchy on the Line* in the **Field Name** field.

3. Select *Customer Contract Line* from the **Business Object** prompt.

4. Select *Lookup Related Value* from the **Function** prompt.

5. Click **OK**.

6. Select *Contract Line* from the **Lookup Field** prompt.

7. Select *Revenue Category Hierarchies* from the **Return Value** prompt.

8. Click **OK**.

9. Click **Done**.

**10.** Add the calculated field as a condition rule on the **Maintain Custom Validations** report.

Security: *Set Up: Custom Validations* domain in the Common Financial Management and System functional areas.

## Multiple-Element Revenue Allocation

---

### Setup Considerations: Multiple-Element Revenue Allocation

You can use this topic to help make decisions when planning your configuration and use of multiple-element revenue allocation. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Multiple-element revenue allocation enables you to allocate revenue on customer contracts with multiple performance obligations.

## Business Benefits

Multiple-element revenue allocation reduces manual effort and helps to ensure that you report recognized revenue in compliance with:

- ASC 606 accounting standards.
- IFRS 15 accounting standards.

## Use Cases

Use multiple-element revenue allocation to meet reporting requirements when the revenue line amount on the customer contract differs from the contract line amount.

## Questions to Consider

Questions	Considerations
When you do your pricing studies, how do you determine the fair value price for your sales items?	<p>When your company sells items based on:</p> <ul style="list-style-type: none"> <li>• A percentage of the list price or a discount from the list price, you can configure your fair value price list using a percentage.</li> <li>• The average selling price over a period of time, you can configure your fair value price list using an amount.</li> </ul>
How do you want to allocate revenue for a single customer contract?	<p>To calculate revenue allocation:</p> <ul style="list-style-type: none"> <li>• Automatically, configure fair value price lists for each sales item or sales item group on a customer contract line. Workday applies the fair value to each line and allocates revenue when you enable multiple-element revenue allocation on the customer contract.</li> <li>• Manually, specify fair value and revenue allocation amounts for each sales item on a customer contract line.</li> </ul>
How do you allocate revenue among multiple customer contracts?	<p>Enable at least 1 customer contract type for linked contracts. You can then associate multiple customer contracts with a single parent contract and allocate revenue among them.</p>
What volume of your customer contracts need multiple-element revenue allocation?	<p>To allocate revenue for:</p> <ul style="list-style-type: none"> <li>• A single customer contract, you can create multiple-element revenue allocation from the related actions menu of an approved customer contract. This method enables you to update range percentages, fair value pricing, revenue override amounts, and exclude lines from the calculation.</li> <li>• Multiple customer contracts, you can run multiple-element revenue allocation in mass using a report.</li> </ul>

## Recommendations

Features	Considerations
Lower and Upper Range Percentages	When you don't create a fair value price list, Workday recommends that you calculate revenue based on a percentage of the sales price.
Allocation Basis	Workday recommends that you use an allocation basis to calculate the relative selling price allocation for each sales item on a customer contract line.
Do Not Auto-Allocate Revenue	When you have a large number of customer contract lines that you want to allocate revenue for, Workday recommends that you: <ul style="list-style-type: none"> <li>Enable this option in your revenue allocation configurations.</li> <li>Run allocations in mass using a report.</li> </ul>
Revenue Allocated	When you create multiple-element revenue allocation outside of Workday, we recommend that you enable this check box to indicate that you've already allocated revenue for the customer contract.

## Requirements

You must:

- Create sales items that use an accrued or deferred revenue treatment for use in a fair value price list.
- Manually enter revenue override amounts for sales item bundles on customer contract lines.

## Limitations

Features	Considerations
Sales Items and Sales Item Groups	You can only: <ul style="list-style-type: none"> <li>Assign sales items to 1 sales item group when the sales item group has a group type of fair value pricing.</li> <li>Include sales item groups that have a group type of fair value pricing in a fair value price list.</li> </ul>
Variable Customer Contract Lines	Workday doesn't support these variable customer contract lines with multiple-element revenue allocation: <ul style="list-style-type: none"> <li>Fixed Fee Project</li> <li>Prepaid</li> <li>Project Time and Expense</li> <li>Usage-Based</li> <li>Variable Amount Non-Project</li> <li>Value-Based Project</li> </ul>
Projects	Workday doesn't support Time and Material projects with multiple-element revenue allocation.

## Tenant Setup

To define tenant-wide and company-wide configurations, access the **Set Up Revenue Allocation Configuration** task. You can use the task to configure how Workday allocates revenue on customer contracts with multiple-element arrangements.

## Security

Domains	Considerations
<i>Process: Customer Contract - View in the Customer Contracts and Project Billing functional areas.</i>	Report on multiple-element revenue allocation.
<i>Process: Revenue - Allocations in the Customer Contracts and Project Billing functional areas.</i>	Create multiple-element revenue allocation for approved customer contracts.
<i>Set Up: Customer Contracts - Price Lists in the Customer Contracts and Project Billing functional areas.</i>	Maintain and view fair value price lists.
<i>Set Up: Revenue - Allocations in the Customer Contracts and Project Billing functional areas.</i>	<ul style="list-style-type: none"> <li>• Create, edit, maintain, and view fair value price lists.</li> <li>• Set up revenue allocation configurations.</li> </ul>
<i>Set Up: Sale Item in the Customer Accounts and Learning Core functional areas.</i>	Create and edit sales items.
<i>View: Sale Item in the Customer Accounts and Learning Core functional areas.</i>	Report on sales items.

## Business Processes

Business Processes	Considerations
<i>Customer Contract Event</i>	Create and approve customer contracts with multiple-element revenue allocation.
<i>Revenue Recognition Schedule Event</i>	Review and approve revenue override amounts from multiple-element revenue allocations.

## Reporting

Reports or Dashboards	Considerations
<b>Carve In/Out</b> report	View multiple-element revenue allocations on your customer contracts.
<b>Fair Value Allocation</b> report	View multiple-element revenue allocations completed for a company.
<b>Fair Value Analysis</b> report	View customer contract lines that fall within the allocation threshold for your tenant.
<b>Maintain Fair Value Price List</b> report	View and edit fair value price lists.
<b>Run Multiple-Element Revenue Allocation</b> report	Run allocations for available customer contracts.
Revenue dashboard	Use this dashboard to access tasks and reports related to multiple-element revenue allocation.

You can use these report data sources to create custom reports:

- **Customer Contracts**
- **Customer Contracts Lines**
- **Revenue Recognition Schedules**

## Integrations

Web Services	Considerations
<i>Get Customer Contracts</i>	Retrieves customer contracts with multiple-element revenue allocation enabled.
<i>Get Multiple-Element Revenue Allocations</i> <i>Put Multiple-Element Revenue Allocation</i>	Retrieves multiple-element revenue allocations for customer contracts. Creates and updates multiple-element revenue allocations for customer contracts.
<i>Get Revenue Allocation Configurations</i> <i>Put Revenue Allocation Configuration</i>	Retrieves the current revenue allocation configurations in your tenant. Creates and updates revenue allocation configurations.
<i>Get Sales Items</i> <i>Put Sales Item</i>	Retrieves all the sales items in your tenant. Creates and updates sales items
<i>Get Sales Item Fair Value Price Lists</i> <i>Put Sales Item Fair Value Price List</i>	Retrieves the fair value price list associated with a sales item. Creates and updates fair value price lists.
<i>Submit Customer Contract</i>	Submits customer contracts with multiple-element revenue allocation enabled.

## Connections and Touchpoints

Features	Considerations
Customer Contracts	Specify revenue override amounts on customer contract lines. Workday applies the revenue override amounts to the amounts on your revenue recognition schedule.
Financial Accounting	Create revenue recognition operational journals for multiple-element arrangements.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

#### Tasks

[Create Sales Items](#) on page 1018

[Create Fair Value Price Lists](#) on page 1065

[Set Up Revenue Allocation Configurations](#) on page 1067

[Create Customer Contracts](#) on page 1034

[Steps: Link Customer Contracts for Revenue Allocation](#) on page 1030

[Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110

## Steps: Create Multiple-Element Revenue Allocation

### Prerequisites

- [Create Sales Items](#) on page 1018.
- Review [Setup Considerations: Multiple-Element Revenue Allocation](#) on page 1059.

### Context

You can allocate revenue on customer contracts that have multiple-element arrangements. You can either:

- Manually allocate revenue for each sales item on the customer contract line.
- Enable Workday to automatically create multiple-element revenue allocation in compliance with recognition standards.

### Steps

1. [Create Fair Value Price Lists](#) on page 1065.
2. [Set Up Revenue Allocation Configurations](#) on page 1067.
3. [Create Customer Contracts](#) on page 1034.

To:

- Manually allocate revenue for a single customer contract, enter allocation amounts in the **Revenue Override Amount** field. When you manually allocate revenue, you can proceed to the *Next Steps* section.
  - Set up automatic revenue allocation for a single customer contract, select the **Multiple-Element Revenue Allocation** check box and select an option from the **Fair Value Price List** prompt. Workday populates the fair values on the customer contract line.
  - Set up automatic revenue allocation for multiple customer contracts, select a **Contract Type** enabled for linked contracts and select the child customer contracts from the **Linked Customer Contracts** prompt.
4. (Optional) To run multiple-element revenue allocation for:
    - A single customer contract, select **Customer Contract > Create Multiple-Element Revenue Allocation** from the related actions menu of the approved customer contract.
    - Linked customer contracts, select **Customer Contract > Create Multiple-Element Revenue Allocation** from the related actions menu of the parent linked contract.
    - Multiple customer contracts simultaneously, use the *Put Multiple-Element Revenue Allocation* web service for bulk updates. You can use the web service to make bulk updates for multiple-element revenue allocation inclusions or exclusions, fair value fields, and revenue override amounts.

Security: *Process: Revenue - Allocations* domain in the Customer Contracts and Project Billing functional areas.

5. (Optional) To run multiple-element revenue allocation for multiple customer contracts, access the **Run Multiple-Element Revenue Allocation** report.

Click **Review Contracts** and make any necessary changes.

Security: *Process: Customer Contract - View* domain in the Customer Contracts and Project Billing functional areas.

## Result

Workday allocates the relative selling price for revenue recognition to the contract lines using your fair value and revenue allocation configurations.

## Next Steps

You can access the:

- **Carve In/Out** report to view a summary of revenue allocations on your customer contracts.
- **Fair Value Analysis** report to view whether sales items are in compliance with fair value guidelines.

## Related Information

[Concept: EIB Spreadsheet Data Entry Guidelines](#)

### Tasks

[Create Sales Items](#) on page 1018

[Steps: Link Customer Contracts for Revenue Allocation](#) on page 1030

## Create Fair Value Price Lists

### Prerequisites

- [Create Sales Items](#) on page 1018 .
- Security: These domains in the Customer Contracts and Project Billing functional areas:
  - *Set Up: Customer Contracts - Price Lists*
  - *Process: Revenue - Allocations*

### Context

You can create fair value price lists to associate with your customer contracts. When you add sales items included in the fair value price list to the customer contract, Workday populates the fair values on the line.

You can configure fair value price lists by:

- Currency
- Contract Effective Date
- Sales Item
- Sales Item Group
- Worktags

### Steps

1. Access the **Maintain Fair Value Price List** report.
2. Click **Add**.
3. As you complete the task, consider:

Option	Description
<b>Worktag Type</b>	Select worktag types that you want to associate with each item on the fair value price list.
<b>Sales Item and Sales Item Group</b>	Workday uses the sales item and then the sales item group to determine the fair value amount to use.
<b>Bundle</b>	Specify the amount and percent configurations for the sales item bundle.

Option	Description
	<p>Workday displays the <b>Bundle</b> column on the <b>Percent</b> tab when you select a sales item that's included in a bundle.</p> <p>As you configure the bundle, consider:</p> <ul style="list-style-type: none"> <li>• Sales Item Bundle has Fixed Quantities: Select this check box to use fixed quantities for the sales items in the bundle. When you enable this option, you can't update the quantity per bundle, list unit price, or list extended amount in the bundle pop-up on the customer contract.</li> <li>• Percent of: Choose whether the percentage calculation applies to the bundle or sales item price.</li> <li>• Price Type: Choose whether the percentage calculation applies to the list or net item price on the contract line.</li> </ul>
<b>Related Sales Items</b>	<p>You can link 1 sales item to another and calculate the fair value pricing based on the relationship.</p>
<b>Fair Value Price Method</b>	<p>Select a fair value price method for a sales item or sales item group.</p> <p>When you select the <b>Boundary</b> method:</p> <ul style="list-style-type: none"> <li>• For amount, you must also specify a <b>Lower Range Amount</b> and an <b>Upper Range Amount</b>.</li> <li>• For percent, you must also specify a <b>Lower Range Percentage</b> and an <b>Upper Range Percentage</b>.</li> </ul> <p>When you select the <b>Discount and Premium</b> method (applies only to percent), you must also specify either or both:</p> <ul style="list-style-type: none"> <li>• A <b>Lower Range Percentage</b>.</li> <li>• An <b>Upper Range Percentage</b>.</li> </ul>
<b>Percent or Amount</b>	<p>The fair value price list can consist of percentage and amount values.</p> <ul style="list-style-type: none"> <li>• Percent: Enter a percentage to apply to the list or net item price on the contract line.</li> <li>• Amount: Enter an amount.</li> </ul>
<b>Worktags</b>	<p>Select a worktag for each worktag type that you selected at the header.</p>

## Result

You can associate the fair value price list with customer contracts when you select the **Multiple-Element Revenue Allocation** check box on the contract.

## Next Steps

Add a fair value price list to companies using the **Set Up Revenue Allocation Configuration** task.

## Related Information

### Concepts

[Setup Considerations: Multiple-Element Revenue Allocation](#) on page 1059

### Tasks

[Create Sales Items](#) on page 1018

[Create Customer Contracts](#) on page 1034

### Examples

[Example: Create Fair Value Price List for Bundled and Unbundled Sales Items](#) on page 1068

[Example: Create a Custom Report for Fair Value Price Lists with Sales Item Bundle Allocations](#) on page 1069

## Set Up Revenue Allocation Configurations

### Prerequisites

- Create sales items.
- Create fair value price lists.
- Security: *Set Up: Revenue - Allocations* domain in the Customer Contracts and Project Billing functional areas.

### Context

You can set up tenant-wide and company-wide configurations to specify how Workday allocates revenue on customer contracts with multiple-element arrangements. When you set up company-wide configurations, you can also specify revenue allocation for sales items and sales item groups. The company-wide configurations override the configurations that you set up for the tenant.

### Steps

1. Access the **Set Up Revenue Allocation Configuration** task.
2. As you complete the task, consider:

Option	Description
<b>Lower Range Percentage</b>	<p>Enter a percentage to use as a threshold for allocation in relation to the allocation basis.</p> <p>When the contract line amount is above or below the fair value extended amount based on the range percentage you specify, then use the lower range as your allocation basis.</p>
<b>Upper Range Percentage</b>	<p>Enter a percentage to use as a threshold for allocation in relation to the allocation basis.</p> <p>When the contract line amount is above or below the fair value extended amount based on the range percentage you specify, then use the upper range as your allocation basis.</p>
<b>Allocation Basis</b>	<p>Select 1 of these options to determine how Workday calculates the relative selling price allocation for each sales item:</p> <ul style="list-style-type: none"> <li>• <i>Fair Value</i> - Workday calculates the relative selling price allocation using the actual fair value as the basis for the allocation.</li> <li>• <i>Lower Range</i> - Workday calculates the relative selling price allocation using the lower range as the basis for the allocation.</li> </ul> <p>Workday determines the lower range using the percentage that you specify as the allocation threshold.</p>

Option	Description
	<ul style="list-style-type: none"> <li>• <i>Midrange</i> - Workday calculates the relative selling price allocation using the median value of the <i>Contract Line Amount</i>, <i>Lower Range</i>, and <i>Upper Range</i>.</li> <li>• <i>Upper Range</i> - Workday calculates the relative selling price allocation using the upper range as the basis for the allocation. Workday determines the upper range using the percentage that you specify as the allocation threshold.</li> </ul>
<b>Fair Value Price List</b>	Select a fair value price list that you configure on the <b>Maintain Fair Value Price List</b> task.
<b>Allocate Revenue at Summary and Prorate at Line</b>	Select to prorate revenue allocation using the revenue category on the customer contract lines.
<b>Do Not Auto-Allocate Revenue</b>	<p>Select to prevent Workday from automatically calculating the revenue override amount for all customer contract lines.</p> <p>The revenue override amount won't update until you click <b>Run Allocation</b> when you create multiple-element revenue allocation from the related actions menu of the approved customer contract.</p>
<b>Calculate Fair Value Unit Price upon Submit or Save for Later</b>	Select this option if you want Workday to calculate the fair value unit price on contract lines when you submit or save a customer contract.

## Result

When you add sales items included in the fair value price list on the customer contract line, Workday uses these configurations to allocate revenue.

## Next Steps

Create customer contracts with multiple-element arrangements.

### Related Information

#### Concepts

[Setup Considerations: Multiple-Element Revenue Allocation](#) on page 1059

#### Tasks

[Create Sales Items](#) on page 1018

## Example: Create Fair Value Price List for Bundled and Unbundled Sales Items

This example illustrates how to create a fair value price list that specifies boundary percentages for sales items, and allocation percentages for sales item bundles.

### Context

You're a revenue administrator who wants to:

- Specify boundary percentages for sales items to keep fair value prices within a limited range.
- Specify allocation percentages for items within sales item bundles.

## Steps

1. First, we'll specify boundary percentages. Access the **Maintain Fair Value Price List** report.
2. Click **Add** to create a new fair value price list.
3. Enter header information: **Name**, **Currency**, **Effective Date**, and **Worktag Type**.
4. On the **Percent** tab, click **Add Row**.
5. Enter the **Sales Item** *ABC Software*.
6. For the **Fair Value Price Method** field, select *Boundary*.
7. Enter a **Lower Range Percentage** of 80, and an **Upper Range Percentage** of 120.

Selecting *Boundary* enables you to choose lower and upper percentages that determine the minimum and maximum fair value prices for that sales item.

Because the ABC Software sales item has a list price of 825, the lower and upper boundary percentages of 80% and 120% set the minimum and maximum fair value prices to 660 and 990.

When you associate this fair value price list with a customer contract, Workday adjusts the **FV Unit Price** of any line item that has a unit price outside of this range. For example:

- If the contract line unit price is 700, which is within the fair value price range, the FV Unit Price is the same as the contract line unit price.
  - If the contract line unit price is 600, Workday adjusts the FV Unit Price to 660.
8. Now we'll add a bundled sales item. Access the **Maintain Fair Value Price List** report again, and edit the fair value price list you created earlier.
  9. Add the **Sales Item** *ABC Software & Laptop Bundle*.
  10. Click the number 4 in the **Bundle** column to open the list of sales items in the bundle.
  11. Allocate percentages and amounts to the sales items in the bundle as follows:

Sales Item	Percent	Percent of	Price Type	Amount
ABC Software	50	Bundle	Net	
Software Maintenance	20	Bundle	Net	
Training Manual	0			200
Laptop	90	Sales Item	List	

Selecting *Bundle* enables you to choose whether to apply the percentage you entered to the list price of the bundle or net price of the bundle (which is the contract line unit price). Selecting *Sales Item* applies the percentage to the list price of that sales item only.

When you associate this fair value price list with a customer contract, Workday uses the **FV Extended Amount** (which is equal to **FV Unit Price \* Total Quantity**) to prorate the **Revenue Override Amount** for the 4 sales items in the bundle, so that the total of the revenue override amounts is equal to the net price of the bundle.

## Related Information

### Tasks

[Create Fair Value Price Lists](#) on page 1065

## Example: Create a Custom Report for Fair Value Price Lists with Sales Item Bundle Allocations

This example illustrates how to configure a custom report that retrieves Fair Value Price List data including sales item bundle allocations.

## Context

You've created fair value price lists, including sales item bundles, and you want to view all of your price list configurations together in a report.

## Steps

1. Access the **Create Custom Report** task.

2. Enter these values:

Option	Description
Report Name	FV Price List with Sales Item Bundle Allocations
Report Type	Advanced
Optimized for Performance	Clear the check box
Data Source	Fair Value Price List

3. Click **OK**.

4. On the **Columns** tab, for the business object *Fair Value Price List*, select *Instance* from the **Field** prompt.

5. Add additional rows for the business object *Fair Value Price List* with these **Field** values:

- *Currency*
- *Effective Date*

6. Add additional rows for the business object *Sales Item Fair Value Price Rules and Allocations*, with any of the following **Field** values that you want to report on:

- *Sales Item Group*
- *Sales Item Bundle for Price Rule Allocation*
- *Sales Item for Sales Item Price Rule*
- *Sales Item Bundle has Fixed Quantities*
- *Fair Value Calculation Method*
- *Percent*
- *Price Rule Lower Range Percentage*
- *Price Rule Upper Range Percentage*
- *Amount*
- *Price Rule Lower Range Amount*
- *Price Rule Upper Range Amount*
- *Percent Type*
- *Price Type*

7. Click **OK**, and **Run**.

8. If you want the report to retrieve the Fair Value Price List data in effect on a specific date, specify an **Effective Date**.

9. Click **OK**.

## Result

Workday displays your fair value price list configurations.

## Customer Contracts Billing

---

### Setup Considerations: Prepaid Billing Using Consolidated Billing Schedules

You can use this topic to help make decisions when planning your configuration and use of prepaid billing using consolidated billing schedules. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Prepaid billing using consolidated billing schedules enables you to apply prepayments toward installment and transaction line amounts on a customer contract.

#### Business Benefits

Prepaid billing using consolidated billing schedules provides greater flexibility in meeting billing requirements by enabling you to:

- Define the consumption of prepaid balances.
- Distribute prepayments to multiple customer contract lines at once.

#### Use Cases

Use consolidated billing schedules for prepaid billing when your company needs to:

- Map multiple customer contract lines to 1 prepayment.
- Associate installment and transaction customer contract lines to the same prepayment.
- Specify various revenue treatments on prepaid mapping contract lines.

#### Questions to Consider

Questions	Considerations
Which line types on customer contracts can you use to consume prepaid installments?	You can use installment and transaction lines on a customer contract to consume prepaid installments.
Which revenue treatments can you use for your prepaid mapping contract lines?	<p>You can use any revenue treatment for your prepaid mapping contract lines without creating a revenue recognition schedule.</p> <p>When your prepaid mapping contract lines use:</p> <ul style="list-style-type: none"> <li>• An <i>Accrued</i> revenue treatment, Workday posts accounting to the Unbilled Receivables ledger account.</li> <li>• A <i>Deferred</i> revenue treatment, Workday posts accounting to the Deferred Revenue ledger account.</li> <li>• An <i>Invoice</i> revenue treatment, Workday posts accounting to the Revenue ledger account.</li> </ul>

## Recommendations

To direct payments to a specific account, you can configure *Prepaid Billing* as a dimension and value for the Deferred Revenue ledger account posting rule.

## Requirements

You must:

- Create a customer contract with at least 1 prepaid line type.
- Create a billing schedule with a schedule type enabled for consolidated billing.
- Map prepaid customer contract lines to installment and transaction lines on the same billing schedule. Then, associate the prepaid mapping to prepaid installments.
- Create a consolidated customer invoice to invoice the prepaid installment.
- Create a consolidated customer invoice to consume installment and transaction activities.

When you update a consolidated billing schedule using the *Submit Billing Schedule* web service, include existing prepaid installments in the request to ensure that Workday doesn't remove them.

## Limitations

You can't:

- Cancel consolidated billing schedules with prepayment balances.
- Consume against a prepaid installment until you invoice the installment when you configure Workday to require a paid prepayment status for prepaid billing.

## Tenant Setup

Enable tenant-wide configurations for prepaid billing in the **Customer Contracts Options** section on the **Edit Tenant Setup - Financials** task.

## Security

Domains	Considerations
<i>Manage: Billable Projects</i> in the Projects functional area. <i>Process: Project Billing - Core</i> in the Project Billing functional area.	<ul style="list-style-type: none"> <li>• Review and exclude transactions from prepayment consumption.</li> <li>• View and drill down on completed prepaid installments.</li> </ul>
<i>Process: Billing - Invoicing</i> in the Customer Contracts and Project Billing functional areas. <i>Process: Project Billing - Invoicing</i> in the Project Billing functional area.	<ul style="list-style-type: none"> <li>• Create customer invoices for prepaid billing installments that use a billing schedule enabled for consolidated billing.</li> <li>• Enable Workday to bill prepaid installments on the same invoice as other installments and transactions when you create customer invoices.</li> </ul>
<i>Process: Billing Schedule - Core</i> in the Customer Contracts and Project Billing functional areas.	Create consolidated billing schedules with prepaid mapping.
<i>Process: Revenue Schedule - Core</i> in the Customer Contracts and Project Billing functional areas.	Create revenue recognition schedules for prepaid mapping contract lines with an <i>Accrued</i> or <i>Deferred</i> revenue treatment.

Domains	Considerations
<p><i>Set Up: Accounting Rules</i> in the Common Financial Management functional area.</p> <p><i>Set Up: Payroll - Company Specific (Accounting)</i> in the Core Payroll functional area.</p>	Configure <i>Prepaid Billing</i> as a dimension and value for the Deferred Revenue ledger account posting rule.
<i>Set Up: Customer Contracts - Templates and Types</i> in the Customer Contracts and Project Billing functional areas.	Create a billing schedule type enabled for consolidated billing.
<i>Set Up: Tenant Setup - Financials</i> in the System functional area.	Enable Workday to bill: <ul style="list-style-type: none"> <li>Transactions against prepayments only after you apply a customer payment to the related installment invoice.</li> <li>Prepaid installments on the same invoice as other installments and transactions when you create customer invoices.</li> </ul>

## Business Processes

Business Processes	Considerations
<i>Billing Schedule Event</i>	Create and approve consolidated billing schedules with prepaid mapping.
<i>Customer Contract Event</i>	Create and approve customer contracts with prepaid line types.
<i>Revenue Recognition Installment Event</i>	Create and approve revenue recognition accounting when you create a revenue recognition schedule.
<i>Revenue Recognition Schedule Event</i>	Create and approve revenue recognition schedules for prepaid mapping contract lines with an <i>Accrued</i> or <i>Deferred</i> revenue treatment.

## Reporting

No impact.

## Integrations

You can use these web services to cancel, retrieve, update, and submit prepaid billing for installments and transactions:

- *Cancel Billing Schedule*
- *Cancel Customer Invoice*
- *Get Billing Schedules*
- *Put Customer Contract Template*
- *Put Tenant Setup - Financials*
- *Submit Billing Schedule*
- *Submit Customer Contract*
- *Submit Customer Contract Amendment*
- *Submit Customer Invoice*

## Connections and Touchpoints

## Steps: Set Up Prepaid Billing Using Consolidated Billing Schedules

### Prerequisites

Review setup considerations for prepaid billing using consolidated billing schedules.

### Context

You can set up prepaid billing using consolidated billing schedules to apply prepayments towards installment and transaction line amounts on a customer contract.

### Steps

1. Access the **Maintain Schedule Types** task.

Select the **Consolidated Billing Schedule** check box for at least 1 schedule type.

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

2. (Optional) Access the **Edit Tenant Setup - Financials** task.

As you complete the *Customer Contracts Options* section, select the:

- **Require Paid Prepayment Status for Prepaid Billing** check box to bill transactions against prepayments only after you apply a customer payment to the related installment invoice.
- **Invoice Prepaid Installments with Other Transaction Types** check box to bill prepaid installments on the same invoice as other installments and transactions when you create customer invoices.

See [Reference: Edit Tenant Setup - Financials](#).

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

3. (Optional) [Set Up Account Posting Rules](#) on page 84.

For the Deferred Revenue ledger account posting rule:

- a. Click **Edit Posting Rule**.
- b. Select *Prepaid Billing* from the **Dimension** and **Values** prompts.

4. [Create Customer Contracts](#) on page 1034.

In the **Line Details** tab of the **Goods and Services** grid, select:

- a. *Prepaid* from the **Line Type** prompt. Workday automatically selects *Deferred* from the **Revenue Treatment** prompt.
- b. A project from the **Billable Project** prompt.

The billable project displays on customer invoice lines when you:

- Select a billable project on prepaid customer contract lines.
- Create customer invoices or customer invoice proposals.

5. [Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080.
  - a. Select a schedule type that you enabled for consolidated billing from the **Schedule Type** prompt.
  - b. On the **Prepaid** tab:
    1. Select the **Invoice Prepaid Installments with Other Transaction Types** check box to bill prepaid installments on the same invoice as other installments and transactions when you create customer invoices.
    2. Map prepaid customer contract lines to installment and transaction type lines on the same billing schedule.
    3. Associate the prepaid mapping to prepaid installments.
6. [Create Customer Invoices from Contracts](#) on page 1099.
 

Create a prepaid installment invoice. You can only consume against prepaid installments after you invoice them.
7. [Create Customer Invoices from Contracts](#) on page 1099.
 

Access the task again to consume installment and transaction activities.

When you create a customer invoice from contracts, Workday:

  - Applies prepayments to billing installments and transactions.
  - Bills prepaid installments on the same invoice as other installments and transactions when you select the **Invoice Prepaid Installments with Other Transaction Types** check box.
  - Creates offset lines to consume prepayment installments.
  - Displays the billable project on the customer invoice lines.
8. [Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110.
 

Create a revenue recognition schedule for prepaid mapping contract lines that have a revenue treatment of *Deferred* or *Accrued*.
9. [Manage Project Billing Transactions](#) on page 1417.
 

On the **Prepaid** tab:

  - (Optional) Select the **Exclude from Prepayment** check box to exclude transactions from prepayment consumption.
  - View and drill down on completed prepaid installments.
- 10.(Optional) Access the **Review Billable Usage-Based Transactions** task.
 

On the **Prepaid** tab:

  - (Optional) Select the **Exclude from Prepayment** check box to exclude transactions from prepayment consumption.
  - View and drill down on completed prepaid installments.

Security: *Process: Usage* domain in the Customer Contracts and Project Billing functional areas.
11. Access the **Create Revenue Recognition Accounting** task.
 

When you use a revenue recognition schedule, create revenue recognition accounting.

Configure the *Revenue Recognition Installment Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

## Steps: Set Up Prepaid Billing Using Installment Billing Schedules

### Context

You can set up prepaid billing using installment billing schedules to track advance payments against future services. Create and track prepayment invoices and Workday automatically offsets billable transaction invoices against the prepayment amount.

### Steps

1. Access the **Maintain Schedule Types** task.

Select these check boxes for at least 1 schedule type:

- **Prepaid**
- **Billing**

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

2. [Create Customer Contracts](#) on page 1034.

a. Create *Project Time and Expense* or *Usage-Based* customer contract lines.

b. Select *Deferred* from the **Revenue Treatment** prompt for the customer contract lines.

3. [Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085.

• Select:

- A schedule type enabled for prepaid billing.
- *Installment* from the **Billing Type** prompt.
- *Custom* from the **Billing Method** prompt.
- (Optional) the **Include Tax on Prepaid** check box to apply tax on the initial prepaid installment and tax your transactions that incur overconsumption.

4. [Create Customer Invoices for Billing Installments](#) on page 1097.

Workday uses the prepaid amount to offset all future invoices generated from the billable transactions.

5. Access the **Create Customer Invoices for Billable Transactions** task.

Workday offsets the invoice amount against the prepaid invoices. The offset displays on the customer invoice as a negative invoice line. You can manually adjust this amount, if needed.

Security:

- *Process: Billing - Invoicing* domain in the Customer Contracts and Project Billing functional areas.
- *Process: Project Billing - Invoicing* domain in the Project Billing functional area.

6. Access the **View Billing Schedule** report.

To review prepayment activity, click the **Prepayment Reconciliation** tab. This tab displays all invoices offset against prepaid amounts and remaining prepaid balances.

Security: *Process: Billing Schedule - View* domain in the Customer Contracts and Project Billing functional areas.

## Steps: Create Customer Contracts for Minimum Commitments

### Context

Workday enables you to evaluate customer usage and automatically apply a contractual minimum commitment on a recurring basis.

### Steps

- [Create Customer Contracts](#) on page 1034.

Create a customer contract that includes *Usage-Based* and *Recurring - Fixed Term* contract line types.

Select an option from the **Usage Billing Rate** prompt. The usage billing rate that you select must include the *Recurring - Fixed Term* contract line in the **Minimum Commitment** section.

- [Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085.

Generate billing installments for your customer contract lines.

- Access the **Record Usage-Based Transactions** task.

To calculate minimum commitments, select an option from the **Unit of Measure** prompt that matches the *Unit of Measure* on the **Usage Billing Rate**.

Security:

- *Process: Project Billing - Usage* domain in the Project Billing functional area.
- *Process: Usage* domain in the Customer Contracts and Project Billing functional areas.

- [Create Customer Invoices from Contracts](#) on page 1099.

Create minimum commitment invoices.

### Result

Workday creates invoices based on the minimum commitment requirements that you define.

### Related Information

#### Reference

[Reference: Contract Line Types for Customer Contracts](#) on page 1054

## Steps: Create Retention for Customer Invoices

### Prerequisites

Create and approve customer contracts.

### Context

You can contractually withhold a portion of a customer invoice using the billing schedule; for example, to allow your customer to withhold payment on a percentage of the invoice amount until work is completed. When your customer contract meets the requirements, you can release the retention balances by contract line for invoicing.

### Steps

- (Optional) [Set Up Account Posting Rules](#) on page 84.

- [Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085.

Include your customer contract lines for installments or transactions in the billing schedule.

Click **Edit Retention Terms**. These fields are for reporting purposes only:

- **Estimated Retention Release Date**
- **3rd Party Retention**

3. When the customer contract meets the requirements, select **Retention > Release Retention** from the related actions menu of the billing schedule to release all or part of the retention balance.
- Released retention amounts generate separate invoices, which are shown in the **Released on Invoice Lines** field on the original customer invoice line.

## Next Steps

You can run the **Customer Retention Balance** report to view the retention balance by company.

## Create Billing Schedule Templates for Customer Contracts

### Prerequisites

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

### Context

You can create templates for installment or transaction billing schedules to streamline the billing schedule creation process for customer contracts. You can associate a customer contract with a billing schedule template, enabling you to create billing schedules directly from the customer contract. Workday populates the billing schedule with the information that you specify on the billing schedule template.

### Steps

1. Access the **Create Billing Schedule Template for Customer Contract** task.
2. As you complete the task, consider:

Option	Description
<b>Billing Type</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Installment</i> to associate this template with installment contract line types.</li> <li>• <i>Transaction</i> to associate this template with usage-based or time and expense contract line types.</li> </ul>
<b>Milestone</b>	<p>Specify milestones for the entire billing schedule. Milestones must be complete for the billing process to occur on any installments.</p>
<b>Billing Method</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Custom</i> to create custom installment amounts.</li> <li>• <i>Defined Installment</i> to define the first and last installment amounts. Workday divides the remaining amount among the other installments.</li> <li>• <i>Spread Even</i> to spread the amounts evenly across installments.</li> </ul>

Option	Description
<b>Group All Related Contract Lines</b>	Select to group all contract lines with the same billing type on the same billing schedule.
<b>Separate Billing Schedule</b>	Select to generate a different billing schedule for each contract line, though contract lines with the same date remain on the same billing schedule.
<b>Include Attachments on Invoice</b>	<p>Displays when you select <i>Transaction</i> as the <b>Billing Type</b>.</p> <p>Include expense report or supplier invoice attachments on customer invoices created from the billing schedule.</p>

## Result

You can select the template on the **Billing** tab when you create or edit a customer contract.

## Next Steps

Create a customer contract.

### Related Information Concepts

[Concept: Billing Schedule Templates for Customer Contracts](#) on page 1089

### Tasks

[Create Customer Contracts](#) on page 1034

[Create Consolidated Billing Schedule Templates for Customer Contracts](#) on page 1079

## Create Consolidated Billing Schedule Templates for Customer Contracts

### Prerequisites

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

### Context

You can create billing templates to streamline the consolidated billing schedule creation process for customer contracts. Workday populates the billing schedule with the information you specify on the billing template.

You can apply different billing templates on contract headers and contract lines, enabling you to create consolidated billing schedules that group by combinations of:

- Billing Template
- Billing To Date
- Billing From Date

Workday groups transaction-based contract lines without Billing To Dates and Billing From Dates with installment-based contract lines with the earliest Billing From Date.

### Steps

1. Access the **Create Billing Template for Customer Contract** task.

- As you complete the task, consider:

Option	Description
<b>Schedule Type</b>	Select the consolidated billing schedule type. You can't create billing templates for installment or transaction billing schedules.
<b>Billing Method</b>	Select: <ul style="list-style-type: none"> <li>• <i>Custom</i> to create custom installment amounts.</li> <li>• <i>Spread Even</i> to spread the amounts evenly across installments.</li> </ul>

## Result

You can select the template when you create or edit:

- Customer contracts, on the *Billing* tab.
- Customer contract lines, on the *Revenue and Billing* tab.
- Customer contract templates.
- Sales items, in the *Sales Item Attribute* section.

## Next Steps

Create a customer contract, customer contract template, or sales item.

### Related Information

#### Tasks

[Create Customer Contracts](#) on page 1034

[Create Sales Items](#) on page 1018

#### Reference

[2023R1 What's New Post: Consolidated Billing Schedule Templates](#)

## Create Consolidated Billing Schedules for Customer Contracts

### Prerequisites

- Enable consolidated billing for a billing schedule type.
- Create and approve a customer contract.
- Configure the *Billing Schedule Event* business process and security policy in the Customer Contracts and Project Billing functional areas.
- Security: *Process: Billing Schedule - Core* domain in the Customer Contracts and Project Billing functional areas.

### Context

You can create consolidated billing schedules to specify billing and invoicing information for installment, transaction, prepaid, and usage-based customer contract lines.

Workday uses the billing schedule to determine how to bill customers for costs on your customer contract lines. You can group:

- Customer contract lines that span multiple contracts in the same billing schedule.
- Projects for the same company and customer in the same billing schedule.

When you generate installments, Workday associates 1 contract line with each installment line.

## Steps

1. Access the **Create Billing Schedule for Customer Contract** task.
2. As you complete the task, consider:

Option	Description
<b>Schedule Type</b>	Select a schedule type that you enabled for consolidated billing on the <b>Maintain Schedule Types</b> task.
<b>Customer Contracts</b>	When you create the billing schedule, Workday adds the customer contract lines from contracts that you select.
<b>Billable Project</b>	Select the billable project associated with the customer contract lines that you want to create a billing schedule for.

3. (Optional) On the **Schedule Options** tab, consider:

Option	Description
<b>Statutory Invoice Type</b>	<p>Select a statutory invoice type that you configured for customer invoices on the <b>Maintain Invoice Types by Country</b> report. Workday filters the options that display in this prompt by the company that you select on the billing schedule.</p> <p>Workday uses the statutory invoice type to:</p> <ul style="list-style-type: none"> <li>• Determine the bill from location.</li> <li>• Populate the statutory invoice type from the billing schedule onto the customer invoice. When you create a customer invoice, you can change the statutory invoice type to be different from the statutory invoice type on the billing schedule.</li> </ul> <p>Workday doesn't support statutory invoice types on award contracts, intercompany contracts, or student contracts.</p>
<b>Recurring Invoice Day</b>	Enter a day of the month to override the invoice dates on customer invoices that you create using this billing schedule. Consolidated billing schedules only apply invoice dates at the time of invoicing.

4. (Optional) As you complete the **Installment** tab, consider:

Option	Description
<b>Billing Frequency</b>	<p>When you select these options, installment periods start at the beginning of the selected time frame:</p> <ul style="list-style-type: none"> <li>• <i>Calendar Week</i></li> <li>• <i>Calendar Month</i></li> <li>• <i>Calendar Quarter</i></li> <li>• <i>Calendar Year</i></li> </ul> <p>When you select these options, installment periods start at the <b>From Date</b>:</p>

Option	Description
	<ul style="list-style-type: none"> <li>• <i>Weekly</i></li> <li>• <i>Monthly</i></li> <li>• <i>Quarterly</i></li> <li>• <i>Annual</i></li> </ul>
<b>Recurrence</b>	<p>Enter a number to generate installments in multiples of the billing frequency.</p> <p>Example: When the billing frequency is weekly, enter 3 to bill the customer every 3 weeks.</p>
<b>Billing Period</b>	<p>Determines whether the installment date is inside or outside of the installment period. When you select:</p> <ul style="list-style-type: none"> <li>• <i>Advance</i>, installment dates start from the last day of the previous installment period.</li> <li>• <i>Arrears</i>, installment dates start from the first day of the next installment period.</li> <li>• <i>Current</i>, installment dates start from the first day of the current installment period.</li> </ul>
<b>Installment Day</b>	<p>When a month doesn't have the date you select, Workday uses the last day of the month.</p> <p>Example: When you select <i>30th</i>, Workday uses the <i>28th</i> for an installment in February.</p> <p>When the billing period is:</p> <ul style="list-style-type: none"> <li>• <i>Advance</i>, Workday uses the occurrence of this day or of the date closest to the end of the previous installment period.</li> <li>• <i>Arrears</i>, Workday uses the occurrence closest to the start of the next installment period.</li> <li>• <i>Current</i>, Workday uses the occurrence closest to the start of the current installment period.</li> </ul>
<b>Prorate First and Last Installment</b>	<p>Displays when you select the <i>Spread Even</i> billing method and 1 of these billing frequencies:</p> <ul style="list-style-type: none"> <li>• <i>Calendar Week</i></li> <li>• <i>Calendar Month</i></li> <li>• <i>Calendar Quarter</i></li> </ul> <p>Select to prorate the first and last installments when the installments don't cover a full installment period.</p> <p>Example: When the billing frequency is <i>Calendar Week</i> and the <b>From Date</b> is a Thursday, the first billing installment covers 4 days instead of a full calendar week.</p> <p>When both the first and last installments are partial periods, use these calculations:</p>

Option	Description
	<ul style="list-style-type: none"> <li>First installment = (Number of days to bill ÷ Total number of days in the period) × (Total amount to bill ÷ Number of installments)</li> <li>Last installment = (Number of days to bill ÷ Total number of days in the period) × ((Total amount to bill - First installment amount) ÷ Number of installments)</li> <li>Other installments = (Total amount to bill - First installment amount - Last installment amount) ÷ (Number of installments - 2)</li> </ul> <p>When either the first or last installment is a partial period and the other installment is a full period, use these calculations:</p> <ul style="list-style-type: none"> <li>Partial installment = (Number of days to bill ÷ Total number of days in the period) × (Total amount to bill ÷ Number of installments)</li> <li>Other installments = (Total amount to bill - Partial installment amount) ÷ (Number of installments - 1)</li> </ul>
<b>Automatically Regenerate Installments</b>	Select to generate new installments when you modify the contract line amount on the customer contract. When you enable proration for the first and last installments, Workday updates the proration calculations accordingly.
<b>Automatically Submit Schedule via Contract Amendment</b>	Displays when you select the <b>Automatically Regenerate Installments</b> check box. Select to submit new installments for approval. Workday doesn't update installments when you have contract amendments on a business process.
<b>Status</b>	When you create credit adjustments or credit and rebill customer invoices, Workday changes the <i>Completed</i> installment status to <i>Credited</i> . When you: <ul style="list-style-type: none"> <li>Cancel the billing schedule, Workday only deletes installments in <i>Available</i> status.</li> <li>Change the billing schedule, you can't edit installments in <i>Credited</i> status.</li> </ul>
<b>Invoice</b>	Workday appends IDs to credit adjustment and credit and rebill customer invoices using the custom ID generators that you configure on these tasks: <ul style="list-style-type: none"> <li><b>Edit Company ID Definitions</b></li> <li><b>Edit Tenant Setup - Financials</b></li> </ul> Example: You can configure these custom IDs to display on credit adjustment and credit and rebill customer invoices:

Option	Description
	<ul style="list-style-type: none"> <li>• 9874CR - Credit</li> <li>• 9875RB - Rebill</li> </ul>

5. (Optional) On the **Transaction** tab, select a **Project Invoice Summary Definition** to group time transactions instead of displaying individual lines.

You can create project invoice summary definitions on the **Maintain Project Invoice Summary Definitions** task.

6. (Optional) As you complete the **Prepaid** tab, consider:

Option	Description
<b>Invoice Prepaid Installments with Other Transaction Types</b>	<p>Displays when you create a customer contract with at least 1 <i>Prepaid</i> line type and 1 other line type.</p> <p>Workday automatically enables this check box and bills prepaid installments on the same invoice as other installments and transactions when you create customer invoices.</p> <p>When the check box selection that you configure on the billing schedule is different from the check box selection on the <b>Edit Tenant Setup – Financials</b> task, Workday uses the selection on the billing schedule to bill prepaid installments.</p>
<b>Prepaid Mapping</b>	Map prepaid customer contract lines to installment or transaction type lines.
<b>Installments</b>	<p>Set up prepaid installments for each prepaid mapping. To remove a prepaid line with a prepaid balance from the billing schedule, create a negative installment to zero out the prepaid balance.</p> <p>You can place prepaid installments <i>On Hold</i>, but you can't bill or consume against them. You also can't cancel billing schedules that have prepayment balances.</p> <p>When you create a credit adjustment or credit and rebill a prepaid installment, Workday displays the credit adjustment and rebilled installment.</p>

7. (Optional) Select **Manage Attachments** from the **More** menu to add attachments.

## Result

Workday routes the billing schedule to the *Billing Schedule Event* business process for review and approval.

## Next Steps

Create customer invoices from contracts.

## Create Installment or Transaction Billing Schedules for Customer Contracts

### Prerequisites

- Create and approve a customer contract.
- Configure the *Billing Schedule Event* business process and security policy in the Customer Contracts and Project Billing functional areas.
- Security: *Process: Billing Schedule - Core* domain in the Customer Contracts and Project Billing functional areas.

### Context

You can create an installment or transaction billing schedule to specify billing and invoice information for customer contracts. Workday uses the billing schedule to determine how to bill customers for costs on your customer contract lines. You can group:

- Customer contract lines that span multiple contracts in the same billing schedule.
- Projects for the same company and customer in the same billing schedule.

When you generate installments, Workday associates 1 contract line with each installment line.

### Steps

1. Access the **Create Billing Schedule for Customer Contract** task.
2. As you complete the task, consider:

Option	Description
<b>Billing Type</b>	Select: <ul style="list-style-type: none"> <li>• <i>Installment</i> for fixed amount contract line types.</li> <li>• <i>Transaction</i> for usage-based or project time and expense contract line types.</li> </ul>
<b>Milestone</b>	Select milestones for the entire billing schedule. Milestones must be complete for the billing process to occur on an installment.  Displays: <ul style="list-style-type: none"> <li>• All tasks from all phase levels for the billable project.</li> <li>• When you select <i>Installment</i> from the <b>Billing Type</b> prompt.</li> </ul>
<b>Statutory Invoice Type</b>	Select a statutory invoice type that you configured for customer invoices on the <b>Maintain Invoice</b>

Option	Description
	<p><b>Types by Country</b> report. Workday filters the options that display in this prompt by the company that you select on the billing schedule.</p> <p>Workday uses the statutory invoice type to:</p> <ul style="list-style-type: none"> <li>Determine the bill from location.</li> <li>Populate the statutory invoice type from the billing schedule onto the customer invoice. When you create a customer invoice, you can change the statutory invoice type to be different from the statutory invoice type on the billing schedule.</li> </ul> <p>Workday doesn't support statutory invoice types on award contracts, intercompany contracts, or student contracts.</p>
<b>Delivery Type</b>	A read-only field that displays the document delivery method specified on the customer profile.
<b>Delivery Type Override</b>	Select a document delivery option for a given billing installment or transaction. This value overrides the default document delivery type values defined on the customer profile.
<b>Billing Method</b>	When you select <i>Defined Installment</i> , you can specify amounts for the first and last installments. Workday divides the remainder among the other installments.
<b>Number of Installments</b>	When you specify the number of installments, Workday determines the installment dates based on the billing method.
<b>Invoice Date Options</b>	<p>Using the installment date information, Workday rolls back 1 month, then applies the option that you select for the invoice date.</p> <p>Example: When you select a <b>Billing Frequency</b> of <i>Monthly</i>, a <b>From Date</b> of 2020-07-01, and an invoice date of the 15th, the first installment date is 2020-06-15.</p>
<b>Automatically Regenerate Installments</b>	<p>Select to generate new installments when you modify the contract line amount on the customer contract.</p> <p>Displays when you select <i>Spread Even</i> from the <b>Billing Method</b> prompt.</p>
<b>Automatically Submit Schedule via Contract Amendment</b>	<p>Select to submit new installments for approval. Workday doesn't update installments when you have contract amendments on a business process.</p> <p>Displays when you select the <b>Automatically Regenerate Installments</b> check box.</p>

3. As you complete or edit the draft billing schedule, consider:

Option	Description
<b>Define Installment Amounts</b>	<p>Click to enter <i>Regular</i>, <i>First</i>, and <i>Last</i> installment amounts for each customer contract line.</p> <p>Displays when you select <i>Installment</i> from the <b>Billing Type</b> prompt.</p>
<b>Manage Milestones</b>	<p>Click to define milestone information.</p> <p>Workday displays:</p> <ul style="list-style-type: none"> <li>• All tasks from all phase levels for the billable project in the <b>Milestone for Transaction Billing Schedule</b> prompt.</li> <li>• Only top-level phases for the billable project in the <b>Limit Milestone to Phase(s)</b> prompt.</li> </ul> <p>Displays when you select <i>Transaction</i> from the <b>Billing Type</b> prompt.</p>

4. (Optional) As you complete the **Installments** tab, consider:

Option	Description
<b>Status</b>	<p>When you create credit adjustments or credit and rebill customer invoices, Workday changes the <i>Completed</i> installment status to <i>Credited</i>.</p> <p>When you:</p> <ul style="list-style-type: none"> <li>• Cancel the billing schedule, Workday only deletes installments in <i>Available</i> status.</li> <li>• Change the billing schedule, you can't edit installments in <i>Credited</i> status.</li> </ul>
<b>Invoice</b>	<p>Workday appends IDs to credit adjustment and credit and rebill customer invoices using the custom ID generators that you configure on these tasks:</p> <ul style="list-style-type: none"> <li>• <b>Edit Company ID Definitions</b></li> <li>• <b>Edit Tenant Setup - Financials</b></li> </ul> <p>Example: You can configure these custom IDs to display on credit adjustment and credit and rebill customer invoices:</p> <ul style="list-style-type: none"> <li>• 9874CR - Credit</li> <li>• 9875RB - Rebill</li> </ul>

## Result

Workday routes the billing schedule to the *Billing Schedule Event* business process for review and approval.

When you create a credit adjustment or credit adjust and rebill a customer invoice, Workday displays the credit adjustment and rebilled invoice in the **Customer Invoices** tab on the customer contract billing schedule. You can view the credit adjustment and rebilled invoice in the **Customer Invoices** tab regardless of whether you enable the **Create and Submit Installment for Credit and Rebill** check box.

on the **Edit Tenant Setup - Financials** task. When you view the credit adjustment or rebilled invoice, Workday links to the associated billing schedule in the **Billing Schedule** field.

## Next Steps

Create invoices for billing installments.

## Maintain Project Invoice Summary Definitions

### Prerequisites

- Create a customer contract with a transaction based project line.
- Security: *Set Up: Project Billing - Invoicing* domain in the Project Billing functional area.

### Context

Use the **Maintain Project Invoice Summary Definitions** task to create and maintain project invoice summary definitions. After you configure a summary definition, you can select the definition from the **Project Invoice Summary Definition** prompt on the **Create Billing Schedule for Customer Contract** task for transaction or consolidated billing schedules for customer contracts.

When you create customer invoices or invoice proposals from the contract, Workday groups and summarizes the transactions of the type configured in your summary definition instead of displaying them all on individual lines. You can click **Billable Transactions** on a summarized invoice line to display the individual transaction lines.

Workday respects the grouping for the summary definition that you select on the billing schedule, even if you have multiple contract line types. For example, if you select a *Time* summarization at the contract line but you have both *Time* and *Expense* invoice lines, Workday respects the grouping from the *Time* rule.

### Steps

1. Access the **Maintain Project Invoice Summary Definitions** task.
2. As you complete the task, consider:

Option	Description
<b>Project Transaction Source</b>	Select the transaction type you want to summarize: <i>Expense</i> , <i>Misc Expense</i> , or <i>Time</i> .
<b>Tenant Default</b>	(Optional) Select a summary definition to be the default for the tenant.

Option	Description
	<p>If you select a project invoice summary definition on the billing schedule, Workday summarizes the transaction lines associated with the billing schedule that match the transaction source specified in the summary definition you selected.</p> <p>If you don't select a project invoice summary definition on the billing schedule but you have defined a default summary definition for the tenant, Workday summarizes the transaction lines that match the transaction source specified in the default summary definition.</p>
<b>Summarize By</b>	Select the dimensions you want to summarize transactions by.

### Next Steps

Create a transaction or consolidated billing schedule, and select a project invoice summary definition that you defined.

### Related Information

[Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080

## Concept: Billing Schedule Templates for Customer Contracts

Billing schedule templates streamline the billing schedule creation process by enabling you to select a template directly from the customer contract. When you select a template from the customer contract, Workday populates the billing schedule with the information you specify in the template. Using billing schedule templates helps to eliminate the manual steps involved in creating billing schedules for each individual customer contract.

Workday offers these 2 billing types when you create billing schedule templates:

Option	Description
<i>Installment</i>	<p>Use for installment contract line types.</p> <p>You can:</p> <ul style="list-style-type: none"> <li>• Group all related contract lines in 1 billing schedule.</li> <li>• Group contract lines with the same date in 1 billing schedule.</li> <li>• Create a separate billing schedule for each contract line with different dates.</li> <li>• Create individual billing installments.</li> <li>• Submit a billing schedule for approval.</li> </ul>
<i>Transaction</i>	<p>Use for usage-based or project time and expense contract line types.</p> <p>You can:</p> <ul style="list-style-type: none"> <li>• Group all related contract lines with a <i>Transaction</i> billing type.</li> <li>• Create a separate billing schedule for each contract line.</li> <li>• Submit a billing schedule for approval.</li> </ul>

You can associate both an *Installment* template and a *Transaction* template with your contract to address different types of contract lines on a single contract.

## Related Information

### Tasks

[Create Billing Schedule Templates for Customer Contracts](#) on page 1078

[Create Consolidated Billing Schedule Templates for Customer Contracts](#) on page 1079

## Concept: Billing

Workday uses the information that you specify on the customer contract to create a billing schedule. The billing schedule is based on the billing installments established in the terms of the agreement. On the appropriate date, Workday then uses the installment information to create a customer invoice and routes it for management approval.

### Milestones

You can create milestones to track the completion of tasks and specify when Workday can process billing and revenue recognition schedules and installments. You can assign multiple milestones to schedules and installments. Workday doesn't process schedules or installments with pending milestones.

You can use these tasks to configure standard milestones:

- **Maintain Date Milestone Types**
- **Create Date Milestone**

Standard milestones become customer milestones once you add them to a customer. You can view customer milestone details using the **Find Milestones** report. Customer milestones are unique for each customer and company combination.

Workday supports these milestone types:

- Billing Schedule First Invoice: Use to initiate revenue recognition once billing has occurred.
- Date Milestones: Use standard date milestones as the basis for creating customer date milestones.
- Project Tasks: Mark project tasks as milestones in the project. Use project milestones to control when you bill project transactions and recognize revenue. You can define project milestones for a project phase or for the overall project to determine when transactions are available for billing. You can use project tasks marked as milestones as contract milestones. You can't delete project tasks that are in use on a contract. You can enter estimated and actual completion dates. Once the project task is complete and you enter an end date, billing can occur. Workday uses the end date as the milestone completion date.

### Schedule Types

You can use the **Maintain Schedule Types** task to configure schedule types for use on billing and revenue recognition schedules. When you enable a schedule type for use on:

- Billing schedules, you also have the option to enable *Prepaid* or *Consolidated Billing Schedule*.
- Revenue recognition schedules, you also have the option to enable *Usage-Based Subscription* or *Multi-Period*.

Workday displays the usage count for each schedule type, and you can set a schedule type as *Inactive* at any time. When you set a schedule type as *Inactive*, Workday removes the option from the **Schedule Type** prompt on billing and revenue recognition schedules.

### Billing Schedules and Installments

You can:

- Link contract lines that span multiple contracts for the same company and customer to the same billing schedule.

- Define schedule types so you can classify your schedules. This process simplifies searches, approvals, and reporting.
- Create installment or transaction billing schedules to manage certain types of contract lines, or consolidated billing schedules to manage installment, transaction, and prepaid contract lines in 1 schedule.

Workday creates installments based on the scheduled start and end dates, which can differ from the contract line start and end dates. You can also configure the invoice date to assign, which can differ from the installment start date.

Workday supports these billing methods for each billing schedule, and you can change methods throughout the life of the schedule:

- *Defined Installment*: Define the first and last installment amount for each contract line. Workday spreads the remaining amount evenly among the other installments. You can't use this billing method on consolidated billing schedules.
- *Spread Even*: Define a set number of installments with equal amounts.
- *Custom*: You control all aspects of the installments.

A billing schedule includes 1 or more installments. Each billing installment:

- Creates a customer invoice.
- Becomes an invoice line.
- Derives attributes from the associated contract line.

Once you generate installments, you can:

- Manually update individual installments.
- Regenerate billing installments automatically after changes to contract amounts. This function only applies to *Spread Even* billing methods or *Spread Even* and *Number of Days* revenue recognition methods.
- Update your schedules automatically when you make changes to your contract lines.
- Edit all installments at once when you have a custom schedule.

Workday assigns an *Out of Balance* status when:

- You don't schedule your contract line installments exactly.
- A custom schedule overbills.

You can create customer invoices from billing installments after you approve the billing schedule.

## Billing for Order Fulfillment

When you record order fulfillment for customer contract lines, you can generate billing based on partially and completely filled orders.

### Create Customer Invoices from Billing Installments

With the **Create Customer Invoices from Billing Installments** task, you can run this task as needed or as a scheduled process. This task enables you to:

- Select available billing installments to invoice.
- Mark invoices to submit for automatic approval.

You can:

- Make limited changes to the customer invoice and add more lines.
- Create invoices that reference contract lines when you have invoice adjustments.

Workday reflects any changes to invoice line amounts on the billing installment. The contract line billed amount reflects all approved invoices.

## Retention for Customer Invoices

You can:

- Withhold a portion of a customer invoice, enabling you to use billing schedules for retention tracking, and reducing manual entry errors.
- Post the accounting for the retained amounts from invoices to different ledger accounts using a new posting rule.
- Support multiple types of billing schedules, including transaction and installment billing.
- Release all or a portion of the retention balances by contract line for invoicing, when your contract meets the requirements.

## Customer Contracts Invoicing

### Steps: Create Credit and Rebill Customer Invoices for Customer Contracts

#### Prerequisites

Create:

- A customer contract.
- Billable transactions.
- A billing schedule for the customer contract.
- Customer invoices from contracts.

#### Context

When you bill a customer invoice amount incorrectly and want to create 1 corrected invoice, you can configure Workday to credit the original invoice and create a new rebill invoice. Workday only supports full credit adjustments and full rebill installments.

#### Steps

- (Optional) [Set Up Unique Invoice Numbering for a Company](#) on page 778.

Unique invoice IDs enable you to comply with global accounting requirements. When you enable unique invoice IDs for credits, debits, and rebills, Workday creates and processes an adjustment with a unique invoice ID.

- Access the **Edit Tenant Setup - Financials** task.

In the *Customer Contracts Options* section, select the **Create and Submit Installment for Credit and Rebill** check box to automatically create and submit new installments on the customer contract billing schedule when you create credit adjustments or credit and rebill customer invoices.

See [../../../../manage-workday/tenant-configuration/tenant-setup/dan1370796760004.dita](#).

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

- Select **Customer Invoice > Create Credit and Rebill** from the related actions menu of a customer invoice.

The **Create Credit and Rebill** task is only available when:

- The contract line is in *Active* status and is associated with a billing schedule in *Approved* status.
- The customer invoice is in *Approved* status.
- The customer invoice is in *Unpaid* status.
- The customer invoice isn't created from interest and late fee calculation runs.
- The customer invoice isn't direct intercompany.
- The customer invoice isn't already linked to a credit adjustment or a rebilled invoice that's in *Approved* status or *In Progress* status.
- Workday hasn't already created customer invoices from billing installments or billable transactions.
- You enable the **Create and Submit Installment for Credit and Rebill** check box on the **Edit Tenant Setup - Financials** task.

As you complete the task, consider:

Option	Description
<b>Invoice Lines To Copy (on the Create Credit and Rebill page)</b>	When you select to copy all the invoice lines, you can delete unneeded invoice lines on the rebill. When you adjust the rebill, Workday recommends that you also update the associated billing schedule to ensure that the amounts remain balanced.
<b>Bill-To Customer (on the Create Rebill page)</b>	To prevent users from changing the <i>Bill-To Customer</i> , create a custom validation.

Workday doesn't support credit and rebill for:

- Award contracts or student contracts.
- Contract line fee, minimum commitment, prepaid billing using nonconsolidated billing schedules, order fulfillment, or retention.

Configure the *Customer Invoice Event* business process and security policy in the Customer Accounts functional area.

## Result

Workday:

- Automatically approves the *Billing Schedule Event* business process for credit and rebilled installments. You can also use the **Rebilled Installment from Credit Adjustment** report field in condition rules to define how Workday routes credit adjustments through the *Billing Schedule Event* business process.
- Creates and applies a credit adjustment to the original invoice and creates a new rebill invoice. The new rebill invoice goes through the same business process approval as new invoices.
- Rebills transaction-based invoices.

When you create a credit adjustment or credit and rebill:

- An invoice, Workday displays the credit adjustment and rebill invoice in the **Customer Invoices** tab on the customer contract billing schedule. You can view the credit adjustment and rebill invoice in the **Customer Invoices** tab regardless of whether you enable the **Create and Submit Installment for Credit and Rebill** check box on the **Edit Tenant Setup - Financials** task.
- A prepaid installment, Workday displays the credit adjustment and rebill installment in the **Prepaid** tab on consolidated customer contract billing schedules.

When you view the credit adjustment or rebill invoice, Workday links to the associated billing schedule in the **Billing Schedule** field.

If you enabled unique invoice IDs, Workday creates and processes the adjustment with a unique invoice ID to comply with global accounting requirements. If you didn't enable unique invoice IDs, Workday uses this naming convention so that you can easily track credited and rebilled invoices:

- The credit adjustment appends *CR* to the original invoice number. If there are multiple credit adjustments, Workday numbers them sequentially. Example: 9531CR, 9531CR2, 9531CR3.
- The rebill invoice appends *RB* to the original invoice number. Example: 9531RB. Multiple rebill invoices follow the same naming convention as multiple credit adjustments.

## Steps: Manage Customer Invoice Proposals

### Prerequisites

Create transactions that are ready to bill.

### Context

You can create customer invoice proposals from billable transactions to preview, adjust, and review information before you create customer invoices. Creating invoice proposals eliminates the need to cancel and recreate invoices when you want to adjust figures or correct errors. When you add transactions to an invoice proposal, you can only invoice customers for those transactions by creating an invoice from the proposal.

### Steps

1. (Optional) Access the **Edit Tenant Setup - System** task.

You can enable workers to add comments on customer invoice proposals. In the Activity Stream Settings section, select *Customer Invoice Proposal* from the **Selected Objects for Activity Stream** prompt.

See [Reference: Edit Tenant Setup - System](#).

Security: *Set Up: Tenant Setup - System* domain in the Customer Central and System functional areas.

2. (Optional) [Edit Business Processes](#).

Configure the *Customer Invoice Proposal Event* business process and security policy to:

- Route customer invoice proposals for review and approvals.
- Automate customer invoice creation.
- Set up worklets for custom reports. Worklets enable you to add custom reports to an approval step in the business process. For example, you could add a custom report that shows you information

about previous invoices during the approval step of a new invoice proposal, to help you make your decision on approving or rejecting the invoice proposal.

a) [Edit Business Process Security Policies](#).

On the *Customer Invoice Proposal Event* business process security policy, add the Approvers security group to the View and Approve actions. Workday routes the customer invoice proposal to a designated approver in your organization.

- b) Set up the *Create Customer Invoice* service step on the *Customer Invoice Proposal Event* business process. Workday automatically creates customer invoices when you approve the customer invoice proposal.
- c) Add an approval step to the *Customer Invoice Proposal Event* business process, and add a custom report worklet to the approval step.

The custom report is embedded into the BP approval page as a worklet. Approvers can click the worklet to open the custom report during the approval process. For details, see [Add Worklets to Business Processes](#).

**3. (Optional) Access the *Create Customer Invoice Proposal* task.**

In the Selection Criteria section, select an option from the **Project Owner** prompt to view billable projects for the user you select.

Workday automatically bills prepaid installments on the same invoice as other installments and transactions when you:

- Enable the **Invoice Prepaid Installments with Other Transaction Types** check box on consolidated billing schedules.
- Create customer invoice proposals.

Security:

- Process: Billing - Invoice Proposal* domain in the Customer Contracts and Project Billing functional areas.
- Process: Project Billing - Invoice Proposal* domain in the Project Billing functional area.

**4. (Optional) Access the *Customer Invoice Proposal Workspace* task.**

In the search criteria, select an option from the **Project Owner** prompt to view billable projects for the user you select.

As you complete the task, consider:

Option	Description
<b>Search</b>	Click to change the selection criteria. Workday saves your selection and uses it each time you access the task.
<b>Billable Projects</b>	Use the drill-down menu to view the project owner for the billable project.
<b>Status of Pending Events</b>	View the status of project transactions and billing schedules that are pending business process approval.
<b>Refresh</b>	Click to update the selected proposals with new transactions in <i>Ready to Bill</i> status that meet the selection criteria.
<b>Create Invoice</b>	Once you create a customer invoice, you can't revert it to an invoice proposal. You can cancel the invoice to return the transactions to <i>Ready to Bill</i> status. Then, you can create a new proposal.

Option	Description
<b>Cancel Proposal</b>	Click to cancel the selected proposals and return transactions to <i>Ready to Bill</i> status.
<b>Print</b>	<p>Click to generate PDF copies of the selected proposals. When the PDFs are available, Workday displays them in the <b>PDF</b> column on the grid.</p> <p>You can only print proposals for customers for which you have View access.</p>

Security:

- *Process: Billing - Invoice Proposal* domain in the Customer Contracts and Project Billing functional areas.
- *Process: Project Billing - Invoice Proposal* domain in the Project Billing functional area.

5. (Optional) From the **Proposal** column on the **Customer Invoice Proposal Workspace** task, open the **View Customer Invoice Proposal** report in a new window.

View customer invoice custom objects using the Additional Data related action in the Billing Information section. To view customer invoice custom objects, you must first configure the custom object on the **Create Custom Object** task.

When you enable activity streams, you can add comments on the customer invoice proposal and view comments from other users.

Security:

- *Process: Billing - Invoice Proposal* domain in the Customer Contracts and Project Billing functional areas.
- *Process: Project Billing - Invoice Proposal* domain in the Project Billing functional area.

6. (Optional) From a row on the **Customer Invoice Proposal Workspace** task, click **Edit** to access the **Edit Customer Invoice Proposal** task.

Edit customer invoice custom objects using the Additional Data related action in the Billing Information section. To edit customer invoice custom objects, you must first configure the custom object on the **Create Custom Object** task.

To add ad hoc invoice lines on customer invoice proposals, you must have a project role or a company role that matches the company on the project. When you add ad hoc invoice lines on customer invoice proposals, you can only:

- Add lines that have a **Revenue Treatment** of *Invoice*.
- Edit the description of invoice lines that you created on the **Create Customer Invoice Proposal** task.
- Select nondeferred customer contract lines.
- Select projects that you already included on the customer invoice proposal.

To exclude transactions from prepayment consumption, you can select transactions individually, or select multiple transactions and use the **Exclude from Prepayment** mass action.

Refresh the customer invoice proposal when you:

- Add a new line.
- Change existing lines that impact the total invoice amount.
- Remove a new line.

Security:

- *Process: Billing - Invoice Proposal* domain in the Customer Contracts and Project Billing functional areas.
- *Process: Project Billing - Invoice Proposal* domain in the Project Billing functional area.

## Next Steps

Create invoices from customer invoice proposals.

## Create Customer Invoices for Billing Installments

### Prerequisites

- Create a billing schedule for a customer contract.

- Security: Process: *Billing - Invoicing* domain in the Customer Contracts and Project Billing functional areas.

## Context

You can set up a schedule to automate the invoice process for billing installments as a one-time or a recurring job. Workday doesn't include pending and on hold milestones in the installments.

You can also access the **Create Customer Invoices for Billing Installments** task to create invoices immediately.

## Steps

1. Access the **Schedule Create Customer Invoices for Billing Installments** task.
2. As you complete the **Criteria** section, consider:

Option	Description
<b>Invoice Date Days Ahead</b>	<p>Enter a:</p> <ul style="list-style-type: none"> <li>Positive number to include installments that have invoice dates up to this number of days after the run date.</li> <li>Negative number to include installments that have invoice dates up to this number of days before the run date.</li> </ul> <p>Leave blank to include installments that have invoice dates on or before the run date.</p> <p>Example: When you schedule the process to run on January 28, enter:</p> <ul style="list-style-type: none"> <li>3 to include installments that have invoice dates of January 31 and earlier.</li> <li>-3 to include installments that have invoice dates of January 25 and earlier.</li> </ul>
<b>Billing Method</b>	<p>Select:</p> <ul style="list-style-type: none"> <li><i>Custom</i> to create custom installment amounts.</li> <li><i>Defined Installment</i> to define the first and last installment amount. Workday divides the remaining amount among the other installments.</li> <li><i>Number of Days</i> to use the number of days specified in the billing frequency.</li> <li><i>Spread Even</i> to spread the amounts evenly across installments.</li> </ul>
<b>Preview Installments for Criteria</b>	<p>Select to review installments that meet the selection criteria before you create the schedule.</p>

3. On the confirmation page, you can override the currency rate by selecting the **Rate Override** check box. When you have alternate ledger currency configured for your organization, you can override the currency rate for both the base currency and alternate ledger currency.

## Result

Workday displays the schedule details and creates the invoices at the time you configured. You can view the next 10 scheduled launches on the **Additional Info** tab.

When you generate customer invoices from contracts with a negative amount due, Workday automatically creates credit adjustment documents linked to the billing schedule. If an invoice has retention, Workday instead creates a customer invoice with the negative amount.

When you approve the customer invoices, Workday creates accounting using the dimensions that you configure in the account posting rules. Example: For the Deferred Revenue and Unbilled Receivables account posting rules, you can configure Customer Group or Project Hierarchy. You can also configure custom organization and custom worktag dimensions.

## **Related Information**

### **Concepts**

[Concept: Billing](#) on page 1090

[Concept: Revenue Recognition Accounting](#) on page 1145

### **Tasks**

[Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085

### **Reference**

[The Next Level: Customer Invoicing](#)

[2023R1 What's New Post: Credit Adjustments for Negative Customer Invoice Amounts](#)

## **Create Customer Invoices from Contracts**

### **Prerequisites**

Create:

- A customer contract.
- Custom references for ad hoc project transactions.
- Billable transactions.
- A consolidated billing schedule.

Security:

- *Process: Billing - Invoicing* domain in the Customer Contracts and Project Billing functional areas.
- *Process: Project Billing - Invoicing* domain in the Project Billing functional area.

### **Context**

You can consolidate across all billing schedules at the time of invoicing. You can consolidate billing installments, transactions, and usage-based transactions on customer invoices using consolidation grouping and invoice date options. You can also override the invoice date on an installment, and reconsolidate the charges using the new invoice date.

To create invoices, you can access either of these tasks:

- **Create Customer Invoices from Contracts**
- **Schedule Create Customer Invoices from Contracts**

### **Steps**

1. Access the **Create Customer Invoices from Contracts** task.
2. As you complete the task, consider:

Option	Description
<b>Consolidation Options</b>	Select how you want to consolidate the invoices. Workday always uses the Customer and Billing Schedule consolidation option when the billing schedule contains prepaid lines.

Option	Description
	<p>In addition to grouping invoices by consolidation options, Workday also groups invoices by these implicit consolidated fields:</p> <ul style="list-style-type: none"> <li>• Auto Submit Invoice</li> <li>• Bill-To Customer</li> <li>• Currency</li> <li>• Invoice Date</li> <li>• Invoice Type</li> </ul> <p>When invoices don't share the same values for the implicit consolidated fields, Workday won't consolidate them regardless of which consolidation options you select.</p>
<b>Additional Consolidation Grouping</b>	<p>Workday groups the consolidation option you select with the additional consolidation grouping options on the same invoice.</p> <p>Example: Select <b>Customer</b> from the <b>Consolidation Options</b> prompt and <b>PO Number</b> to group installments and transactions with the same customer and purchase order number on the same invoice.</p> <p>You can set up additional consolidation grouping options by accessing the <b>Enable Ad Hoc Project Transaction Custom References</b> task and selecting the <b>Enabled</b> and <b>Consolidated Billing</b> check boxes for the custom references that you want to add.</p>
<b>Invoice Date Options</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Override Blank Transaction Invoice Date</i> to update all transaction invoice dates.</li> <li>• <i>Override All Invoice Dates</i> to update all installment and transaction invoice dates.</li> </ul> <p>The <b>Number of Days Before or After Run Date</b> field displays when you select <b>Run Date</b> from either of the previous prompts.</p>

## Result

Workday creates customer invoices for installments and transactions using the consolidation and invoice date options that you specify.

When you generate customer invoices from contracts with a negative amount due, Workday automatically creates credit adjustment documents linked to the billing schedule. When an invoice has retention, Workday instead creates a customer invoice with the negative amount.

When you enable the **Invoice Prepaid Installments with Other Transaction Types** check box on consolidated billing schedules and create customer invoices from contracts, Workday automatically bills prepaid installments on the same invoice as other installments and transactions. Once you consume a prepaid installment, you can't cancel the associated customer invoice.

When you approve the customer invoices, Workday creates accounting using the dimensions that you configure in the account posting rules. Example: For the Deferred Revenue and Unbilled Receivables account posting rules, you can configure Customer Group or Project Hierarchy. You can also configure custom organization and custom worktag dimensions.

[2021R1 What's New Post: Project Roles as Worktags](#)

[2023R1 What's New Post: Credit Adjustments for Negative Customer Invoice Amounts](#)

## **Create Customer Invoice Proposals**

### **Prerequisites**

Create:

- A customer contract.
- Billable transactions.

Security:

- For the **Create Customer Invoice Proposal** task:
  - *Process: Project Billing - Invoice Proposal* domain in the Project Billing functional area.
  - *Process: Billing - Invoice Proposal* domain in the Customer Contracts and Project Billing functional areas.
- For the **Manage Project Billing Transactions** task:
  - *Manage: Billable Projects* domain in the Projects functional area.
  - *Process: Project Billing - Core* domain in the Project Billing functional area.

### **Context**

You can create customer invoice proposals from billable transactions to preview, adjust, and review information before you create customer invoices. Creating invoice proposals eliminates the need to cancel and recreate invoices when you want to adjust figures or correct errors. When you add transactions to an invoice proposal, you can only invoice customers for those transactions by creating an invoice from the proposal.

### **Steps**

1. Access either the **Create Customer Invoice Proposal** or the **Manage Project Billing Transactions** task.

2. If using the **Create Customer Invoice Proposal** task, enter your selection criteria and click **OK**.  
For details, see [Manage Project Billing Transactions](#) on page 1417 and [Create Customer Invoices from Contracts](#) on page 1099.
3. If using the **Manage Project Billing Transactions** task:
  - a) Enter your search criteria and click **OK**.  
For details, see [Manage Project Billing Transactions](#) on page 1417.
  - b) On the project summary view, select transaction groups with at least one transaction in the *Ready To Bill* state, click the **More** button, and click **Create Invoice Proposal**.  
Or on the transaction details view, select transactions in the *Ready To Bill* state, and click **Create Invoice Proposal**.

### Result

Workday creates the customer invoice proposal. You can view and edit your proposals using the **Customer Invoice Proposal Workspace** task.

### Next Steps

**Note:** When you make changes to the bill-from address on any contracts that are included in a customer invoice proposal, the invoice proposal grouping is affected. We recommend that you cancel the invoice proposal and create a new one to pick up the latest bill-from address changes on the contracts.

[Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080

## Concept: Customer Invoice Proposal Workspace

You can access the **Customer Invoice Proposal Workspace** task to review and manage customer invoice proposals before you generate customer invoices. To populate the task, first create customer invoice proposals. Workday groups the customer invoice proposals by billing schedule. When you access the task for the first time, Workday:

- Prompts you for proposal search criteria.
- Saves your selection for future access.

You can create invoices for transactions on an approved customer invoice proposal directly from the workspace. Once you create a customer invoice, you can't revert it back to a customer invoice proposal.

### Edit Customer Invoice Proposals

When you edit a customer invoice proposal, you can:

- Add ad hoc invoice lines. Ad hoc invoice lines don't consume prepaid installments.
- Change invoice header information.
- Make lump sum adjustments at the time of invoicing.
- Manage prepaid installments.
- Update billable project transactions, excluding daily rate transactions.
- View customer invoice custom objects using the Additional Data related action when you first configure the customer invoice custom object on the Create Custom Object task.

- View the billable project associated with the customer contract line.

When you edit a customer invoice proposal, you can't update:

- Daily rate transactions.
- On Hold or Milestone prepaid installments.

When you update prepaid installments, Workday:

- Creates new prepaid installments with a *Created from Proposal* status.
- Submits the associated billing schedule for review and approval.

You can't edit a customer invoice proposal when a transaction on the proposal is awaiting business process approval.

### **Print Customer Invoice Proposals**

When you print a customer invoice proposal, Workday generates a PDF copy of the invoice proposal.

When the PDF copy is available, you can access it from the **PDF** column on the customer invoice proposal workspace.

## **Customer Contracts Revenue Recognition**

### **Setup Considerations: Revenue Recognition Schedules**

You can use this topic to help make decisions when planning your configuration and use of Revenue Recognition Schedules. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### **What It Is**

You can create a schedule to recognize your revenue:

- For individual transactions.
- Independently from billing status.
- Over multiple periods.

You can also configure templates with preselected values. Workday creates a revenue recognition schedule using the parameters at the same time as your other items, such as your customer contracts.

#### **Business Benefits**

Revenue recognition schedules:

- Make it easier to automate period end accounting.

- Dictate timing and the amount of revenue recognition.
- Align with your selected accounting policies.

## Use Cases

As a revenue accountant, you need to recognize revenue for deferred and accrued items. Workday enables you to create revenue recognition schedules for:

- Awards.
- Billable transactions.
- Customer contracts.
- Customer invoices.

## Questions to Consider

Question	Considerations
When do you want to recognize revenue?	<p>When you select a <b>Revenue Recognition Method</b> of <i>Transaction</i>, you're able to select the <b>Independent Revenue Processing</b> check box on your revenue recognition schedule.</p> <p>When you select this check box, Workday will process the revenue even when billing isn't complete.</p>
Do you amend your customer contracts?	<p>Workday updates the revenue recognition schedule when you select the <b>Automatically Regenerate Installments</b> check box on your revenue recognition schedule.</p> <p>Workday only regenerates installments when you:</p> <ul style="list-style-type: none"> <li>• Use a revenue recognition method of <i>Spread Even</i> or <i>Number of Days</i>.</li> <li>• Make changes to the contract line amount or worktags.</li> <li>• Don't have your contract amendments on a business process for approval.</li> </ul>
How do you recognize revenue?	<p>If your company doesn't have guidelines for revenue recognition, we provide a reference topic covering revenue recognition methods.</p>

## Recommendations

Functionality	Considerations
Milestones	<p>Assign a milestone to your revenue recognition schedules and templates if you don't want revenue recognition to occur before certain events dictated by you or your customer.</p>
<b>Schedule Type</b>	<p>Select a schedule type when you create your revenue recognition schedules and templates for improved reporting capabilities. Workday uses this field to group your revenue recognition schedules and templates.</p>

Functionality	Considerations
Templates	Instead of creating the same revenue recognition schedules multiple times, Workday recommends that you create a template to improve efficiency.

## Requirements

Feature	Considerations
Billable Transactions	When you update your billable transactions, your revenue recognition schedule doesn't update. Access the <b>Create Revenue Installments for Billable Transactions</b> task to update your revenue recognition installments.
Contract Rate Sheets	When you update your contract rate sheets, your revenue recognition schedule doesn't update. Access the <b>Schedule Revenue Installments for Billable Transactions</b> task to update your revenue recognition installments.

## Limitations

Feature	Considerations
Intercompany worktags	Your revenue recognition schedule won't display any worktags if there's an intercompany worktag. The worktags carry from your source transactions to the revenue recognition accounting that you create from your revenue installments.
Multiple-element revenue allocation	When you run multiple-element revenue allocation on a contract, you can't use the percent complete method for your schedule.

## Tenant Setup

No impact.

## Security

Domains	Considerations
<i>Process: Revenue Schedule - Cancel</i> in the Customer Contracts and Project Billing functional areas.	Cancel revenue recognition schedules for customer contracts.
<i>Process: Revenue Schedule - Core</i> in the Customer Contracts and Project Billing functional areas.	Create revenue recognition schedules for customer contracts.
<i>Set Up: Customer Accounts</i> in the Customer Accounts functional area.	Import and export templates for revenue recognition schedules.

Domains	Considerations
<i>Process: Customer Invoice - View in the Customer Accounts functional area.</i>	
<i>Set Up: Customer Contracts - Templates and Types in the Customer Contracts and Project Billing functional areas.</i>	Create templates for revenue recognition schedules.

## Business Processes

You can configure the *Revenue Recognition Schedule Event* business process to enable you to create and approve revenue recognition schedules.

## Reporting

You can use the Revenue dashboard to:

- Create revenue recognition schedules and templates.
- Access reporting on your revenue recognition schedules and templates.

You can use the **Revenue Recognition Schedules** report data source to create custom reports for revenue recognition schedules and templates.

## Integrations

Web Services	Considerations
<i>Cancel Revenue Recognition Schedule</i>	Enables you to cancel your existing revenue recognition schedules.
<i>Get Revenue Recognition Schedules</i>	Retrieves revenue recognition schedules according to selected criteria.
<i>Get Revenue Recognition Schedule Templates</i>	Retrieves templates for revenue recognition schedules according to selected criteria.
<i>Put Revenue Recognition Schedule Template</i>	Adds or updates templates for revenue recognition schedules.
<i>Submit Revenue Recognition Schedule</i>	Adds or updates revenue recognition schedules and submits them to the <i>Revenue Recognition Schedule</i> business process.

## Connections and Touchpoints

Features	Considerations
Customer Accounts	Nonproject related items that you recognize revenue for come from the Customer Accounts functional area.
Expenses	Workday uses project expenses to create revenue recognition schedules.
Financial Accounting	You create revenue recognition journals by using revenue recognition schedules.
Projects	You create revenue recognition schedules from customer contracts created for billable projects.

Features	Considerations
Project Billing	You create revenue recognition schedules from billable project time and expenses.
Time Tracking	You use the time tracked for billable projects to create revenue recognition schedule.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

##### Tasks

[Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110

## Setup Considerations: Cumulative Catch-Up Revenue Installments

You can use this topic to help make decisions when planning your configuration and use of cumulative catch-up revenue installments. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Cumulative catch-up revenue installments enable you to generate new revenue recognition installment amounts when you modify customer contracts.

### Business Benefits

Cumulative catch-up revenue installments reduce manual processing by providing an option to automatically generate revenue recognition installment amounts when you modify customer contracts.

### Use Cases

You can generate cumulative catch-up revenue installments when your company modifies the customer contract:

- Start and end dates.
- Term and amounts.

### Questions to Consider

Questions	Considerations
When you amend customer contracts, do you change the existing contract line amount?	When you change an existing contract line amount and enable automatic regeneration of installments on the revenue recognition schedule, Workday: <ul style="list-style-type: none"> <li>• Creates a cumulative catch-up installment for the completed installment.</li> <li>• Adjusts future installment amounts.</li> </ul>

Questions	Considerations
When you amend customer contracts, do you add a new line to update line amounts?	<p>When you add a new line on the contract, you can either:</p> <ul style="list-style-type: none"> <li>• Amend the existing revenue recognition schedule to generate cumulative catch-up revenue installments.</li> <li>• Create a new revenue recognition schedule to generate cumulative catch-up revenue installments.</li> </ul>

## Recommendations

To reduce manual effort, you can enable cumulative catch-up revenue installments on revenue recognition schedule templates. Workday then automatically enables the option when you create a revenue recognition schedule for customer contracts using a template.

On the revenue recognition schedule, you can enable Workday to automatically regenerate installments. When you enable this option and generate cumulative catch-up installments, Workday automatically creates new installments when you modify the customer contract.

## Requirements

To enable cumulative catch-up revenue installments on a revenue recognition schedule or template, you must use a:

- Revenue recognition method of defined installment, number of days, or spread even.
- Schedule type enabled for revenue recognition.

## Limitations

You can't:

- Disable cumulative catch-up revenue installments when you have completed installments.
- Generate cumulative catch-up revenue installments for alternate customer contracts, standalone invoices with revenue recognition schedules, or customer contracts with a variable amount line type.

## Tenant Setup

No Impact.

## Security

Domains	Considerations
<i>Process: Customer Invoice - View</i> in the Customer Accounts functional area.	<p>Find cumulative catch-up revenue installments on revenue recognition schedules for customer contracts.</p> <p>View cumulative catch-up revenue installments on revenue recognition schedule templates.</p>
<i>Process: Revenue Schedule - Core</i> in the Customer Contracts and Project Billing functional areas.	<p>Create cumulative catch-up revenue installments on revenue recognition schedules for customer contracts.</p>

Domains	Considerations
<p><i>Set Up: Customer Accounts</i> in the Customer Accounts functional area.</p> <p><i>Set Up: Customer Contracts - Templates and Types</i> in the Customer Contracts and Project Billing functional areas.</p>	Create, edit, and view cumulative catch-up revenue installments on revenue recognition schedule templates.

## Business Processes

Business Processes	Considerations
<i>Customer Contract Event</i>	Review and approve customer contract dates, terms, and amounts before generating cumulative catch-up revenue installments.
<i>Revenue Recognition Schedule Event</i>	Review and approve revenue recognition schedules that generate cumulative catch-up revenue installments for customer contract modifications.

## Reporting

Reports	Considerations
<b>Find Revenue Recognition Schedules</b>	Find revenue recognition schedules by company, customer, schedule type, and schedule date.
<b>Revenue Recognition Schedule Templates</b> <b>View Revenue Recognition Schedule Template</b>	View revenue recognition schedule templates that generate cumulative catch-up revenue installments.

## Integrations

You can use these web services to retrieve, update, and submit cumulative catch-up revenue installments on revenue recognition schedules and templates:

- *Get Revenue Recognition Schedule Templates*
- *Get Revenue Recognition Schedules*
- *Put Revenue Recognition Schedule Template*
- *Submit Revenue Recognition Schedule*

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Concepts

[Setup Considerations: Revenue Recognition Schedules](#) on page 1103

#### Tasks

[Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110

## Steps: Create Multiperiod Revenue Recognition Schedules

### Prerequisites

Create a customer contract.

## Context

You can create revenue recognition schedules that cover multiple periods. You can specify the contract terms for each period, including the:

- Date range for the period.
- Revenue amount or percentage that you want to allocate to each period.

## Steps

1. Access the **Maintain Schedule Types** task.

Select these check boxes for at least 1 schedule type:

- **Multi-Period**
- **Revenue Recognition**

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

2. [Create Revenue Recognition Schedules for Customer Contracts on page 1110](#).

Select:

- A **Schedule Type** that you enabled for multiperiod.
- A **Revenue Recognition Method** of *Number of Days* or *Spread Even*.

On the **Multi-Period Allocation** tab:

- Click **Add**.
- Select a *From Date* and a *To Date*.
- Allocate a revenue amount or percentage to each period.

The time periods for revenue recognition schedules can overlap, and you can allocate revenue up to the *Revenue Schedule Total*.

## Next Steps

Generate revenue installments.

### Related Information

#### Concepts

[Setup Considerations: Revenue Recognition Schedules on page 1103](#)

[Concept: Revenue Recognition on page 1118](#)

## Create Revenue Recognition Schedules for Customer Contracts

### Prerequisites

- Create a customer contract with at least 1 contract line enabled for accrued or deferred revenue.
- Security: *Process: Revenue Schedule - Core* domain in the Customer Contracts and Project Billing functional areas.

## Context

You can create a revenue recognition schedule for 1 or more lines on your customer contracts. All lines that you include in a schedule must use the same revenue recognition method. You can also associate the revenue recognition schedule with dates, project tasks, and billing-related milestones. Milestones must be complete for revenue recognition to occur on an installment.

## Steps

1. Access the **Create Revenue Recognition Schedule for Customer Contract** task.

2. As you complete the task, consider:

Option	Description
<b>Contract Line Company</b>	To create a revenue recognition schedule for an intercompany contract, select a contract line company that's different from the contract company. Revenue recognition schedules tie to the line company, enabling you to recognize accrued or deferred revenue to the same company.
<b>Schedule Type</b>	To improve reporting capabilities, select a schedule type enabled for revenue recognition. When you select <i>Usage-Based Subscription</i> , Workday restricts the date range and limits the selection for the <b>Revenue Recognition Method</b> . You can add the revenue start and end dates on the <b>Record Usage-Based Transactions</b> task.
<b>Schedule On Hold</b>	Select to place the revenue recognition schedule on hold when you need to take action before you create accounting. When you release the hold, installments become available for revenue recognition accounting the next time you run the task.
<b>Hold Reasons</b>	Select a hold reason that you configured on the <b>Maintain Customer Contract Schedule Hold Reasons</b> task. Displays when you select the <b>Schedule On Hold</b> check box.
<b>Milestones</b>	Displays all tasks from all phase levels for the billable project.
<b>Default Currency Rate</b>	<p>Select 1 of these options for Workday to use as the default currency conversion rate when you create new revenue recognition schedules with foreign currency:</p> <ul style="list-style-type: none"> <li>• <i>Contract Effective Date</i> - Uses the currency conversion rate for the contract effective date.</li> <li>• <i>Revenue Recognition Installment Date</i> - Uses the installment date on the revenue recognition schedule to determine the currency exchange rate. When there isn't a rate for the installment date, Workday uses the rate for the most recent date when you generate revenue recognition installments and accounting.</li> <li>• <i>Schedule Override Rate</i> - Uses the override currency conversion rate you enter in the <b>Schedule Override Rate</b> field.</li> </ul> <p>When you:</p> <ul style="list-style-type: none"> <li>• Don't select an option in the prompt, Workday uses the revenue recognition default currency conversion rate that you select on the <b>Edit Tenant Setup - Financials</b> task.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Select an option in the prompt that's different from the option you select in the <b>Revenue Recognition Default Currency Rate</b> prompt on the <b>Edit Tenant Setup - Financials</b> task, Workday uses the selection on the revenue recognition schedule to determine the currency conversion rate.</li> </ul> <p>Displays on new revenue recognition schedules with foreign currency.</p>
<b>Schedule Override Rate</b>	<p>Enter the override currency conversion rate to use for all installment lines on the revenue recognition schedule.</p> <p>Displays on new revenue recognition schedules with foreign currency when you select <i>Schedule Override Rate</i> from the <b>Default Currency Rate</b> prompt.</p>
<b>Create Reversal</b>	<p>Select to create a reversal journal when you generate accounting for revenue installments. This option is only available for <i>Project Time and Expense</i> customer contract lines.</p> <p>Displays when you select a <b>Revenue Recognition Method</b> of <i>Transaction</i>.</p>
<b>Independent Revenue Processing</b>	<p>Select to:</p> <ul style="list-style-type: none"> <li>Generate revenue installments for transactions in an <i>Awaiting Review</i>, <i>On Hold</i>, or <i>Ready to Bill</i> billing status.</li> <li>Reverse revenue accounting when you've already recognized revenue for transactions in a <i>Do Not Bill</i> billing status.</li> </ul> <p>Displays when you select a <b>Revenue Recognition Method</b> of <i>Transaction</i>.</p>
<b>Automatically Regenerate Installments</b>	<p>Select to generate new installments when you modify the contract line amount on the customer contract.</p> <p>Displays when you select:</p> <ul style="list-style-type: none"> <li>A <b>Schedule Type</b> enabled for revenue recognition.</li> <li>A <b>Revenue Recognition Method</b> of <i>Defined Installment</i>, <i>Number of Days</i>, or <i>Spread Even</i>.</li> </ul>
<b>Automatically Submit Schedule via Contract Amendment</b>	<p>Select to submit new installments for approval. The installments won't update when you have contract amendments on a business process.</p> <p>Displays when you select:</p> <ul style="list-style-type: none"> <li>A <b>Schedule Type</b> enabled for revenue recognition.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• A <b>Revenue Recognition Method</b> of <i>Defined Installment, Number of Days, or Spread Even.</i></li> <li>• The <b>Automatically Regenerate Installments</b> check box.</li> </ul>
<b>Generate Cumulative Catch-up Installments</b>	<p>Select to generate adjustment revenue installments when you modify the customer contract term or amounts.</p> <p>Displays when you select:</p> <ul style="list-style-type: none"> <li>• A <b>Schedule Type</b> enabled for revenue recognition.</li> <li>• A <b>Revenue Recognition Method</b> of <i>Defined Installment, Number of Days, or Spread Even.</i></li> </ul>

3. Select the lines that you want to add to the revenue recognition schedule.

4. Click **Save and Continue** to view the draft schedule.

5. As you complete the revenue recognition schedule, consider:

Option	Description
<b>Manage Lines</b>	<p>Lines can span multiple contracts but must match the schedule company, customer, and currency.</p> <p>Displays only deferred revenue lines.</p>
<b>Define Installment Amounts</b>	<p>To define amounts manually, enter the defined installment amounts for each customer contract line.</p> <p>To prorate the amounts for contracts that begin with a start date after the first of the month, select a <b>From Date</b> and <b>To Date</b>. Workday calculates the first and last installments based on those dates.</p>
<b>Customize Installments</b>	<p>When you customize installments and save your changes, Workday automatically updates the <b>Revenue Recognition Method</b> to <i>Custom</i>.</p>
<b>Override Currency Rates</b>	<p>You can override the exchange rate or the base currency amount on installments. Workday displays the <b>Maintain Revenue Recognition Schedule Currency Rates</b> task with only the contract lines that you can override.</p> <p>Displays when you generate installments on a revenue recognition schedule with foreign currency.</p>

6. (Optional) To add supporting documentation, select **Revenue Recognition Schedule > Manage Attachments** from the related actions menu of the revenue recognition schedule.

## Next Steps

- Report on the revenue recognition schedule or on installment hold reasons.
- Create revenue recognition accounting.

## Create Ledger Currency Adjustment Installment

### Prerequisites

- Create a customer contract. See [Create Customer Contracts](#).
- Create and approve a revenue recognition schedule with at least 1 completed installment for a foreign currency customer contract. See [Create Revenue Recognition Schedules for Customer Contracts](#).
- Security: *Process: Revenue Schedule* - Core domain in the Customer Contracts and Project Billing functional areas.

### Context

You can create an extra installment line for revenue recognition adjustments. The adjustment installment ensures that the invoiced ledger amounts equal the ledger amounts for recognized revenue at a specific point in time.

For example, if you recognize revenue before you bill, but the currency rate changes between revenue recognition and billing, the invoiced ledger amounts may not equal the recognized revenue ledger amounts. This situation can happen when you use the percent complete revenue recognition method.

Workday determines how much you've invoiced your customers in the ledger currency by adding all the completed installments for a contract line. You can create adjustments for revenue that's out of balance due to exchange rates or currency rate overrides.

Workday displays every fixed amount line requiring an adjustment from the **Manage Lines** task for the revenue recognition schedule. Variable contract lines don't display because the actual ledger amount billed is already on the installment. Workday displays the ledger amount at both the recorded and historic rates.

### Steps

1. From the related actions menu of an approved revenue recognition schedule with foreign currency, select **Revenue Recognition Schedule > Create Ledger Currency Adjustment Installment**.
2. As you complete the task, consider:

Option	Description
<b>Accounting Date for Adjustment Installment</b>	You can override the date with any accounting date that's applicable to the entire installment.
<b>Create Revenue Recognition Accounting</b>	Select for Workday to run the <b>Create Revenue Recognition Accounting</b> task automatically when you save the current task. Regular posting rules and approvals apply. Workday moves the ledger amount for deferred revenue into the revenue account so that the completed installment displays on the revenue recognition schedule with the new ledger amount.
<b>Amount Recorded in Primary Currency</b>	Displays the installment amount invoiced to the customer from the revenue recognition schedule.
<b>Amount at Historic Rate in Primary Currency</b>	Displays the customer invoiced amount in the primary ledger currency at the current point in time. To preview line details for how Workday calculates the rate, click the amount.
<b>Revenue Recognition Adjustment in Primary Currency</b>	When the <b>Amount at Historic Rate in Primary Currency</b> is: <ul style="list-style-type: none"> <li>• Greater than the <b>Amount Recorded in Primary Currency</b>, enter a positive</li> </ul>

Option	Description
	<p>adjustment amount to increase the <b>Amount Recorded in Primary Currency</b>.</p> <ul style="list-style-type: none"> <li>Less than the <b>Amount Recorded in Primary Currency</b>, enter a negative adjustment amount to reduce the <b>Amount Recorded in Primary Currency</b>.</li> </ul>
<b>Revenue Recognition Adjustment in Alternate Currency</b>	For companies configured with Alternate Ledger Currency (ALC), you can use this column to create an adjustment in the <b>Alternate Currency</b> .

## Result

Workday creates an installment for the revenue recognition schedule. The installment includes ledger currency amounts without transaction amounts so that you can create accounting for revenue recognition.

[Concept: Foreign Currency Customer Contracts](#) on page 1051

## Create Revenue Recognition Schedules for Customer Invoices

### Prerequisites

- Create a customer invoice with 1 or more lines enabled for deferred revenue.
- Security:
  - Process: Customer Invoice - Core* domain in the Customer Accounts functional area.
  - Process: Revenue Schedule - Core* domain in the Customer Contracts and Project Billing functional areas.

### Context

You can create a revenue recognition schedule for 1 or more invoice lines:

- From a single invoice not linked to a contract.
- With deferred revenue.
- With the same revenue recognition method and end date.

Workday doesn't populate the revenue recognition schedule with intercompany worktags. The intercompany worktags display when you create revenue recognition accounting.

### Steps

- Access the **Create Revenue Recognition Schedule for Customer Invoice** task.
- For intercompany invoices, select an **Invoice Line Company**.
- As you complete the **Revenue Recognition Information** section, consider:

Option	Description
<b>Schedule Type</b>	To improve reporting capabilities, select a schedule type for revenue recognition.
<b>Milestone</b>	Select milestones for the entire revenue recognition schedule. Milestones must be

Option	Description
	complete for revenue recognition to occur on the installment.

4. Select the lines to add to the revenue recognition schedule.
5. Click **Save and Continue** to view the draft of the revenue recognition schedule.
6. As you complete the revenue recognition schedule, consider:

Option	Description
<b>Manage Lines</b>	Click to add or delete lines that use the revenue recognition schedule.
<b>Define Installment Amounts</b>	Click to enter <b>Regular</b> , <b>First</b> , and <b>Last</b> installment amounts for each invoice line. Use when you specify a <b>Revenue Recognition Method</b> of <i>Defined Installment</i> .
<b>Generate Installments</b>	Click to generate installments using the <b>Revenue Recognition Method</b> you selected.
<b>Customize Installments</b>	When you customize installments and save your changes, Workday automatically updates the <b>Revenue Recognition Method</b> to <i>Custom</i> .

7. (Optional) To add supporting documentation, select **Revenue Recognition Schedule > Manage Attachments** from the related actions menu of the revenue recognition schedule.

## Result

Workday routes the revenue recognition schedule to the *Revenue Recognition Schedule Event* business process for review and approval. The customer invoice line references the revenue recognition schedule.

## Next Steps

Create revenue recognition accounting.

### Related Information Concepts

[Create Customer Invoices for Billing Installments](#) on page 1097

[Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110

## Create Revenue Installments for Billable Transactions

### Prerequisites

- Approve billable transactions.
- Security: *Process: Revenue Schedule* - Core domain in the Customer Contracts and Project Billing functional areas.

### Context

When you approve billable transactions, you can accrue revenue by generating revenue installments using 1 of these tasks:

- [Create Revenue Installments for Billable Transactions](#)

- **Schedule Revenue Installments for Billable Transactions**

Workday displays revenue as available to accrue when you change a:

- Transaction billing status from billable to nonbillable.
- Transaction billing status from nonbillable to billable.
- Transaction from a *Deferred* to an *Invoice* revenue treatment.

### Steps

1. Access the **Create Revenue Installments for Billable Transactions** task.

As you complete the task, consider:

Option	Description
<b>Transaction Type</b>	<p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Project Time and Expense</i> to create revenue installments and recognize revenue independently from billing for <i>Project Time and Expense</i> customer contract lines. To enable this process, select the <b>Independent Revenue Processing</b> check box on the revenue recognition schedule.</li> <li>• <i>Fixed Fee Project for Percent Complete</i> revenue recognition methods.</li> <li>• <i>Usage-Based</i> to create revenue installments and recognize revenue independently from billing for <i>Usage-Based</i> customer contract lines. To enable this process, select the <b>Independent Revenue Processing</b> check box on the revenue recognition schedule.</li> </ul>

2. As you complete the **Revenue Accruals** tab, consider:

Option	Description
<b>Select</b>	You can update revenue installments until the installment status is <i>Complete</i> or <i>Canceled</i> .
<b>Amount to Accrue</b>	Workday adds the amount to existing <i>Available</i> revenue installments when the billing transactions have the same grouping criteria. Otherwise, Workday creates a new revenue installment.
<b>Amount Scheduled to Accrue</b>	The amount excludes deleted and offset revenue installments.
<b>Completed Accrual to Date</b>	The amount accrued for revenue installments in <i>Completed</i> status as of the installment date.

3. On the **Revenue Offsets** tab, view offset revenue installment lines for billable transactions.

Workday displays offset revenue installment lines that you:

- Changed from billable to nonbillable status.
- Changed from a *Deferred* to an *Invoice* revenue treatment.
- Changed in a way that affects accounting.
- Deleted after you recognized revenue.
- Split into multiple transaction lines.

Revenue offsets only apply to *Project Time and Expense* customer contract lines.

## Next Steps

To view the revenue recognition schedule, access the **Schedules** tab on the customer contract.

#### Reference

[2021R1 What's New Post: Project Roles as Worktags](#)

## Concept: Revenue Recognition

You can create revenue recognition schedules for customer contracts based on the contract terms.

Revenue recognition schedules identify and drive accounting for the creation and appropriate amortization of unrecognized revenue. Revenue recognition operates separately from billing processing.

### Milestones

You can create milestones to track the completion of tasks and specify when Workday can process billing and revenue recognition schedules and installments. You can assign multiple milestones to schedules and installments. Workday doesn't process schedules or installments with pending milestones.

You can use these tasks to configure standard milestones:

- [Maintain Date Milestone Types](#)
- [Create Date Milestone](#)

Standard milestones become customer milestones once you add them to a customer. You can view customer milestone details using the **Find Milestones** report. Customer milestones are unique for each customer and company combination.

Workday supports these milestone types:

- Billing Schedule First Invoice: Use to initiate revenue recognition once billing has occurred.
- Date Milestones: Use standard date milestones as the basis for creating customer date milestones.
- Project Tasks: Mark project tasks as milestones in the project. Use project milestones to control when you bill project transactions and recognize revenue. You can define project milestones for a project phase or for the overall project to determine when transactions are available for billing. You can use project tasks marked as milestones as contract milestones. You can't delete project tasks that are in use on a contract. You can enter estimated and actual completion dates. Once the project task is complete and you enter an end date, billing can occur. Workday uses the end date as the milestone completion date.

### Schedule Types

You can use the **Maintain Schedule Types** task to configure schedule types for use on billing and revenue recognition schedules. When you enable a schedule type for use on:

- Billing schedules, you also have the option to enable *Prepaid* or *Consolidated Billing Schedule*.
- Revenue recognition schedules, you also have the option to enable *Usage-Based Subscription* or *Multi-Period*.

Workday displays the usage count for each schedule type, and you can set a schedule type as *Inactive* at any time. When you set a schedule type as *Inactive*, Workday removes the option from the **Schedule Type** prompt on billing and revenue recognition schedules.

## Billing Schedules and Installments

You can:

- Link contract lines that span multiple contracts for the same company and customer to the same billing schedule.
- Define schedule types so you can classify your schedules. This process simplifies searches, approvals, and reporting.
- Create installment or transaction billing schedules to manage certain types of contract lines, or consolidated billing schedules to manage installment, transaction, and prepaid contract lines in 1 schedule.

Workday creates installments based on the scheduled start and end dates, which can differ from the contract line start and end dates. You can also configure the invoice date to assign, which can differ from the installment start date.

Workday supports these billing methods for each billing schedule, and you can change methods throughout the life of the schedule:

- *Defined Installment*: Define the first and last installment amount for each contract line. Workday spreads the remaining amount evenly among the other installments. You can't use this billing method on consolidated billing schedules.
- *Spread Even*: Define a set number of installments with equal amounts.
- *Custom*: You control all aspects of the installments.

A billing schedule includes 1 or more installments. Each billing installment:

- Creates a customer invoice.
- Becomes an invoice line.
- Derives attributes from the associated contract line.

Once you generate installments, you can:

- Manually update individual installments.
- Regenerate billing installments automatically after changes to contract amounts. This function only applies to *Spread Even* billing methods or *Spread Even* and *Number of Days* revenue recognition methods.
- Update your schedules automatically when you make changes to your contract lines.
- Edit all installments at once when you have a custom schedule.

Workday assigns an *Out of Balance* status when:

- You don't schedule your contract line installments exactly.
- A custom schedule overbills.

You can create customer invoices from billing installments after you approve the billing schedule.

## Independent Revenue Processing

To accrue and recognize revenue for project transactions without billing, select the **Independent Revenue Processing** check box on the **Create Revenue Recognition Schedule for Customer Contract** task.

## Multi-Period Revenue Schedules

Workday enables you to create revenue recognition schedules that span multiple periods. You can specify the duration and the amount or percentage of revenue to allocate for each period.

## Revenue Recognition for Order Fulfillment

You can track orders fulfilled against a customer contract line. You can then generate billing based on both partially and completely filled orders, and recognize revenue. You can recognize revenue for orders by:

- Creating a sales item that requires order fulfillment.
- Creating a customer contract with a sales item on the contract line that requires order fulfillment.
- Recording order fulfillment transactions.
- Creating revenue recognition installments for billable transactions.
- Posting revenue recognition accounting for the revenue recognition installments.

### Invoices and Revenue Recognition Schedules for Transaction-Based Contract Lines

For multiple element arrangements, you can allocate and recognize revenue based on the Standalone Selling Price (SSP) of each item sold.

Recognizable revenue derives from ongoing billing. To add every invoice for a contract line to the revenue recognition schedule, you can assign a schedule to the transaction-based contract line in your contract configuration. Revenue recognition for each invoice starts at the invoice date and distributes until the schedule end date. Workday recalculates the amount if:

- The invoice date falls in an installment that's already in process or completed.
- The schedule method for revenue recognition is *Daily* or *Spread Even*.

You can enter different worktags on the invoice and contract lines, but the revenue recognition transaction worktags automatically populate from the contract line.

When an invoice contains lines that reference a contract line, Workday displays an invoice summary on the **Contract Lines** tab on the customer invoice.

### Revenue Recognition Accounting

When you create revenue recognition accounting:

- Workday ignores installments with pending milestones.
- Workday generates accounting using the account posting rules for revenue and deferred revenue.
- You can post revenue transactions when the ledger period status is:
  - *Open*
  - *Open for Journals*
  - *Open for Journals and Payroll*

Workday sets the status for revenue recognition installments to *Complete* after generating accounting entries.

### Reference: Revenue Recognition Methods

Workday provides these revenue recognition methods for your revenue recognition schedules and templates:

Revenue Recognition Method	Description
<i>Custom</i>	<p>You can customize the:</p> <ul style="list-style-type: none"> <li>• Installment date to recognize revenue.</li> <li>• Customer contract lines that you're recognizing revenue for.</li> <li>• Period of time that you're recognizing revenue for.</li> <li>• Amount of revenue that you want to recognize for that period.</li> <li>• Worktags that don't populate from the customer contract line.</li> </ul> <p>When you select a revenue recognition method of <i>Custom</i>, you must manually verify that the revenue schedule total matches the total line amount. Workday doesn't display a critical validation error when the amounts differ.</p>
<i>Defined Installment</i>	<p>Workday uses the:</p> <ul style="list-style-type: none"> <li>• Amount of revenue equal to the number of days that are in the beginning and end periods of the schedule.</li> <li>• <i>Spread Even</i> revenue recognition method for the remaining periods.</li> </ul>
<i>Number of Days</i>	<p>Workday recognizes revenue proportionate to the number of days in the period.</p> <p>Example: You receive more revenue for the March period than the April period because the month of March has 1 more day than the month of April.</p>
<i>Percent Complete</i>	<p>Workday recognizes revenue equal to the percent completion of your project for that period.</p> <p>You can recognize revenue by the:</p> <ul style="list-style-type: none"> <li>• Total cost of the project completed for that period.</li> <li>• Number of hours completed for the project in that period.</li> </ul>
<i>Spread Even</i>	<p>Workday recognizes the same amount of revenue for each installment that it creates.</p> <p>You can create revenue installments by:</p> <ul style="list-style-type: none"> <li>• Selecting a date range.</li> <li>• Entering the number of installments to create.</li> </ul>
<i>Transaction</i>	<p>You can create a revenue recognition schedule for these transaction sources:</p> <ul style="list-style-type: none"> <li>• Expense</li> <li>• Miscellaneous Expenses</li> <li>• Supplier Invoices</li> <li>• Time</li> </ul>

Revenue Recognition Method	Description
	<p>When you select the <b>Create Reversal</b> check box, Workday:</p> <ul style="list-style-type: none"> <li>Accrues revenue installments, posting the accrual in each period.</li> <li>Creates a reversal journal when you generate accounting for revenue installments. The journal reverses the debits and credits using the first day of the next period.</li> </ul> <p>When you select the <b>Independent Revenue Processing</b> check box, you can recognize revenue before creating a customer invoice.</p>

## Reference: Revenue Recognition Currency Conversion Rates for Foreign Currency Customer Contracts

Workday provides these currency conversion rates for revenue recognition schedules and accounting when you create customer contracts in foreign currencies:

- [Blended Rates](#) on page 1122
- [Invoice Rates](#) on page 1123
- [Contract Effective Date](#) on page 1124
- [Revenue Recognition Installment Date](#) on page 1126
- [Schedule Override Rate](#) on page 1128

### Blended Rates

Workday only supports blended rates on foreign currency revenue recognition schedules and accounting created before September 10, 2022. When billing occurs before revenue recognition, Workday derives the foreign currency conversion rate for revenue recognition installments and accounting using a weighted average calculation.

Scenario: Your company base currency is USD and you create a customer contract in EUR. The conversion rate on the contract effective date is 1.350. You invoice the customer quarterly, but recognize revenue from the contract monthly.

### Billing and Revenue Schedule

Month	Conversion Rate	Billing in EUR	Revenue in EUR
January	1.360	30,000	10,000
February	1.370		10,000
March	1.375		10,000
April	1.365	30,000	10,000
May	1.350		10,000

Month	Conversion Rate	Billing in EUR	Revenue in EUR
June	1.360		10,000
July	1.375	30,000	10,000
August	1.355		10,000
September	1.365		10,000
October	1.370	30,000	10,000
November	1.345		10,000
December	1.355		10,000
Total		120,000	120,000

#### Billing and Revenue Schedule - Foreign Currency Conversion Rates on Contract Date

Conversion Rate	Billing in USD	Revenue in USD	Net Deferred Balance in USD
1.350	40,800	13,500	27,300
1.350		13,500	13,800
1.350		13,500	300
1.350	40,950	13,500	27,750
1.350		13,500	14,250
1.350		13,500	750
1.350	41,250	13,500	28,500
1.350		13,500	15,000
1.350		13,500	1,500
1.350	41,100	13,500	29,100
1.350		13,500	15,600
1.350		13,500	2,100
Total	164,100	162,000	2,100

#### Invoice Rates

Workday only supports invoice rates on foreign currency revenue recognition schedules and accounting created before September 10, 2022. When billing occurs before revenue recognition, Workday derives the foreign currency conversion rate for revenue recognition installments and accounting using the invoice rate.

Scenario: Your company base currency is USD and you create a customer contract in EUR. The conversion rate on the contract effective date is 1.350. You invoice the customer quarterly, but recognize revenue from the contract monthly.

#### Billing and Revenue Schedule

Month	Conversion Rate	Billing in EUR	Revenue in EUR
January	1.360	30,000	10,000

Month	Conversion Rate	Billing in EUR	Revenue in EUR
February	1.370		10,000
March	1.375		10,000
April	1.365	30,000	10,000
May	1.350		10,000
June	1.360		10,000
July	1.375	30,000	10,000
August	1.355		10,000
September	1.365		10,000
October	1.370	30,000	10,000
November	1.345		10,000
December	1.355		10,000
Total		120,000	120,000

#### Billing and Revenue Schedule - Foreign Currency Conversion Rates on Invoice Date

Conversion Rate	Billing in USD	Revenue in USD	Net Deferred Balance in USD
1.360	40,800	13,600	27,200
1.360		13,600	13,600
1.360		13,600	0
1.365	40,950	13,650	27,300
1.365		13,650	13,650
1.365		13,650	0
1.375	41,250	13,750	27,500
1.375		13,750	13,750
1.375		13,750	0
1.370	41,100	13,700	27,400
1.370		13,700	13,700
1.370		13,700	0
Total	164,100	164,100	0

#### Contract Effective Date

When you set the default currency conversion rate on the revenue recognition schedule to contract effective date, Workday uses the contract effective date to determine the currency conversion rate.

Example: You create a foreign currency customer contract:

Option	Value
Contract Line Amount	12,000 EUR

Option	Value
Term	12 Months
Contract Effective Date	09/01/2022
Conversion Rate	1.5
Base Currency Amount	18,000 USD
Transaction Currency Amount/Period	1,000 EUR
Base Currency Amount/Period	1,500 USD

You create revenue recognition installments:

Installment	Installment Date	Revenue Amount	Conversion Rate	Revenue Amount in Base Currency
1	09/30/2022	1,000 EUR	1.5	1,500 USD
2	10/31/2022	1,000 EUR	1.5	1,500 USD
3	11/30/2022	1,000 EUR	1.5	1,500 USD
4	12/31/2022	1,000 EUR	1.5	1,500 USD
5	01/31/2023	1,000 EUR	1.5	1,500 USD
6	02/28/2023	1,000 EUR	1.5	1,500 USD
7	03/31/2023	1,000 EUR	1.5	1,500 USD
8	04/30/2023	1,000 EUR	1.5	1,500 USD
9	05/31/2023	1,000 EUR	1.5	1,500 USD
10	06/30/2023	1,000 EUR	1.5	1,500 USD
11	07/31/2023	1,000 EUR	1.5	1,500 USD
12	08/31/2023	1,000 EUR	1.5	1,500 USD
Total		12,000 EUR		18,000 USD

The **Conversion Rate** and **Revenue Amount in Base Currency** display on the revenue recognition schedule once you generate accounting.

You create revenue recognition accounting:

Run Date	Accounting Date	Installment Date	Ledger Account	Debit Amount	Credit Amount	Conversion Rate	Ledger Debit Amount	Ledger Credit Amount	Calculation
10/01/2022	09/30/2022	09/30/2022	Deferred Revenue or Unbilled Receivables	1,000 EUR		1.5	1,500 USD		Base currency amount converted using the rate for the contract effective date:

Run Date	Accounting Date	Installment Date	Ledger Account	Debit Amount	Credit Amount	Conversion Rate	Ledger Debit Amount	Ledger Credit Amount	Calculation
									1,000 EUR x 1.5 = 1,500 USD
			Revenue		1,000 EUR	1.5		1,500 USD	
11/01/2022	10/31/2022	10/31/2022	Deferred Revenue or Unbilled Receivables	1,000 EUR		1.5	1,500 USD		Base currency amount converted using the rate for the contract effective date: 1,000 EUR x 1.5 = 1,500 USD
			Revenue		1,000 EUR	1.5		1,500 USD	

### Revenue Recognition Installment Date

When you set the default currency conversion rate on the revenue recognition schedule to revenue recognition installment date, Workday uses the installment date to determine the currency conversion rate. When there isn't a rate for the installment date, Workday uses the rate for the most recent date when you generate revenue recognition installments and accounting. After you generate revenue recognition accounting, the rates on the revenue recognition installment lines match the rates on the operational journal lines.

Example: You create a foreign currency customer contract:

Option	Value
Contract Line Amount	12,000 EUR
Term	12 Months
Contract Effective Date	09/01/2022
Conversion Rate	1.5
Base Currency Amount	18,000 USD
Transaction Currency Amount/Period	1,000 EUR
Installment Date	09/30/2022
Conversion Rate	2.0

Option	Value
Base Currency Amount	24,000
Base Currency Amount/Period	2,000 USD
Installment Date	10/31/2022
Conversion Rate	1.8
Base Currency Amount	21,600 USD
Base Currency Amount/Period	1,800 USD

You create revenue recognition installments:

Installment	Installment Date	Revenue Amount	Conversion Rate	Revenue Amount in Base Currency
1	09/30/2022	1,000 EUR	2.0	2,000 USD
2	10/31/2022	1,000 EUR	1.8	1,800 USD
3	11/30/2022	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
4	12/31/2022	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
5	01/31/2023	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
6	02/28/2023	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
7	03/31/2023	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
8	04/30/2023	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
9	05/31/2023	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
10	06/30/2023	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
11	07/31/2023	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
12	08/31/2023	1,000 EUR	Determined at the time of accounting	Determined at the time of accounting
Total		12,000 EUR		

The **Conversion Rate** and **Revenue Amount in Base Currency** display on the revenue recognition schedule once you generate accounting.

You create revenue recognition accounting:

Run Date	Accounting Date	Installment Date	Ledger Account	Debit Amount	Credit Amount	Conversion Rate	Ledger Debit Amount	Ledger Credit Amount	Calculation
10/01/2022	09/30/2022	09/30/2022	Deferred Revenue or Unbilled Receivables	1,000 EUR		2.0	2,000 USD		Base currency amount converted using the effective conversion rate for the posting period: 1,000 EUR × 2.0 = 2,000 USD
			Revenue		1,000 EUR	2.0		2,000 USD	
11/01/2022	10/31/2022	10/31/2022	Deferred Revenue or Unbilled Receivables	1,000 EUR		1.8	1,800 USD		Base currency amount converted using the effective conversion rate for the posting period: 1,000 EUR × 1.8 = 1,800 USD
			Revenue		1,000 EUR	1.8		1,800 USD	

### Schedule Override Rate

When you set the default currency conversion rate on the revenue recognition schedule to schedule override rate, Workday uses the schedule override rate you specify to determine the currency conversion rate.

Example: You create a foreign currency customer contract:

Option	Value
Contract Line Amount	12,000 EUR

Option	Value
Term	12 Months
Contract Effective Date	09/01/2022
Conversion Rate	1.5
Base Currency Amount	18,000 USD
Base Currency Amount/Period	1,500 USD
Transaction Currency Amount/Period	1,000 EUR
Conversion Override Rate	1.7
Base Currency Amount	20,400 USD
Base Currency Amount/Period	1,700 USD

You create revenue recognition installments:

Installment	Installment Date	Revenue Amount	Conversion Rate	Revenue Amount in Base Currency
1	09/30/2022	1,000 EUR	1.7	1,700 USD
2	10/31/2022	1,000 EUR	1.7	1,700 USD
3	11/30/2022	1,000 EUR	1.7	1,700 USD
4	12/31/2022	1,000 EUR	1.7	1,700 USD
5	01/31/2023	1,000 EUR	1.7	1,700 USD
6	02/28/2023	1,000 EUR	1.7	1,700 USD
7	03/31/2023	1,000 EUR	1.7	1,700 USD
8	04/30/2023	1,000 EUR	1.7	1,700 USD
9	05/31/2023	1,000 EUR	1.7	1,700 USD
10	06/30/2023	1,000 EUR	1.7	1,700 USD
11	07/31/2023	1,000 EUR	1.7	1,700 USD
12	08/31/2023	1,000 EUR	1.7	1,700 USD
Total		12,000 EUR		20,400 USD

The **Conversion Rate** and **Revenue Amount in Base Currency** display on the revenue recognition schedule once you generate accounting.

You create revenue recognition accounting:

Run Date	Accounting Date	Installment Date	Ledger Account	Debit Amount	Credit Amount	Conversion Rate	Ledger Debit Amount	Ledger Credit Amount	Calculation
10/01/2022	09/30/2022	09/30/2022	Deferred Revenue or Unbilled Receivables	1,000 EUR		1.7	1,700 USD		Base currency amount converted using the

Run Date	Accounting Date	Installment Date	Ledger Account	Debit Amount	Credit Amount	Conversion Rate	Ledger Debit Amount	Ledger Credit Amount	Calculation
									override rate for the schedule: 1,000 EUR × 1.7 = 1,700 USD
			Revenue		1,000 EUR	1.7		1,700 USD	
11/01/2022	10/31/2022	10/31/2022	Deferred Revenue or Unbilled Receivables	1,000 EUR		1.7	1,700 USD		Base currency amount converted using the override rate for the schedule: 1,000 EUR × 1.7 = 1,700 USD
			Revenue		1,000 EUR	1.7		1,700 USD	

**Related Information****Concepts**[Concept: Foreign Currency Customer Contracts on page 1051](#)[Concept: Revenue Recognition Accounting on page 1145](#)**Tasks**[Create Revenue Recognition Schedules for Customer Contracts on page 1110](#)**Reference**[Reference: Edit Tenant Setup - Financials](#)**Example: Create Accounting Using Blended Rates for Foreign Currency Customer Contracts**

This example illustrates how to create revenue recognition accounting using blended rates for foreign currency customer contracts. This method only applies to foreign currency revenue recognition schedules and accounting created before September 10, 2022.

## Context

You have a customer that operates in Canadian Dollar (CAD), but your company reports in United States Dollar (USD). You need to create:

- A customer contract with a *Fixed Amount* line type of 3,000 CAD and a *Deferred* revenue treatment.
- A billing schedule using a *Spread Even* billing method and 3 installments.
- A revenue recognition schedule using a *Number of Days* revenue recognition method and 3 installments.
- A customer invoice for the billing installments.
- Revenue recognition accounting for the revenue recognition installments.

## Prerequisites

Configure these business processes and security policies in the Customer Contracts and Project Billing functional areas:

- *Billing Schedule Event*
- *Customer Contract Event*
- *Customer Invoice Event*
- *Revenue Recognition Installment Event*
- *Revenue Recognition Schedule Event*

Security: These domains in the Customer Contracts and Project Billing functional areas:

- Process: *Billing Schedule - Core*
- Process: *Revenue Schedule - Core*

## Steps

1. Access the **Create Customer Contract** task.
2. In the **Contract Information** section, select:

Field	Value
Company	500.1 Global Modern Services, Inc. (USA)
Customer	Bluestar Corporation
Contract Type	Grid Form

3. Click **OK**.
4. In the **Contract Information** section, select:

Field	Value
Currency	CAD
Effective Date	01/01/2020

5. In the **Contract Amounts and Balances** section, enter 3,000 in the **Contract Amount** field.
6. In the **Line Details** section on the **Goods and Services** tab, add a row and enter:

Field	Value
Revenue Category	Product
Line Type	Fixed Amount
Contract Line Amount	3,000

7. In the **Revenue and Billing** section on the **Goods and Services** tab, select **Deferred** from the **Revenue Treatment** prompt.
8. Click **Submit**.
9. Access the customer contract for Bluestar Corporation.
10. From the related actions menu, select **Customer Contract > Create Billing Schedule**.
11. Click **OK**.
12. In the **Generate Installment Information** section, select:

Field	Value
<b>Billing Method</b>	<i>Spread Even</i>
<b>Billing Frequency</b>	<i>Monthly</i>
<b>From Date</b>	<i>01/01/2020</i>
<b>Number of Installments</b>	<i>3</i>

13. In the **Invoice Date Options** section, select the *Use From Date* option.
14. In the **Add Lines** grid, select the **Add** check box for the contract line you created.
15. Click **Save and Continue**.
16. Click **Generate Installments**.
17. Click **OK**.
18. Click **Submit**.
19. Expand the **Billing Schedule Information** section to view these installments that Workday creates on the billing schedule:

Status	Invoice Date	Due Date	From Date	To Date	Total Amount	Line	Amount
Available	01/01/2020	01/31/2020	01/01/2020	01/31/2020	1,000	Product (Line 1)	1,000
Available	02/01/2020	03/02/2020	02/01/2020	02/29/2020	1,000	Product (Line 1)	1,000
Available	03/01/2020	03/31/2020	03/01/2020	03/31/2020	1,000	Product (Line 1)	1,000

20. Click **OK**.
21. Click **Done**.
22. Access the customer contract for Bluestar Corporation.
23. From the related actions menu, select **Customer Contract > Create Revenue Recognition Schedule**.
24. Click **OK**.
25. In the **Generate Installment Information** section, select:

Field	Value
<b>Revenue Recognition Method</b>	<i>Number of Days</i>
<b>From Date</b>	<i>01/01/2020</i>
<b>Number of Installments</b>	<i>3</i>

26. Click **Save and Continue**.
27. Click **Generate Installments**.
28. Click **OK**.

**29.**Click **Submit**.

**30.**Expand the **Revenue Recognition Schedule Information** section to view these installments that Workday creates on the revenue recognition schedule:

Status	Installment Date	From Date	To Date	Total Amount	Currency	Revenue Category	From Date	To Date	Revenue Amount	Currency Rate	Amount in Base Currency
Available	01/31/2020	01/01/2020	01/31/2020	2021.98	CAD	Product (Line 1)	01/01/2020	01/31/2020	2021.98	0.861338	1880.27
Available	02/29/2020	01/01/2020	02/29/2020	925.04	CAD	Product (Line 1)	02/01/2020	02/29/2020	925.04	0.861338	823.47
Available	03/31/2020	01/01/2020	03/31/2020	2021.98	CAD	Product (Line 1)	03/01/2020	03/31/2020	2021.98	0.861338	1880.27

When you create a revenue recognition schedule before invoicing, the installments temporarily use the effective date on the customer contract to determine the currency rate. Workday also uses the effective date on the customer contract for the **Amount in Base Currency** calculation. Workday calculates the **Amount in Base Currency** by multiplying the **Revenue Amount** by the **Currency Rate**.

**31.**Click **OK**.

**32.**Click **Done**.

**33.**Access the billing schedule for Bluestar Corporation.

**34.**From the related actions menu of an installment, select **Billing Installment > Create Customer Invoice**.

**35.**Click **OK**.

**36.**Click **Refresh** until Workday generates the customer invoice.

**37.**From the related actions menu of the customer invoice drill-down, select **Accounting > View Accounting**.

**38.**On the **Journal Lines** tab, view these journal lines that Workday creates on the operational journal:

Ledger Account	Debit Amount	Credit Amount	Currency	Currency Rate	Ledger Debit Amount	Ledger Credit Amount	Ledger Currency
Accounts Receivable	1,088.75		CAD	0.861334	937.77		USD
Taxes Payable		88.75	CAD	0.861334		76.44	USD
Deferred Revenue		1,000	CAD	0.861334		861.33	USD

Workday updates the revenue recognition installments with the currency rate from the customer invoice. This method ensures that your billing and revenue recognition balances remain reconciled.

**39.**Access the revenue recognition schedule for Bluestar Corporation.

**40.**From the related actions menu of an installment, select **Revenue Recognition Installment > Create Revenue Recognition Accounting**.

**41.**Select the **Revenue Recognition Installments** check box.

**42.**Click **OK**.

**43.**Click **Refresh** until Workday generates the revenue recognition accounting.

**44.**Click the drill-down in the **Journal** column to view these journal lines that Workday creates on the operational journal:

Ledger Account	Debit Amount	Credit Amount	Currency	Currency Rate	Ledger Debit Amount	Ledger Credit Amount	Ledger Currency
Deferred Revenue	1,021.98		CAD	0.861328	880.26		USD
Revenue		1,021.98	CAD	0.861328		880.26	USD

Workday determines the **Currency Rate** by dividing the **Ledger Debit Amount** by the **Debit Amount**.

## Result

You can view reconciled foreign currency billing and revenue balances at the end of the period.

## Period End Revenue Accounting

---

### Setup Considerations: Period End Revenue Accounting

You can use this topic to help make decisions when planning your configuration and use of period end revenue accounting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Period end revenue accounting enables you to create reclassification adjustments for deferred revenue balances on a customer contract. You can use period end accounting to adjust deferred revenue balances to zero when your company has:

- Deferred and accrued revenue adjustments deriving from multiple-element arrangements with revenue allocations.
- Foreign exchange gain or loss adjustments deriving from foreign currency customer contracts.

### **Business Benefits**

Workday automates the accounting reconciliation process and improves reporting with period end accounting by enabling you to create reclassification adjustments for deferred revenue balances. Creating reclassification adjustments ensures that you properly relieve deferred revenue balances at the end of a customer contract term.

### **Use Cases**

Use period end accounting to:

- Calculate the difference between billing and revenue recognition amounts that have different exchange rates.
- Reclassify deferred and accrued revenue balances for customer contracts that have multiple-element revenue allocations.
- Post operational journals for deferred, accrued, and asset and liability reclassifications.

### **Questions to Consider**

<b>Subjects</b>	<b>Questions</b>	<b>Considerations</b>
Carve In/Carve Out Adjustments	How do you reclassify deferred and accrued revenue balances for customer contracts that have multiple-element revenue allocations?	You can create carve in/carve out adjustment journals to reclassify deferred and accrued revenue balances.
Carve In/Carve Out Adjustments	Where do your operational journals for deferred revenue reclassifications post?	Workday creates operational journals for deferred revenue among customer contract lines.  When you use the same Deferred Revenue ledger account for each customer contract line, the journal posts to the same ledger account.
Carve In/Carve Out Adjustments	Where do your operational journals for accrued revenue reclassifications post?	Workday creates operational journals for unbilled receivables among customer contract lines.  When you use the same Unbilled Receivables ledger account for each customer contract line, the journal posts to the same ledger account.
Carve In/Carve Out Adjustments	Which ledger accounts do you debit and credit for carve in/carve out adjustments?	Carve in/carve out adjustments impact these ledger accounts: <ul style="list-style-type: none"> <li>• Deferred Revenue for customer contract lines with a deferred revenue treatment.</li> <li>• Unbilled Receivables for customer contract lines with an accrued revenue treatment.</li> </ul>

Subjects	Questions	Considerations
		<p>When the adjustment results in a:</p> <ul style="list-style-type: none"> <li>Positive amount for the period, Workday credits the ledger account.</li> <li>Negative amount for the period, Workday debits the ledger account.</li> </ul> <p>(Optional) You can configure dimensions in the account posting rules for Workday to use when creating operational journals. Example: For the Deferred Revenue and Unbilled Receivables account posting rules, you can configure Customer Group or Project Hierarchy. You can also configure custom organization and custom worktag dimensions.</p>
Foreign Currency Adjustments	How do you account for foreign currency gain or loss amounts on a customer contract?	When there are billing and revenue recognition discrepancies due to conversion rates, you can create foreign currency adjustment journals to calculate the difference.
Foreign Currency Adjustments	Which ledger accounts do you debit and credit for foreign currency gain or loss?	<p>Foreign currency adjustments impact these ledger accounts when you enable realized gain or loss as the offset account posting rule in the foreign currency adjustment rules:</p> <ul style="list-style-type: none"> <li>Realized Currency Gain</li> <li>Realized Currency Loss</li> </ul> <p>When the adjustment results in a:</p> <ul style="list-style-type: none"> <li>Positive amount for the period, Workday credits the Realized Currency Gain ledger account and debits either the Deferred Revenue ledger account for customer contract lines with a deferred revenue treatment or the Unbilled Receivables ledger account for customer contract lines with an accrued revenue treatment.</li> <li>Negative amount for the period, Workday debits the Realized Currency Loss ledger account and credits either the Deferred Revenue</li> </ul>

Subjects	Questions	Considerations
		<p>ledger account for customer contract lines with a deferred revenue treatment or the Unbilled Receivables ledger account for customer contract lines with an accrued revenue treatment.</p> <p>(Optional) You can configure dimensions in the account posting rules for Workday to use when creating operational journals. Example: For the Deferred Revenue and Unbilled Receivables account posting rules, you can configure Customer Group or Project Hierarchy. You can also configure custom organization and custom worktag dimensions.</p>
Foreign Currency Adjustments	<p>Which ledger accounts do you debit and credit for foreign currency revenue?</p>	<p>Foreign currency adjustments impact the Revenue ledger account when you enable revenue as the offset account posting rule in the foreign currency adjustment rules.</p> <p>When the adjustment results in a:</p> <ul style="list-style-type: none"> <li>Positive amount for the period, Workday credits the Revenue ledger account and debits either the Deferred Revenue ledger account for customer contract lines with a deferred revenue treatment or the Unbilled Receivables ledger account for customer contract lines with an accrued revenue treatment.</li> <li>Negative amount for the period, Workday debits the Revenue ledger account and credits either the Deferred Revenue ledger account for customer contract lines with a deferred revenue treatment or the Unbilled Receivables ledger account for customer contract lines with an accrued revenue treatment.</li> </ul> <p>(Optional) You can configure dimensions in the account posting rules for</p>

Subjects	Questions	Considerations
		Workday to use when creating operational journals. Example: For the Deferred Revenue and Unbilled Receivables account posting rules, you can configure Customer Group or Project Hierarchy. You can also configure custom organization and custom worktag dimensions.
Customer Contract Asset and Liability Reclassifications	Where do operational journals for customer contract asset and liability reclassifications post?	<p>When the customer contract has more revenue recognized than billed, Workday creates operational journals that:</p> <ul style="list-style-type: none"> <li>Debit the Unbilled Receivables ledger account.</li> <li>Credit the Deferred Revenue ledger account.</li> </ul> <p>Workday also reverses the operational journal on the first day of the next period.</p>

## Recommendations

When many customer contracts require foreign currency adjustments, Workday recommends that you schedule the creation of adjustment journals to reduce manual effort.

## Requirements

Features	Considerations
Account Posting Rules	To configure account posting rules for foreign currency adjustments, create customer contract foreign currency adjustment rules.
Customer Contract Lines	When you create a multiple-element arrangement, you must have at least 2 customer contract lines with a deferred or accrued revenue treatment.

## Limitations

Features	Considerations
Accounting Periods	You can only create period end adjustments for open ledger periods.
Linked Customer Contracts	<p>Workday excludes parent customer contracts and linked customer contracts from adjustments when:</p> <ul style="list-style-type: none"> <li>The transaction currency of the linked customer contracts doesn't match the transaction currency of the parent customer contract.</li> </ul>

Features	Considerations
	<ul style="list-style-type: none"> <li>The base currency of the linked customer contracts doesn't match the base currency of the parent customer contract.</li> <li>The linked customer contracts have different transaction or base currencies.</li> </ul> <p>Workday doesn't support parent customer contracts or linked customer contracts on asset and liability reclassification journals.</p>
Prepaid Customer Contracts	With period end revenue accounting, Workday: <ul style="list-style-type: none"> <li>Excludes prepaid billing schedule types.</li> <li>Supports customer contracts with prepaid line types.</li> <li>Supports prepaid lines on consolidated billing schedules.</li> </ul>
Variable Line Customer Contracts	Workday excludes all customer contracts with variable line types from carve in/carve out adjustments.
Customer Contract Asset and Liability Reclassification Journals	When you rerun the reclassification process, Workday cancels existing reclassification journal entries for the company, year, and period when the process completes. When you enable the business process, Workday cancels the reclassification journal entries when you complete the final approval.
Worktag Balancing	Workday doesn't support worktag balancing for carve in/carve out adjustment journals.

## Tenant Setup

In the Customer Contracts Options section on the **Edit Tenant Setup - Financials** task, select the **Include Closed Revenue Recognition Installments in Period-End Revenue Accounting** check box to include closed installments in the total revenue recognized amount calculation.

## Security

Domains	Considerations
<i>Process: Billing Schedule</i> - Core in the Customer Contracts and Project Billing functional areas.	Create billing schedules for customer contracts.
<i>Process: Revenue - Adjustments</i> in the Customer Contracts and Project Billing functional areas.	<ul style="list-style-type: none"> <li>View accounting for contract asset and liability reclassifications.</li> <li>View accounting for customer contract adjustments.</li> </ul>
<i>Reports: Financial Accounting</i> in the Financial Accounting functional area.	View reports for ledger details.
<i>Set Up: Revenue - Adjustments</i> in the Customer Contracts and Project Billing functional areas.	<ul style="list-style-type: none"> <li>Create, edit, and view foreign currency adjustment rules for customer contracts.</li> </ul>

Domains	Considerations
	<ul style="list-style-type: none"> <li>Create foreign currency adjustment account posting rules.</li> </ul>
<i>Set Up: Tenant Setup - Financials</i> in the System functional area.	Include closed revenue recognition installments in the total revenue recognized amount calculation.

## Business Processes

Business Processes	Considerations
<i>Carve In Carve Out or Foreign Currency Adjustment Journal Event</i>	Create and approve carve in/carve out and foreign currency adjustment journals.
<i>Customer Contract Asset and Liability Reclassification Journal Event</i>	Create and approve customer contract asset and liability reclassification journals.
<i>Customer Contract Event</i>	Create and approve customer contracts.
<i>Revenue Recognition Schedule Event</i>	Create and approve revenue recognition schedules.

## Reporting

Reports	Considerations
<b>Customer Contract Asset and Liability Reclassification Lines for Contract Lines</b>	View and drill into asset and liability reclassification lines for customer contract lines.
<b>Find Carve In/Carve Out Adjustment Journals</b>	View and drill into carve in/carve out adjustment journals.
<b>Find Carve In/Carve Out Adjustment Runs</b>	View and drill into carve in/carve out adjustment runs.
<b>Find Customer Contract Asset and Liability Reclassification Journals</b>	View and drill into asset and liability reclassification journals for customer contracts.
<b>Find Customer Contract Foreign Currency Adjustment Journals</b>	View and drill into foreign currency adjustment journals for customer contracts.
<b>Find Customer Contract Foreign Currency Adjustment Runs</b>	View and drill into foreign currency adjustment runs for customer contracts.
<b>Find Journals</b>	View journals by year and period.
<b>Intercompany Payables and Receivables Reconciliation</b>	View intercompany transactions associated with carve in/carve out adjustment journals for on-behalf intercompany contracts.
<b>Ledger Detail</b>	View a summary of ledger balances by year and period.
<b>View Customer Contract Foreign Currency Adjustment Rule</b>	View foreign currency adjustment rules for customer contracts.

You can use these report data sources to create custom reports that display adjustment information:

- Carve In Carve Out Adjustment Lines**
- Customer Contract Adjustment Runs**
- Customer Contract Adjustments**

- Customer Contract Asset and Liability Reclassification Line for Contract Lines
- Customer Contract Asset and Liability Reclassification Lines
- Customer Contract Fx Adjustment Lines

## Integrations

Web Services	Considerations
<i>Put Ad Hoc Project Transaction</i>	Use to include closed billable transactions in the total billed amount calculation.
<i>Put Usage Based Transaction</i>	Use to include closed billable transactions in the total billed amount calculation.
<i>Submit Billing Schedule</i>	Use to include closed billing installments in the total billed amount calculation.

## Connections and Touchpoints

Features	Considerations
Customer Contracts	Create revenue recognition schedules for period end accounting.
Financial Accounting	Create operational journals for period end accounting.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Reference

[Reference: Edit Tenant Setup - Financials](#)

[Reference: Period End Revenue Accounting Reclassification Calculations](#) on page 1146

[The Next Level: Recognizing Revenue by Contract Asset \(Unbilled Receivables\)](#)

[The Next Level: Carve-In/Carve-Out and Foreign Currency Adjustments](#)

## Steps: Reclassify Customer Contract Assets and Liabilities

### Prerequisites

Review setup considerations for period end revenue accounting.

### Context

You can configure Workday to manage your period end accounting to adjust deferred revenue balances to zero when your company has:

- Deferred and accrued revenue adjustments deriving from multiple-element arrangements with revenue allocations.
- Foreign exchange gain or loss adjustments deriving from foreign currency customer contracts.

When you run period end accounting, Workday creates an operational journal:

- In the selected period.
- Reversal at the beginning of the next period.

Workday doesn't calculate or post accruals or reversals that relate to linked contracts or prepaid schedules.

## Steps

1. (Optional) Access the **Edit Tenant Setup - Financials** task.

Select the **Include Closed Revenue Recognition Installments in Period-End Revenue Accounting** check box to include closed revenue recognition installments in the total revenue recognized amount calculation.

See [Reference: Edit Tenant Setup - Financials](#).

Security: *Set Up: Tenant Setup - Financials* in the System functional area.

2. (Optional) [Set Up Account Posting Rules](#) on page 84.

Select:

a. *Reclassification* from the **Dimension** prompt.

b. *Customer Contract Asset and Liability* from the **Values** prompt for these ledger accounts:

- *Deferred Revenue*
- *Unbilled Receivables*

3. Access the **Maintain Journal Source Mapping to Operational Transactions** task.

To post operational journals, select *Customer Contract Asset and Liability Reclassification* from the **Customer Contract Asset and Liability Reclassification Journal Entry Source** prompt.

Security:

- *Set Up: Journal Source* domain in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

4. (Optional) [Configure Worktag Balancing Rule Sets for Transaction Journals](#) on page 370.

When you use worktag balancing, select an option from the **Default Worktag for Customer Contract Asset and Liability Reclassification** prompt to balance your operational journals.

**Note:** Carve in/carve out adjustment tasks don't support worktag balancing.

5. [Create Customer Contracts](#) on page 1034.

Add at least 1 contract line with an *Accrued* or *Deferred* revenue treatment.

6. (Optional) Access the **Maintain Schedule Types** task.

When you want to create a consolidated billing schedule, enable consolidated billing for a schedule type.

Security: *Set Up: Customer Contracts - Templates and Types* domain in the Customer Contracts and Project Billing functional areas.

7. Create a billing schedule for the customer contract.

See:

- [Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080
- [Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085

8. [Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110.

9. [Create Customer Invoices for Billing Installments](#) on page 1097.

10. Access the **Create Revenue Recognition Accounting** task.

Create accounting for the relevant revenue recognition installments.

Configure the *Revenue Recognition Installment Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

11. (Optional) Access 1 of these tasks to reclassify deferred revenue balances for customer contracts that have multiple-element revenue allocation:

- [Create Carve In/Carve Out Adjustment Journal](#)
- [Schedule Carve In/Carve Out Adjustment Journal](#)

Workday creates an operational journal to post the reclassification using the dimensions that you configure in the account posting rules. Example: For the Deferred Revenue and Unbilled Receivables

account posting rules, you can configure Customer Group, Project Hierarchy, custom organization, and custom worktag dimensions.

Configure the *Carve In Carve Out or Foreign Currency Adjustment Journal Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

**12.(Optional) Access the **Create Customer Contract Foreign Currency Adjustment Rule** task.**

Define account posting rules and worktags for foreign currency adjustments.

Security: *Set Up: Revenue - Adjustments* domain in the Customer Contracts and Project Billing functional areas.

**13.(Optional) Access 1 of these tasks to calculate the difference between your billing and revenue recognition based on transaction periods and exchange rates:**

- **Create Customer Contract Foreign Currency Adjustment Journal**
- **Schedule Customer Contract Foreign Currency Adjustment Journal**

Workday creates an operational journal based on the foreign currency rules that you define for your adjustments. You can also configure dimensions in the account posting rules for Workday to use when creating operational journals. Example: For the Deferred Revenue and Unbilled Receivables account posting rules, you can configure Customer Group, Project Hierarchy, custom organization, and custom worktag dimensions.

When there's a prepaid balance in base currency after you fully apply prepaid amounts due to the exchange rate differences between your prepaid invoice and the consumption invoices, Workday adjusts the amount when you complete 1 of the tasks. Workday only adjusts amounts for:

- Customer contracts with prepaid line types.
- Prepaid lines on consolidated billing schedules.

Configure the *Carve In Carve Out or Foreign Currency Adjustment Journal Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

**14.Access 1 of these tasks to create asset and liability reclassification journals:**

- **Create Customer Contract Asset and Liability Reclassification Journal**
- **Schedule Customer Contract Asset and Liability Reclassification Journal**

Configure the *Customer Contract Asset and Liability Reclassification Journal Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

## Result

Workday uses the revenue treatment and account posting rules to debit or credit your *Deferred Revenue* and *Unbilled Receivables* ledger accounts.

## Next Steps

Use these reports to view your reclassification journals:

- [Find Journals](#)
- [Find Customer Contract Asset and Liability Reclassification Journals](#)

[The Next Level: Recognizing Revenue by Contract Asset \(Unbilled Receivables\)](#)

[The Next Level: Carve-In/Carve-Out and Foreign Currency Adjustments](#)

## Steps: Configure Derivation Rules for Billable Supplier Invoices

### Prerequisites

Create a billable:

- Project.
- Supplier invoice associated with a company that's different from the project company.

### Context

You can configure revenue company derivation rules to post accounting for billable supplier invoices using the project company or the supplier invoice line company. Workday posts accounting for billable supplier invoices using the supplier invoice line company when you don't configure derivation rules. When you create a billable supplier invoice associated with a company that's different from the project company, Workday creates on-behalf-of intercompany transactions.

### Steps

**1. [Configure Worktag Rules for Project Hierarchies](#) on page 1178.**

Select 1 of these options from the **Revenue Company is from** prompt:

- *Project* to post revenue for billable supplier invoices using the company on the project.
- *Supplier Invoice Line* to post revenue for billable supplier invoices using the company on the supplier invoice line.

**2. [Create Customer Contracts](#) on page 1034.**

The company on the customer contract must be the same as the company on the project.

**3. (Optional) [Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085.**

When the line type on the customer contract line is *Project Time and Expense*, create a transaction billing schedule. The company on the billing schedule must be the same as the company on the project.

Select *Transaction* from the **Billing Type** prompt.

**4. (Optional) [Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080.**

When the customer contract has different line types that you want to include on 1 billing schedule, create a consolidated billing schedule. The company on the billing schedule must be the same as the company on the project.

Select a schedule type enabled for consolidated billing from the **Schedule Type** prompt.

**5. (Optional) [Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110.**

When the revenue treatment on the customer contract line is *Accrued* or *Deferred*, create a revenue recognition schedule. The company on the revenue recognition schedule must be the same as the company on the project.

Select:

- *Transaction* from the **Revenue Recognition Method** prompt.
- The **Independent Revenue Processing** check box.

**6. (Optional) Access the [Create Customer Invoices for Billable Transactions](#) task.**

When you use a transaction billing schedule, create customer invoices for billable transactions.

Security:

- *Process: Billing - Invoicing* domain in the Customer Contracts and Project Billing functional areas.
- *Process: Project Billing - Invoicing* domain in the Project Billing functional area.

**7. (Optional) [Create Customer Invoices from Contracts](#) on page 1099.**

When you use a consolidated billing schedule, create customer invoices from contracts.

**8. (Optional) [Create Revenue Installments for Billable Transactions](#) on page 1116.**

When the revenue treatment on the customer contract line is *Accrued* or *Deferred*, create revenue installments for billable transactions.

**9. (Optional) Access the [Create Revenue Recognition Accounting](#) task.**

When the revenue treatment on the customer contract line is *Accrued* or *Deferred*, create revenue recognition accounting.

Configure the *Revenue Recognition Installment Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

## Result

When the revenue treatment on the customer contract line is:

- *Invoice*, Workday posts accounting at the time of invoicing. Workday posts revenue accounting for the customer invoice lines using the company derivation rules that you configure for billable supplier invoices. When the company on the customer invoice line is different from the company on the header, Workday creates intercompany accounting.
- *Accrued* or *Deferred*, Workday posts accounting at the time of revenue recognition accounting. Workday posts revenue accounting for the installment lines using the company derivation rules that you configure for billable supplier invoices. When the company on the installment line of the revenue recognition schedule is different from the company on the header, Workday creates intercompany accounting.

## Related Information

### Tasks

[Create Projects](#) on page 1202

[Create Supplier Invoices](#) on page 1618

## Concept: Revenue Recognition Accounting

You can create revenue recognition accounting for your revenue installments using these tasks:

- [Create Revenue Recognition Accounting](#)
- [Schedule Revenue Recognition Accounting](#)

### Revenue Recognition Accounting

When you create accounting, Workday:

- Ignores revenue installments with pending milestones.
- Posts accounting using the dimensions that you configure in the account posting rules. Example: For the Deferred Revenue and Unbilled Receivables account posting rules, you can configure Customer Group or Project Hierarchy. You can also configure custom organization and custom worktag dimensions.
- Processes revenue recognition installments individually, or in batches.

Workday then:

- Initiates the *Revenue Recognition Installment Event* business process and routes the accounting for approval.
- Posts the accounting created for each installment in the relevant period, using the installment date as the accounting date.

When you schedule accounting using the earliest open accounting period, Workday generates accounting based on the earliest open period even when more than 1 period is open.

Workday displays the amount in base currency and the currency conversion rate on the completed installment lines when you:

- Cancel completed installments that have accounting.
- Create new revenue recognition schedules with foreign currency and complete installments.
- Generate revenue recognition accounting.

When you create operational journal lines, Workday uses the currency conversion rate that you specify on the **Create Revenue Recognition Schedule for Customer Contract** task to display the actual currency rate for foreign currency installment lines. Once you generate accounting, the currency conversion rate on the installment lines matches the currency conversion rate on the operational journal lines.

You can use the **Find Journals** report to ensure that the accounting posts correctly.

When you update usage-based transactions for which you created revenue recognition accounting, you must:

- Cancel any existing revenue recognition accounting.
- Create new revenue recognition accounting.

### **Intercompany Revenue Recognition Accounting**

Workday creates intercompany accounting when:

- You configure worktag derivation rules for time or expense transactions on a project hierarchy.
- The line company on the customer contract differs from the project or worker company.

For foreign currency customer contracts, Workday uses the contract effective date to post intercompany accounting for the contract line company and the project or worker company when you:

- Configure worktag derivation rules for time or expense transactions on a project hierarchy.
- Select *Contract Effective Date* as the default currency rate on the **Create Revenue Recognition Schedule for Customer Contract** task. You can only configure the currency conversion rate on new revenue recognition schedules with foreign currency.

### **Closed Installments and Transactions in Period End Revenue Accounting Calculations**

To include closed:

- Billable transactions in the total billed amount calculation, use the *Put Ad Hoc Project Transaction* and *Put Usage Based Transaction* web services.
- Billing installments in the total billed amount calculation, use the *Submit Billing Schedule* web service.
- Revenue recognition installments in the total revenue recognized amount calculation, select the **Include Closed Revenue Recognition Installments in Period-End Revenue Accounting** check box on the [Edit Tenant Setup - Financials](#) task.

## Carve In and Carve Out Reclassification Calculations

Revenue Treatment	Criteria	Calculation
<i>Accrued</i>	Customer contract lines have revenue allocation.	Workday creates an operational journal that: <ul style="list-style-type: none"> <li>Debits the Unbilled Receivables ledger account for negative amounts.</li> <li>Credits the Unbilled Receivables ledger account for positive amounts.</li> </ul>
<i>Deferred</i>	Customer contract lines have revenue allocation.	Workday creates an operational journal that: <ul style="list-style-type: none"> <li>Debits the Deferred Revenue ledger account for negative amounts.</li> <li>Credits the Deferred Revenue ledger account for positive amounts.</li> </ul>

## Customer Contract Foreign Currency Reclassification Calculations

Revenue Treatment	Criteria	Calculation
<i>Accrued and Deferred</i>	Billing and revenue recognition have discrepancies in base currency amounts due to foreign currency conversion rates.	When you enable realized gain or loss as the offset account posting rule in the foreign currency adjustment rules, Workday creates an operational journal that: <ul style="list-style-type: none"> <li>Debits the Realized Currency Loss ledger account for negative amounts.</li> <li>Credits the Realized Currency Gain ledger account for positive amounts.</li> </ul> When you enable revenue as the offset account posting rule in the foreign currency adjustment rules, Workday creates an operational journal that: <ul style="list-style-type: none"> <li>Debits the Revenue ledger account for negative amounts.</li> <li>Credits the Revenue ledger account for positive amounts.</li> </ul>

## Customer Contract Asset and Liability Reclassification Calculations

Revenue Treatment	Criteria	Calculation
<i>Accrued</i>	Billed amount is greater than recognized revenue amount.	<p>Workday:</p> <ol style="list-style-type: none"> <li>Subtracts the total recognized revenue amount from the total billed amount.</li> <li>Creates an operational journal using the difference to debit the Unbilled Receivables ledger account and credit the Deferred Revenue ledger account.</li> <li>Creates a reversal operational journal that credits the Unbilled Receivables ledger account and debits the Deferred Revenue ledger account in the next period.</li> </ol>
<i>Accrued</i>	Recognized revenue amount is greater than billed amount.	No reclassification occurs.
<i>Deferred</i>	Billed amount is greater than recognized revenue amount.	No reclassification occurs.
<i>Deferred</i>	Recognized revenue amount is greater than billed amount.	<p>Workday:</p> <ol style="list-style-type: none"> <li>Subtracts the total billed amount from the total recognized revenue amount.</li> <li>Creates an operational journal using the difference to debit the Unbilled Receivables ledger account and credit the Deferred Revenue ledger account.</li> <li>Creates a reversal operational journal that credits the Unbilled Receivables ledger account and debits the Deferred Revenue ledger account in the next period.</li> </ol>
<i>Accrued and Deferred</i>		<p>Workday:</p> <ol style="list-style-type: none"> <li>Calculates reclassification for all <i>Accrued</i> contract lines.</li> <li>Calculates reclassification for all <i>Deferred</i> contract lines.</li> <li>Calculates the total from steps 1 and 2.</li> <li>Creates an operational journal using the total to debit the Unbilled Receivables ledger account and credit</li> </ol>

Revenue Treatment	Criteria	Calculation
		<p>the Deferred Revenue ledger account.</p> <p>5. Creates a reversal operational journal that credits the Unbilled Receivables ledger account and debits the Deferred Revenue ledger account in the next period.</p>

## ASC 606/IFRS 15

---

### Steps: Compare Revenue Allocation Scenarios

#### Context

Revenue recognition rules require companies to present comparative financial statements using the new ASC 606 revenue standards. You can create revenue allocation scenarios to compare and display in reports.

#### Steps

1. [Create Revenue Allocation Rules](#) on page 1150.

2. From the **Maintain Revenue Allocation Scenarios** report, click the **Create Contract Set** button to access the **Create Customer Contract Set** task.

Enter a name for the contract set, or replace the contracts in an existing set with the contracts you select.

Security: These domains in the Customer Contracts and Project Billing functional areas:

- *Process: Alternate Customer Contract*
- *Process: Customer Contract - View*
- *Process: Revenue - Allocations*

3. Access the **Maintain Revenue Allocation Scenarios** report.

Set up unique combinations of contract sets and revenue allocation rules to compare in your scenarios.

Security: These domains in the Customer Contracts and Project Billing functional areas:

- *Process: Alternate Customer Contract*
- *Process: Revenue - Allocations*

#### Result

You can compare revenue allocation scenarios for your contract sets.

## Next Steps

View your revenue scenario reports on the **Revenue Scenario Tool** dashboard.

### Related Information

#### Reference

[The Next Level: ASC 606 | IFRS 15 Conversion](#)

## Create Alternate Contracts

### Prerequisites

Security: *Process: Customer Contract - View domain* in the Customer Contracts and Project Billing functional areas.

### Context

The Accounting Standards Codification (ASC) Topic 606 and International Financial Reporting Standard (IFRS) 15 revenue recognition rules require companies to present comparative financial statements. You can create alternate contracts to model out your revenue in the old standard or new standard, based on your business transition plan.

### Steps

1. Access the **Manage Customer Contract for Revenue Scenario** task.
2. Select the customer contracts that you want to replicate as alternate contracts.

### Result

You replicate the selected customer contracts as alternate contracts. Alternate contracts enable you to model revenue scenarios without altering your actual customer contracts.

## Next Steps

You can run multiple-element revenue allocations on your alternate contracts, similar to how you would run allocations on your customer contracts.

### Related Information

#### Reference

[The Next Level: ASC 606 | IFRS 15 Conversion](#)

## Create Revenue Allocation Rules

### Prerequisites

Security: *Set Up: Revenue - Allocations domain* in the Customer Contracts and Project Billing functional areas.

### Context

You can create revenue allocation rules that enable you to compare scenarios of your revenue allocations and display them in reports. These scenarios and reports help you comply with the new Revenue Recognition rules.

### Steps

1. Access the **Create Revenue Allocation Rule** task.

2. As you complete this task, consider:

Option	Description
<b>Allocation Basis</b>	<p>You can define how revenue is allocated according to your <b>Fair Value Price List</b>. Depending on which option you select, Workday will automatically allocate the revenue according to the percentages you define.</p> <p>The lower and upper ranges are calculated based off of the <b>Lower Range Percentage</b> and the <b>Upper Range Percentage</b> percentages and the <b>Fair Value Price List</b>.</p>
<b>Fair Value Price List</b>	<p>You can select a <b>Fair Value Price List</b> to define the standard selling price for an item.</p> <p>You can define <b>Fair Value Price Lists</b> in Workday using the <b>Maintain Fair Value Price List</b> report.</p>
<b>Do Not Auto-Allocate Revenue</b>	<p>Select this check box if you don't want Workday to calculate revenue override amounts for all contract lines.</p> <p>You'll be able to calculate the <b>Revenue Override Amount</b> by selecting <b>Run Allocation</b> process on the <b>Run Multiple-Element Revenue Allocation</b> task.</p>

3. (Optional) Create an **Override Revenue Allocation Rule** for each company that requires a separate revenue allocation rule.

## Result

The rules that you create populate revenue allocation information for your companies.

## Next Steps

- Create customer contract sets.
- Create revenue allocation scenarios.

## Concept: Alternate Contracts

Revenue recognition rules Accounting Standards Codification (ASC) Topic 606 and International Financial Reporting Standard (IFRS) 15 require you to present comparative financial statements. You can replicate your customer contracts as alternate contracts. Alternate contracts enable you to model your revenue based on the current standard or the new standard, for your business transition plan without altering your actual contracts.

## Alternate Contract Business Process

You can manage your new and updated alternate contracts using the *Customer Contract Alternate Event* business process to route for approval.

## Alternate Linked Contracts

You can associate multiple related contracts with a single parent contract. With linked contracts, you can consolidate all of your revenue in a common currency, display it in a single report, and reallocate revenue across the linked contracts.

- With fair value (FV) price lists, you can perform multiple-element revenue allocations through mass action using the **Manage Alternate Customer Contract** report.
- Without FV price lists, access the **Create Multiple-Element Revenue Allocation** task to carve in or carve out your contract lines.

## Alternate Book Codes

You can create alternate book codes using the **Maintain Book Codes** task and book accounting from your alternate contracts. This accounting includes:

- Reversal entries from the original contracts under ASC 605.
- Accounting entries under ASC 606.

## Alternate Contract Accounting

You can post journal entries by period using the **Manage Alternate Customer Contract** report. You can select the original contract offset entries, the alternate contract entries, or both.

### Related Information

## Concept: Revenue Scenario Tool Dashboard

Workday helps you comply with the ASC 606 and IFRS 15 standards. The **Revenue Scenario Tool** dashboard provides quick access to tasks and reports that enable you to see the impact of the new requirements on your historical data.

You can configure the **Revenue Scenario Tool** dashboard with the **Maintain Dashboards** task.

## Revenue Scenario Reports

You can use several reports to compare revenue allocation based on the rules you configure on the **Create Revenue Allocation Rule** task, including:

- Contract Scenario Comparison**
- Contract Scenario Comparison by Revenue Category**
- Contract Scenario Revenue Trend**
- Contract Scenario Scheduled Revenue**

For a complete list with report descriptions, access **Workday Standard Reports**, and select the *Customer Accounts* report category.

## Preparing Revenue Scenarios

To prepare your revenue scenarios, you can run these reports and tasks from the dashboard:

- Create Revenue Allocation Rule** task.
- Maintain Fair Value Price List** report.
- Maintain Revenue Allocation Scenarios** report.
- Manage Customer Contract for Revenue Scenario** report.

## Concept: Opportunities

---

Workday works with Salesforce.com to provide revenue and cost management capabilities during the opportunity stage of the revenue cycle. Our Opportunity functionality completes the Lead-to-Cash process using the Financial Management Connector for Salesforce integration. It enables you to track and analyze cost to close for an opportunity by tagging it with sales expenses and purchases. It eases customer billing automation by triggering invoices from won opportunities. Opportunity sends useful customer information, such as balance and payment details, to Salesforce.com for use by sales representatives.

### Opportunity Reports

These reports can help you track opportunities and cost to close in Workday:

- **Opportunities**
- **Find Opportunities**
- **Opportunities and Employee Expenses**
- **Opportunity Statuses**
- **Invoices for Salesforce Opportunities**

### Related Information

#### Concepts

[Concept: Financial Management Connector for Salesforce](#)

## Concept: Revenue Dashboard

---

The Revenue Dashboard enables you to view and drill into your revenue information. It provides you with access to multiple revenue reports, including the:

- **Budget vs. Actuals by Revenue Category** report.
- **Contract Value by Region** report.
- **Top 10 Customers by Revenue** report.

You can use the **Maintain Dashboards** task to configure the Revenue Dashboard. You can also add the Revenue Dashboard as a worklet to your Home page for quick access.

## Concept: Workday Revenue

---

Workday Revenue helps you manage all aspects of revenue from customer creation to sales. Workday Revenue works with your CRM solution to complete the opportunity-to-cash business process, including:

- Creating customers.
- Recording customer contracts.
- Billing and invoicing.
- Account receivables and cash receipts.
- Recognizing revenue.
- Providing customer and revenue analytics.

When you sell items to your customers, you can use Workday to:

- Manage the invoices and sales terms.
- Record customer payments and cash sales.
- Make deposits.
- Record invoice adjustments.
- Write off bad debt.
- Place overpayment balances on account.

- Create refunds for invoice adjustments and on account balances.

You can track and analyze your customer account data anytime throughout the cycle. Fundamental integration points give you further flexibility to manage customer revenue.

## Create Customers

You can:

- Create customers in Workday to manage your customer accounts.
- Enable suppliers, financial institutions, and tax authorities that you've already configured in Workday to be customers.
- Use the Financial Management Connector for Salesforce integration to generate customer requests automatically in Workday and route the requests to administrators for approval.

## Create Customer Invoices

To record your sales and create receivables, you can use customer invoices. Triggers for invoice creation include:

- The shipment of physical goods.
- The delivery of services.
- The billing schedule for an ongoing project, subscription, or membership.

You can print invoices to send to customers as necessary. Unpaid invoices for credit card and direct debit become available for selection in Workday settlement processing.

## Retention for Customer Invoices

You can:

- Withhold a portion of a customer invoice, enabling you to use billing schedules for retention tracking, and reducing manual entry errors.
- Post the accounting for the retained amounts from invoices to different ledger accounts using a new posting rule.
- Support multiple types of billing schedules, including transaction and installment billing.
- Release all or a portion of the retention balances by contract line for invoicing, when your contract meets the requirements.

## Record Payments

The flow of customer payments depends on the payment type.

For customers with accounts in Workday to pay by credit card or direct debit, the unpaid invoices become inbound transactions that you can pay with a settlement run. As part of settlements, you can authorize and capture credit card payments through the CyberSource integration. The settlement run also generates and sends an ACH file to your bank for direct debit payments.

For customers using check, cash, or manual payment methods, you can record the customer payment transaction. Then you can deposit the customer payment transaction either as part of the payment recording, or later. You can also record an ad hoc credit card payment, but you must then capture the payment through a settlement run.

## On Account Balances

If a customer overpays, you can keep the extra money on-account. You can then apply this balance to subsequent invoices, or create a refund.

## Create Refunds

You can issue refunds to customers for invoice adjustments where you owe them money, and for on-account balances.

## Deposit Payments

You can select which payments to deposit for a company, and deposit into specific bank accounts.

Customer payments available for deposit can come from:

- Cash sales.
- Check, cash, or manual payments that you record.
- Credit card and direct debit payments that you complete through Workday settlement processing.

## Integrations

Workday Revenue includes these integrations to load data from third parties:

- Financial Management Connector for Salesforce: Enables you to:
  - Import selected sales data from your Salesforce.com tenant into Workday.
  - Display Workday customer activity data in Salesforce tenant.
- When you convert an opportunity into an account, the connector syncs the account to a Customer in Workday so that you can view the Workday transactions in Salesforce tenant. If there's a billing schedule attached to the opportunity, Workday can create invoices according to that schedule.
- CyberSource: Enables you to authorize and capture credit card payments in Workday. When you create customers in Workday, you can send data for customer credit cards to CyberSource. You then receive a secure token to mask credit card information for that customer. Workday uses these secure tokens when you settle credit card payments in Workday Cash Management.
- Electronic Invoice Connector: Enables you to create custom configuration so that you can send invoice data electronically to external entities in XML format to meet local government requirements. You can also receive acknowledgments sent back by external entities.
- Customer Payment Lockbox: Enables you to import Bank Administration Institute (BAI) lockbox data into Workday-defined file format. The file includes multiple types of records. Some records include subrecords.

# Projects

---

## Steps: Configure Projects

---

### Context

Workday Projects enables you to:

- Define work that aligns with strategic company and individual goals.
- Unify your human resources, financial, and spend information.
- Track project costs and progress using worker logged time and project spending.
- Analyze business results to make adjustments, or gain further insight for future planning.
- Find and compare workers to staff your projects, with clear insight into their availability.

### Steps

1. (Optional) Create initiatives to align your projects and nonproject work with an individual or organization goal.  
See [Steps: Set Up Initiatives](#) on page 1377.
2. (Optional) [Create Basic Project Worktags](#) on page 1198.  
Create basic projects that function solely as worktags for your financial transactions and payroll entries.
3. Set up the Projects infrastructure.  
See [Steps: Set Up Projects Infrastructure](#) on page 1164.
4. Build out your projects.  
See [Steps: Build Projects](#) on page 1190.
5. (Optional) Set up capitalization for the project.  
See [Steps: Configure Capital Projects](#) on page 1344.
6. (Optional) Compare different combinations of resources and determine their optimal distribution.  
See [Steps: Set Up Project Scenarios](#) on page 1373.
7. (Optional) Access the **Maintain Work Functions** task.  
Configure the nonproject work for your organization.  
Security: *Set Up: Job* domain in the Jobs & Positions functional area.
8. (Optional) Create and approve project ideas.  
See [Steps: Set Up Project Ideas](#) on page 1379.

## Concept: Workday Projects

---

Workday Projects enables you to:

- Plan and track your work.
- Integrate your projects with Workday Human Capital Management and Financial Management.
- Use worker attributes and organizations when you configure and manage your projects.

Workday supports these types of projects:

Project Type	Use
Basic	Basic projects function solely as worktags on financial transactions and payroll entries. They don't contain detailed project information.
Nonbillable	<p>Internal projects that don't invoice customers for work done on the project. With nonbillable projects you can:</p> <ul style="list-style-type: none"> <li>Divide work into phases and tasks.</li> <li>Assign workers and unnamed resources.</li> <li>Track costs and spending.</li> </ul>
Billable	<p>Projects with customer contracts, invoices, and billing.</p> <p>When you use billable projects with Workday Revenue and Project Billing, you can:</p> <ul style="list-style-type: none"> <li>Define billing rates and create contract rate sheets by project role.</li> <li>Define billing rate rules for automatic billing.</li> <li>Define hourly billing rates by job profile and project role.</li> <li>Recognize revenue for projects based on the percent complete accounting method.</li> <li>Invoice your customers for billable time and expense transactions.</li> </ul>
Capital	Projects with cost transactions. You can record and manage the costs as long-term assets within the project. Doing so delays the recognition of these costs until you're ready to capitalize the costs into capital business assets.
Opportunity	<p>Sales opportunities that you can later convert into a project.</p> <p>You can use opportunities to:</p> <ul style="list-style-type: none"> <li>Prioritize resources and make staffing decisions based on the probability of the sale.</li> <li>Create project plans and generate forecasts.</li> <li>Generate financial reports and view the estimated profit.</li> </ul> <p>When you sell an opportunity project, you can convert it using the <b>Convert Opportunity Project to Project</b> task.</p>

## Uses for Workday Projects

### Alignment

You can define company goals and communicate how you're going to achieve them. Defining these goals ensures that the work in your organization lines up with the goals of your organization.

- Use initiatives to align your projects and nonproject work with company goals. Initiatives describe how you're going to achieve your goals.
- Use projects and nonproject work to take concrete steps toward your goal. Workers can log their time and effort, and you can track spend costs versus estimated budget.

## Planning

You can determine an optimum resource distribution by analyzing labor costs and availability for allocating your resources.

- Use Idea Management to collect and funnel ideas from your entire workforce. Then, turn the best ideas into actual work that drives your workforce toward a common goal.
- Use Project Scenario Planning to model different scenarios and potential resource allocations before creating projects.

## Tracking

Use Workday Time Tracking or create ad hoc project time transactions to record hours for projects and tasks.

## Concept: Project Dashboard

---

The **Projects** dashboard (secured to the *Reports: Projects* domain in the Projects functional area) is a configurable workspace that gives you quick, visual insight into the health of your projects. You can see both operational and financial data for your projects in real time. The dashboard also gives you direct access to frequently used project-related tasks and reports. You can select the tasks that you want to display in the default menu using the **Edit** button on the **Maintain Dashboards** report. The **Menu** section on the **Content** tab enables you to add links to custom reports and external links.

Workday delivers these report worklets available for use in your Projects dashboard:

- **Average Project Duration**
- **Average Revenue by Project Role**
- **Comparative Revenue by Project**
- **Forecast vs. Actuals - Project Hours by Month**
- **Headcount by Job Profile**
- **Project Actual Hours - Monthly**
- **Project Forecasted Hours - Monthly**
- **Project Status by Project Hierarchy**
- **Project Utilization Report - Monthly**
- **Projects Headcount Supply and Demand by Job Profile**

- **Project Profitability**
- **Trended Revenue by Project**

Once you configure the dashboard, you can add it as a worklet to your Home page.

## **Reference: Project Reports**

---

Workday delivers reports that give you greater insight into the health and progress of your projects and your project staffing needs.

For a complete list of project reports, access the **Workday Standard Reports** report and select these report categories:

- *Projects*
- *Set Up Project*

#### **Operational Reports**

These reports help you analyze the operational health of your projects.

Report	Security	Description
<b>Average Project Duration</b>	<i>Manage: Project Details</i> domain in the Project Tracking functional area.	Review the durations of your projects so that you can make improvements for faster returns on your investments. Includes: <ul style="list-style-type: none"> <li>• The average project duration for a project hierarchy and its subordinate projects.</li> <li>• All projects with at least 1 day of duration for your selected time period.</li> </ul>
<b>Forecast vs. Actuals - Project Hours by Month</b>	<i>Reports: Manager</i> domain in the Staffing functional area.  <i>Manage: Project Resource Forecast</i> domain in the Projects functional area.  <i>Reports: Time Tracking</i> domain in the Time Tracking and Time Tracking Hub functional areas.	Compare the forecasted hours to the actual hours worked on a project.
<b>Projects Headcount Supply and Demand by Job Profile</b>	<i>Manage: Project Resources</i> domain in the Project Tracking functional area.	Includes: <ul style="list-style-type: none"> <li>• Supply: Workers who don't have an assignment to a resource plan line and are within the selected date range.</li> </ul>

Report	Security	Description
	<i>Worker Data: Current Staffing Information</i> domain in the Staffing functional area.	<ul style="list-style-type: none"> <li>Demand: Resource plan lines without assigned workers.</li> </ul>

## Financial Reports

These reports provide insight into the financial health of your projects.

Financial Reports	Security	Description
<b>Average Revenue by Project Role</b>	<i>Reports: Project Billing</i> domain in the Project Billing functional area.	<p>Analyze how your project staffing relates to project revenue. Workday calculates the average revenue in the project currency by project role based on:</p> <ul style="list-style-type: none"> <li>Total approved hours.</li> <li>Total billings from invoice lines.</li> </ul> <p>You can see when you use certain project roles more than others.</p>
<b>Comparative Revenue by Project</b>	<i>Reports: Projects</i> domain in the Projects functional area.	Analyze revenue trends for month-over-month and year-over-year revenue by project. You can customize this report to include quarterly analysis for project revenue using your existing time periods.
<b>Fully Burdened Cost Rate for Worker</b>	<p>To access the report: <i>Reports: Fully Burdened Cost</i> in the Projects functional area.</p> <p>To view data on the report, all of these:</p> <ul style="list-style-type: none"> <li><i>Set Up: Fully Burdened Cost Rate</i> in the Projects functional area. Grants access to the values under the <b>Fully Burdened Cost Rate Calculation</b> heading.</li> <li><i>Worker Data: Compensation Factors for Fully Burdened Cost Rate</i> in the Projects functional area. Grants access to the values under the <b>Worker Compensation Factors</b> heading.</li> <li><i>Worker Data: Fully Burdened Cost</i> in the Projects functional area. Grants access to the values under the <b>Fully</b></li> </ul>	<p>You can run this report for workers who have a time block posted to a project. Analyze how Workday uses your configuration to determine the fully burdened cost rate for a specific worker. You can view:</p> <ul style="list-style-type: none"> <li>The base rate, worker currency, and project currency conversion for the worker.</li> <li>The formula Workday uses to calculate fully burdened labor costs.</li> <li>The overhead rate rules for the worker, and the effective date of the fully burdened labor cost.</li> </ul>

Financial Reports	Security	Description
	<b>Burdened Cost Rate Factors</b> heading.	
<b>Project Billing Exceptions</b>	<p>To access the report: <i>Process: Project Billing - Core</i> in the Project Billing functional area.</p> <p>To access related tasks, both:</p> <ul style="list-style-type: none"> <li>• <i>Process: Customer Contract</i> - View in the Customer Contracts and Project Billing functional areas.</li> <li>• <i>Reports: Billing</i> in the Customer Contracts and Project Billing functional areas.</li> </ul>	<p>View a list of all your projects with billable transactions that aren't ready to be billed, and the total number of affected transactions between them. Transactions may be unbillable, have a contract rate change which has not yet been applied to the time transaction, or have no billable rate. Only includes transactions with one of these:</p> <ul style="list-style-type: none"> <li>• A contract line type of Project Time and Expense, or Fixed Fee.</li> <li>• A status of Awaiting Review, or Ready to Bill for rate changes and missing rates.</li> <li>• A status of On Hold for missing rates only.</li> </ul>
<b>Project Budgetary Balance with Labor Cost</b>	<p>Both:</p> <ul style="list-style-type: none"> <li>• <i>Reports: Projects</i> in the Projects functional area.</li> <li>• <i>Reports: Time Tracking</i> in the Time Tracking functional area.</li> </ul>	<p>Compare your project budget to your actuals, including labor costs. Doesn't include ad hoc time blocks. View your project actuals and labor costs by the:</p> <ul style="list-style-type: none"> <li>• Current fiscal year.</li> <li>• Current period.</li> <li>• Life to date of your project.</li> </ul> <p><b>Note:</b> Current Period amounts only populate for period-based budgets. Life to Date amounts populate for both period- or duration-based budgets.</p> <p>You can run the report by company, or for all companies within a company hierarchy.</p>
<b>Project Profitability</b>	<p><i>Reports: Projects</i> domain in the Projects functional area.</p> <p><i>Reports: Time Tracking</i> domain in the Time Tracking and Time Tracking Hub functional areas.</p>	<p>Analyze how direct and labor costs consume your profitability. Workday calculates:</p> <ul style="list-style-type: none"> <li>• Gross profit and labor margins.</li> <li>• Project revenue and related direct costs from journal lines and labor costs based on approved worker time.</li> </ul> <p>Includes these subreports that you can view individually:</p>

Financial Reports	Security	Description
		<ul style="list-style-type: none"> <li>• <b>Project Profitability Direct Costs</b></li> <li>• <b>Project Profitability Revenue</b></li> <li>• <b>Project Profitability Time Blocks</b></li> </ul>
<b>Revenue Leakage</b>	<i>Report Execution</i> domain in the Tenant Non-Configurable functional area.	For operational and financial users. View these concessions that have been made in the project: <ul style="list-style-type: none"> <li>• Contractual versus actual rates.</li> <li>• Project hours leaked.</li> <li>• Revenue leakage.</li> </ul>
<b>Trended Revenue by Project</b>	<i>Reports: Projects</i> domain in the Projects functional area.	View revenue by project for the top 10 projects over the selected period. You can analyze revenue trends by: <ul style="list-style-type: none"> <li>• Month-over-month.</li> <li>• Year-over-year.</li> </ul>
<b>View Initial Project Budget Calculation</b>	<i>Manage: Project Budget</i> domain in the Projects functional area. ## Set Up Projects

---

### Steps: Set Up Projects Infrastructure

#### Context

You can set up your projects infrastructure to plan, track, and manage work across your organization.

You can predefine project elements, such as:

- Custom labels
- Hierarchies
- Plans
- Rates
- Roles
- Templates

## Steps

### 1. Edit Business Processes.

Configure these business process definitions:

- *Ad Hoc Project Transaction Event*
- *Create Project*
- *Create Project Hierarchy*
- *Edit Project*
- *Project Resource Plan Line*
- *Rate Work*
- *Request Worker*

### 2. Edit Business Process Security Policies.

Configure the security policies for these business processes:

- *Ad Hoc Project Transaction Event*
- *Create Project*
- *Create Project Hierarchy*
- *Edit Project*
- *Project Resource Plan Line*
- *Rate Work*
- *Request Worker*

### 3. Activate Pending Security Policy Changes

### 4. (Optional) Configure the Project Profile on page 1166.

### 5. (Optional) Access the **Configure Optional Fields** task to hide optional fields on the project summary.

From the **By Functional Area** prompt, select the *Project Summary - Composite View* option to hide optional fields on most Projects tasks and reports that display the project summary. When you hide an optional field, Workday continues to require it for custom validations you've configured.

See

- [Hide or Require Optional Fields](#).
- [Reference: Project Tasks and Reports with Configurable Project Summary Fields](#) on page 1168.

### 6. Create Project Hierarchies on page 1174.

### 7. (Optional) Access the **Edit Tenant Setup - Financials** task.

In the **Projects** section, configure your tenant-wide settings.

See [Reference: Edit Tenant Setup - Financials](#).

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

### 8. (Optional) Create Custom Labels.

Select *Project* from the **Term Context** prompt on the **Maintain Custom Labels** task.

### 9. (Optional) Create custom validations. See [Steps: Set Up Custom Validations](#) on page 52.

Configure validations for these project transaction types:

- Project
- Project Plan
- Project Resource Plan
- Project Task Resource

### 10.(Optional) Create project standard cost rates to cost labor without accessing worker-sensitive information.

See [Create Project Standard Cost Rate Sheets](#) on page 1330.

**11.**(Optional) Calculate project cost rates based on worker salaries and an overhead percentage. See:

- [Set Up Fully Burdened Cost Rate Definitions for Projects](#) on page 1336.
- [Create Project Cost Rate Rules](#) on page 1336.

**12.**(Optional) Create advanced labor cost calculations for prorating and overtime.

See [Steps: Manage Project Advanced Labor Costs](#) on page 1329.

**13.**(Optional) Define project details.

See [Steps: Maintain Project Details](#) on page 1167.

**14.**(Optional) [Create Project Templates](#) on page 1182.

**15.**Configure your project plans.

See [Steps: Set Up Project Plans](#) on page 1213.

**16.**Configure resource management.

See [Steps: Set Up Resource Management](#) on page 1237.

## Next Steps

Build projects.

## Related Information

### Tasks

[Steps: Build Projects](#) on page 1190

### Reference

[Reference: Edit Tenant Setup - Financials](#)

[2022R2 What's New Post: Hide Project Summary Fields](#)

## Project Profile

### Configure the Project Profile

#### Prerequisites

Security: *Set Up: System* domain in the System functional area.

#### Context

The project composite view is a configurable profile for daily project management. This profile displays when you access a project directly or with the **View Project** report.

You can:

- Reorder profile groups.
- Hide profile groups.
- Add custom reports and tasks to the profile groups.
- Reorder or hide reports and tasks on the profile groups.

#### Steps

1. Access the **Configure Profile** task.

**2. Enter *Project Composite View Profile*.**

You can update the composite view of the project profile by:

- Reordering project profile groups.
- Displaying project profile groups.
- Hiding project profile groups.

**3. Access the **Configure Profile Group** task.**

**4. Select 1 of these options in the **Profile Group** prompt:**

- *Financials for Project Composite View Profile*
- *Overview for Project Composite View Profile*
- *Project Plan for Project Composite View Profile*
- *Resources for Project Composite View Profile*

**5. Click **OK**.**

**6. As you complete the task, consider:**

<b>Option</b>	<b>Description</b>
<b>Display in Profile</b>	Select to display the reports in the profile group on the composite view of the project profile.
<b>*Report</b>	Select the reports, custom reports, and custom tasks that display in the profile group.  The reports and tasks display in sequential order on the composite view of the project profile.

## Result

You can find information and take action from the composite view of the project.

## Next Steps

- Create project hierarchies.
- Add project phases and tasks.

## Related Information

### Tasks

[Steps: Set Up Profiles and Profile Groups](#)

[Steps: Set Up Project Plans](#) on page 1213

## Steps: Maintain Project Details

### Context

You can configure custom details for your projects to create definitions for parameters such as project risk level and priority. You can configure definitions for:

- Importance ratings.
- Project statuses.
- Risk levels.
- Risk severities.
- Risk statuses.
- Success ratings.
- Work priorities.

You can also apply custom risk parameters to project ideas during the approval phase to track overall project risk and individual risks.

## Steps

1. (For Projects and Project Ideas) (Optional) Access the **Maintain Risk Levels** task.  
Define the values for your project risk levels. Example: High, Medium, and Low.  
Security: *Set Up: Risk and Priorities* domain in the Project Tracking functional area.
2. (For Projects and Project Ideas) (Optional) Access the **Maintain Risk Severities** task.  
Define risk severities to categorize individual risks by importance or impact on project objectives.  
Example: High, Medium, and Low.  
Security: *Set Up: Risk and Priorities* domain in the Project Tracking functional area.
3. (For Projects and Project Ideas) (Optional) Access the **Maintain Risk Statuses** task.  
Define risk statuses to track the progress of individual risks as assigned workers mitigate them.  
Example: New, In Progress, Canceled, and Closed.  
Security: *Set Up: Risk and Priorities* domain in the Project Tracking functional area.
4. (For Projects only) (Optional) Access the **Maintain Project Statuses** task.  
Define the values for the overall statuses of your projects. Example: Green, Red, and Yellow.  
Security: *Set Up: Project Details* domain in the Project Tracking functional area.
5. (For Projects only) (Optional) Access the **Maintain Work Priorities** task.  
Define the values for your project priorities. Example: High, Medium, and Low.  
Security: *Set Up: Risk and Priorities* domain in the Project Tracking functional area.
6. (For Projects only) (Optional) Access the **Maintain Success Ratings** task.  
Define success ratings to score completed projects.  
Security: *Set Up: Project Tracking* domain in the Project Tracking functional area.
7. (For Projects only) (Optional) Access the **Maintain Importance Ratings** task.  
Define the values for the importance levels of your projects. Example: Critical, Significant, and Important.  
Security:
  - *Manage: Initiatives* domain in the Projects functional area.
  - *Set Up: Project Details* domain in the Project Tracking functional area.

## Result

Workday makes the details that you've defined available for use on projects and project templates. Workday makes the risk-related details that you've defined available for use on projects, project templates, and project ideas.

## Next Steps

- Create project ideas.
- Create templates for projects.
- Set up project plans.

## Related Information

### Tasks

[Steps: Set Up Projects Infrastructure](#) on page 1164

## Reference: Project Tasks and Reports with Configurable Project Summary Fields

You can hide optional project summary fields on some project tasks and reports. When you hide an optional field, Workday hides it on all tasks and reports with configurable project summary fields. Workday continues to require hidden fields for your custom validations.

On some tasks and reports, Workday collapses the project summary by default. Workday doesn't collapse the project summary on the Project Composite View by default.

Workday applies your configuration for optional fields to these tasks and reports:

Task or Report	Collapsible Project Summary
Copy Project	No
Create Opportunity Project	No
Create Project	No
Create Project from Idea	No
Create Project from Project Worktag	No
Create Project Using Template on Sales Item	No
Create Risks	Yes
Edit Project	No
Edit Project Budget	No
Edit Project Details	No
Edit Project Summary	No
Edit Related Worktags	Yes
Edit Risks	Yes
Project Composite View	Yes
Review Edit Project	No
Revise Edit Project	No
Revise Opportunity Project	Yes
Review Project	No
Revise Project	No
View Project	Yes
View Project Related Worktags	Yes
View Project Risks	Yes

## Project Hierarchies

### Setup Considerations: Project Hierarchies

You can use this topic to help make decisions when planning your configuration and use of project hierarchies. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What They Are

Project hierarchies define the parent and child relationships between hierarchies and also categorize projects.

Workday has 2 types of project hierarchies:

Hierarchy Type	Definition
Primary	Required for project creation. Child hierarchies and projects inherit their configuration from the primary parent hierarchy.
Optional	Optional for project creation. Child hierarchies and projects don't inherit configuration options. Use optional hierarchies to add more categories to your projects for increased granularity in your roll-up reports.

## Business Benefits

Project hierarchies simplify the process of creating projects and reporting on them. You can use project hierarchies to:

- Streamline project creation. Configure the options for the projects on the same primary project hierarchy. Configuring options at the hierarchy level prevents manually repeating the same configuration steps for each of the individual projects.
- Create detailed reports to compare the costs, revenue, time, and progress of the projects at your organization.

## Use Cases

With project hierarchies, you can:

- Add a resource plan to a project hierarchy so that the projects in the hierarchy use the same plan.
- Assign roles to workers at the hierarchy level for projects to inherit.
- Categorize projects with primary and optional project hierarchies for detailed roll-up reporting.
- Create budget and worktag rules at the hierarchy level for projects to inherit.
- Configure business processes so that projects in the same hierarchy use the same approval types.
- Prevent project workers from logging time for future dates on the projects in a hierarchy.
- Restrict project plan tasks and project roles to specific primary project hierarchies for streamlined data entry.

## Questions to Consider

Questions	Considerations
How can you use hierarchies to group your projects?	You can use primary project hierarchies to group similar types of projects to: <ul style="list-style-type: none"> <li>Apply common configuration options.</li> <li>Configure a roll-up security structure for who can view and report on a set of projects.</li> <li>Create roll-up reports.</li> </ul>

Questions	Considerations
	<ul style="list-style-type: none"> <li>Simplify selection prompts when searching for projects.</li> </ul>
Do you need to group your projects into different functional or logical categories?	<p>You can use optional project hierarchies to add more categories to projects for granular reporting. Example: Group projects by region in 1 optional hierarchy and by product line in another.</p>
When should you create resource plans for project hierarchies?	<p>You can create a resource plan for a primary project hierarchy, enabling all of the projects that share the same hierarchy to inherit the same resource plan. Use this method to save time for your users if the projects within a hierarchy always use the same resource plan.</p>
Which project tasks should you restrict to specific project hierarchies?	<p>You can restrict the availability of project tasks to primary project hierarchies. This restriction simplifies task selection and reduces data entry errors. Child hierarchies inherit task restrictions from their parent hierarchies. Restrict project tasks using the <b>Maintain Project Tasks</b> task.</p>
Which project roles should you restrict to specific project hierarchies?	<p>You can restrict the availability of project roles to primary project hierarchies. This restriction simplifies role selection and reduces data entry errors. Child hierarchies inherit role restrictions from their parent hierarchies. Restrict project roles using the <b>Maintain Project Roles</b> task.</p>

## Recommendations

To reduce data entry:

- Configure primary project hierarchies so that the associated projects inherit shared settings.
- Create resource plans at the project-hierarchy level when the associated projects can share the same resource plan.
- Restrict project tasks and roles to the relevant primary project hierarchies.

For Worktags that you plan to use in derived Worktag rules, access the **Maintain Worktag Usage** report and allow your Worktags to be used on customer contracts and customer invoices.

To increase report detail, create optional project hierarchies to further group your projects.

Only associate 1 project hierarchy that has a custom business process with a project. If a project belongs to multiple hierarchies, each with its own business process, Workday randomly selects 1 business process for the project.

## Requirements

Create at least 1 primary project hierarchy so that users can create projects.

## Limitations

You can't use optional project hierarchies with account posting rules.

## Tenant Setup

No impact.

## Security

Domains	Considerations
<i>Business Process Administration</i> in the System functional area	Users secured to this domain can edit the <i>Create Project Hierarchy</i> business process.
<i>Manage: Business Process Definitions</i> in the System functional area	Users secured to this domain can manage the <i>Create Project Hierarchy</i> business process.
<i>Set Up: Project Hierarchy</i> in the Project Tracking functional area	Users secured to this domain can manage project hierarchies and resource plans on project hierarchies.

To ensure proper access, review these team member roles and activities:

Domain Security Roles	Considerations
Project administrator	<ul style="list-style-type: none"> <li>Edits the <i>Create Project Hierarchy</i> business process.</li> <li>Creates and configures project hierarchies.</li> <li>Approves new project hierarchies routed by the <i>Create Project Hierarchy</i> business process.</li> <li>Uses web services.</li> <li>Runs reports.</li> <li>Creates custom reports.</li> </ul>
Project hierarchy manager	<ul style="list-style-type: none"> <li>Owns and is responsible for the projects within a project hierarchy.</li> <li>Approves new project hierarchies routed by the <i>Create Project Hierarchy</i> business process.</li> <li>Views reports.</li> </ul>

## Business Processes

The *Create Project Hierarchy* business process enables you to create, review, and approve new project hierarchies.

## Reporting

Reports	Considerations
Navigate Project Hierarchy	<p>Provides a high-level view of project hierarchies, including subordinate hierarchies and projects. You can also view worker information and edit:</p> <ul style="list-style-type: none"> <li>Project hierarchies</li> <li>Projects</li> </ul>

Reports	Considerations
View Project Hierarchy	Use as a central access point for viewing and editing information on existing project hierarchies.
View Project Hierarchy Setup Objects Configuration	<p>Use to view the direct, inherited, and unrestricted project tasks and roles. These roles and tasks are eligible for the projects associated with the primary project hierarchy.</p> <p>You can access the report from the related actions menu of a project hierarchy.</p>

You can also use primary and optional project hierarchies to create custom reports to review project:

- Time
- Revenue
- Cost
- Expense

Custom reports enable you to group multiple projects for security reasons or for summary reporting.

You can use these report data sources to create custom reports:

- *Project Hierarchies* on the Project Hierarchy business object.
- *Project Task* on the Project Task business object.
- *Project Timesheet Lines by Project and Project Hierarchy* on the Project Timesheet Line business object.
- *Timesheet Day for Project Hierarchies and Timesheet Periods* on the Timesheet Day business object.
- *Top Level Project Hierarchies* on the Project Hierarchy business object.

## Integrations

Web Services	Considerations
<i>Get Workday Project Hierarchies</i>	Retrieves project hierarchies and subordinate hierarchies.
<i>Submit Workday Project Hierarchy</i>	Creates a project hierarchy event and submits it through the <i>Create Project Hierarchy</i> business process for approval. Workday then creates the new project hierarchy.
<i>Get Workday Project Hierarchies without Dependencies</i>	Retrieves project hierarchies only. Doesn't include the parent and child relationships of the hierarchies.
<i>Get Resource Plans</i>	Retrieves data on resource plans and resource plan lines on project hierarchies and projects.

## Connections and Touchpoints

Features	Considerations
Expenses	The worktag rules on a project hierarchy enable you to configure how Workday calculates expenses.
Revenue	The worktag rules on a project hierarchy enable you to configure how Workday calculates revenue.

Features	Considerations
Time Tracking	The time entry rules on a project hierarchy prevent project workers from logging future time on a project.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Examples

[Example: Simplify the Selection of Project Tasks on Project Plans](#) on page 1221

## Create Project Hierarchies

### Prerequisites

- Review [Setup Considerations: Project Hierarchies](#).
- Configure the *Create Project Hierarchy* business process and security policy in the Project Tracking functional area.
- Set up assignable roles.

### Context

Project hierarchies enable you to define the parent and child relationships between hierarchies, and to categorize your projects. Use these hierarchies to streamline project creation and to group projects for roll-up reports.

You must have at least 1 top-level primary project hierarchy that routes to user-based roles, according to the default *Create Project Hierarchy* business process definition. You can then use the related actions menu from this hierarchy to:

- Assign roles.
- Configure common settings.
- Create a business process definition that routes the workflow.

In addition to the primary hierarchies that you create for your projects, you can create 1 or more optional project hierarchies. Use these optional hierarchies to add more categories for your roll-up reports.

### Steps

1. Access the **Create Project Hierarchy** task.
2. As you complete the task, consider:

Option	Description
ID	Enter a unique ID or let Workday generate it for you. Once you save or submit, Workday uses this

Option	Description
	value as the reference ID for integrations. Only a Workday administrator can change the ID.
<b>Enable as Optional Hierarchy</b>	<p>Select to create an optional hierarchy that you can use to:</p> <ul style="list-style-type: none"> <li>Group projects under multiple project hierarchies for reporting purposes.</li> <li>Disable all hierarchy configuration options like resource plans, derived worktag rules, and project budgets.</li> </ul> <p>When you create an optional hierarchy, you can't:</p> <ul style="list-style-type: none"> <li>Change it to a primary project hierarchy after you submit it.</li> <li>Change a primary project hierarchy to optional.</li> </ul>
<b>Subtype</b>	(Optional) Workday uses subtypes to define the levels in a hierarchical structure on a top-level organization.
<b>Projects to Include</b>	<p>Select the projects that you want to include in the hierarchy.</p> <p>When you create projects, you must associate each one with a project hierarchy. To move a project from:</p> <ul style="list-style-type: none"> <li>Another hierarchy to this hierarchy, select the project you want here.</li> <li>This hierarchy to another hierarchy, open the project hierarchy you want to move it to, and select the project to move. This action removes it from the first hierarchy.</li> </ul>

3. Click **Submit**.

4. Review the **Assigned Roles** section of the **Details** tab.

Only workers with roles on the project or project hierarchy can see project information. Workday assigns roles to the project hierarchy based on the organization types that you enabled for project hierarchies. You can manage these role assignments by:

- Using the **Maintain Assignable Roles** task.
- Selecting **Roles > Assign Roles** from the related action menu on the project hierarchy.

## Result

Workday launches the *Create Project Hierarchy* business process, and then routes the new hierarchy for approval.

## Next Steps

- Create a resource plan for a primary project hierarchy to share staffing across all of its projects.
- Use the related actions menu on a primary project hierarchy to configure the common settings for its child hierarchies and projects to inherit.

- Use these reports to review project hierarchies:
  - [Navigate Project Hierarchy](#)
  - [View Project Hierarchy](#)

#### **Related Information**

##### **Concepts**

[Setup Considerations: Project Hierarchies](#) on page 1169

[Concept: Project Hierarchies](#) on page 1176

[Concept: Resource Plans on Projects and Project Hierarchies](#) on page 1277

##### **Tasks**

[Set Up Assignable Roles](#)

[Assign Roles to Projects](#) on page 1207

[Steps: Set Up Resource Plans](#) on page 1274

#### **Concept: Project Hierarchies**

Project hierarchies define the parent and child relationships within hierarchies and categorize your projects.

Workday has 2 types of project hierarchies:

- Primary
- Optional

Primary project hierarchies pass their configurations onto their child hierarchies and associated projects.

Use these hierarchies to streamline project creation and to group projects for roll-up reports.

You can use primary project hierarchies to:

- Group similar projects and child hierarchies for roll-up reporting.
- Make related projects more accessible.
- Configure resource plans for use on similar projects.
- Configure business process definitions, common settings, and project roles for similar projects.

Optional project hierarchies don't have configuration options for other hierarchies or projects to inherit. Use optional hierarchies to add additional report categories for more granularity in your roll-up reports.

All projects must belong to a primary project hierarchy and can belong to 1 or more optional project hierarchies. Assign projects to hierarchies at the time of project creation, or by adding and removing them from the hierarchy definitions. Don't assign a project to more than 1 node in the hierarchy tree.

#### **Hierarchy Considerations**

- After you submit a hierarchy for approval, you can't change its type.
- Child project hierarchies must be the same type as their parent.
- Use custom business processes, including any specific project roles, for only 1 hierarchy.

#### **Related Information**

##### **Concepts**

[Setup Considerations: Project Hierarchies](#) on page 1169

[Create Project Hierarchies](#) on page 1174

## Worktag Rules for Projects

### Create Derived Worktag Rules for Project Cost and Revenue

#### Prerequisites

- To ensure your Worktags derive correctly, access the **Maintain Worktag Usage** report and set your Worktags as allowed on customer contracts and customer invoices.
- Security: *Set Up: Enable Worktags* in the Common Financial Management and Worktags functional areas.

#### Context

As a financial administrator, you need the flexibility to determine how to account for project costs and revenue. This accounting might depend on whether the project resource is an employee or a contingent worker. In Workday, when workers enter time or submit expense reports against a project, there can be multiple worktags associated with the project. You can configure simple rules at the project hierarchy level to determine if project costs and revenue should follow the worker or the project worktags. These derived worktag rules:

- Automatically apply the correct accounting to project costs and revenue.
- Ensure that the project costs and revenue display in the right organizations, such as Cost Center.
- Only apply to time and expense contract lines that have transaction-based revenue recognition, not to fixed-fee contract lines with % complete revenue recognition.

#### Steps

##### 1. Access the **Create Derived Worktag Rule** task.

Set up a rule that determines which worktags to support when a worker creates an expense report or bills for time against a project. Workday then derives the worktags to use based on this rule.

##### 2. Enter worktag rule details.

As you complete the rule, consider:

Option	Description
<b>Name</b>	Enter a name for the rule.  Example: <i>Employee Cost and Revenue Rules</i> .
<b>Company is from</b>	(Optional) Select whether to derive the worktags for the company from either the <i>Project</i> or the <i>Worker</i> .  This field only applies to project revenue.
<b>Worktag Derived From</b>	Select whether the worktags for this rule should come from the <i>Project</i> or the <i>Worker</i> .  Your selection controls the worktag types available for selection.
<b>Worktag Types</b>	Select the worktag types that you want to use for the worker or the project. For: <ul style="list-style-type: none"> <li><i>Project</i>: Only the worktag types you define on the <b>Maintain Worktag Usage</b> task are available here. In this task, you can define which worktags the project supports. The <i>Customer</i> worktag type supports a specific</li> </ul>

Option	Description
	<p>field on the project rather than one that you define on this task.</p> <ul style="list-style-type: none"> <li>• <b>Worker:</b> Only costing worktags, such as <i>Business Unit</i> and <i>Location</i>, as well as custom organizations configured as financial worktags are available. You can use the <b>Maintain Organization Types</b> report to edit costing worktags and custom organizations.</li> </ul>

## Result

Your worktag rules are now available for use in the project hierarchy configuration.

## Next Steps

Create the project hierarchy configuration for this worktag rule.

### Related Information

#### Concepts

[Concept: Worktags](#)

#### Examples

[Steps: Enable Worktags for Cost Allocations](#)

[Example: Configure Worktag Rules for Project Cost and Revenue](#) on page 1180

## Configure Worktag Rules for Project Hierarchies

### Prerequisites

- [Create Derived Worktag Rules for Project Cost and Revenue](#) on page 1177.
- Security: *Set Up: Project Hierarchy* domain in the Project Tracking functional area.

### Context

You can configure your tenant to account for project revenue and costs with either the worker or the project worktags. You can configure rules for Workday to apply accounting for expenses, supplier invoices, and time entries to all underlying projects and hierarchies. You can also create configuration rules for a lower-level project hierarchy, so projects under that hierarchy inherit different worktag rules than the primary hierarchy.

### Steps

1. Access the **View Project Hierarchy** report, **Worktag Rule Configuration** tab.
2. Select whether you want to **Create** a new configuration, or **Edit** an existing one.

Workday displays the **Create Project Hierarchy Configuration for Worktag Rules** task.

**3. Set up the worktag rules.**

You can:

- Configure rules separately for expense reports and for time tracking.
- Configure revenue derivation rules for billable supplier invoices.
- Set different rules for employees than for contingent workers.
- View the derived worktag rule details using the preview button. Workday displays whether the rule derives from the worker or the project, and the associated worktag types.

As you complete these rule dimensions, consider:

Option	Description
<b>Worktag Rules for Project Revenue and Project Costs</b>	<p>Select this option if either:</p> <ul style="list-style-type: none"> <li>• There are no worktag rules on the <b>Create Derived Worktag Rule</b> task.</li> <li>• You want Workday to ignore the derived worktags.</li> </ul> <p>Workday then applies all worktags associated with the project to both expense reports and time entries. Workday makes no distinction between employees and contingent workers.</p>
<b>Worktag Rules for Expense</b>	<p>Select the worktag rule to apply to expense reports filed by workers. You can select separate rules for employees and contingent workers.</p> <p>On the expense report, when you define worktag rules, Workday:</p> <ul style="list-style-type: none"> <li>• Uses the values for the worktags defined in the rule and adds them to the expense report line.</li> <li>• Overrides the entry with the worktag rule value for this configuration if the worktag already exists on the expense report line.</li> </ul> <p>Example: If you set a separate cost center for a worker and the project, Workday uses the cost center you define here.</p> <ul style="list-style-type: none"> <li>• Leaves existing worktags not impacted by the worktag configuration rules for the project hierarchy.</li> <li>• Only includes project worktags that are part of the worktag rules.</li> </ul>
<b>Worktag Rules for Time</b>	<p>Select the applicable worktag rule when either:</p> <ul style="list-style-type: none"> <li>• Workers submit hours using Time Tracking.</li> <li>• You create ad hoc project time transactions.</li> </ul> <p>You can select separate rules for employees and contingent workers.</p> <p><b>Note:</b> Workday supports the revenue from time entry, but not time cost.</p>
<b>Revenue Rule for Supplier Invoice</b>	When you select:

Option	Description
	<ul style="list-style-type: none"> <li>• <i>Project</i>, Workday posts revenue for billable supplier invoices using the company on the project.</li> <li>• <i>Supplier Invoice Line</i> or leave the prompt blank, Workday posts revenue for billable supplier invoices using the company on the supplier invoice line.</li> </ul> <p>Workday displays the derivation rules that you configure in the <b>Revenue Company Source</b> column on the <b>Projects</b> tab of approved customer contracts.</p>

## Result

Workday applies the rules that you configure to all project-related expense, supplier invoice, and time entries within the project hierarchy.

## Next Steps

To enforce the derived worktag rules on expense reports (cost), create a custom validation using the **Worktags Don't Match Project Derived Worktag Rules** report field.

### Related Information

#### Tasks

[Steps: Configure Derivation Rules for Billable Supplier Invoices](#) on page 1144

[Create Custom Object Validations](#)

#### Examples

[Example: Configure Worktag Rules for Project Cost and Revenue](#) on page 1180

### Example: Configure Worktag Rules for Project Cost and Revenue

This example illustrates how to configure worktag rules so that expenses logged by employees and contingent workers use different worktags.

## Context

Project ABC has its own worktags for cost center and region. There are 2 types of workers on the project: full-time employees and contingent workers. Each worker type has its own associated worktag values for cost center and region.

Here's the data we'll use for this Example:

Project: ABC	Worker: Javier	Worker: Isabel
Cost Center: 1001	Cost Center: 5000	Cost Center: 8000
Region: West  Worker Type: Employee	Region: Central  Worker Type: Employee	Region: South  Worker Type: Contingent Worker

Your accounting organization would like to ensure that any expense reports filed by workers on the project follow certain rules. In this case, they want all employee expenses, like Javier's, to attribute to the employee cost center and region. For Isabel and all other contingent workers, expenses attribute to the project cost center and region.

Expense Report for Javier	Expense Report for Isabel
<p><b>Item:</b> Meal</p> <p><b>Amount:</b> 25 Euro</p> <p><b>Worktags:</b></p> <ul style="list-style-type: none"> <li>• <b>Project:</b> ABC</li> <li>• <b>Cost Center:</b> 5000</li> <li>• <b>Region:</b> Central</li> </ul>	<p><b>Item:</b> Meal</p> <p><b>Amount:</b> 25 Euro</p> <p><b>Worktags:</b></p> <ul style="list-style-type: none"> <li>• <b>Project:</b> ABC</li> <li>• <b>Cost Center:</b> 1001</li> <li>• <b>Region:</b> West</li> </ul>

### Prerequisites

- Security: *Set Up: Enable Worktags* domain in the Common Financial Management and Worktags functional areas.
- Security: *Set Up: Project Hierarchy* domain in Project Tracking functional area.

### Steps

1. Access the **Create Derived Worktag Rule** task to create a worktag rule for employees like Javier.
2. Enter field details:

<b>Name</b>	<i>Employee Cost and Revenue Rules</i>
<b>Company is from</b>	<i>Worker</i>
<b>Worktag Derived From</b>	<i>Worker</i>
<b>Worktag Types</b>	<i>Cost Center</i> <i>Region</i>

3. Click **OK** and **Done**.
4. Access the **Create Derived Worktag Rule** task to create a worktag rule for contingent workers like Isabel.
5. Enter field details:

<b>Name</b>	<i>Contingent Worker Cost and Revenue Rules</i>
<b>Company is from</b>	<i>Project</i>
<b>Worktag Derived From</b>	<i>Project</i>
<b>Worktag Types</b>	<i>Cost Center</i> <i>Region</i>

6. Access the **Worktag Rule Configuration** tab on the **View Project Hierarchy** report to view the hierarchy for Project ABC.
7. Access the **Create Project Hierarchy Configuration for Worktag Rules** task by clicking **Create**.
8. Enter these **Worktag Rules for Expense** details:

Option	Description
<b>Employee</b>	<i>Employee Cost and Revenue Rules</i>
<b>Contingent Worker</b>	<i>Contingent Worker Cost and Revenue Rules</i>

## Result

When contingent workers and employees log expense reports related to Project ABC, all accounting will follow the rules you configured.

## Next Steps

You can ensure that revenue accounting follows similar guidelines. Create **Worktag Rules for Time** so that revenue is attributed to the right accounts when Isabel and Javier log time against Project ABC, based on their employment status.

# Project Templates

## Create Project Templates

### Prerequisites

Security: *Set Up:* Project domain in the Projects functional area.

### Context

Project templates simplify project creation, maintain consistency, and reduce errors. You can prefill common options for users when they create a new project using the template.

### Steps

1. Access the **Create Project Template** task.
2. As you complete the **Template Information** section, consider:

Option	Description
<b>Template ID</b>	When you leave the template ID blank, Workday generates a sequential ID.  The template ID becomes the reference ID for integrations.
<b>Project Plan Template</b> <b>Resource Plan Template</b> <b>Task Resource Template</b> <b>Customer Contract Template</b>	Any project you create from this template also includes these associated templates.  To select a template for task resources, you must first select a resource plan template and project plan template.  Select a customer contract template when you create a template for billable projects.

3. As you complete the **Reference Information** section, consider:

Option	Description
<b>Status</b>	Presets the overall status of the new project.
<b>Include Project ID in Name</b>	Appends the Project ID value to the project name.
<b>Billable</b>	Creates new billable projects from the template.  Select to enable time and expense billing and revenue recognition for the project.
<b>Capital</b>	Creates new capital projects from the template.
<b>Company</b>	Sets the company for new projects.

Option	Description
	Workday populates the company name in time blocks when workers log time against a project using Time Tracking. Workday also assigns a company worktag for the accounting, unless you override the worktags in the operational transaction.
<b>Project Currency</b>	Sets the currency for new projects. Workday converts all internal and billable rates to this currency when you report on the project.
<b>Customer</b>	Sets the customer for new projects. Workday populates the customer name into time blocks and worksheets when workers log time against the project. Workday also assigns a customer worktag for the accounting, unless overridden in the operational transaction.
<b>Balancing Worktag</b>	<p>Select for capital projects. When you enable worktag balancing for your tenant, select a worktag to balance journals for transactions. The balancing rules evaluate the balancing worktag of the project, not the balancing worktag of the transaction. Workday generates <i>Due To</i> and <i>Due From</i> accounting entries to balance your journal when the values on the transaction and project differ.</p> <p>When you use a cost center as a balancing worktag, you can restrict values to companies or company hierarchies on the <b>Edit Cost Center</b> task.</p>
<b>Project Groups</b>	Associates a new project with a group of related projects. Project groups make it easier to retrieve and compare projects using reports.

4. Enter the **Worktags** you want to set for new projects.

When you enable worktag balancing, Workday only uses the balancing worktag when you select a worktag of the same type in both the:

- **Worktags** grid.
- **Balancing Worktag** field.

Set up related worktags for this object using the related worktag types that you configure on the **Maintain Related Worktag Usage** task. Workday automatically populates transactions with the values in the **Default Worktag** column when you select the object on the transaction.

5. As you complete the **Project Details** section, consider:

Option	Description
<b>Percent Complete</b>	When this value is 100%, workers can't log time against the project or its tasks.
<b>Risk Level</b>	Set the project risk level.
<b>Priority</b>	Set the project priority.

Option	Description
<b>Importance</b>	Set the importance rating of the project.

## Result

Project managers can create new projects based on your template using the:

- **Create Project** task.
- Related actions menu on the template.

## Next Steps

- Create projects.
- Run the **Find Project Templates** report to retrieve other templates.

## Related Information

### Concepts

[Concept: Worktags](#)

[Concept: Balancing Worktags on Capital Project Transactions](#) on page 1360

### Tasks

[Create Projects](#) on page 1202

## Create Project Plan Templates

### Prerequisites

- Set up project plans.
- Security: *Set Up: Project* domain in the Projects functional area.

### Context

You can create templates to:

- Make it easier to create project plans for your projects, rather than always creating your plans from scratch.
- Enforce consistency across projects through the use of shared phases and tasks. Enforcing consistency enables you to report on and analyze efforts by phase and task across projects. It also enables you to search for and find workers with similar task experiences.

### Steps

1. Access the **Create Project Plan Template** task.
2. As you complete the task, consider:

Option	Description
<b>Template ID</b>	If you leave the Template ID blank, Workday generates a new ID. Integrations use the ID as a reference and only a Workday System Administrator can change it.
<b>Use Date Offset</b>	Select this check box to define task start and end dates relative to the project start and end dates.
<b>Date Offset</b>	Select the time interval for the date offset.
<b>Phase</b>	Select the project phases.

Option	Description
<b>Task</b>	<p>Select the project plan tasks for each project plan phase.</p> <p><b>Note:</b> When you create a new project using a project plan template, Workday only creates project plan tasks that are:</p> <ul style="list-style-type: none"> <li>• Unrestricted.</li> <li>• Restricted to the project hierarchy of the project.</li> <li>• Inherited from the parent hierarchy of the project.</li> </ul>
<b>Start Date Offset</b> <b>End Date Offset</b>	Workday populates the dates on the project plan based on the date offsets relative to the project start date.
<b>Non-Billable</b>	<p>By marking a task as nonbillable, you can:</p> <ul style="list-style-type: none"> <li>• Set filters to generate reports listing nonbillable tasks, billable tasks, or both.</li> <li>• Create custom validations to exclude billing for nonbillable tasks.</li> </ul>
<b>Milestone</b>	Select to use milestones for reporting and invoicing billable projects.
<b>Closed</b>	Select to mark the project task as closed for time entry.
<b>Utilization</b>	<p>Select if the time block associated with this task qualifies for actual utilization.</p> <p>You can then create a custom report to determine utilization.</p>

## Next Steps

- Create templates for resource plans and task resources.
- Create project plans.
- Create projects.

## Related Information

### Tasks

[Steps: Set Up Project Plans](#) on page 1213

[Create Project Plans](#) on page 1215

## Create Resource Plan Templates

### Prerequisites

Security domains in the Projects functional area:

- *Set Up: Project*
- *Worker Data: Standard Cost Rate Override*

Security domains in the Project Tracking functional area:

- *Manage: Project Resources*

- Set Up: Project Hierarchy

## Context

Create resource plan templates to populate the common information that most users need to enter. Templates streamline data entry, reduce user errors, and enforce consistency.

## Steps

1. Access the **Create Resource Plan Template** task.
2. As you complete the task, consider:

Option	Description
<b>Template ID</b>	<p>Enter a unique Template ID, or leave blank for Workday to generate the ID.</p> <p>This value becomes the reference ID for integrations, and only an administrator can change it.</p>
<b>Use Date Offset</b>	<p>Select this check box to define start and end dates relative to the project start date.</p> <p>When you select this check box, you must also select an offset increment in the <b>Date Offset</b> prompt.</p>
<b>Project Role</b>	<p>You can assign the same project role more than once to a resource plan line.</p> <p>If a project role isn't eligible for the hierarchy of a new project, Workday doesn't include it. Workday only applies the roles that are:</p> <ul style="list-style-type: none"> <li>• Unrestricted.</li> <li>• Restricted to the project hierarchy of the new project.</li> <li>• Inherited from the parent hierarchy of the new project.</li> </ul> <p>The <b>Maintain Project Roles</b> task defines the project role restrictions to project hierarchies.</p>
<b>Start Date Offset</b> <b>End Date Offset</b>	<p>The <b>End Date Offset</b> must be greater than or equal to the <b>Start Date Offset</b>.</p>
<b>Standard Cost Rate Override</b> <b>Standard Cost Rate Currency Override</b>	<p>Enter a rate and currency to override the standard cost rate and standard cost rate currency defined in the standard cost rate sheet.</p> <p>Workday calculates and persists time entry costs upon time entry approval.</p> <p>Changes to the standard cost rate on the resource plan line don't change the standard cost amount for approved project time entries.</p>
<b>Allocation Type</b>	<p>Select <b>Assign a Worker</b> to:</p> <ul style="list-style-type: none"> <li>• Add unnamed resources to a project role.</li> <li>• Hire new workers.</li> </ul>

Option	Description
	<p>Select <b>Associate a Group</b> to add a group of workers to a project role. Any of the workers within the group can fill the project role and charge their time to the project.</p> <p>Your selection sets the security, reporting, and worker access to project tasks. It also determines the fields that display when you add workers or groups to the project role.</p>
<b>To Be Hired</b>	<p>Displays only when you select <b>Assign a Worker</b>.</p> <p>When you select this check box, you can complete the resource plan without a direct assignment and report more accurately on needed resources.</p>
<b>Resource</b>	<p>Enter the number of unnamed resources you need to fill the role.</p> <p>For each unnamed resource, Workday adds a row to the Worker grid, which you can replace with a specific worker later in the resource plan.</p>
<b>Project Role Requirements</b>	<p>The <b>Maintain Project Roles</b> task defines the default values for the project role requirements.</p> <p>Enter any additional requirements for the project role.</p> <p>These requirements help resource managers find suitable candidates for the project role directly from the resource plan line.</p>

## Next Steps

- Create templates for task resources.
- Create resource plans.

## Related Information

### Tasks

[Create Project Roles on page 1238](#)

[Steps: Set Up Resource Plans on page 1274](#)

[Create Resource Plans on page 1275](#)

## Create Project Task Resource Templates

### Prerequisites

Set up templates for:

- Project plans.
- Resource plans.

Security:

- *Set Up:* Project domain in the Projects functional area.
- *Manage:* Project Plan domain in the Project Tracking functional area.

## Context

Task resource templates simplify the process of adding project plan tasks to a project and assigning them to workers. Templates maintain consistency, streamline data entry, and reduce errors. You can configure templates to prefill common options for users when they create a project that includes task resources.

## Steps

1. Access the **Create Task Resource Template** task.
2. As you complete this task, consider:

Option	Description
<b>ID</b>	When you leave the ID blank, Workday automatically generates a new ID. The ID becomes the reference ID for integrations.
<b>Use Date Offset</b>	Select to define the task start and end dates relative to the project start and end dates.
<b>Task</b>	When you create a new project using a task resource template, Workday only creates task resources for project tasks that are: <ul style="list-style-type: none"> <li>• Inherited from the parent hierarchy of the project.</li> <li>• Restricted to the project hierarchy of the project.</li> <li>• Unrestricted.</li> </ul>
<b>Resources</b>	For direct assignments, select unnamed resources from the resource plan line.
<b>Resource Plan Line</b>	Workday populates this field based on the worker entry from the associated resource plan template.
<b>Start Date Offset</b>	Enter a positive whole number.
<b>End Date Offset</b>	The <b>End Date Offset</b> must be greater than or equal to the <b>Start Date Offset</b> . Workday populates the dates on the project plan task based on the date offsets relative to the start date on the project plan template.
<b>% Allocation</b>	Displays when the associated: <ul style="list-style-type: none"> <li>• Resource plan template has unnamed resource assignments or worker group associations on the resource plan lines.</li> <li>• Project plan template has defined phases and tasks.</li> </ul> Workday populates the value from the resource plan.

Option	Description
	You can also enter a new value using whole numbers that are greater than or equal to zero and percentages over 100.
<b>Estimated Hours</b>	Enter the number of hours you estimate the task will take. Enter positive numbers with up to 2 decimal points.

## Next Steps

Create new projects.

### Related Information

#### Tasks

[Create Projects](#) on page 1202

## Create Project Budget Templates

### Prerequisites

Security: *Manage: Project Budget* in the Projects functional area.

### Context

You can create templates to:

- Make it easier to create project budgets, rather than always creating your budgets from scratch.
- Enforce consistency across project budgets.

Enforcing consistency enables you to report on and analyze efforts by phase and task across projects.

### Steps

1. Access the **Create Project Budget Template** task.
2. Select or create a **Plan Structure**.

Workday creates separate columns on the **Project Budget Template** for each primary worktag dimension on the **Plan Structure**. All other dimensions will be available in the **Additional Worktags** field.

**Note:** Inactivate a template before you can make changes to an associated **Plan Structure**.

3. (Optional) Select the **Override Template with Related Worktags from Project** check box.

## Next Steps

Create project budgets based on your template using the **Create Budget** task on the **Plan** section of the **Financials** grid of your project.

### Related Information

#### Concepts

[Concept: Project Budgets](#) on page 1312

#### Tasks

[Set Up Plan Structures for Project Budgets](#) on page 1296

[Steps: Create Project Budgets](#) on page 1304

# Manage Projects

---

## Steps: Build Projects

### Context

Workday Projects enables you to effectively:

- Plan the projects for your organization.
- Track your progress.
- Staff your projects.
- Manage your project resources.
- Enable project workers to log their time and expenses to a project.

You can define project work that aligns with strategic company and individual goals, as well as develop effective outcomes.

### Steps

1. Set up the infrastructure for your project.

See [Steps: Set Up Projects Infrastructure](#) on page 1164.

2. (Optional) Access the **Maintain External Link Validation** task to enable external links on projects.

Define the authorized URI formats for the **Project External Link** option. Example: <https://zimit.io/>  
This validation:

- Enables users to add links that match your specific formats.
- Prevents users from adding unauthorized links.

Security: *Set Up: Tenant Setup - Security* domain in the System functional area.

3. [Create Projects](#) on page 1202.

4. [Create Project Plans](#) on page 1215.

5. [Create Resource Plans](#) on page 1275.

6. [Configure Task Resources](#) on page 1253.

7. Access the **Assign Work to Worker** task.

Assign project and nonproject work to workers.

Security: *Assign Work to Worker* business process and security policy in the Projects and Staffing functional areas.

8. (Optional) Access the **Create Risks** task.

Define the risks associated with the project.

Security: *Manage: Project Details* domain in the Project Tracking functional area.

9. (Optional) [Create Project Groups](#) on page 1199.

- 10.(Optional) Set up the Project Manager Hub.

See [Steps: Set Up Project Manager Hub](#) on page 1226.

### Next Steps

- Use the **Projects** dashboard to manage your projects.
- Set up resource forecasts.
- Set up project budgets.

**Related Information****Concepts**

[Concept: Project Dashboard](#) on page 1159

[Steps: Set Up Resource Forecasts](#) on page 1284

[Steps: Set Up Project Budgets](#) on page 1294

**Reference**

[Reference: Project Reports](#) on page 1160

## Reference: Project Components

### Project Components

After you create a project hierarchy, you can assemble a framework for your projects by defining its components. These components simplify the process of creating a new project.

Component	Description
Project Hierarchy	<p>All projects must belong to a primary hierarchy. You can also specify optional hierarchies to further group your projects.</p> <p><b>Note:</b> If you specify an optional hierarchy, you'll disable all of these hierarchy-level configuration options:</p> <ul style="list-style-type: none"> <li>• Derived worktag rules.</li> <li>• Project budget configurations.</li> <li>• Resource plans.</li> </ul>
Project Plan	<p>Contains the project phases and tasks. Describes the sequences of steps, activities, and milestones needed for a project.</p>
Resource Plan	<p>Describes who accomplishes the work detailed in the project and in the project plan. You can:</p> <ul style="list-style-type: none"> <li>• Specify the project roles for the workers, and then assign individual workers or associate groups of workers to the roles.</li> <li>• Define groups of workers using talent pools, job profiles, or cost centers.</li> <li>• Assign a resource plan to a project or project hierarchy.</li> </ul> <p>A resource plan that you assign directly to a project is unique to that project. A resource plan that you assign to a project hierarchy replicates to the subordinate projects and hierarchies.</p>
Phases and tasks	<p>Phases are the high-level sequence of steps to complete a project. Example: A software implementation project might include these phases: analyze, scope, design, construct, test, document, deliver, and support.</p>

Component	Description
	<p>Tasks are the distinct activities within a phase. Example: The document phase might have a task to write end-user instructions.</p> <p>All project plans, project plan templates, and project templates have phases and tasks.</p> <p>When you assign phases and tasks to a project, Workday creates a specific instance of them that you can report on for that project.</p>
Templates	<p>You can create templates for projects and project plans that automatically fill in configuration settings and other information. Templates help reduce the manual effort required in configuring these settings every time you create a new project or project plan. They're also useful in standardizing projects across your organization.</p>
Project labor costing	<p>You can define project labor costs based on either:</p> <ul style="list-style-type: none"> <li>• Standard cost rate sheets:           <p>Use to define the rates for:</p> <ul style="list-style-type: none"> <li>• Unnamed resources based on project roles.</li> <li>• Workers based on worker attributes, worker names, and project roles.</li> </ul> </li> <li>• Fully burdened cost rate sheets:           <p>Use to determine an hourly rate to cost the time spent by a worker on a project. Workday generates the fully burdened cost rate based on your configurations of:</p> <ul style="list-style-type: none"> <li>• Compensation basis.</li> <li>• Frequency.</li> <li>• Overhead percent.</li> </ul> <p>Workday then combines the fully burdened cost rates with project time tracked by workers to calculate project costs.</p> </li> </ul>
Dates	<p>Workday doesn't require or enforce relationships between start and end dates across these project areas:</p> <ul style="list-style-type: none"> <li>• Project.</li> <li>• Project Plan Task.</li> <li>• Resource Plan Line.</li> <li>• Task Resources.</li> </ul> <p>Examples:</p> <ul style="list-style-type: none"> <li>• A project plan task can have an end date after the project end date.</li> <li>• A task resource can have a date range outside the resource plan line.</li> </ul>

**Related Information****Tasks**[Steps: Build Projects](#) on page 1190[Create Projects](#) on page 1202[Create Project Templates](#) on page 1182**Reference: Project Management Reports**

You can use these reports to view your projects at a high level and to manage project details.

Report or Worklet	Description	Security
<b>My Projects</b>	<p>Displays your most frequently used projects.</p> <p>To add a project to the worklet, set it as a favorite from the related actions menu on the project.</p> <p>This worklet only displays projects where users have a direct assignment.</p>	<i>Manage: Project Details</i> domain in the Project Tracking functional area.
<b>View Project</b>	<p>Enables you to view and edit information about existing projects.</p> <p>Workday bases this report on the project profile and profile groups, giving you a composite view of the information.</p> <p>You can configure the information that displays in this report with the <b>Configure Profile</b> and <b>Configure Profile Group</b> tasks.</p>	<i>Manage: Project Details</i> domain in the Project Tracking functional area.
<b>View Project Hierarchy</b>	<p>Enables you to view and edit information on existing project hierarchies. You can:</p> <ul style="list-style-type: none"> <li>• Add workers to resource plan lines.</li> <li>• Configure a project budget.</li> <li>• Create worktag rules.</li> <li>• Restrict time entry for future dates.</li> </ul>	<i>Set Up: Project Hierarchy</i> domain in the Project Tracking functional area.
<b>View Project Plan Timeline</b>	<p>Displays the schedule for project phases and tasks by:</p> <ul style="list-style-type: none"> <li>• Percent complete.</li> <li>• Estimated hours.</li> <li>• Hours logged.</li> <li>• Time remaining.</li> </ul>	<i>Manage: Project Plan</i> domain in the Project Tracking functional area.

For a complete list and description of the Workday standard reports for Projects, access [Workday Standard Reports](#). Then, select the *Projects* report category.

## Related Information

### Concepts

### Tasks

[Configure the Project Profile on page 1166](#)

## Create Projects

### Setup Considerations: Create Projects

You can use this topic to help make decisions when planning your configuration of how users create and edit projects. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Project creation enables you to plan and track the project work for your organization. You can create these types of projects:

- *Basic projects* function solely as worktags on financial transactions and payroll entries.
- *Billable projects* have customer contracts, invoices, and billing.
- *Capital projects* have cost transactions for managing project costs as long-term assets.
- *Nonbillable projects* are internal projects that don't invoice customers.
- *Opportunity projects* are sales opportunities that you can later convert into a project.

### Business Benefits

Workday reduces data entry by enabling you to:

- Copy data from an existing project.
- Use templates to populate common project information.
- Copy data from an idea.

Workday also streamlines project maintenance by enabling project managers to:

- Update existing projects.
- Approve new and updated projects.
- Generate draft customer contracts.

### Use Cases

- Create templates for similar projects to reduce effort, maintain consistency, and avoid errors.
- Set Workday to generate a draft customer contract from a template after a manager approves a billable project.
- Create new projects.
- Create new projects from approved ideas.
- Copy existing projects.
- Update existing projects.
- Approve changes to projects.
- Convert basic projects into fully defined projects.

## Questions to Consider

Questions	Considerations
Do you need projects that only function as worktags?	You can create basic projects to use as worktags on financial transactions and payroll entries.
How do you want to configure templates for your projects?	<p>You can create templates for similar types of projects to populate common information that most users need to enter.</p> <p>Within the project template, you can further simplify project creation by associating these additional templates:</p> <ul style="list-style-type: none"> <li>• Project plans.</li> <li>• Resource plans.</li> <li>• Task resources.</li> <li>• Customer contracts.</li> </ul>
Do you want to use a specific format for the project ID?	You can set a custom format for project IDs on the <b>Edit Tenant Setup - Financials</b> task.
How do you want to maintain consistency between projects?	To maintain consistency, you can define common values for the project fields. Users can then select these predefined values when they create or update a project.
How do you want to create new projects?	<p>You can simplify the process of creating a new project by enabling users to copy existing projects. Users can copy most of the transferable project information. Example: worktags, project plans, and resource plans.</p> <p>You can also enable users to create new projects from an approved idea. This type of project creation includes information you define in the idea.</p> <p>To enable these features, configure the <i>Copy Project</i> and <i>Create Project from Idea</i> initiating actions in the security policy for the <i>Create Project</i> business process.</p>
How do you want to create your customer contracts?	<p>You can simplify the process of creating customer contracts by configuring Workday to generate a draft customer contract after project approval.</p> <p>To enable this feature, add the <i>Create Customer Contract</i> service step to the <i>Create Project</i> business process after the business process completes.</p>
What external links should users add to their projects?	<p>You can enable users to add external links to their projects by configuring URLs that:</p> <ul style="list-style-type: none"> <li>• Enable the <b>External Link</b> option on projects.</li> <li>• Prevent users from adding unauthorized links.</li> </ul> <p>Before you begin, determine which external links your organization approves for project use.</p>

## Recommendations

Create templates to populate fields with information common to all your projects. You can also associate your project templates with these templates:

- Project plans.
- Resource plans.
- Task resources.
- Customer contracts.

Configure the *Create Project* business process to copy projects.

Configure the *Create Project* business process to generate a draft customer contract from a template for billable projects.

## Requirements

Create project hierarchies for your organization before you enable users to create projects.

## Limitations

You can only:

- Add customer contract templates to billable projects.
- Generate draft customer contracts for billable projects you associate with customer contract templates.

## Tenant Setup

To create custom formats for your project IDs, you can configure the **ID Generator for Projects** option in the **Projects** section on the **Edit Tenant Setup - Financials** task.

## Security

Domains	Considerations
<i>Set Up: Tenant Setup - Security</i> in the System functional area	Users can enable external links on projects and specify the URIs.
<i>Business Process Administration</i> in the System functional area	Users can edit the <i>Create Project</i> and <i>Edit Project</i> business processes.
<i>Manage: Business Process Definitions</i> in the System functional area	Users can manage the <i>Create Project</i> and <i>Edit Project</i> business processes.
<i>Manage: Initiatives</i> in the Projects functional area	Users can create and manage importance ratings.
<i>Manage: Project Details</i> in the Project Tracking functional area	Users can: <ul style="list-style-type: none"> <li>• Create and modify importance ratings.</li> <li>• Run the <b>Find Projects</b> report.</li> <li>• View projects.</li> </ul>
<i>Set Up: Basic Project Worktag</i> in the Common Financial Management and Worktags functional areas	Users can create basic projects to use as worktags.
<i>Set Up: Project</i> in the Projects functional area	Users can create and manage project templates.
<i>Set Up: Project Details</i> in the Project Tracking functional area	Users can create and manage: <ul style="list-style-type: none"> <li>• Project statuses.</li> <li>• Importance ratings.</li> </ul>

Domains	Considerations
<i>Set Up: Project Tracking</i> in the Project tracking functional area	<p>Users can:</p> <ul style="list-style-type: none"> <li>• Create and manage success ratings.</li> <li>• Use the <i>Get Projects</i> web service.</li> </ul>
<i>Set Up: Risk and Priorities</i> in the Project Tracking functional area	<p>Users can create and manage:</p> <ul style="list-style-type: none"> <li>• Risk levels.</li> <li>• Work priorities.</li> </ul>

Ensure proper access to these security roles:

Domain Security Roles	Considerations
Project Administrator	<ul style="list-style-type: none"> <li>• Configures tenant setup information.</li> <li>• Edits the <i>Create Project</i> and <i>Edit Project</i> business processes.</li> <li>• Specifies the URIs for external project links.</li> <li>• Creates projects and templates.</li> <li>• Uses web services.</li> </ul>
Project Manager	<ul style="list-style-type: none"> <li>• Creates and updates projects.</li> <li>• Manages and views project information.</li> <li>• Approves changes to projects routed by the <i>Create Project</i> and <i>Edit Project</i> business processes.</li> </ul>

## Business Processes

Business Processes	Considerations
<i>Create Project</i> in the Project Tracking functional area	<p>Enables project administrators to:</p> <ul style="list-style-type: none"> <li>• Create new projects.</li> <li>• Copy existing projects.</li> <li>• Use the <i>Submit Project</i> web service.</li> </ul> <p>Enables project managers to:</p> <ul style="list-style-type: none"> <li>• Create new projects.</li> <li>• Create new projects from approved ideas.</li> <li>• Copy existing projects.</li> <li>• Review and approve new projects.</li> <li>• Generate a draft customer contract for billable projects.</li> </ul>
<i>Edit Project</i> in the Project Tracking functional area	<p>Enables project managers to:</p> <ul style="list-style-type: none"> <li>• Edit existing projects.</li> <li>• Review and approve changes to existing projects.</li> </ul>

## Reporting

Project managers can view the **Find Projects** report to search for existing projects.

## Integrations

Web Services	Considerations
<i>Get Projects</i>	Retrieves projects with your specific criteria. You can request project criteria for a single transaction based on the Reference value, or retrieve all transactions when you don't specify any criteria.
<i>Submit Project</i>	Creates a project and submits it through the <i>Create Project</i> business process for approval.

## Connections and Touchpoints

Features	Considerations
Customer Contracts	When you define project templates for your customer contracts, project managers can select them when they create billable projects. You can enable the <i>Create Project</i> business process to generate a draft contract after project approval.
Time Tracking	You can configure the start and end dates of the project. This date range sets the initial date range for project workers to log time against the project or project tasks.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Create Basic Project Worktags

### Prerequisites

Security: Set Up: Basic Project Worktag domain in the Common Financial Management and Worktags functional areas.

### Context

Basic projects solely consist of a project name and an ID. They function as worktags on financial transactions and payroll entries, eliminating the need to create a fully defined project. You can convert a basic project into a full project later on, if needed.

Basic projects:

- Aren't used to manage a project.
- Don't have detailed project information.
- Don't need enabled financial security domains.

### Steps

1. Access the **Maintain Basic Projects** task.
2. For each new basic project, add a row to the **Basic Projects** grid.
3. As you complete each row, consider:

Option	Description
<b>Project ID</b>	Workday generates an incremental ID.
<b>Project Name</b>	Enter a project name. Workday displays this name on the project worktag.
<b>Inactive</b>	When you set a basic project as inactive, you can't use it as a worktag until you activate it. You can set basic projects as active or inactive using the <b>Maintain Basic Projects</b> task.

### Result

Basic projects are available to use as worktags for:

- All available financial transactions including requisitions, spend authorizations, and expense reports.
- Payroll input by workers.

### Next Steps

- Convert a basic project to a full project with the **Create Project from Project Worktag** task.
- Find and review existing basic projects with the **View Basic Projects** report.
- Review and edit your basic projects with the **Maintain Basic Projects** task. You can change the names of basic projects and set them as active or inactive.

### Related Information

#### Concepts

[Setup Considerations: Create Projects](#) on page 1194

#### Tasks

[Convert Basic Worktags to Full Definitions](#)

[Create Basic Worktags](#)

### Create Project Groups

#### Prerequisites

Security: *Set Up: Project Tracking* domain in Project Tracking functional area.

#### Context

*Project Groups* enable you to organize related projects for categorization, prompting, and reporting purposes. Grouping your projects makes it easier to retrieve and compare them with the **Find Projects** report.

### Steps

1. Access the **Create Project Group** task.

## 2. Add projects.

You can add both active and inactive projects to your group. A project can belong to multiple groups.

## 3. (Optional) Set the project group to *Inactive*.

### Next Steps

- Search for projects by their project group with the **Find Projects** report.
- Add project groups to projects.
- Use the **View Project Group** report to review the projects within a group.

### Configure the Create Project Business Process

#### Prerequisites

Security - These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

#### Context

The *Create Project* business process provides increased visibility and workflow control over the creation of a new project and changes to an existing project.

This business process enables you to:

- Initiate a project.
- Set approvals for security groups.
- Define advancement to the next step in the process.
- Create a draft customer contract from a template.
- Create custom validations for project creation.

You can edit the security policy for the Create Project business process to set the security groups that can:

- Create new projects.
- Copy existing projects.
- Approve new projects.
- Review new project information.

#### Steps

1. Access the **Create Project** business process definition.
2. Select **Business Process > Edit Definition** from the related actions menu.

As you complete the task, consider:

Option	Description
<b>Due Date</b>	The elapsed time from when the process starts until the process is complete.
<b>Due Date is Based on Effective Date</b>	<p>The effective date that the project manager specifies when starting an instance of the business process:</p> <ul style="list-style-type: none"> <li>• If selected, Workday calculates from the effective date of the business process.</li> <li>• If not selected, Workday calculates from the moment the prior step completes.</li> </ul>

3. As you complete the **Business Process Steps**, consider:

Option	Description
<b>Order</b>	Use to set the completion order of the steps. We recommend using letters instead of numbers, because Workday sorts sequentially, not numerically. Example: 10 sorts before 2.
<b>Parallel Step Order in My Tasks</b>	<p>Use to configure the order of parallel steps in the business process. A parallel step is when 2 or more Workflow steps have the same alphanumeric order.</p> <p>The sequence you enter here determines how each parallel step displays in the approver's My Tasks.</p> <p><b>Note:</b> If an approver sorts My Tasks by <b>Newest on Top</b>, Workday displays their tasks in My Tasks in the opposite order of what you configure here.</p>
<b>Type</b>	<p>Use to set the type of step for the business process.</p> <p>A business process always starts with an initiation step.</p> <p>To route changes to the project manager for approval, select <i>Approval</i>.</p> <p>To create a draft customer contract from a customer contract template, select <i>Service</i> and specify <i>Create Customer Contract</i>.</p>
<b>Group</b>	Use to set the type of role that you want to approve the change. You can select more than 1 option.
<b>All</b>	Use if everyone in the specified security groups must complete this step.
<b>Due Date</b>	<p>Use to set the due date for the step.</p> <p>The due date is the amount of time allotted to complete the current step, after the previous step completes.</p>
<b>Due Date is Based on Effective Date</b>	Use to change the starting time to the effective date of this business process instance.
<b>Complete</b>	<p>Use for approval steps.</p> <p>When a <i>Completion</i> step finishes, the business process completes. Completion makes the data available for the <i>Edit Project</i> business process.</p>

4. Enable Workday notifications.

- a) Add *Manager* to the notifications using the **Maintain System Notifications** task.
- b) (Optional) Set up **Custom Notifications**.

## Result

The *Create Project* business process guides the creation and approval of new projects.

### Related Information

#### Concepts

[Concept: Inbox](#)

#### Tasks

[Edit Business Processes](#)

[Edit Business Process Security Policies](#)

[Create Custom Notifications](#)

## Create Projects

### Prerequisites

- Review setup considerations for project creation. See [Setup Considerations: Create Projects](#) on page 1194.
- [Set Up Assignable Roles](#).
- Create a project hierarchy. See [Create Project Hierarchies](#) on page 1174.
- Configure these business processes and security policies in the Project Tracking functional area:
  - *Create Project*
  - *Edit Project*
- Security: *Manage: Project Details* domain in the Project Tracking functional area.

### Context

You can create nonbillable, billable, capital, and opportunity projects. These Workday projects help you to plan and track your work and resources. When you create a new project, you can:

- Copy this data from a similar project:
  - Financials Summary
  - Overview (Summary and Details)
  - Project plan
  - Resource plan
  - Worktags
- Select templates to prefill common project information.
- Enter all your project data manually.

### Steps

1. Access 1 of these options:

- **Create Project** task.
- **Create Opportunity Project** task.
- A project to copy. From the related actions menu of the project, select **Project > Copy Project**. You can only copy the projects and project data that you can access.
- An approved Idea. From the related actions menu of the idea, select **Idea > Create Project**.

2. (Optional) Select 1 or more templates for your project.

If you select a **Customer Contract Template**, Workday creates a billable project.

3. As you complete the **Project Summary** section, consider:

Option	Description
<b>Project Name</b>	You can reuse project names by editing the critical validation rule for project names on the <b>Maintain Custom Validations</b> report.
<b>Start Date</b>	Select the start and end dates for the project.
<b>End Date</b>	These dates control when workers can log time against the project in Time Tracking. Workers can only log time to the project between these 2 dates.
<b>Status</b>	Project previews display this status for informational purposes only. Project Status doesn't control functional behavior.
<b>Owner</b>	Identifies the person responsible for the project. You can use this information for roll-up reporting.
<b>Probability</b>	For an opportunity project, enter a number between 1 and 100 to specify or indicate the probability of converting to a project. Workday appends [O] to the names of opportunity projects. When you sell an opportunity project, you can convert it using the <b>Convert Opportunity Project to Project</b> task.

4. As you complete the **Reference Information** section, consider:

Option	Description
<b>Optional Project Hierarchies</b>	Select additional hierarchies to group projects for reporting purposes.
<b>Project ID</b>	When you leave the <b>Project ID</b> blank, Workday generates a sequential ID. Integrations use the project IDs as a reference and only Workday administrators can change them.
<b>Billable</b>	Select this check box to enable time and expense billing, as well as revenue recognition for the project. Workday makes a project billable when: <ul style="list-style-type: none"> <li>• You link the project to a contract or contract line.</li> <li>• You select a customer contract template.</li> <li>• A worker logs billable time against it.</li> </ul>
<b>Capital</b>	Select to make the project a capital project. When you select this check box, you can't: <ul style="list-style-type: none"> <li>• Review existing transactions tagged to the project for capitalization.</li> <li>• Revert to a noncapital project.</li> </ul>

Option	Description
	A capital project is specific to a single company that you select for the project. You can tag transactions to a capital project when they belong to this company. Workday registers the resulting business assets with the company.
<b>Company</b>	<p>Workday:</p> <ul style="list-style-type: none"> <li>• Populates this company on time blocks when workers log time against the project.</li> <li>• Assigns a worktag for the accounting, unless you override worktags in the operational transaction.</li> </ul>
<b>Project Currency</b>	Workday converts all internal and billable rates to this currency when you report on the project.
<b>Customer</b>	<p>Required for billable projects.</p> <p>Workday:</p> <ul style="list-style-type: none"> <li>• Populates this field on time blocks and worksheets when workers log time against the project.</li> <li>• Assigns a worktag for the accounting, unless you override worktags in the operational transaction.</li> </ul>
<b>Balancing Worktag</b>	<p>For capital projects, when you enable worktag balancing in your tenant, you can select a worktag to balance journals for transactions. The rules evaluate the balancing worktag of the project, not the balancing worktag of the transaction. Workday generates <i>Due To</i> and <i>Due From</i> accounting entries to balance your journal when the values on the transaction and project differ.</p> <p>When you use a cost center as a balancing worktag, you can restrict values to companies or company hierarchies on the <b>Edit Cost Center</b> task.</p>
<b>Optional Balancing Worktags</b>	<p>For capital projects, when you enable optional balancing worktags in your tenant, you can select up to 5 worktags. You can use them with your primary balancing worktag to report on and balance multiple worktags in a single transaction.</p> <p>Workday includes the Project worktag for the project.</p> <p>You can use a cost center as an optional balancing worktag to restrict values to companies or company hierarchies on the <b>Edit Cost Center</b> task.</p>

Option	Description
<b>Project Groups</b>	Associate the project with a group of related projects for easier retrieval and comparison later on. This grouping is useful for roll-up reporting.
<b>External Project Reference</b>	You can associate the project with an external project ID, such as an ID from a third-party project.
<b>External Link</b>	<p>To link the project to an external web site, enter the URL here. Example: <a href="https://zimit.io/">https://zimit.io/</a></p> <p>The URL must match an authorized format specified by your project administrator.</p> <p>You can set up external links for the project using the <b>Maintain External Link Validation</b> task.</p>
<b>Customer Contract Template</b>	<p>For billable projects only.</p> <p>You can configure the Create Project business process to generate a draft customer contract from this template.</p>
<b>Prerequisite For</b>	Displays all projects that have a dependency relationship with this project.
<b>Dependencies</b>	Select a project to create a dependency relationship with your current project. This relationship gives you 2-way visibility into related project details that might impact the current project.

5. As you complete the **Worktags** tab, consider:

- When you select the project on a transaction, Workday populates the transaction with the values in the **Default Worktag** column.
- For worktag balancing, Workday only uses a balancing worktag if you select worktags of the same type in both the:
  - Worktags** grid.
  - Balancing Worktag** field.
- You can set up related worktags for the project using the **Maintain Related Worktag Usage** report.
- When you capitalize a *project asset*, Workday populates the related worktags in the **Location** and **Worktags** fields of the business asset.

6. (Optional) As you complete the **Project Detail** tab, consider:

Option	Description
<b>Percent Complete</b>	When this value is 100%, workers can't log time against the project or its tasks.
<b>Success Rating</b>	<p>After you complete the project, select a success rating.</p> <p>If you reduce the <b>Overall % Complete</b> to less than 100, the <b>Success Rating</b> field clears and becomes read only.</p>

**7. (Optional) Select the **Role Assignment** tab.**

As you complete the tab, consider:

Option	Description
<b>Restricted to Single Assignment</b>	When selected, you can only assign 1 worker to the project role.
<b>Assigned To</b>	Assigns workers to a project role and grants them the appropriate security for their role on the project.

**Note:** Only workers with roles on the project can see project information. You can also limit roles to specific workers on this task.

**8. (Optional) Complete the **Project Plan** tab.**

When you create a new project, you can only access the project plan tasks on the project plan that are:

- Unrestricted.
- Restricted to the project hierarchy of the new project.
- Inherited from the parent hierarchy of the new project.

You can also add your project plan after project approval.

**9. (Optional) Complete the **Resource Plan** tab.**

When you create a new project, you can only access the project roles on the resource plan that are:

- Unrestricted.
- Restricted to the project hierarchy of the new project.
- Inherited from the parent hierarchy of the new project.

You can also add your resource plan after project approval.

## Result

Workday submits the project for review and approval.

## Next Steps

- Identify project risks.
- (Billable projects only) Create customer contracts, and then add contract rates and billing rate rules.
- Create custom objects.
- Associate an idea with the project from the related actions menu.

## Assign Roles to Projects

### Prerequisites

- [Set Up Assignable Roles](#) .
- Create a project hierarchy. See [Create Project Hierarchies](#) on page 1174 .
- Create a project. See [Create Projects](#) on page 1202 .

### Context

For workers to manage project information, you must assign them to a role on either a project or a project hierarchy. Example: Project Resource Manager.

### Steps

1. Access a project or project hierarchy.
2. From the related actions menu of the project or hierarchy, select **Roles > Assign Roles**.
3. Select a starting date for your new role assignments.
4. Click **OK**.
5. Add a row for each new organizational role.
6. Select the organizational role from the **Role** prompt.
7. Select the worker from the **Assigned To** prompt.

[Create Projects](#) on page 1202

## Associate a Project with a Sales Opportunity

### Prerequisites

- Add *Opportunity* as a worktag type for the project transactions on the **Maintain Related Worktag Usage** task.
- Configure derived worktag rules to tag your transactions with the opportunity.
- Configure the *Create Project* business process and security policy in the Project Tracking functional area.

### Context

When you create an opportunity in a third-party software application like Salesforce.com, Workday generates opportunity and prospect worktags. You can use these worktags to tag expense reports, purchase orders, and projects. Tagging a project enables you to track sales expenses before securing the sale or incurring project expenses. This process enables you to track labor costs and expenses for a specific sales deal.

### Steps

1. Access the **Create Opportunity Project** task.
2. Complete the project summary and reference information.
3. Select the related *Opportunity* in the **Default Worktag** column.

## Result

When you generate transactions related to this project, Workday tags the transaction with the opportunity.

## Project Plans

### Setup Considerations: Project Plans

You can use this topic to help make decisions when planning your configuration and use of project plans. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

In Workday, you can use project plans to organize these aspects of a project:

- Project phases
- Project tasks
- Worker assignments
- Timelines
- Risks

### Business Benefits

- Streamline the creation and management of your project plans.
- Reduce data entry for commonly used information.
- Increase efficiency by defining project timelines and setting milestones for billing and tracking.
- Reduce effort, maintain consistency, and avoid errors by controlling the content of project plans.

### Use Cases

- Specify the window of time that workers can record their hours on a project.
- Assign workers to specific project tasks so they can log time against their task assignments.
- Add risks that might affect your project plan, such as extreme weather conditions or personnel turnover.
- Update all dates on your project tasks, task resources, or task-level resource forecasts at once.
- Export project information, such as project plan phases and scheduling information, to an XML file that can be imported into Microsoft® Project.

### Questions to Consider

Questions	Considerations
Do your project plans contain common information?	You can use templates to streamline data entry and reduce user errors.

Questions	Considerations
	When you create templates for project plans and task resources, Workday prefills the common information that most users need to enter.
How do you want to organize the work for your project plans?	<p>Workday organizes your project work into:</p> <ul style="list-style-type: none"> <li>• Phases that sequence the work for the project. Project phases are a required component of project plans.</li> <li>• Tasks that define the work details of the project phases. Project tasks are an optional component of project plans. When you configure project tasks, you can also create detailed resource forecasts and detailed project budgets.</li> </ul> <p>You can create project plans that have:</p> <ul style="list-style-type: none"> <li>• A flat structure with project plan phases all at the same level. These standard project plans enable you to use templates to prefill common information.</li> <li>• A tree structure with up to 9 child phases under each top-level project plan phase. These multilevel project plans enable you to create detailed Advanced reports.</li> </ul>
How do you want to make project tasks available for project plans?	<p>You can restrict project tasks to specific project hierarchies, ensuring that the tasks are only available to the project plans for the projects on:</p> <ul style="list-style-type: none"> <li>• The restricted project hierarchy.</li> <li>• A parent project hierarchy.</li> </ul> <p>By restricting the project tasks, you ensure that project managers only see the tasks that are relevant to their project.</p> <p><b>Note:</b> When you don't restrict a project task to a hierarchy, it's available for use on all projects on all hierarchies.</p>
Do you need custom names for your project plan tasks?	<p>You can create custom names for your project plan tasks to ensure that the names are relevant to your projects.</p> <p>To create custom task names, you must first enable the security policy for the <i>Manage: Project Custom Task Name</i> domain.</p>
What date range do you want to set for workers logging their time on a project?	<p>By default, Workday sets the date range for time entry to the start and end dates of the project.</p> <p>You can configure a narrower date range for workers to log their time when you set up the tenant by using the dates specified in:</p> <ul style="list-style-type: none"> <li>• Resource plans.</li> <li>• Project plan tasks.</li> <li>• Task resources.</li> </ul>

Questions	Considerations
	You can use multiple sources to narrow the date range. Workers can only log time where the selected date ranges overlap.
Do you want to define the severity levels for your project risks?	You can define the severity levels of your project risks, to ensure data consistency. Determine the security levels for your project risks before you set up your project plans.

## Recommendations

- Create templates for your standard project plans and your task resources to reduce the time users spend on data entry. Workday populates the fields on the project plan with information from its associated template.
- Restrict project plan tasks to the relevant project hierarchies for simplified task selection.

## Requirements

Create a project. You can only create a project plan for an existing project.

## Limitations

- Workday didn't design project plans for use with Agile methodologies.
- Project plan tasks don't have dependencies. You can't initiate a cascading update of the dates on project plan tasks.
- If a project plan has more than 500 rows of phases and tasks in the **Project Plan** grid, Workday has reduced performance.
- Multilevel project plans don't allow you to:
  - Copy them when you create a new project by copying an existing project.
  - Create project plan templates.
  - Export multilevel project plans to Microsoft Project.
- The **Project Planner** report doesn't:
  - Support data sorting.
  - Copy from the previous row.
  - Have related actions directly from the project plan phases, tasks, or resources. To access related actions, click the hyperlink for the project plan phase or project plan task and select the menu in the preview window.

## Tenant Setup

Access the **Projects** section on the **Edit Tenant Setup - Financials** task to set the date range within which workers can record their hours on a project.

## Security

Domains	Considerations
<i>Manage: Project Integration</i> in the Projects functional area	Enables users to export project information for use with Microsoft Project.
<i>Manage: Project Plan</i> in the Project Tracking functional area	Enables users to manage and view information for both standard and multilevel project plans.

Domains	Considerations
<i>Manage: Project Task Resources</i> in the Projects functional area	Enables users to manage project plan tasks.
<i>Set Up: Project Details</i> in the Project Tracking functional area	Enables users to manage the configuration for project details, including phases and tasks.
<i>Manage: Project Details</i> in the Project Tracking functional area	Enables users to manage and view existing projects.
<i>Manage: Project Custom Task Name</i> in the Project Tracking functional area	Enables users to create and edit custom task names.

To ensure proper access, review these team member roles and activities:

Domain Security Roles	Responsibilities
Project Administrator	<ul style="list-style-type: none"> <li>Configures tenant setup information.</li> <li>Configures the <b>Project Plan</b> and <b>Project Planner</b> reports.</li> <li>Creates projects.</li> </ul>
Project Manager	<ul style="list-style-type: none"> <li>Creates projects with project plans.</li> <li>Manages the project plan, project phases, and project tasks.</li> <li>Assigns task resources.</li> </ul>
Project Workers	Log time on their assigned project plan tasks using Time Tracking.

## Business Processes

No impact.

## Reporting

Report	Description
<b>Project Planner</b>	Create, edit, and view a project plan on 1 page.
<b>View Project Plan</b>	Displays the project plan.
<b>View Project Plan Timeline</b>	Displays the schedule for project phases and tasks.

You can use these report data sources to create custom reports:

- Project Time Blocks Approved Between a Date Range
- Project Plan Phases
- Project Plan Tasks
- Project Task Resources

## Integrations

Web Services	Considerations
<i>Get Project Plans</i>	Enables you to manage project plans.

Web Services	Considerations
<i>Put Project Plan</i>	
<i>Get Project Plan without Dependencies</i>	Enables you to retrieve multilevel project plans without retaining the parent and child relationships between the phase levels.
<i>Get Project Phases</i> <i>Put Project Phase</i>	Enables you to manage project phases.
<i>Get Project Tasks</i> <i>Put Project Task</i>	Enables you to manage project tasks. For <i>Put</i> , all task names must be unique, not just the task IDs.
<i>Get Project Task Resources</i> <i>Put Project Task Resources</i>	Enables you to manage project task resources.

### Connections and Touchpoints

Features	Considerations
Time Tracking	You can restrict workers to log only their time during the dates on their project plan tasks, task resource assignments, or both. Workers can only log time where the selected date ranges overlap.
Project hierarchies	You can restrict project plan tasks to specific project hierarchies. This restriction ensures that project managers only see the tasks that are relevant to their business unit, not all of the tasks in the tenant.
Resource plans	You need to first create a resource plan for your project and assign workers to it. Then you can assign workers to the project tasks in your project plan.
Resource forecasts	You can create resource forecasts based on your task resource assignments.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[2022R2 What's New Post: Project Planner](#)

[2021R2 What's New Post: Project Planner](#)

[Example: Simplify the Selection of Project Tasks on Project Plans](#) on page 1221

## Steps: Set Up Project Plans

### Prerequisites

- Create project hierarchies.
- Review setup considerations for project plans.

### Context

You can use project plans to organize these aspects of your projects:

- Risks.
- Time lines.
- Work details, such as project phases, project tasks, and worker assignments.

Configure your project plans to:

- Include project phases that organize and sequence the project work.
- Include tasks that define the work details within each of the project phases.
- Use custom task names.
- Restrict time entry to the date ranges for the project plan, the task resources, or both.
- Use templates that simplify the creation of your project plans and task resources.

**Note:** At this time, both the Project Plan and Project Planner reports are available for your project management needs, but the Project Plan report will be retired in a future release. Workday recommends that you use the Project Planner for a more streamlined project management workflow.

### Steps

1. (Optional) Access the **Edit Tenant Setup - Financials** task.

Select 1 or more of these check boxes in the **Projects** section:

- **Use Project Plan Task Dates**
- **Use Task Resource Dates**

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

2. (Optional) [Configure the Project Profile](#) on page 1166.

To replace the **Project Plan** report with the **Project Planner** report on the **Project Plan** tab of the project profile:

- a. Access the **Configure Profile Group** task.
- b. Select the Project Plan for Project Composite View Profile group.
- c. Add the **Project Planner** report to the profile group.
- d. Remove the **Project Plan** report from the profile group.

3. Access the **Maintain Project Phases** task.

Add the project phases that categorize and sequence the work for your projects. Example: *Plan and Strategize*.

You select these phases when you create a new plan or edit an existing one.

Security: *Set Up: Project Details* domain in the Project Tracking functional area.

4. (Optional) [Create Project Tasks](#) on page 1214.

Create the tasks that define the project work.

5. (Optional) [Edit Domain Security Policies](#).

Enable the *Manage: Project Custom Task Name* domain in the Project Tracking functional area to use custom task names in your project plans.

**6. Access the **Maintain Risk Severities** task.**

Add the risk severity levels for your projects. You can select these risks when you edit your project plans.

Security: *Set Up: Risk and Priorities* domain in the Project Tracking functional area.

**7. (Optional) [Create Project Plan Templates](#) on page 1184.**

Create templates for projects with similar project plan types to populate them with common information.

You can only create templates for standard project plans.

**8. (Optional) [Create Project Task Resource Templates](#) on page 1187.**

Create templates for projects with similar task resources to populate them with common information.

## Next Steps

- Create projects.
- Create project plans.

## Related Information

### Concepts

[Setup Considerations: Project Plans](#) on page 1208

[Create Project Hierarchies](#) on page 1174

[2021R2 What's New Post: Project Planner](#)

[Reference: Edit Tenant Setup - Financials](#)

## Create Project Tasks

### Prerequisites

- Create a project hierarchy.
- Security: *Set Up: Project Details* domain in the Project Tracking functional area.

### Context

Project tasks define the work details of a project. You can add these tasks on:

- Project plan phases.
- Task resources.

You can also create resource forecasts based on project plan tasks to view detailed work estimates.

### Steps

1. Access the **Maintain Project Tasks** task.
2. For each new task, add a row to the **Project Tasks** grid.
3. As you complete the task, consider:

Option	Description
<b>Project Task Name</b>	<p>Enter a name for the task.</p> <p>Users see this name when selecting tasks on the:</p> <ul style="list-style-type: none"> <li>• Project plan.</li> <li>• Task resources.</li> </ul> <p>Workday also displays this name on task-level resource forecasts.</p>

Option	Description
<b>Restricted to Project Hierarchies</b>	<p>(Optional) To limit the use of a project task to the project plans on a specific set of projects, select 1 or more project hierarchies.</p> <p>Restricting tasks to project hierarchies ensures that only the relevant tasks are available on the project plans under those hierarchies.</p> <p><b>Note:</b> If you add an unrestricted project task to a project plan, and then later restrict the same task to a different project hierarchy:</p> <ul style="list-style-type: none"> <li>• The restricted task remains on the original project plan.</li> <li>• You can't add another occurrence of the restricted task to the project plan.</li> </ul> <p>You can use unrestricted project tasks on all project plans on all hierarchies.</p>
<b>In Use</b>	<p>This setting is read-only. Workday marks the check box when a project task is associated with 1 or more project plans.</p>
<b>Inactive</b>	<p>Select for unused or obsolete project tasks. When selected:</p> <ul style="list-style-type: none"> <li>• You can hide the inactive tasks in custom reports.</li> <li>• Workday prevents project workers from charging their time to inactive tasks.</li> <li>• Workday prevents inactive tasks from displaying on drop-down menus.</li> <li>• You can hide worktags for inactive project tasks with the <b>Maintain Worktag Usage</b> report.</li> </ul> <p><b>Note:</b> You can still add inactive tasks by searching for the names of the tasks in the prompts on:</p> <ul style="list-style-type: none"> <li>• Project plans.</li> <li>• Project plan templates.</li> </ul>

## Next Steps

Create project plans.

### Related Information Concepts

[Create Project Hierarchies](#) on page 1174

[Example: Simplify the Selection of Project Tasks on Project Plans](#) on page 1221

### Create Project Plans

#### Prerequisites

Set up project plans. See [Steps: Set Up Project Plans](#) on page 1213 .

Create a project. See [Create Projects](#) on page 1202 .

Security domains in the Project Tracking functional area:

- *Manage: Project Plan*
- *Set Up: Project Details*

## Context

You can use Workday project plans to capture the details of a project from start to finish, by:

- Listing the phases and tasks that define your project work.
- Designating milestones for your project.
- Marking specific tasks as nonbillable to exclude the associated work hours from billing and revenue forecasts.
- Marking specific tasks for reports on actual utilization.

## Steps

1. Access 1 of these options:

- **Create Project Plan** task.
- **Project Planner** tab on the **Project Plan** profile group for the project.

Before you can use the **Project Planner** report, you first need to add it to the **Project Plan** profile group. See [Steps: Set Up Project Plans](#) on page 1213 .

2. As you complete the project plan, consider:

Option	Description
<b>Phases and Tasks</b>	Once you assign phases and tasks to the project, Workday creates a project-specific instance of them for reporting purposes.
<b>Start Date</b> <b>End Date</b>	Set these dates to control the number of tasks that workers can select when they enter the time they work on a project.
<b>Non-Billable</b>	For billable projects only. You can mark a task as nonbillable to: <ul style="list-style-type: none"> <li>• Create custom validations to exclude billing for nonbillable tasks.</li> <li>• Exclude hours from revenue forecast calculations on project budgets.</li> <li>• Set filters to generate reports listing nonbillable tasks, billable tasks, or both.</li> </ul>
<b>Milestone</b>	Use milestones for reporting and invoicing billable projects.
<b>Utilization</b>	Select if the time block for this task qualifies for actual utilization. When selected, you can create a custom report to determine utilization.

## Result

Workday populates the project plan with your information.

## Next Steps

- Create a multilevel project plan.
- Create a resource plan.
- Allocate workers to project plan tasks.

## Related Information

[2022R2 What's New Post: Project Planner](#)

[2021R2 What's New Post: Project Planner](#)

## Create Multilevel Project Plans

### Prerequisites

Create a project plan.

Security: *Manage: Project Plan* domain in the Project Tracking functional area.

### Context

You can create multilevel project plans to manage your project work. Workday structures multilevel project plans to:

- Improve plan organization.
- Increase the granularity of custom reports.

Multilevel project plans can include up to 9 child phases under each top-level parent phase. Each phase level can include an unlimited number of project plan tasks. When a project plan task is associated with a transaction, you can't delete the:

- Project plan task.
- Project plan phase or any of its parent phases.

### Steps

1. Access 1 of these options:

- **Manage Project Plan Levels** task.
- **Project Planner** tab on the **Project Plan** profile group for the project.

Before you can use the **Project Planner** report, you first need to add it to the **Project Plan** profile group.

2. As you complete the multilevel project plan, consider:

Option	Description
<b>Child Phases and Tasks</b>	Once you assign child phases and tasks to the project, Workday creates a project-specific instance of them for reporting purposes.  If a project plan has more than 500 rows of phases and tasks in the Project Plan grid, Workday has reduced performance.

Option	Description
<b>Start Date</b>	Set these dates to control the number of tasks that workers can select when they enter the time they work on a project.
<b>End Date</b>	For billable projects only. You can mark a task as nonbillable to: <ul style="list-style-type: none"> <li>• Create custom validations to exclude billing for nonbillable tasks.</li> <li>• Exclude hours from revenue forecast calculations on project budgets.</li> <li>• Set filters to generate reports listing nonbillable tasks, billable tasks, or both.</li> </ul>
<b>Non-Billable</b>	
<b>Milestone</b>	Use milestones for reporting and invoicing billable projects.
<b>Utilization</b>	Select if the time block for this task qualifies for actual utilization. When selected, you can create a custom report to determine utilization.

## Result

When you view a project plan, you can view and edit the new child phases and their associated project plan tasks.

## Next Steps

- Allocate workers to project plan tasks.
- Create resource plans.
- Revert a multilevel project plan back to a standard project plan from the project menu on the **Manage Project Plan Levels** task.

**Note:** You can't revert to a standard project plan when project plan tasks are associated with transactions.

[2023R2 What's New Post: Task Resources in Project Planner](#)

[2022R2 What's New Post: Project Planner](#)

## Mass Update Project Task Dates

### Prerequisites

Create a project with project plan tasks, task resources, or a task-level resource forecast.

#### Security:

- *Manage: Project Plan* domain in Project Tracking functional area.
- *Manage: Project Resource Forecast* domain in the Projects functional area.
- *Manage: Project Task Resources* domain in the Projects functional area.

## Context

You can update start and end dates or hourly allocation dates simultaneously across:

- Project tasks.
- Task resources.
- Resource forecast lines at the task-level.

Mass updating improves the reliability of dates throughout a project and the accuracy of your resource allocations.

## Steps

1. Access the project.
2. (Optional) To mass update the project plan tasks:
  - a. Click the **Project Plan** tab.
  - b. Select 1 of these reports:
    - **Project Plan**
    - **Project Planner**
  - c. Click **Mass Update**.

You can either move or set specific start and end dates for the project plan tasks.
3. (Optional) To mass update the task resources:
  - a. Click the **Project Plan** tab.
  - b. Select the **Task Resources** report.
  - c. Click **Mass Update**.

You can either move or set specific start and end dates for the task resources.
4. (Optional) To mass update the resource forecast:
 

**Note:** You can only update resource forecasts that use project plan tasks for the forecast level view.

  - a. Click the **Resources** tab.
  - b. Select the **Resource Forecast** report.
  - c. Click **Mass Update**.

## Result

When you have potentially impacted dates or hourly allocations, Workday displays 1 of these tasks:

- **Mass Update Task Resources:** Displays when date changes on the project plan tasks impact the dates on the task resource lines.
- **Mass Update Resource Forecast:** Displays when date changes on the task resources impact the hourly allocations on the resource forecast line.

## Next Steps

From the resource plan, synchronize the start and end dates between the resource plan lines and the task resource lines.

### Export Project Plans for Microsoft Project

#### Prerequisites

**Note:** The solutions described in this section are not part of the Workday Service. See [Legal Notice](#) for details.

- Create and approve a project plan.

- Security: Manage: Project Integration domain in Projects functional area.

## Context

You can export a snapshot of a standard project plan for use in Microsoft Project while you continue to manage your projects in Workday.

**Note:** You can only export standard project plans to Microsoft Project. You can't export multilevel project plans.

## Steps

1. Access the project.
2. Select the **Project Plan** tab.
3. Click **Export for Microsoft Project**.
4. Access your Notifications, and then click **My Reports**.

The exported XML file displays in a time-stamped list of files.

5. Open Microsoft Project and import the XML file as a new project.

Workday exports the project plan phases and the task dates to Microsoft Project:

- As is, for all the phases and the tasks, when the tasks have both start and end dates.
- As the phase and either the task start date or end date, when a task date is missing.
- As the project start date, if both the task start and end dates are missing.

## Result

In Microsoft Project, the Workday project plan phase and task fields map to these Microsoft Project fields:

Workday Field	Microsoft Project Field
Phase	Task Name
Task	Task Name (indented)
Start Date	Start
End Date	Finish
% Complete	% Work Complete
Milestone	Milestone
Memo	Notes

## Concept: Project Plans

You can use project plans to organize projects into phases and tasks:

- Project plan phases organize and sequence each stage of the project work. Example: Plan and Strategize.
- Project plan tasks define the work details in each project phase. Example: Define Project Objectives.

Project plans enable you to:

- Assign resources to project plan tasks.
- Monitor project timelines.
- Set date ranges for workers to log their time on a project.
- Specify project risks.
- Streamline data entry by creating templates.

## Types of Project Plans

You can create 2 types of project plans:

- Standard
- Multilevel

Standard project plans have a flat structure, with the project plan phases all at the same level. Example:

- Project Plan Phase 1
  - Task a
  - Task b
- Project Plan Phase 2
  - Task c
  - Task d

Multilevel project plans have a tree structure. You can add up to 9 project plan phases under each top-level parent phase. Multilevel project plans can include more details about your project work, improve organization, and increase the granularity of your custom reports. Example:

- Parent Project Plan Phase 1
  - Task a
  - Child Project Plan Phase 1.1
    - Task b
  - Child Project Plan Phase 1.2
    - Grandchild Project Plan Phase 1.2.1
      - Task c
- Parent Project Plan Phase 2
  - Task d

[2023R2 What's New Post: Task Resources in Project Planner](#)

[2021R2 What's New Post: Project Planner](#)

### **Example: Simplify the Selection of Project Tasks on Project Plans**

This example explains how to simplify the selection of project tasks for your Workday users when they create project plans. You can accomplish this simplification by restricting project tasks to project hierarchies.

### **Context**

By default, Workday doesn't restrict project tasks to project hierarchies. Users can view and select all of the project tasks available in Workday on their project plans. Not all of these project tasks are relevant to a specific project and can confuse users, leading to data entry errors and inconsistent project plans.

You want to ensure that only relevant project tasks are available to users on project plans. To limit project tasks to a specific set of projects, you restrict the appropriate project tasks to a specific project hierarchy.

Users can then only select the restricted project tasks when they create project plans for the projects on the selected hierarchy.

### **Prerequisites**

Create a primary project hierarchy with this name: Services Projects

Security: Set Up: *Project Details* domain in the Project Tracking functional area.

## Steps

1. Access the **Maintain Project Tasks** task.
2. Add 2 rows to the **Project Tasks** grid.
3. Enter these values for the new rows on the **Project Tasks** grid:

Option	Value
<b>Project Task Name</b>	<ul style="list-style-type: none"> <li>• Row 1: <i>Business Plan</i></li> <li>• Row 2: <i>Approve Business Plan</i></li> </ul>
<b>Restricted to Project Hierarchies</b>	<ul style="list-style-type: none"> <li>• Row 1: <i>Services Projects</i></li> <li>• Row 2: <i>Services Projects</i></li> </ul>

4. Click **OK**.
5. Click **Done**.

## Result

When users create project plans for their projects, Workday only displays these restricted project plan tasks on the projects associated with the Services Projects hierarchy:

- Business Plan
- Approve Business Plan

Workday hides these restricted project tasks on the project plans for all other projects on all other hierarchies.

Unrestricted project tasks are available on all project plans for all projects on all hierarchies throughout Workday.

## Next Steps

- Create projects.
- Create project plans.

## Example: Create Advanced Report for Expenses Using Multilevel Project Plans

This example explains how to create an advanced report for a single project that rolls up project expenses on a multilevel project plan.

**Note:** You can only roll up Workday advanced reports to 7 groups.

## Context

A project manager wants to view the expenses for their project on each project plan phase.

## Prerequisites

- Create a project with a multilevel project plan and a resource plan.
- Assign resources to project tasks.
- Create expense report lines for the relevant project plan tasks across the project plan and top-level project plan phases.
- Security: These domains in the System functional area:
  - *Custom Field Management*
  - *Custom Report Creation*

## Steps

1. Access the **Create Calculated Field** task.

2. Enter these values:

Option	Value
<b>Field Name</b>	<i>2nd Level Project Plan Phase</i>
<b>Business Object</b>	<i>Expense Report Lines and Itemizations</i>
<b>Function</b>	<i>Lookup Related Value</i>

3. Click **OK**.

4. Select these values on the **Create Calculated Field - Lookup Related Value** page:

Option	Value
<b>Lookup Field</b>	<i>Project Plan Task</i>
<b>Return Value</b>	<i>Project Plan Phase Level 2</i>

5. Click **OK**.

6. Click **Create Another Calculation**.

7. Enter these values:

Option	Value
<b>Field Name</b>	<i>3rd Level Project Plan Phase</i>
<b>Business Object</b>	<i>Expense Report Lines and Itemizations</i>
<b>Function</b>	<i>Lookup Related Value</i>

8. Click **OK**.

9. Select these values on the **Create Calculated Field - Lookup Related Value** page:

Option	Value
<b>Lookup Field</b>	<i>Project Plan Task</i>
<b>Return Value</b>	<i>Project Plan Phase Level 3</i>

10. Click **OK**.

11. Click **Done**.

12. Access the **Create Custom Report** task.

13. Enter these values:

Option	Value
Report Name	<i>Multilevel Expense Report</i>
Report Type	<i>Advanced</i>
Optimized for Performance	<i>Checked</i>
Data Source	<i>Expense Report Lines and Itemizations</i>

14. Click **OK**.

15. Add rows with these field values to the grid on the **Columns** tab:

- a. Group Name
- b. Worker
- c. Expense Report Created By Worker for Line
- d. Expense Report Line
- e. Expense Line Reimbursement Amount

16. Verify that the business object on each row is set to *Expense Report Lines and Itemizations*.

17. Select **Sum** from the **Options** prompt on the *Expense Line Reimbursement Amount* row.

18. Add rows with these field values to the **Sort and Group** grid on the **Sort** tab:

- a. Project
- b. Project Plan Phase
- c. 2nd Level Project Plan Phase (Calculated field)
- d. 3rd Level Project Plan Phase (Calculated field)
- e. Project Plan Task
- f. Worker

19. Verify that the **Sort Direction** on each row is set to *Alphabetical - Ascending*.

20. Select these check boxes for each row:

- Display Headers
- Display Subtotals

21. Select the **Enable Outlining based on Grouping** check box in the **Grouping and Totaling Options** section.

22. Add a row with these values to the **Filter on Instances** grid on the **Filter** tab, and then select these values:

Option	Value
And/Or	<i>And</i>
Field	<i>Project</i>
Operator	<i>in the selection list</i>
Comparison Type	<i>Prompt the user for the value</i>
Comparison Value	<i>Default Prompt</i>

23. Click **OK**.

24. Click **Run**.

25. Click **OK**.

## Result

You have a multilevel expense report that rolls up to the phase level.

**Related Information****Concepts**[Create Projects](#) on page 1202[Create Project Plans](#) on page 1215[Create Multilevel Project Plans](#) on page 1217[Create Resource Plans](#) on page 1275[Create Expense Lines](#) on page 1816**Reference: Keyboard Shortcuts for Project Planner**

## Project Manager Hub

### Steps: Set Up Project Manager Hub

#### Prerequisites

Security: *Set Up: Tenant Setup - Hub* domain in the Projects functional area.

#### Context

The Project Manager Hub is a centralized landing page that helps project managers navigate to the tasks and reports that are most relevant to them. Project managers can use this hub to manage and gain insight into their projects.

You can configure the hub by:

- Adding announcements.
- Adding links.
- Configuring card attributes and parameters.
- Customizing hub cards.
- Customizing hub sections.

#### Steps

##### 1. Set Up Hubs.

As you complete the **Content** tab of the **Maintain Hubs** task select either:

- **Default Sections and Cards** to enable Workday to update the Project Manager Hub with:
  - The default configurations.
  - New enhancements.
- **Customize Sections and Cards** to:
  - Add or remove sections.
  - Change the order of your cards.
  - Prevent Workday from automatically updating the Project Manager Hub with new enhancements.

##### 2. (Optional) Configure Project Manager Hub Cards on page 1226.

Customize the parameters and information on the project manager hub cards.

##### 3. (Optional) Add cards to the People Experience Home page.

See [Steps: Set Up People Experience](#).

##### 4. Edit Domain Security Policies.

Set up the *View: Project Manager Hub* domain security policy.

##### 5. Activate Pending Security Policy Changes.

#### Related Information

##### Tasks

[Steps: Build Projects](#) on page 1190

##### Reference

[2023R1 What's New Post: Configure Project Manager Hub Cards](#)

## Configure Project Manager Hub Cards

#### Prerequisites

- Set up the Project Manager Hub. See [Steps: Set Up Project Manager Hub](#) on page 1226.

- Security: *Set Up: Tenant Setup - General* domain in the System functional area.

## Context

You can configure some cards in the Project Manager Hub with custom attributes, such as titles and help text. You can also configure the parameters of some cards, to change the information they display based on your organization's needs.

## Steps

1. Access the **Configure Card Overrides by Admin** task.
2. Add the cards that you want to configure in the grid and click **OK**.
3. Select the card that you want to edit.
4. (Optional) As you complete the **Informational Text** tab, add helpful information about your custom settings.
5. (Optional) As you complete the **Parameter** tab, configure the information displayed on the card.  
Example: Change the aging range of transactions displayed on the Transactions Awaiting Review Cards.
6. (Optional) As you complete the **Overflow Menu** tab, add links to the drop-down menu on the card.  
Select the **Security Group** or **Condition Rule** option to add a security requirement for your custom links. Other security requirements still apply to tasks, reports, or dashboards you link to.

## Related Information

### Reference

[2023R1 What's New Post: Configure Project Manager Hub Cards](#)

### Reference: Project Manager Hub Cards

Workday displays cards in the Project Manager Hub to centralize insights and prioritize relevant tasks. To access these cards, you must have access to the *View: Project Manager Hub* domain in the Projects functional area.

You can configure the Project Manager Hub cards in order to suit your organization's specific needs.

Workday displays these cards in the Project Manager Hub:

Card	Security	Description
My Projects	Either of these domains in the Project Tracking functional area: <ul style="list-style-type: none"> <li>• <i>Manage: Project Details</i></li> <li>• <i>View: Project</i></li> </ul>	You can view your active projects within a range of weeks that you enter and set the number of weeks that activate the visual indicators.  You can navigate to specific projects.  Visual indicators: <ul style="list-style-type: none"> <li>• Red for approaching end dates.</li> <li>• Yellow for approaching start dates.</li> <li>• Gray for finished projects.</li> <li>• Blue for projects in progress.</li> </ul>
Tasks Ending	Both:	You can view project plan tasks that are incomplete and enter the number of weeks to:

## 2023R1 What's New Post: Configure Project Manager Hub Cards

### Project Transactions

#### Create Ad Hoc Project Transactions

##### Prerequisites

- Create custom references for ad hoc project transactions.
- For Time transactions, create a project with assigned workers on the resource plan.
- For Spend transactions, create a project.
- Configure the *Ad Hoc Project Transaction Event* business process and security policy in the Project Billing and Projects functional areas.

##### Context

Ad hoc project transactions provide flexibility when you log transactions in Workday. You can use ad hoc project transactions to:

- Create one-off Time transactions for all projects requiring immediate action without using Workday Time Tracking.
- Directly charge Spend transactions against projects without using Workday Expenses or Workday Supplier Accounts. Spend transactions include:
  - Expenses.
  - Miscellaneous expenses.
  - Supplier invoices.
- Integrate your external time tracking and spend transactions with Workday.
- Migrate your project billing into Workday and generate invoices and accounting internally.

##### Steps

1. Access the **Create Ad Hoc Project Transactions** task.
2. Enter transaction details.

Users assigned to only 1 of the security domains might have limited access to these options:

- Billing Status
- Include Cost
- Standard Cost Rate
- Cost Currency
- Rate to Bill
- Billing Currency

As you enter task details, consider:

Option	Description
<b>Billing Status</b>	Select <i>Do Not Bill</i> when you don't want to invoice your expense to the customer.
<b>Worker</b>	(Expense, Miscellaneous Expense, and Time) Displays all workers on the resource plan on the project.
<b>Supplier</b>	(Miscellaneous Expense and Supplier Invoice) Select a supplier to provide your item.

Option	Description
<b>Project Phase</b>	(Expense, Miscellaneous Expense, and Supplier Invoice) Displays only top-level phases for the billable project.
<b>Project Task</b>	(Expense, Miscellaneous Expense, and Supplier Invoice) Displays all tasks from all phase levels for the billable project.  (Time) Displays all tasks from all phase levels assigned to the selected worker.
<b>Project Role</b>	(Time) Populates based on your selection for <b>Transaction Date</b> , <b>Worker</b> , and <b>Project Task</b> if applicable.
<b>Include Cost</b>	(Expense, Miscellaneous Expense, and Supplier Invoice) Select to include a <b>Unit Cost Amount</b> and <b>Extended Cost Amount</b> for the transaction.  (Time) Select to calculate the <b>Standard Cost Amount</b> and fully burdened cost amount for the transaction.  Workday automatically selects this check box.
<b>Standard Cost Rate</b>	(Time) Enter a rate amount to override the standard cost rate from the resource plan line or the project standard cost rate sheet if 1 exists.
<b>Cost Currency</b>	(Time) Workday converts the <b>Standard Cost Amount</b> to the <b>Cost Currency</b> .
<b>Rate to Bill</b>	(Time) For billable projects, enter a rate amount to override the billing rate from the contract rate sheet if 1 exists.
<b>Billing Currency</b>	When you enter a currency different than the customer contract currency, Workday converts the <b>Amount to Bill</b> to the billing currency.
<b>Spend Category</b>	(Expense, Miscellaneous Expense, and Supplier Invoice) Select to associate items with their account posting rules and provide details for creating invoices. When you select an item before specifying the spend category, you can't change the value assigned to the item.
<b>Worktags</b>	The worktag derivation rules specified for the project hierarchy, or the worktags assigned to the contract line, determine the worktag assignment for the transaction. For billed transactions, the worktags apply when you create accounting entries. You can add or change worktags if needed.
<b>Memo</b>	For billable projects, this field displays in the note section of the customer invoice.
<b>Custom Reference 1</b>	Enter additional ad hoc project transactions details for billing and reporting purposes.

Option	Description
<b>Custom Reference 2</b>	Displays when you select the <b>Enabled</b> check box on the <b>Enable Ad Hoc Project Transaction Custom References</b> task.
<b>Custom Reference 3</b>	
<b>Custom Reference 4</b>	
<b>Custom Reference 5</b>	When you enter a <b>Reference Name</b> on the <b>Enable Ad Hoc Project Transaction Custom References</b> task, Workday displays the reference name instead of the Workday-delivered custom reference.

## Result

The ad hoc project transactions for the billable project become available for review on the **Manage Project Billing Transactions** task.

## Next Steps

Review the billable project transactions.

## Steps: Set Up Project Transaction Summaries

### Prerequisites

Projects you want to include in the project transaction summary must:

- Belong to an active and approved project hierarchy.
- Be active, and have a start and end date, resource forecast, and currency.
- Have a project state set to **Project**.

### Context

As a project portfolio manager, you can use a single consolidated data source to generate your custom reports. This consolidated source can contain data related to project time, cost, and revenue. The reports can summarize data at a monthly level for unique combinations of project resources and roles.

**Note:** Workday only includes data that's within the project start and end dates.

### Steps

1. Access the **Configure Project Transaction Summary** task.

Security: *Set Up: Project Hierarchy* domain in the Project Tracking functional area.

2. Select eligible project hierarchies and projects to include in the data source.

3. Schedule the creation date for the data source.

4. (Optional) Access the **Update Project Transaction Summary** task.

Run an ad hoc data refresh of specific projects, or for events not tracked by the daily refresh.

Security: *Manage: Project Transaction Summary* domain in the Project Tracking functional area.

## Result

When the scheduled job is complete, you can report on the summarized data. Workday refreshes the data daily, factoring in changes to:

- Project attributes: start and end dates, Inactive and Billable flags, currency, state, and status.
- Project hierarchy: new project or hierarchy added; hierarchy removed, moved, or marked inactive.
- Worker time block hours.
- Resource forecast hours.
- Resource plan lines.
- Contract rates.
- Cost rates for forecasted hours.

You can select the **Disable Project Transaction Summary** check box to disable the daily data refresh.

## Next Steps

- Create custom reports using the Project Transaction Summary data source.

## Project Portfolios

### Steps: Manage Project Portfolios and Funding

#### Context

You can create project portfolios to group your nonbillable projects and other project portfolios. You can then allocate funding from the top-level or parent portfolio to the subordinate or children projects and project portfolios. This feature enables you to track project actuals against allocated funding to guide your portfolio management decisions.

#### Steps

1. Set up the security policies for these domains in the Projects functional area:

- *Manage: Project Portfolios* grants access to:
  - The **Create Project Portfolio** task.
  - The **Edit Project Portfolio** task.
  - The **Project Portfolio** Report Data Source.
  - The **View Project Portfolio** report.
- *Manage: Project Portfolio Funding* grants access to:
  - The **Manage Project Portfolio Funding** task.
  - The **View Project Portfolio** report.
  - Funding and Project Budget amount-related fields on the Create and Edit tasks and View reports.
  - Currency type report fields on the Project Portfolio business object.

2. Access the **Create Project Portfolio** task.

Create your top-level or parent project portfolio.

#### Note:

- All Project Portfolios in the same structure must have the same reporting currency.
- Only unconstrained users can create a top-level project portfolio.

*Security: Manage: Project Portfolios* domain in the Projects functional area.

3. From the related actions menu of your **Project Portfolio**, select **Roles > Assign Roles**.

Workday suggests assigning roles with access to the *Manage: Project Portfolios* domain to projects or project hierarchies to ease adding projects to project portfolios.

**4. Access the **Edit Project Portfolio** task.**

Create your project portfolio structure to:

- Add the subordinate or children projects.
- Link a superior or parent portfolio.

**Note:** You can only add projects that you can access from the *Manage: Project Portfolio* domain as either:

- An unconstrained user.
- Having a role on the project, the project hierarchy, or the current project portfolio.

**5. Access the **Manage Project Portfolio Funding** task.**

Assign funding to your subordinate:

- Projects
- Project Portfolios

Security: *Manage: Project Portfolio Funding* domain in the Projects functional area.

### Next Steps

- Add additional subordinate projects or project portfolios using the **Edit Project Portfolio** task.
- Create custom objects for Project Portfolio business object.
- Configure the Overview for Project Portfolio profile group to add custom reports to the **View Project Portfolio** report.
- Track your project actuals against your allocated funding.

### Reference: Project Portfolio Funding Calculations

This table lists fields for project portfolio funding and their definitions and calculations.

Field	Definitions and Calculations
<b>Allocated Amount</b>	Total approved funding amount allocated to direct subordinate or children projects and project portfolios.  The sum of the <b>Funding Amount</b> issued to all children.
<b>Baseline Amount</b>	Total amount of all baseline project budgets in the project portfolio.  For projects without a project budget configuration, Workday totals the estimated budget amount field instead.
<b>Forecast Amount</b>	Total amount of all forecast project budgets in the project portfolio.
<b>Funding Amount</b>	Amount allocated from the parent project portfolio to the project or subordinate project portfolio.
<b>Remaining Amount</b>	Funding amount of the project portfolio not yet allocated to the direct subordinate or children projects and project portfolios.  The difference of the <b>Funding Amount</b> minus the <b>Allocated Amount</b> .

# Manage Project Resources

---

## Steps: Set Up Resource Management

### Prerequisites

Review setup considerations for:

- Project resources.
- Resource plans.
- Resource forecasts.

### Context

Resource management for Projects enables you to:

- Plan and organize your resources.
- Staff your projects.
- Specify when workers can log time against a project.
- Rate worker performance.
- Compare the expected and actual utilization rates of workers.
- Forecast worker hours.
- Schedule workers.

### Steps

1. [Create Project Roles](#) on page 1238.
2. (Optional) [Create Project Role Categories](#) on page 1239.
3. [Assign Roles to Projects](#) on page 1207.  
Assign workers to the organizational roles on a project.
4. (Optional) [Create Resource Plan Templates](#) on page 1185.
5. (Optional) [Create Project Task Resource Templates](#) on page 1187.
6. (Optional) [Set Up Security for Dynamic Resource Pools](#) on page 1249.
7. (Optional) [Create Dynamic Resource Pools](#) on page 1250.
8. (Optional) Create resource pools.  
See [Steps: Create Resource Pools](#) on page 1251.
9. (Optional) Configure ratings for project workers.  
See [Steps: Set Up Worker Ratings](#) on page 1258.
10. [Set Up Time Entry Dates for Project Workers](#) on page 1255.
11. (Optional) [Create Utilization Target Sheets](#) on page 1259.
12. Configure resource plans.  
See [Steps: Set Up Resource Plans](#) on page 1274.
13. [Create Resource Plans](#) on page 1275.
14. (Optional) [Configure Task Resources](#) on page 1253.
15. (Optional) Configure resource forecasts.  
See [Steps: Set Up Resource Forecasts](#) on page 1284.
16. (Optional) Configure resource scheduling.  
See [Steps: Set Up Resource Scheduling](#) on page 1256.

## Create Project Roles

**Prerequisites**

Security: *Set Up: Project Tracking* domain in the Project Tracking functional area.

**Context**

For each project, you need a standard set of work roles for your project resources. You select these roles when you create the resource plans for your projects.

**Steps**

1. Access the **Maintain Project Roles** task.
2. As you complete the task, consider:

Option	Description
<b>Restricted to Project Hierarchies</b>	Select 1 or more project hierarchies to restrict the project role.  The restricted project roles are only available to the resource plans on projects associated with the selected hierarchies or their child hierarchies.  If you don't restrict the project role, it's available for use on all projects on all project hierarchies.
<b>In Use</b>	You can only remove a project role if it isn't in use on a project.
<b>Inactive</b>	Select to deactivate an existing project role.  On the resource plan, any inactive roles in use display as (inactive) after the project role name.
<b>Project Role Requirements</b>	Select role requirements to display on the resource plan line. Role requirements enable you to identify qualified workers for project assignments.  When searching for project workers from the resource plan line, you can override these values.
<b>Category</b>	Select a category for the requirement.  You can have multiple categories for each project role but only 1 row for each category.

Option	Description
<b>Requirements</b>	<p>Select the requirement for the category.</p> <p>You can include multiple requirements per category but only 1 requirement for <i>Location</i> and <i>Job Profile</i>.</p>
<b>Optional</b>	<p>Select when the project role requirement isn't mandatory for your project assignments.</p>

## Result

You can select the project role on a resource plan line.

## Next Steps

- Create project role categories.
- Set up resource plans.

## Related Information

### Tasks

[Steps: Set Up Resource Plans](#) on page 1274

## Create Project Role Categories

### Prerequisites

Security: *Set Up: Project Details* domain in the Project Tracking functional area.

### Context

You can create project role categories to group your project roles. You select these categories when you create the resource plans for your projects.

### Steps

1. Access the **Maintain Project Role Categories** task.
2. As you complete the task, consider:

Option	Description
<b>Inactive</b>	<p>Select to deactivate an existing project role category.</p> <p>On the resource plan, inactive role categories in use display as (inactive) after the category name.</p>
<b>In Use</b>	<p>You can only remove a project role category if it isn't in use on a project.</p>

## Result

You can select a project role category on a resource plan line.

## Next Steps

Set up your resource plans.

**Related Information****Tasks**

[Steps: Set Up Resource Scheduling](#) on page 1256

## Project Resources

### Setup Considerations: Project Resources

You can use this topic to help make decisions when planning your configuration for project resources. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Project resources include all of the workers on a project. You can configure these features to simplify project staffing and resource management:

- *Resource Pools* are stable groups of project workers that organize your resources.

- *Dynamic Resource Pools* are groups of project workers who match preset criteria, such as skills, certifications, or location. These types of pools automatically update when workers leave, change roles, and start new jobs.
- *Rate Work* enables managers to rate the quality of the project work completed by a worker.
- *Utilization Target Sheets* provide insight into the productivity of your project workers.

## Business Benefits

Project resources in Workday organize and streamline the management, planning, and staffing of your project workers.

## Use Cases

- Create a resource pool of consultants and manage them from the **Resource Pool Manager** dashboard.
- Create a dynamic resource pool of business analysts with specific skills, and then associate them with a resource plan.
- Rate the quality of the project work completed by individual workers.
- Define utilization targets for project workers to gain insight into their expected productivity for a specific time period.

## Questions to Consider

Questions	Considerations
How do you want to organize your resource pools?	<p>Resource pools enable you to run custom reports and view information on the <b>Resource Pool Manager</b> dashboard.</p> <p>You can:</p> <ul style="list-style-type: none"> <li>• Borrow workers from other resource managers.</li> <li>• Compare worker attributes.</li> <li>• Staff projects.</li> <li>• View the status and utilization of your workers.</li> </ul> <p>You can also assign 1 or more of the workers in a resource pool to a resource plan line.</p> <p>Before you begin creating resource pool hierarchies and resource pools, determine:</p> <ul style="list-style-type: none"> <li>• The organization of the hierarchies.</li> <li>• The project workers who should be in the resource pools.</li> </ul>
Which dynamic resource pools do you want to use for project staffing?	<p>Dynamic resource pools enable you to staff projects using preset worker qualifications.</p> <p>You can:</p> <ul style="list-style-type: none"> <li>• Associate a dynamic resource pool as a group with a resource plan line, and then exclude specific individuals from the group.</li> <li>• Assign 1 or more individual workers in a dynamic resource pool to a resource plan line.</li> <li>• Display dynamic resource pools in reports when you search for workers.</li> </ul> <p>Project workers in these pools can enter time and expenses for their project assignments.</p>

Questions	Considerations
	Before you begin creating dynamic resource pools, determine the selection criteria for the workers in the pools, such as job profile and location.
Do managers want to rate workers on their project work?	<p>Project and resource managers can rate the project workers who have a direct assignment to a project task, approved time logged against a task, or both. To rate a worker, managers must also have a role on the same project as the worker.</p> <p>Before you set up worker ratings, you need to determine a rating scale for the completed project work. See <a href="#">Create Rating Scales</a>.</p>
How do you want to track the utilization of your project resources?	<p>Utilization target sheets enable you to define utilization targets to benchmark workers for staffing, workforce planning, and performance.</p> <p>Before you set up the utilization target sheets, you need to determine the rules and utilization percentages for your workers.</p>

## Recommendations

We recommend that you configure these features to simplify project staffing:

- Resource pools.
- Dynamic resource pools.

## Requirements

No impact.

## Limitations

You can't use resource forecasts when you enable workers to enter time on a project with dynamic resource pools, because:

- Workday doesn't automatically create resource forecast entries for the workers in dynamic resource pools.
- Workers automatically leave dynamic resource pools when they no longer meet the pool criteria, which might cause problems with time entry. We recommend that you not manually add workers from dynamic resource pools to resource forecast lines.

## Tenant Setup

Access the **Projects** section on the **Edit Tenant Setup - Financials** task to select the:

- **Rating Scale** to use when evaluating a project worker's performance using the **Rate Work** task.
- **Run Project Worker Days Job** check box to view data on the **Utilization Targets for Workers - Monthly** report.

## Security

Domains	Considerations
<i>Set Up: Advanced Project Resource Management</i> in the Projects functional area	<p>Users secured to this domain can:</p> <ul style="list-style-type: none"> <li>Maintain project booking statuses.</li> <li>Create and manage utilization target sheets.</li> <li>Create custom reports on resource utilization.</li> </ul> <p>Assign this domain to users with unconstrained security roles, such as the project administrator.</p>
<i>Manage: Advanced Project Resource Management</i> in the Projects functional area	<p>Users secured to this domain can:</p> <ul style="list-style-type: none"> <li>Use the <b>Find Worker Assignments</b> report to find workers on specific projects or project hierarchies.</li> <li>Use these dashboards: <ul style="list-style-type: none"> <li><b>Resource Manager</b></li> <li><b>Resource Pool Manager</b></li> </ul> </li> </ul>
<i>Manage: Project Resources</i> in the Project Tracking functional area	<p>Users secured to this domain can:</p> <ul style="list-style-type: none"> <li>View the workers listed in a resource pool on the resource plan and in reports. They can't, however, view the faceted dimensions or values that define the resource pool.</li> <li>View the <b>View My Favorites</b> report in the <b>Actions</b> menu on the <b>Resource Manager</b> dashboard.</li> </ul>
<i>Manage: Resource Pool</i> in the Projects functional area	<p>Users secured to this domain can:</p> <ul style="list-style-type: none"> <li>View resource pools and resource pool hierarchies.</li> <li>Use the <b>Find Worker Assignments</b> report to find workers in specific resource pools and resource pool hierarchies.</li> <li>Use the <b>Resource Pool Manager</b> dashboard.</li> </ul>
<i>Management Dashboard: Resource Manager</i> in the Projects functional area	<p>Users secured to this domain can use these dashboards:</p> <ul style="list-style-type: none"> <li><b>Resource Manager</b></li> <li><b>Resource Pool Manager</b></li> </ul>
<i>Reports: Manager</i> in the Staffing functional area	<p>Users secured to this domain can use the <b>Find Worker Assignments</b> report to find workers in specific supervisory organizations.</p> <p>To ensure that users can review the report details, also secure them to the <i>Manage: Advanced Project Resource Management</i> domain, the <i>Manage: Resource Pool</i> domain, or both. Otherwise, they can't expand the rows in the report to review the details.</p>

Domains	Considerations
<i>Set Up: Dynamic Resource Pool</i> in the Project Tracking functional area	<p>Users secured to this domain can create, edit, delete, and view dynamic resource pools.</p> <p>Assign this domain to users with unconstrained security roles, such as the dynamic resource pool administrator.</p>
<i>Set Up: Resource Pool</i> in the Projects functional area	<p>Users secured to this domain can create, edit, delete, and view resource pools and resource pool hierarchies.</p> <p>Assign this domain to users with unconstrained security roles, such as the resource pool administrator.</p>

To ensure proper access, review these team member roles and activities:

Domain Security Roles	Responsibilities
Dynamic resource pool administrator	Creates and maintains the definitions for dynamic resource pools.
Project administrator	<ul style="list-style-type: none"> <li>Configures tenant setup information.</li> <li>Creates and edits resource pools and dynamic resource pools.</li> <li>Edits the <i>Rate Work</i> business process and security policy.</li> <li>Configures the <b>Resource Manager</b> and <b>Resource Pool Manager</b> dashboards.</li> <li>Creates and maintains utilization target sheets.</li> <li>Creates custom reports.</li> </ul>
Project manager	<ul style="list-style-type: none"> <li>Rates the performance of project workers using the <b>Rate Work</b> task.</li> <li>Approves performance ratings on project workers routed by the <i>Rate Work</i> business process.</li> <li>Uses resource pools and dynamic resource pools to staff projects.</li> <li>Views Utilization Target Sheets.</li> </ul>
Resource manager	<ul style="list-style-type: none"> <li>Rates the performance of project workers using the <b>Rate Work</b> task.</li> <li>Approves performance ratings on project workers routed by the <i>Rate Work</i> business process.</li> <li>Uses the <b>Resource Manager</b> dashboard to view the status of their project workers.</li> <li>Uses resource pools and dynamic resource pools to staff projects.</li> <li>Uses the <b>Find Worker Assignments</b> report to determine when project workers are under or over allocated.</li> </ul>

Domain Security Roles	Responsibilities
Resource pool administrator	<ul style="list-style-type: none"> <li>Creates and maintains resource pool hierarchies and resource pools.</li> <li>Adds project workers to resource pools.</li> <li>Assigns roles to resource pools and resource pool hierarchies.</li> </ul>
Resource pool hierarchy manager	<ul style="list-style-type: none"> <li>Maintains and views resource pool hierarchies and resource pools.</li> <li>Only has access to the positions in their supervisory organization.</li> </ul>
Resource pool manager	<ul style="list-style-type: none"> <li>Maintains and views resource pools.</li> <li>Uses the <b>Resource Pool Manager</b> dashboard to view the status of the project workers in resource pools.</li> <li>Only has access to the positions in their assigned resource pools and supervisory organizations.</li> </ul>

### Business Processes

You can use the *Rate Work* business process to enable project and resource managers to:

- Rate the performance of their project workers.
- Approve the performance ratings of their project workers.

### Reporting

Reports and Dashboards	Considerations
<b>Find Worker Assignments</b> report	Enables you to check the allocations of project workers.
<b>Resource Manager</b> dashboard	Provides access to reports that help manage the workers in your organization.
<b>Resource Pool Manager</b> dashboard	Provides access to reports that help manage the workers in resource pools. You can view and manage workers with and without project assignments.
<b>Utilization Targets for Workers - Monthly</b> report	<p>Enables you to view a monthly summary of the utilization targets for your project workers.</p> <p>To view the data in this report, you must select the <i>Run Project Workers Day Job</i> check box on the <b>Edit Tenant Setup - Financials</b> task.</p>

You can use these report data sources to create custom reports:

- Project Dynamic Resource Pool
- Project Resource Requirements
- Project Worker Days
- Project Worker Holidays
- Resource Pool

- Resource Pool Hierarchy
- Time Off by Date Taken and Resource Pool
- Worker Utilization Target Sheet

## Integrations

Web Services	Considerations
<i>Get Resource Pool Hierarchies</i>	Retrieves resource hierarchies, including the parent hierarchies and attached resource pools.
<i>Get Resource Pool Hierarchies Without Dependencies</i>	Retrieves only resource hierarchies, not including the parent hierarchies or attached resource pools.
<i>Put Resource Pool Hierarchy</i>	Creates and updates resource pool hierarchies.
<i>Get Resource Pools</i>	Retrieves resource pools.
<i>Put Resource Pool</i>	Creates and updates resource pools.
<i>Get Worker Utilization Target Sheets</i>	Retrieves utilization target sheets and their associated data.
<i>Put Worker Utilization Target Sheet</i>	Creates and updates utilization target sheets and their associated data.

## Connections and Touchpoints

Project resources interact with these areas of Human Capital Management (HCM) in Workday:

- Managers assign workers from HCM Core to their projects.
- Projects link to the job requisitions for hiring workers in HCM Core.
- Project workers in dynamic resource pools can use Time Tracking to enter their project hours.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[The Next Level: Resource Management in Projects](#)

## Set Up Security for Dynamic Resource Pools

### Context

There are 2 main domains related to dynamic resource pools. To maintain the security of worker data, we split permissions between the users who can:

- Create dynamic resource pools.

- View and manage the workers in dynamic resource pools.

The domains are:

- *Set Up: Dynamic Resource Pool* in the Project Tracking functional area. This domain controls who can manage resource pools, and only supports user-based security groups and project administrators.
- *Manage: Project Resources* in the Project Tracking functional area. This domain controls who can access the workers in a resource pool on both the resource plan and reports. Users can select the worker and see the available pools. They can't see the faceted dimensions and values that define the resource pool.
- Domains by dimension. Users must also have access to each dimension to use it in the dynamic resource pool. Users without access to a dimension can still use dynamic resource pools, but they can't see that dimension.

Workday manages security permissions automatically as you assign workers to and remove them from dynamic resource pools on the resource plan line. Example: Workers in a dynamic resource pool can only track time or file expense reports for projects that you assigned them to.

## Steps

1. Access the **Edit Domain Security Policy Permissions** task for the *Set Up: Dynamic Resource Pool* domain.
2. Add *Project Administrator* as a **Security Group**.
3. Select **Modify** so project administrators can create and change dynamic resource pools.  
Workday selects **View** automatically when you select **Modify**.
4. Use the **Activate Pending Security Policy Changes** task to create an active timestamp for your changes.

## Result

Project administrators can now create and change dynamic resource pools. Project and resource managers can assign workers to projects based on the criteria for the dynamic resource pool.

## Related Information

### Tasks

[Edit Domain Security Policies](#)

[Activate Pending Security Policy Changes](#)

## Create Dynamic Resource Pools

### Prerequisites

- Review setup considerations for project resources.
- Set up security for dynamic resource pools.
- Security: *Set Up: Dynamic Resource Pool* domain in the Project Tracking functional area.

### Context

Dynamic Resource Pools are groups of project workers who match preset criteria, such as skills, certifications, or location. These types of pools automatically update when workers leave, change roles, and start new jobs. As you change the criteria for a dynamic resource pool:

- Workers who no longer match your criteria move out of the pool.
- Workers who do match your criteria move into the pool.

Dynamic resource pools provide you with a current source of workers that you can repeatedly assign to projects based on preset worker criteria. As workers leave or change roles, the dynamic resource pool updates to reflect your current staffing.

**Note:** Workday doesn't add workers with multiple jobs to dynamic resource pools.

You can use dynamic resource pools in resource plans when you:

- Associate a worker group with a resource plan line, you can select a dynamic resource pool.
- Assign an individual worker to a resource plan line, you can select them from a dynamic resource pool.
- Associate a dynamic resource pool with a resource plan line, the workers in the pool can log their time on the project.

You can also use dynamic resource pools to filter your search results with these reports:

- Find Available Workers for Project**
- Find Worker Assignments**
- Find Worker for Project**

## Steps

- Access the **Create Dynamic Resource Pool** task.
- Enter a **Name** and a **Description**.

The name displays on the resource plan line under *Resource Pools* for these fields:

- Worker**
- Worker Group**

Users don't see the description, only the name of the dynamic resource pool.

- Select the dimensions for your resource pool.

For dimensions that are hierarchy-based, such as *Cost Center*, Workday returns all workers within that hierarchy node, but not the workers within subordinate hierarchies. You can add the subordinate hierarchies separately.

Workday secures each dimension to its own domain. If you don't have security access to a domain for a dimension, you can't add that dimension or make changes to the field. Example: The **Skills** dimension secures to the *Worker Data Skills* domain. If you don't have security access to that domain, you can't edit the field.

## Next Steps

To see all active dynamic resource pools for a specific worker, use the **Project Dynamic Resource Pool** report field.

To search for workers by dynamic resource pool, use these reports:

- Find Available Workers for Project**
- Find Worker Assignments**
- Find Worker for Project**

## Related Information

### Concepts

[Setup Considerations: Project Resources](#) on page 1243

## Steps: Create Resource Pools

### Prerequisites

- Review setup considerations for project resources.
- Create project roles.
- Security: *Set Up: Resource Pool* domain in the Projects functional area.

## Context

Resource pools are groups of project workers that simplify staffing. They also enable resource managers to run custom reports and view worker information on the **Resource Pool Manager** dashboard.

## Steps

- Access the **Create Resource Pool Hierarchy** task to create a new hierarchy for the resource pool.

You must have at least 1 resource pool hierarchy before you can create a new resource pool.

As you complete the task, consider:

Option	Description
<b>ID</b>	If you leave the <b>ID</b> blank, Workday automatically generates a sequential ID for the resource pool.
<b>Resource Pools to Include</b>	Select the resource pools for the hierarchy.
<b>Role</b>	Assign the <i>Resource Pool Hierarchy Manager</i> and the <i>Resource Pool Manager</i> roles to the users who manage the resource pool hierarchy and its associated resource pools.

- Access the **Create Resource Pool** task.

As you complete the task, consider:

Option	Description
<b>ID</b>	If you leave the <b>ID</b> blank, Workday automatically generates a sequential ID for the resource pool.
<b>Resource Pool Hierarchy</b>	Select the hierarchies for the pool. You can assign a resource pool to multiple hierarchies, but the pool can't be in 2 hierarchies within the same tree.
<b>Workers to Include</b>	Select the workers for the pool. If you select a worker that's already in another resource pool, Workday moves the worker from their existing pool into the new pool.
<b>Role</b>	Assign the <i>Resource Pool Manager</i> role to the user who will manage the resource pool.

## Result

The resource pool managers can access the project workers in their assigned pools.

**Note:** If resource pool managers need to access workers outside of their assigned resource pools, you need to create an unconstrained security group for them.

## Next Steps

Set up:

- Resource plans.
- Resource Pool Manager** dashboard.

## Configure Task Resources

### Prerequisites

- Create a project.
- Create a resource plan.
- Create project tasks.
- Create a project plan.
- Security: *Manage: Project Task Resources* domain in the Projects functional area.

### Context

By configuring task resources, you can add these assignments to specific project plan tasks:

- Individual project workers.
- Unnamed resources.
- Worker groups.

These task resource assignments enable:

- Project workers to log their time to their specific task assignments with Time Tracking and ad hoc project time transactions.
- Project managers to create detailed resource forecasts.
- Project managers to create detailed project budgets.

### Steps

1. Access the project.
2. Select **Project Plan**.
3. Select 1 of these tabs:
  - **Project Planner**.
  - **Task Resources**.
4. (Optional) Click **Edit in Grid** to update the task resources in a table format.  
Available on the **Task Resources** tab only.
5. Select or expand a project plan task and enter the assignment details.

As you complete the task, consider:

Option	Description
<b>Project Resources</b>	<p>Select specific workers or unnamed resources who are available for assignment from the resource plan line.</p> <p>Workers that you assign as task resources can enter time to a project plan task in Time Tracking or through ad hoc project time transactions.</p>

Option	Description
	<p>Workers on the resource plan can view and log time to a task without task resources on both billable and nonbillable projects.</p> <p>To modify this field on the Project Planner, select a task resource line and click the pencil icon.</p>
<b>Resource Plan Line</b>	<p>Identifies the project role on the resource plan line. Workday populates this field based on the worker.</p> <p>This field displays even when the role is an association or not yet hired.</p> <p>To modify this field on the Project Planner, select a task resource line and click the pencil icon.</p>
<b>Resource Start Date or Start Date</b> <b>Resource End Date or End Date</b>	<p>Enter a start date that's on or before the end date.</p> <p>Workday doesn't require or enforce date relationships across:</p> <ul style="list-style-type: none"> <li>• Projects.</li> <li>• Project plan tasks.</li> <li>• Resource plan lines.</li> <li>• Task resources.</li> </ul> <p>Example: You can assign a worker as a task resource with dates outside their resource plan line.</p>
<b>% Allocation</b>	<p>Available on the <b>Task Resources</b> tab only.</p> <p>Percentages automatically populate from the resource plan line when available. Or, you can enter a new value.</p> <p>Workday supports whole numbers that are greater than or equal to zero and percentages over 100.</p>
<b>Estimated Hours</b>	<p>Enter the number of hours you estimate the task takes. You can enter positive numbers up to 2 decimal points.</p>
<b>Memo</b>	<p>Enter details to track historical changes to:</p> <ul style="list-style-type: none"> <li>• Estimated hours.</li> <li>• Start and end dates.</li> <li>• Any other task resource updates.</li> </ul> <p>The memo you enter here follows the worker to display on the <b>Edit Task Assignment</b> subtask for the <b>Find Worker Availability</b> report.</p>

6. (Optional) Click **Mass Update** to set or move the start and end dates for multiple resources at once.

### Next Steps

- Synchronize the resource plan and task resource dates from the resource plan on the project.
- Identify conflicts in contract billing rates with the **Task Resource Audit** report on the project.

- Set up resource forecasts.

## Related Information

## Set Up Time Entry Dates for Project Workers

### Prerequisites

- Review setup considerations for resource plans.
- Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

### Context

By default, Workday enables the date range for time entry as the start and end dates of a project.

You can narrow the date range by using the start and end dates from the:

- Resource plan
- Project plan tasks
- Task resources

To narrow the date range even more, you can select multiple sources for the dates.

### Steps

1. Access the **Edit Tenant Setup - Financials** task.
2. In the **Projects** section, consider:

Option	Description
<b>Use Resource Plan Dates</b>	Select to enable workers to log their time during the date range on the resource plan.
<b>Use Project Plan Task Dates</b>	Select to enable workers to log their time during the date range on the project plan task.
<b>Use Task Resource Dates</b>	Select to enable workers to log their time during the date range on the task resources.

### Note:

- If you don't select an option, workers can log their time between the start and end dates of the project.
- If you select multiple options, workers can only log their time where the date ranges overlap.

### Example

A project has these date ranges:

- Project: January 1 through June 30.
- Resource plan: February 1 through May 31.
- Project plan task: March 1 through June 30.
- Task resources: March 1 through April 30.

Depending on the options you select, workers can log their time on the project during these date ranges:

Option	Date Range Workers can Log Time
None	January 1 through June 30. The start and end dates on the project.
Resource plan	February 1 through May 31. The start and end dates on the resource plan.
Resource plan Project plan task	March 1 through May 31. The overlap of the 2 date ranges.
Resource plan Project plan task Task resources	March 1 through April 30 The overlap of the 3 date ranges.

## Related Information

### Concepts

[Setup Considerations: Resource Plans on page 1267](#)

### Reference

[Reference: Edit Tenant Setup - Financials](#)

## Steps: Set Up Resource Scheduling

### Prerequisites

Create resource plans with start and end dates on the resource plan lines.

### Context

Resource scheduling enables you to:

- Create a balanced distribution of worker allocations across your workforce.
- Streamline the allocation of your resources to project work.

When you configure resource scheduling, you can use the **Manage Worker Assignments** report to view and manage resource assignments.

When you enable this report for forecast hours, Workday generates the resource forecasts for new and existing projects without forecasts. These Workday-generated resource forecasts:

- Don't display in Workday, except for reporting.
- Don't overwrite user-created forecasts.
- Are replaced by user-created forecasts.
- Calculate forecast hours at the project level, not the project plan task level.

### Steps

#### 1. Access the **Edit Tenant Setup - Financials** task.

In the **Projects** section, select the resource scheduling options. These settings enable Workday to generate resource forecasts for new projects, so that you can view forecast hours in reports.

[Security: Set Up: Tenant Setup - Financials](#) domain in the System functional area.

## 2. Access the **Schedule Workday Generated Forecasts** task.

Enter your project criteria and forecast schedule to run the Create Workday-Generated Forecasts job. This job creates resource forecasts for existing projects that don't already have a forecast, enabling you to view the project-level forecast hours in reports.

**Note:** Workday recommends that you wait until the job finishes before using the **Manage Worker Assignments** report. Otherwise, you might not have a complete set of data to display in the report.

Security: *Set Up: Advanced Project Resource Management* domain in the Projects functional area.

## 3. (Optional) [Configure Custom Validation Messages](#) on page 54.

Configure validation messages for users when they change worker assignments with the **Update Project Assignments** task.

## 4. [Edit Domain Security Policies](#).

Set up these domains for access to the **Manage Worker Assignments** report and its prompts:

Domain	Considerations
<i>Manage: Advanced Resource Management</i> in the Projects functional area	Users secured to this domain can access the: <ul style="list-style-type: none"> <li>• <b>Manage Worker Assignments</b> report.</li> <li>• <b>Projects and Project Hierarchies</b> prompt within the task.</li> </ul>
<i>Manage: Resource Pool</i> in the Projects functional area	Users secured to this domain can access the: <ul style="list-style-type: none"> <li>• <b>Manage Worker Assignments</b> report.</li> <li>• <b>Resource Pools and Resource Pool Hierarchies</b> prompt.</li> </ul>
<i>Reports: Manager</i> in the Staffing functional area	Users secured to this domain can access the <b>Supervisory Organizations</b> prompt. <p><b>Note:</b> If a user has sole access to this domain, they can't access the <b>Manage Worker Assignments</b> report.</p>

## 5. [Edit Business Process Security Policies](#).

Configure the security policy for the *Update Project Assignment* initiating action on the *Project Resource Plan Line* business process in the Project Tracking functional area. This initiating action provides access to the **Update Project Assignments** task on the **Manage Worker Assignments** report.

## 6. [Edit Business Processes](#).

Add the *Recalculate Resource Forecast* service step as the last step for all definitions of the *Project Resource Plan Line* business process. This service step enables Workday to update a resource forecast after you edit a resource plan line using the **Manage Worker Assignments** report.

## 7. (Optional) [Configure Rule-Based Business Processes](#).

Configure automatic approvals for project assignments updated from the **Manage Worker Assignments** report. Automatic approvals enable you to view the modified project assignments immediately and avoid the wait. To configure automatic approvals for project assignments, use a rule-based configuration for these business processes and report fields:

Business Process	Report Field	Business Object
<i>Project Resource Plan Line</i>	Edit Resource Plan Line from Manage Worker Assignments. Set to True.	Project Resource Plan Line Event

Business Process	Report Field	Business Object
Request Worker	Request Worker from Manage Worker Assignments Set to True.	Request Worker for Resource Plan Event

## 8. Activate Pending Security Policy Changes.

Activate these business security policies:

- *Project Resource Plan Line* in the Project Tracking functional area.
- *Request Worker* in the Projects functional area.

## Next Steps

Access the **Manage Worker Assignments** report to schedule your resources.

[Reference: Edit Tenant Setup - Financials](#)

## Steps: Set Up Worker Ratings

### Prerequisites

Review setup considerations for project resources.

### Context

Project and resource managers can rate the project workers who have a direct assignment to a project task, approved time logged against a task, or both. To rate a worker, managers must also have a role on the same project as the worker.

In addition, the project or project task must meet at least 1 of these conditions:

- The project end date is before today.
- The task end date is before today.
- The task is 100 percent complete.
- The task is closed.

### Steps

#### 1. Create Rating Scales.

Define the rating scales for your project workers.

#### 2. Access the **Edit Tenant Setup - Financials** task.

In the projects section, select the **Rating Scale** to use for rating project work.

[Security: Set Up: Tenant Setup - Financials](#) in the System functional area.

#### 3. Edit Business Processes.

Set up the *Rate Work* business process in the Projects functional area.

#### 4. [Edit Business Process Security Policies](#).

Set up the *Rate Work* business security policy in the Projects functional area.

#### 5. [Activate Pending Security Policy Changes](#).

Activate the *Rate Work* business security policy in the Projects functional area.

### **Result**

Managers can rate the work completed by project workers on their assigned tasks, as well as add qualitative feedback on the worker.

Managers can also filter project workers by their average project rating when they search from the resource plan line using these reports:

- [Find Available Workers for Project](#)
- [Find Worker for Project](#)

### **Next Steps**

Rate project workers.

#### **Related Information**

##### **Concepts**

[Setup Considerations: Project Resources](#) on page 1243

##### **Reference**

[Reference: Edit Tenant Setup - Financials](#)

### **Create Utilization Target Sheets**

#### **Prerequisites**

- [Create Project Cost Rate Rules](#) on page 1336.
- Security: *Set Up: Advanced Project Resource Management* domain in the Projects functional area.

#### **Context**

You can create utilization target sheets to track the estimated productivity of project workers against their scheduled hours.

You can define utilization targets to benchmark workers for:

- Performance.
- Project staffing.
- Workforce planning.

#### **Steps**

1. Access the **Create Utilization Target Sheet** task.

2. As you complete the task, consider:

Option	Description
<b>Company</b>	You can create only 1 utilization target sheet for a company. You can, however, assign multiple companies to a utilization target sheet.
<b>Effective Date</b>	You can past-date the effective date.
<b>1st Priority</b>	Workday evaluates the utilization target of project workers by priority.
<b>2nd Priority</b>	

Option	Description
	<p>Example: The <b>1st Priority</b> is <b>Worker</b> and the <b>2nd Priority</b> is <b>Utilization Target Rule</b>. Jane Smith has 2 potential utilization targets:</p> <ul style="list-style-type: none"> <li>• An individual utilization target of 85%.</li> <li>• A utilization target rule for California employees with a value of 90%.</li> </ul> <p>Workday returns a utilization target of 85% for Jane.</p> <p>If Jane doesn't have a utilization target on the <b>Worker</b> tab, Workday retrieves a value from the utilization target rule.</p> <p>If Jane doesn't have a utilization target on either the <b>Worker</b> tab or the <b>Utilization Target Rule</b> tab, Workday can't retrieve a value for her.</p>

3. As you complete the **Utilization Target Rule** tab, consider:

Option	Description
<b>Utilization Target Rule</b>	<p>A category of workers with the same productivity targets. Workday determines the available categories using project cost rate rules.</p> <p>Workday generates utilization targets by sequentially processing the utilization target rules on your list, starting from the top.</p> <p>Example: When a worker belongs to more than 1 utilization target rule, Workday derives the value from the first rule in the sequence.</p>
<b>Utilization Target %</b>	<p>The percent of productive time you expect the project resources to work.</p>

4. As you complete the **Worker** tab, consider:

Option	Description
<b>Worker</b>	<p>You can only add workers from the companies you select for the target sheet.</p>
<b>Utilization Target %</b>	<p>The percent of productive time you expect this individual to work.</p>

## Next Steps

- Run the **Utilization Targets for Workers - Monthly** report. You can compare the utilization target percent for project workers with their scheduled hours and target utilization hours.

**Note:** To view data in this report, you must select the **Run Project Worker Days Job** check box in the **Edit Tenant Setup - Financials** task.

- Use the **targetsheet** search prefix to find an existing target sheet to view or edit.

[Steps: Set Up Projects Infrastructure](#) on page 1164

## Reference

[Reference: Edit Tenant Setup - Financials](#)

[Reference: Resource Management Reports](#) on page 1240

## Concept: Resource Pool Security

To maintain the security of worker data in resource pools, Workday Projects divides permissions among the users who can:

- Create and maintain resource pool hierarchies and resource pools without restriction.
- View and access the workers in a resource pool on the resource plan, in reports, and on the **Resource Pool Manager** dashboard.

Security domains for resource pool hierarchies and resource pools:

Domain	Considerations	Security Groups
<i>Set Up: Resource Pool</i> in the Projects functional area	Controls who can: <ul style="list-style-type: none"> <li>• Create and view resource pools and resource pool hierarchies.</li> <li>• Assign roles to the resource pool and resource pool hierarchy managers.</li> </ul>	Project Administrator Resource Pool Administrator
<i>Manage: Resource Pool</i> in the Projects functional area	Controls who can: <ul style="list-style-type: none"> <li>• View resource pools and resource pool hierarchies.</li> <li>• View and access the project workers in a resource pool on the resource plan, in reports, and on the <b>Resource Pool Manager</b> dashboard.</li> </ul>	Project Manager Project Resource Manager Resource Pool Manager Resource Pool Hierarchy Manager

## Related Information

### Tasks

[Steps: Create Resource Pools](#) on page 1251

## Concept: Resource Manager Dashboards

Resource managers use these dashboards to manage their project workers:

- **Resource Manager**
- **Resource Pool Manager**

They can:

- Borrow workers from other resource managers.
- Compare worker attributes.
- Staff projects.
- View the status and utilization of their workers.

Resource pool managers can also view and manage workers even if they don't have a role on the same project as the worker.

These dashboards display:

- The status of workers on a project.
- A consolidated view of work allocations.

- Frequently used tasks and reports.
- Your urgent staffing needs. Workday calculates urgency as the sum of these parameters:
  - Is the project start date - the current date less than 30? (+1)
  - Is the start date for the resource plan line - the current date less than 14? (+1)
  - Does the resource plan line have more than 1 unnamed resource? (+1)
  - Does the resource plan line have requirements? (+1)
  - Is the Project billable? (+1)

**Note:** To ensure that Workday displays the correct dashboard data, assign managers to a role in the same supervisory organization as their workers. You might also need to assign resource pool managers to multiple supervisory organizations.

[The Next Level: Resource Management in Projects](#)

### Reference: Security for Resource Manager Dashboards

Workday provides these dashboards for resource managers, secured to the *Management Dashboard: Resource Manager* domain in the Projects functional area:

- Resource Manager
- Resource Pool Manager

When you configure the dashboards, use this security for the worklets:

Worklets	Domains
<b>Staffing That Needs Attention</b>	<i>Manage: Advanced Project Resource Management</i> in the Projects functional area
<b>Workers That Need Attention</b>	These domains in the Projects functional area: <ul style="list-style-type: none"> <li>• <i>Management Dashboard: Resource Manager</i></li> <li>• <i>Manage: Resource Pool</i></li> </ul>
<b>Workers Rolling Off Projects In</b>	These domains in the Projects functional area: <ul style="list-style-type: none"> <li>• <i>Management Dashboard: Resource Manager</i></li> <li>• <i>Manage: Resource Pool</i></li> </ul>
<b>Worker Allocations</b>	<i>Reports: Manager</i> in the Staffing functional area These domains in the Projects functional area: <ul style="list-style-type: none"> <li>• <i>Manage: Project Resource Forecast</i></li> <li>• <i>Manage: Advanced Project Resource Management</i></li> </ul> These domains in the Time Off and Leave functional area: <ul style="list-style-type: none"> <li>• <i>Worker Data: Time Off (Time Off)</i></li> <li>• <i>Worker Data: Time Off (Time Off Manager View)</i></li> </ul>

Worklets	Domains
<b>Worker Allocations by Resource Pool</b>	<i>Manage: Resource Pool</i> in the Projects functional area

When you configure the **Actions** menu on the dashboards, use this security:

Report in Actions Menu	Domains
<b>Find Worker for Project</b>	These domains in the Projects functional area: <ul style="list-style-type: none"><li>• <i>Manage: Advanced Project Resource Management</i></li><li>• <i>Manage: Resource Pool</i></li></ul>
<b>View My Favorites</b>	<i>Manage: Project Resources</i> in the Project Tracking functional area <i>Manage: Resource Pool</i> in the Projects functional area
<b>Find Project for Worker</b>	<i>Manage: Advanced Project Resource Management</i> in the Projects functional area

## Related Information

### Concepts

[Setup Considerations: Project Resources](#) on page 1243

### Example: Use Unnamed Resources in Projects

This example explains how to use unnamed resources in your projects.

### Context

You need to define the resources and scope the work effort for a 1-month project before you can fully staff it. You add unnamed resources allocated at 100% as placeholders on the resource plan, resource forecast, and task resources for the project. Once complete, you then review the:

- Estimated work effort for each project worker.
- Task assignments for each project worker.

### Prerequisites

Create a project hierarchy.

Configure these business processes and security policies:

- *Create Project* in the Project Tracking functional area.
- *Edit Project* in the Project Tracking functional area.
- *Project Resource Plan Line* in the Project Tracking functional area.
- *Request Worker* in the Projects functional area.

Security: These domains in the Project Tracking functional area:

- *Manage: Project Details*
- *Manage: Project Plan*
- *Set Up: Project Details*

## Steps

1. Access the **Create Project** task.
  - a. Create a project without selecting any templates.
  - b. Enter today as the Start Date.
2. Access the **Create Project Plan** task.
  - a. Create a project plan for your project without selecting a template.
  - b. Add 1 phase and 1 task to your plan.
3. Access the **Create Resource Plan for Project** task.
  - a. Create a resource plan for your project without selecting a template.
  - b. Enter these values on the **Resource Plan Line**:

Option	Value
<b>Project Role</b>	<i>Consultant</i>
<b>Start Date</b>	Today
<b>End Date</b>	A date 1 month in the future.
<b>Allocation Type</b>	<i>Assign a Worker</i>
<b>% Allocation</b>	100
<b>Add Unnamed Resources</b>	3

Workday adds your unnamed resources to the resource plan line using the role name appended with an incremental number. Example: Consultant-1, Consultant-2, Consultant-3.

4. Access the **Edit Task Resources** report.
  - a. Select your project.
  - b. Add 3 rows to the **Task Resources** grid.
  - c. As you complete each row, select these values:

Option	Value
<b>Project Resources</b>	An unnamed resource. Example: <i>Consultant-1</i>
<b>Resource Plan Line</b>	Consultant
<b>Resource Start Date</b>	Today
<b>Resource End Date</b>	A date 1 month in the future.
<b>% Allocation</b>	100

You see a grid of your unnamed resources and their task assignments for the project.

5. Access the **Create Resource Forecast for Project** task.
  - a. Select your project.
  - b. As you complete the task, enter these values:

Option	Value
<b>Forecast Level View</b>	Project
<b>Forecast Frequency View</b>	Week

Option	Value
Forecast Source	Percent Allocation
Forecast Hours	Whole Numbers

You see the work estimate for your unnamed resources on the resource forecast.

**6.** Access the **View Project** report and select your project.

To review and verify your unnamed resources:

- a. Click the **Resources** profile group.
- b. Click the **Project Resources** tab. You see your unnamed resources in the grid.
- c. Click the **Resource Plan** tab. You see your unnamed resources in the **Workers** section on the resource plan line.
- d. Click the **Resource Forecast** tab. You see your unnamed resources and their estimated hours in the grid.
- e. Click the **Project Plan** profile group.
- f. Click the **Task Resources** tab. You see your unnamed resources and their assigned project tasks in the grid.

### Next Steps

When you're ready to assign specific workers to your project, use a Find Worker report to replace the unnamed resources with project workers:

1. Navigate to the resource plan.
2. Click the **Find Workers** button.
3. Assign a worker to the project.

Workday replaces 1 of the unnamed resources with the new worker, and then automatically updates the project resources, resource forecast, and task resources with your new worker assignment.

### Troubleshooting: Resource Pool Manager Can't Assign Workers to Pools

Resource pool managers can't access all project workers in all resource pools. Workday restricts resource pool managers to creating new resource pools only from their original resource pool assignment.

**Cause:** The *Resource Pool Manager* security group is a constrained security group. It only enables resource pool managers to access the workers in their assigned resource pools.

**Solution:** Create an unconstrained role-based security group for resource pool managers. Then, assign the new security group and the resource pool manager to a resource pool.

## Steps

Security:

- *Manage: Resource Pool* domain in the Projects functional area.
- *Security Activation* domain in the Customer Central and System functional areas.
- *Security Configuration* domain in the System functional area.
- *Set Up: Assignable Roles* domain in the Organizations and Roles functional area.
- *Set Up: Resource Pool* domain in the Projects functional area.

1. Access the **Maintain Assignable Roles** task.
2. Add a new row, and then complete these options:

Option	Description
<b>Role Name</b>	Enter a name. Example: Resource Pool Manager (Unconstrained)
<b>Enabled for</b>	Select <i>Resource Pool</i> and <i>Resource Pool Hierarchy</i> .
<b>Hide on View if Not Assigned</b>	Select.
<b>Assigned by Security Groups</b>	Select <i>Security Administrator</i> .

3. Access the **Create Security Group** task.
4. Complete these options:

Option	Description
<b>Type of Tenanted Security Group</b>	Select <i>Role-Based Security Group (Unconstrained)</i> .
<b>Name</b>	Enter the role name. Example: Resource Pool Manager (Unconstrained)

5. In the **Assignable Role** field, select your new role name.  
Example: Resource Pool Manager (Unconstrained)
6. Access the **Set Up: Resource Pool** domain.
7. From the related actions menu of the *Domain Security Policy*, select **Domain Security Policy > Edit Permissions**.
8. Add a new row to the **Report/Task Permissions** grid and complete these options:

Option	Description
<b>Security Groups</b>	Enter the name. Example: Resource Pool Manager (Unconstrained)
<b>View</b>	Select.
<b>Modify</b>	Select.

9. Access the **Manage: Resource Pool** domain.

**10.**From the related actions menu of the *Domain Security Policy*, select **Domain Security Policy > Edit Permissions**.

**11.**In the **Report/Task Permissions** grid, add a new row and complete these options:

Option	Description
<b>Security Groups</b>	Enter the name. Example: Resource Pool Manager (Unconstrained)
<b>View</b>	Select.
<b>Modify</b>	Select.

**12.**Access the **Activate Pending Security Policy Changes** task to confirm your changes.

**13.**Access the **Create Resource Pool** task.

**14.**In the **Assign Roles** grid, complete these options:

Option	Description
<b>Role</b>	Select the new unconstrained security group. Example: Resource Pool Manager (Unconstrained)
<b>Assigned To</b>	Select the person who manages the resource pool. Example: Abbie Knickerbocker

## Resource Plans

### Setup Considerations: Resource Plans

You can use this topic to help make decisions when planning your configuration and use of resource plans. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Resource plans in Workday help you to staff your projects and enable your workers to charge their time against a project.

## Business Benefits

- Create and update resource plans.
- Reduce data entry for commonly used information.
- Staff your projects with qualified workers.
- Configure custom objects to extend Workday to meet your unique requirements for resource plans.
- Enable project workers to log their time with Workday Time Tracking.

## Use Cases

- Specify the window of time that workers can record their hours on a project.
- Control the content of resource plans to reduce effort, maintain consistency, and avoid errors.
- Find qualified workers who are available for project work.
- Balance the distribution of project assignments across your workforce.

## Questions to Consider

Questions	Considerations
Will your resource plans contain common information?	You can create templates for resource plans to populate the common information that most users need to enter. Templates streamline data entry and reduce user errors.
Do you want to enable workers to log their time on any project or only on assigned projects?	Use the time entry template to enable project workers to log time to any project, without having an assignment on a resource plan.  Otherwise, you must assign project workers to a resource plan before they can log time to the project.
What date range do you want workers to access when they log their time on a project?	Workers on a resource plan can log time against a project or a project task. Workday automatically populates the date range with the start and end dates of the project.  You can configure a narrower date range for workers to log their time on the <b>Edit Tenant Setup - Financials</b> task by using the dates specified in: <ul style="list-style-type: none"> <li>• Resource plans.</li> <li>• Project plan tasks.</li> <li>• Task resources.</li> </ul> You can use multiple sources to continue narrowing the date range. Workers can only log time where the selected date ranges overlap.
How will you find workers for your projects?	Workday provides multiple reports that you can use to find workers to add to your resource plans.  You can configure the <b>Find Workers</b> button to launch the report that best suits your needs.
What are the requirements for your project roles?	You can simplify your staffing effort by specifying the requirements for your project roles. When defined, a Find Worker report returns the workers who match your requirements.

Questions	Considerations
Which project roles should you restrict to project hierarchies?	<p>You can restrict the availability of project roles to specific primary project hierarchies. This restriction simplifies role selection and reduces data entry errors. Child hierarchies inherit role restrictions from their parent hierarchies.</p> <p>Restrict project roles using the <b>Maintain Project Roles</b> task.</p>
How do you want to organize your project roles?	<p>You can specify the categories for organizing the project roles on the resource plan lines. Use the <b>Maintain Project Role Categories</b> task to add or change your values.</p>
How do you want to approve new or modified resource plan lines?	<p>To enable manual approvals, configure the <i>Project Resource Plan Line</i> business process.</p> <p>If you don't configure this business process, Workday automatically approves both new and modified resource plans.</p>
How do you want to approve new project workers?	<p>To enable manual approvals, configure the <i>Request Worker</i> business process.</p> <p>If you don't configure this business process, Workday automatically approves new project workers.</p>
Do you want to differentiate between the confirmed and potential workers assigned to a resource plan line?	<p>You can configure the project booking status to specify the commitment level of a worker on their assigned resource plan line. Use the <b>Maintain Project Booking Status</b> task to specify the values.</p> <p>Example: Hard Booked and Soft Booked.</p>
Do you want to restrict project workers to selecting only their assigned projects in their expense reports?	<p>You can restrict the project worktags that workers can select when they create or edit an expense report.</p> <p>To limit workers to selecting only the worktags for their project assignments, configure the <b>Expenses Options</b> section on the <b>Edit Tenant Setup - Financials</b> task.</p>

## Recommendations

Configure the **Find Workers** button to open the **Find Available Workers for Project** report to streamline the staffing process. This report enables managers to see an overview of worker qualifications and their availability all at once.

Create templates for your resource plans to reduce the time users spend on data entry. The templates prefill the fields with information that is common to all your projects.

Configure resource scheduling to view and manage resource assignments from 1 location with the **Manage Worker Assignments** report.

Create your resource plans at the project-hierarchy level when the projects within the same hierarchy use the same resource plan. This configuration:

- Reduces the time spent on data entry.
- Maintains consistency.
- Avoids errors.

Restrict project roles to specific primary project hierarchies to streamline data entry.

## Requirements

Before you can create resource plans, you must first create project:

- Hierarchies.
- Roles.

## Limitations

You can't add the same worker to more than 1 resource plan line when the worker has:

- The same project role.
- Overlapping dates.
- Different standard cost rates.

You can't delete a resource plan line when:

- A task resource references the resource plan line.
- It has a pending worker assignment.

## Tenant Setup

Access the **Projects** and **Expenses Options** sections on the **Edit Tenant Setup - Financials** task to configure the project-specific options.

Depending on how you configure your resource plans in Workday, you can:

- Set the date range within which workers can record their hours on a project.
- Enable project and resource managers to use a specific report for staffing their projects. Managers launch this report from the **Find Workers** button.
- Restrict workers to select project worktags associated with their assigned resource plans.
- Enable resource scheduling to use the **Manage Worker Assignments** report.

## Security

Domains	Considerations
<i>Business Process Administration</i> in the System functional area.	Users secured to this domain can edit the <i>Project Resource Plan Line</i> and <i>Request Worker</i> business processes.
<i>Manage: Business Process Definitions</i> in the System functional area.	Users secured to this domain can manage the <i>Project Resource Plan Line</i> and <i>Request Worker</i> business processes.
<i>Set Up: Project</i> in the Projects functional area.	Users secured to this domain can: <ul style="list-style-type: none"> <li>• Create, edit, and view templates for resource plans.</li> <li>• Restrict project roles to primary project hierarchies.</li> </ul>
<i>Set Up: Project Hierarchy</i> in the Project Tracking functional area.	Users secured to this domain can create, edit, and view resource plans on the project hierarchy.

Domains	Considerations
<i>Set Up: Project Tracking</i> in the Project Tracking functional area.	<p>Users secured to this domain can:</p> <ul style="list-style-type: none"> <li>• Create, edit, view, and maintain project roles.</li> <li>• View resource plans.</li> </ul>
<i>Manage: Project Resources</i> in the Project Tracking functional area.	<p>Users secured to this domain can:</p> <ul style="list-style-type: none"> <li>• View and manage resource plans.</li> <li>• View project resources.</li> <li>• Use the <i>Get Resource Plans</i> web services.</li> </ul>
<i>Manage: Advanced Project Resource Management</i> in the Projects functional area.	<p>Users secured to this domain can use the <b>Manage Worker Assignments</b> report.</p>
<i>Set Up: Advanced Project Resource Management</i> in the Projects functional area.	<p>Users secured to this domain can:</p> <ul style="list-style-type: none"> <li>• View worker availability.</li> <li>• Staff projects.</li> <li>• Use these web services: <ul style="list-style-type: none"> <li>• <i>Get Requirements for Resource Plan</i></li> <li>• <i>Put Requirements for Resource Plan</i></li> </ul> </li> </ul>

To ensure proper access, review these team member roles and activities:

Domain Security Roles	Considerations
Finance administrator	Configures tenant setup information.
Project administrator	<ul style="list-style-type: none"> <li>• Edits the <i>Project Resource Plan Line</i> and <i>Request Worker</i> business processes.</li> <li>• Creates templates.</li> <li>• Creates resource plans for project hierarchies.</li> <li>• Manages and views resource plan information.</li> <li>• Uses web services.</li> </ul>
Project manager Resource manager	<ul style="list-style-type: none"> <li>• Approves changes to the resource plan lines routed by the <i>Project Resource Plan Line</i> and <i>Request Worker</i> business processes.</li> <li>• Creates resource plans for individual projects.</li> <li>• Manages and views resource plan information.</li> <li>• Adds workers to resource plans.</li> </ul>

## Business Processes

Business Processes	Considerations
<i>Project Resource Plan Line</i> in the Project Tracking functional area	<p>Enables users to:</p> <ul style="list-style-type: none"> <li>• Create resource plans for a project, but not the project hierarchy.</li> <li>• Use the <i>Submit Resource Plan</i> web service.</li> </ul>

Business Processes	Considerations
	<p>enable manual advancement to the next step by a business process administrator.</p> <p>Contextual security for the supervisory organization is only available for workers assigned to a project, not workers pending approval. Because of this security, when you configure a definition step with a supervisory organization manager, you must also configure a <b>Worker is Assigned</b> condition rule.</p>
<i>Request Worker</i> in the Projects functional area	<p>Enables changes in worker assignments or associations.</p> <p>This business process:</p> <ul style="list-style-type: none"> <li>• Is a required subprocess of the <i>Project Resource Plan Line</i> business process.</li> <li>• Supports the resource plan for the project, not the project hierarchy.</li> <li>• Creates a separate event for each resource plan line that you modify.</li> <li>• You can also set up permissions that enable you to manually advance the business process to the next step.</li> </ul>

## Reporting

Reports	Considerations
<b>Manage Worker Assignments</b>	<p>Use to:</p> <ul style="list-style-type: none"> <li>• View project resource assignments, time off, and holidays.</li> <li>• Compare workers for project assignments.</li> <li>• Drill into and manage project assignments.</li> </ul> <p>To enable this report, set up resource scheduling.</p>
<b>Find Available Workers for Project</b>	<p>Use this report to find both qualified and available workers for their projects.</p> <p>You can configure Workday to launch this report from the <b>Find Workers</b> button on the resource plan line.</p>
<b>Find Worker for Project</b>	<p>Project and resource managers use this report to find qualified workers for their projects.</p> <p>Workday automatically launches this report, by default, from the <b>Find Workers</b> button on the resource plan line.</p>

You can use these report data sources to create custom reports:

- **Project Resource Plan Line Events - All Statuses** on the Project Resource Plan Line Event business object.
- **Project Resource Requirements** on the Project Resource Requirement Parameter business object.

- **Project Roles** on the Project Role business object.
- **Project Standard Cost Rate Sheet** on the Project Standard Cost Rate Sheet business object.
- **Resource Plan Details** on the Project Resource Plan Detail business object.
- **Resource Plan Details Search** on the Project Resource Plan Detail business object.

## Integrations

Web Service	Considerations
<i>Get Resource Plans</i> <i>Submit Resource Plan</i>	Manages data on resource plans and resource plan lines for both project hierarchies and projects.  <i>Submit</i> initiates the <i>Project Resource Plan Line</i> business process for approval only for resource plans on projects, not project hierarchies.
<i>Get Requirements for Resource Plan</i> <i>Put Requirements for Resource Plan</i>	Manages data on resource requirements for resource plans.

## Connections and Touchpoints

Feature	Considerations
Resource Forecasts	You must have a resource plan with assigned resources to create a resource forecast.
Project Budgets	You can create a project budget based on a resource plan.
Time Entry Templates	You can enable workers to log time on any project or project task, even if they don't have an assignment on a resource plan. Use the time entry template to enable this feature.
Expenses	You can restrict project workers to select only the project worktags for their assigned resource plans when they create an expense report. Use the financial tenant settings to enable this feature.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Tasks

- [Create Project Hierarchies](#) on page 1174
  - [Create Project Roles](#) on page 1238
  - [Create Project Role Categories](#) on page 1239
  - [Steps: Set Up Resource Scheduling](#) on page 1256
  - [Create and Edit Custom Object Definitions](#)
- Reference**
- [Reference: Edit Tenant Setup - Financials](#)
  - [The Next Level: Resource Management in Projects](#)

## Steps: Set Up Resource Plans

### Prerequisites

Review setup considerations for resource plans.

Set up project roles.

Set up these business processes and security policies:

- *Project Resource Plan Line* in the Project Tracking functional area.
- *Request Worker* in the Projects functional area.

### Context

With resource plans, you can enable:

- Managers to assign workers to projects and estimate their cost.
- Workers to charge time against a project.

Resource plans are also a prerequisite for creating resource forecasts.

### Steps

#### 1. (Optional) Access the **Maintain Project Booking Status** task.

The booking status defines the confidence level of the resource booking. Users can select this value when they assign a worker to a project role on a resource plan.

Security: *Set Up: Advanced Project Resource Management* domain in the Projects functional area.

#### 2. (Optional) Access the **Edit Time Entry Template** task.

You can enable project workers to log time to any project without having an assignment on a resource plan. Select the **Enable Time Entry by Project** and the **Use High Volume Projects Prompt** options in the **Projects** profile group.

Security: *Set Up: Time Tracking* domain in the Time Tracking and Time Tracking Hub functional areas.

#### 3. Access the **Edit Tenant Setup – Financials** task and navigate to the **Projects** section. As you complete the task, consider:

Option	Description
<b>Use Resource Plan Dates</b>	By default, the project workers on a resource plan can log their time in Workday during the project start and end dates.
<b>Use Project Plan Task Dates</b>	Select 1 or more options to narrow the date range for time entry.
<b>Use Task Resource Dates</b>	To apply the most restrictive range, select multiple date options. Workers can only log time where the selected date ranges overlap.
	Example: If your project start and end dates are January 1 - March 30, workers can log time between January 1 - March 30. If you include dates for project plan tasks, which range from March 1 - April 30, then workers can only log time from March 1 - March 30 — where the 2 date ranges overlap.
<b>Configure Find Worker Report</b>	Specify a report for all <b>Find Workers</b> buttons in Workday. By default, Workday uses the <b>Find Worker for Project</b> report.

Option	Description
	<b>Note:</b> If you specify a custom report, ensure that users have the correct access so they can use the <b>Find Workers</b> button. If you configure a custom report, it must use the <b>Workers for HCM Reporting</b> data source.
<b>Always use Find Available Workers for Project</b>	Select to use the <b>Find Available Workers for Project</b> report for the <b>Find Workers</b> button. This setting overrides the report specified for <b>Configure Find Worker Report</b> .

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

#### 4. (Optional) [Create Resource Plan Templates](#) on page 1185.

#### Related Information

##### Concepts

[Concept: Resource Plans on Projects and Project Hierarchies](#) on page 1277

##### Tasks

[Create Project Roles](#) on page 1238

[Create Project Role Categories](#) on page 1239

##### Reference

[Reference: Edit Tenant Setup - Financials](#)

[The Next Level: Resource Management in Projects](#)

### Create Resource Plans

#### Prerequisites

- Create a project.
- Set up resource plans.
- Configure these business processes and security policies:
  - *Project Resource Plan Line* in the Project Tracking functional area.
  - *Request Worker* in the Projects functional area.
- Security: *Set Up: Project Hierarchy* domain in the Project Tracking functional area.

#### Context

In Workday, you use resource plans to define the workers who work on a project. You can create resource plans for either the project or the project hierarchy. If a project hierarchy has a resource plan, all projects in that hierarchy can use the same resource plan.

After you create a resource plan:

- You can assign workers to tasks in the project plan.
- Workers can charge time against the project.

#### Steps

##### 1. Access 1 of these tasks:

- **Create Resource Plan for Project.**
- **Create Resource Plan for Project Hierarchy.**

2. As you complete the task, consider:

Option	Description
<b>Project Role</b>	You can assign the same project role more than once to the resource plan.
<b>Standard Cost Rate Override</b> <b>Standard Cost Rate Currency Override</b>	Accept the default rate and currency from the standard cost rate sheet, or enter new values. Workday calculates and persists time entry costs upon approval. Changes to the standard cost rate on the resource plan line don't change the standard cost amount for approved project time entries.
<b>Allocation Type</b>	<p>Select <b>Assign a Worker</b> to add individual workers or unnamed resources to a project role.</p> <p>Select <b>Associate a group</b> to add a group of workers to a project role.</p> <p>Any of the workers, unnamed resources, or workers within a group can fill the project role and charge their time to the project.</p> <p>Your selection sets security, reporting, and worker access to project tasks. It also determines the detail fields that display when you add workers or groups to the project role.</p>
<b>To Be Hired</b>	Displays only when you select <b>Assign a Worker</b> . When you select this check box, you can complete the resource plan without a direct assignment and report more accurately on needed resources.
<b>Job Requisition</b>	<p>Displays only when you:</p> <ul style="list-style-type: none"> <li>• Select the <b>To Be Hired</b> option.</li> <li>• Have rights to view or change the <i>Manage: Project Resource Job Requisition</i> domain.</li> </ul> <p>You can assign the same requisition to multiple resource plan lines, and you can have multiple workers for the same position.</p>
<b>% Allocation</b>	Displays only when you select <b>Assign a Worker</b> . Enter a percent value for the time commitment of the worker. Workday supports percentages greater than 100. If you specify this field, you can create a project budget later.
<b>Estimated Hours</b>	Displays only when you select <b>Assign a Worker</b> . Enter the sum of all the resources total estimated hours for a project, or for a project plan task.

Option	Description
	If you specify this field, you can create a project budget later.
<b>Worker Group</b>	<p>Displays only when you select <b>Associate a group</b>.</p> <p>Select to identify the groups of workers who can charge time to the project.</p>
<b>Excluded Workers</b>	<p>Displays only when you select <b>Associate a group</b>.</p> <p>Select to remove specific workers from the group for this resource plan only.</p>
<b>Project Booking Status</b>	Select from the confidence levels you created on the <b>Maintain Project Booking Status</b> task.
<b>Worker</b>	<p>Displays only when you select <b>Assign a Worker</b>.</p> <p>Add 1 or more workers to the project role.</p> <p>For each unnamed resource, Workday adds a row to the Worker grid, which you can replace with a specific worker later.</p> <p>If you plan to create a project budget from the resource plan, you must assign at least 1 worker or unnamed resource to a project role.</p>
<b>Project Role Requirements</b>	<p>Enter the Categories and Requirements. The <b>Maintain Project Roles</b> task defines the default values.</p> <p>These requirements help resource managers find available candidates for the project directly from the resource plan.</p> <p>You can override these default values in the <b>Project Role Requirements</b> section on the resource plan line. If you later decide to change to a new role that doesn't have default requirements, Workday maintains your previously saved values.</p>

## Next Steps

- Create a resource forecast.
- Identify conflicts with the Standard Cost Rate using the **View Resource Plan Lines with Conflicting Standard Cost Rates** report.
- Create custom objects.

## Related Information

### Tasks

[Steps: Set Up Resource Forecasts](#) on page 1284

[Create and Edit Custom Object Definitions](#)

### Concept: Resource Plans on Projects and Project Hierarchies

You can create resource plans for:

- Projects.
- Primary project hierarchies.

We recommend that you create:

- A *unique* resource plan for each project when your resource plans differ between projects.
- A *shared* resource plan for the project hierarchy when the projects on the same hierarchy always use the same plan. This configuration reduces work effort, since all the projects on the hierarchy inherit this plan.

**Note:** Project managers must have a role on the project hierarchy to create a shared resource plan.

These principles apply to resource plans:

- When you create a new project, you can:
  - Inherit a preconfigured resource plan from the project hierarchy.
  - Select a preconfigured template for the resource plan.
  - Manually create a new resource plan.
- When a project uses a resource plan at the task-resource level, you can't remove the plan from the hierarchy.
- When a project in the hierarchy uses an inherited resource plan, you can't add another resource plan to the project hierarchy.

## Related Information

### Concepts

[Setup Considerations: Project Hierarchies](#) on page 1169

[Setup Considerations: Resource Plans](#) on page 1267

[Concept: Project Hierarchies](#) on page 1176

### Tasks

[Steps: Set Up Resource Plans](#) on page 1274

## Troubleshooting: Can't Add Resource Plan Lines to Resource Plan

When you access a resource plan on a project, the **Add** option is missing, and you can't add new resource plan lines.

**Cause:** Your project has both:

- A resource plan inherited from a project hierarchy.
- Task resource assignments for the inherited resource plan lines.

You can't edit inherited resource plans at the project level, only on the project hierarchy.

### Solution:

### Steps

[Security: Set Up: Project Hierarchy](#) domain in the Project Tracking functional area.

1. Access the **View Project Hierarchy** report.

Select the project hierarchy.

2. From the related actions menu on the project hierarchy, select **Project Hierarchy > Edit Resource Plan**.

3. Add your changes to the resource plan lines.

## Related Information

### Concepts

[Setup Considerations: Project Hierarchies](#) on page 1169

### Tasks

[Create Resource Plans](#) on page 1275

## Resource Forecasts

### Setup Considerations: Resource Forecasts

You can use this topic to help make decisions when planning your configuration and use of resource forecasts. It explains:

- Why to set them up.
- How this feature fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Resource forecasts estimate the number of hours that project workers need to complete their work on a project. You can:

- Generate high-level forecasts from the resource plan.
- Generate detailed forecasts from the task resources.

**Note:** At this time, both the Resource Forecast and Resource Forecaster reports are available for your forecasting needs, but the Resource Forecast report will be retired in a future release.

- Generate daily, weekly, or monthly forecasts.
- Use whole numbers or decimals for the forecast hours.

### Business Benefits

Resource forecasting in Workday simplifies the process of estimating project work and ensures that project and resource managers can easily:

- Plan for projects.
- Schedule project resources.
- Gain insight into staffing requirements and project progress.
- Manage project costs by creating project budgets based on a resource forecast.

In addition, project workers can record their forecast project hours to:

- Increase forecast accuracy.
- Enable managers to make better staffing decisions for headcount planning.

### Use Cases

Resource forecasts enable you to:

- Estimate the work hours needed to complete a project or project task.
- Recognize revenue on fixed-fee projects by calculating the percent completion of the project.
- Gain insight into how many work hours you need to complete a project or project task.
- Calculate project budgets based on resource forecasts.
- Use Worksheets to simplify data entry for forecast hours.
- Enable project workers to update their own resource forecasts and route changes to a manager for approval.

## Questions to Consider

Questions	Considerations
How do you want to create resource forecasts?	<p>You can create resource forecasts from either the project or the project plan tasks.</p> <p>For a high-level view, create forecasts from the project.</p> <p>For a detailed view, create forecasts from project plan tasks.</p> <p><b>Note:</b> Project budgets reflect the same level of detail as the resource forecasts that you use to create them. Example: A detailed project budget at the task level requires that you first create a resource forecast from the project plan tasks.</p>
How do you use Worksheets for data entry?	<p>You can enable Worksheets to simplify data entry for forecast hours, reducing manual entry of project hours on the <b>Resource Forecast</b> or <b>Resource Forecaster</b> grid.</p>
How can workers update their own forecast hours?	<p>You can configure resource forecasts so that workers can forecast their project hours and submit them to managers for review and approval.</p>
Do you want to simplify staffing by enabling resource scheduling?	<p>You can enable resource managers to schedule their project resources from 1 location using the <b>Manage Worker Assignments</b> report. This report displays the forecast hours for your assigned project workers, and requires resource forecasts on all your projects.</p> <p>When you enable resource scheduling, Workday automatically generates resource forecasts for all your new projects. You can also schedule Workday to generate resource forecasts for your existing projects with the <b>Schedule Workday Generated Forecasts</b> task.</p> <p>These Workday-generated resource forecasts:</p> <ul style="list-style-type: none"> <li>• Don't display in Workday, except for reporting.</li> <li>• Don't overwrite user-created forecasts.</li> <li>• Are replaced by user-created forecasts.</li> </ul>

## Recommendations

We recommend that you:

- Complete your resource plans before you create resource forecasts. Workday creates the first iteration of the resource forecast from the assigned workers on the resource plan.
- Set up your resource forecasts before work begins on a project. If you configure your resource forecasts early, you can avoid creating an incomplete resource forecast. You can't past-date the forecast hours.
- Enable Worksheets to view and edit resource forecasts. Worksheets provide a larger view of the forecast and simplify editing.
- Enable resource scheduling to streamline project staffing.

## Requirements

- Create a project with workers assigned to the resource plan.
- To generate task-level resource forecasts, create a project with a project plan and workers assigned as task resources.
- To enable users to update their forecast hours with a Worksheet, you must first configure Worksheets for your tenant.
- To enable workers to update their own forecast hours, you must first configure the *Update My Resource Forecast* business process.

## Limitations

- The Estimate at Completion (EAC) column on the resource forecast displays only the workers with a resource forecast entry. Workday doesn't include hours from workers who log time on a project but aren't in the resource forecast.
- You can't edit forecast intervals for dates in the past.
- Workday limits the number of columns that you can view and edit at one-time in the resource forecast.
- You can't delete a resource forecast when you have:
  - A project budget based on the forecast.
  - A snapshot of the forecast.

## Tenant Setup

Access the **Projects** section on the **Edit Tenant Setup - Financials** task to view project-specific tenant configuration options.

You can select:

- **Enable Worksheets for Resource Forecast (Advanced Projects only).**
- **Enable Resource Scheduling**, and then specify your resource forecast options.

## Security

Domains	Considerations
<i>Business Process Administration</i> in the System functional area.	Users secured to this domain can edit the <i>Update My Resource Forecast</i> business process.
<i>Manage: Business Process Definitions</i> in the System functional area.	Users secured to this domain can manage the <i>Update My Resource Forecast</i> business process.
<i>Manage: Project Resource Forecast</i> in the Projects functional area.	Users secured to this domain can use tasks, reports, and web services to create, edit, delete, and view resource forecasts.
<i>Reports: Manager</i> in the Staffing functional area.	Users secured to this domain can use the <b>Project Forecasted Hours - Monthly</b> report.
<i>Self-Service: Resource Forecast</i> in the Projects functional area.	Users secured to this domain can update forecast hours for their project assignments.
<i>Set Up: Advanced Project Resource Management</i> in the Projects functional area.	Users secured to this domain can use the <b>Schedule Workday Generated Forecasts</b> task.
<i>Set Up: System</i> in the System functional area.	Users secured to this domain can add the <b>Resource Forecast</b> and <b>Resource Forecaster</b> reports to the project profile using the <b>Configure Profile Group</b> task.

Domains	Considerations
Worksheets in the System functional area. Drive in the System functional area.	Users secured to these domains can edit resource forecasts with a Worksheet.

To ensure proper access, review these team member roles and activities:

Domain Security Roles	Responsibilities
Project administrator	<ul style="list-style-type: none"> <li>Configures tenant setup information.</li> <li>Adds the resource forecast report to project profiles.</li> <li>Edits the <i>Update My Resource Forecast</i> business process.</li> <li>Manages and views resource forecast information.</li> </ul>
Project manager	<ul style="list-style-type: none"> <li>Approves forecast hours routed by the <i>Update My Resource Forecast</i> business process.</li> <li>Manages and views resource forecast information.</li> <li>Uses Worksheets.</li> </ul>
Resource manager	<ul style="list-style-type: none"> <li>Approves forecast hours routed by the <i>Update My Resource Forecast</i> business process.</li> <li>Manages and views resource forecast information.</li> <li>Schedules project resources.</li> <li>Uses Worksheets.</li> </ul>
Project worker	Updates their own forecast hours.

## Business Processes

You can use the *Update My Resource Forecast* business process to enable project workers to update their own forecast hours and managers to approve forecast changes.

## Reporting

Reports	Considerations
<b>Forecast vs. Actuals - Project Hours by Month</b>	Compares forecasted hours with actual project hours.
<b>Project Forecasted Hours - Monthly</b>	Displays the forecasted project hours.
<b>Worker Availability - Detailed Allocation</b>	Identifies the weekly availability of workers for a 3-month period, based on: <ul style="list-style-type: none"> <li>Approved time off.</li> <li>Forecasted hours.</li> <li>Holiday hours.</li> </ul>
<b>Manage Worker Assignments</b>	Displays project resource: <ul style="list-style-type: none"> <li>Assignments.</li> </ul>

Reports	Considerations
	<ul style="list-style-type: none"> <li>• Time off.</li> <li>• Holidays.</li> </ul> <p>This report enables you to:</p> <ul style="list-style-type: none"> <li>• Compare workers for project assignments.</li> <li>• Drill into and manage project assignments.</li> </ul>
<b>Project Forecasted vs. Actual Hours</b> Project Manager Hub card	<p>Displays the actual hours that surpass or approach the total resource forecast hours.</p> <p>This card enables you to determine if projects have:</p> <ul style="list-style-type: none"> <li>• An Estimate at Completion (EAC) that exceeds the total forecasted hours.</li> <li>• Total actual hours that exceed the total forecasted hours.</li> <li>• Total actual hours within 5% of the total forecasted hours.</li> </ul>
<b>Worker Forecasted vs. Actual Hours</b> Project Manager Hub card	<p>Displays project workers over the past 4 weeks from the previous Sunday with:</p> <ul style="list-style-type: none"> <li>• Missing actuals.</li> <li>• Missing forecasts.</li> <li>• Actuals and forecasts that differ by greater than ±10%.</li> </ul> <p>This card enables you to:</p> <ul style="list-style-type: none"> <li>• Compare the forecasted hours of each project worker to the actual hours that they worked on a project.</li> <li>• View the time off, in hours, for the project workers in the details.</li> </ul>

You can use these report data sources to create custom reports:

- Project Resource Forecast
- Project Resource Forecast Edit Events - All Statuses
- Project Resource Forecast Line

## Integrations

Web Service	Considerations
<i>Get Resource Forecasts</i>	Enables you to retrieve an existing resource forecast.
<i>Import Resource Forecast</i>	<p>Enables you to:</p> <ul style="list-style-type: none"> <li>• Create a new resource forecast.</li> <li>• Update an existing resource forecast.</li> <li>• Edit the allocations in an existing resource forecast.</li> </ul>

## Connections and Touchpoints

Resource forecasts interact with these other areas in Workday, including:

Feature	Considerations
Customer Contracts	You can recognize revenue on fixed-fee projects by using <b>Percent Complete</b> for the <b>Revenue Recognition Method</b> . Workday calculates this value from the resource forecast.
Project Budgets	You can create project budgets based on a forecast at either the project or the project-task level.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Concepts

[Concept: Resource Forecast Calculations](#) on page 1286

[Steps: Set Up Project Budgets](#) on page 1294

[Steps: Configure Customer Contracts](#) on page 1024

[Steps: Set Up Resource Scheduling](#) on page 1256

[The Next Level: Resource Management in Projects](#)

[Reference: Project Manager Hub Cards](#) on page 1227

[Example: Configure Employee Self-Service for Resource Forecasts](#) on page 1287

## Steps: Set Up Resource Forecasts

### Prerequisites

- Review setup considerations for resource forecasts.
- Create a project. See [Create Projects](#) on page 1202.
- Set up resource plans. See [Steps: Set Up Resource Plans](#) on page 1274.

### Context

You can:

- Use resource forecasts to estimate monthly, weekly, or daily estimated hours for the workers on your projects.
- On the Resource Forecaster, see whether workers are over, under, or fully allocated.
- Enable project workers to update their own resource forecasts and route changes to a manager for approval.
- Enter fractional or whole numbers for the forecast hours.
- Include both individual workers and unnamed resources in your forecasts.

Workday can generate these types of resource forecasts:

- Project-level forecasts based on the resource assignments in the resource plan.
- Task-level forecasts based on the assignments of the task resources in the project plan.

**Note:** You can't delete the resource forecasts that you use to create project budgets or resource forecast snapshots.

**Note:** The Resource Forecast report will be retired in a future release. Workday recommends that you use the Resource Forecaster for a more streamlined resource forecasting workflow.

## Steps

### 1. Configure the Project Profile on page 1166.

If necessary, set up the composite view of the project profile to include the **Resource Forecast** and **Resource Forecaster** reports on the **Resources** tab of the project profile.

- a. Access the **Configure Profile Group** task.
- b. From the **Profile Group** prompt, select the **Resources for Project Composite View Profile** group.
- c. Add the **Resource Forecast** and **Resource Forecaster** reports, as needed, to the profile group.

### 2. Edit Domain Security Policies.

Edit these domains and security policies:

- *Manage: Project Resource Forecast* domain in the Projects functional area. Project and resource managers need this security to create resource forecasts.
- (Optional) *Self-Service: Resource Forecast* domain in the Projects functional area. Project workers need this security to access self-service data and tasks.
- (Optional) *Worksheets and Drive* domains in the System functional area. Project and resource managers need this security to edit resource forecasts using a worksheet.

### 3. Edit Business Process Security Policies.

Edit the security policies for these business processes:

- *Project Resource Plan Line* in the Project Tracking functional area. Project and resource managers need this security to create resource plans.
- (Optional) *Update My Resource Forecast* in the Projects functional area. Project workers need this security to update their resource forecasts.

### 4. (Optional) Edit Business Processes.

Edit the *Update My Resource Forecast* business process in the Projects functional area to enable:

- Workers to update their own resource forecasts.
- Managers to approve the forecast change initiated by the workers.

### 5. (Optional) To enable users to edit resource forecasts with worksheets:

- a) [Set Up Worksheets](#) and enable worksheets for your tenant.
- b) Access the **Edit Tenant Setup - Financials** task. In the **Projects** section, select the **Enable Worksheets for Resource Forecast** check box.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

### 6. Create Resource Plans on page 1275.

Create a resource plan for the project, and then add workers to the resource plan lines.

### 7. (Optional) Enable resource forecasts to display detailed task information.

- a) [Create Project Plans](#) on page 1215.
- b) [Configure Task Resources](#) on page 1253.

### 8. Access the **Create Resource Forecast for Project** task (to use the Resource Forecast report) or the **Create Resource Forecast for Project via Resource Forecaster** task (to use the Resource Forecaster report).

For the **Forecast Level View**, when you select:

- **Project**, Workday generates a project-level forecast that contains the worker and their forecasted hours.
- **Project Plan Task**, Workday generates a detailed forecast that includes the worker, their project tasks, and their forecasted hours.

Security: *Manage: Project Resource Forecast* domain in the Projects functional area.

## Result

Workday creates the resource forecast and displays a forecast line for each worker that includes the:

- Task, on the Resource Forecast report only. (Displays only if you created the forecast from the project plan task.)
- Total forecasted hours.
- Estimate at Completion (EAC). EAC includes all the hours logged and approved for the project. It also includes the future hours the worker expects to complete.
- Estimate to Completion (ETC). ETC includes the future hours the worker expects to complete.
- Forecast hours.

On the Resource Forecaster, Workday also displays an overlay of visual indicators showing whether workers are under, over, or fully allocated. You can toggle the indicators on or off using the gear button on the top-right of the grid, and you can hover or drill down on them to see a detailed view of the calculation.

Workday calculates the initial forecast hours based on the:

- Start and end dates.
- Percent allocation or estimated hours.

## Next Steps

Create a project budget using the resource forecast.

Project workers can access the **Update My Resource Forecast** task to modify their own forecasts in these upcoming time periods:

- Current week + next 3 weeks for weekly forecasts.
- Today + next 9 days for daily forecasts.

## Related Information

### Concepts

[Steps: Create Project Budgets](#) on page 1304

[The Next Level: Resource Management in Projects](#)

## Concept: Resource Forecast Calculations

Workday generates resource forecasts for your projects using calculations that distribute forecast hours over a specific date range on weekdays (Monday through Friday). These calculations vary, depending on your selections for:

- Forecasts for the project or the project plan tasks.
- Forecasts at the daily, weekly, or monthly level.
- Forecast hours based on either the percent allocation or the estimated work hours.
- Forecast hours based on whole numbers or decimals.

**Note:** Workday rounds forecast hours throughout the calculation process. Depending on the rounding variance, Workday might add extra hours to the beginning of the forecast or remove extra hours from the end of the forecast.

**Note:** The Resource Forecast report will be retired in a future release. Workday recommends that you use the Resource Forecaster for a more streamlined resource forecasting workflow.

## Date Ranges for Resource Forecasts

Workday sets the date range for your resource forecast by using the start and end dates of the:

- Resource plan line, for forecasts at the project level.
- Project task resources, for forecasts at the project plan task level.

By default, Workday only calculates forecast hours for dates in the future, not current or past dates. If you don't specify both the start and end dates, the forecast hours are zero.

## Example Calculations

In the example calculations that follow, the resource forecasts have:

- Project-level forecasts.
- Weekly frequencies.
- Whole numbers.
- One assigned project worker, Allison Hunter, who is a Consultant.

### Example 1: Percent Allocation

The date range is 4 weeks for these dates: 2020-11-1 to 2020-11-30.

Calculation steps:

1. Workday obtains the scheduled weekly hours for Allison from their primary position. Value: 40 hours per week.
2. Workday obtains the percent allocation for Allison from the resource plan line. Value: 50%
3. Workday calculates the weekly availability for Allison. Result: 20 hours per week.
4. Workday calculates the daily availability for Allison. Result: 4 hours per day.
5. Workday populates the weekly resource forecast for Allison with:
  - 20 hours for the first 4 weeks of November.
  - 4 hours for the last day of November, which falls on a Monday.

### Example 2: Estimated Hours

The date range is 5 weeks for these dates: 2022-10-31 to 2022-12-2.

Calculation steps:

1. Workday obtains the estimated hours for Allison from the resource plan line. Value: 160 hours.
2. Workday calculates the number of working days (Monday through Friday only) between the start and ends dates on the resource plan line. Result: 25
3. Workday calculates the daily hours per worker ( $160/25 = 6.4$ ). The calculation rounds the daily hours to 6 and then evenly distributes the hours across the resource forecast plan. For hours that Workday can't evenly distribute, it adds more hours at the start of the forecast than at the end.

In this case, Workday multiplies 6 daily hours by 25 days for a total of 150 hours. Workday then distributes the hours evenly across the resource forecast. For the remaining 10 hours, Workday distributes an additional 1 hour per day. The distribution starts at the beginning of the resource forecast and continues towards the end until the forecast reaches a total of 160 hours.

4. Workday populates the weekly resource forecast for Allison with:
  - 35 hours for the first 2 weeks.
  - 30 hours for the last 3 weeks.

## Related Information

### Concepts

[Setup Considerations: Resource Forecasts](#) on page 1279

## Example: Configure Employee Self-Service for Resource Forecasts

This example illustrates 1 way to configure your tenant so that workers can make updates to their hours on resource forecasts.

## Context

As a project manager, you create a resource forecast that includes Anna, a worker on multiple projects. To keep forecast hours up to date, your resource manager must perform several searches through data such as PTO, resource forecasts, and historic actuals. Managers then have to confirm the accuracy of the forecast manually.

During the project, you learn that Anna's availability has changed unexpectedly. You want to enable workers like Anna to update their own resource forecasts directly so that you can simply review and approve changes.

### Prerequisites

- Security: *Business Process Administration* and *Manage: Business Process Definitions* domains in the System functional area.
- Create a project with workers assigned to the resource plan.
- Create a resource forecast from either the project or the project plan tasks.

### Steps

1. From the related actions menu of the *Update My Resource Forecast (Default Definition)* business process, select **Business Process > Edit Definition**.
2. Enter the current date.
3. Click **OK**.
4. Click **Security Group Restrictions** to view the **Initiating Security Groups**. Workday populates this field with **Contingent Worker As Self** and **Employee As Self**.
5. To include a step that enables you to review and then approve worker updates, add a row to the **Business Process Steps** tab.
6. Enter these values:

Order	Type	Specify	Group
b	Action	Review Update My Resource Forecast	Project Manager

**Note:** If you don't include an approval step, Workday auto-approves worker updates to resource forecasts.

7. Click **OK**.
8. Click **Done**.
9. To review your security configurations, select **Business Process Policy > Edit** from the related actions menu of the business process.
10. Click **OK**.

### Result

When workers make changes to their resource forecasts, Workday sends requests to My Tasks for your review and approval.

##### Tasks

[Steps: Set Up Resource Forecasts](#) on page 1284

## Project Budgets

---

### Setup Considerations: Project Budgets

You can use this topic to help make decisions when planning your configuration and use of project budgets. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

Project Budgets is the primary financial component within Projects. It enables you to analyze:

- Budget versus actuals.
- Cost versus revenue.
- Labor versus nonlabor.
- Primary variance contributors by various dimensions like ledger account, spend or revenue category, and supplier.

## Business Benefits

Project budgets support:

- Analysis of project budget versus actuals across your organization.
- Automated labor cost calculations based on standard cost rates and forecasted hours.
- Automated revenue calculations based on contract rates, fixed fee installments, or fixed fee percent complete (hours).
- Worktag dimensions.

## Use Cases

With project budgets, you can:

- Create high-level project duration budgets or more detailed monthly budgets.
- Create custom reports to understand your project revenue and costs.
- Develop flexible project budgets at different levels of granularity.
- Use Worksheets to update and maintain project budgets.
- View live data on project progress, time, and spend, as well as budgets and forecasts.

## Questions to Consider

Questions	Considerations
What project budget types do you need to manage?	<p>You can create budgets to manage your cost projects, revenue projects, or both. Project budgets are available for:</p> <ul style="list-style-type: none"> <li>• Cost with Workday Projects.</li> <li>• Revenue with Workday Project Billing.</li> </ul> <p>You can:</p> <ul style="list-style-type: none"> <li>• Define default cost and revenue worktags for time to include in budget lines. Workday then: <ul style="list-style-type: none"> <li>• Assigns worktags from your selected forecast source.</li> <li>• Uses the worktags when you don't list them on the project as related worktags.</li> </ul> </li> <li>• Identify actuals and forecasts to bring actuals into the budget, to create an Estimate at Completion (EAC). Select from time blocks and ad hoc time, journal lines, or both.</li> <li>• Identify whether to create your forecast sources for your budget from hours in the resource plan, resource forecast, or neither.</li> <li>• Create a calculation type for each variation you want to make available for creating budgets.</li> </ul>

Questions	Considerations
	<ul style="list-style-type: none"> <li>Manage budgets using worksheets.</li> <li>Use segmented security so that project managers can view only their budget.</li> </ul>
What configuration level do you need to manage your project budgets?	<p>You can configure your project budget at the project hierarchy level, the tenant level, or both.</p> <p>Project hierarchy configurations take precedence over tenant configurations.</p>
Will you create your budget using prior actuals?	<p>For cost budgets that you want to include actuals in, use this configuration to identify:</p> <ul style="list-style-type: none"> <li>Ledger accounts</li> <li>Spend categories</li> <li>Ledger accounts and spend categories</li> </ul> <p>For revenue budgets, include ledger accounts and revenue categories.</p>
What dimensions do you want to track?	<p>Create a plan structure and include the relevant dimensions.</p> <p>You can make these dimensions required or optional. Each budget line must include required dimensions.</p>
What plan line attributes do you want to track?	<p>By default, Workday classifies the plan lines for project budgets as cost or revenue.</p> <p>You can also configure Workday to classify the plan lines for project budgets as labor or nonlabor.</p> <p>You can use the plan line attributes in custom reports to understand the financial health of your project.</p>
What resource forecast level do your project budgets have?	<p>Workday generates resource forecasts at the:</p> <ul style="list-style-type: none"> <li>Project level - Including the worker and their forecasted hours.</li> <li>Project Plan Task level - Including the worker and their project task or forecasted hours for each task.</li> </ul>

## Recommendations

When maintaining multiple budget periods at once, use Worksheets rather than updating each period individually.

Maintain at least 2 calculation types. These calculations types are:

- Baseline, which shouldn't include actuals.
- Forecast, which should include actuals.

## Requirements

To ensure that Workday calculates Project Budgets accurately, you should:

- Understand projects.

- Understand project resource plans if generating your budget from your resource forecast or resource plan.
- For managing your project labor costs, create your standard cost rate sheet.
- For revenue budgets, define your project billing dependencies in Workday.
- For setting up budget check options, understand budgetary control functionality.

## Limitations

Workday doesn't:

- Include committed costs, such as purchase orders in project budgets. You can manually add these transactions as budget line items.
- Support fully burdened costing, or percent complete by cost.
- Support the creation of workbooks from project plan budgets with more than 500 periods or more than 10 years in the future.
- Support using the **Schedule Project Budget Mass Update** task to update more than 5,000 plans.

## Tenant Setup

No impact.

## Security

Domain	Considerations
<i>Set Up: Project Hierarchy</i> in the Projects functional area	Can configure and update project budgets on the project hierarchy.
<i>Set Up: Project Budget</i> in the Projects functional area	Can configure and update project budgets on the tenant.
<i>Manage: Project Budget</i> in the Projects functional area	Can manage and view budget information.
<i>Manage: Project Resource Forecast</i> in the Projects functional area	Can manage and view resource forecast information.
<i>Access Plan Type (segmented)</i> in the Budgets and Projects functional areas	Can control access to project budgets.

Workday uses multiple roles to configure project budgets. However, since several steps in the process are one-time only, project budgets require minimal maintenance.

Role	Considerations
Security Administrator	Configures security. Adds project administrators to the proper security groups.
Budget Administrator	Adds Project as an entry type.
Project Administrator	Configures project budgets on the: <ul style="list-style-type: none"> <li>• Tenant</li> <li>• Project hierarchy</li> </ul> Defines standard cost rates for: <ul style="list-style-type: none"> <li>• Workers based on worker attributes.</li> <li>• Unnamed resources based on project roles.</li> </ul>

Role	Considerations
Project Hierarchy Administrator	<p>Defines the project budget by configuring:</p> <ul style="list-style-type: none"> <li>The project hierarchy or tenant to draw from specific dimensions from the budget structure.</li> <li>The plan calculation types to drive the different types of plans enabled in the hierarchy or tenant.</li> </ul>
Project Manager	<p>Creates and updates project budgets.</p> <p>Creates plans as outlined by the plan structure and project hierarchy configurations. Assigns plans as baselines or forecasts to compare variances across projects in the hierarchy or tenant.</p> <p>Creates a revised budget for changes to:</p> <ul style="list-style-type: none"> <li>Contracts.</li> <li>Resource forecasts.</li> <li>Worker time blocks.</li> <li>Past period actuals.</li> </ul> <p>Manages budgetary control options.</p> <p>Tracks spend and revenue.</p> <p>Analyzes:</p> <ul style="list-style-type: none"> <li>Profit and losses</li> <li>Return on investments</li> </ul>
Contract Administrator for Revenue Budgets	Defines the billing rate that Workday uses to calculate the revenue budget.

## Business Processes

Business Processes	Considerations
<i>Assign Plan as Baseline Event</i>	Can designate the calculation type as a baseline budget.
<i>Budget Amendment Event</i>	Can submit amendments for budget templates requiring approval or amendment.
<i>Plan Event</i>	Can create a budget when the budget template requires approval or amendments.

## Reporting

Reports	Considerations
Project Budgetary Balance With Labor Cost	You can compare the budget for a project to the actual cost. This report doesn't apply to duration budgets.
Project Hierarchy Baseline vs. Forecast	Enables organization level reporting on baseline versus forecast at your project hierarchy or tenant level. You can customize this report to include the

Reports	Considerations
	dimensions and variance thresholds appropriate for your organization.

You can use these report data sources to create custom reports:

- All Budget Amendments
- Budget Amendments by Organization
- Project Budget Calculation Details

## Integrations

You can use these web services to upload your project budgets:

- *Import Budget*
- *Import Budget Amendment*
- *Put Project Budget Template*

## Connections and Touchpoints

Project Budgets interacts with:

- Financial accounting.
- Time tracking.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[The Next Level: Project Budgets](#)

[2021R2 What's New Post: Plan Line Attributes for Project Budgets](#)

[2021R2 What's New Post: Tenant Configuration for Project Budgets](#)

## Steps: Set Up Project Budgets

### Prerequisites

Review setup considerations for project budgets.

### Context

You can configure project budgets to simplify budget creation and ensure consistency across your organization.

### Steps

1. Set up a segmented security group that will configure your project budget.

See [Steps: Maintain Access to Budget Structures for Projects](#) on page 1295.

**2. Access the **Maintain Entry Types** task.**

Add a new entry type with a **Plan Type Usage** of *Project* so you can identify budget lines by plan type usage. Ensure that the entry type is active.

Security: *Set Up: Budget General* domain in the Budgets functional area.

**3. Set Up Plan Structures for Project Budgets** on page 1296.

**4. Set up a project budget configuration.**

See:

- [Set Up Hierarchy Configuration for Project Budgets](#) on page 1299.
- [Set Up Tenant Configuration for Project Budgets](#) on page 1301.

**5. Create Contract Rate Sheets** on page 1403.

Link billable projects to the contract rate sheet for revenue budgets.

**6. (Optional) Set Up Labor and Nonlabor Attributes for Plan Lines** on page 1302.

**7. Create project budgets.**

See [Steps: Create Project Budgets](#) on page 1304.

**8. (Optional) Use Worksheets to manage your project budgets.**

See [Steps: Manage Project Budgets with Worksheets](#) on page 1307.

**9. (Optional) Schedule Project Budget Mass Update** on page 1310.

**10.(Optional) Set up budget checking for your project budgets.**

See [Setup Considerations: Budget Check](#) on page 458.

## Steps: Maintain Access to Budget Structures for Projects

### Context

Project administrators will need access rights to configure the budget structure properly. You can create a segment-based security group for the groups you want to enable to add Project as a plan type to the budget structure. You then add the security group to the required domain policy.

### Steps

**1. Access the **Edit Security Group** task.**

**2. Select Segment-Based Security Group > Project Plan Type Segment Security Group.**

**3. Select the **Security Groups** which you want to have access to the Project plan type on the budget structure.**

Security groups might include: *Project Administrator*, *Project Hierarchy Manager*, or *Project Resource Manager*.

**4. Select *Project Plan Type Segment* for the **Access to Segments** field under **Access Rights**.**

Based on this setting, Workday determines the plan type you can access on the budget structure.

**5. Access the **Edit Permissions** task as a related action from the **Access Plan Type (Segmented)** domain security policy. This task enables you to add the security group to the domain.**

### Result

The security group you enabled can now add Project as a plan type on the budget structure and define budget dimensions.

#### Concepts

[Concept: Security Groups](#)

## Tasks

[Create Segment-Based Security Groups](#)

# Set Up Plan Structures for Project Budgets

## Prerequisites

- Create an entry type that uses Project as a plan type.
- Access to the *Project Plan Type Segment* security group.
- Security: *Manage: Project Budget* domain in the Projects functional area.

## Context

You can define the framework and dimensions in project budgets for all projects in a project hierarchy using plan structures.

## Steps

1. Access the **Create Plan Structure** task.
2. Select **Project** from the **Plan Type** prompt.
3. As you complete the header and **Schedule** tab, consider:

Option	Description
<b>Use Contextual Amendments</b>	Select to amend plans that you create using this structure in the context of your current budget and current spend.  When you select this check box, Workday displays the running total of your budget and these columns on budget amendment tasks: <ul style="list-style-type: none"> <li>• <b>Current Plan Amount</b></li> <li>• <b>Current Spend</b></li> <li>• <b>Percentage Change</b></li> <li>• <b>Proposed Remaining Plan</b></li> <li>• <b>Remaining Plan</b></li> <li>• <b>Total Plan</b></li> </ul> You can change this setting at any time. Example: You didn't originally include this functionality in your plan structures, but later want to uptake it.
<b>Period</b>	Workday bases project budget periods on the calendar month, except for the first and last periods. Workday defines the: <ul style="list-style-type: none"> <li>• First period as the project start date to the end of the month.</li> <li>• Last period as the first day of the month to the project end date.</li> </ul>

4. As you complete the **Structured Dimensions** tab, consider:

Option	Description
<b>Organizing Dimension Type</b>	Enter 1 dimension value per plan to populate each line with the same dimension. This entry

Option	Description
	method reduces manual entries and streamlines review and approval.
<b>Account Set</b>	<p>Your selection must match the account set for:</p> <ul style="list-style-type: none"> <li>The companies you plan by, as configured on the <b>Edit Company Accounting Details</b> task.</li> <li>The company hierarchies you plan by, as set on the <b>Edit Consolidation Details</b> task.</li> </ul> <p>Clear this field to exclude <i>Ledger Account</i> as a dimension.</p>
<b>Book</b>	<p>When you enable budgetary control, Workday filters the budget check based on the book code associated with the book you select.</p> <p>When you select a book on the plan structure, you can't remove it from the <b>Maintain Books</b> task.</p> <p>To filter by book on custom reports, you must use the <b>Journal Lines for Financial Reporting</b> report data source.</p>
<b>Must Be Empty</b>	<p>Select to require that a dimension must have an empty value for the transaction to be subject to the budget. This option enables you to define budgets with and without that specific dimension.</p> <p>Example: You want a budget for transactions associated with certain cost centers, funds, and projects. You also want a budget for transactions associated with just projects and cost centers. For the latter budget, you can specify that the fund worktag must be empty on the transaction.</p>
<b>Spend or Revenue Category Required on Plan Lines</b>	<p>Select when you want either a spend or a revenue category to be present on each plan line for the project budget. When you select this option, you must have both spend and revenue categories as optional dimensions on the budget structure.</p>
<b>Disable Related Worktags in Worksheets</b>	<p>Select this check box to disable worktag type precedences for all associated project budgets that use this plan structure. Disabling the related worktags avoids duplicate budget lines for optional dimensions that use related worktags.</p>
<b>Record Quantity</b>	<p>When you select this check box, you can view these fields on plan lines:</p> <ul style="list-style-type: none"> <li><b>Quantity</b></li> <li><b>Units (hours)</b></li> </ul>

5. As you complete the **Structured Dimension** grid, consider:

Option	Description
<b>Dimension</b>	Workday requires 1 of these dimensions for project budgets:

Option	Description
	<ul style="list-style-type: none"> <li>• <i>Project</i></li> <li>• <i>Project Phase</i></li> <li>• <i>Project Task</i></li> </ul>
<b>Primary Worktag</b>	<p>Select to display the worktag in its own column rather than as additional worktags on the plan lines. When you maintain or amend your budget:</p> <ul style="list-style-type: none"> <li>• Workday displays primary worktag columns in the order that you configure on your plan structure.</li> <li>• Primary worktag columns enable you to enter line information faster.</li> </ul> <p>Because <i>Company</i> and <i>Ledger Account</i> are required dimensions that display by default, you can't select them as primary dimensions.</p> <p>You can designate up to 10 worktags as primary worktags for each structure.</p>
<b>Top Level Hierarchy</b>	<p>Dimension members can be part of multiple hierarchies. You can determine the uppermost hierarchy and select it as the top-level hierarchy.</p> <p>Workday only supports company hierarchies for virtual parent-child plan structures.</p>
<b>Hierarchy Level</b>	<p>When you select a top-level hierarchy, you can select a hierarchy level on this prompt.</p>
<b>Dimensions to Include</b>	<p>When you select a structured dimension or dimension hierarchy, you can't include any of the superior or subordinate dimensions, or dimension hierarchies at any other level. This restriction prevents double-counting budgets between superior and subordinate dimensions and dimension hierarchies.</p>

## Next Steps

Set up project budget configurations for the project hierarchy.

To view the account set your company uses, access the **View Company Accounting Details** report.

## Set Up Hierarchy Configuration for Project Budgets

### Prerequisites

- Create an entry type that uses Project as a plan type.
- Create a plan structure with Project as a required dimension.
- Security: *Set Up: Project Hierarchy* domain in the Projects functional area.

### Context

You can configure the project hierarchy for all subordinate projects to use as a template when creating project budgets. You can also create calculation types to enforce different plan types.

**Note:** Workday gives precedence to project hierarchy configurations over tenant configurations.

### Steps

1. Access the **View Project Hierarchy** report.
2. As you complete the **Project Budget Configuration** tab, consider:

Option	Description
<b>Do Not Allow Creation of Project Budgets</b>	(Optional) Select to prevent project managers from creating budgets for any projects under this hierarchy.  You can access the report later to remove this limitation.
<b>Do Not Allow Submission of Forecast Budgets</b>	(Optional) Select to prevent users from submitting their forecast budgets for approval.  This setting ensures that Workday continues to update your forecast budgets with actuals.  You can access the report later to remove this limitation.
<b>Plan Structure</b>	The plan structure that you select determines the dimensions Workday makes available for selection.
<b>Plan Eligible For</b>	Determines whether you can create a baseline or forecast budget for the plan calculation type. You can't edit this field after you've created a budget for the plan calculation type.
<b>Inactive</b>	Select this check box to disable this calculation type for new project budgets. For existing project budgets, Workday will continue to use this calculation type.
<b>Cost</b> <b>Revenue</b>	Include all budget dimensions that project managers need as they create budgets for the projects under this tenant. Configure: <ul style="list-style-type: none"> <li>• Cost and revenue dimensions if the plan structure requires them. Include at least 1 dimension from each category.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Plan structure dimensions. Worktags that you select in these fields populate on:           <ul style="list-style-type: none"> <li>Plan Lines sourced from the resource forecast.</li> <li>Resource plans without project override data.</li> </ul> </li> </ul> <p>To avoid duplicate postings, Workday recommends that you don't create dimensions already on the project as worktags.</p>
<b>Actuals Source(s)</b>	<p>You can leave this prompt blank to see only your forecast on your project budget.</p> <p>If you've already configured your ledger accounts to include time cost, exclude <i>Time</i> to avoid double counting.</p>
<b>Forecast Source</b>	<p>Specify a cut-off date to include time transactions instead of resource forecasts in the current period.</p> <p>If you haven't reached the cut-off date, Workday uses the last day of the prior period for time transactions.</p>
<b>Include Approved Time in Current Period Through End of</b>	<p>To include time transactions in your resource forecast for the current period, select one of these:</p> <ul style="list-style-type: none"> <li>Prior Day</li> <li>Day of the Week</li> <li>Day of the Month</li> </ul> <p>Workday will include approved time transactions in the resource forecast for your current period up to the date you enter.</p>

## Result

Workday references these settings to generate the project budget.

## Next Steps

- Set up the labor and nonlabor attributes for plan lines.
- Create project budgets.
- Create a resource forecast to capture detailed estimated hours for your workers to include in your project budget.

# Set Up Tenant Configuration for Project Budgets

## Prerequisites

- Create an entry type that uses Project as a plan type.
- Create a plan structure with Project as a required dimension.
- Configure the plan calculation type on the *Assign Plan as Baseline Event* business process.
- Security: *Set Up: Project Budget* domain in the Projects functional area.

## Context

You can configure your tenant and use it as a template when creating project budgets. You can also create calculation types to enforce different plan types.

**Note:** Workday gives precedence to project hierarchy configurations over tenant configurations.

## Steps

1. Access the **Maintain Project Budget Tenant Configuration** report.
2. On the **Default Configuration** tab, click **Maintain**.
3. (Optional) To ensure that Workday continues to update your forecast budgets with actuals, mark the **Do Not Allow Submission of Forecast Budgets** check box. Workday uses this setting to prevent users from submitting their forecast budgets for approval.
4. As you complete the **Plan Calculation Type** section, consider:

Option	Description
<b>Plan Structure</b>	Workday uses the plan structure that you select to determine the dimensions available to configure for the project.
<b>Plan Eligible For</b>	Enable tracking and reporting of plans across tenants.
<b>Inactive</b>	Select this check box to disable this calculation type for new project budgets. For existing project budgets, Workday will continue to use this calculation type.
<b>Cost</b> <b>Revenue</b>	Include all budget dimensions that project managers need as they create budgets for the projects under this tenant. Configure: <ul style="list-style-type: none"> <li>• Cost and revenue dimensions if the plan structure requires them. Include at least 1 dimension from each category.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Plan structure dimensions. Worktags that you select in these fields populate on:           <ul style="list-style-type: none"> <li>Plan Lines sourced from the resource forecast.</li> <li>Resource plans without project override data.</li> </ul> </li> </ul> <p>To avoid duplicate postings, Workday recommends that you don't create dimensions that are already on the project as worktags.</p>
<b>Actuals Source(s)</b>	<p>You can leave this field blank to see only your forecast on your project budget.</p> <p>If you've already configured your ledger accounts to include time cost, exclude <i>Time</i> to avoid double counting.</p>
<b>Forecast Source</b>	<p>Specify a cutoff date to include time transactions instead of resource forecasts in the current period.</p> <p>If you haven't reached the cut-off date, Workday uses the last day of the prior period for time transactions.</p>

## Result

Workday references these settings to generate the project budget.

## Next Steps

- Set up the labor and nonlabor attributes for plan lines.
- Create project budgets.
- Create a resource forecast to capture detailed estimated hours for your workers to include in your project budget.

## Related Information

## Set Up Labor and Nonlabor Attributes for Plan Lines

### Prerequisites

- Set up project budgets.
- Security: *Set Up: Project Budget* domain in the Projects functional area.

## Context

You can configure project budgets to classify plan lines as labor or nonlabor, and then apply your changes to the existing project budgets in your tenant.

This classification makes it easier for project managers to:

- Identify plan lines when they view their project budgets.
- Accurately track the financial health of their projects.
- Inform their stakeholders.

## Steps

1. Access the **Maintain Project Budget Tenant Configuration** task.
2. Click the **Plan Line Attribute Configuration** tab.
3. Click **Maintain**.
4. As you complete the task, consider:

Option	Description
<b>Spend Categories</b>	Select the spend categories for labor. Workday labels the rest of the spend categories as nonlabor on the plan lines for the project budget.
<b>Revenue Categories</b>	Select the revenue categories for labor. Workday labels the rest of the revenue categories as nonlabor on the plan lines for the project budget.
<b>Ledger Accounts</b>	Select the cost and revenue ledger accounts for labor. Workday labels the rest of the ledger accounts as nonlabor on the plan lines for the project budget.

## Result

You can view the labor and nonlabor classifications of your project budgets on the:

- Plan lines.
- Key performance indicator cards.

## Next Steps

- Update the plan line attributes for your existing project budgets.
- Create project budgets.

## Related Information

### Tasks

[Steps: Set Up Project Budgets](#) on page 1294

### Reference

[Reference: Key Performance Indicator Cards](#) on page 1320

[2021R2 What's New Post: Plan Line Attributes for Project Budgets](#)

## Steps: Create Project Budgets

### Prerequisites

Create a project with start and end dates.

### Context

A project cost plan gives you insight into approaching costs from your project assigned resources, while a project revenue plan helps you estimate future revenue from the contract billing process. To populate the final budget, we pull all dimensions from the plan structure and the project budget configuration. Budget lines pull from project worktags. Workday then creates a project budget schedule.

As the project progresses, you can update forecasts to include historical data with actuals along with future estimates, and use this information to revise your project.

You can also create a preliminary project budget without using a resource forecast:

- Create a blank budget and schedule. Useful if there are no labor costs associated with the project, and the budget is maintainable through manual input.
- Use the percentage allocation or estimated hours from the resource plan as the basis for a high-level budget.

(Optional) You can differentiate baseline budgets from forecast budgets using plan categories configured from the project hierarchy. Workday supports the assignment of a single plan for both a baseline and a forecast in a project.

### Steps

1. (Optional) [Create Resource Plans](#) on page 1275.

Define your project resource plan with project role assignments and consider:

- Percent Allocation or Estimated Hours.
- Project Resources.
- Start and End Dates.

2. (Optional) Create a resource forecast.

a. Access the **Create Resource Forecast for Project** task.

b. As you complete the *Forecast Level View* option, consider:

Option	Description
<b>Project</b>	Workday generates an upper-level forecast containing the worker and their forecasted hours.
<b>Project Plan Task</b>	Workday generates a detailed forecast including the worker and their: <ul style="list-style-type: none"> <li>• Project tasks.</li> <li>• Forecasted hours for each task.</li> </ul>

Security: *Manage: Project Resource Forecast* domain in the Projects functional area.

3. (Optional) [Create Project Budget Templates](#) on page 1189.

**4.** Access the project profile.

- a. Select the **Financials** tab.
- b. Select the **Plan** tab.
- c. Click **Create Budget**.

**Note:** Workday doesn't display the **Create Budget** button on the Plan tab when:

- There isn't a project budget configuration on the project hierarchy or on the tenant.
- A project budget configuration exists on the hierarchy or tenant, but the configuration disabled the creation of project budgets.

**d.** As you complete the task, consider:

Option	Description
<b>Company</b>	This required field displays only when there isn't a company identified on the project.
<b>Worktags</b>	<p>Enter any additional worktags that are required dimensions on the plan structure. This field doesn't display when required dimensions on the plan structure are on the project hierarchy.</p> <p>Example: <i>Cost Center</i> is a required dimension on the plan structure but isn't defined on the project or the project budget configuration. Enter the <i>Cost Center</i> worktag here. Workday saves the <i>Cost Center</i> value to the project and will use it on the project budget.</p>
<b>Plan Name</b>	Workday displays this name in the <b>Project Budget</b> grid. Access the grid on the <b>Plan</b> report of the <b>Financials</b> profile group of the project profile.
<b>Plan Calculation Type</b>	Select the revenue and cost inputs configured for the project hierarchy or tenant that you want to use as a base to build the project budget.
<b>Resource Forecast</b>	Displays when the plan calculation type includes a resource forecast as the basis for the creation of the budget.
<b>Revenue Calculation Method</b>	<p>Select the basis for calculating revenue for the project budget:</p> <ul style="list-style-type: none"> <li>• <i>Project Time and Expense</i> - Workday creates a revenue plan using the contract line associated with the project, project phase, or project task level. When you have contract lines at the project phase or task level with the type time and expense, Workday uses the corresponding contract line at the most granular level for project phase or task to create the revenue plan line. Project budgets support both hourly and daily rates, depending on the contract rate sheet and billing rate rules.</li> <li>• <i>Fixed Fee - Installment</i> - Workday displays contract lines for fixed fee installments with generated revenue installments used to calculate the revenue plan.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>Fixed Fee - Percent Complete (Hours)</b> - Workday displays available fixed fee contracts that you can select to populate the <b>Contract Amount</b> field. Alternatively, you can enter a contract amount to preview how Workday calculates the budget. Workday creates the revenue plan using percent complete revenue recognition formula for each period based on actual and forecasted data: (Contract Amount * Percent Complete)/(Previously Recognized Revenue)</li> </ul>
<b>Plan Structure</b>	Displays the plan structure configured on the plan calculation type for the project hierarchy.
<b>Forecast Source</b>	Select the type of forecast source for the project budget.

Security: *Manage: Project Budget* in the Projects functional area.

5. (Optional) To create another project budget by copying an existing budget, select **Plan > Copy Budget** from the related actions menu on the plan.
6. To submit the budget for approval, select **Plan > Submit Plan for Approval** from the related actions menu on the plan.
7. (Optional) To apply the configuration of the plan line attributes to your project budget:
  - a. Access the **Maintain Project Budget Tenant Configuration** task.
  - b. Click the **Plan Line Attribute Configuration** tab.
  - c. Click **Update Attributes** and complete the task.

**Note:** When you use Worksheets for project budgets, you must manually update the attributes on the plan lines in the project budget workbooks.

Security: *Set Up: Project Budget* domain in the Projects functional area.

## Result

You can expand the resulting revenue and cost budget results to view amounts by budget period.

You can examine the Workday calculation details of a draft or approved plan. From the related actions menu, you can select **Plan > View Initial Calculation** on the budget line sourced from:

- Ad hoc project time transactions (actual costs).
- Journal lines (actual revenue).
- Resource forecasts (revenue and cost forecast).
- Resource plan estimated hours by project role (estimated cost and revenue).
- Resource plan percent allocation by project role (estimated cost and revenue).
- Revenue recognition installments (for Fixed Fee - Installment revenue plans only).
- Time blocks (actual costs).

**Note:** Calculated project budget lines don't include:

- Manual changes to project budget lines.
- The addition of budget lines for ledger accounts such as travel, equipment, or facilities.

[2021R2 What's New Post: Plan Line Attributes for Project Budgets](#)

## Steps: Create Parent-Child Project Budgets

### Prerequisites

Security: *Manage: Project Budget* in the Projects functional area.

### Context

You can create a virtual parent-child structure for project budgets, enabling you to link your existing individual budgets. You can also streamline activities, such as consolidating reports and adding budget controls at a more summarized level than your detailed plans.

To create a parent plan, create a plan structure as you normally would, then use the related actions menu on your new plan structure to link a child plan.

### Steps

1. [Set Up Plan Structures for Project Budgets](#) on page 1296.

When you create a parent plan structure and include a top-level hierarchy, you can control budgets for all companies within the hierarchy.

2. From the related actions menu of the new parent structure, select **Plan Structure > Link Child Plan Structure**.

When you select 1 or both of these check boxes on the parent plan structure, you must match them on the child plan structure:

- **Spend or Revenue Category required on Plan Lines**
- **Record Quantity**

**Note:** All required dimensions on the parent plan structure must be required dimensions on the child plan structure.

3. Access the **Create Plan Template** task. See [Create Plans or Budgets](#) on page 468.

Create a parent plan and include your linked plans.

### Next Steps

- Review your **Virtual Parent** plans on the **Plan** grid of the **Financials** grid of your project.
- Report at an aggregate level across plan structures that might be different.

## Steps: Manage Project Budgets with Worksheets

### Prerequisites

- Set up and configure Worksheets in your tenant.
- Create project budgets.
- Configure the *Planning Event* business process and security policy in the Planning functional area.

- Security:
  - *Manage: Project Budget* domain in the Projects functional area.
  - *Set Up: Budget General* domain in the Budgets functional area.
  - *Worksheets* domain in the System functional area.

## Context

With Worksheets, you can use a spreadsheet framework to:

- Create project budget scenarios based on different assumptions.
- Model nonlabor expenses and materials for a project budget or forecast.
- Collaborate with project members on planning project budgets and forecasts.

## Steps

1. From the related actions menu of the plan, select **Generate Plan Workbook**.

Workday generates a plan workbook with a status of *In Worksheets*, preventing all other modifications to the plan.

2. (Optional) Select **Plan Workbook > Enter Worksheets Draft Mode** from the related actions menu of the plan.

Suspend validations during editing. Workday doesn't display custom validations in the related workbooks.

When the plan is in draft mode, Workday changes the status to *In Worksheets Draft*.

3. (Optional) Select **Create Plan Version** from the related actions menu of the plan.

Create versions of your workbook. Take a snapshot of your edited workbook at any time while the plan status is *In Worksheets*. The original plan and workbook remain active and editable. Workday creates read-only copies with a status of *Versioned*.

4. (Optional) From the related actions menu of the plan, select **Plan Workbook > Update Plan from Workbook**.

Update the plan with your changes from the active plan entry area in the workbook while the plan status is *In Worksheets*.

5. [Edit Plan Workbooks](#) on page 1309.

6. (Optional) Lock your workbook from the related actions menu of the plan.

When you lock the workbook, Workday returns the plan to a status of *Draft*.

7. (Optional) From the related actions menu of the plan, select **Update Budget**.

Sync your workbook when updating your project budget.

8. (Optional) Select the **Update Plan Workbook** check box.

Sync the associated workbook. Workday overwrites any changes you make on the sheet containing the plan entry area. You can only update project budgets with a plan status of *Draft*.

## Next Steps

Submit and route your plan for approval.

### Related Information

#### Concepts

[Concept: Managing Workbooks](#)

[Concept: Editing Workbooks](#)

#### Reference

[Reference: Automatic Data Updates in Workbooks](#)

## Edit Plan Workbooks

### Prerequisites

- Create a plan workbook.
- Security:
  - *Worksheets* domain in the System functional area.
  - *Manage: Project Budget* domain in the Projects functional area.

### Context

You can edit plan workbooks to:

- Build and link models.
- Update plans from workbooks.
- Plan for your baseline and forecast budgets.

### Steps

1. Access your plan workbook.
2. Make changes to your plan workbook data.

The workbook must be in *In Worksheets* mode. You can't change workbooks in *Draft* mode.

The active plan entry area displays inside a green dashed outline in the plan sheet. Changes you make in this area update your plan when you initiate the **Update Plan from Workbook** task. Changes you make outside of the active plan entry area don't update the plan.

Follow these guidelines to work with cells in the plan entry area:

- All cells with Workday dimensions are prompts with values set by the plan structure. To search for prompt values, enter a value or click **Alt + Down Arrow** or **Option + Down Arrow** to open the list of values.
- A required dimension must have a value in all rows in the plan entry area. An optional dimension can be empty.
- All validations that display in the plans display in the related workbook, except custom validations.

3. (Optional) Create planning models and assumptions.

You can perform numerous functions in workbooks to help you analyze and shape your plan data, including:

- Add or create new columns or rows of data.
- Pivot data.
- Import other Workday reports.
- Import relevant external data into your workbook.

4. (Optional) Click the **Share** button to invite others to review your workbook.

You can control view, edit, and sharing permissions for users you collaborate with.

5. (Optional) Suspend validations during editing.

- a) Select the **Plan Workbook > Enter Worksheets Draft Mode** related action to suspend validations so you can edit without interruptions. Workday changes the plan status to *In Worksheets Draft*. You can only enter draft mode for single workbooks that contain a single or multiple plan entry areas.
- b) When you finish your edits, select the **Plan Workbook > Exit Worksheets Draft Mode** related action. Workday resumes validations and returns the plan status to *In Worksheets*.

**6.** (Optional) Create versions of your workbook.

Select the **Create Plan Version** related action to take a snapshot of your plan and the related workbook at any time. The plan must be *In Worksheets* status. The original plan and workbook remain active and editable, the versions are read-only copies.

You can only create versions of plans that contain a single plan entry area in their plan workbooks.

**7.** (Optional) Update your plan with changes you made in an active plan entry area of your plan workbook.

Select **Plan Workbook > Update Plan from Workbook** from the related actions menu of the plan workbook. When you update your plan from your workbook, Workday:

- Applies the changes you made in the active plan entry areas to the plans.
- Performs custom validations configured for lines in your plan. Access the **View Plan** report and select the **View Exceptions** button to see any failed validations.

You can also access the **Update Plan from Workbook** task using global search.

**8.** (Optional) Lock the workbook to update your budget with actuals and forecast data.

a) From the related actions menu of the plan, select **Plan > Lock Workbook**.

b) Either:

- From the related actions menu of the plan, select **Plan > Update Budget**.
- For forecast budgets only, access the **Schedule Project Budget Mass Update** task.
- c) (Optional) Select the **Update Plan Workbook** checkbox to add the newly updated lines to your workbook and unlock it.
- d) Select **Plan > Unlock Workbook** to make the workbook available for editing.

## Next Steps

Submit and route your plan for approval.

If you need to delete a workbook, you can only do so once the plan has been approved from the **Drive** home area. You can't delete a workbook with an active plan entry area.

## Schedule Project Budget Mass Update

### Prerequisites

- Set up project budget configurations.
- Create project budgets.
- Security: *Set Up: Project Hierarchy* domain in the Projects functional area.

### Context

You can schedule regular updates to forecast project budgets in mass, eliminating the need to update individual budgets. Simultaneously updating all your forecast project budgets ensures that they remain current with your actuals.

**Note:** You can schedule a mass update for active projects with a maximum of 500 plans per tenant. The schedule duration can't be greater than 3 months.

### Steps

1. Access the **Schedule Project Budget Mass Update** task.
2. As you complete the task, consider:

Option	Description
<b>Project Hierarchies for Budget Mass Update</b>	Create only 1 schedule at a time per project hierarchy. Workday updates plans that use a project budget configuration when the:

Option	Description
	<ul style="list-style-type: none"> <li>Associated project is active.</li> <li>Plan is in draft status.</li> <li>Plan category is <i>Forecast</i>.</li> <li><i>Resource Forecast</i> is the forecast source.</li> </ul> <p><b>Note:</b> You can't schedule a mass update for optional project hierarchies.</p>
<b>(Optional) Company</b>	You can select a company to filter which budgets you update.
<b>(Optional) Project Status</b>	You can select a Project Status to filter which budgets you update.
<b>(Optional) Project Group</b>	You can select a Project Group to filter which budgets you update.
<b>(Optional) Revenue Calculation Method</b>	<p>You can select a Revenue Calculation Method to filter which budgets you update. Select one of these:</p> <ul style="list-style-type: none"> <li>Project Time and Expense</li> <li>Fixed Fee - Installment</li> <li>Fixed Fee - Percent Complete (Hours)</li> </ul>

3. As you complete the Schedule tab, consider:

Option	Description
<b>Priority</b>	Setting a higher priority can reduce potential queuing.
<b>Day(s) of the Month</b>	Select to run the update based on calendar date. To ensure your reports run on schedule, Workday recommends that you select <i>Last Day of the Month</i> if you want to run the report at the end of every month.
<b>Catch Up Behavior</b>	<p>Use this option to determine whether Workday will re-run the process if your tenant was down for maintenance at the scheduled run time.</p> <p>When you select:</p> <ul style="list-style-type: none"> <li><b>None</b>, Workday ignores the missed updates and continues to run the update at your scheduled times.</li> <li><b>Run Once</b>, Workday runs the update process once after your tenant comes back online, and then continues to run the update at your scheduled times.</li> </ul>
<b>Start Date</b>	Select a start date and time that are in the future. The <i>Start Date</i> must occur on the same day of the week that you selected for <i>Day(s) of the Month</i> or <i>Day of the Week</i> .

## Result

Workday notifies the process owner for each updated forecast project budget.

## Next Steps

- (Optional) Manage your scheduled updates with the **Scheduled Future Processes** report.
- (Optional) Extend or end your scheduled updates with the **Mass Update Scheduled Future Processes** task.

## Related Information

### Concepts

[Concept: Project Budgets](#) on page 1312

[Concept: Workday Scheduled Processes](#)

### Tasks

[Set Up Hierarchy Configuration for Project Budgets](#) on page 1299

[Manage Scheduled Future Processes](#)

### Reference

[Reference: Scheduled Future Processes](#)

## Concept: Project Budgets

You can gain insight into the approaching costs of a project by creating a project budget. As your projects progress, you can update them with actuals and future estimates.

You can also use project budgets to:

- Create high-level budgets without using detailed resource forecasts.
- Compare baseline budgets with up-to-date resource forecasts (including actuals) across your project portfolio.

## Baseline Budgets

Within your organization, you can designate plans as eligible for a baseline budget using calculation types. You can also configure a business process to approve plans as the project baseline in addition to regular approval. Assign your plan as the baseline to enable reporting of baseline plans at a portfolio level.

## Budget Forecasts

Once the project is under way and you have an approved budget, you can create forecasts using the same **Create Budget** button to view progress over time. To create the forecast, Workday uses revenue from the journal lines within historical periods to calculate actual hours from approved time blocks and ad hoc project time transactions. You can also include approved worker time blocks and ad hoc project time transactions in the current period. For future periods, Workday uses the resource forecast. The resulting forecast is a combination of actual amounts and budget amounts, which you can update as many times as you need.

You can create a project budget snapshot with the **Resource Forecast** report for the project. As the project progresses, you can take snapshots of the resource forecast for specific dates to estimate how the project has evolved over time. You can take 1 snapshot per month. You can't edit snapshots.

Assign your plan as a Forecast to enable reporting of forecasts at a portfolio level. Using the **Schedule Project Budget Mass Update** task, you can also regularly update draft forecast plans that use a resource forecast for the forecast calculation.

## Project Financials (Plan Grid)

You can review your project financial metrics on the Plan section of the Financials tab for these Plan Categories:

- Baseline with a status of *Available*.
- Forecast.

The grid includes:

- **Inception to Date:** The plan line amount from the project start date to the reporting period.
- **Estimate to Complete:** The plan line amount for a period after the reporting period until the project end date.

Workday doesn't calculate these amounts for duration plans.

### **Project Financials (Summary Grid)**

You can review your project financial metrics on the Summary section of the Financials tab. The Summary section includes these performance indicators:

Field	Description
<b>Project Schedule</b>	Calculates using the project start and end dates in relation to today.
<b>Total Cost Consumed</b>	Calculates the total consumed amount divided by the sum of total consumed and total plan remaining.
<b>Project Spend By Type</b>	Summarizes all project spend transactions with the project worktag, and groups the transactions by spend type.
<b>Project Revenue For Time</b>	Summarizes time transaction amounts from the <b>Contract/Billing</b> section for billable projects.
<b>Project Time Blocks By Role</b>	Pulls the approved project time blocks from the worker time submission, and then breaks them down by the project role of the worker.

### **Edit Plan Details**

You can update a plan by selecting **Plan > Edit Plan Details** from the related actions menu:

- Extend Plan End Date
- Inactivate Plan
- Rename Plan

### **Project Budgets Without Resource Forecasts**

Without using a resource forecast, you can create:

- Blank project budget schedules.
- Blank project budgets without anticipated labor costs. You can then add nonlabor costs.
- Project budgets using only labor actuals.
- Project budgets using estimated hours by project role from the resource plan.
- Project budgets using percent allocation by project role from the resource plan.

### **Project Budget Templates**

You can create default configurations at the project hierarchy level using project budget templates. You can select a template when creating a project budget, saving time and preventing errors.

## Consolidated Project Budgets

Consolidated project budgets deliver a virtual parent-child structure for project budgets, enabling you to link individual budgets. We also enable you to streamline activities, such as consolidating reports and adding budgetary controls.

[2021R2 What's New Post: Tenant Configuration for Project Budgets](#)

## Concept: Multicurrency in Project Budgets

Workday supports multicurrency conversions in project budgets. Depending on the conversion type, Workday selects different currency rates and effective dates for those rates. For worker time block conversions, Workday uses a different calculation method than other project budget conversions.

If you used the **Edit Company Accounting Details** task to configure a *Currency Rate Type Override* for your company, Workday uses it as the currency conversion rate in your project budget calculations. Otherwise, Workday uses the default currency rate for your tenant.

For worker time block conversions, Workday uses the **Standard Cost Rate Currency Override** on the *Resource Plan Line* for the worker. Otherwise, Workday uses the currency rate from the *Project Standard Cost Rate Sheet* for the worker company. For ad hoc time blocks, if you specify a currency override on the transaction, Workday will use the rate you specify. If you don't specify a currency override on an ad hoc time block, Workday uses the same order of operations as it does for determining the rate type on worker time block conversions.

You can review your specific currency rates by using the **Currency Rates as of Date** report. Depending on the conversion type, Workday uses a different effective date to select the currency conversion rate:

Currency Conversion Type	Currency Conversion Date
Project company to project	Project start date
Project to project company	Transaction date
Worker standard cost to project	Transaction date

### Example

You submit a worker time entry on 2023-01-14, costing \$1500 CAD, for your project budget, which is in USD.

- The currency rate type override for your company is *Average*.
- Because the conversion is from worker standard cost to project, Workday uses the currency rate as of your transaction date (2023-01-14).
- The *Average* currency rate in your tenant as of 2023-01-14 for the *Source Currency* CAD and the *Target Currency* USD is 0.76.
- The debit to your project budget is \$1,140 USD ( $1,500 \times 0.76 = 1,140$ ).

## Reference: Project Budget Setup by Role

Project budget configuration requires multiple roles, but you only need to perform some of the steps once.

Step	Role	Frequency and Details
Configure security.	Security Administrator	Once; add project administrators to the proper security groups.
Create an entry type.	Budget Administrator	Once; add an entry type for the project plan type.
Set up the plan structure.	Project Administrator Project Manager	Once, with possible occasional updates (you can create alternate plan structures to use with the same project hierarchy or tenant). Create the foundation for the project budget.
Set up the project budget configurations.	Project Administrator	Once per project hierarchy or tenant, with possible occasional updates. Configure: <ul style="list-style-type: none"> <li>The project hierarchy or tenant to select specific labor cost and revenue dimensions based on the plan structure.</li> <li>Labor and nonlabor attributes for plan lines.</li> <li>Plan calculation types to drive the different types of plans enabled in the hierarchy or tenant.</li> </ul>
Create resource forecast.	Project Manager	Once per project; add the workers and estimated hours from the resource plan to the project budget.
Create resource forecast snapshot.	Project Manager	Periodically; edit the resource forecast as project resources change and take a snapshot to apply the updated forecast to the project budget.
Create standard cost rate sheets.	Project Administrator	Once per currency. Define standard cost rates for: <ul style="list-style-type: none"> <li>Workers based on worker attributes.</li> <li>Unnamed resources based on project roles.</li> </ul>
Create contract rate sheet.	Contract Administrator	Once per contract, with updates as needed; define the billing rate that Workday uses to calculate the revenue budget.
Create project budget.	Project Manager	As needed; create plans as outlined by the plan structure and project hierarchy or tenant configuration. Assign plans as baselines or forecasts to compare.

Step	Role	Frequency and Details
		variance across projects in the hierarchy or tenant.
Update project budget.	Project Manager	As needed; create an updated budget when you make changes on your: <ul style="list-style-type: none"> <li>• Resource forecast.</li> <li>• Worker time blocks.</li> <li>• Ad hoc project time transactions.</li> <li>• Contracts.</li> </ul>

**Related Information****Tasks**

[Steps: Set Up Project Budgets](#) on page 1294

**Reference: Project Budget Calculations**

We collect data for cost and revenue budgets from areas within Workday to create the project budget.

Source	Per-Period Calculations
Time	Approved time blocks and all ad hoc project time transactions for the project: <ul style="list-style-type: none"> <li>• The sum of the total hours grouped by worker and role per period. The rates use:           <ol style="list-style-type: none"> <li>1. The standard cost amount in project currency on the time block.</li> <li>2. The project currency from the project.</li> </ol> </li> <li>• Workday compares a worker from the time transaction to the resource plan. If there's more than 1 entry on the resource plan for that worker, Workday considers:           <ol style="list-style-type: none"> <li>1. The assignment and association.</li> <li>2. The most recent entry.</li> </ol> </li> </ul>
Journal Lines	The sum of all journal lines that match these elements: <ul style="list-style-type: none"> <li>• Project and Project Company.</li> <li>• Ledger Account and Type (when listed as a dimension in the project hierarchy configuration or the tenant configuration).</li> <li>• Journal Status, Journal Line Type, and Journal Entry Type.</li> <li>• Budget dimensions from the project budget configuration, budget structure, and worktag values on the project.</li> </ul>
Resource Forecast	If there are no actual worker hours logged to the worker time block or the ad hoc project time transaction, Workday draws on the resource forecast and uses:

Source	Per-Period Calculations
	<ul style="list-style-type: none"> <li>The estimated hours by worker and project role from the resource forecast.</li> <li>The standard cost rate and cost rate currency from the standard cost rate sheet for the project. Alternatively, Workday uses the override standard cost rate and cost rate currency from the resource plan line.</li> </ul>
Resource Plan	<p>Workday draws estimates from the resource plan and uses:</p> <ul style="list-style-type: none"> <li>The estimated hours or percentage allocation by worker and project role.</li> <li>The standard cost rate and cost rate currency from the standard cost rate sheet for the project. Alternatively, Workday uses the override standard cost rate and cost rate currency from the resource plan line.</li> </ul>
Contract Rate Sheet	<p>Workday gathers actual hours logged to the project and uses the project billing rate from the rate sheet on the customer contract, taking into consideration any billing rate rules.</p> <p>Workday converts the currency into the project currency, if applicable. Conversion rates come from the <b>Currency Rates As of Date</b> task based on the resource forecast or snapshot date. Workday determines the currency rate type from the <b>Default Currency Rate Type</b> field specified on the <b>Edit Tenant Setup-System</b> task.</p>
Revenue Recognition Installments	<p>Workday calculates <b>Fixed Fee - Installment</b> plans by pulling in installments from the revenue recognition schedule. Actuals come from journal lines.</p>
Calculated Project Budget Line	<p>Workday calculates <b>Fixed Fee - Percent Complete (Hours)</b> contracts using this source when:</p> <ul style="list-style-type: none"> <li>Time hasn't been entered in the corresponding period. The calculated project budget line reverses the journal line without hours logged to the project.</li> <li>A resource needs to recognize a revenue adjustment, but doesn't have a resource forecast for hours in the current period. Example: Project EAC has changed, altering the percent complete for the corresponding resource.</li> </ul>

The calculation details for the project budget line are available on the [View Initial Calculation](#) report.

**Note:** This report doesn't include manual changes to project budget lines.

From the related actions menu of a draft or approved project budget, select **Plan > View Initial Calculation**.

Calculation Detail	Description
Resource	<p>Includes:</p> <ul style="list-style-type: none"> <li>Unnamed resource, associated group, or worker on the resource forecast line.</li> <li>Workers with time logged.</li> </ul>
Role	Project worker, associated group, or unnamed resource role assignment on the resource plan line.
Period	Inclusive date range for calculation.
Hours	Total number of hours used in calculation.
Ledger Account	Ledger account for actuals.
Source	<p>Draws from 1 of these origins:</p> <ul style="list-style-type: none"> <li>Journal lines.</li> <li>Resource forecasts.</li> <li>Time blocks.</li> <li>Ad hoc project time transactions.</li> <li>Resource plan estimated hours or percentage allocation.</li> <li>Installments from revenue recognition schedule.</li> </ul>
Cost Rate	<p>Cost rate derives at:</p> <ul style="list-style-type: none"> <li>The transaction date of the time block.</li> <li>The transaction date of the ad hoc project time transaction.</li> <li>The period end date of the resource forecast line. Draws from either:           <ul style="list-style-type: none"> <li>Override standard cost rate from the resource plan line.</li> <li>Standard cost rate sheet, if override standard cost rate from resource plan is zero.</li> </ul> </li> </ul>
Cost Rate Currency	<p>Cost rate currency derives at:</p> <ul style="list-style-type: none"> <li>The transaction date of the time block.</li> <li>The transaction date of the ad hoc project time transaction.</li> </ul> <p><b>Note:</b> Currency is sourced from the time block as <i>Project Currency</i>.</p> <ul style="list-style-type: none"> <li>The period end date of the resource forecast line. Draws from either:           <ul style="list-style-type: none"> <li>Override standard cost rate currency from the resource plan line.</li> <li>Standard cost rate sheet.</li> </ul> </li> </ul>
Cost Amount (Source Currency)	Multiplies the cost rate by hours using the source currency.
Cost Amount (Budget Currency)	Multiplies the cost rate by hours using the budget currency.

Calculation Detail	Description
Cost Worktags	<p>Worktags define:</p> <ul style="list-style-type: none"> <li>The project.</li> <li>The time cost of the budget configuration for the project hierarchy or the tenant.</li> </ul> <p>If the same worktag type defines the project and the time cost, the project worktag overrides the configuration worktag.</p>
Billable Hours	<p>The total number of billable hours used in calculation. For project budgets created from resource forecasts at the task level, billable hours include:</p> <ul style="list-style-type: none"> <li>Resource forecasted hours for project plan task, if you don't select the <b>Non-Billable</b> check box.</li> <li>These current period time transactions, if you select the <b>Include Time Actuals in Current Period</b> check box: <ul style="list-style-type: none"> <li>Ad hoc project time transactions without the <i>Do Not Bill</i> status.</li> <li>Worker time blocks without the <b>Do Not Bill</b> check box selected.</li> </ul> </li> </ul>
Days for Period	Calculates days from the contract rate sheet.
Billing Rate	Draws the contract rate sheet from the first applicable transaction for the period.
Billing Rate Currency	Draws from the contract rate sheet.
Revenue Amount (Source Currency)	Uses the source currency, the billable hours, and the billing rate with considerations from the billing rate rules.
Revenue Amount (Budget Currency)	Uses the budget currency, the billable hours, and the billing rate with considerations from the billing rate rules.
Billing Rate Rules	The billing rate rule types applied to calculate the revenue amount. These rules are from the contract rate sheet.
Project Inception to Date Hours	Workday calculates <b>Fixed Fee - Percent Complete (Hours)</b> revenue calculation methods as the total hours worked for matching budget lines from prior periods through the current period.
Project Estimated Hours at Complete	Workday calculates <b>Fixed Fee - Percent Complete (Hours)</b> revenue calculation methods as the total hours worked by all project resources.
Percent Complete by Hours	Workday calculates <b>Fixed Fee - Percent Complete (Hours)</b> revenue calculation methods as the <i>Project Inception to Date Hours</i> divided by the <i>Project Estimated Hours At Complete</i> .

Calculation Detail	Description
Contract Amount	The total contract amount for <b>Fixed Fee - Percent Complete (Hours)</b> revenue calculation methods.
Total Recognizable Revenue	Workday calculates <b>Fixed Fee - Percent Complete (Hours)</b> revenue calculation methods as <i>Percent Complete by Hours</i> multiplied by <i>Contract Amount</i> .
Previously Recognized Revenue Amount	Workday calculates <b>Fixed Fee - Percent Complete (Hours)</b> revenue calculation methods as matching budget lines (role, resource, and worktags from prior periods) in the <i>Budget Currency</i> .
Calculated Allocation	<p>Workday calculates <b>Fixed Fee - Percent Complete (Hours)</b> revenue calculation methods as the allocation of journal lines for the period to:</p> <ul style="list-style-type: none"> <li>• Ad hoc project time transactions.</li> <li>• Associated time blocks.</li> </ul> <p>Workday uses this calculation to project revenue by resource in future months. A resource or a task on the journal line matches to the corresponding time block or ad hoc project time transaction. If there are no matches, Workday allocates the journal line to time blocks proportionally by hours logged.</p>
Total Plan Remaining	<p>Workday calculates the total plan remaining based on an available approved baseline plan.</p> <p>When an approved baseline plan isn't available, then the calculation is based on the last approved budget. If neither are available, then the calculation is based on your estimated budget.</p>

## Reference: Key Performance Indicator Cards

Workday displays project budget metrics in the form of key performance indicator (KPI) cards.

Workday doesn't display KPI cards when a project is missing 1or more of these items:

- A plan structure.
- A budget configuration.
- A project budget.
- An assigned plan category.

- A configured labor or nonlabor plan line attribute.

### KPI Cards

Card	Description
Project Financial Health	The plan lines for the overall project.
Labor Performance	The labor plan lines.
Nonlabor Performance	The nonlabor plan lines.

### Calculations

Metric	Calculation	Visual Indicator	Drill-Down Visual Indicator
Cost	$(\text{forecast cost} - \text{baseline cost}) \div \text{baseline cost} \times 100$	Green: Less than or equal to zero. Yellow: Greater than zero. Red: Greater than 10 percent.	Green: Less than zero. Yellow: Greater than zero. Red: Greater than 10%.
Revenue	$(\text{forecast revenue} - \text{baseline revenue}) \div \text{baseline revenue} \times 100$	Green: Greater than zero percent. Yellow: Less than zero. Red: Less than -10%.	Green: Greater than zero. Yellow: Less than zero. Red: Less than -10%.
Margin	$(\text{forecast margin} - \text{baseline margin}) \div \text{baseline margin} \times 100$	Green: Greater than or equal to zero. Yellow: Less than zero. Red: Less than -50%.	Green: Less than zero. Yellow: Greater than zero. Red: Greater than 5%.
Margin %	forecast margin% - baseline margin.	Green: Greater than zero percent. Yellow: Less than zero. Red: Less than -5%.	Green: Greater than zero. Yellow: Less than zero. Red: Less than -5%.

### Reference: Classification Logic for Plan Line Attributes

Workday classifies the plan line attributes for project budgets using this logic:

Attribute	Classification Logic
Cost or Revenue	<p>For attribute assignments for cost or revenue, Workday follows this logic sequence:</p> <ol style="list-style-type: none"> <li>1. The plan calculation type is either cost only or revenue only.</li> <li>2. The plan line has either a spend category (cost) or a revenue category (revenue).</li> <li>3. The plan line matches either the cost or the revenue actuals configuration on the project budget configuration.</li> <li>4. The plan line matches either the default cost or revenue worktags for Time on the <b>Plan Calculation Type</b> for the project budget.</li> <li>5. The plan line has either a debit value (cost) or a credit value (revenue).</li> </ol>
Labor or Nonlabor	<p>Labor attribute, if the plan line matches the:</p> <ul style="list-style-type: none"> <li>• Labor cost configuration.</li> <li>• Labor revenue configuration.</li> </ul> <p>Nonlabor attribute for everything else.</p>
Plan or Actuals	<p>For period-based budgets only. Not duration budgets.</p> <p>Actuals attribute for Workday-generated plan lines sourced only from journal lines or time transactions.</p> <p>Plan attribute for everything else.</p>

If you update the configuration for the plan line attributes, apply the new settings to existing project budgets using the **Update Plan Line Attributes for Project Budgets** task.

## FAQ: Project Budgeting

### When do I use a project budget to manage my budget?

Use a project budget to:

- Track budgets for billable projects and based off forecasts.
- Use segmented security so that project managers can view only their budget.
- Budget by project duration.
- Manage budgets using worksheets.
- Track projects that require different configurations. Example: projects that require a combination of budgets tracked by project and project hierarchy level.

## When do I use a financial budget with Projects worktag to manage my budget?

Use a financial budget with *Projects* worktag to:

- Budget at the project hierarchy level.
- Run allocations on budgets.
- Align budget with fiscal schedule. Example: fiscal year, fiscal quarter.
- Use top-down budgeting.
- Roll over budgets into the next period.

## Project Labor Costing

### Setup Considerations: Project Advanced Labor Costing

You can use this topic to help make decisions when planning your configuration and use of project advanced labor costing. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

With project advanced labor costing, you can prorate your salaried and nonsalaried labor costs using standard or fully burdened costing. Proration accounts for hours worked above or below scheduled hours.

#### Business Benefits

Project advanced labor costing helps you:

- Determine labor actuals by enabling you to adjust costs when worked hours differ from scheduled hours.
- Understand the impact of hours worked above or below scheduled hours, based on how your costs increase or decrease with proration.
- Define unique calculation types to prorate worker costs using the costing types, rates, and hours you want to include.

#### Use Cases

When salaried workers exceed or work less than their scheduled hours, you can use a calculation method to:

- Prorate labor costs up or down.
- Prorate all labor costs down using the base rate from the standard cost rate sheet or fully burdened cost rate definition as the maximum rate.

When salaried or nonsalaried workers exceed their scheduled hours, apply premium percentages to prorate costs.

## Questions to Consider

Questions	Considerations
What aspects of worker labor do you need to base proration on?	You can calculate a factor that prorates worker costs based on your: <ul style="list-style-type: none"> <li>• Salaried or nonsalaried calculation method.</li> <li>• Time components.</li> <li>• Rates for worker overtime.</li> </ul>
What time entries do you use to calculate your project labor costs?	You can prorate labor costs on these approved time entries: <ul style="list-style-type: none"> <li>• Ad hoc project time transactions.</li> <li>• Project time blocks.</li> </ul>
Do you want to cost all your time entries using proration, including past time entries that already have cost amounts?	You can optionally prorate past time entries approved before the date you initiate the project advanced labor costing feature to recalculate these cost amounts.
Do you have various groups of workers that you need to cost differently?	You can prorate worker groups by configuring cost calculation types, then assigning them to your project cost rate rules.
What impact does advanced labor costing have on intercompany billable transactions?	Your intercompany billable transactions for time have a status of <i>Pending Pricing</i> until the advanced labor costing process completes.

## Recommendations

We recommend that you set up:

- Standard cost rate sheets or a fully burdened cost rate definition for all project workers. Workday uses these rates to determine prorated cost amounts.
- Advanced labor costing to run on a weekly recurrence. This configuration eliminates manual work and enables you to review your prorated cost amounts before you complete your month end processing.

## Requirements

Either set up Workday Time Tracking or create ad hoc project transactions so you can log time against project work.

## Limitations

No impact.

## Tenant Setup

No impact.

## Security

Domains	Considerations
Setup: Project in the Projects functional area.	Create and manage advanced labor costs using standard or fully burdened costing.

Domains	Considerations
<p><i>Manage: Ad Hoc Project Costing</i> in the Projects functional area.</p> <p><i>Process: Project Billing</i> in the Project Billing functional area.</p>	Edit ad hoc project time transactions.

## Business Processes

You can use the *Ad Hoc Project Transaction Event* business process to review and approve ad hoc transactions on projects.

## Reporting

You can use these report data sources to create custom reports:

- **All Time Blocks**
- **Ad Hoc Project Transactions**

## Integrations

Web Services	Considerations
<i>Get Project Advanced Labor Cost Calculation Types</i>	Create and preview advanced labor cost calculation types.
<i>Put Project Advanced Labor Cost Calculation Type</i>	
<i>Get Project Advanced Labor Cost Definitions</i>	Initiate project advanced labor costing.
<i>Put Project Advanced Labor Cost Definition</i>	

## Connections and Touchpoints

Project advanced labor costing interacts with these other areas in Workday:

Features	Considerations
Project Labor Cost Capitalization	After you calculate advanced labor costs, you can use labor cost capitalization to recognize these project costs as long-term assets rather than short-term liabilities.
Project Budgets	Advanced labor costing can help you better estimate and manage labor actuals for your projects.
Intercompany Contracts	When you use advanced labor costing to prorate standard costs, you can use transfer pricing rate sheets to mark prorated costs up or down.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Setup Considerations: Ledger Posting for Project Labor Costs

You can use this topic to help make decisions when planning your configuration and use of ledger posting for project labor costs. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Ledger posting for project labor costs enables you to summarize project labor costs and post these summaries to your ledger.

### Business Benefits

Ledger posting for project labor costs enables you to improve efficiency and reduce manual effort by:

- Analyzing project profitability as a dimension of company profitability.
- Automating ledger posts for your labor cost summaries.
- Making all project labor costs auditable within Workday.
- Reporting on total project labor costs using ledger balances.

### Use Cases

- Capitalize labor cost summaries tagged to capital projects.
- Create comprehensive accounting and reporting for project labor cost summaries.
- Summarize labor costs for intercompany projects, and recover the labor cost from either the project or worker company.
- Summarize labor costs from Workday Payroll journal lines tagged to capital projects.
- Summarize standard and fully burdened labor costs from worker time blocks and ad hoc project time transactions.

### Questions to Consider

Questions	Considerations
Which project types do you need to post labor cost summaries for?	You can post labor cost summaries that include all projects or capital projects only.
What level of detail do you need to include in your ledger posts for summarized project labor costs?	When configuring summaries for project labor costs, you can specify worktag details to determine: <ul style="list-style-type: none"> <li>• The granularity of summarizations.</li> <li>• Whether worktags follow projects or workers.</li> </ul>
How does project advanced labor costing interact with ledger posting for project labor costs?	You can summarize and post prorated labor costs to your ledger.

Questions	Considerations
What company and cost center combinations will you use to account for project labor costs?	Invalid company and cost center combinations result in labor cost summaries with a status of <i>Invalid</i> . Workday doesn't create accounting for invalid labor cost summaries.
How do payroll cost allocations and payroll adjustments interact with ledger posting for project labor costs?	Workday doesn't support payroll cost allocations or payroll adjustments when summarizing project labor costs.
Where do you want Workday to post project labor cost summaries?	You can configure your tenant to create intercompany accounting entries that post to the ledger of either the project or worker company. If you don't configure your tenant to generate intercompany accounting for project labor cost summaries, Workday posts all journals to the actuals ledger of the project company.
Do you want to enable multibook accounting for capital project transactions?	To set up your tenant to create multibook accounting for capital project transactions, ensure you configure the <i>Business Asset Multibook Settlement</i> account posting rule.

## Recommendations

Run labor cost summarizations for projects after:

- You approve and submit all time.
- The end date of your ledger period passes.

Otherwise, you might summarize the same period multiple times, causing Workday to create a reversal and a new transaction to account for any changes.

Complete your review of capital project transactions after you run labor cost summarizations.

Include the same worktag types in time entry templates that you include in your criteria for summarizing project labor costs. This action ensures that worktags are available for summarization.

If you configure balancing worktags in your tenant, require the primary balancing worktag type on the template for project time entry. Otherwise, labor cost summaries will have a status of *Invalid*, and Workday won't generate accounting for them.

## Requirements

If you're using advanced labor costing, schedule summarizations for project labor costs after you run advanced labor costing. This action ensures you include prorated amounts in the summaries.

## Limitations

You can only configure this functionality for a tenant-level setup. Company or project-level configurations are unavailable.

## Tenant Setup

Configure Work In Progress (WIP) worktags in your tenant for Workday to include them automatically in your WIP ledger posting.

## Security

These domains in the Capital Projects and Projects functional areas:

Domain	Considerations
<i>Manage: Project Labor Cost Accounting</i>	Create, schedule, and view labor cost summarizations that post to your ledger for capital and noncapital projects.
<i>Set Up: Project Labor Cost Summary Accounting</i>	Configure labor cost summarizations that post to your ledger for capital and noncapital projects.

## Business Processes

When you configure the *Verify Project Labor Cost Summarization* business process for fully burdened and standard costing methods, Workday:

- Routes your summarizations for approval.
- Creates accounting for your labor cost summaries.

## Reporting

Use the:

- **Find Project Labor Cost Summaries** report to review summarized time transactions and details for standard and fully burdened labor costs.
- **Project Labor Cost Summary** report data source to create custom reports.

## Integrations

No impact.

## Connections and Touchpoints

Feature	Considerations
Capital Projects	Ledger posting for project labor costs enables you to configure labor cost summaries for all projects or capital projects only.  Capitalize labor cost summaries tagged to capital projects.
Payroll	Capitalize summarized labor costs from Workday Payroll journal lines tagged to capital projects.
Time Tracking	Summarize standard or fully burdened labor costs for worker time blocks and ad hoc project time transactions.  Configure time entry templates for projects to group time blocks on labor cost summarizations.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Tasks

[Steps: Set Up Project Labor Cost Summary Configurations](#) on page 1332

[Steps: Manage Project Labor Cost Summaries](#) on page 1334

[Steps: Configure Capital Projects](#) on page 1344

## Reference

[2022R2 What's New Post: Project Labor Cost Summarization for Intercompany Projects](#)

[2020R1 What's New Post: Ledger Posting for Project Labor Costs](#)

## Steps: Manage Project Advanced Labor Costs

### Prerequisites

Review [Setup Considerations: Project Advanced Labor Costing](#).

### Context

Prorate salaried and nonsalaried workers' standard or fully burdened labor costs for hours worked above or below scheduled hours. You can use cost calculation types to define proration treatments and calculate a proration factor to:

- Prorate approved project time blocks and ad hoc project transactions.
- Understand the impact that overtime and over-utilized workers can have on your project cost.

### Steps

#### 1. [Maintain Project Advanced Labor Cost Calculation Types](#) on page 1338.

Configure the cost calculation types to define your proration treatments for your standard or fully burdened costs. You can preview how your configurations calculate the proration factor.

#### 2. Access the **Maintain Project Advanced Labor Cost Calculation Assignment** task and enter an effective date.

You can assign only 1 cost calculation type per project cost rate rule. You can assign multiple rules to a cost calculation type.

Some workers qualify for more than 1 rule in the list. Workday applies the rate for the first rule that the worker qualifies for based on attributes, such as:

- Company
- Job profile
- Worker location

When you submit this task, Workday immediately initiates advanced labor costing and discontinues labor costing for all time transactions within your effective date range. Advanced labor costing initiates at:

- The ad hoc project transaction submission.
- The approval event for time entry logged against a project or project plan task.

**Note:** Before inactivating a calculation assignment snapshot, delete all scheduled advanced labor costing processes. Workday also recommends that you cost all approved time before inactivation.

To deactivate a calculation assignment snapshot, return to this task and select the **Inactive** check box for your specified effective date.

Security: *Set Up: Project* domain in the Projects functional area.

#### 3. (Optional) Access the **Project Advanced Labor Costing Preparation** task.

Prorate these transactions previously approved before you initiated advanced labor costing:

- Approved project time blocks.
- Approved ad hoc project time transactions.

Security: *Set Up: Project* domain in the Projects functional area.

#### 4. Access the **Schedule Project Advanced Labor Costing** task.

Schedule concurrent costing processes to cost your approved time entries. Workday uses the most recent completed process for your standard or fully burdened cost amounts.

**Note:** The billing status of intercompany billable transactions for time is *Pending Pricing*, and your selected cost amounts display as zero for all projects. When this task completes, cost amounts calculate and become available for:

- Approved project time blocks.
- Approved ad hoc project time transactions.

Also, let this task complete before you schedule a project labor cost summarization. Your summarization will post zero to the project company ledger if advanced labor costing is incomplete.

Security: *Set Up: Project* domain in the Projects functional area.

#### Next Steps

- Create a custom report using the **All Time Blocks** or **Ad Hoc Project Transaction** report data source to track each worker's:
  - Reported standard or fully burdened cost amount in project currency.
  - Standard or fully burdened cost rate.
  - Proration group start date.
  - Cost calculation type.
  - Proration factor.
- [Manage Scheduled Future Processes](#) to edit or update your scheduled project labor costing job.

#### Related Information

##### Concepts

[Setup Considerations: Project Advanced Labor Costing](#) on page 1323

## Create Project Standard Cost Rate Sheets

#### Prerequisites

- (Optional) [Create Project Cost Rate Rules](#) on page 1336.
- Security: *Set Up: Project* domain in the Projects functional area.

#### Context

Create project standard cost rate sheets to cost labor without accessing worker sensitive information.

Configure standard cost rates for:

- Individual workers by name.
- Workers based on worker attributes.
- Workers or unnamed resources based on project roles.

You can override standard cost rates and currency on the project resource plan line.

#### Steps

1. Access the **Create Project Standard Cost Rate Sheet** task.
2. As you complete the header, consider:

Option	Description
Currency	Determines the currency for worker costing. This currency can differ from the company currency.

Option	Description
<b>Company</b>	<p>You can create only 1 rate sheet per company. You can assign multiple companies to a rate sheet.</p> <p>Workday determines the cost rate sheet to use for:</p> <ul style="list-style-type: none"> <li>Workers using the company from the worker primary position.</li> <li>Unnamed resources using the project company.</li> </ul>
<b>Default Hourly Rate</b>	<p>The hourly rate populates the cost rate when either:</p> <ul style="list-style-type: none"> <li>The worker doesn't meet any criteria.</li> <li>The project role doesn't define an unnamed resource.</li> </ul>
<b>Effective Date</b>	<p>You can post-date the effective date when you create or edit a standard cost rate sheet. Workday calculates and persists time entry costs upon time entry approval.</p> <p><b>Note:</b> The standard cost amount for approved project time entries doesn't change when:</p> <ul style="list-style-type: none"> <li>The standard cost rate sheet doesn't change.</li> <li>The override to a cost rate on the resource plan line doesn't change.</li> </ul> <p>Use the <b>History</b> tab to view effective date changes to the standard cost rate sheet. From the related actions menu of the standard cost rate sheet, select <b>Audits &gt; View Audit Trail</b> to view change activity.</p>
<b>Inactive</b>	<p>Retires the rate sheet permanently. Selecting this check box isn't reversible.</p>
<b>Order of Execution</b>	<p>Determines the order of processing for the rate sheet tabs.</p> <p>If a worker qualifies for more than 1 rule, Workday applies the rate for the first rule that the worker qualifies for. The <b>Order of Execution</b> option doesn't apply to unnamed resources.</p>

3. As you complete the rate sheet tabs, consider:

Option	Description
<b>Project Rate Rule</b>	<p>Defines a group of workers based on a set of attributes, such as worker location, job profile, or company.</p>
<b>Worker</b>	<p>Configure a rate for a worker included in your list of companies for this rate sheet.</p>

Option	Description
<b>Project Role</b>	<p>The project role for a worker or unnamed resource.</p> <p>When a worker replaces the unnamed resource, Workday uses the <b>Order of Execution</b> to determine the cost rate with the:</p> <ul style="list-style-type: none"> <li>• Project cost rate rule.</li> <li>• Worker.</li> <li>• Project role associated with the worker.</li> </ul>

## Result

Standard cost rates are now available for:

- Capturing actual labor costs.
- Forecasting and budgeting project labor costs.

## Next Steps

Configure your project advanced labor costing.

To view the workers in your resource plan, go to the project composite view and select **Resources > Project Resources**.

Select **View Resource Rates** to view and compare project resource cost rates including:

- Fully burdened cost rate definition.
- Standard cost rate.
- Standard cost rate override.

## Steps: Set Up Project Labor Cost Summary Configurations

### Prerequisites

Configure your preferred project labor costing method using:

- Advanced labor cost calculation assignments.
- Fully burdened cost rate definitions.
- Payroll to allocate costs towards capital projects.
- Standard cost rate sheets.

### Context

You can configure the summarization of your:

- Labor costs for intercompany projects.
- Labor costs from Workday Payroll journal lines tagged to capital projects.
- Standard or fully burdened labor costs for worker time blocks and ad hoc project time transactions.

Workday uses your configuration to create accounting for your project labor costs.

## Steps

**1. Set Up Account Posting Rules** on page 84.

To identify the ledger account in which to record the resulting accounting, configure these account posting rules:

- *Project Labor Cost*
- *Project Labor Cost Recovery*

**2. (Optional) Configure project capitalization.**

See [Steps: Configure Capital Projects](#) on page 1344.

For capital projects, configure Work in Progress accounting and select worktags to include.

**3. Edit Domain Security Policies.**

Configure the *Manage: Project Labor Cost Accounting* and *Set Up: Project Labor Cost Summary Accounting* security domains in the Capital Projects and Projects functional areas.

**4. Edit Business Processes.**

Configure the *Verify Project Labor Cost Summarization* business process and security policy in the Capital Projects and Projects functional areas.

**5. Access the Set Up Project Labor Cost Summary Configuration task.**

Configure for *All Projects* or *Capital Projects Only*.

You can only configure your tenant to generate intercompany project labor cost summaries for all projects.

Security: *Set Up: Project Labor Cost Summary Accounting* domain in the Capital Projects and Projects functional areas.

**6. As you complete the Labor Cost Calculation Method section, consider:**

Option	Description
<b>Payroll</b>	Summarizes payroll journal lines that use: <ul style="list-style-type: none"> <li>• A capital projects worktag.</li> <li>• The same company as the tagged capital project.</li> </ul> Only available for the <i>Capital Projects Only</i> configuration.
<b>Standard Costing</b>	Summarizes the standard cost amount of worker time blocks and ad hoc project time transactions tagged to the project.
<b>Fully Burdened Costing</b>	Summarizes the fully burdened cost amount of worker time blocks and ad hoc project time transactions tagged to the project.
<b>None</b>	Turns off all project calculations for labor cost summarization.

**7. (Optional) For standard or fully burdened costing methods, complete the Summarized By section.**

Worktag types you select determine:

- The granularity of the summarization.
- The detail on the journal lines generated from the *Project Labor Cost Recovery* account posting rule.

**Note:** Workday automatically includes worktag types in Work In Progress (WIP), primary, and optional balancing worktags.

**8. (Optional) Select the Worker check box under Company is From to include worktag rules, or to generate intercompany accounting.**

**9.** (Optional) For standard or fully burdened costing methods, complete the **Worktag Rules for Labor Cost Recovery** section.

Rules determine whether worktags on journal lines from the *Project Labor Cost Recovery* account posting rule follow:

- Projects.
- Workers.

**10.**(Optional) Set up project time entry.

See [Steps: Set Up Project Time Entry](#).

In the template for project time entry, include the worktag types you would like to group the time blocks by.

**Note:** Also include the worktag types that you selected in the **Summarized By** section to ensure that the worktags are available for summarization.

If you configure balancing worktags in your tenant, require the primary balancing worktag type on the template for project time entry. Otherwise, the labor cost summaries will have a status of *Invalid*, and Workday won't generate accounting for them.

## Next Steps

Create or schedule project labor cost summarizations.

### Related Information

#### Concepts

[Concept: Balancing Worktags on Capital Project Transactions](#) on page 1360

#### Tasks

[Create Derived Worktag Rules for Project Cost and Revenue](#) on page 1177

[Steps: Set Up Worktags for Time Entry](#)

#### Reference

[2022R2 What's New Post: Project Labor Cost Summarization for Intercompany Projects](#)

[2020R1 What's New Post: Ledger Posting for Project Labor Costs](#)

## Steps: Manage Project Labor Cost Summaries

### Prerequisites

Configure the *Verify Project Labor Cost Summarization* business process and security policy in the Capital Projects and Projects functional areas for fully burdened and standard costing calculation methods.

### Context

You can manage the ledger posting of your fully burdened and standard labor cost summaries for projects.

### Steps

**1.** Configure your tenant to create project labor cost summaries.

See [Steps: Set Up Project Labor Cost Summary Configurations](#) on page 1332.

**2.** As you create your labor cost summarizations, consider:

Option	Description
<b>Create Project Labor Cost Summarization</b>	Run your summarization now or once in the future.

Option	Description
	Security: <i>Manage: Project Labor Cost Accounting</i> domain in the Capital Projects and Projects functional areas.
<b>Schedule Project Labor Cost Summarization</b>	Runs monthly. Security: <i>Manage: Project Labor Cost Accounting</i> domain in the Capital Projects and Projects functional areas.

3. Enter the companies to summarize the project time transactions.

**Note:** Selected companies and company hierarchies must have the same fiscal schedule.

Workday only summarizes labor costs from projects with an assigned company.

4. Define the periods to summarize your transactions for. As you complete this step, consider:

Option	Description
<b>Create Project Labor Cost Summarization</b>	Select exact periods to include. Summarizes time transactions with transaction dates that are within the selected periods.
<b>Schedule Project Labor Cost Summarization</b>	Select the number of immediate past periods to include. Summarizes time transactions with transaction dates that are within the selected periods.

**Note:** When you summarize a period from a previously created labor cost summary, Workday creates a reversal and a new transaction to account for changes to:

- A time block matching the worktags from the previous summary.
- The project currency.
- The project or worker company.

5. (Optional) Access the **Find Project Labor Cost Summaries** report.

To find intercompany labor cost summaries, you must search by project company. You can add the worker company as an additional dimension to narrow the results down further.

Review the summarized time transactions and details for these labor costs when auditing your labor cost summarizations:

- Fully burdened.
- Standard.

Security: *Manage: Project Labor Cost Accounting* domain in the Capital Projects and Projects functional areas.

## Result

Workday routes your summarizations for approval through the *Verify Project Labor Cost Summarization* business process. Once approved, Workday creates *Project Labor Cost* accounting for labor cost summaries in the currency of the project upon summarization. When the ledger currency is different from the project currency, Workday converts amounts to the ledger currency on the labor cost summary transaction date.

When the labor cost summary meets a Work In Progress (WIP) exclusion rule, Workday:

- Doesn't create accounting for the *Capital Projects Only* configuration.

- Creates accounting using the *Project Labor Cost* account posting rule instead of the *WIP* account posting rule for the *All Projects* configuration.

## Next Steps

Capitalize labor cost summaries tagged to capital projects.

### Related Information

#### Tasks

[Review Capital Project Transactions](#) on page 1353

[Add or Edit Project Assets](#) on page 1347

#### Reference

[2022R2 What's New Post: Project Labor Cost Summarization for Intercompany Projects](#)

## Create Project Cost Rate Rules

### Prerequisites

Security: *Set Up: Project* domain in the Projects functional area.

### Context

Define a rule that determines project cost rates for workers. Use project cost rate rules to define a group of workers based on a set of attributes. Example: You might have a group of employees with a job profile of Consultant, assigned to your San Francisco office.

Use these rules to define:

- Hourly rates on the project standard cost rate sheet.
- Fully burdened cost rate definitions with overhead percentages.

### Steps

1. Access the **Create Project Cost Rate Rule** task.

2. Enter a **Description**.

The description functions as the name of the project cost rate rule.

3. (Optional) Select an existing rule to copy from the **Copy Condition from Rule** prompt.

4. Define the **Rule Conditions**.

### Result

You can select the project cost rate rule when you set up:

- Project standard cost rate sheets.
- Fully burdened cost rates.

## Set Up Fully Burdened Cost Rate Definitions for Projects

### Prerequisites

- For authorized users, set up the *Worker Data: Fully Burdened Cost* security domain and appropriate security groups.
- Create compensation plans and compensation bases for assigning worker compensation. See [Steps: Propose Compensation for Employees or Positions](#) and [Steps: Manage Compensation Basis](#).
- Security: *Set Up: Fully Burdened Cost Rate* domain in the Projects functional area.
- (Optional) Create project cost rate rules to define a group of workers. Workday defines groups based on a set of attributes such as worker location, job profile, or company. See [Create Project Cost Rate Rules](#).

## Context

You can configure a fully burdened cost rate definition to generate an hourly rate for a worker to cost their time spent on a project. You can also define the cost rate relative to scheduled weekly hours, so that a worker with fewer hours has a higher per-hour cost rate. In addition, you can apply separate overhead percentages for costs, such as benefits, to different worker groups.

## Steps

1. Access the **Set Up Fully Burdened Cost Rate Definition** task.
2. Specify details for these fields:

Option	Description
<b>Compensation Basis</b>	Select a compensation basis that contains the components for calculating the earnings of a worker.
<b>Frequency</b>	Specify a frequency for calculating the hourly cost rate for a worker. Use the <b>Maintain Frequencies</b> task to add, edit, or delete frequencies to use for calculations. To base the cost rate on the scheduled weekly work hours of the worker, select <b>Use Weekly Hours</b> .
<b>Default Overhead Percent</b>	Specify a percentage of overhead costs to apply to the base cost for the worker.
<b>Overhead Rate Rule</b>	To define an overhead percent for a specific group of workers, select a <b>Project Cost Rate Rule</b> . A worker receives the overhead percent associated with the first overhead rate rule for which the worker meets the criteria. If there's no match, Workday uses the <b>Default Overhead Percent</b> .  If a worker qualifies for multiple project cost rate rules, Workday applies the overhead rate for the first project cost rate rule that the worker qualifies for.

## Result

The fully burdened cost rate definition supports costing of projects based on condition rules and compensation. Workday uses costing rates to calculate time cost for projects and initiatives. You can see time cost in the project budget information when you view or edit a project. You can see time cost for initiatives when you analyze them.

To determine the cost rate for workers, Workday uses, in order:

- Standard cost rate override.
- Standard cost rate sheet.
- Fully burdened cost rate.

## Next Steps

Run the **Fully Burdened Cost Rate for Worker** report to understand how Workday uses your configuration to determine the fully burdened cost rate for specific workers. For workers who have a time block posted, you can view the cost rate rules and worker compensation factors, as well as a breakdown of the formula Workday uses to calculate fully burdened cost rates.

## Maintain Project Advanced Labor Cost Calculation Types

### Prerequisites

- Create your standard cost rate sheet or set up a fully burdened cost rate definition.
- Security: *Set Up: Project* domain in the Projects functional area.

### Context

You can define cost calculation types to prorate your project labor costs.

### Steps

1. Access the **Maintain Project Advanced Labor Cost Calculation Types** task.
2. (Optional) For salaried calculation methods, select the **Base Cost Rate Is Max** check box. This check box caps the maximum hourly cost rate during the proration calculation not to exceed the base cost rate from the standard cost rate sheet or fully burdened cost rate definition.
3. Assign the **Start Day Of Week** to identify the first day of the work week for this cost calculation type.
4. Include time components to calculate your proration factor.

As you complete the **Actual Hours For Calculation** section, consider:

Option	Description
<b>Absence</b>	Select to include worker time off and absence time entries. Doesn't include leave of absence.
<b>Ad Hoc Project Time</b>	Select to include approved ad hoc project time transactions.
<b>Company Holiday</b>	Select to include the hours from holidays designated on the company holiday calendar, except those holidays occurring on Saturday or Sunday. Workday calculates holidays as a full day of work per occurrence, depending on worker position.  If you plan to submit time entries on holidays, select <b>Absence</b> instead.
<b>Project Time Block</b>	Select to include hours from approved time entries submitted for project or project plan tasks.
<b>Non-Project Time</b>	Select to include approved hours from time entries submitted with codes other than absence, project, or project plan tasks.

As you complete the **Total Hours For Calculation** section, consider:

Option	Description
<b>Scheduled Weekly Hours</b>	Select to use the scheduled weekly hours based on the worker primary position from Workday Human Capital Management (HCM).  When you select the <b>Scheduled Weekly Hours</b> check box, Workday automatically selects the <b>Absence</b> and <b>Company Holiday</b> check boxes.

Option	Description
<b>Specified Scheduled Hours</b>	(Optional) Enter a value to override the hours populated from the <b>Schedule Weekly Hours</b> option.
<b>Absence</b>	If you clear this option, the approved hours from time off entries reduce the values from the schedule weekly or specified scheduled hours.
<b>Company Holiday</b>	If you clear this option, the company holiday hours and approved time off entries for these holidays reduce the values from the schedule weekly or specified scheduled hours. Workday calculates holidays as a full day of work per occurrence, depending on worker position.  If you plan to submit time entries on holidays, select <b>Absence</b> instead.
<b>Non-Project Time</b>	If you clear this option, the hours from approved nonproject time entries reduce the values from the schedule weekly or specified scheduled hours.

5. (Optional) Use the **Preview Cost Calculation** button to preview how your configured cost calculation type calculates the proration factor.

**Note:** The preview results are simulations and don't make updates to your labor cost data for projects.

## Next Steps

Assign your cost calculation types to prorate worker groups. Define your worker groups using project cost rate rules.

### Related Information

#### Tasks

[Steps: Manage Project Advanced Labor Costs](#) on page 1329

## Reference: Causes of Labor Cost Summary Reversals

Workday reverses or recalculates labor cost summaries if you retroactively change a configuration or time entry.

Workday reverses labor cost summaries when:

- You retroactively add or delete a time block in a summarized period.
- You change a configuration for labor cost summaries.
- You retroactively change a time block in a summarized period.
  - Example: You change a worktag or the quantity of time.
- You change the project, project company currency, or worker company currency.
  - Worker company currency only applies when you've selected **Company from Worker** on the **Set Up Project Labor Cost Summary Configuration** task.

When you're using advanced project labor costing, Workday recalculates labor cost summaries when:

- You retroactively add or delete a time block in a summarized period.
- You change a worker's job profile as of the end date of the scheduled advanced labor cost job recurrence.
  - Example: A worker changes jobs on 2023-1-15. You schedule the advanced labor cost job for *Weekly Recurrence*, and you schedule a labor cost summary for *Monthly Recurrence*. On your next

labor cost summary, Workday uses the new job profile that's active on 2023-1-15 to summarize the first week of January, because it's the job profile active on 2023-1-31, the date Workday creates the summary.

- You change the time calculation type.
- You terminate a worker as of the end date of a scheduled labor cost summary.
- Example: You terminate a worker on 2023-1-15. You schedule the advanced labor cost job for *Weekly Recurrence* and you schedule labor cost summaries for *Monthly Recurrence*. On your next labor cost summary, Workday creates a labor cost summary for the first week of January. All time blocks entered after this will be zero rated, because Workday evaluates scheduled hours as of the last day of the scheduled advanced labor cost job.

## Capital Projects

---

### Setup Considerations: Capital Projects

You can use this topic to help make decisions when planning your configuration and use of Capital Projects. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

This feature enables you to track your spending on projects that result in capitalized assets.

### Business Benefits

With capital projects, you can collect costs on a project and convert them into business assets.

### Use Cases

You can track spending on large projects that you capitalize and depreciate over time. Examples can include:

- Building improvements
- Equipment installations
- New buildings
- Software and implementations

### Questions to Consider

Questions	Considerations
How does your organization capitalize labor costs?	<p>You can recognize labor costs on a project as long-term assets rather than short-term expenses. You can capitalize labor costs using these methods:</p> <ul style="list-style-type: none"> <li>• Fully Burdened</li> <li>• Payroll</li> <li>• Standard</li> </ul>

Questions	Considerations
What costs do you want to track against your project that you would never include in a project asset?	You can create Work in Progress (WIP) exclusion rules to resolve these transactions automatically using the spend account posting rule. This posting rule streamlines accounting and eliminates the need for review.
Does your organization use primary balancing worktags?	If so, you must define a primary balancing worktag on your capital project to use in WIP accounting.
What optional balancing worktag types does your organization use?	You can specify up to 5 additional worktag types to generate fully balanced journals. You can use these additional worktags with or without your primary balancing worktags on WIP accounting.
How do you want to assign your capital project transactions to project assets?	<p>You can assign capital project transactions to project assets either:</p> <ul style="list-style-type: none"> <li>• Manually</li> <li>• Automatically</li> </ul> <p>Automatic assignment reduces the effort of managing your capital project transactions.</p>
Do you want to enable multibook accounting for capital project transactions?	To set up your tenant to create multibook accounting for capital project transactions, ensure you configure the <i>Business Asset Multibook Settlement</i> account posting rule.
How do you want Workday to generate accounting for your labor cost summaries?	<p>To generate intercompany accounting, select All Projects on the <b>Set Up Project Labor Cost Summary Configuration</b> task.</p> <p>To generate accounting for eligible Capital Project time, select Capital Projects Only. When transactions meet a work in progress exclusion rule, Workday doesn't generate any accounting.</p>

## Recommendations

We recommend that you:

- Create 1 or more WIP Exclusion rules. Your exclusion rules can classify capital project transactions automatically as expenses or assets, excluding them from manual WIP accounting.
- Create 1 or more Project Asset Assignment rules. Your assignment rules enable Workday to auto-assign capital project transactions to project assets. This auto-assignment eliminates the manual effort of reviewing your capital project transactions.
- Use the **Capital Project Workbench** to:
  - Review your transactions in WIP more efficiently.
  - Automatically assign capital project transactions to project assets.
  - Capitalize project assets.

## Requirements

As you configure your Capital Projects, you need to create account posting rules for:

- WIP
- Spend

- Payables
- Project Labor Cost Recovery

If you use balancing worktags, you need to configure the InterWorktag Payables and InterWorktag Receivables account posting rules.

The line level company for expense reports, supplier invoices, and manual journals must match the capital project company on that transaction line.

## **Limitations**

You need to create manual journals to account for changes to transactions after you've expensed them.

To move the cost of a procurement card transaction to a capital project asset, you need to create a manual journal and tag it with the capital project.

You can only set primary and optional balancing worktags on capital projects without transactions. Once your project has transactions, you can't edit the balancing worktags selected on the project. You can only select optional balancing worktag types set for the tenant before the creation of your project.

## **Tenant Setup**

On the **Edit Tenant Setup - Financials** task, you can:

- Define the level of detail for the journal lines generated from the Work in Progress posting rule. You can add these worktag types in the **Include Worktag Types in WIP** section for:
  - Expense report lines and itemizations.
  - Labor cost summaries from fully burdened and standard costing summarization methods.
  - Supplier invoice line and line splits and supplier invoice adjustment line and line splits.
- Enable the posting of WIP to company asset book codes for multibook asset accounting.

## **Security**

Assign these security domains in the Capital Projects functional area:

Domain	Considerations
<i>Manage: Capital Projects</i>	Manage project: <ul style="list-style-type: none"> <li>• Assets</li> <li>• Labor Cost Summarizations</li> <li>• Transactions</li> </ul>
<i>Manage: Project Labor Cost Accounting</i>	Manage and access labor cost summaries in reports and tasks.
<i>Set Up: Capital Projects</i>	Manage: <ul style="list-style-type: none"> <li>• Project Asset Assignment Rules.</li> <li>• WIP Exclusion Rules.</li> </ul>
<i>Set Up: Project Labor Cost Summary Accounting</i>	Configure labor cost summary accounting for capital and noncapital projects.

## **Business Processes**

Business Processes	Considerations
<i>Verify Capital Project Expense</i>	Review and approve transactions reclassified as expenses.

Business Processes	Considerations
<i>Verify Project Labor Cost Summarization</i>	Review and approve labor costs summarized by the fully burdened and standard costing methods.
<i>Asset Registration Event</i>	Register and assign accounting information to capitalized project assets.
<i>Asset Removal Event</i>	Undo project asset capitalization.

## Reporting

Reports or Dashboards	Considerations
<b>Capital Project Transaction Detail</b>	Audit all capital project transactions.
<b>Capital Project Workbench</b>	Review transactions and capitalize project assets.
<b>Find Project Labor Cost Summaries</b>	View labor cost summaries created from the fully burdened and standard costing summarization methods.
<b>View Project</b>	Review and edit project details such as dates, organization, and owner.
<b>Work in Progress Reconciliation Report</b>	Compare activity related to capital projects from an operational transaction rather than a ledger standpoint and reconcile activity.

## Integrations

You can use these web services to manage your Capital Projects:

- Get Project Asset
- Put Project Asset

## Connections and Touchpoints

Capital Projects interacts with these areas of Workday:

Feature	Considerations
Business Assets	Designate your project assets to convert them into business assets and capitalize the associated costs.
Expenses	Expense reports flow to capital projects and become designated as business assets or expenses.
Financial Accounting	Manual journal entries flow to capital projects.
Payroll	Capitalize labor costs from Payroll on a project as a long-term asset.
Supplier Accounts	Supplier invoices flow to capital projects and become designated as business assets or expenses.
Time Tracking	You can capitalize labor costs from Time Tracking on a project as a long-term asset.

Feature	Considerations
Projects	You can capitalize labor costs from ad hoc project time transactions.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Steps: Configure Capital Projects](#) on page 1344

[Steps: Create Project Asset Assignment Rules](#) on page 1348

##### Reference

[Reference: Edit Tenant Setup - Financials](#)

[2022R2 What's New Post: Capital Project Asset Quantities](#)

[The Next Level: Capital Projects for Core Financials](#)

## Steps: Configure Capital Projects

#### Prerequisites

Set up project infrastructure.

#### Context

Project capitalization gives you greater visibility into project costs. You can manage your:

- Acquisition in transactions.
- Association of transactions with *project assets* in the project.
- Capitalization of those project assets into business assets.

#### Steps

##### 1. Set Up Account Posting Rules on page 84.

To identify the ledger account in which you want to record the resulting accounting for transactions tied to capital projects, configure the *Work In Progress* account posting rule.

##### 2. Edit Domain Security Policies.

Configure the *Manage: Capital Projects* security domain in the *Capital Projects* functional area.

##### 3. Edit Business Processes.

As you configure the business processes and corresponding security policies related to project capitalization, consider:

Option	Description
<b>Verify Capital Project Expense</b>	When you review and mark capital project transactions as an expense rather than an asset, Workday launches this business process for approval.
<b>Asset Registration Event</b>	When you capitalize project assets, Workday launches this business process for approval.

Option	Description
<b>Asset Removal Event</b>	When you undo project asset capitalization, Workday launches this business process for approval.

4. If you enabled worktag balancing for your tenant, evaluate your worktag balancing rule set and your financial balancing rule for the supplier invoices and expenses transaction types.  
See [Concept: Balancing Worktags on Capital Project Transactions](#) on page 1360.
5. (Optional) Access the **Edit Tenant Setup - Financials** task.  
Select worktag types to add to the **Include Worktag Types in WIP** section. These worktag types define the level of detail for the journal lines generated from the Work In Progress account posting rule. The selections apply to:
  - Expense report lines and itemizations.
  - Labor cost summaries from fully burdened and standard costing summarization methods.
  - Supplier invoice lines and line splits.
6. If you enabled multibook asset accounting in your tenant, add or verify book codes for the Company.  
See [Steps: Set Up Asset Books for a Company](#) on page 1491.  
 Optionally, enable **Post Work in Progress to Company Asset Book Codes** in your tenant to post WIP transactions automatically to each asset book code.
7. (Optional) [Steps: Create Capital Project Work In Progress \(WIP\) Exclusion Rules](#) on page 1350.  
Create rules that automatically classify capital project transactions as expenses or assets, eliminating manual WIP accounting.

## Result

You can now create capital projects and tag transactions with those capital projects. You can review WIP transactions and assign them to project assets, which you can then capitalize.

## Next Steps

Capitalize projects.

### Related Information

#### Reference

[Workday 32 What's New Post: Configurable Labor Cost Capitalization](#)

## Steps: Manage Capital Projects

### Prerequisites

Configure project capitalization.

### Context

Once you've configured project capitalization, you can manage project costs, identify them, and delay recognition of these expenses. Workday automates the accounting entries along the way.

## Steps

**1. Create Projects** on page 1202.

When creating a capital project, select the:

- **Capital** check box.
- **Company** that is working on the capital project.

**2. Add or Edit Project Assets** on page 1347.

To capture separate, ongoing costs of a capital project that's in progress, create project assets.

**3. Tag transaction lines with a capital project or 1 of the phases or tasks to place incurred costs into the Work in Progress (WIP) account.**

You can tag these transactions:

- Expense report lines, including line itemization.
- Financial accounting adjustments.
- Manual journal lines with a WIP ledger account that don't go through an account posting rule.
- Supplier invoice lines, including line splits.
- Transactions that result in labor costs (such as time tracking, payroll costing allocations, and payroll input).

Optionally, access the **Create Capital Project WIP Exclusion Rule** task to create rules that automatically classify transactions as expenses or assets, eliminating manual WIP accounting.

See [Steps: Create Capital Project Work In Progress \(WIP\) Exclusion Rules](#) on page 1350.

**4. Review Capital Project Transactions** on page 1353.

**5. (Optional) Set up automatic assignment of project assets.**

See [Steps: Create Project Asset Assignment Rules](#) on page 1348.

**6. Capitalize Project Assets** on page 1355.

Register your fully accounted project asset costs as business assets.

**7. To monitor the capital project to track project assets and total project costs, use the **View Project** report.**

As you review the report, consider:

Option	Description
<b>Transactions Reclassified as Expense</b>	Displays summarized expenses by transaction type for transactions marked as expense during the transaction review. To view a list of transactions for that transaction type, click the amount.
<b>Project Assets</b>	Lists all current buckets to capture separate, ongoing costs of the capital project. Click an amount to view the transactions that comprise the uncapitalized, capitalized, and project costs. For a capitalized project asset, click the business asset to see the details including account information, depreciation schedule, and lifecycle history.

**8. As additional project costs come in, recapitalize project assets to make acquisition or post-acquisition cost adjustments to the corresponding business asset.**

**9. Reconcile Work in Progress (WIP) Accounts** on page 1358.

At the end of each period, reconcile your WIP accounts to your transactions.

- 10.(Optional)** Adjust expense costs related to the capital project by creating manual journals. Create a manual journal line against your spend account and tag it with the capital project.

**Note:** These lines aren't reviewable in the **Review Capital Project Transactions** task.

## Next Steps

- Track the assets through their entire lifecycle.
- Perform lifecycle events for capital assets.

## Related Information

### Tasks

[Review Billable Project Transactions](#) on page 1425

[Steps: Create Capital Project Work In Progress \(WIP\) Exclusion Rules](#) on page 1350

### Reference

[2022R2 What's New Post: Capital Project Asset Quantities](#)

## Add or Edit Project Assets

### Prerequisites

- Create a capital project. See [Create Projects](#) and [Steps: Manage Capital Projects](#).
- Security: *Manage: Capital Projects* domain security policy in Capital Projects functional area.

### Context

Project assets are buckets, specific to each capital project, that capture separate, ongoing costs of a capital project that's in progress. You can associate multiple project assets with a project to track cost over the life of a project. When you tag all costs from transactions to the capital project, you can convert project assets to business assets to realize cost and start depreciation. Each asset typically has a different depreciation schedule.

Example: Your company is building a new restaurant. You want to track ongoing costs for the land, building, labor, and kitchen equipment independently. You use a different project asset for each part of the project until you tag all cost transactions.

Workday doesn't support asset pooling for project assets, or for business assets you create when you capitalize project transactions.

### Steps

1. Access the [View Project](#) report.
2. On the **Financials > Capitalization** tab, select **Add Project Assets** or **Edit Project Assets**.
3. As you complete the task, consider:

Option	Description
<b>Project Asset Spend Category</b>	<p>Select from the categories defined to track items or the hierarchies that contain at least 1 trackable spend category. If you don't see the value that you want, use the <b>Maintain Spend Categories</b> task and select <b>Track Items</b>.</p> <p>When you capitalize the project asset, Workday uses this spend category for the resulting business asset. The spend category drives the depreciation profile and schedule.</p>

Option	Description
<b>Project Asset Quantity</b>	Enter the quantity for multiple assets of the same type. You can adjust this quantity later, so long as you haven't capitalized the project assets.
<b>Uncapitalized Cost</b>	The total cost of all transactions associated with the project asset before its capitalization. After you capitalize the project asset, uncapitalized costs are the cost of transactions that come in late for the project asset. When you recapitalize the project asset, these late costs become a cost adjustment to the corresponding business asset.
<b>Capitalized Cost</b>	The transaction costs that you've already capitalized for the project asset.
<b>Project Asset Cost</b>	The total cost of the project asset. Equals the sum of the uncapitalized and capitalized costs.
<b>Capitalization Date</b>	The initial date when you capitalized the project asset to create the business asset.
<b>Asset ID, Acquisition Date, Business Asset Status</b>	Information about the business asset that results from capitalization of the project asset.

## Result

Workday updates the **Project Assets** grid on the **Capitalization** profile group of the **View Project** report.

## Next Steps

- Optionally, create rules that automatically classify capital project transactions as expenses or assets, eliminating manual Work In Progress (WIP) accounting.
- Set up the automatic assignment of capital project transactions to project assets.
- Review WIP transactions tagged to the capital project and associate their costs to project assets.
- Capitalize project assets when all transaction costs are in.
- Recapitalize project assets when uncapitalized costs come in late.

## Related Information

### Concepts

[Setup Considerations: Capital Projects](#) on page 1340

### Tasks

[Create Spend Categories](#)

[Steps: Create Project Asset Assignment Rules](#) on page 1348

### Reference

[2022R2 What's New Post: Capital Project Asset Quantities](#)

## Steps: Create Project Asset Assignment Rules

### Prerequisites

- Create a capital project with transactions. See [Create Projects](#) and [Steps: Manage Capital Projects](#).
- [Add or Edit Project Assets](#).

## Context

Before you can capitalize your capital project transactions, you need to assign them to project assets. You can manually assign transactions to project assets (see [Review Capital Project Transactions](#)) or you can configure Workday to automatically assign capital project transactions to project assets. That way, you can eliminate manual effort.

Workday runs the assignment job periodically, so you can control how often Workday assigns transactions to project assets. You can apply your rules to multiple projects or project hierarchies.

## Steps

1. Access the **Create Project Asset Assignment Rule** task.

As you complete the task, consider:

Option	Description
<b>Description</b>	Workday displays this text when the conditions that you specify are true.
<b>Category</b>	Assigning a category makes the Project Asset Assignment Rule easier to find.  You can create <i>Capital Project Asset Assignment Rule</i> categories using the <b>Maintain Condition Rule Categories</b> task.
<b>Derived Logic</b>	The statement you defined with the conditions for the project asset assignment rule. It displays after you save a new Project Asset Assignment Rule.
<b>And / Or</b>	When 2 or more statements exist, specify how they relate to each other.
<b>( )</b>	Use parentheses for 3 or more statements and a combination of <i>And</i> and <i>Or</i> conditions.  Example: <i>(A and B) or C</i> .
<b>Source External Field or Condition Rule</b>	Select: <ul style="list-style-type: none"> <li>• Data source report fields for capital project transactions.</li> </ul> <b>Note:</b> Don't use report fields that populate using downstream workflow events. Examples: <i>Accounting Date</i> , <i>Capitalization Date</i> , or <i>Spend Account</i> . <ul style="list-style-type: none"> <li>• Available assignment rules for capital project assets, or other condition rules.</li> </ul>
<b>Comparison Type</b>	Specify whether to compare the source to: <ul style="list-style-type: none"> <li>• Another field.</li> <li>• A value you enter for <b>Comparison Value</b>.</li> </ul>
<b>Comparison Value</b>	Based on the <b>Comparison Type</b> , select a comparison field or enter a value to compare to the source.

Security: Set Up: *Capital Projects* domain in the Capital Projects functional area.

**2. Access the **Edit Project Assets** task.**

Add the Project Asset Assignment Rules to the appropriate project assets.

Security: *Manage: Capital Projects* domain in the Capital Projects functional area.

**3. Access the **Schedule Project Asset Auto-Assignment** task to schedule the job that runs the auto-assignment rules.**

As you complete the task consider:

Option	Description
<b>Run Frequency</b>	<p>Select how often you want Workday to assign capital project transactions to project assets.</p> <p>Example: Select <b>Custom Recurrence</b> to set up a quarterly run frequency.</p>
<b>Unassign Transactions from Project Assets</b>	<p>Select to undo previous auto-assignments. Manually assigned project assets remain unchanged.</p> <p>To use this option, you must also select the <i>Run Now</i> run frequency.</p>
<b>Project Hierarchies</b>	<p>Select a project hierarchy.</p> <p>If you don't select a project or project hierarchy, Workday applies the Project Asset Assignment Rules to all of the projects you can access.</p>
<b>Projects</b>	<p>Select a project.</p> <p>If you don't select a project or project hierarchy, Workday applies the Project Asset Assignment Rules to all of the projects you can access.</p>

Security: *Manage: Capital Projects* domain in the Capital Projects functional area.

### Next Steps

Run the **Capital Project Transaction Detail** report to verify that your rules are working as expected.

### Related Information

#### Concepts

[Setup Considerations: Capital Projects](#) on page 1340

#### Reference

[2022R1 What's New Post: Automated Project Asset Assignment](#)

## Steps: Create Capital Project Work In Progress (WIP) Exclusion Rules

### Prerequisites

- Create a Capital Project.
- Apply a Capital Project worktag to project transactions.

### Context

Create Work in Progress (WIP) exclusion rules that automatically classify capital project transactions as expenses or assets, excluding them from manual WIP accounting. Create date-effective WIP exclusion rule sheets to evaluate and apply WIP exclusion rules in order of display.

WIP exclusion rules apply when these transaction types have a Capital Project worktag:

- Supplier invoice lines and line splits.
- Expense report lines.
- Labor cost summaries.

WIP exclusion rules also apply when you make accounting adjustments to the applicable transaction types. Transaction dates determine the date-effective WIP exclusion rule sheet to use.

## Steps

### 1. Access the **Create Capital Project WIP Exclusion Rule** task.

As you complete the task, consider:

Option	Description
<b>Description</b>	Workday displays this text as a message when the conditions that you specify are true.
<b>Category</b>	Assign a category to make the WIP exclusion rule easier to find later. You can create <i>Capital Project WIP Exclusion Rule</i> categories on the <b>Maintain Condition Rule Categories</b> task.
<b>Derived Logic</b>	The statement you defined through the WIP exclusion rule conditions. It displays after you save a new WIP exclusion rule.
<b>And / Or</b>	When 2 or more statements exist, specify how they relate to each other.
( )	Use parentheses for 3 or more statements and a combination of <i>And</i> and <i>Or</i> conditions.  Example: <i>(A and B) or C</i> .
<b>Source External Field or Condition Rule</b>	Select: <ul style="list-style-type: none"> <li>• Capital Project Transaction data source report fields.  <b>Note:</b> Don't use report fields that populate using downstream workflow events. Examples: <i>Account Date</i>, <i>Capitalization Date</i>, or <i>Spend Account</i>.</li> <li>• Available Capital Project WIP Exclusion Rule, or other condition rule.</li> </ul>
<b>Comparison Type</b>	Specify whether to compare the source to: <ul style="list-style-type: none"> <li>• Another field.</li> <li>• A value you enter for <b>Comparison Value</b>.</li> </ul>
<b>Comparison Value</b>	Based on the <b>Comparison Type</b> , select a comparison field or enter a value to compare to the source.

Security: Set Up: Capital Projects domain in the Capital Projects functional area.

**2. Access the Set Up Capital Project WIP Exclusion Rule Sheet task.**

Specify the effective date of the WIP exclusion rule sheet based on the transaction type dates used for the WIP exclusion rules. You can define multiple rule sheet snapshots, differentiated by effective date.

Add, remove, or reorder the WIP exclusion rules on the rule sheet. Workday applies the first WIP exclusion rule that matches the transaction.

Security: *Set Up: Capital Projects* domain in the Capital Projects functional area.

**3. (Optional) Access the Capital Project Transaction Detail report.**

Use this report to audit your capital project transactions.

To distinguish between capital project transactions and accounting adjustments that met the WIP exclusion rule, the report has 2 distinct fields with the name Capital Project WIP Exclusion Rule Met. The field for accounting adjustments is in the **Accounting Adjustment Lines for Capital Project Transaction** section of the report.

Security: *Manage: Capital Projects* domain in the Capital Projects functional area.

## Result

Workday uses the *Spend* account posting rule when a transaction meets the WIP exclusion rule condition. When transactions don't meet a WIP exclusion rule, Workday uses the *Work in Progress* account posting rule to create the WIP account.

## Next Steps

Access the **Edit Capital Project WIP Exclusion Rules** task to update any rule not yet applied to a transaction.

Access the **Delete Capital Project WIP Exclusion Rule** task to delete any rule that meets both of these requirements:

- Not yet applied to a single transaction.
- Not on a Capital Project WIP Exclusion Rule Sheet snapshot.

## Related Information

### Tasks

[Capitalize Project Assets](#) on page 1355

[Steps: Manage Capital Projects](#) on page 1345

## Example: Create Capital Project Work In Progress (WIP) Exclusion Rule (Spend Category)

This example illustrates how to create a capital project work-in-progress exclusion rule that automatically excludes certain spend categories from your WIP accounting.

### Context

Your company wants to post any travel and entertainment-related costs incurred during the course of your capital project to the *Spend* account. You'll create a WIP exclusion rule to be applied to your capital project transactions when they fall into the *Travel & Entertainment* spend category.

### Steps

1. Access the **Create Capital Project WIP Exclusion Rule** task, and enter a description and category for your rule.

2. Enter these values in the *Rule Conditions* section:

Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
Spend Category as Worktag	<i>exact match with the selection list</i>	<i>Value specified in this filter</i>	<i>Travel &amp; Entertainment</i>

### Result

Workday applies your WIP exclusion rules to your transactions based on the order of precedence that you specify on the **Set Up Capital Project WIP Exclusion Rule Sheet** task, and creates accounting in either the *Spend* or *Work in Progress* accounts based on your rules.

### Next Steps

Use the **Set Up Capital Project WIP Exclusion Rule Sheet** task to specify an effective date and order of precedence for your new rule.

## Example: Create Capital Project Work In Progress (WIP) Exclusion Rule (Transaction Date)

This example illustrates how to create a capital project work-in-progress exclusion rule that automatically excludes transactions you incur after your project end date from your WIP accounting.

### Context

Your company doesn't want any costs incurred after the project end date you've scheduled in Workday to be included in the WIP accounting. You'll create a WIP exclusion rule to be applied to the capital project transactions you incur after the project end date.

### Steps

1. Access the **Create Capital Project WIP Exclusion Rule** task, and enter a description and category for your rule.
2. Enter these values in the *Rule Conditions* section:

Source or External Field Condition Rule	Relational Operator	Comparison Type	Comparison Value
<i>Transaction Date</i>	<i>greater than</i>	<i>Value from another field</i>	<i>Project End Date</i>

### Result

Workday applies your WIP exclusion rules to your transactions based on the order of precedence that you specify on the **Set Up Capital Project WIP Exclusion Rule Sheet** task, and creates accounting in either the *Spend* or *Work in Progress* accounts based on your rules.

### Next Steps

Use the **Set Up Capital Project WIP Exclusion Rule Sheet** task to specify an effective date and order of precedence for your new rule.

## Review Capital Project Transactions

### Prerequisites

- Create a capital project with project assets.

- Tag these transaction lines with a capital project worktag:
  - Expense reports.
  - Labor costs.
  - Manual journals.
  - Supplier invoices.

## Context

Review each transaction line tagged to a capital project and either:

- Place the costs into a *project asset*.
- Reclassify the cost as an expense.

When you reclassify a cost as an expense, Workday moves the accounting out of Work In Progress (WIP) accounts and back into spend accounts. Optionally, you can create rules that automatically classify capital project transactions as expenses or assets, eliminating manual WIP accounting.

To review transactions across multiple projects manually, access the **Capital Project Workbench**.

## Steps

1. (Optional) Access the **Edit Tenant Setup - Financials** task.

Select the **Post Work in Progress to Company Asset Book Codes** and the **Enable Multibook Asset Accounting** check boxes in the **Business Assets Options** section.

2. Access the **View Project** report.

3. Select **Financials > Capitalization**.

4. Click the **Review Transactions** button and select a review option:

- Use *Express Review* to review all new, unassigned transaction lines tagged to the capital project for all capital transaction types.
- Review transaction lines by transaction type, such as expense reports or labor costs. This review method enables you to work with new transaction lines as well as the transaction lines you've already assigned to project assets.

5. (Non-express only) Use the **Search Criteria** to narrow the list of transaction lines.

Select **Only Transactions Already Assigned** to view only transaction lines already assigned to a project asset, but not lines that you already classified as expenses. Example: Use this option when you want to reclassify costs from 1 project asset to another.

6. (Non-express only) Select the transaction lines that you want to act on.

7. Select the action that you want to apply to the transaction lines:

Option	Description
<b>Mark as Expense Cost</b>	Reclassifies the transaction line costs as a project expense not associated with any asset. This option doesn't apply to manual journal entries. You apply their costs directly to WIP accounting when you create a manual journal. There's no original spend account in which to reclassify the costs.  You can't reverse this choice after you submit.
<b>Assign to Project Asset</b>	Associates the transaction line costs with the correct project asset for this capital project. You can assign multiple transaction lines to the same project asset.

Option	Description
<b>Set Project Asset Values to Blank</b>	(Non-express only) Reset assigned lines to unassigned. Use with the <b>Only Transactions Already Assigned</b> check box in the <b>Search Criteria</b> . Example: You can use this option when you incorrectly tie transactions to a project asset.

## Result

For transaction lines marked as expense during the review, Workday initiates the *Verify Capital Project Expense* business process. A reviewer can confirm that the transactions are expenses not related to any project asset.

Once approved, Workday moves the expense costs out of the WIP account and into the proper spend account. Workday determines an account based on your *Spend* account posting rule and the spend category from the original transaction line. Workday displays project expenses in the **Transactions Reclassified as Expense** section of the **Capitalization** tab by transaction type. The capital project remains as a worktag on the transaction line.

If you enable post Work in Progress (WIP) to company book codes with multibook asset accounting, Workday moves the expense out of the WIP account and into spend. Select **Accounting > View Accounting** from the related actions menu of a transaction for details.

For transaction lines assigned to project assets, Workday retains the costs in the WIP account. Workday displays these costs in the **Project Assets** section of the capitalization tab as **Uncapitalized Cost** for the selected project asset.

## Next Steps

- Review the additional transactions for the capital project as they come in.
- Configure the automatic assignment of capital project transactions to project assets.
- Capitalize project assets.

## Capitalize Project Assets

### Prerequisites

- [Add or Edit Project Assets](#).
- (Optional) Create Work in Progress exclusion rules. See [Steps: Create Capital Project Work In Progress \(WIP\) Exclusion Rules](#) on page 1350.
- [Review Capital Project Transactions](#) on page 1353.
- Security: *Manage: Capital Projects* domain in the Capital Projects functional area.
- To undo project asset capitalization, you need security access to the **Asset Removal Event** business process.

### Context

A project asset is a container that you use to capture separate transactions from your capital projects in progress. Once you capture all applicable transactions in a project asset, you capitalize it to convert it to 1

or more business assets. You can configure Workday to automatically assign capital project transactions to project assets, reducing manual work.

When you have capital project assets with assigned transactions, you can capitalize those project assets to convert them to business assets and capitalize their associated cost. You can then perform lifecycle events, such as depreciation, on those business assets. See [Steps: Perform Lifecycle Events for Capital Assets](#).

Before you capitalize a project asset, consider:

- You can't pool the assets that you create when you capitalize a project asset to create multiple business assets.
- You can include business assets tagged with capital project transactions in composite assets, but those business assets are no longer available for further capitalization.

## Steps

1. Access the **Capital Project Workbench** and select **Capitalize Project Assets**.
2. Complete the **Search Criteria** section. Workday displays a list of project assets that match your criteria.
3. Select the project assets with uncapitalized cost that you want to capitalize.

As you complete the task, consider:

Option	Description
<b>Project Asset Quantity</b>	<p>You can enter the number of business assets you want to create when you capitalize the project asset. Workday creates new business assets based on the quantity that you enter, and divides the capitalized cost equally among them. You can't adjust the asset quantity after you capitalize project assets.</p> <p>This field is only available when you access the task from the <b>Capital Project Workbench</b>.</p>
<b>Capitalization Date</b>	<p>You can change the <b>Capitalization Date</b> to a date in the past or future for any asset that you haven't yet capitalized. You can now set these dates on the resulting business asset to any day in the past:</p> <ul style="list-style-type: none"> <li>• Business acquisition.</li> <li>• Placed in service.</li> </ul> <p>Example: You acquire an asset, but don't enter it into Workday until a month later. You can back date the <b>Capitalization Date</b>. This enables you to have accurate acquisition and in service dates after you capitalize the project asset into a business asset.</p>
<b>Acquisition Adjustment</b>	<p>Select when you have a previously capitalized project asset with new uncapitalized costs that you want to mark as a post-acquisition cost adjustment.</p> <p>Enter an <b>Adjustment Date</b>.</p> <p>Workday divides the cost equally amongst the business assets generated from the same project asset, and uses your selections to determine</p>

Option	Description
	<p>where on the depreciation schedule to add the post-acquisition cost adjustment. Workday divides the cost by the remaining periods on the asset depreciation profile and the selected date. You can enter any date during the life of the asset.</p> <p>When you dispose of a business asset, you can't make cost adjustments to any other business assets that were capitalized from the same project asset.</p>

## Result

When you submit the transaction:

- When you capitalize a project asset, Workday initiates the *Asset Registration Event* business process. The *Asset Assign Accounting Event* step of the business process generates journal entries. These entries move costs out of your WIP accounts and to the business assets. This step displays in My Tasks for the asset accountant.
- When you recapitalize a project asset, Workday initiates the *Asset Cost Adjustment Event* business process.

This process:

- Adjusts the acquisition or post-acquisition cost of the corresponding business assets.
- Applies your decision to approve or deny a cost adjustment to all business assets generated from the same project asset.
- Generates journal entries to move post-acquisition costs out of your WIP accounts and to the business assets.

## Next Steps

If you capitalize a project asset, and you later need to undo the capitalization because you made a mistake, you can remove all of the business assets and move the uncapitalized cost back to the project asset:

- To remove assets that you created by capitalization, you must use the related action on the project asset. You first need security access to the initiating action on the **Asset Removal Event** business process.
- The related action won't be available if any of the business assets have an adjustment or are disposed. If you created multiple assets upon capitalization, you can only remove all or none.
- Navigate to the project composite view, and from the related actions menu of the project asset, select **Remove Business Assets**.

You can also:

- Capitalize or recapitalize additional project assets to create acquisition or post-acquisition cost adjustments to the business assets Workday created upon the initial capitalization. Workday divides the new cost equally between the business assets linked to the adjusted project asset.
- Track the resulting assets.
- Perform lifecycle events for the resulting assets. See [Steps: Perform Lifecycle Events for Capital Assets](#).

## Related Information

### Tasks

[Adjust Asset Costs](#) on page 1536

[Assign Asset Accounting Information](#) on page 1497

#### Reference

[2022R2 What's New Post: Capital Project Asset Quantities](#)

[2023R2 What's New Post: Undo Project Asset Capitalization](#)

## Reconcile Work in Progress (WIP) Accounts

#### Prerequisites

- Create a capital project. See [Create Projects](#) and [Steps: Manage Capital Projects](#).
- [Add or Edit Project Assets](#).
- (Optional) Create rules to automatically assign transactions to WIP accounts. See [Steps: Create Capital Project Work In Progress \(WIP\) Exclusion Rules](#).

#### Context

Work in progress accounts are the accounts (typically asset) where you record the costs of work in progress for capital projects. For transaction lines with a capital project worktag, Workday uses the *Work In Progress* account posting rule to determine the account in which to post journal entries.

When you create work in progress account posting rules, you can use dimensions such as company and project to determine the correct account. If you have enabled worktag balancing, additional dimensions are available.

Reconcile your work in progress accounts to:

- Ensure that your transaction amounts for a specified period tie out to your net ledger balance for the same period.
- Understand the amounts capitalized or reclassified as expense from your work in progress ledger account.

**Note:** Workday doesn't use the Work in Progress account posting rule for capital project transactions that meet a Capital Project Work in Progress Exclusion Rule.

#### Steps

1. Access the **Work in Progress Reconciliation Report**.
2. To reconcile, select the **Company**, **Ledger Period**, and **Ledger Accounts**.

When you enable multibook asset accounting, you can select the company book code to reconcile.

3. Review the **Ledger Details**.

As you review the report, consider:

Field	Notes
<b>Project Estimated Budget</b>	This field is informational only and has no bearing on the reconciliation of the work in progress ledger account.
<b>Ledger Balance at Period End</b>	Work in progress ledger account balance at the end of the period.
<b>Total Ledger Activity for Period</b>	This amount should equal the <b>Total Transaction Activity for Period</b> amount.
<b>Total Transaction Activity for Period</b>	The <b>New Transactions in WIP for Period</b> minus <b>Amount Reclassified as Expense for Period</b> minus <b>Capitalized Amount for Period</b> .

Field	Notes
<b>New Transactions in WIP for Period</b>	Doesn't include amounts reclassified as expense or capitalized amounts.
<b>Amount Reclassified as Expense for Period</b>	Credits (subtracts from) the work in progress ledger account balance.
<b>Spend Category</b>	Spend category for the <i>project asset</i> , not the transaction.
<b>Capitalized Amount for Period</b>	Sum of transactions capitalized as a business asset for the period, crediting the work in progress ledger account balance.

## Concept: Capital Project Workbench

The **Capital Project Workbench** (secured to the *Manage: Capital Projects* domain in the *Capital Projects* functional area) enables you to review and act on pending transactions and capitalization tasks across multiple projects.

With the **Capital Project Workbench**, you can:

- [Add or Edit Project Assets](#) on page 1347.
- [Capitalize Project Assets](#).
- [Review Capital Project Transactions](#).

With the **Capital Project Workbench**, you can review these transaction types:

- Capital project labor cost reclassification
- Expense report
- Manual journal entries
- Supplier invoice lines

You can also:

- Auto-assign capital project transactions to project assets.
- Filter search results and apply individual or mass action.
- Search for pending actions by project, project hierarchy, spend category, and worktags.

### Related Information

#### Tasks

[Review Capital Project Transactions](#) on page 1353

[Capitalize Project Assets](#) on page 1355

[Steps: Create Project Asset Assignment Rules](#) on page 1348

## Concept: Labor Cost Capitalization

Labor cost capitalization enables you to recognize labor costs on a project as long-term assets rather than short-term liabilities.

The *Project Labor Cost Recovery* account posting rule enables you to identify the different contra accounts (typically liability) in which to record the capitalization of labor costs.

Example: You can have different contra accounts for each cost center or company. These labor costs come from transactions that you tie to capital projects, phases, or tasks. Workday debits summarized labor costs from Work in Progress (WIP) accounts and credits the labor costs to contra accounts.

A *Labor Cost Summarization* subprocess on the transaction combines journal lines from labor costs. It then posts a:

- Summarized debit line to the correct WIP account based on your WIP account posting rule.

- Credit to contra account to offset the WIP account debit, based on the *Project Labor Cost Recovery* account posting rule.

Within the posting rule, you can have different contra accounts for each cost center or company.

**Note:** For labor costs tagged to capital projects, Workday doesn't create WIP accounting when the labor cost summary meets a WIP exclusion rule.

#### Related Information

##### Tasks

[Steps: Manage Project Labor Cost Summaries](#) on page 1334

##### Reference

[Workday 32 What's New Post: Configurable Labor Cost Capitalization](#)

[2020R1 What's New Post: Ledger Posting for Project Labor Costs](#)

## Concept: Post Work in Progress to Company Asset Book Codes

When enabled in your tenant, Workday posts Work in Progress (WIP) capital project transactions to multiple book codes for company assets. In the **Edit Tenant Setup - Financials** task, **Business Assets Options** section, select these check boxes:

- **Enable Multibook Asset Accounting.**
- **Post Work in Progress to Company Asset Book Codes.**

The common book retains the spend transaction, and WIP reclassification entry posts. These entries for book codes for company assets are:

- Cost reclassifications for capital projects (transactions reclassified to expense).
- Expense reports.
- Labor cost reclassifications for capital projects.
- Supplier invoices.

#### Related Information

##### Tasks

[Review Capital Project Transactions](#) on page 1353

[Capitalize Project Assets](#) on page 1355

## Concept: Balancing Worktags on Capital Project Transactions

### Balancing Worktags

When you enable worktag balancing for your tenant, you directly impact your Work In Progress (WIP) capital project financial transactions. These rules determine the balancing worktag to use on the payables journal line for supplier invoice and expense report transactions:

- Worktag balancing rule sets.
- Your financial balancing rules for the supplier invoices and expenses transaction types.

If set to inherit:

- The payables journal line uses the balancing worktag from the expense report or supplier.
- The WIP journal line uses the same balancing worktag as the capital project.

If set to specify:

- The payables journal line uses the balancing worktag from the balancing rule selected for the transaction type.

- The WIP journal line uses the balancing worktag from the capital project. When your journal line balancing worktags for WIP and payables vary, Workday generates due to and due from journal lines. These journal lines balance the transaction journals.

**Note:** Spend journal lines always inherit the balancing worktag from the spend transaction line.

### Optional Balancing Worktags

Optional balancing worktags for your tenant enable you can specify up to 5 additional worktags to generate fully balanced journals. You can use these additional worktags with or without your primary balancing worktags on your WIP transactions.

Once you configure optional balancing worktags, transactions balance based on the worktags you specify. Workday:

- Inherits optional balancing worktags on Workday-generated entries based on the worktags selected.
- Generates due to and due from journal lines to balance the transaction journal.

**Note:** You can only set primary and optional balancing worktags on capital projects without transactions. Once your project has transactions, you can't edit the balancing worktags selected on the project. You can only select optional balancing worktag types set for the tenant before the creation of your project.

[Define Worktag Balancing Rules for Financial Transactions](#) on page 361

---

## Project Tracking

### Setup Considerations: Project Tracking

You can use this topic to help make decisions when planning your configuration and use of Project Tracking. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Project Tracking gives you access to a limited set of Projects features, and enables you to create projects specifically for tracking time and expenses.

We recommend using Project Tracking if you don't need to:

- Create billable projects.
- Create capital projects.
- Use advanced resource management.

### Business Benefits

You can use Project Tracking to record, manage, and report on the expenses and time worked on your projects.

## Use Cases

You can use Project Tracking to:

- Create and manage projects.
- Track work with project plans.
- Staff workers to projects with resource plans.
- Track and report on the time entered for projects (Time Tracking only).
- Track and report on project expenses (Expenses only).

## Questions to Consider

Subjects	Questions	Considerations
Project IDs	Do you want to use a custom format for your Project IDs?	You can set a custom format for project IDs in the <b>Edit Tenant Setup - Financials</b> task.
Project creation	How will you define the common field values for your projects?	To maintain consistency and reduce data entry, you can use these tasks to define project field values: <ul style="list-style-type: none"> <li>• <b>Maintain Project Statuses</b></li> <li>• <b>Maintain Risk Levels</b></li> <li>• <b>Maintain Work Priorities</b></li> <li>• <b>Maintain Importance Ratings</b></li> <li>• <b>Maintain Success Ratings</b></li> </ul> Users can then select these values when they create or update a project.
Project creation	How do you want users to create new projects?	You can greatly simplify the process of creating a new project by enabling users to copy existing projects.  To enable this feature, configure the <i>Copy Project</i> initiating action in the security policy for the <i>Create Project</i> business process.
Resource plans	How do you want to create resource plans?	When you create a resource plan for a project hierarchy, all of the projects that share the same hierarchy inherit the same resource plan. Use this method to save time for your users if the projects within a hierarchy always use the same resource plan.  When you create a resource plan for an individual project, only that project will use the resource plan. Use this method if your resource plans differ between projects.

Subjects	Questions	Considerations
Resource plans	How do you want to define the categories for project roles?	If you specify values for the <b>Project Role Categories</b> , project managers can then organize the project roles on the resource plan lines.
Resource Plans	Do you want to require manual approval for new or modified resource plan lines?	Project and resource managers can manually approve changes to resource plan lines. To enable the approval process, configure the <i>Project Resource Plan Line</i> business process.
Resource plans	How do you want to capture resource plan data that's unique to your organization?	You can configure custom objects to extend Workday to meet your unique requirements for resource plans.
Project resources	How do you want to manage approvals for new project workers?	Project and resource managers can manually approve workers when they have new project assignments. To enable the approval process, set up the <i>Request Worker</i> business process.
Project resources	Will you use dynamic resource pools to manage your worker groups and simplify project staffing?	<p>Dynamic resource pools enable managers to associate groups of workers to projects based on preset worker qualifications.</p> <p>They can:</p> <ul style="list-style-type: none"> <li>Associate a dynamic resource pool as a group to a resource plan line, and then exclude specific individuals from the group.</li> <li>Assign 1 or more individual workers in a dynamic resource pool to a resource plan line.</li> <li>Display dynamic resource pools in reports when they search for workers.</li> </ul> <p>The project workers in dynamic resource pools can enter the time and expenses for their project assignments.</p>
Time entry For Time Tracking only.	Do you want to enable workers to log their time on any project, or only to their project assignments?	You can enable project workers to log time to any project without having an assignment on a resource plan. Use the Time Entry Template to enable this feature.

Subjects	Questions	Considerations
		Otherwise, you must assign project workers to a resource plan before they can log time to the project.
Time entry For Time Tracking only.	Which time window do you want workers to use when they log their time on a project?	<p>Workers on a resource plan can log time against a project or a project task. Workday automatically populates the date range with the start and end dates of the project.</p> <p>You can configure a narrower date range for workers to log their time with the <b>Edit Tenant Setup - Financials</b> task by using the dates specified in:</p> <ul style="list-style-type: none"> <li>• Resource plans</li> <li>• Project plan tasks</li> </ul> <p>You can use multiple sources to continue narrowing the date range. Workers can only log time where the selected date ranges overlap.</p>
Expenses For Expenses only.	Do you want to restrict project workers to selecting only their assigned projects in their expense reports?	<p>You can restrict the project worktags that workers can select when they create or edit an expense report.</p> <p>To limit workers to selecting only the worktags for their project assignments, configure the <b>Expense</b> section of the <b>Edit Tenant Setup - Financials</b> task.</p>

## Recommendations

We recommend that you:

- Configure the *Create Project* business process to enable users to copy projects to reduce the time spent on data entry.
- Create your resource plans at the project-hierarchy level when the projects within the same hierarchy use the same resource plan. This configuration:
  - Reduces the time spent on data entry.
  - Maintains consistency.
  - Avoids errors.
- Configure dynamic resource pools to simplify project staffing.

## Requirements

- Enable the Project Tracking functional area.
- Create project hierarchies.

## Limitations

Project Tracking has a limited subset of Projects features. You can't:

- Create billable projects.
- Create capital projects.
- Use a Find Worker report to staff your projects.
- Assign workers to project tasks.
- Create resource forecasts.
- Create labor cost rates or determine labor costs for project.
- Create project budgets.
- Bill customers.

## Tenant Setup

Access the **Projects** and **Expense** sections on the **Edit Tenant Setup - Financials** task to view the project-specific tenant configuration options.

Depending on how you configure Project Tracking in Workday, you can:

- Create a custom format for your project IDs.
- Narrow the date range that project workers can record the hours they work on a project.
- Restrict worker access to the project worktags for their assigned resource plans. This restriction ensures that the workers select the correct projects for their expense reports.

## Security

Domains	Considerations
<i>Business Process Administration</i> in the System functional area	<p>Users secured to this domain can edit these business processes:</p> <ul style="list-style-type: none"> <li>• <i>Create Project</i></li> <li>• <i>Create Project Hierarchy</i></li> <li>• <i>Edit Project</i></li> <li>• <i>Project Resource Plan Line</i></li> <li>• <i>Request Worker</i></li> </ul>
<i>Manage: Business Process Definitions</i> in the System functional area	<p>Users secured to this domain can manage these business processes:</p> <ul style="list-style-type: none"> <li>• <i>Create Project</i></li> <li>• <i>Create Project Hierarchy</i></li> <li>• <i>Edit Project</i></li> <li>• <i>Project Resource Plan Line</i></li> <li>• <i>Request Worker</i></li> </ul>
<i>Set Up: Project Tracking</i> in the Project Tracking functional area	<p>A super domain for the <i>Set Up</i> domains in the Project Tracking functional area.</p> <p>Users secured to this domain can configure projects.</p>
<i>Set Up: Period Schedule</i> in the Project Tracking functional area	Users secured to this domain can configure and manage the payroll period schedules for projects.
<i>Set Up: Project Details</i> in the Project Tracking functional area	Users secured to this domain can manage the configuration for project details, including phases and tasks.

Domains	Considerations
<i>Set Up: Risk and Priorities</i> in the Project Tracking functional area	Users secured to this domain can configure project risks and priorities.
<i>Set Up: Dynamic Resource Pool</i> in the Project Tracking functional area	Users secured to this domain can use tasks and reports to create, edit, delete, and view Dynamic Resource Pools.
<i>Manage: Project Tracking</i> in the Project Tracking functional area	A super domain for the <i>Manage</i> domains in the Project Tracking functional area. Users secured to this domain can manage projects.
<i>Manage: Project Details</i> in the Project Tracking functional area	Users secured to this domain can manage and view existing projects. You can control access to the project plans and resource plans through their respective domains.
<i>Manage: Project Plan</i> in the Project Tracking functional area	Users secured to this domain can manage and view project plan information, including the allocation of resources to project plan tasks.
<i>Manage: Project Custom Task Name</i> in the Project Tracking functional area	Users secured to this domain can edit and view the information on custom task names.
<i>Manage: Project Resources</i> in the Project Tracking functional area	Users secured to this domain can manage and view project resource plans.
<i>View: Project</i> in the Project Tracking functional area	Users secured to this domain can view projects.
<i>Worker Data: Project Tracking</i> in the Project Tracking functional area	Users secured to this domain can access a worker's project tracking information. This information includes the project worker roles and project information on the worker profile.

To ensure proper access, review these team member roles and activities:

Domain Security Roles	Responsibilities
Project Tracking administrator	<ul style="list-style-type: none"> <li>Configures tenant setup information.</li> <li>Edits and maintains business processes.</li> <li>Creates projects.</li> <li>Performs payroll functions.</li> <li>Works with the Time Tracking administrator to ensure that time is ready for payroll processing.</li> </ul>
Time Tracking administrator	Sets up project time entry in Workday Time Tracking.
Project manager	<ul style="list-style-type: none"> <li>Creates projects with resource plans and project plans.</li> <li>Creates basic projects if tracking expenses only.</li> <li>Manages the project plan and project phases.</li> <li>Approves project time.</li> </ul>
Project worker	Enters hours worked in Time Tracking by selecting a project or a project plan task.

Domain Security Roles	Responsibilities
Expense Data Entry Specialist	Tags expenses to a project using worktags for the project, project phase, and project task.

## Business Processes

Business Processes	Considerations
<i>Project Resource Plan Line</i> in the Project Tracking functional area.	<p>Enables project managers to:</p> <ul style="list-style-type: none"> <li>• Create resource plans for a project, but not the project hierarchy.</li> <li>• Use the <i>Submit Resource Plan</i> web service.</li> </ul> <p>Has a security policy that enables you to open up approvals to various security groups. You can also enable manual advancement to the next step by a business process administrator.</p>
<i>Request Worker</i> in the Projects functional area.	<p>Enables changes in worker assignments.</p> <p>This business process is a required subprocess of the <i>Project Resource Plan Line</i> business process.</p>
<i>Create Project</i> in the Project Tracking functional area.	<p>Enables Project Tracking administrators to:</p> <ul style="list-style-type: none"> <li>• Create new projects.</li> <li>• Copy existing projects.</li> <li>• Use the <i>Submit Project</i> web service.</li> </ul> <p>Enables project managers to:</p> <ul style="list-style-type: none"> <li>• Create new projects.</li> <li>• Copy existing projects.</li> <li>• Review and approve new projects.</li> </ul>
<i>Edit Project</i> in the Project Tracking functional area.	<p>Enables project managers to:</p> <ul style="list-style-type: none"> <li>• Edit existing projects.</li> <li>• Review and approve changes to existing projects.</li> </ul>

## Reporting

Report	Considerations
<b>Find Projects</b>	Use this report to search for existing projects.
<b>My Projects</b>	Use this worklet to display your most frequently used projects.
<b>View Project</b>	Use this composite report as a central access point for viewing and editing information on existing projects.
<b>View Project Plan Timeline</b>	<p>Use this report to display the schedule for project phases and tasks by:</p> <ul style="list-style-type: none"> <li>• Percent complete.</li> <li>• Estimated hours.</li> </ul>

Report	Considerations
	<ul style="list-style-type: none"> <li>Hours logged.</li> <li>Time remaining.</li> </ul>

You can use these report data sources to create custom reports:

- Top Level Project Hierarchies on the Project Hierarchy business object.
- Project Hierarchies on the Project Hierarchy business object.
- Project Roles on the Project Role business object.
- Project Plan Phases on the Project Plan Phase business object.
- Project Plan Tasks on the Project Plan Task business object.

## Integrations

Web Service	Considerations
<i>Get Projects</i>	<p>Retrieves projects with all of their associated details, including:</p> <ul style="list-style-type: none"> <li>A single project based on the Reference ID.</li> <li>All projects if you don't specify any criteria.</li> </ul>
<i>Get Projects without Dependencies</i>	<p>Retrieves projects without the resource plan, or the <i>Project Groups</i> and <i>Dependencies</i> fields.</p> <p>You can retrieve:</p> <ul style="list-style-type: none"> <li>A single project based on the Reference ID.</li> <li>All projects if you don't specify any criteria.</li> </ul> <p>Only use for data migrations.</p>
<i>Submit Project</i>	<p>Creates a project event and submits it through the <i>Create Project</i> business process for approval. Workday then creates the new project after approval.</p>
<i>Get Project Phases</i>	Retrieves project phases.
<i>Put Project Phase</i>	Adds and updates project phases.
<i>Get Project Role Categories</i>	<p>Retrieves project role categories, including:</p> <ul style="list-style-type: none"> <li>A single project role category with the Reference ID.</li> <li>All project role categories if you don't specify any criteria.</li> </ul>
<i>Put Project Role Category</i>	Adds and updates project role categories.
<i>Get Resource Plans</i>	Retrieves data on resource plans and resource plan lines.
<i>Submit Resource Plan</i>	Sends data on resource plans and resource plan lines through the <i>Project Resource Plan Line</i> business process. Upon approval, Workday then updates the resource plans and resource plan lines after approval.
<i>Get Project Worker Roles</i>	Retrieves project worker roles, including:

Web Service	Considerations
	<ul style="list-style-type: none"> <li>A single project worker role with the Project Worker Role reference ID.</li> <li>All project worker roles if you don't specify any criteria.</li> </ul>
<i>Put Project Worker Role</i>	Adds and updates project worker roles.
<i>Get Project Plans</i>	Retrieves project plans.
<i>Put Project Plan</i>	Adds and updates project plans.
<i>Get Project Tasks</i>	Retrieves project tasks.
<i>Put Project Task</i>	Adds and updates project tasks. <b>Note:</b> All task names must be unique, not just the task IDs.
<i>Get Period Schedules</i> For Time Tracking only.	Retrieves the periods for time entry.
<i>Put Period Schedule</i> For Time Tracking only.	Adds and updates the periods for time entry.

## Connections and Touchpoints

Project Tracking interacts with these other areas in Workday:

- Managers assign workers from HCM Core to their projects.
- Project workers can use Time Tracking to enter their project hours.
- Managers and project workers can use Expenses to track their project expenses.
- Administrators can use Time Tracking to specify the period schedules for projects.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[The Next Level: Project Tracking](#)

## Steps: Set Up Security for Project Tracking

### Prerequisites

Review setup considerations for project tracking.

## Context

You can configure the security for the Project Tracking functional area to determine who can:

- Create and edit project hierarchies and projects.
- Assign workers to individual projects.
- View and analyze project data.
- Set project task dates, percent complete, and milestones.
- Tag projects with worktags and roles.
- Tag and report time and expense entry by projects, phases, and tasks.

## Steps

1. Access the **Maintain Functional Areas** task.

Select the **Enabled** check box for the Project Tracking functional area.

*Security: Security Configuration domain in the Workday functional area.*

2. **Edit Domain Security Policies.**

Set up these domains in the Project Tracking functional area:

- *Manage: Project Custom Task Name*
- *Manage: Project Details*
- *Manage: Project Plan*
- *Manage: Project Resources*
- *Manage: Project Tracking*
- *Set Up: Dynamic Resource Pool*
- *Set Up: Period Schedule*
- *Set Up: Project Details*
- *Set Up: Project Hierarchy*
- *Set Up: Project Tracking*
- *View: Project*
- *Worker Data: Project Tracking*

You can use the **View All Domains** report to review the security group types permitted for each domain.

3. **Create User-Based Security Groups.**

Set up the user-based security groups for each domain, based on the requirements of your organization.

4. **Create Role-Based Security Groups.**

Set up the role-based security groups for each domain, based on the requirements of your organization.

5. **Create Intersection Security Groups**

Set up the intersection security groups for each domain, based on the requirements of your organization.

6. **Set Up Assignable Roles.**

7. **Edit Business Processes.**

Edit the definitions for these business processes, based on your organizational needs:

- *Create Project*
- *Create Project Hierarchy*
- *Edit Project*
- *Project Resource Plan Line*

## **8. Edit Business Process Security Policies.**

Set up the security policies for these business processes, based on your organizational needs:

- *Create Project*
- *Create Project Hierarchy*
- *Edit Project*
- *Project Resource Plan Line*

Example: Add approvers to a business process.

## **9. Activate Pending Security Policy Changes.**

### **Related Information**

#### **Reference**

[The Next Level: Project Tracking for Time Tracking, Expenses, and Core Financials](#)

## **Steps: Set Up Project Tracking**

### **Prerequisites**

Review setup considerations for project tracking.

### **Context**

Project Tracking enables you to create and manage projects designed to track time and expenses. You can:

- Record and analyze worker time logged against projects and tasks.
- Track project costs using project expense reports.

**Note:** Since Project Tracking only gives you access to a limited set of Projects features, you can't create billable or capital projects. You also can't use advanced resource management features, such as resource forecasting and budgeting.

### **Steps**

#### **1. Set up Project Tracking security.**

See [Steps: Set Up Security for Project Tracking](#) on page 1369.

#### **2. Create Project Hierarchies** on page 1174.

#### **3. Create Project Roles** on page 1238.

#### **4. (Optional) Create Project Role Categories** on page 1239.

#### **5. Create Projects** on page 1202.

#### **6. Set up the resource plans.**

See [Steps: Set Up Resource Plans](#) on page 1274.

#### **7. Create Resource Plans** on page 1275.

#### **8. Create Project Plans** on page 1215.

#### **9. (Optional) Create Custom Labels.**

#### **10.(Optional) Access the Create Risks task.**

Define the risks associated with the project.

Security: *Manage: Project Details* domain in the Project Tracking functional area.

#### **11.(Optional) Create Project Groups** on page 1199.

### **Result**

If you have Time Tracking or Expenses, project workers can log their time or expenses against a project.

## Next Steps

You can view and report on:

- Time entered for projects. (Time Tracking only.)
- Project expenses. (Expenses only.)

## Related Information

### Reference

[The Next Level: Project Tracking for Time Tracking, Expenses, and Core Financials](#)

## Concept: Project Tracking

Project Tracking gives you access to a limited set of Projects features, and enables you to create projects specifically for tracking time and expenses.

You can use Project Tracking if you don't need to:

- Create billable projects.
- Create capital projects.
- Use advanced resource management.

## How Project Tracking Interacts with Time Tracking and Expenses

Workday integrates Project Tracking with Time Tracking and Expenses. You can configure and record the time worked on a project, as well as the expenses for a project. This table describes the roles and responsibilities for implementing Project Tracking.

Role	Action	Results
Project Manager	Creates projects with resource plans and project plans.  If tracking expenses only, creates basic projects.	Configured projects with phases and tasks available in prompts for worker time entry and project expense associations.
Time Tracking Administrator	Sets up project time entry in Time Tracking.	Workers can enter time for the work they complete on a project.
Project Worker	Enters time in Time Tracking and associates it with a project, project phase, or project task.	Managers can monitor and analyze the time workers spend on their assigned projects.
Expense Data Entry Specialist	Uses project, project phase, and project task worktags to tag project expenses.	Managers can monitor and analyze project expenses.

## Project Tracking Components

At minimum, you must create a project hierarchy. However, we recommend that you use additional project components to reduce data entry.

Component	Description
Project Hierarchies	Group similar types of projects and subordinate project hierarchies using tree-like structures.  All projects must belong to a primary project hierarchy, and can also have 1 or more optional hierarchies.

Component	Description
Project Plans	<p>Organize the project using phases and tasks. Describes the sequences of steps and activities necessary to complete a project. You can designate specific tasks as milestones for your project.</p> <p>Phases are the high-level sequence of steps needed to complete a project. Example: A development project might consist of these phases: Analyze, Scope, Design, Construct, Test, Deploy, and Support.</p> <p>Tasks are the distinct activities within a phase. Example: A Deploy phase might include a task for completing a deployment checklist.</p> <p>Once you assign phases and tasks to a project, Workday creates a project-specific instance of them that you can report on for a specific project.</p>
Resource Plans	<p>Describe who is working on the project and project plan. You can:</p> <ul style="list-style-type: none"> <li>• Specify project roles.</li> <li>• Assign workers directly to a project role.</li> <li>• Associate a group of workers with a project role.</li> </ul> <p>You can also assign resource plans to projects or project hierarchies.</p>
Dates	<p>Workday doesn't require or enforce relationships between the start and end dates across these project areas:</p> <ul style="list-style-type: none"> <li>• Project</li> <li>• Project Plan Task</li> <li>• Resource Plan Line</li> </ul> <p>Example: A project plan task can have an end date after the project end date.</p>

[Setup Considerations: Project Tracking](#) on page 1361

[Concept: Project Hierarchies](#) on page 1176

## Project Scenarios, Initiatives, and Ideas

---

### Project Scenario Planning

#### Steps: Set Up Project Scenarios

#### Context

**Note:** We plan to retire the Project Scenario feature.

You can configure Workday to model your projects using tasks, assignments, and dates in a series of possible scenarios. These scenarios enable you to compare different resource allocations to optimize the costs, availability, skills, and work experience of your resources.

## Steps

1. [Create Project Hierarchies](#) on page 1174.

You must have at least 1 project hierarchy to configure project scenarios.

2. Configure the *Create Project Scenario* business process and security policy in the Projects functional area.

See [Steps: Configure Business Process Definitions](#).

See [Edit Business Process Security Policies](#).

3. Access the **Create Project Scenario Group** task.

Create the categories that organize your related project scenarios.

Security: *Manage: Project Scenario* domain in Projects functional area.

4. (Optional) Access the **Maintain Project Phases** task.

Define the project phases for your scenarios.

Security: *Set Up: Project Details* domain in the Project Tracking functional area.

5. (Optional) Access **Maintain Project Tasks**.

Define the project tasks for your scenarios.

Security: *Set Up: Project Details* domain in the Project Tracking functional area.

## Create Project Scenarios

### Prerequisites

- Create Project Scenario Groups.
- Configure the *Create Project Scenario* business process and security policy in the Projects functional area.

### Context

Create project scenarios to model distributions of resources, dates, and costs to aid in project planning.

## Steps

1. Access the **Create Project Scenario** task.

2. Assign the scenario to a **Project Group**.

3. Select a **Time Unit for Effort**.

4. (Optional) Add a row to the **Plan** to add phase, task, assignment, and other project scenario details.

As you complete the task, consider:

Field	Description
<b>Phase and Task</b>	Select from existing project phases and tasks. You can also create new phases and tasks from this prompt if you have the security access. The <b>Create Project Phase</b> and the <b>Create Project Task</b> tasks are secured to the <i>Set Up: Project Details</i> domain in the <i>Projects</i> functional area.
<b>Start Date and End Date</b>	For a task, select start and end dates that fall within the project scenario start and end dates.

Field	Description
	For an assignment, select start and end dates that fall within the task start and end dates.
<b>Estimated Effort</b>	Enter an estimated effort for the task. The units for the effort are based on your <b>Time Unit for Effort</b> selection.
<b>Job Profile</b>	Select a job profile to assign to the phase or task. Selecting a job profile also enables you to search for individual workers by job profile.
<b>Worker</b>	Once you select a worker, the worker's job profile defaults in to the <b>Job Profile</b> field if you have not defined one.
<b>To Be Hired</b>	If you do not select a <b>Worker</b> , this check box is required.

## Result

Submitting launches the *Create Project Scenario* business process.

Workday calculates effort, budget, and time costs when you submit the project scenario. You can view the calculations by accessing the **View Project Scenario** report.

## Shift Dates for Project Scenarios

### Prerequisites

- Configure the *Create Project Scenario* business process and security policy in the Projects functional area.
- Create project scenarios.

### Context

You can shift the dates of a project scenario as well as its tasks and assignments. Use this feature to model a project scenario similar to an existing one with a different time frame or to resolve resource conflicts with other scenarios.

Workday only makes this feature available for projects that you've saved for later or submitted, but haven't yet approved.

### Steps

- Access the **Revise Project Scenario** task or the **Review Project Scenario** task.
  - You can access these tasks from My Tasks if you created the project scenario or are a reviewer.
  - Alternatively, to shift the dates of an existing project scenario:
    - Copy the existing scenario. From the related actions menu of the existing scenario, select **Project Scenario > Copy Project Scenario**.
    - Save or submit the copied scenario.
    - Access the **Revise Project Scenario** task or the **Review Project Scenario** task from My Tasks.
- Select **Shift Dates**.

**3. Enter an Anchor Date.**

Workday uses the anchor date to determine which objects shift dates. When you shift forward, Workday only shifts dates for objects with start dates that fall on or after the anchor date. When you shift backward, Workday only shifts dates for objects with end dates that fall before the anchor date.

**4. Select a Shift Direction.**

**5. Enter a Shift Value.**

**6. Select a Shift Interval.**

### Result

Workday returns you to the **Revise Project Scenario** task or the **Review Project Scenario** task with updated start and end dates for the project scenario, tasks, and assignments.

### Example

**Example 1: Shift forward 1 month**

- Anchor date: 2022-01-01
- Shift Direction: Forward
- Shift Value: 1
- Shift Interval: Month

Results:

	<b>Before</b>	<b>After</b>
Project Scenario	2022-01-01 - 2022-05-31	2022-02-01 - 2022-06-30
Task 1	2022-01-01 - 2022-01-31	2022-02-01 - 2022-02-28
Assignment 1A	2022-01-01 - 2022-01-15	2022-02-01 - 2022-02-15
Task 2	2022-02-02 - 2022-05-31	2022-03-02 - 2022-06-30
Assignment 2A	2022-02-02 - 2022-04-30	2022-03-02 - 2022-05-31

**Example 2: Shift backward 1 month**

- Anchor date: 2022-06-01
- Shift Direction: Backward
- Shift Value: 1
- Shift Interval: Month

Results:

	<b>Before</b>	<b>After</b>
Project Scenario	2022-01-01 - 2022-05-31	2021-12-01 - 2022-04-30
Task 1	2022-01-01 - 2022-01-31	2021-12-01 - 2021-12-31
Assignment 1A	2022-01-01 - 2022-01-15	2021-12-01 - 2021-12-15

	<b>Before</b>	<b>After</b>
Task 2	2022-02-02 - 2022-05-31	2022-01-02 - 2022-04-30
Assignment 2A	2022-02-02 - 2022-04-30	2022-01-02 - 2022-03-31

**Example 3: Anchor date falls between project scenario start and end dates**

- Anchor date: 2022-02-01
- Shift Direction: Forward
- Shift Value: 1
- Shift Interval: Month

Results:

	<b>Before</b>	<b>After</b>
Project Scenario	2022-01-01 - 2022-05-31	Unchanged
Task 1	2022-01-01 - 2022-01-31	Unchanged
Assignment 1A	2022-01-01 - 2022-01-15	Unchanged
Assignment 1B	2022-01-16 - 2022-02-28	Unchanged
Task 2	2022-02-01 - 2022-03-31	2022-03-01 - 2022-04-30
Assignment 2A	2022-02-01 - 2022-03-31	2022-03-01 - 2022-04-30

Workday only shifts the dates for Task 2 and Assignment 2A forward, because their start dates fall on or after the anchor date.

## Initiatives

### Steps: Set Up Initiatives

#### Context

Initiatives enable you to align project and nonproject work with your organizational goals. You can analyze initiatives for cost versus budget, on-time success, project spend, and other dimensions that affect progress towards a goal. Creating initiatives is optional. You don't need to create an initiative to create a project.

#### Steps

1. Access the **Maintain Work Functions** task.

Add the work functions for your project workers.

Security: *Set Up: Job* domain in the Projects functional area.

2. (Optional) [Create or Edit Organization Goals](#).

Create goals for your initiatives to support.

### 3. Edit Business Processes.

Edit the definitions for these business processes, based on your organizational needs:

- *Cascade Goals* to assign personal goals to project workers that are also linked to organizational goals.
- *Assign Work to Worker* to assign project work to workers.

### 4. Edit Business Process Security Policies.

Set up the security policies for these business processes, based on your organizational needs:

- *Cascade Goals* to assign personal goals to project workers that are also linked to organizational goals.
- *Assign Work to Worker* to assign project work to workers.

### 5. (Optional) Access the **Maintain Importance Ratings** task.

Add or edit the values that measure the importance of your initiatives. Example: *Critical*, *Significant*, and *Important*.

**Note:** You can't delete an importance rating if it's already in use.

Security:

- *Manage: Initiatives* domain in the Projects functional area.
- *Set Up: Project Details* domain in the Project Tracking functional area.

## Next Steps

Create your initiatives.

## Create Initiatives

### Prerequisites

- Create projects.
- Set up initiatives.
- Security: *Manage: Initiatives* domain in the Projects functional area.

### Context

Your organization can have both project and nonproject work in progress at the same time. You can group this work with initiatives to support your organizational goals. Grouping your projects by initiative gives you a clear view into the work your organization is undertaking. You can then use the reporting tools in Workday to analyze and drill into project costs versus budget, on-time success, and other dimensions.

### Steps

1. Access the **Create Initiative** task.
2. As you complete this task, consider:

Option	Description
<b>Importance</b>	Select the value that measures the importance of the initiative.
<b>Supports Organization Goal</b>	The goal can have more than 1 initiative assigned to it, but each initiative can belong to only 1 organization goal. For an organizational goal to include initiatives, it must be public and in an active goal period.

Option	Description
<b>Supporting Projects</b>	You can assign an initiative to more than 1 project, but each project can belong to only 1 initiative.

## Result

You can use these reports:

Report	Description
<b>View Initiative</b>	<p>Displays details of the initiative, including the supporting projects and nonproject work. Project details include:</p> <ul style="list-style-type: none"> <li>Number of assigned workers.</li> <li>Number of workers who have logged time to the project.</li> <li>Total project budget.</li> <li>Totals spent on time and project costs.</li> <li>Remaining budget.</li> <li>Percent complete.</li> </ul> <p>Nonproject work details by work function include:</p> <ul style="list-style-type: none"> <li>Assigned workers.</li> <li>Workers who logged time.</li> <li>Total hours logged.</li> <li>Total time cost.</li> </ul> <p><b>Note:</b> Workday retired the <b>Project Timesheets</b> feature in Workday 29. Workers can no longer log time against nonproject work, and you won't see any data in the <i>Time</i> section of an Initiative. If you have older data created from this retired feature, you can still see the information with the correct security access.</p>
<b>Talent Matrix - Performance by Initiative Importance</b>	Compares worker performance the to initiative importance ratings for the projects they worked on.

## Related Information

### Concepts

[Concept: Talent Matrix Reports](#)

### Tasks

[Run Talent Matrix Reports](#)

[Steps: Set Up Talent Matrix Reports](#)

## Ideas

[Steps: Set Up Project Ideas](#)

### Prerequisites

Review setup considerations for project creation.

## Context

Workers can create project ideas that support the goals of your organization. As managers review and approve these ideas, they can add additional details on the:

- Scope
- Cost
- Risk

When you create a project from an approved idea, Workday populates the project with the details specified in the idea.

## Steps

1. Set up the *Manage: Idea* domain in the Projects functional area.

See [Edit Domain Security Policies](#).

2. Set up these business processes:

- *Create Idea* in the Projects functional area.
- *Create Project* in the Project Tracking functional area.

See [Edit Business Processes](#).

3. Set up these security policies:

- *Create Idea* in the Projects functional area.
- *Create Project* in the Project Tracking functional area.

See [Edit Business Process Security Policies](#).

4. (Optional) Set up project risk parameters.

See [Steps: Maintain Project Details](#) on page 1167.

5. (Optional) Set up security for organization goals.

The **Supports Organization Goal** prompt on an idea is secured to the following domains:

- *Self Service: Organizational Goals*
- *Worker Data: Organizational Goals*

When you select an organization goal from the prompt, Workday restricts the goals available based on these domains. Also, Workday supports only public goals in the prompt.

See [Edit Domain Security Policies](#).

If you configure Workday to not use organization goals on ideas, the **Find Ideas** report doesn't run properly. To resolve this issue, make a copy of the **Find Ideas** report, with the following changes:

- On the **Columns** tab, remove the **Organization Goal for Idea** field.
- On the **Filter** tab, remove the **Organization Goal for Idea** field.
- On the **Prompt** tab, remove both of the **Organization Goal for Idea** fields.

## Result

Approved workers can create new project ideas. Managers can review their ideas, define the risks, and approve them from My Tasks.

Project managers can then create a new project from an approved idea, and associate an existing project with an idea.

## Next Steps

- Access the **Create Idea** task to create new project ideas.

- Access the **Review Idea** task from My Tasks to review, add detail, and approve submitted project ideas.
- Access the **Find Ideas** report to view a list of ideas that meet your search criteria.

#### **Related Information**

##### **Concepts**

[Setup Considerations: Create Projects on page 1194](#)

##### **Tasks**

[Create or Edit Organization Goals](#)

[Create Projects on page 1202](#)

#### **Concept: Idea Management**

Workday recognizes that all individuals are valuable contributors to an organization. With Workday Projects, all workers and contingent workers have the opportunity to contribute ideas for how to achieve company-wide goals. Managers can then prioritize, manage, and, upon approval, turn ideas into projects. Workday gives you insight into who has the best and most useful ideas.

If you also have Talent Management, you can use the organization goals created there to assign ideas to your goals.

#### **Idea Review and Approval**

Once a worker submits an idea, it then routes to their manager for approval. Managers can then:

- Add details on the scope of the work.
- Outline the budget impact of the idea.
- Identify risk parameters, including the risk severity and status.
- Associate an idea with a project hierarchy, which then routes to the project hierarchy manager for approval.

#### **Project Generation from Ideas**

After approval, ideas are available for association with a project. You can:

- Associate ideas with existing projects.
- Create a project from an idea, after setting the appropriate security.

To set up the security for Idea Management, you need to:

- Edit the **Create Project Business Process Security Policy** to grant access.
- Ensure that the **Initiating Action** of the **Create Project from Idea** has security groups assigned to it.

#### **Related Information**

##### **Tasks**

[Steps: Configure Projects on page 1157](#)

[Create Projects on page 1202](#)

## **Project Metrics and Reports**

---

### **Steps: Set Up Project Transaction Summaries**

#### **Prerequisites**

Projects you want to include in the project transaction summary must:

- Belong to an active and approved project hierarchy.
- Be active, and have a start and end date, resource forecast, and currency.

- Have a project state set to **Project**.

## Context

As a project portfolio manager, you can use a single consolidated data source to generate your custom reports. This consolidated source can contain data related to project time, cost, and revenue. The reports can summarize data at a monthly level for unique combinations of project resources and roles.

**Note:** Workday only includes data that's within the project start and end dates.

## Steps

1. Access the **Configure Project Transaction Summary** task.

Security: *Set Up: Project Hierarchy* domain in the Project Tracking functional area.

2. Select eligible project hierarchies and projects to include in the data source.

3. Schedule the creation date for the data source.

4. (Optional) Access the **Update Project Transaction Summary** task.

Run an ad hoc data refresh of specific projects, or for events not tracked by the daily refresh.

Security: *Manage: Project Transaction Summary* domain in the Project Tracking functional area.

## Result

When the scheduled job is complete, you can report on the summarized data. Workday refreshes the data daily, factoring in changes to:

- Project attributes: start and end dates, Inactive and Billable flags, currency, state, and status.
- Project hierarchy: new project or hierarchy added; hierarchy removed, moved, or marked inactive.
- Worker time block hours.
- Resource forecast hours.
- Resource plan lines.
- Contract rates.
- Cost rates for forecasted hours.

You can select the **Disable Project Transaction Summary** check box to disable the daily data refresh.

## Next Steps

- Create custom reports using the Project Transaction Summary data source.

## Concept: Project Dashboard

The **Projects** dashboard (secured to the *Reports: Projects* domain in the Projects functional area) is a configurable workspace that gives you quick, visual insight into the health of your projects. You can see both operational and financial data for your projects in real time. The dashboard also gives you direct access to frequently used project-related tasks and reports. You can select the tasks that you want to display in the default menu using the **Edit** button on the **Maintain Dashboards** report. The **Menu** section on the **Content** tab enables you to add links to custom reports and external links.

Workday delivers these report worklets available for use in your Projects dashboard:

- **Average Project Duration**
- **Average Revenue by Project Role**
- **Comparative Revenue by Project**
- **Forecast vs. Actuals - Project Hours by Month**
- **Headcount by Job Profile**
- **Project Actual Hours - Monthly**
- **Project Forecasted Hours - Monthly**

- **Project Status by Project Hierarchy**
- **Project Utilization Report - Monthly**
- **Projects Headcount Supply and Demand by Job Profile**
- **Project Profitability**
- **Trended Revenue by Project**

Once you configure the dashboard, you can add it as a worklet to your Home page.

## **Concept: Resource Manager Dashboards**

Resource managers use these dashboards to manage their project workers:

- **Resource Manager**
- **Resource Pool Manager**

They can:

- Borrow workers from other resource managers.
- Compare worker attributes.
- Staff projects.
- View the status and utilization of their workers.

Resource pool managers can also view and manage workers even if they don't have a role on the same project as the worker.

These dashboards display:

- The status of workers on a project.
- A consolidated view of work allocations.
- Frequently used tasks and reports.
- Your urgent staffing needs. Workday calculates urgency as the sum of these parameters:
  - Is the project start date - the current date less than 30? (+1)
  - Is the start date for the resource plan line - the current date less than 14? (+1)
  - Does the resource plan line have more than 1 unnamed resource? (+1)
  - Does the resource plan line have requirements? (+1)
  - Is the Project billable? (+1)

**Note:** To ensure that Workday displays the correct dashboard data, assign managers to a role in the same supervisory organization as their workers. You might also need to assign resource pool managers to multiple supervisory organizations.

#### **Related Information**

##### **Concepts**

[Setup Considerations: Project Resources](#) on page 1243

##### **Tasks**

[Steps: Set Up Dashboards and Landing Pages](#)

##### **Reference**

[The Next Level: Resource Management in Projects](#)

## Reference: Security for Resource Manager Dashboards

Workday provides these dashboards for resource managers, secured to the *Management Dashboard: Resource Manager* domain in the Projects functional area:

- Resource Manager
- Resource Pool Manager

When you configure the dashboards, use this security for the worklets:

Worklets	Domains
<b>Staffing That Needs Attention</b>	<i>Manage: Advanced Project Resource Management</i> in the Projects functional area
<b>Workers That Need Attention</b>	These domains in the Projects functional area: <ul style="list-style-type: none"> <li>• <i>Management Dashboard: Resource Manager</i></li> <li>• <i>Manage: Resource Pool</i></li> </ul>
<b>Workers Rolling Off Projects In</b>	These domains in the Projects functional area: <ul style="list-style-type: none"> <li>• <i>Management Dashboard: Resource Manager</i></li> <li>• <i>Manage: Resource Pool</i></li> </ul>
<b>Worker Allocations</b>	<i>Reports: Manager</i> in the Staffing functional area These domains in the Projects functional area: <ul style="list-style-type: none"> <li>• <i>Manage: Project Resource Forecast</i></li> <li>• <i>Manage: Advanced Project Resource Management</i></li> </ul> These domains in the Time Off and Leave functional area: <ul style="list-style-type: none"> <li>• <i>Worker Data: Time Off (Time Off)</i></li> <li>• <i>Worker Data: Time Off (Time Off Manager View)</i></li> </ul>
<b>Worker Allocations by Resource Pool</b>	<i>Manage: Resource Pool</i> in the Projects functional area

When you configure the **Actions** menu on the dashboards, use this security:

Report in Actions Menu	Domains
<b>Find Worker for Project</b>	These domains in the Projects functional area: <ul style="list-style-type: none"> <li>• <i>Manage: Advanced Project Resource Management</i></li> <li>• <i>Manage: Resource Pool</i></li> </ul>
<b>View My Favorites</b>	<i>Manage: Project Resources</i> in the Project Tracking functional area <i>Manage: Resource Pool</i> in the Projects functional area
<b>Find Project for Worker</b>	<i>Manage: Advanced Project Resource Management</i> in the Projects functional area

## Related Information Concepts

## Reference: Project Reports

Workday delivers reports that give you greater insight into the health and progress of your projects and your project staffing needs.

For a complete list of project reports, access the **Workday Standard Reports** report and select these report categories:

- *Projects*
- *Set Up Project*

### Operational Reports

These reports help you analyze the operational health of your projects.

Report	Security	Description
<b>Average Project Duration</b>	<i>Manage: Project Details</i> domain in the Project Tracking functional area.	Review the durations of your projects so that you can make improvements for faster returns on your investments. Includes: <ul style="list-style-type: none"> <li>• The average project duration for a project hierarchy and its subordinate projects.</li> <li>• All projects with at least 1 day of duration for your selected time period.</li> </ul>
<b>Forecast vs. Actuals - Project Hours by Month</b>	<i>Reports: Manager</i> domain in the Staffing functional area.  <i>Manage: Project Resource Forecast</i> domain in the Projects functional area.  <i>Reports: Time Tracking</i> domain in the Time Tracking and Time Tracking Hub functional areas.	Compare the forecasted hours to the actual hours worked on a project.
<b>Projects Headcount Supply and Demand by Job Profile</b>	<i>Manage: Project Resources</i> domain in the Project Tracking functional area.  <i>Worker Data: Current Staffing Information</i> domain in the Staffing functional area.	Includes: <ul style="list-style-type: none"> <li>• Supply: Workers who don't have an assignment to a resource plan line and are within the selected date range.</li> <li>• Demand: Resource plan lines without assigned workers.</li> </ul>

### Financial Reports

These reports provide insight into the financial health of your projects.

Financial Reports	Security	Description
<b>Average Revenue by Project Role</b>	<i>Reports:</i> Project Billing domain in the Project Billing functional area.	<p>Analyze how your project staffing relates to project revenue. Workday calculates the average revenue in the project currency by project role based on:</p> <ul style="list-style-type: none"> <li>• Total approved hours.</li> <li>• Total billings from invoice lines.</li> </ul> <p>You can see when you use certain project roles more than others.</p>
<b>Comparative Revenue by Project</b>	<i>Reports:</i> Projects domain in the Projects functional area.	<p>Analyze revenue trends for month-over-month and year-over-year revenue by project. You can customize this report to include quarterly analysis for project revenue using your existing time periods.</p>
<b>Fully Burdened Cost Rate for Worker</b>	<p>To access the report: <i>Reports: Fully Burdened Cost</i> in the Projects functional area.</p> <p>To view data on the report, all of these:</p> <ul style="list-style-type: none"> <li>• <i>Set Up: Fully Burdened Cost Rate</i> in the Projects functional area. Grants access to the values under the <b>Fully Burdened Cost Rate Calculation</b> heading.</li> <li>• <i>Worker Data: Compensation Factors for Fully Burdened Cost Rate</i> in the Projects functional area. Grants access to the values under the <b>Worker Compensation Factors</b> heading.</li> <li>• <i>Worker Data: Fully Burdened Cost</i> in the Projects functional area. Grants access to the values under the <b>Fully Burdened Cost Rate Factors</b> heading.</li> </ul>	<p>You can run this report for workers who have a time block posted to a project. Analyze how Workday uses your configuration to determine the fully burdened cost rate for a specific worker. You can view:</p> <ul style="list-style-type: none"> <li>• The base rate, worker currency, and project currency conversion for the worker.</li> <li>• The formula Workday uses to calculate fully burdened labor costs.</li> <li>• The overhead rate rules for the worker, and the effective date of the fully burdened labor cost.</li> </ul>
<b>Project Billing Exceptions</b>	<p>To access the report: <i>Process: Project Billing - Core</i> in the Project Billing functional area.</p> <p>To access related tasks, both:</p> <ul style="list-style-type: none"> <li>• <i>Process: Customer Contract - View</i> in the Customer</li> </ul>	<p>View a list of all your projects with billable transactions that aren't ready to be billed, and the total number of affected transactions between them. Transactions may be unbillable, have a contract rate change which has not yet been applied to the time transaction,</p>

Financial Reports	Security	Description
	Contracts and Project Billing functional areas. <ul style="list-style-type: none"> <li>Reports: Billing in the Customer Contracts and Project Billing functional areas.</li> </ul>	or have no billable rate. Only includes transactions with one of these: <ul style="list-style-type: none"> <li>A contract line type of Project Time and Expense, or Fixed Fee.</li> <li>A status of Awaiting Review, or Ready to Bill for rate changes and missing rates.</li> <li>A status of On Hold for missing rates only.</li> </ul>
<b>Project Budgetary Balance with Labor Cost</b>	Both: <ul style="list-style-type: none"> <li>Reports: Projects in the Projects functional area.</li> <li>Reports: Time Tracking in the Time Tracking functional area.</li> </ul>	Compare your project budget to your actuals, including labor costs. Doesn't include ad hoc time blocks. View your project actuals and labor costs by the: <ul style="list-style-type: none"> <li>Current fiscal year.</li> <li>Current period.</li> <li>Life to date of your project.</li> </ul> <b>Note:</b> Current Period amounts only populate for period-based budgets. Life to Date amounts populate for both period- or duration-based budgets.  You can run the report by company, or for all companies within a company hierarchy.
<b>Project Profitability</b>	<i>Reports: Projects</i> domain in the Projects functional area.  <i>Reports: Time Tracking</i> domain in the Time Tracking and Time Tracking Hub functional areas.	Analyze how direct and labor costs consume your profitability. Workday calculates: <ul style="list-style-type: none"> <li>Gross profit and labor margins.</li> <li>Project revenue and related direct costs from journal lines and labor costs based on approved worker time.</li> </ul> Includes these subreports that you can view individually: <ul style="list-style-type: none"> <li><b>Project Profitability Direct Costs</b></li> <li><b>Project Profitability Revenue</b></li> <li><b>Project Profitability Time Blocks</b></li> </ul>
<b>Revenue Leakage</b>	<i>Report Execution</i> domain in the Tenant Non-Configurable functional area.	For operational and financial users. View these concessions that have been made in the project:

Financial Reports	Security	Description
		<ul style="list-style-type: none"> <li>• Contractual versus actual rates.</li> <li>• Project hours leaked.</li> <li>• Revenue leakage.</li> </ul>
<b>Trended Revenue by Project</b>	<i>Reports:</i> Projects domain in the Projects functional area.	<p>View revenue by project for the top 10 projects over the selected period. You can analyze revenue trends by:</p> <ul style="list-style-type: none"> <li>• Month-over-month.</li> <li>• Year-over-year.</li> </ul>
<b>View Initial Project Budget Calculation</b>	<i>Manage:</i> Project Budget domain in the Projects functional area.	<p>Examine the details of how Workday calculates project budget lines for draft and approved budgets sourced from:</p> <ul style="list-style-type: none"> <li>• Journal lines (actual revenue).</li> <li>• Resource forecasts (revenue and cost forecast).</li> <li>• Resource plan percentage allocation by project role (estimated cost and revenue).</li> <li>• Revenue recognition installments (revenue).</li> <li>• Resource plan estimated hours by project role (estimated cost and revenue).</li> <li>• Time blocks (actual costs).</li> </ul> <p>Calculated project budget lines don't include manually added project budget line, including lines from:</p> <ul style="list-style-type: none"> <li>• Project Budget Templates.</li> <li>• The Import Budget web service.</li> <li>• The Maintain Budget task.</li> <li>• Worksheets.</li> </ul>

## Talent Reports

These reports, secured to the *Metrics Published* domain in the System functional area, provide insight into the workforce behind your projects.

Talent Reports	Descriptions
<b>Project Demand</b>	View the number of open resource plan lines without a worker assignment or group association. Includes all resource plan lines with at least a 1-day duration within the current time period.
<b>Project Talent</b>	View a count of open resource plan lines:

Talent Reports	Descriptions
	<ul style="list-style-type: none"> <li>• Marked for external hire.</li> <li>• With an open job requisition.</li> <li>• Marked for external hire with a pending worker associated with the line.</li> </ul> <p>You can also view the ratio of project demand to staffed workers, where a high ratio indicates a need for increased staffing.</p>

## Reference: Resource Management Reports

### Match Resources with Projects

These reports can help you match qualified workers with available projects.

Report Name	Description	Security
<b>Compare Workers for Project</b>	<p>Use to compare workers by tenure, qualifications, project, and talent from the filtered results of the <b>Find Workers for Project</b> report.</p>	<i>Manage: Advanced Project Resource Management</i> domain in the Projects functional area
<b>Find Available Workers for Project</b>	<p>Use to find available workers who meet specific requirements, and then assign them to a project.</p> <p>To enable this report, select the <b>Always Use Find Available Workers for Project</b> check box in the Projects section of the <b>Edit Tenant Setup - Financials</b> task.</p> <p>When enabled, this report launches from the <b>Find Workers</b> button on the resource plan line.</p>	<p>These domains in the Projects functional area:</p> <ul style="list-style-type: none"> <li><i>Manage: Advanced Project Resource Management</i></li> <li><i>Manage: Resource Pool</i></li> </ul>
<b>Find Project for Me</b>	<p>Enables workers to find projects with available assignments for themselves.</p>	<p><i>Self-Service: Resource Management</i> domain in the Projects functional area</p> <p>Modify or grant permissions for these security group types:</p>

Report Name	Description	Security
	To use this report, enable and activate the domain security policy.	<ul style="list-style-type: none"> <li>• Self-Service - Project</li> <li>• Self-Service - Worker</li> </ul>
<b>Find Project for Worker</b>	Use to find projects with available assignments for a worker.	<i>Manage: Advanced Project Resource Management</i> domain in the Projects functional area
<b>Find Worker Assignments</b>	<p>Use to determine if your project workers are under or over allocated.</p> <p>Compares the scheduled weekly hours for workers against their total assignments, including:</p> <ul style="list-style-type: none"> <li>• Holidays.</li> <li>• Time off.</li> <li>• Resource forecast lines.</li> </ul>	<p>These domains in the Projects functional area:</p> <ul style="list-style-type: none"> <li>• <i>Manage: Advanced Project Resource Management</i>. Provides access to the report and the <b>Projects and Project Hierarchies</b> prompt on the report.</li> <li>• <i>Manage: Resource Pool</i>. Provides access to the report and the <b>Resource Pools and Resource Pool Hierarchies</b> prompt on the report.</li> </ul> <p>The <i>Reports: Manager</i> domain in the Staffing functional area. Provides access to the report and the <b>Supervisory Organizations</b> prompt on the report.</p> <p><b>Note:</b> Users secured solely to the <i>Reports Manager</i> domain can access and view this report, but they can't expand the rows to review the details. To ensure that users can review the report details, also secure them to the <i>Manage: Advanced Project Resource Management</i> domain, the <i>Manage: Resource Pool</i> domain, or both.</p>
<b>Find Worker for Project</b>	<p>Use to find workers to:</p> <ul style="list-style-type: none"> <li>• View their availability.</li> <li>• Assign to a project.</li> <li>• Add to a resource pool.</li> </ul> <p>You can launch this report from the <b>Find Workers</b> button on the resource plan line.</p>	<p>These domains in the Projects functional area:</p> <ul style="list-style-type: none"> <li>• <i>Manage: Advanced Project Resource Management</i></li> <li>• <i>Manage: Resource Pool</i></li> </ul>

## View Resource Commitments

These reports can help resource managers view and manage the assignment of workers across projects.

Report Name	Description	Security
<b>Find Worker Availability</b>	<p>Use to examine the project commitments of your workers.</p> <p>From the search results, you can edit existing project assignments, add workers to another project, open the Find Worker for Project report, and preview project details.</p>	<i>Manage: Advanced Project Resource Management</i> domain in the Projects functional area
<b>Manage Worker Assignments</b>	<p>Use to:</p> <ul style="list-style-type: none"> <li>View project resource assignments, time off, and holidays.</li> <li>Compare workers for project assignments.</li> <li>Drill into and manage project assignments.</li> </ul> <p>To enable this report, set up resource scheduling.</p>	<i>Manage: Advanced Project Resource Management</i> domain in the Projects functional area <i>Manage: Resource Pool</i> domain in the Projects functional area <i>Reports Manager</i> domain in the Staffing functional area
<b>Utilization Targets for Workers - Monthly</b>	<p>Use to view and manage the assignment of workers across projects and their utilization targets.</p> <p>To view data in this report, select the <b>Run Project Worker Days Job</b> check box on the <b>Edit Tenant Setup - Financials</b> task.</p>	<i>Manage: Advanced Project Resource Management</i> domain in the Projects functional area
<b>Worker Availability - Detailed Allocation</b>	<p>Use to:</p> <ul style="list-style-type: none"> <li>Examine the scheduled time commitment of workers in your supervisory organizations.</li> <li>Take project allocation actions based on worker availability.</li> </ul> <p>The percentages for worker time commitments are based on:</p> <ul style="list-style-type: none"> <li>Forecast allocations.</li> <li>Approved time off.</li> <li>Holidays.</li> </ul> <p>The indication of weekly worker time commitment displays 3 ranges:</p> <ul style="list-style-type: none"> <li>Greater than 110% (red icon).</li> <li>70 to 110% (green icon).</li> <li>Less than 70% (yellow icon).</li> </ul>	<p>These domains in the Projects functional area:</p> <ul style="list-style-type: none"> <li><i>Manage: Advanced Project Resource Management</i></li> <li><i>Manage: Project Resource Forecast</i></li> </ul> <p>These domains in the Staffing functional area:</p> <ul style="list-style-type: none"> <li><i>Reports: Manager</i></li> <li><i>Worker Data: Current Staffing Information</i></li> </ul> <p><i>Worker Data: Time Off Manager View</i> in the Time Off and Leave functional area.</p> <p>Users must have a role in the appropriate supervisory organization to view the data in this report.</p>

## Compare Resource Cost Rates

These reports can help resource managers view and compare the cost rates of workers and unnamed resources.

Report	Description	Security
<b>Project Forecasted Labor Cost</b>	<p>Use to view this information on workers and unnamed resources in specific projects and project hierarchies:</p> <ul style="list-style-type: none"> <li>• Cost amount.</li> <li>• Forecasted hours.</li> <li>• Standard cost rate.</li> </ul> <p>Workday bases the time period in this report on the end date for the fiscal period and uses 3 consecutive fiscal periods.</p>	<i>Manage: Project Resource Forecast</i> domain in the Projects functional area <i>Reports: Manager</i> domain in the Staffing functional area
<b>View Resource Rates</b>	<p>Use to view the resource cost rates for a project, including:</p> <ul style="list-style-type: none"> <li>• Fully Burdened Cost Rate Definition</li> <li>• Standard Cost Rate</li> <li>• Standard Cost Rate Override</li> </ul> <p>This report launches from the <b>View Resource Rates</b> button on the Resources profile group of a project.</p>	View access to either: <ul style="list-style-type: none"> <li>• <i>Worker Data: Project Costing</i> domain in the Projects functional area</li> <li>• <i>Worker Data: Fully Burdened Cost</i> domain in the Projects functional area</li> <li>• <i>Process: Project Billing</i> domain in the Project Billing functional area.</li> </ul>
<b>View Project Standard Cost Rate Sheet</b>	<p>Use to view the hourly rates on a specific cost rate sheet for:</p> <ul style="list-style-type: none"> <li>• Unnamed Resources based on project role.</li> <li>• Workers based on worker attributes.</li> </ul>	<i>Set Up: Project</i> domain in the Projects functional area
<b>Standard Cost Rate for Worker</b>	<p>Use to view the cost rate for project workers, based on the cost rate rule.</p>	<i>Worker Data: Project Costing</i> domain in the Projects functional area
<b>View Resource Plan Lines with Conflicting Standard Cost Rates</b>	<p>Use to find the assigned project workers who have more than 1 standard cost rate.</p>	<i>Manage: Project Resources</i> domain in the Project Tracking functional area

# Project Billing

---

## Setup Considerations: Project Billing

You can use this topic to help make decisions when planning your configuration and use of Project Billing. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Project Billing is part of the Workday Professional Services Automation (PSA) solution. Using information from customer contracts and Workday Projects, you can create a comprehensive billing process for client-facing billable projects.

### Business Benefits

Project Billing in Workday enables you to:

- Bill customers.
- Bill within your organization.
- Track project revenue.

Project Billing also helps you manage your project financials. Workday helps eliminate reconciliation between applications and foster collaboration between your controller, project managers, and billing specialists.

When used with Customer Accounts and Customer Contracts in Workday, you can manage receivable credit and collection, maintain customer accounts, and automate your billing all at once.

### Use Cases

You can combine billable projects with the Workday Revenue and Project Billing solutions, and recognize your revenue:

- As invoiced.
- Based on completed milestones.
- On a deferred basis.
- On a percent complete basis.
- Through accruals, which enables you to recognize revenue independent from billing.

### Questions to Consider

Questions	Considerations
How do you handle varying invoice and tax requirements in different countries?	Understand your specific country and regional billing requirements. Invoice and tax requirements vary from country to country.

Questions	Considerations
What billing methods does your company use?	<p>Workday Project Billing supports these billing methods:</p> <ul style="list-style-type: none"> <li>• Fixed Fee - Installments</li> <li>• Fixed Fee - Milestones - Date</li> <li>• Fixed Fee - Milestones - Project</li> <li>• Prepaid</li> <li>• Retainer/Holdback</li> <li>• Transactions - Time and Expense</li> </ul>
What are your requirements for intercompany transfer pricing?	<p>Workday Project Billing supports these intercompany pricing options:</p> <ul style="list-style-type: none"> <li>• Cost plus</li> <li>• Multiparty</li> <li>• Transfer</li> <li>• Value-based</li> </ul> <p>Create standard or custom rate rules for transfer pricing to apply to the intercompany contract.</p>
What billing rates work with Project Billing?	<p>Workday Project Billing supports these billing configurations:</p> <ul style="list-style-type: none"> <li>• Billing rate sheets.</li> <li>• Billing rate rules.</li> <li>• Custom caps.</li> <li>• Project caps for Time and Expense.</li> <li>• Tiered rates.</li> </ul> <p>Structure your billing around these configurations before applying them to your projects.</p>
What specific billing rate rules does your company need?	<p>Project Billing supports these rate rule configurations:</p> <ul style="list-style-type: none"> <li>• Contract-specific caps.</li> <li>• Discounts.</li> <li>• Mark-ups.</li> <li>• Tiered pricing.</li> </ul> <p>Configure these billing rate rules to add them to the contract rate sheet.</p>
What invoice format modifications do you need for Project Billing?	<p>Modifications to invoice formats require Business Intelligence and Reporting Tools (BIRT) enhancements. If BIRT support isn't in scope, contact your Workday Customer Success Manager for assistance.</p>
What revenue recognition methods do you use?	<p>Workday Project Billing supports these revenue recognition methods:</p> <ul style="list-style-type: none"> <li>• Fixed Fee - Installment and Spread Even</li> <li>• Fixed Fee - Percent Complete</li> <li>• Milestones</li> <li>• Performance-based</li> </ul>

Questions	Considerations
	<ul style="list-style-type: none"> <li>• Retainer/Holdback</li> <li>• Transaction - Time and Expense</li> </ul> <p>Plan your revenue recognition methods for use with project billing.</p>
Does your project revenue follow the project worktags or worker worktags?	<p>Workday uses these worktag rules:</p> <ul style="list-style-type: none"> <li>• Fixed Fee projects follow the contract worktags designated in the project.</li> </ul> <p><b>Note:</b> To reclassify the fixed fee revenue at the worker level manually, you must first create a custom report.</p> <ul style="list-style-type: none"> <li>• Transaction-based projects for time and expense follow the worker worktags or project worktags.</li> </ul>
Does your organization need to integrate your contingent worker time or expenses into Workday for Project Billing?	Contact your Workday Customer Success Manager for assistance.

## Recommendations

Workday recommends:

- Using project hierarchies and project groups for better budgeting and reporting.
- Understanding country or region-specific invoicing requirements.

## Requirements

Consider any integration requirements in and out of Workday.

## Limitations

Project billing only supports customer contracts for these project-related line types:

- *Fixed Fee*
- *Prepaid*
- *Time and Expense*
- *Value-based*

## Tenant Setup

Select the **Only Include Non-Recoverable Tax on Billable Transactions** check box on the **Edit Tenant Setup - Financials** task. This check box excludes recoverable tax from your expense and supplier invoice billable amounts.

## Security

Domains	Considerations
<i>Process: Billing Schedule – Core</i> in the Customer Contracts and Project Billing functional areas.	Create billing schedules for customer contracts.
<i>Process: Billing Schedule – View</i> in the Customer Contracts and Project Billing functional areas.	View billing schedules and installments for customer contracts.

Domains	Considerations
<i>Process: Customer Contract - Core in the Customer Contracts and Project Billing functional areas.</i>	Manage customer contracts.
<i>Process: Project Billing - Core in the Project Billing functional area.</i>	Manage project billing transactions.
<i>Process: Project Billing - Invoice Proposal in the Project Billing functional area.</i> <i>Process: Billing - Invoice Proposal in the Customer Contracts and Project Billing functional areas.</i>	Manage customer invoice proposals.
<i>Process: Project Billing - Invoicing in the Project Billing functional area.</i> <i>Process: Billing - Invoicing in the Customer Contracts and Project Billing functional areas.</i>	Create customer invoices for billing installments, transactions, and consolidated billing.
<i>Process: Revenue Schedule - Core in the Customer Contracts and Project Billing functional areas.</i>	Create revenue recognition schedules for customer contracts.
<i>Process: Revenue Schedule - View in the Customer Contracts and Project Billing functional areas.</i>	View revenue recognition schedules and installments for customer contracts.
<i>Set Up: Customer Contracts - Templates and Types in the Customer Contracts and Project Billing functional areas.</i>	Create templates for billing and revenue recognition schedules.
<i>Set Up: Customer Milestones in the Customer Contracts and Project Billing functional areas.</i>	Manage date milestones for customers on: <ul style="list-style-type: none"> <li>Billing schedules.</li> <li>Revenue recognition schedules.</li> </ul>
<i>Set Up: Milestone Types in the Customer Contracts and Project Billing functional areas.</i>	Maintain and view milestone types.

As you enable security groups, consider:

Security Groups	Considerations
Revenue specialist and customer contract specialist	Set up customer contracts.
Accounts Payable specialist	Create supplier invoices for costs associated with the project.
Project manager	Review and approve billable transactions for a project.
Billing specialist	Generate customer invoices.
Revenue accountant	Manage accounting and related reporting.

As you assign security roles for the project billing and customer contracts domains, consider:

Security Roles	Considerations
Assign roles to workers at the project and project hierarchy level.	You can assign roles at the project or project hierarchy level. Projects within these hierarchies

Security Roles	Considerations
	inherit the assignments and reducing security maintenance.
Assign roles to workers at the company and company hierarchy level.	You can assign roles at the company or company hierarchy level. Projects within these hierarchies inherit the assignments and reducing security maintenance.

## Business Processes

Business Processes	Considerations
<i>Ad Hoc Project Transaction Event</i>	Create and approve ad hoc transactions on projects.
<i>Billing Schedule Event</i>	Create and approve billing schedules.
<i>Contract Rate Sheet Event</i>	Create and approve contract rate sheets.
<i>Customer Contract Amendment Event</i>	Create and approve customer contract amendments.
<i>Customer Contract Asset and Liability Reclassification Journal Event</i>	Create and approve journals for customer contract asset and liability reclassifications.
<i>Customer Contract Event</i>	Create and approve customer contracts.
<i>Deferred Cost Installment Event</i>	Create and approve deferred cost installments.
<i>Project Transaction Adjustment Event</i>	Create and approve project transaction adjustments.
<i>Revenue Recognition Installment Event</i>	Create and approve revenue recognition installments.
<i>Revenue Recognition Schedule Event</i>	Create and approve revenue recognition schedules.

## Reporting

You can use projects standard reports and tasks to build your Project Billing dashboard.

## Integrations

Web Services	Considerations
<i>Get Ad Hoc Project Transactions</i>	Retrieves all ad hoc project transactions.
<i>Get Contract Rate Sheets</i>	Retrieves all contract rate sheets.
<i>Get Project Billing Rate Sheets</i>	Retrieves all rate sheets for project billing.
<i>Get Worker Billing Rates</i>	Retrieves all worker billing rates.
<i>Import Worker Billing Rate</i>	Adds or updates worker billing rates.
<i>Put Ad Hoc Project Transaction</i>	Adds or updates ad hoc project transactions.
<i>Put Contract Rate Sheet</i>	Adds or updates contract rate sheets.
<i>Put Project Billing Rate Sheet</i>	Adds or updates rate sheets for project billing.

## Connections and Touchpoints

Project Billing interacts with these other areas in Workday:

Feature	Considerations
Customer Accounts	Approved project time and expenses for invoicing flow from Project Billing.
Customer Contracts	Prepaid and billing schedules, and project and usage-based billing rate sheets flow to Project Billing.
Projects	Billable project time and expense and billable supplier invoices flow to Project Billing.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[The Next Level: Project Billing](#)

## Steps: Set Up Project Billing

---

### Prerequisites

Review setup considerations for project billing.

### Context

Project Billing uses information from customer contracts and Workday Projects to create a comprehensive billing process for billable projects. To use Project Billing, configure the Financials and Projects product areas to track and bill for activity against your projects.

### Steps

1. Set up billable projects.

See [Steps: Build Projects](#) on page 1190.

2. [Create Customer Contracts](#) on page 1034.

Create a customer contract with billable project lines. The customer contract can reference 1 or more billable projects.

3. Create a contract rate sheet and billing rate rules for the customer contract.

See:

- [Create Contract Rate Sheets](#) on page 1403.
- [Add Billing Rate Rules to Contract Rate Sheets](#) on page 1405.

4. Create a billing schedule for the customer contract.

See:

- [Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080.
- [Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085.

5. Review and manage project billing transactions.

See [Steps: Manage Project Billing Transactions](#) on page 1413.

6. (Optional) Create and review customer invoice proposals.  
See [Steps: Manage Customer Invoice Proposals](#) on page 1094.
7. [Create Customer Invoices](#) on page 780.  
Generate invoices against the project.

**Related Information****Concepts**[Setup Considerations: Project Billing](#) on page 1394[Concept: Project Billing](#) on page 1458

## **Steps: Consolidate Billing for Multiple Projects**

---

**Prerequisites**

Create multiple billable projects.

**Context**

When customers have multiple projects, it's easier and more efficient to bill them once for each billing cycle. You can consolidate your projects into a single billing schedule and invoice based on billing type.

**Steps**

1. [Create Customer Contracts](#) on page 1034.  
Create a contract that includes more than 1 project. You can have multiple projects on a single contract with different transaction sources, such as *Time*, *Expense*, and *Supplier Invoice*.
2. [Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080 or [Create Installment or Transaction Billing Schedules for Customer Contracts](#) on page 1085.  
(Optional) On an installment billing schedule, click **Manage Milestones**. You can limit milestones to specific project phases by individual project, or create milestone lines for each project in the billing schedule.  
Security: *Manage: Project Plan* domain in the Project Tracking functional area.
3. [Create Customer Invoices from Contracts](#) on page 1099.  
Create customer invoices from contracts for your projects. When a customer invoice includes:
  - More than 1 project, Workday references the projects on the invoice lines instead of on the invoice header.
  - Only 1 project, Workday references the project on the invoice header.

**Result**

When a customer invoice includes:

- More than 1 project reference, Workday debits the Accounts Receivables journal line and not the individual projects due to worktag balancing limitations. Credits post to the respective projects.
- Only 1 project reference, Workday posts both the debit and credit to the project worktag.

**Next Steps**

Access the **Financials > Customer Invoices** profile group on the project profile to view the invoice details.

**Related Information****Concepts**[Concept: Project Billing](#) on page 1458

**Tasks**

[Create Customer Invoices](#) on page 780

[Steps: Set Up Email for Customer Invoice Documents](#) on page 937

## Project Pricing and Billing

---

### Steps: Set Up Project Pricing and Billing

**Prerequisites**

- Create and approve a billable project.
- Associate a customer contract with the billable project.
- Create transactions to bill against the project.

**Context**

As a project billing specialist, you can bill your customers for the work completed on a project using various rates and billing rules. You can also set effective dates on your contract rates. Workday uses the latest version of the rate sheet within the transaction date period when invoicing customers.

Example: You create a rate sheet with an effective date of December 1, 2020 and a rate of 100 USD. You update the rate sheet using the same effective date of December 1, 2020 and a new rate of 105 USD. Then, you add a new rate sheet with an effective date of January 1, 2021 and a rate of 110 USD. If you enter a time block for 1 hour on December 31, 2020, Workday uses the rate of 105 USD.

**Steps**

1. (Optional) Access the **Maintain Daily Rate Transaction Groupings** task.

You can group daily rate transactions for granular reporting. You can also view the groupings that you define on the project billing and contract rate sheets.

Workday doesn't support daily rate transaction groupings for ad hoc billable transactions.

Security: *Set Up: Project Billing - Rate Sheet* domain in the Project Billing functional area.

2. [Create Project Billing Rate Sheets](#) on page 1402.

Define pricing categories and dimensions within those categories for the rate sheet.

3. [Create Contract Rate Sheets](#) on page 1403.

Link the standard rate sheet with project roles for the billable project associated with the customer contract.

4. (Optional) [Add Billing Rate Rules to Contract Rate Sheets](#) on page 1405.

**Next Steps**

Access the:

- **Manage Project Billing Transactions** task to review and manage project billing transactions.
- **Create Customer Invoice Proposal** task to create invoice proposals before invoicing.

**Related Information****Tasks**

[Create Projects](#) on page 1202

[Create Customer Contracts](#) on page 1034

**Reference**

[Reference: Billing Rate Rule Types for Projects](#) on page 1412

## Create Project Billing Rate Sheets

### Prerequisites

Security:

- *Process: Billing - Rate Sheet* in the Customer Contracts and Project Billing functional areas.
- *Process: Project Billing - View* in the Project Billing functional area.
- *Set Up: Project Billing - Rate Sheet* in the Project Billing functional area.

### Context

You can define different billing rates based on a variety of criteria. When you create rate sheets, you can set pricing categories and multiple rate dimensions. You can set pricing categories to include a:

- Currency for sales that span multiple countries.
- Region for sales areas that cover a wide territory.

### Steps

1. Access the **View Project Billing Rates** task.

2. On the **Rate Sheets** tab, click **Add**.

Workday contextually secures the **Create Project Billing Rate Sheet** task by company, enabling you to view only the project billing rates that you have security access to.

3. As you create the project billing rate sheet, consider:

Option	Description
<b>Company</b> <b>Customer</b> <b>Worktags</b>	Workday uses your selection from these prompts to filter the project billing rate sheets available to select when you create or edit contract rate sheets. On a contract rate sheet, Workday displays only project billing rate sheets on which the company, customer, and worktags match those on the contract line.
<b>Unit of Time</b>	When you select <i>Days</i> from the prompt, also specify daily rate transaction details on the <b>Time Definition</b> tab.  <b>Note:</b> Workday doesn't support using daily rates for ad hoc project transactions.
<b>Transaction Grouping</b>	Group transactions based on the dimensions that you configured on the <b>Maintain Daily Rate Transaction Groupings</b> task.  Grouping transactions enables more detailed grouping and pricing on daily rate transactions.  When you select a <b>Transaction Grouping</b> on the project billing rate sheet, Workday populates the grouping on the contract rate sheet.  Displays when you select <i>Days</i> from the <b>Unit of Time</b> prompt.
<b>Mutually Exclusive Rules</b>	Select to apply only the first applicable billing rate rule for each billing rate rule type.

Option	Description
	When you select the check box, Workday automatically enables the check box on all the contract rate sheets that use the project billing rate sheet.

4. On the **Rate Dimensions** tab, click **Edit**.
5. As you maintain the project rate categories and members, consider:

Option	Description
<b>Category Name</b>	The names that you enter display as columns on the project billing rate sheet. You can add up to 5 pricing categories.
<b>Category Members</b>	The members that you enter display as prompt options for the <b>Category Name</b> columns on the project billing rate sheet.

## Result

Workday populates rates on the project resource plan when you assign roles to projects with an effective date in the project billing rate sheet.

You can use the project billing rate sheet on all of your projects.

## Next Steps

- Map your worktags to the project billing rate sheet and the category dimensions on the **Configure Project Billing Rate Sheet** task.
- To update the billing rates by effective date:
  1. Access the **View Project Billing Rates** task.
  2. Select **Project Billing Rate Sheet > Edit** from the related actions menu of the project billing rate sheet.

## Related Information

### Concepts

[Concept: Project Billing](#) on page 1458

### Tasks

[Create Customer Contracts](#) on page 1034

## Create Contract Rate Sheets

### Prerequisites

- Create a customer contract with an approved billable project.
- Configure the *Contract Rate Sheet Event* business process and security policy in the Customer Contracts and Project Billing functional areas.
- Security: *Process: Billing - Rate Sheet* domain in the Customer Contracts and Project Billing functional areas.

### Context

Contract rate sheets enable you to set billing rates for billable projects. You can:

- Apply a discount or premium to all resource rates using an adjustment percentage.
- Apply the billing rate rules to the contract rates.

- Populate values onto the contract rate sheet from the project billing rate sheet.

When you make changes to the contract rate sheet, Workday doesn't reflect the changes on your revenue recognition installments. To change your revenue recognition installments, access the **Schedule Revenue Installments for Billable Transactions** task.

## Steps

1. Access the **Create Contract Rate Sheet** task.

You can access the task from the **Contract Rate Sheet** prompt on the customer contract line. When you select a **Billable Project**, a **Project Transaction Source**, and a **Line Type** of *Project Time and Expense* on the customer contract line, Workday enables the **Contract Rate Sheet** prompt. When enabled, you can access an existing contract rate sheet or create a new contract rate sheet.

When creating or editing a contract rate sheet, Workday displays only project billing rate sheets on which the company, customer, and worktags match those on the contract line. Users with shared project access can copy a contract rate sheet that uses a project billing rate sheet for a company they don't have access to, but they won't be able to view that project billing rate sheet.

2. As you complete the task, consider:

Option	Description
<b>Effective Date</b>	The effective date can't be in the past if it's already associated with a billable transaction. The billable transaction date determines which contract rate sheet and billing rate rule set to use.
<b>Project Billing Rate Sheet</b>	(Optional) Select a project billing rate sheet to update the contract rates. Your selection controls the options available in the <b>Rate Category Members</b> prompt.  Workday only displays the project billing rate sheets that match the company, customer, and worktags that you specify on the <b>Create Project Billing Rate Sheet</b> task.
<b>Is Daily Rate</b>	Select this check box and complete the <b>Time Definition</b> tab to convert the hours worked to days.  <b>Note:</b> Workday doesn't support using daily rates for ad hoc project transactions.
<b>Transaction Grouping</b>	Workday populates this field using the project billing rate sheet. You can select additional transaction groupings that you configured on the <b>Maintain Daily Rate Transaction Groupings</b> task.
<b>Rate Category Members</b>	Select from the rate dimensions defined on the project billing rate sheet.
<b>Adjustment Percentage</b>	Enter a positive or negative percentage to apply to all lines on the contract rate sheet.
<b>Mutually Exclusive Rules</b>	Select to apply only the first applicable billing rate rule for each billing rate rule type.  Workday automatically enables this check box when you select the check box on the project

Option	Description
	billing rate sheet. You can clear the check box at any time.
<b>Revenue Adjustment Reason</b>	<p>Select a reason to include when you create separate revenue installments for billable transactions with billing rate rule adjustments.</p> <p>Workday posts adjustments to the Revenue ledger account when you add <i>Revenue Adjustment Reason</i> as a dimension in your account posting rules.</p>

3. When you select a project billing rate sheet, click **Update Contract Rates** to populate the rates from the billing rate sheet for the project.

Workday displays the billing rates that match the:

- Effective date.
- Project billing rate sheet.
- Rate category members.

When you don't have security access to the project billing rate sheet, Workday hides the **Update Contract Rates** button.

## Result

Workday applies the contract rates to the billable transactions associated with the customer contract line.

## Related Information

### Concepts

[Concept: Project Billing](#) on page 1458

### Tasks

[Create Customer Contracts](#) on page 1034

[Manage Project Billing Transactions](#) on page 1417

### Reference

## Add Billing Rate Rules to Contract Rate Sheets

### Prerequisites

- Create a customer contract with an approved billable project.
- Configure the *Contract Rate Sheet Event* business process and security policy in the Customer Contracts and Project Billing functional areas.
- Security: *Process: Billing - Rate Sheet* domain in the Customer Contracts and Project Billing functional areas.

### Context

Billing rate rules enable you to group rule types on contract rate sheets for use in project billing. You can create billing rate rules to apply:

- A cap on project time and expenses.
- Tiered rates on time transactions.
- Override billing rates on expense, miscellaneous expense, supplier invoice, and time transactions.

## Steps

### 1. Access the **Billing Rate Rules** tab on the **Create Contract Rate Sheet** task.

You can access the contract rate sheet from the customer contract line. When you select a **Project Transaction Source** and a **Line Type** of *Project Time and Expense* on the customer contract line, Workday enables the **Contract Rate Sheet** prompt. When enabled, you can access an existing contract rate sheet or create a new contract rate sheet.

### 2. Click **Add Billing Rate Rule Type** to add to your rule set.

When you create multiple rule types, Workday applies the override rate rules first, then the cap rules.

### 3. Define the rules for each **Billing Rate Rule Type Group** that you add.

For *Expense* and *Supplier Invoice* rules, consider:

Option	Description
<b>Expense Item</b>	To apply the billing rate rule, associate the expense report line with a billable project. Displays on <i>Expense Caps</i> and <i>Override Rate (Expense)</i> rule types only.
<b>Spend Category</b>	To apply the billing rate rule, associate the supplier invoice line with a billable project. Displays on <i>Override Rate (Supplier Invoice)</i> rule types only.

For *Override* and *Tiered Rate* rules, consider:

Option	Description
<b>Adjustment Type</b>	Select: <ul style="list-style-type: none"> <li>• <i>Rate Override</i> to enter an amount.</li> <li>• <i>Percent</i> to override by a percentage.</li> </ul> A positive value applies a mark up and a negative value applies a discount.
<b>Revenue Adjustment Reason</b>	Select a reason to include when you create separate revenue installments for billable transactions with billing rate rule adjustments. Workday posts adjustments to the Revenue ledger account when you add <i>Revenue Adjustment Reason</i> as a dimension in your account posting rules.

For *Time* rules, consider:

Option	Description
<b>Dimensions</b>	Enter project dimensions for the rule. You can limit the rule to: <ul style="list-style-type: none"> <li>• A complete project phase.</li> <li>• A task that impacts multiple assignments or associations.</li> <li>• An individual worker.</li> </ul>

Option	Description
<b>By Amount or Units</b>	For <i>Project Cap</i> , select to limit the cap by an amount or a number of hours for the project dimension specified. When you review billable transactions associated with the project, Workday displays zero for the <b>Amount to Bill</b> once you reach the cap.
<b>Cap Amount</b> <b>Cap Units</b>	Enter the amount or number of hours to cap for project billing against time spent on the project. The cap amount that you enter sets the limit for the project.

4. To configure the billing rate rules to match the billing agreements with customers, select the **Dimensions** and **Worktags** that apply.
5. Enter an **Order** for rule type groups with multiple entries.  
**Order** is an alphanumeric field. Workday applies the rules within each billing rate rule type in the order of entry, if not designated.
6. (Optional) Complete the **Reset Option** section to reset contract rates periodically throughout the contract term.  
Displays on the *Expense Caps*, *Project Cap*, and *Tiered Rate* rule types only.

## Result

Workday applies the billing rate rules on the contract rate sheet to project time and expense transactions when you approve:

- Expense reports.
- Supplier invoices.
- Worker time blocks.

## Next Steps

Review your billable transactions and invoice customers.

## Create Transfer Pricing Rate Sheets

### Prerequisites

Security: *Set Up: Transfer Pricing* domain in the Projects functional area.

### Context

You can use transfer pricing rate sheets to define rates for intercompany contracts. Your rate sheets can include pricing increases or decreases as either a rate or percentage.

## Steps

1. Access the **Create Transfer Pricing Rate Sheet** task.
2. As you complete this task, consider:

Option	Description
<b>Transfer Pricing Default Rate / Percent</b>	Define a default rate or a percentage for time blocks not affected by the rate rules listed. The percentage represents a markup or markdown of the custom rate or standard cost rate.
<b>Effective Date</b>	Workday calculates and persists time entry costs upon time entry approval. The rate you specify is applicable to workers in the selected category based on the applicable effective date.  <b>Note:</b> Changes to the rate sheet or standard cost rates don't change the cost amount for approved project time entries.  Use the <b>History</b> tab to view effective date changes to the standard cost rate sheet. From the related actions menu for this rate sheet, select <b>Audits &gt; View Audit Trail</b> to view change activity.
<b>Project Cost Rate Rules</b>	Workday applies the rate for the first project cost rate rule that the worker qualifies for based on the order.

## Result

Workday establishes transfer pricing rates for intercompany billing.

## Next Steps

- Associate your rate sheet with intercompany contracts.
- Create intercompany transactions.

## Related Information

### Tasks

[Steps: Create Intercompany Contracts](#) on page 1028

## Create Custom References for Ad Hoc Project Transactions

### Prerequisites

Security: Set Up: *Project Billing - Invoicing* domain in the Project Billing functional area.

### Context

Custom reference fields enable you to view external reporting data on your billable transactions and consolidate billing installments and transactions on invoices. You can create custom reference fields to use on:

- Ad hoc project transactions.
- Customer invoices from contracts.

## Steps

1. Access the **Enable Ad Hoc Project Transaction Custom References** task.
2. As you complete the task, consider:

Option	Description
<b>Enabled</b>	<p>Select to display the custom reference fields on these tasks:</p> <ul style="list-style-type: none"> <li>• <b>Create Ad Hoc Project Transactions</b></li> <li>• <b>Manage Project Billing Transactions</b></li> </ul>
<b>Consolidated Billing</b>	<p>Select to add the custom references as options in the <b>Additional Consolidation Grouping</b> prompt on these tasks:</p> <ul style="list-style-type: none"> <li>• <b>Create Customer Invoices from Contracts</b></li> <li>• <b>Schedule Create Customer Invoices from Contracts</b></li> </ul>
<b>Reference Name</b>	<p>Workday displays the reference name that you enter instead of the Workday-delivered custom reference on these tasks:</p> <ul style="list-style-type: none"> <li>• <b>Create Ad Hoc Project Transactions</b></li> <li>• <b>Manage Project Billing Transactions</b></li> </ul>
<b>In Use</b>	<p>Workday enables this check box when you use the custom reference fields on:</p> <ul style="list-style-type: none"> <li>• Ad hoc project transactions.</li> <li>• Customer invoices from contracts.</li> </ul> <p>You can't delete a custom reference field when it's in use.</p>

## Next Steps

- Create ad hoc project transactions.
- Create customer invoices from contracts.

## Related Information

### Tasks

[Create Customer Invoices from Contracts](#) on page 1099

[Manage Project Billing Transactions](#) on page 1417

## Create Ad Hoc Project Transactions

### Prerequisites

- Create custom references for ad hoc project transactions.
- For Time transactions, create a project with assigned workers on the resource plan.
- For Spend transactions, create a project.
- Configure the *Ad Hoc Project Transaction Event* business process and security policy in the Project Billing and Projects functional areas.

## Context

Ad hoc project transactions provide flexibility when you log transactions in Workday. You can use ad hoc project transactions to:

- Create one-off Time transactions for all projects requiring immediate action without using Workday Time Tracking.
- Directly charge Spend transactions against projects without using Workday Expenses or Workday Supplier Accounts. Spend transactions include:
  - Expenses.
  - Miscellaneous expenses.
  - Supplier invoices.
- Integrate your external time tracking and spend transactions with Workday.
- Migrate your project billing into Workday and generate invoices and accounting internally.

## Steps

1. Access the **Create Ad Hoc Project Transactions** task.

2. Enter transaction details.

Users assigned to only 1 of the security domains might have limited access to these options:

- Billing Status
- Include Cost
- Standard Cost Rate
- Cost Currency
- Rate to Bill
- Billing Currency

As you enter task details, consider:

Option	Description
<b>Billing Status</b>	Select <i>Do Not Bill</i> when you don't want to invoice your expense to the customer.
<b>Worker</b>	(Expense, Miscellaneous Expense, and Time) Displays all workers on the resource plan on the project.
<b>Supplier</b>	(Miscellaneous Expense and Supplier Invoice) Select a supplier to provide your item.
<b>Project Phase</b>	(Expense, Miscellaneous Expense, and Supplier Invoice) Displays only top-level phases for the billable project.
<b>Project Task</b>	(Expense, Miscellaneous Expense, and Supplier Invoice) Displays all tasks from all phase levels for the billable project. (Time) Displays all tasks from all phase levels assigned to the selected worker.
<b>Project Role</b>	(Time) Populates based on your selection for <b>Transaction Date</b> , <b>Worker</b> , and <b>Project Task</b> if applicable.
<b>Include Cost</b>	(Expense, Miscellaneous Expense, and Supplier Invoice) Select to include a <b>Unit Cost Amount</b> and <b>Extended Cost Amount</b> for the transaction.

Option	Description
	(Time) Select to calculate the <b>Standard Cost Amount</b> and fully burdened cost amount for the transaction. Workday automatically selects this check box.
<b>Standard Cost Rate</b>	(Time) Enter a rate amount to override the standard cost rate from the resource plan line or the project standard cost rate sheet if 1 exists.
<b>Cost Currency</b>	(Time) Workday converts the <b>Standard Cost Amount</b> to the <b>Cost Currency</b> .
<b>Rate to Bill</b>	(Time) For billable projects, enter a rate amount to override the billing rate from the contract rate sheet if 1 exists.
<b>Billing Currency</b>	When you enter a currency different than the customer contract currency, Workday converts the <b>Amount to Bill</b> to the billing currency.
<b>Spend Category</b>	(Expense, Miscellaneous Expense, and Supplier Invoice) Select to associate items with their account posting rules and provide details for creating invoices. When you select an item before specifying the spend category, you can't change the value assigned to the item.
<b>Worktags</b>	The worktag derivation rules specified for the project hierarchy, or the worktags assigned to the contract line, determine the worktag assignment for the transaction. For billed transactions, the worktags apply when you create accounting entries. You can add or change worktags if needed.
<b>Memo</b>	For billable projects, this field displays in the note section of the customer invoice.
<b>Custom Reference 1</b>	Enter additional ad hoc project transactions details for billing and reporting purposes.
<b>Custom Reference 2</b>	
<b>Custom Reference 3</b>	
<b>Custom Reference 4</b>	
<b>Custom Reference 5</b>	
	Displays when you select the <b>Enabled</b> check box on the <b>Enable Ad Hoc Project Transaction Custom References</b> task.  When you enter a <b>Reference Name</b> on the <b>Enable Ad Hoc Project Transaction Custom References</b> task, Workday displays the reference name instead of the Workday-delivered custom reference.

## Result

The ad hoc project transactions for the billable project become available for review on the **Manage Project Billing Transactions** task.

## Next Steps

Review the billable project transactions.

## Reference: Billing Rate Rule Types for Projects

Workday provides 7 billing rate rule types for use in project billing. You can apply the rules and settings you configure on the contract rate sheet to project time and expense transactions. The contract rate sheet calculates the project billing rate at a given point in time. You can also define a **Reset Option** for some rules to enable you to reset contract rates periodically throughout the contract term.

When you add rule types to a group:

- Workday applies the override rate rules first and cap rules last.
- You can have multiple rules per billing rate rule type.
- You can have only 1 of each billing rate rule type in your set.
- You can order the rules within each group.

Billing Rate Rule Type	Description	Reset Option	Example
Expense Caps (Expense)	Sets a cap on total expenses for a project or specific expense category.	Yes	<ul style="list-style-type: none"> <li>• Limit airfare to 2,000 USD for the project.</li> <li>• Limit total expenses to 20,000 EUR for the project.</li> </ul>
Override Rate (Expense)	Sets an override rate as: <ul style="list-style-type: none"> <li>• A percentage (either a mark up or a discount).</li> <li>• A specific amount on expense types for the project.</li> </ul>	Not Applicable	<ul style="list-style-type: none"> <li>• Fix hotel rates at 250 USD per night.</li> <li>• Offer a 20% discount on car rentals.</li> <li>• Limit meals to 100 USD per day.</li> </ul>
Override Rate (Misc Expense)	Sets an override rate on miscellaneous expenses as a percentage (either a markup or discount) or as an amount on these dimensions: <ul style="list-style-type: none"> <li>• Item (Expense or Purchase)</li> <li>• Project Phase</li> <li>• Project Task</li> <li>• Spend Category</li> <li>• Supplier</li> <li>• Workers</li> </ul>	Not Applicable	<ul style="list-style-type: none"> <li>• Fix car rentals at 40 USD per day.</li> <li>• Offer a 15% discount on consulting services.</li> </ul>

Billing Rate Rule Type	Description	Reset Option	Example
Override Rate (Supplier Invoice)	Sets an override rate on supplier invoices as a percentage (either a markup or discount) or as an amount on an expense category.	Not Applicable	<ul style="list-style-type: none"> <li>Set a 5% discount on other billable invoices.</li> <li>Set a premium rate of 15% on all professional services subcontractors.</li> </ul>
Override Rate (Time)	Sets an override rate as a percentage (either a mark up or a discount) or as a specific hour or amount on these project dimensions: <ul style="list-style-type: none"> <li>Project Phase</li> <li>Project Role</li> <li>Project Task</li> <li>Worker</li> </ul>	Not Applicable	<ul style="list-style-type: none"> <li>Set a 20% discount rate for Marion West who's new and still training.</li> <li>Set a premium rate of 10% for all Senior Consultants.</li> <li>Set a premium rate for the design phase of the project since all workers are outside consultants and upper management.</li> </ul>
Project Cap (Time)	Sets a limit on each project dimension or to the entire project over time.	Yes	<ul style="list-style-type: none"> <li>Limit total project time to 2,000 hours.</li> <li>Limit the project billing total to 250,000 EUR.</li> <li>Limit the design phase of a project to 500 hours.</li> </ul>
Tiered Rate (Time)	Sets different rates based on tiers (hours or amounts).	Yes	<ul style="list-style-type: none"> <li>Set the first 50 hours of the project to be free.</li> <li>Set a discount rate of 20% after 500 hours worked on the project.</li> <li>Apply a 20% discount after the project reaches 50,000 USD.</li> </ul>

## Project Billing Transactions

---

### Steps: Manage Project Billing Transactions

#### Prerequisites

- Create and approve a billable project.
- Associate a customer contract with the billable project.
- Create transactions to bill against the project.

## Context

You can configure default options for Workday to populate during project billing review. You can also review billable transactions for projects assigned to your role and perform mass actions on transactions, including:

- Adjusting amounts.
- Approving transactions.
- Changing billing statuses.
- Creating invoice proposals.
- Recalculating rates.
- Transferring or splitting nonlabor billable transactions.

## Steps

1. [Set Up Project Billing Configurations](#) on page 1414.

2. (Optional) Access the **Maintain Custom Validations** task.

Set up custom validations to ensure users enter all required information when they modify billable project transactions. See [Example: Set Up Custom Validations on Billable Project Transactions](#) on page 1434.

Security: *Set Up: Custom Validations* domain in the Common Financial Management and System functional areas.

3. [Manage Project Billing Transactions](#) on page 1417.

4. (Optional) [Edit Business Processes](#).

Configure the *Project Transaction Adjustment Event* business process to set up worklets for custom reports. Worklets enable you to embed custom reports in an approval step in the business process. Approvers can click the worklet to open the custom report during the approval process.

For example, you could add a custom report that shows you information about previous project transaction adjustments during the approval step of a new transaction adjustment, to help you make your decision on approving or rejecting the adjustment.

For details, see [Add Worklets to Business Processes](#).

## Set Up Project Billing Configurations

### Prerequisites

Security: *Set Up: Project Billing - Configurations* domain in the Project Billing functional area.

## Context

You can configure:

- Deferred billable project costs accounting.
- Required fields for Workday to populate when you transfer or split nonlabor project transactions.
- Revenue offsets for invoiced billable transactions.
- Workday to recalculate transactions based on billing status.

## Steps

- Access the **Set Up Project Billing Configuration** task.
- As you complete the **Project Transfer Options** tab, consider:

Option	Description
<b>Accounting Adjustment Date</b>	Select a date for Workday to populate when you transfer or split paid nonlabor project transactions on the <b>Manage Project Billing Transactions</b> and <b>Transfer Project Transactions</b> tasks.  When you select: <ul style="list-style-type: none"> <li><i>Use Today's Date</i>, the accounting adjustment uses the date of the transfer.</li> <li><i>Use Transaction Date</i>, the accounting adjustment uses the date of the transaction.</li> </ul> Workday requires you to configure an accounting adjustment date for project transfer.
<b>Accounting Adjustment Reason</b>	Select a reason for Workday to populate when you transfer or split paid nonlabor project transactions on the <b>Manage Project Billing transactions</b> and <b>Transfer Project Transactions</b> tasks.  Workday requires you to configure an accounting adjustment reason for project transfer. You can configure accounting adjustment reasons on the <b>Maintain Accounting Adjustment Change Reason Codes</b> task.
<b>Transfer Reason Required</b>	Select to require a transfer reason when you transfer nonlabor project transactions on the <b>Manage Project Billing Transactions</b> and <b>Transfer Project Transactions</b> tasks.

- As you complete the **Transfer Reasons** tab, consider:

Option	Description
<b>Default</b>	Select a default transfer reason for Workday to populate when you transfer unpaid nonlabor project transactions on the <b>Manage Project Billing Transactions</b> and <b>Transfer Project Transactions</b> tasks.
<b>In Use</b>	Workday enables this check box when you use the transfer reason to transfer nonlabor project transactions on the <b>Manage Project Billing Transactions</b> and <b>Transfer Project Transactions</b> tasks.  You can't delete a transfer reason when it's in use.

- As you complete the **Revenue** tab, consider:

Option	Description
<b>Revenue Offset for Invoiced Billable Transactions</b>	Select to prevent the creation of revenue offset installments when you've already accrued revenue.

Option	Description
<b>Enable Deferred Billable Project Costs Accounting</b>	<p>Select to generate billable project cost recognition operational journals for nonlabor billable project transactions when you recognize revenue.</p> <p>Once you enable deferred billable project costs accounting, you can't disable it.</p>

5. As you complete the **Billing** tab, consider:

Option	Description
<b>Automatically Recalculate Transactions</b>	<p>Select to recalculate billable project transactions when there's a change to the associated:</p> <ul style="list-style-type: none"> <li>• Billing schedule.</li> <li>• Billing rate sheet.</li> <li>• Contract rate sheet.</li> <li>• Customer contract.</li> <li>• Standard rate sheet.</li> </ul> <p>When you don't automatically recalculate transactions, Workday populates the <b>Recalculate</b> column on the <b>Manage Project Billing Transactions</b> task to identify the billable projects and transactions that might require recalculation.</p> <p>Workday doesn't automatically recalculate transactions when you:</p> <ul style="list-style-type: none"> <li>• Add, edit, or delete a project rate rule.</li> <li>• Add or edit a worker rule billing rate.</li> <li>• Add or reorder standard billing rate by rules.</li> <li>• Cancel an invoice resulting in transactions returning to <i>Ready to Bill</i> status.</li> <li>• Edit a project.</li> <li>• Update a worker attribute.</li> </ul>
<b>Recalculate Transactions with Billing Status</b>	<p>When you select the <b>Automatically Recalculate Transactions</b> check box, select the billing status that you want Workday to recalculate.</p>
<b>Reset Invoiced Transactions to Billing Status</b>	<p>Select the billing status that you want Workday to apply to billable project transactions when you deny, cancel, or credit adjust an invoice. By default, Workday populates the prompt with a billing status of <i>Ready to Bill</i>.</p> <p>Workday doesn't apply the billing status to order fulfillment or daily project transactions.</p>
<b>Hide Separate Tabs in Transaction Grid</b>	<p>Select this option to display the billing transactions grid with all fields in one view. Clear the option to display the grid with tabs that group related fields together. The option is unchecked by default.</p>
<b>Transaction Types for Adjustment</b>	<p>Select the transaction types that users are allowed to mass modify.</p> <p>For more information, see <a href="#">Concept: Set Up Project Billing Configurations</a> on page 1429.</p>
<b>Enable Custom Validations for Customer Invoice Proposals</b>	<p>Select this option to enable custom validations created for the customer invoice context to also apply to customer invoice proposals.</p>

Option	Description
	<p>This option is checked by default.</p> <p>For information on how to restrict custom validations to apply only to customer invoices or customer invoice proposals, see <a href="#">Concept: Set Up Project Billing Configurations</a> on page 1429.</p>

## Related Information

### Concepts

[Concept: Set Up Project Billing Configurations](#) on page 1429

[Concept: Project Transaction Transfers](#) on page 1432

### Tasks

[Steps: Set Up Custom Validations](#) on page 52

[Transfer Project Transactions](#) on page 1427

[2024R2 Release Note: Mass Modification of Amounts for Non-Labor Transaction Sources](#)

## Manage Project Billing Transactions

### Prerequisites

- To transfer nonlabor billable project transactions to another project, configure an accounting adjustment date and an accounting adjustment reason.
- To enable transaction transfers within closed time periods, enable the tenant-wide option **Allow Transfers Within Closed Time Entry Periods** on the **Project Transfer Options** tab on the **Set Up Project Billing Configuration** task.
- Security:
  - *Manage: Billable Projects* domain in the Projects functional area.
  - *Process: Project Billing - Core* domain in the Project Billing functional area.
  - For project transfers in locked and closed periods:
    - The user must also have access to the *Time Tracking: Exempt from Lockout* domain in the Time Tracking functional area.
    - If the *Project Transaction Adjustment Event* business process:
      - Is configured, the initiator of the project transfer must have access to the *Time Tracking: Exempt from Lockout* domain, or the business process does not advance.
      - Is configured with approvers, the approvers must have access to the *Time Tracking: Exempt from Lockout* domain, or the business process does not complete.
  - *Set Up: Project Billing - Configurations* domain in the Project Billing functional area (for the **Allow Transfers Within Closed Time Entry Periods** option).

### Context

You can review all transaction sources for your project billing transactions, apart from daily rate transactions. Workday enables you to view aging transactions, view transactions that might require recalculation, and drill into transactions based on billing status.

You can view transactions from all transaction sources together, or grouped on tabs by transaction source.

You can also:

- Adjust transaction hours, rates, and amounts.
- Approve transactions for a project.
- Change the billing status of transactions.
- Create invoice proposals for transactions.

- Filter by and view previously invoiced billable transactions.
- Recalculate transaction amounts using billing rate sheets.
- Split nonlabor billable transactions into multiple transactions (when viewing by transaction source).
- Transfer billable transactions to another project, phase, or task (when viewing by transaction source).
- Access the **Transfer Project Transactions** task from the summary page to transfer and split other transaction types.

You can add the **Manage Project Billing Transactions** worklet to your Home page to review project billing transactions.

## Steps

1. Access the **Manage Project Billing Transactions** task.

Workday displays the search criteria dialog with your previous search criteria saved each time you access the task.

2. Complete the search criteria:

At least one of these fields must be populated to perform a search: **Project Hierarchy**, **Customer**, **Project Owner**, **Billable Projects**.

Option	Description
<b>Billable Projects</b>	Select the billable projects that you want to review.  The <b>Project Hierarchy</b> , <b>Customer</b> , and <b>Project Owner</b> fields filter the projects available to select in the <b>Billable Projects</b> field.  Workday saves your selection and uses it each time you access the task.
<b>Show Unbillable Transactions</b>	(Optional) Select to display transactions in <i>Unbillable</i> status.  Workday saves your selection and uses it each time you access the task.
<b>Show Fixed Fee Transactions</b>	(Optional) Select to display the <b>Fixed Fee</b> column on the project summary view, which shows the number of fixed fee project transactions within that transaction group.  Workday saves your selection and uses it each time you access the task.
<b>Review Transactions by Source</b>	Select this option to view project billing transactions grouped by transaction source on the transaction details view.  Workday saves your selection and uses it each time you access the task.
<b>Review Transactions in Detail</b>	(Optional) Select to navigate directly to the transaction details view.  Workday saves your selection and uses it each time you access the task.
<b>Group Results By</b>	(Optional) Select an option to group the transactions by on the project summary view. Displays when you clear the <b>Review Transactions in Detail</b> check box.  Workday saves your selection and uses it each time you access the task.

3. (Optional) Complete the Aging Summary section on the project summary view:

Card	Description
Transactions Awaiting Review	Review work in progress (WIP) billable transactions. You can view billable transactions grouped by aging days, project, and currency.
Notifications	Displays when you modify the associated standard billing rate sheet rules on the <b>Maintain Standard Billing Rates by Rules</b> task and have billable project transactions that might require recalculation.

4. On the project summary view, select the projects that you want to either review in detail or perform mass actions on.

You can approve the transactions, recalculate rates, create customer invoice proposals, mass modify amounts for billable project transactions, or initiate the **Transfer Project Transactions** task. Consider:

Option	Description
<b>Original Total Amount to Bill</b>	The total amount to bill, before mass modification adjustments.
<b>Transaction Types for Adjustment</b>	(Optional) Select the transaction types to be adjusted by mass modification. By default, this field is set to <b>Time</b> transactions only, but you can add the other supported transaction types: <b>Supplier Invoice</b> , <b>Expense</b> , and <b>Misc Expense</b> .
<b>Eligible Amount for Adjustment</b>	Workday calculates the total amount available for adjustment based on the selections made in the <b>Transaction Types for Adjustment</b> field.
<b>New Total Amount to Bill</b>	(Optional) Enter the new amount you want to bill for the transaction line. The amount you enter is the amount for the entire row, not just for the transaction types selected in the <b>Transaction Types for Adjustment</b> field, but Workday prorates only the transaction types for adjustment to achieve the amount you enter.
<b>Adjustment % for Selected Types</b>	(Optional) Enter an adjustment percentage for the mass modification adjustment. Workday adds this percentage to the <b>Original Total Amount to Bill</b> to calculate the <b>New Total Amount to Bill</b> . A positive number increases the amount to bill, and a negative number decreases it. Only the transaction types selected in the <b>Transaction Types for Adjustment</b> field are included in the calculation.
<b>Adjustment Amount for Selected Types</b>	(Optional) Enter an adjustment amount for the mass modification adjustment. Workday adds this amount to the <b>Original Total Amount to Bill</b> to calculate the <b>New Total Amount to Bill</b> . A positive number increases the amount to bill, and a negative number decreases it. Only the transaction types selected in the <b>Transaction Types for Adjustment</b> field are included in the calculation.
<b>Zero Amount to Bill</b>	(Optional) Select this check box to set the <b>New Total Amount to Bill</b> to zero.
<b>Approve</b>	Click to approve billable transactions at the project level. Workday updates the status of <i>Awaiting Review</i> and <i>On Hold</i> billable project transactions to <i>Ready to Bill</i> .

Option	Description
<b>Recalculate Rates</b>	Click to recalculate rates for billable transactions at the project level. Workday recalculates rates for billable project transactions in <i>Awaiting Review</i> , <i>On Hold</i> , and <i>Ready to Bill</i> status.
<b>Create Invoice Proposal</b>	<p>Click to create customer invoice proposals for billable transactions at the project level. Workday creates customer invoice proposals for billable project transactions in <i>Ready to Bill</i> status.</p> <p>Displays when you click the <b>More</b> button.</p>
<b>Submit Mass Modify Amounts</b>	<p>Click to mass adjust amounts for billable transactions at the project level. Workday mass modifies amounts for billable project transactions:</p> <ul style="list-style-type: none"> <li>• For original and offset billable transactions.</li> <li>• In <i>Awaiting Review</i>, <i>On Hold</i>, and <i>Ready to Bill</i> status.</li> <li>• With negative and positive billable amounts.</li> </ul> <p>This action applies to the transaction types that you configure with the <b>Transaction Types for Adjustment</b> option in the <b>Set Up Project Billing Configuration</b> task. By default, you can adjust amounts for all 4 transaction types: Time, Supplier Invoice, Expense, and Misc Expense transactions.</p> <p>Displays when you click the <b>More</b> button.</p> <p><b>Note:</b> This option enables you to complete the same action as the <i>Modify Amount</i> mass action on the transaction details view, but at the project level.</p>
<b>Transfer Project</b>	<p>Click to initiate the <b>Transfer Project Transactions</b> task for transferring and splitting transactions.</p> <p>If you want to disable the <b>Transfer Project</b> option from the <b>Manage Project Billing Transactions</b> task's summary view, access the <b>Configure Optional Fields</b> task, select the <i>Manage Project Billing Transactions</i> functional area, and select security groups to hide the <i>Summary: Transfer Project Button</i> from.</p> <p>Displays when you click the <b>More</b> button.</p>

5. (Optional) On both the project summary view and the transaction details view, click the icons at the upper-right corner of the grid to filter the grid data, reorder and hide columns, and toggle fullscreen mode.
6. (Optional) As you complete the search criteria from the transaction details view, select *Do Not Bill* from the **Billing Status** prompt to display transactions in *Do Not Bill* status.
7. Complete the header on the transaction details view:

Option	Description
<b>Total Amount to Bill</b>	The sum of the <b>Amount to Bill</b> for the selected transactions. Or, when viewing by transaction source, the sum of the <b>Amount to Bill</b> for the selected transactions for each transaction source.
<b>Currency</b>	Displays when the selected transactions have the same billing currency.
<b>Mass Action</b>	Select multiple transactions and then apply one of these actions to all selected transactions at once:

Option	Description
	<ul style="list-style-type: none"> <li><i>Project Transfer:</i> Transfer transactions to another project, phase, or task. This option is available when viewing by transaction source.</li> <li><i>Change Billing Status:</i> Change the billing status of transactions; for example, from <i>On Hold</i> to <i>Ready to Bill</i>.</li> <li><i>Exclude from Prepayment:</i> Exclude transactions from prepayment consumption.</li> <li><i>Modify Amount:</i> Modify the amounts to bill for the selected transactions. This action applies to the transaction types that you configure with the <b>Transaction Types for Adjustment</b> option in the <b>Set Up Project Billing Configuration</b> task. By default, you can adjust amounts for all 4 transaction types: Time, Supplier Invoice, Expense, and Misc Expense transactions.</li> </ul>
<b>Billing Status</b>	<p>Select a new billing status for the selected transactions and click <b>Apply</b>.</p> <p>Displays when you select <i>Change Billing Status</i> from the <b>Mass Action</b> prompt.</p>
<b>Original Amount to Bill</b>	<p>The sum of the <b>Amount to Bill</b> for the selected transactions.</p> <p>Displays when you select <i>Modify Amount</i> from the <b>Mass Action</b> prompt.</p>
<b>New Amount to Bill</b>	<p>(Optional) Enter the amount you want to bill for all transactions you've selected in the grid. The transaction types that this action applies to are configured by the <b>Transaction Types for Adjustment</b> option in the <b>Set Up Project Billing Configuration</b> task. By default, you can adjust amounts for all 4 transaction types: Time, Supplier Invoice, Expense, and Misc Expense transactions.</p> <p>Enter a positive value if you want the <b>Billable Amount</b> to be positive, and a negative value for a negative <b>Billable Amount</b>. Example: Enter -150.00 for a billable amount of (150.00).</p> <p>Workday determines the percentage of each transaction in relation to the total billable amount. Then, Workday applies that percentage to the <b>New Amount to Bill</b> that you enter.</p> <p>Example: You select 2 Time transactions. Transaction 1 has a <b>Billable Amount</b> of \$150. Transaction 2 has a <b>Billable Amount</b> of \$480. The total billable amount for the 2 transactions is \$630. Transaction 1 is 23.8% (<math>150 \div 630</math>) of the total billable amount and Transaction 2 is 76.19% (<math>480 \div 630</math>). You enter a <b>New Amount to Bill</b> of \$500. Workday automatically populates the <b>Amount to Bill</b> with \$119.05 for Transaction 1 and \$380.95 for Transaction 2.</p> <p>Displays when you select <i>Modify Amount</i> from the <b>Mass Action</b> prompt.</p>
<b>Zero Amount to Bill</b>	<p>Select to update the <b>Amount to Bill</b> to zero for the selected transactions.</p>

Option	Description
	<p>When you select this check box, Workday disables data entry for the <b>New Amount to Bill</b>, <b>Adjustment %</b>, and <b>Adjustment Amount</b> fields.</p> <p>Displays when you select <i>Modify Amount</i> from the <b>Mass Action</b> prompt.</p>
<b>Adjustment %</b> and <b>Adjustment Amount</b>	<p>(Optional) Enter a number in one of these fields to adjust the amounts to bill for all transactions you've selected in the grid:</p> <ul style="list-style-type: none"> <li>• <b>Adjustment %</b>: Workday adds the percentage you enter in this field to the <b>Original Amount to Bill</b> to calculate the <b>New Amount to Bill</b>. A positive number increases the amount to bill, and a negative number decreases it.</li> <li>• <b>Adjustment Amount</b>: Workday adds the amount you enter in this field to the <b>Original Amount to Bill</b> to calculate the <b>New Amount to Bill</b>. A positive number increases the amount to bill, and a negative number decreases it.</li> </ul> <p>These fields display when you select <i>Modify Amount</i> from the <b>Mass Action</b> prompt.</p>
<b>Adjustment Reason</b>	<p>When you leave this prompt blank, Workday populates the selected transactions with the default revenue adjustment reason that you configured on the <b>Maintain Revenue Adjustment Reasons</b> task.</p> <p>When you click:</p> <ul style="list-style-type: none"> <li>• <b>Apply</b>, Workday prorates the adjustment amount across the selected transactions and populates the revenue adjustment reason on the transactions.</li> <li>• <b>Submit</b>, Workday routes the transactions for review and approval using the <i>Adjustment</i> business process. You can drill down on the <b>Adjustment Count</b> column to view the manual adjustments.</li> </ul> <p>Displays when you select <i>Modify Amount</i> from the <b>Mass Action</b> prompt.</p>
<b>Transfer To Project Plan Task</b> (available when viewing by transaction source)	<p>Select an option to mass transfer Time transactions and click <b>Apply</b>.</p> <p>The prompt includes all tasks from all phase levels for the billable project.</p> <p>Displays when you select <i>Project Transfer</i> from the <b>Mass Action</b> prompt.</p>
<b>Transfer to Project / Phase / Task</b> (available when viewing by transaction source)	<p>Select an option to mass transfer nonlabor billable transactions and click <b>Apply</b>.</p> <p>When you transfer transactions to a:</p> <ul style="list-style-type: none"> <li>• Project plan task, Workday displays all tasks from all phase levels for the billable project.</li> <li>• Project plan phase, Workday displays only top-level phases for the billable project.</li> </ul>

Option	Description
	Displays when you select <i>Project Transfer</i> from the <b>Mass Action</b> prompt.

8. (Optional) In the Project Transactions grid (on the **Billing Review** tab in tabbed view), you can change the billing status, hours to bill, rate to bill, and amount to bill for individual transactions. You can also filter by and view previously invoiced billable transactions and view billable transactions that require recalculation. Workday doesn't recalculate offset amounts or populate the **Recalculate** column for usage-based transactions.
9. Complete the **Project Transfer** tab (available when viewing by transaction source in tabbed view):

Option	Description
<b>Transfer To Project Plan Task</b>	Select project plan tasks to transfer individual transactions to. This field is available for Time transactions only, and displays all tasks from all phase levels for the billable project.
<b>Transfer To Project / Phase / Task</b>	Select projects, project plan phases, or project plan tasks to transfer individual nonlabor billable transactions to. This field is available for Expense or Supplier Invoice transactions.  When you transfer: <ul style="list-style-type: none"> <li>• Transactions to a project plan task, Workday displays all tasks from all phase levels for the billable project.</li> <li>• Transactions to a project plan phase, Workday displays only top-level phases for the billable project.</li> <li>• Paid nonlabor billable transactions, Workday creates an accounting adjustment line with details from the Supplier Invoice or Expense Report source transaction.</li> <li>• Unpaid nonlabor billable transactions, Workday updates the Supplier Invoice or Expense Report lines on the source document with the new project worktag.</li> </ul>
<b>Split</b>	(Expense and Supplier Invoice) Click to allocate a percentage or amount to split the nonlabor billable transaction into multiple transactions without changing the original transaction amount.  When you split: <ul style="list-style-type: none"> <li>• Paid nonlabor billable transactions, Workday creates an accounting adjustment line with details from the Supplier Invoice or Expense Report source transaction.</li> <li>• Unpaid nonlabor billable transactions, Workday creates a Supplier Invoice line split or an Expense Report itemization.</li> </ul>
<b>Transfer Reason</b>	(Expense and Supplier Invoice) Workday populates this field with the transfer reason that you configured on the <b>Set Up Project Billing Configuration</b> task.
<b>Accounting Adjustment Date</b>	(Expense and Supplier Invoice) Workday populates this field with the date that you configured on the <b>Set Up Project Billing Configuration</b> task.  Displays on paid nonlabor billable project transactions only.
<b>Accounting Adjustment Reason</b>	(Expense and Supplier Invoice) Workday populates this field with the reason that you configured on the <b>Set Up Project Billing Configuration</b> task.

Option	Description
	Displays on paid nonlabor billable project transactions only.

**10.**(Optional) In the Project Transactions grid (on the **Prepaid** tab in tabbed view), exclude transactions from prepayment consumption.

You can exclude transactions by selecting them individually using the **Exclude from Prepayment** check box, or by selecting multiple transactions and using the **Exclude from Prepayment** mass action.

**11.**(Optional) In the Project Transactions grid (on the **Worktags** tab when viewing by transaction source in tabbed view), view prior and current worktags when you transfer or split nonlabor billable transactions.

**12.**(Optional) In the Project Transactions grid (on the **Custom References** tab in tabbed view), edit ad hoc project transaction details for billing and reporting purposes.

Workday displays this tab when you enable custom references for ad hoc project transactions.

**13.**(Optional) Export project billing transactions to Excel.

Export project billing transactions to Excel to analyze the data to better inform your billing decisions.

a) Click the **Billable Transactions** field to open a read-only view of the transactions grid.

b) From the read-only view, click **Export to Excel** to download the transactions as an Excel worksheet.

From this view you can also export to PDF, filter, and expand and collapse rows.

**14.**Submit, recalculate rates, or create customer invoice proposals for the selected transactions.

## Next Steps

Create:

- Customer invoice proposals for billable transactions.
- Customer invoices from contracts.
- Revenue installments for billable transactions.

## Review Billable Project Transactions

### Prerequisites

Security:

- *Manage: Billable Projects* domain in the Projects functional area.
- *Process: Project Billing - Core* domain in the Project Billing functional area.

### Context

Workday recommends that you use the **Manage Project Billing Transactions** task to review your billable transactions instead. Workday will no longer maintain this task going forward.

You can review and approve all billable transactions for your projects before invoicing. Workday displays billable transaction rows and the current status of each transaction. For deleted time block transactions in Time Tracking, Workday generates a negative offset entry. Negative offset entries include any applicable billing rate rule offsets, so you can accurately track time block deletions. You can:

- Approve transactions.
- Change billable amounts.
- Recalculate billing rates.
- Place transactions on hold.
- Transfer time between projects.

### Steps

1. (Optional) Exclude recoverable tax from your expense and supplier invoice billable amounts.  
Select the **Only Include Non-Recoverable Tax on Billable Transactions** check box on the **Edit Tenant Setup - Financials** task. You can clear the **Billable Transaction Tax** check box on the customer contract line to remove the tax.
2. Access the **Review Billable Project Transactions** task.
3. As you complete the selection criteria, consider:

Option	Description
<b>Phase</b>	Displays only top-level phases for the billable project.
<b>Task</b>	Displays all tasks from all phase levels for the billable project.

4. As you complete the task, consider:

Transaction Source	Option	Description
<b>Time</b>	<b>Approve</b>	Once approved, you can generate invoices against the transaction.
<b>Time</b>	<b>Edit</b>	Click <b>Edit</b> to drill into the individual transactions. You can change the hours or rates to bill and approve time transactions individually, if needed.
<b>Time</b>	<b>Transfer Project</b>	To transfer project time between projects, select <b>Transfer Project</b> from the related actions menu.

Transaction Source	Option	Description
		<p>Workday displays all tasks from all phase levels for the billable project in the <b>Transfer to Project Plan Task</b> prompt.</p> <p>After you submit the transfer, Workday Time Tracking validates the time.</p> <p>When you transfer time between projects, Workday duplicates revenue installments to the new project. You must delete installments for the original project.</p>
<b>Expense, Misc Expense, and Time</b>	<b>Recalculate Rates</b>	<p>Select to rerun the billing rate rule engine to recalculate:</p> <ul style="list-style-type: none"> <li>• Corrected caps.</li> <li>• Corrected tiered rates.</li> <li>• New effective rates.</li> </ul> <p>The engine recalculates all transactions, except transactions with a <i>Do Not Bill</i> status.</p> <p>When you recalculate rates, you must update the amounts on your revenue installments associated with the billable transactions.</p>
<b>Expense, Misc Expense, Supplier Invoice, and Time</b>	<b>Modify Amounts</b>	<p>You can adjust the amount to bill or reduce the amount to zero.</p> <p>Workday displays previous adjustments in the <b>Adjustment Count</b> column.</p> <p>For <b>Time</b>, click <b>Edit</b> to access this option.</p> <p>When you modify amounts, you must update the associated revenue recognition installment amounts.</p>

## Next Steps

- Create customer invoices for billable transactions using the **Create Customer Invoices from Contracts** task.
- Update revenue installments for billable transactions using the **Schedule Revenue Installments for Billable Transactions** task.

## Related Information Concepts

Concept: [Project Time Entry](#)

## Tasks

- [Steps: Manage Project Billing Transactions on page 1413](#)
- [Steps: Manage Customer Invoice Proposals on page 1094](#)
- [Create Customer Invoices from Contracts on page 1099](#)
- [Create Revenue Installments for Billable Transactions on page 1116](#)
- [Create Expense Reports on page 1811](#)
- [Create Supplier Invoices on page 1618](#)

## Transfer Project Transactions

### Prerequisites

- [Set Up Project Billing Configurations on page 1414](#).  
Configure an accounting adjustment date and reason.
- To enable transaction transfers within closed time periods, enable the tenant-wide option **Allow Transfers Within Closed Time Entry Periods** on the **Project Transfer Options** tab on the [Set Up Project Billing Configuration task](#).
- Security:
  - *Manage: Project Transaction Transfer* domain in the Projects functional area.
  - For project transfers in locked and closed periods:
    - The user must also have access to the *Time Tracking: Exempt from Lockout* domain in the Time Tracking functional area.
    - If the *Project Transaction Adjustment Event* business process:
      - Is configured, the initiator of the project transfer must have access to the *Time Tracking: Exempt from Lockout* domain, or the business process does not advance.
      - Is configured with approvers, the approvers must have access to the *Time Tracking: Exempt from Lockout* domain, or the business process does not complete.
  - [Set Up: Project Billing - Configurations domain in the Project Billing functional area \(for the Allow Transfers Within Closed Time Entry Periods option\)](#).

### Context

You can transfer transactions from one project to another, and split them between projects. This topic describes how to use the **Transfer Project Transactions** task to transfer any supported transaction types, but you can also transfer billable transactions using the [Manage Project Billing Transactions on page 1417](#) task.

### Steps

1. Access the **Transfer Project Transactions** task.
2. Select filter options (some options are the same as those for the **Manage Project Billing Transactions** task):
 

For **Projects**: Select the projects that you want to review. Workday saves your selection and uses it each time you access the task.

3. On the **Transaction Details** view, select multiple transactions in the grid and choose a target project, phase, or task from the **Mass Action** header to transfer the transactions to, or choose target projects, phases, or tasks in the grid to transfer individual transactions to.

As you complete the task, consider (some options are the same as those for the **Manage Project Billing Transactions** task):

**For Transfer To Project / Phase / Task:**

- Time transactions:
    - You can only transfer time transactions at the task level, and can't split them.
    - The task must have the same worker that the time block is for.
    - When you populate the transfer-to project for a time transaction line, you can edit the Transaction Memo field. The memo you enter here overrides the worker's Time Block Comment.
  - Expense and Supplier Invoice transactions: You can transfer and split these transactions at the project, phase, or task level.
4. (Optional) Export project billing transactions to Excel.
- Export project billing transactions to Excel to analyze the data to better inform your billing decisions.
- a) Click the **Project Transactions** field to open a read-only view of the transactions grid.
  - b) From the read-only view, click **Export to Excel** to download the transactions as an Excel worksheet.
- From this view you can also export to PDF, filter, and expand and collapse rows.
5. Click **Submit** to transfer the selected transactions.

### Result

You can drill into the **Transaction Count** on the confirmation page to see the transaction details.

### Next Steps

You can report on project transaction values before and after they are transferred, by creating an Advanced custom report with the following configurations:

- **Business Object:** *Project Transaction Adjustment Line*
- **Data Source:** *Project Transaction Adjustment Lines*
- In the **Columns** tab of the custom report, add a row with these values:

To answer this question	Select this Business Object	Select a Field value
Where was the transaction originally booked to?	<i>Project Transaction Adjustment Line</i>	<ul style="list-style-type: none"> <li>• <i>Source Project</i></li> <li>• <i>Source Project Plan Phase</i></li> <li>• <i>Source Project Plan Task</i></li> </ul>
Where was the transaction transferred to?	<i>Project Transaction Adjustment Line</i>	<ul style="list-style-type: none"> <li>• <i>Target Project</i></li> <li>• <i>Target Project Plan Phase</i></li> <li>• <i>Target Project Plan Task</i></li> </ul>
Who made the transfer?	<i>Project Transaction Adjustment Event</i>	<i>Initiator</i>
When was the transfer made?	<i>Project Transaction Adjustment Event</i>	<i>Date Initiated</i>

## 2024R2 Release Note: Transfer Project Transactions

### Tasks

[Manage Project Billing Transactions](#) on page 1417

[Set Up Project Billing Configurations](#) on page 1414

## Concept: Set Up Project Billing Configurations

Workday enables you to set up tenant-wide configurations for your billable project transactions.

### Project Transfer Options

You can configure required fields for Workday to populate when you transfer or split nonlabor project transactions. Workday creates an accounting adjustment when you transfer or split paid nonlabor project transactions on the **Manage Project Billing Transactions** and **Transfer Project Transactions** tasks. Nonlabor project transactions include expense reports and supplier invoices. When you modify paid expense reports or supplier invoices, Workday uses the Spend account posting rule to create an accounting adjustment. You can configure an:

- Accounting adjustment date.
- Accounting adjustment reason.

Workday uses the accounting adjustment date to determine which date to use for the journal adjustment. All accounting adjustments require an accounting adjustment reason.

When you transfer:

- A paid nonlabor billable project transaction, you can view the new project worktag on the **Accounting Adjustment** tab of the associated supplier invoice or expense report.
- An unpaid nonlabor billable project transaction, you can view the new project worktag directly on the source transaction line.

When you require a:

- Transfer reason, select a reason on the **Manage Project Billing Transactions** task for each nonlabor billable transaction that you transfer.
- Comment on time entry changes using the **Time Entry** tab on the **Edit Time Entry Template** task, select a time block comment on the **Manage Project Billing Transactions** task. Workday requires a time block comment for each time billable transaction that you transfer. Enabling this option also impacts updates made to time blocks.

### Transfer Reasons

When you require a transfer reason, configure transfer reasons and set 1 transfer reason as default. Workday only uses transfer reasons for reporting purposes.

### Revenue

You can enable or clear the **Revenue Offset for Invoiced Billable Transactions** check box at any time. When you:

- Enable the check box and accrue revenue, Workday doesn't reset the revenue accrual status for billable transactions or create offset installments upon invoicing.
- Clear the check box, Workday evaluates the worktag derivation rules for the billable transaction upon invoicing. If there's a change to the worktag on the billable transaction, Workday updates the revenue accrual status and creates an offset revenue installment.

Example: On the **Worktag Rule Configuration** tab of the project hierarchy, you configure revenue to follow the worker. You accrue revenue on 11/15/2022 and the cost center for the worker is 123. On 12/20/2022, you transfer the worker to cost center 124. You invoice the customer on 12/31/2022.

Revenue Offset for Invoiced Billable Transactions Check Box Enabled	Revenue Offset for Invoiced Billable Transactions Check Box Cleared
Revenue installment accounting on 11/15/2022 for cost center 123: <ul style="list-style-type: none"><li>• Unbilled Receivables 1000</li><li>• Revenue 1000</li></ul>	Revenue installment accounting on 11/15/2022 for cost center 123: <ul style="list-style-type: none"><li>• Unbilled Receivables 1000</li><li>• Revenue 1000</li></ul>
Upon invoicing on 12/31/2022: No accounting	Upon invoicing on 12/31/2022 for cost center 123: <ul style="list-style-type: none"><li>• Revenue 1000</li><li>• Unbilled Receivables 1000</li></ul>
	Upon invoicing on 12/31/2022 for cost center 124: <ul style="list-style-type: none"><li>• Unbilled Receivables 1000</li><li>• Revenue 1000</li></ul>

You can use the **Enable Deferred Billable Project Costs Accounting** check box to generate operational journals for billable expense reports and supplier invoices when you recognize revenue. Workday uses the Spend account posting rule to create operational journals. For the Spend account posting rule, you can configure the resulting ledger account to use an accounting treatment of:

- *Cost of Sales* to post to a cost or an income statement ledger account.
- *Deferred Project Cost* to post to an asset or a balance sheet ledger account.

Example: You select the **Enable Deferred Billable Project Costs Accounting** check box and configure the resulting ledger account in the Spend account posting rule:

Resulting Ledger Account	Dimension	Values
Work in Progress	Accounting Treatment	Deferred Project Cost
Cost of Sales	Accounting Treatment	Cost of Sales

You create a supplier invoice line with a billable project worktag for \$100 and view the resulting accounting:

Ledger Account	Debit Amount	Credit Amount
Work in Progress	100.00 USD	0.00 USD
Accounts Payable	0.00 USD	100.00 USD

You create a revenue installment and view the resulting accounting:

Ledger Account	Debit Amount	Credit Amount
Deferred Revenue: Product and Sales	100.00 USD	0.00 USD
Revenue	0.00 USD	100.00 USD

You create revenue recognition accounting for an accrued or deferred revenue treatment, and you approve a customer invoice for an invoice revenue treatment. Workday automatically creates this secondary operational journal:

Ledger Account	Debit Amount	Credit Amount
Cost of Sales	100.00 USD	0.00 USD

Ledger Account	Debit Amount	Credit Amount
Work in Progress	0.00 USD	100.00 USD

Once you enable deferred billable project costs accounting, you can't disable it.

## Billing

You can configure Workday to automatically recalculate transactions when there's a change to the associated:

- Billing schedule.
- Billing rate sheet.
- Contract rate sheet.
- Customer contract.
- Standard rate sheet.

When you enable the **Automatically Recalculate Transactions** check box, you can specify which transaction billing statuses Workday recalculates.

When you don't automatically recalculate transactions, Workday populates the **Recalculate** column on the **Manage Project Billing Transactions** task to identify the billable projects and transactions that might require recalculation. You can also create custom reports to view billable projects and transactions that might require recalculation.

You can configure Workday to apply a new billing status to billable project transactions when you deny, cancel, or credit adjust an invoice. When you schedule invoicing to occur, you can update the **Reset Invoiced Transactions to Billing Status** prompt to *Awaiting Review* to re-evaluate transactions upon invoice cancellation.

You can configure Workday to display the billing transactions grid either with tabs that group related fields together, or with all fields in one view, using the **Hide Separate Tabs in Transaction Grid** option. The option is unchecked by default.

You can use the **Transaction Types for Adjustment** option to configure which transaction types users are allowed to mass modify. By default, all 4 transaction types are selected — Expense, Misc Expense, Supplier Invoice, and Time — and at least 1 transaction type must be selected. Note that you can't deselect all 4 transaction types; if you want to disable all mass modifications, you can use the **Configure Optional Fields** task to hide the *Summary: Mass Submit Button* in the **Manage Project Billing Transactions** functional area.

This configuration applies tenant-wide, and affects all users' ability to mass modify transaction types throughout all views in the **Manage Project Billing Transactions** and **Customer Invoice Proposal** workflows.

You can configure Workday to enable custom validations for customer invoice proposals, using the **Enable Custom Validations for Customer Invoice Proposals** option. By default, this option is enabled, meaning that custom validations created in the **Maintain Custom Validations** report for the *customer invoice* context also apply to customer invoice proposals.

Custom validations for fields on these tabs in the **View Customer Invoice Proposal** report are supported:

- **Invoice Header**
- **Invoice Lines**
- **Attachments**

For example, if you configure a custom validation to require that the **Invoice Date** be within a specified range for customer invoices, that range also applies to the **Invoice Date** field for customer invoice proposals.

To maintain or create custom validations for fields on the **Project Transactions** tab, use the *Project Billing Transaction Details* context in the **Maintain Custom Validations** report.

When creating a custom validation, you can use the **Is Document a Customer Invoice Proposal** report field in a condition rule to specify that you want a validation to apply only to customer invoices or customer invoice proposals.

If you want validations to apply only to customer invoices, create a condition rule with these values:

- **And/Or:** *And*
- **Source External Field or Conditional Rule:** *Is Document a Customer Invoice Proposal*
- **Relational Operator:** *not equal to*
- **Comparison Type:** *Value specified in this filter*
- **Comparison Value:** Select the check box.

If you want validations to apply only to customer invoice proposals, create a condition rule with the same values as for customer invoices, except:

- **Relational Operator:** *equal to*

To maintain or create custom validations for customer invoice adjustments, use the *Customer Invoice Adjustment* context in the **Maintain Custom Validations** report.

[Steps: Set Up Custom Validations](#) on page 52

[2024R2 Release Note: Mass Modification of Amounts for Non-Labor Transaction Sources](#)

## **Concept: Project Transaction Transfers**

You can transfer transactions from one project to another, and split them between projects. This capability can be helpful if you:

- Book transactions to a project, but want to move expense or supplier invoice transactions to another project, phase, or task, or time transactions to another task within the same project.
- Have transactions that no longer apply to the contract line type they were booked to, for example fixed-fee project contract lines, and want to move them to the correct contract line type.
- Initially book transactions to a nonbillable or internal project, and want to transfer them to a billable project once contract details are completed.
- Want to split nonlabor transactions into multiple transactions and transfer them to different projects, phases, or tasks.

Using the **Transfer Project Transactions** task, you can transfer and split:

- Project time and expense billable transactions.
- Project time and expense unbillable transactions (an issue prevents billing).
- Fixed fee project transactions.
- Value-based project transactions
- Nonbillable project transactions. Example: internal transactions.

You can transfer to any type of project.

You can't transfer or split usage-based, ad hoc, invoiced, misc expense, and capital project transactions.

Using the **Manage Project Billing Transactions** task, you can transfer transactions by either of these methods:

- You can access the **Transfer Project Transactions** task from the summary view of the **Manage Project Billing Transactions** task.
- You can transfer project time and expense billable transactions directly within the **Manage Project Billing Transactions** grid, when viewing by transaction source.

### Time Block Transfers within Closed Time Entry Periods

You can transfer time blocks within closed time entry periods, which enables you to:

- Move time blocks to a different project in a closed period, supporting updates in billing without impacting payroll.
- Maintain work in progress for long periods, and then transfer associated time blocks to other projects.
- Recoup billable hours.

When you transfer time blocks within closed time entry periods, the transfer doesn't trigger time calculations or retroactive payroll calculations to run. However, if there are retroactive payroll triggering events prior to the project transfer time block event, the project transfer occurs and recalculates payroll.

If you reopen a closed period and make changes to a transferred time block or other time blocks in the period, all time blocks, including the transferred time block, are picked up in the next retroactive time calculation for the period.

If a time block fails any time entry validations, the time block is excluded from the transfer, and doesn't create a time review event for approval. The time block remains in the unsubmitted state.

##### Tasks

[Transfer Project Transactions](#) on page 1427

[Manage Project Billing Transactions](#) on page 1417

### Concept: Custom Validations on Billable Project Transactions

You can configure custom validations to apply when users modify transactions on the **Manage Project Billing Transactions** task. Example: A validation that requires users to select a revenue adjustment reason when the **Amount to Bill** doesn't match the **Billable Amount**.

Custom validations trigger:

- When a user attempts to submit the task, not at the moment they change a field.
- Only when a user changes the existing data in fields. They don't trigger when existing data meets the conditions but the user doesn't change the fields.

On the **Maintain Custom Validations** task, you can select these transaction types to configure critical validations on project billing transactions:

Transaction Type	Description
<i>Project Billing Transaction Summary</i>	Configure validations to apply when users modify transactions on the summary screen on the <b>Manage Project Billing Transactions</b> task.
<i>Project Billing Transaction Details</i>	Configure validations to apply on the: <ul style="list-style-type: none"> <li>• Transaction details screen on the <b>Manage Project Billing Transactions</b> task.</li> <li>• <b>Project Transactions</b> tab on the <b>Edit Customer Invoice Proposal</b> task.</li> </ul>

On these transaction types, Workday doesn't currently support custom validation messages that you configure on the **Configure Validation Message** task. We recommend that you use the **Description** field on a custom validation to enter the message you want to display to users.

**Note:** The **Hours to Bill** report field is usable for time-based transactions only. When you create a custom validation using the **Hours to Bill** report field, include this additional condition to prevent the validation triggering incorrectly:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	<i>Project Transaction Source</i>	<i>in the selection list</i>	<i>Value specified in this filter</i>	<i>Time</i>

#### Related Information

##### Tasks

[Steps: Set Up Custom Validations](#) on page 52

## Example: Set Up Custom Validations on Billable Project Transactions

This example illustrates how to set up custom validations on billable project transactions.

#### Context

You want to prevent the need for invoice adjustments that result from project billers omitting data when they modify billable project transactions:

- When project billers modify amounts to bill, they sometimes forget to include an adjustment reason. You want to ensure that users select a **Revenue Adjustment Reason** when the **Amount to Bill** doesn't match the **Billable Amount**.
- Since your organization posts adjustment amounts to a different ledger account, you also want to ensure that users select a **Revenue Adjustment Reason** when they change the **Total Amount to Bill** on the summary screen of the **Manage Project Billing Transactions** task.

#### Prerequisites

Security: *Set Up: Custom Validations* domain in the Common Financial Management and System functional areas.

## Steps

### 1. Access the **Maintain Custom Validations** task.

Create a validation on the summary screen of the **Manage Project Billing Transactions** task.

- In the sidebar, select the *Project Billing Transaction Summary* transaction type.
- In the grid, click **New Validation**.
- In the **Description** field, enter *Select an Adjustment Reason. The New Total Amount to Bill is different to the amount from transactions that are ready to bill.*  
Workday displays this message to users when the validation triggers.
- In the **Comment** field, enter an explanation of the validation logic: *Triggers when the value in New Total Amount to Bill is different to the value in Total Amount to Bill from Ready to Bill Transactions and Adjustment Reason is empty. Requires the user to select an Adjustment Reason.*
- In the **Rule Conditions** grid, select these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	<i>New Total Amount to Bill</i>	<i>not equal to</i>	<i>Value from another field</i>	<i>Total Amount to Bill from Ready to Bill Transactions</i>
And	<i>Revenue Adjustment Reason</i>	<i>is empty</i>		

- Click **OK**.

### 2. Stay on the **Maintain Custom Validations** task.

Create a validation on the details screen of the **Manage Project Billing Transactions** task.

- In the sidebar, select the *Project Billing Transaction Details* transaction type.
- In the grid, click **New Validation**.
- In the **Description** field, enter *Select a Revenue Adjustment Reason. The Amount to Bill is different to the Billable Amount.*  
Workday displays this message to users when the validation triggers.
- In the **Comment** field, enter an explanation of the validation logic: *Triggers when the value in Amount to Bill is different to the value in Billable Amount and Adjustment Reason is empty. Requires the user to select an Adjustment Reason.*
- In the **Rule Conditions** grid, select these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	<i>Amount to Bill</i>	<i>not equal to</i>	<i>Value from another field</i>	<i>Billable Amount</i>
And	<i>Revenue Adjustment Reason</i>	<i>is empty</i>		

- Click **OK and Done**.

## Result

## Next Steps

Test your validations on the **Manage Project Billing Transactions** task.

### Related Information

[Steps: Set Up Custom Validations](#) on page 52

## Reference: Project Billing Transaction Billing Statuses

You can use these billing statuses to track your project billing transactions:

Billing Status	Description
<i>Approval in Process</i>	Workday automatically displays this billing status when a business process needs approval. You can't take action on transactions until you approve the business process.
<i>Awaiting Review</i>	You can review transactions and change the transaction billing status to <i>Ready to Bill</i> .
<i>Billed</i>	The transaction is completely billed and has no remaining amount to bill.
<i>Billing in Progress</i>	Workday displays this billing status when: <ul style="list-style-type: none"> <li>The customer invoice isn't yet completed or approved.</li> <li>No accounting adjustment or project transaction adjustment is terminated, canceled, or completed.</li> <li>The transaction is paid by a noncanceled and noncredited customer invoice line on a nonzero amount due invoice with no prepaid consumption lines.</li> <li>The transaction is paid by a noncanceled customer invoice line (for grants).</li> </ul>
<i>Closed</i>	Workday displays this status when there's no accounting for the transactions or the customer invoice is complete.
<i>Do Not Bill</i>	You can't include transactions with this billing status on customer invoices.
<i>Fixed Fee</i>	The transaction has a matching fixed fee or value-based project contract line with a status of <i>Complete</i> or <i>Active</i> .
<i>On Hold</i>	When you: <ul style="list-style-type: none"> <li>Enable the <b>Independent Revenue Processing</b> check box on the revenue recognition schedule, Workday automatically accrues revenue for <i>On Hold</i> billable transactions.</li> <li>Disable the <b>Independent Revenue Processing</b> check box on the revenue recognition schedule and place transactions <i>On Hold</i>, Workday</li> </ul>

Billing Status	Description
	temporarily prevents billing and revenue recognition from occurring.
<i>Partially Billed</i>	The transaction has a remaining amount to bill.
<i>Pending Award Line Date Review</i>	Workday displays this status on cost reimbursable lines when you settle expenses that fall outside the dates on award lines. To bill these cost reimbursable lines to the sponsor, change the spend budget date or the award line dates to match. See <a href="#">Set Up Award Costs Processing Rules</a> .
<i>Ready to Bill</i>	You can include transactions with this billing status on customer invoices.
<i>Unbillable</i>	Workday automatically displays this billing status when there's an issue on the customer contract line or billing schedule. You can't take action on transactions until you resolve the issue. Example: You entered dates on the customer contract line that are outside of the transaction date range, creating an unbillable transaction.

[Manage Project Billing Transactions](#) on page 1417

## Reference: Project Billing Transaction Ineligibility Reasons

You can use these ineligibility reasons to view why a nonlabor billable transaction is ineligible for transfer or split during project billing review.

Ineligibility Reason	Transfer or Split Eligibility	More Information
<i>Expense report isn't approved.</i>	Ineligible for transfer and split.	You edited the expense report during an in process transfer or split. To transfer or split the expense report, approve the source document.
<i>Expense report isn't editable.</i>	Ineligible for transfer.	You can't edit expense reports with: <ul style="list-style-type: none"><li>• Intercompany billable transactions.</li><li>• Tax declarations.</li><li>• Unpaid negative reimbursements.</li></ul>
<i>Expense report line has a fixed expense item.</i>	Ineligible for split.	Examples: <ul style="list-style-type: none"><li>• Mileage.</li><li>• Per diem expenses.</li><li>• Travel journal items.</li></ul>

Ineligibility Reason	Transfer or Split Eligibility	More Information
<i>Supplier invoice isn't approved.</i>	Ineligible for transfer and split.	You edited the supplier invoice during an in process transfer or split. To transfer or split the supplier invoice, approve the source document.
<i>Supplier invoice isn't editable.</i>	Ineligible for transfer and split.	You can't edit supplier invoices with: <ul style="list-style-type: none"> <li>• A status of <i>Canceled</i>.</li> <li>• A gapless document number.</li> <li>• A paid or in progress payment.</li> <li>• Lines that have a <i>Project Transaction Adjustment Event</i> business process in progress.</li> </ul>
<i>Supplier invoice line has bill, replace purchase orders, and worktag balancing.</i>	Ineligible for transfer.	
<i>Supplier invoice line has purchase orders split by quantity.</i>	Ineligible for split.	
<i>Supplier invoice line is split by quantity.</i>	Ineligible for split.	
<i>Supplier invoice template line is recurring.</i>	Ineligible for split.	
<i>Transaction has intercompany billing.</i>	Ineligible for transfer and split.	
<i>Transaction has supplier invoices associated with a prepaid schedule.</i>	Ineligible for transfer and split.	You can only transfer or split unpaid transactions.
<i>Transaction is an ad hoc transaction or a capital project transaction.</i>	Ineligible for transfer and split.	You can't transfer or split ad hoc project transactions.
<i>Transaction is in process of an accounting adjustment or another type of billing review update.</i>	Ineligible for transfer and split.	To transfer or split the transaction, approve the accounting adjustment or billing review update.
<i>Transaction requires a budget check.</i>	Ineligible for transfer and split.

## Deferred Billable Project Costs Accounting

---

### Setup Considerations: Deferred Billable Project Costs Accounting

You can use this topic to help make decisions when planning your configuration and use of deferred billable project costs accounting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

You can configure Workday to generate secondary journal entries to relieve work-in-progress amounts and record them as costs when you recognize revenue on a billable project.

#### Business Benefits

Deferred billable project costs accounting reduces manual reconciliation by automating deferred cost entries associated with these transactions:

- Expense reports.
- Supplier invoices.

#### Use Cases

You complete work on a project and incur costs, but you don't immediately bill the costs on a customer invoice. Use deferred billable project costs accounting to accrue the work-in-progress amounts and record them as costs associated with the billable project when you recognize revenue.

#### Questions to Consider

Questions	Considerations
Where do operational journals post for expense report billable transactions?	<p>When you post the source transaction, Workday creates operational journals that:</p> <ul style="list-style-type: none"> <li>• Debit work-in-progress amounts using the asset resulting ledger account in the Spend account posting rule.</li> <li>• Credit the Employee Expense Payable ledger account in the Expenses Payable account posting rule.</li> </ul>
Where do operational journals post for supplier invoice billable transactions?	<p>When you post the source transaction, Workday creates operational journals that:</p> <ul style="list-style-type: none"> <li>• Debit work-in-progress amounts using the asset resulting ledger account in the Spend account posting rule.</li> <li>• Credit the Accounts Payable ledger account in the Payables account posting rule.</li> </ul>

## Recommendations

You can debit the cost of sales ledger account using the revenue category on the customer contract line when you create invoices or revenue recognition accounting. Configure the *Revenue Category* dimension in the cost resulting ledger account for the Spend account posting rule.

## Requirements

You must confirm that you want to enable deferred billable project costs accounting.

For the Spend account posting rule, configure these resulting ledger accounts:

- Asset using a *Deferred Project Cost* accounting treatment.
- Cost using a *Cost of Sales* accounting treatment.

## Limitations

Once you enable deferred billable project costs accounting, you can't disable it.

Deferred billable project costs accounting doesn't support:

- Ad hoc project transactions.
- Billable source transaction lines with capital project worktags.
- Billable source transaction lines with asset or inventory tracking spend categories.

## Tenant Setup

To define tenant-wide configurations, enable deferred billable project costs accounting in the **Revenue** tab on the **Set Up Project Billing Configuration** task.

## Security

Domains	Considerations
<i>Process: Billing - Invoicing</i> in the Customer Contracts and Project Billing functional areas. <i>Process: Project Billing - Invoicing</i> in the Project Billing functional area.	Create customer invoices from contracts.
<i>Process: Billing Schedule - Core</i> in the Customer Contracts and Project Billing functional areas.	Create consolidated billing schedules for customer contracts.
<i>Process: Revenue Schedule - Core</i> in the Customer Contracts and Project Billing functional areas.	Create: <ul style="list-style-type: none"> <li>• Revenue installments for billable transactions.</li> <li>• Revenue recognition schedules for customer contracts.</li> </ul>
<i>Set Up: Accounting Rules</i> in the Common Financial Management functional area. <i>Set Up: Payroll - Company Specific (Accounting)</i> in the Core Payroll functional area.	Configure the asset and cost resulting ledger accounts for the Spend account posting rule.
<i>Set Up: Project Billing - Configurations</i> in the Project Billing functional area.	Enable deferred billable project costs accounting.

## Business Processes

Business Processes	Considerations
<i>Customer Contract Event</i>	Create and approve customer contracts.
<i>Customer Invoice Event</i>	Create and approve customer invoices.
<i>Expense Report Event</i>	Create and approve billable expense reports.
<i>Revenue Recognition Installment Event</i>	Create and approve revenue recognition accounting.
<i>Supplier Invoice Event</i>	Create and approve billable supplier invoices.

## Reporting

You can use these report data sources to create custom reports that display information on deferred billable project costs:

- **Deferred Billable Project Cost Lines**
- **Deferred Billable Project Costs**

## Integrations

Web Services	Considerations
<i>Put Resource Category</i>	Workday doesn't support these accounting treatment values: <ul style="list-style-type: none"> <li>• <i>Cost of Sales</i></li> <li>• <i>Deferred Project Cost</i></li> </ul>
<ul style="list-style-type: none"> <li>• <i>Submit Expense Report</i></li> <li>• <i>Submit Expense Report for Applicant</i></li> <li>• <i>Submit Expense Report for Non-Worker</i></li> <li>• <i>Submit Supplier Invoice</i></li> <li>• <i>Supplier Invoice Adjustment</i></li> </ul>	Workday doesn't support billable capital project worktags on expense reports and supplier invoices.
<ul style="list-style-type: none"> <li>• <i>Submit Supplier Invoice</i></li> <li>• <i>Supplier Invoice Adjustment</i></li> </ul>	Workday doesn't support spend categories with asset or inventory tracking on expense reports and supplier invoices.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Concepts

Concept: [Revenue Recognition Accounting](#) on page 1145

## Steps: Set Up Deferred Billable Project Costs Accounting

### Prerequisites

Create and approve a billable project.

## Context

You can set up deferred billable project costs accounting to relieve work-in-progress amounts and record them as costs of sales. When you recognize revenue on a project, Workday automatically creates secondary journal entries associated with expense report and supplier invoice transactions for a billable project. When the billable project on the customer contract line has a revenue treatment of:

- *Accrued or Deferred*, Workday recognizes revenue and creates secondary journal entries at the time of revenue recognition accounting.
- *Invoice*, Workday recognizes revenue and creates secondary journal entries at the time of invoicing.

## Steps

1. [Set Up Project Billing Configurations](#) on page 1414.

Select these check boxes:

- **Enable Deferred Billable Project Costs Accounting**
- **I understand that I can't disable deferred billable project costs accounting once it's enabled**

2. [Set Up Account Posting Rules](#) on page 84.

For the spend account posting rule, configure these options:

Resulting Ledger Account	Dimension	Values
Asset	<i>Accounting Treatment</i>	<i>Deferred Project Cost</i>
Cost	<i>Accounting Treatment</i>	<i>Cost of Sales</i>
Cost	<i>Revenue Category</i>	

3. (Optional) [Assign Company Accounting Details](#) on page 64.

You can configure Workday to post Billable Project Cost Recognition journals using either the accounting date or the invoice approval date. Select *Customer Invoice* from 1 of these prompts:

- **Allow Accounting in Arrears** to post journals at the time of invoicing using the accounting date.
- **Allow Accounting by Approval Date** to post journals using the invoice approval date.

4. [Create Customer Contracts](#) on page 1034.

Workday uses the revenue category on the customer contract line to debit the cost of sales ledger account.

5. [Create Expense Reports](#) on page 1811.

On the expense report lines, select:

- A billable project, project phase, or project task from the **Worktags** prompt.
- The **Billable** check box.

6. [Create Supplier Invoices](#) on page 1618.

On the supplier invoice lines, select:

- A billable project, project phase, or project task from the **Worktags** prompt.
- The **Billable** check box.

7. [Create Consolidated Billing Schedules for Customer Contracts](#) on page 1080.

8. [Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110.

9. [Create Customer Invoices from Contracts](#) on page 1099.

10. [Create Revenue Installments for Billable Transactions](#) on page 1116.

11. Access the **Create Revenue Recognition Accounting** task.

Configure the *Revenue Recognition Installment Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

## Result

Workday creates a Billable Project Cost Recognition operational journal using the spend account posting rule.

## Related Information

### Concepts

[Concept: Revenue Recognition Accounting](#) on page 1145

## Percent Complete Revenue Recognition

---

### Setup Considerations: Percent Complete Revenue Recognition

You can use this topic to help make decisions when planning your configuration and use of percent complete revenue recognition. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to recognize revenue for fixed-fee projects based on the percentage of project completion.

### Business Benefits

Percent complete revenue recognition reduces the manual reconciliation and calculations needed to identify the percentage of project completion. You can:

- Create percent complete configurations to source actual costs and total estimated costs.
- Recognize revenue on projects, or project plan phases and tasks, as a percent complete by cost or hours.
- Approve percent complete revenue recognition before generating installments.

### Use Cases

Use percent complete revenue recognition when your company needs to:

- Generate percent complete calculations by cost or hours.
- Recognize revenue as you log transactions against projects, and project plan phases and tasks.
- Recognize revenue for fixed-fee projects as a percent complete.

### Questions to Consider

Questions	Considerations
Where do you source the cost factors from to calculate the percent complete of a project?	<p>You can create percent complete configurations to source:</p> <ul style="list-style-type: none"> <li>• The actual cost from your journal entries.</li> <li>• The total estimated cost from your billable project budget.</li> </ul>

Questions	Considerations
Where do you source the hours factors from to calculate the percent complete of a project?	<p>Workday sources:</p> <ul style="list-style-type: none"> <li>The actual hours from your time entries.</li> <li>The total estimated hours from the task resource or resource forecast within your billable project.</li> </ul>
What plan calculation type do you use for your projects?	<p>Workday supports these estimated cost factors for percent complete configurations:</p> <ul style="list-style-type: none"> <li>Baseline</li> <li>Estimated Budget</li> <li>Forecast</li> <li>Manual Input</li> </ul> <p>Project plan phase and task granularity is supported for Baseline, Forecast, and Manual Input.</p>
How do you recognize revenue for percent complete?	<p>You can configure Workday to apply cost or hours factors to the contract amount on a cumulative basis for each billable project.</p>

## Recommendations

To reduce manual reconciliation and calculations, Workday recommends that you create percent complete configurations to source actual costs and total estimated costs.

## Requirements

Features	Considerations
Cost	<p>To recognize revenue for percent complete projects, you must create and approve a billable project with a budget.</p>
Project Budget Plans	<p>Workday requires a project budget to source the total estimated costs when you create percent complete configurations to recognize revenue.</p>
Estimated Cost Factor	<p>The estimated cost factor on the percent complete configuration must match the plan category on the related project.</p>
Currency	<p>These currencies must match the project company currency:</p> <ul style="list-style-type: none"> <li>Estimated cost factor.</li> <li>Manual journal entry.</li> </ul> <p>When the manual journal entry currency doesn't match the project company currency, Workday changes the actual cost to zero.</p>

## Limitations

Features	Considerations
Negative Percent Complete Configurations	When your percent complete configuration results in a negative cost, Workday changes the actual cost to zero.
Percent Complete Configurations	Workday only supports percent complete configurations for the total cost of your project.

## Tenant Setup

No impact.

## Security

Domains	Considerations
<i>Manage: Project Details</i> in the Project Tracking functional area.	View project completion for revenue recognition.
<i>Set Up: Revenue - Percent Complete</i> in the Customer Contracts and Project Billing functional areas.	Create, edit, manage, and view percent complete configurations.

## Business Processes

Business Processes	Considerations
<i>Accounting Journal Event</i>	Create and approve accounting journals related to project transactions.
<i>Customer Contract Event</i>	Create and approve customer contracts.
<i>Percent Complete Project Event</i>	Create and approve revenue recognition for percent complete projects.
<i>Revenue Recognition Schedule Event</i>	Create and approve revenue recognition schedules for percent complete projects.

## Reporting

You can access the **Manage Percent Complete Configurations** report to view your percent complete configurations.

You can use these report data sources to create custom reports that display percent complete project details:

- **Customer Contract Lines**
- **Percent Complete Configurations**
- **Percent Complete Lines**

## Integrations

Web Services	Considerations
<i>Get Percent Complete Configurations</i>	Retrieves percent complete configurations.

Web Services	Considerations
<i>Get Percent Complete for Revenue</i>	Retrieves percent complete projects available for revenue recognition.
<i>Put Percent Complete Configuration</i>	Adds or updates percent complete configurations.
<i>Submit Percent Complete for Revenue</i>	Submits percent complete projects for revenue recognition.

## Connections and Touchpoints

Features	Considerations
Customer Contracts	You can create revenue recognition schedules for percent complete projects on customer contracts.
Expenses	You can use expenses to calculate the percent complete of a project.
Financial Accounting	You can create operational journals for percent complete revenue recognition.
Project Billing	You can use billable project transactions to calculate the percent complete of a project.
Projects	You can recognize revenue for your projects.
Time Tracking	You can use the time tracked on billable projects to calculate the percent complete of a project.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Recognize Revenue for Percent Complete

### Prerequisites

Review setup considerations for percent complete revenue recognition.

### Context

Workday enables you to calculate and recognize revenue automatically using the percentage of completion accounting method for fixed fee projects. You can incrementally recognize revenue for your projects as you complete your work.

## Steps

### [1. Edit Business Process Security Policies.](#)

Configure the *Percent Complete Project Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

### [2. Create Customer Contracts](#) on page 1034.

Select:

- *Fixed Fee Project* from the **Line Type** prompt.
- *Deferred* from the **Revenue Treatment** prompt.
- A project from the **Billable Project** prompt.

The project task must include estimated hours when you want to recognize revenue as a percent complete by hours.

### [3. Create Revenue Recognition Schedules for Customer Contracts](#) on page 1110.

Select *Percent Complete* from the **Revenue Recognition Method** prompt.

### [4. Create Percent Complete Configurations for Projects](#) on page 1447.

### [5. Review Percent Complete Calculations for Revenue Recognition](#) on page 1448.

### [6. Create Revenue Installments for Billable Transactions](#) on page 1116.

Accrue revenue for approved billable transactions before you invoice customers.

[2020R1 What's New Post: Percent Complete Revenue Recognition for Projects](#)

## Create Percent Complete Configurations for Projects

### Prerequisites

- Create and approve a billable project with a budget.
- Security: *Set Up: Revenue - Percent Complete* domain in the Customer Contracts and Project Billing functional areas.

### Context

You can create configurations to automate the process of recognizing revenue as a percent complete of cost for your projects, and project plan phases and tasks. The configurations use project cost dimensions to source the:

- Actual cost from journal entries or manual inputs.
- Total estimated cost from billable project budgets or manual inputs.

Workday uses the actual cost and total estimated cost to calculate the percent complete by cost for your projects.

## Steps

### 1. Access the **Manage Percent Complete Configurations** report.

### 2. Click **Add**.

3. Complete the task:

Option	Description
<b>Estimated Cost Factor</b>	<p>Select the estimated cost factor that matches the plan category on the associated project.</p> <p>When you select 1 of these options, Workday uses these calculations to determine the revenue recognized for the project to date:</p> <ul style="list-style-type: none"> <li>• <i>Baseline</i>: <math>(\text{Contract Value} \times \text{Actual Project Cost to Date}) \div \text{Baseline Budget Cost}</math></li> <li>• <i>Estimated Budget</i>: <math>(\text{Contract Value} \times \text{Actual Project Cost to Date}) \div \text{Estimated Budget from Project Financials}</math></li> <li>• <i>Forecast</i>: <math>(\text{Contract Value} \times \text{Actual Project Cost to Date}) \div (\text{Actual Cost} + \text{Estimated Future Cost})</math></li> </ul>
<b>Ledger Account</b>	<p>Workday sources the actual costs from the ledger accounts you select.</p> <p>The available ledger accounts display based on the project hierarchy associated with the billable project.</p>
<b>Dimension</b>	<p>Select the dimensions that match the worktags on the associated journal.</p>
<b>Values</b>	<p>Displays only top-level phases when you select <i>Project Phase</i> from the <b>Dimension</b> prompt.</p>

## Result

Workday uses the configuration to calculate the percent complete by cost for your projects, and project plan phases and tasks.

## Next Steps

Review the percent complete for revenue to view the actual and estimated costs for your projects.

## Review Percent Complete Calculations for Revenue Recognition

### Prerequisites

- Project managers must approve time logged against the project in Time Tracking.
- Configure the *Percent Complete Project Event* business process and security policy in the Customer Contracts and Project Billing functional areas.

## Context

Percent complete calculations enable you to recognize revenue on a project as it progresses. You can approve your percent complete revenue recognition before generating revenue installments.

## Steps

1. Access the **Review Percent Complete for Revenue** task.

You can select multiple customers, projects, or a project hierarchy to review and edit transactions at once. Workday groups the contract lines by project into 1 row.

2. Select the rows that you want to change the revenue amounts for.

When a row has more than 1 contract line, click the number in the **Contract Lines** column to edit revenue amounts for individual contract lines.

3. Complete the task:

Option	Description
<b>Actual Percent Complete</b>	<p>Workday calculates this value using either:</p> <ul style="list-style-type: none"> <li>• The <b>Actual Cost</b> divided by the <b>Estimated Cost</b> for the <b>Cost</b> percent complete method.</li> <li>• The <b>Cumulative Hours Worked</b> divided by the <b>Estimated Hours at Complete</b> for the <b>Hours</b> percent complete method. You can override this calculation by manually entering a new estimated hours value.</li> </ul> <p>Workday doesn't display percent complete projects when:</p> <ul style="list-style-type: none"> <li>• The <b>Actual Percent Complete</b> is 100.00%.</li> <li>• You schedule all the installments.</li> </ul> <p>When you create a revenue installment that has a percent complete of 100.00%, you must cancel at least 1 installment to create negative percent complete project lines.</p>
<b>Base Currency</b>	The base currency for the <b>Estimated Cost</b> and <b>Actual Cost</b> columns, representing the project company currency.
<b>Contract Currency (previously named Currency)</b>	The currency for the customer contract.
<b>Cumulative Revenue to Date</b>	Workday multiplies the <b>Actual Percent Complete</b> by the <b>Contract Value</b> .
<b>Current Revenue Amount</b>	Workday calculates the difference between the <b>Cumulative Revenue to Date</b> and the <b>Cumulative Revenue Recognized to Date</b> values. You can override this calculation.

## Next Steps

Create revenue installments for billable transactions.

## Project Billing Work Area

---

### Steps: Configure the Project Billing Work Area Profile

#### Prerequisites

Security: *Set Up: System* domain in the System functional area.

#### Context

The **Project Billing Work Area Composite View** is a configurable profile for daily billing management with profile groups for:

- Billing Specialists
- Project Managers
- Revenue Specialists

Workday enables you to configure the content of this view to meet your business requirements. For each role that uses the composite view, you can:

- Add custom reports.
- Hide the profile group tabs.
- Reorder the profile group tabs.

#### Steps

1. Access the **Configure Profile** task.

- a. Select *Project Billing Work Area Composite View* from the **Profile** prompt.
- b. (Optional) Reorder the display of the profile groups in the composite view.
- c. Clear the **Display in Profile** check box to hide a section configuration.

2. Access the **Configure Profile Group** task.

Manage the content within each of the profile groups that you selected to display on the profile.

- a. Select from the available profile groups for the *Project Billing Work Area Composite View*.
- b. Add, remove, or reorder reports.
- c. (Optional) Repeat steps 2a and 2b for each of the profile groups that you want to configure.

Workday defines the selection list and includes available standard and custom reports on the work area composite view for project billing. For best display, select 10 groups or less.

**Note:** Security rules determine the tabs that display for each role.

#### Next Steps

Set up security for your users to view the profiles, profile groups, and reports.

[Steps: Set Up Profiles and Profile Groups](#)

## Concept: Project Billing Work Area

You can use the Project Billing Work Area to view project billing transaction activity for multiple companies at once. This composite view enables billing specialists, project managers, and revenue specialists to:

- View billable transactions awaiting review, invoicing, and revenue recognition.
- Preview summarized invoice lines.
- Create customer invoices for billable transactions.
- Generate installments for billable transactions that require accrual.

You can manage the display of the profiles and reports in the composite view using the **Configure Profile** and **Configure Profile Group** tasks.

You can enable these profiles and reports on the **Project Billing Work Area** task.

## Project Billing Reporting

### Concept: Project Dashboard

The **Projects** dashboard (secured to the *Reports: Projects* domain in the Projects functional area) is a configurable workspace that gives you quick, visual insight into the health of your projects. You can see both operational and financial data for your projects in real time. The dashboard also gives you direct access to frequently used project-related tasks and reports. You can select the tasks that you want to display in the default menu using the **Edit** button on the **Maintain Dashboards** report. The **Menu** section on the **Content** tab enables you to add links to custom reports and external links.

Workday delivers these report worklets available for use in your Projects dashboard:

- **Average Project Duration**
- **Average Revenue by Project Role**
- **Comparative Revenue by Project**
- **Forecast vs. Actuals - Project Hours by Month**
- **Headcount by Job Profile**
- **Project Actual Hours - Monthly**
- **Project Forecasted Hours - Monthly**
- **Project Status by Project Hierarchy**
- **Project Utilization Report - Monthly**
- **Projects Headcount Supply and Demand by Job Profile**
- **Project Profitability**
- **Trended Revenue by Project**

Once you configure the dashboard, you can add it as a worklet to your Home page.

### Reference: Project Billing Reports

Project managers and executives need insight into project performance indicators to assure organizations maintain business objectives. They need to know how projects are doing and how they can do better. Workday delivers a number of financial reports for projects.

Financial Reports	Security	Description
<b>Average Revenue by Project Role</b>	<i>Reports:</i> Project Billing domain in the Project Billing functional area.	<p>Analyze how your project staffing relates to project revenue. Workday calculates the average revenue in the project currency by project role based on:</p> <ul style="list-style-type: none"> <li>• Total approved hours.</li> <li>• Total billings from invoice lines.</li> </ul> <p>You can see when you use certain project roles more than others.</p>
<b>Comparative Revenue by Project</b>	<i>Reports:</i> Projects domain in the Projects functional area.	<p>Analyze revenue trends for month-over-month and year-over-year revenue by project. You can customize this report to include quarterly analysis for project revenue using your existing time periods.</p>
<b>Fully Burdened Cost Rate for Worker</b>	<p>To access the report: <i>Reports: Fully Burdened Cost</i> in the Projects functional area.</p> <p>To view data on the report, all of these:</p> <ul style="list-style-type: none"> <li>• <i>Set Up: Fully Burdened Cost Rate</i> in the Projects functional area. Grants access to the values under the <b>Fully Burdened Cost Rate Calculation</b> heading.</li> <li>• <i>Worker Data: Compensation Factors for Fully Burdened Cost Rate</i> in the Projects functional area. Grants access to the values under the <b>Worker Compensation Factors</b> heading.</li> <li>• <i>Worker Data: Fully Burdened Cost</i> in the Projects functional area. Grants access to the values under the <b>Fully Burdened Cost Rate Factors</b> heading.</li> </ul>	<p>You can run this report for workers who have a time block posted to a project. Analyze how Workday uses your configuration to determine the fully burdened cost rate for a specific worker. You can view:</p> <ul style="list-style-type: none"> <li>• The base rate, worker currency, and project currency conversion for the worker.</li> <li>• The formula Workday uses to calculate fully burdened labor costs.</li> <li>• The overhead rate rules for the worker, and the effective date of the fully burdened labor cost.</li> </ul>
<b>Project Billing Exceptions</b>	<p>To access the report: <i>Process: Project Billing - Core</i> in the Project Billing functional area.</p> <p>To access related tasks, both:</p> <ul style="list-style-type: none"> <li>• <i>Process: Customer Contract - View</i> in the Customer</li> </ul>	<p>View a list of all your projects with billable transactions that aren't ready to be billed, and the total number of affected transactions between them. Transactions may be unbillable, have a contract rate change which has not yet been applied to the time transaction,</p>

Financial Reports	Security	Description
	Contracts and Project Billing functional areas. <ul style="list-style-type: none"> <li>Reports: Billing in the Customer Contracts and Project Billing functional areas.</li> </ul>	or have no billable rate. Only includes transactions with one of these: <ul style="list-style-type: none"> <li>A contract line type of Project Time and Expense, or Fixed Fee.</li> <li>A status of Awaiting Review, or Ready to Bill for rate changes and missing rates.</li> <li>A status of On Hold for missing rates only.</li> </ul>
<b>Project Budgetary Balance with Labor Cost</b>	Both: <ul style="list-style-type: none"> <li>Reports: Projects in the Projects functional area.</li> <li>Reports: Time Tracking in the Time Tracking functional area.</li> </ul>	Compare your project budget to your actuals, including labor costs. Doesn't include ad hoc time blocks. View your project actuals and labor costs by the: <ul style="list-style-type: none"> <li>Current fiscal year.</li> <li>Current period.</li> <li>Life to date of your project.</li> </ul> <b>Note:</b> Current Period amounts only populate for period-based budgets. Life to Date amounts populate for both period- or duration-based budgets.  You can run the report by company, or for all companies within a company hierarchy.
<b>Project Profitability</b>	<i>Reports: Projects</i> domain in the Projects functional area.  <i>Reports: Time Tracking</i> domain in the Time Tracking and Time Tracking Hub functional areas.	Analyze how direct and labor costs consume your profitability. Workday calculates: <ul style="list-style-type: none"> <li>Gross profit and labor margins.</li> <li>Project revenue and related direct costs from journal lines and labor costs based on approved worker time.</li> </ul> Includes these subreports that you can view individually: <ul style="list-style-type: none"> <li><b>Project Profitability Direct Costs</b></li> <li><b>Project Profitability Revenue</b></li> <li><b>Project Profitability Time Blocks</b></li> </ul>
<b>Revenue Leakage</b>	<i>Report Execution</i> domain in the Tenant Non-Configurable functional area.	For operational and financial users. View these concessions that have been made in the project:

Financial Reports	Security	Description
		<ul style="list-style-type: none"> <li>• Contractual versus actual rates.</li> <li>• Project hours leaked.</li> <li>• Revenue leakage.</li> </ul>
<b>Trended Revenue by Project</b>	<i>Reports:</i> Projects domain in the Projects functional area.	<p>View revenue by project for the top 10 projects over the selected period. You can analyze revenue trends by:</p> <ul style="list-style-type: none"> <li>• Month-over-month.</li> <li>• Year-over-year.</li> </ul>
<b>View Initial Project Budget Calculation</b>	<i>Manage:</i> Project Budget domain in the Projects functional area.	<p>Examine the details of how Workday calculates project budget lines for draft and approved budgets sourced from:</p> <ul style="list-style-type: none"> <li>• Journal lines (actual revenue).</li> <li>• Resource forecasts (revenue and cost forecast).</li> <li>• Resource plan percentage allocation by project role (estimated cost and revenue).</li> <li>• Revenue recognition installments (revenue).</li> <li>• Resource plan estimated hours by project role (estimated cost and revenue).</li> <li>• Time blocks (actual costs).</li> </ul> <p>Calculated project budget lines don't include manually added project budget line, including lines from:</p> <ul style="list-style-type: none"> <li>• Project Budget Templates.</li> <li>• The Import Budget web service.</li> <li>• The Maintain Budget task.</li> <li>• Worksheets.</li> </ul>

[Reference: Project Reports](#) on page 1160

[2023R1 What's New Post: Project Manager Hub - Billing Exceptions Table](#)

#### Reference: Project Profitability Report

This report helps financial users analyze project profitability over a given time period. The report helps you to understand how direct and labor costs consume the profitability of your project. This report pulls direct costs from journal lines and labor costs from approved worker time blocks. It calculates the gross and labor margins by project and project hierarchy.

After prompting you with required filtering criteria, such as **Ledger** and **Time Period**, Workday displays a grid type report with these calculated results.

Fields	Description
<b>Revenue</b>	The total revenue associated with a project or project hierarchy. This amount is all revenue booked to the accounts prompted for this report.
<b>Direct Costs</b>	Total direct costs related to the project excluding hours. This amount includes project expense reports, supplier invoice billable transactions, and any other costs incurred to the project worktag. Uses all the <b>Direct Cost Accounts</b> you select from the prompt on the report filter page to populate this column.
<b>Labor Costs</b>	Total labor costs based on actual hours logged and the standard cost rate entered on the resource plan line. Uses the <b>All Time Blocks</b> data source and returns the calculated total labor costs for a worker based on their role.
<b>Gross Profit</b>	Total revenue after costs: <b>Revenue - (Direct Costs + Labor Costs)</b> .
<b>Gross Profit Margin %</b>	<b>Gross Profit / Revenue</b> .
<b>Labor Margin</b>	<b>Revenue - Labor Costs</b> .
<b>Labor Margin %</b>	<b>Labor Margin / Revenue</b> .

#### Related Information

##### Concepts

[Concept: Project Dashboard on page 1159](#)

#### Reference: Revenue Leakage Report

The **Revenue Leakage** report helps you identify where concessions are occurring on your projects. The report displays revenue leakage for the overall project, the project hours leaked, and the discrepancies between contractual and actual rates. You can also use the report to determine concession causes associated with the company, customer, project, project role, or worker. You can view:

- Rate adjustments that you made.
- Hours that you haven't billed.

**Note:** The report uses the base currency of the company on the customer contract.

Fields	Description
<b>Company</b>	The company for the customer contract associated with the project.
<b>Customer</b>	The bill-to customer for the billable transaction.
<b>Project Role</b>	The project role associated with the worker for the billable transaction.
<b>Worker</b>	The worker associated with the billable transaction.

Fields	Description
<b>Billable</b>	The total available hours to bill. The billable hours include the worker time booked against the project, project role, and worker combination.
<b>Actual</b>	The current hours to bill that the billing rate rules or manual overrides changed during the review billable project transaction process.
<b>Hours Leaked</b>	The difference between the actual hours and the billable hours.
<b>Average Rate - Standard</b>	The rate by project role before any negotiations or discounts. When you select the <b>Standard Rate Sheet</b> check box on the customer contract, Workday uses the rates that you define in the standard rate sheet. When you clear the check box, Workday uses the rates that you define in the contract rate sheet. The average standard rate takes the total billable transactions and averages the standard rate of those billable transactions.
<b>Average Rate - Contract</b>	The rate by project role. When you select the <b>Standard Rate Sheet</b> check box on the customer contract, Workday uses the rates that you define in the standard rate sheet. When you clear the check box, Workday uses the rates that you define in the contract rate sheet. The average contract rate takes the total billable transactions and averages the contract rates of those billable transactions.
<b>Average Rate - Actual</b>	The rate to bill the customer for a given billable transaction. The average actual rate takes the total of the billable transactions and averages the actual rates of those billable transactions.
<b>Billable Amount</b>	Contract Rate x Billable Hours.
<b>Actual Amount</b>	Actual Rate x Actual Hours.
<b>Revenue Leakage</b>	Actual Amount - Billable Amount.
<b>Revenue Leakage %</b>	Revenue Leakage / Billable Amount.
<b>Variances - Contract Rate vs. Standard Rate</b>	Standard Rate - Contract Rate. Variance % = (Standard Rate - Contract Rate) / Standard Rate.
<b>Variances - Contract Rate vs. Actual Rate</b>	Actual Rate - Contract Rate. Variance % = (Actual Rate - Contract Rate) / Contract Rate.
<b>Variances - Standard Rate vs. Actual Rate</b>	Actual Rate - Standard Rate. Variance % = (Actual Rate - Standard Rate) / Standard Rate.

[Concept: Project Dashboard](#) on page 1159

**Reference**

[Reference: Project Billing Reports](#) on page 1452

## Concept: Project Billing

---

Project Billing uses information from customer contracts and Workday Projects to create a comprehensive billing process for billable projects.

**Project Rate Sheets**

Workday enables you to configure multidimensional project rate sheets to:

- Bill your customers against projects.
- Define the project pricing dimension using rate categories.
- Create project price lists for multiple projects.
- Base project price lists on rate categories such as daily or hourly rates, customer size, or project type.

You can use the project rate sheet to configure the contract rates.

**Billing Rate Rules**

Workday enables you to create standard billing rate rules to give you more control of your billing rates for time and expense billable projects.

**Standard Billing Rate Sheets**

Workday enables you to create rule and worker-based standard billing rate sheets to apply billing rates across multiple contracts for your projects. You can create a rate sheet for each currency you need to bill in using these tasks:

- [Maintain Standard Billing Rates by Rules](#)
- [Maintain Standard Billing Rates by Worker](#)

**Workday Time Tracking and Project Billing**

Workday integrates projects, time tracking, and project billing so you can configure and manage the billing of your projects. These roles are responsible for the process:

- Time Tracking Administrators configure project time entry in Workday Time Tracking as a one-time task.
- Workers enter time blocks in Time Tracking and associate them with a project task.
- Contract Administrators create customer contracts, billing schedules, and contract rate sheets with billing rate rules.
- Project Managers approve or deny time blocks.
- Billing Specialists:
  - Edit and recalculate rates.
  - Generate and print invoices for customers.
  - Review and approve or reject billable transactions.
- Customer Collections Specialists track and manage customer invoices.

## Time Block Adjustments

You can adjust your time blocks until you invoice your customer. To make changes after you invoice your customers or recognize revenue, you must delete and re-enter your time blocks. When a manager approves a timesheet with a deleted time block, Workday reverses the original time block from the billable transaction. Reversal transactions also include any billing rate rule offsets.

## Billable Transaction Worktag Derivation Logic

Workday provides a hierarchy for derivation rules for all of your transaction types. These rules help you reconcile and identify the resulting worktags on billable transaction invoices and revenue accounting.

Transaction Types	Worktag Derivation Logic Rules
Ad hoc Expense Ad hoc Miscellaneous Expense Ad hoc Time Expense Time Block	Workday applies: <ol style="list-style-type: none"> <li>1. Source worktags.</li> <li>2. Derivation rules for worktags not already included. Worker worktags are based on effective date, while Project worktags are based on current moment.</li> <li>3. Contract line worktags for worktags not on source or derivation rules.</li> </ol>
Ad hoc Supplier Invoice Miscellaneous Expenses Supplier Invoice	Workday applies: <ol style="list-style-type: none"> <li>1. Source worktags.</li> <li>2. Derivation rules for worktags not already included.</li> </ol>

Example:

Dimension	Worktags
Worktag derivation rules	Worker: Cost Center Project: Region
Worker worktags	<b>TSerrano 1/1/2019:</b> <ul style="list-style-type: none"> <li>• Cost Center: 50000 Office of CFO</li> <li>• Region: Headquarters Corporate</li> </ul> <b>Change 2/1/2020:</b> <ul style="list-style-type: none"> <li>• Cost Center: 32200 R&amp;D Product Management</li> <li>• Region: USA - Southeast US</li> </ul>
Project	Cost Center: 36100 - Consulting Service - North America Region: USA - Northeast US
Contract line	Cost Center: 71200 Field Sales - North America Region: USA - Central US

Scenario: Time Block on Project for **Worker: TSerrano**

Transaction	Date	Worktags
Time Block	1/3/2020	Cost Center: 35000 Program Management Region: (not entered)
Revenue Accrual	1/3/2020	Cost Center: 35000 Program Management Region: USA - Northeast US
Customer Invoice	2/1/2020	Cost Center: 32200 R&D Product Management Region: USA - Northeast US

## Milestones

You can create milestones to track the completion of tasks and specify when Workday can process billing and revenue recognition schedules and installments. You can assign multiple milestones to schedules and installments. Workday doesn't process schedules or installments with pending milestones.

You can use these tasks to configure standard milestones:

- **Maintain Date Milestone Types**
- **Create Date Milestone**

Standard milestones become customer milestones once you add them to a customer. You can view customer milestone details using the **Find Milestones** report. Customer milestones are unique for each customer and company combination.

Workday supports these milestone types:

- Billing Schedule First Invoice: Use to initiate revenue recognition once billing has occurred.
- Date Milestones: Use standard date milestones as the basis for creating customer date milestones.
- Project Tasks: Mark project tasks as milestones in the project. Use project milestones to control when you bill project transactions and recognize revenue. You can define project milestones for a project phase or for the overall project to determine when transactions are available for billing. You can use project tasks marked as milestones as contract milestones. You can't delete project tasks that are in use on a contract. You can enter estimated and actual completion dates. Once the project task is complete and you enter an end date, billing can occur. Workday uses the end date as the milestone completion date.

## Billing Schedules and Installments

You can:

- Link contract lines that span multiple contracts for the same company and customer to the same billing schedule.
- Define schedule types so you can classify your schedules. This process simplifies searches, approvals, and reporting.
- Create installment or transaction billing schedules to manage certain types of contract lines, or consolidated billing schedules to manage installment, transaction, and prepaid contract lines in 1 schedule.

Workday creates installments based on the scheduled start and end dates, which can differ from the contract line start and end dates. You can also configure the invoice date to assign, which can differ from the installment start date.

Workday supports these billing methods for each billing schedule, and you can change methods throughout the life of the schedule:

- *Defined Installment*: Define the first and last installment amount for each contract line. Workday spreads the remaining amount evenly among the other installments. You can't use this billing method on consolidated billing schedules.
- *Spread Even*: Define a set number of installments with equal amounts.
- *Custom*: You control all aspects of the installments.

A billing schedule includes 1 or more installments. Each billing installment:

- Creates a customer invoice.
- Becomes an invoice line.
- Derives attributes from the associated contract line.

Once you generate installments, you can:

- Manually update individual installments.
- Regenerate billing installments automatically after changes to contract amounts. This function only applies to *Spread Even* billing methods or *Spread Even* and *Number of Days* revenue recognition methods.
- Update your schedules automatically when you make changes to your contract lines.
- Edit all installments at once when you have a custom schedule.

Workday assigns an *Out of Balance* status when:

- You don't schedule your contract line installments exactly.
- A custom schedule overbills.

You can create customer invoices from billing installments after you approve the billing schedule.

### Create Customer Invoices from Billing Installments

With the **Create Customer Invoices from Billing Installments** task, you can run this task as needed or as a scheduled process. This task enables you to:

- Select available billing installments to invoice.
- Mark invoices to submit for automatic approval.

You can:

- Make limited changes to the customer invoice and add more lines.
- Create invoices that reference contract lines when you have invoice adjustments.

Workday reflects any changes to invoice line amounts on the billing installment. The contract line billed amount reflects all approved invoices.

# Business Assets

---

## Asset Tracking

---

### Setup Considerations: Asset Tracking

You can use this topic to help make decisions when planning your configuration and use of asset tracking. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can report on assets that you assign to:

- Locations.
- Workers.
- Worktags, such as cost centers.

Example: Security badges.

### Business Benefits

Tracking business assets helps you retrieve all your assets when workers leave or move to a different role, saving you the cost of lost assets.

### Use Cases

Business assets tracking specialists can:

- Register assets.
- Copy and edit assets.
- Place assets in service without issuing them to workers or locations.
- Issue assets to workers or locations.
- Transfer assets within a company. Example: you transfer an asset from 1 cost center to another.
- Transfer assets to different companies.
- Remove assets that you no longer track, and on which you haven't recorded any depreciation.
- Fully or partially dispose of expired assets.
- Reinstate disposed assets.

### Questions to Consider

Questions	Considerations
To which locations do you assign assets?	You can use existing locations to track business assets.

Questions	Considerations
What types of assets do you track?	<p>You can track tangible and intangible assets by spend categories.</p> <p>For more granular reporting, you can also set up:</p> <ul style="list-style-type: none"> <li>Asset classes.</li> <li>Asset types.</li> </ul>
Which accounting standards or guidelines does your organization follow?	<p>You can set up asset tracking with or without asset accounting:</p> <ul style="list-style-type: none"> <li>Asset tracking enables you to track tangible or intangible assets according to business use.</li> <li>Asset accounting enables you to account for these assets based on your accounting practices.</li> </ul>
How many asset books do you need?	<p>When you enable asset accounting, you can set up multiple asset books. Tax managers can manage the nonprimary asset books for tax purposes without accessing the accounting asset books or affecting accounting activities. See <a href="#">Setup Considerations: Asset Books</a> on page 1483.</p>

## Recommendations

When you uptake asset tracking without accounting, create 1 spend category per fixed asset and accumulated depreciation ledger account. This helps reduce future work when you uptake asset accounting.

## Requirements

No impact.

## Limitations

No impact.

## Tenant Setup

You can access the **Edit Tenant Setup - Financials** task to:

- Configure the ID sequence generator for business assets.
- Automatically populate the **Coordinating Cost Center** field from the cost center worktag when you register assets.

## Security

Domains	Considerations
<i>Process:</i> Business Assets domain in the Business Asset Tracking functional area.	Perform lifecycle events on assets.
<i>Reports:</i> Business Assets domain in the Business Asset Tracking functional area.	Run reports on business assets.
<i>Self-Service:</i> Business Assets domain in the Business Asset Tracking functional area.	Workers can see the assets that you've issued to them.

Domains	Considerations
<i>Set Up:</i> Business Asset Tracking domain in the Business Asset Tracking functional area.	Set up business asset tracking.
<i>Set Up:</i> Spend Categories domain in the Common Financial Management functional area.	Set up spend categories.
<i>Set Up:</i> Tenant Setup - Tenant Analyzer domain in the System functional area.	Run the <b>Tenant Analyzer</b> report.
<i>View:</i> Business Asset domain in the Business Asset Tracking functional area.	View the details of business assets.
<i>Worker Data:</i> Business Assets domain in the Business Asset Tracking functional area.	View the business assets that you've issued to workers.

## Business Processes

The *Asset Registration Event* business process routes transactions for review and approval.

## Reporting

You can:

- Access **Workday Standard Reports** and select the *Business Assets* and *Set Up Business Assets* report categories to view details on standard reports for assets.
- Access the **Tenant Analyzer** report and select the **Validations** tab in the **Financials** profile group to verify your tenant configuration of business assets against Workday recommendations.

## Integrations

When you uptake asset tracking, you can import the assets that you track outside of Workday with the *Register Assets* web service. When you don't use asset accounting, specify an accounting treatment of *Expense* on the assets that you import.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Asset Tracking

### Prerequisites

Review setup considerations for Asset Tracking.

### Context

You can configure how you register and track business assets.

## Steps

1. Configure these business processes and security policies in the Business Asset Tracking functional area.

- *Asset Adjust In Service Date Event*
- *Asset Disposal Event*
- *Asset Intercompany Transfer In Event*
- *Asset Intercompany Transfer Out Event*
- *Asset Issue Event*
- *Asset Registration Event*
- *Asset Reinstatement Event*
- *Asset Removal Event*
- *Asset Transfer Event*

See:

- [Steps: Configure Business Process Definitions](#).
- [Edit Business Process Security Policies](#).

2. (Optional) You can add these steps to these business processes:

Business Process	Steps
<i>Receipt</i>	<ul style="list-style-type: none"> <li>• Action step: <i>Review Trackable Receipt Lines</i>.</li> <li>• Service step: <i>Initiate Asset Registration Events from Receipt for Purchase Order</i>.</li> <li>• Service step: <i>Initiate Asset Registration Events from Receipt for Supplier Contracts</i>.</li> </ul>
<i>Requisition Event</i>	Action step: <i>Source Goods from Storage</i> .
<i>Supplier Invoice Event</i>	<ul style="list-style-type: none"> <li>• Service step: <i>Register Business Assets from Invoice</i>.</li> <li>• Action step: <i>Review Trackable Invoice Lines</i> .</li> </ul>

See [Edit Business Processes](#).

3. [Create Spend Categories](#).

Create spend categories to populate on capital assets or expensed items that you track. Enable **Track Items** and complete the **Asset Tracking** section.

4. [Set Up Asset Disposal Types](#) on page 1466.

5. Enable *Business Asset* as a **Location Usage** on the locations that you populate on assets.

### Related Information

#### Concepts

[Concept: Transaction Revalidation](#) on page 55

[Steps: Set Up Accounting Categories](#) on page 62

[The Next Level: Business Asset Tracking](#)

#### Tasks

[Edit Business Processes](#)

## Set Up Asset Disposal Types

### Prerequisites

Security: *Set Up: Business Asset Tracking* domain in the Business Asset Tracking functional area.

## Context

You can define different ways to dispose of assets. Asset disposal types drive accounting related to the disposal of goods and enable you to report on disposals by type.

## Steps

1. Access the **Maintain Asset Disposal Types** task.

2. As you complete the task, consider:

Option	Description
<b>Asset Disposal Method</b>	<p>These Workday-delivered methods drive accounting for disposals. You can assign the same method to multiple types for flexibility.</p> <p>To dispose of expired assets, associate the <i>Expire</i> method with 1 disposal type.</p>
<b>Fair Market Value as Basis</b>	<p>Select this check box to base the donation amount on the fair market value manually entered at time of disposal. Workday uses the donation amount to calculate the gain or loss for accounting purposes.</p>
<b>Net Book Value as Basis</b>	<p>Select this check box to base the donation amount for an asset on net book value.</p>

## Steps: Track Assets

### Prerequisites

Set up asset tracking. See [Steps: Set Up Asset Tracking](#).

## Context

After registering assets, you can track them through their lifecycles. Tracking an asset doesn't affect accounting activity.

Assets that you register from supplier invoices and purchase order receipt lines can have a negative cost or a cost of zero.

To make changes to business assets, first complete any asset lifecycle events in progress.

## Steps

1. [Register an Asset](#).
2. (Optional) Select **Business Asset > Copy Asset** from the related actions menu of an asset.  
To reduce the manual entry required when registering an asset, copy the details of an existing asset.  
Security: *Process: Business Assets* domain in the Business Asset Tracking functional area.

**3. Select **Business Asset > Edit**** from the related actions menu of an asset.

Edit the asset by:

- Adding attachments.
- Adding or removing components of a discrete composite asset.
- Relating registered assets from the same company together.
- Updating the identification information.

Related assets must be in the same company, and you can't relate disposed assets.

Security: *Process: Business Assets* domain in the Business Asset Tracking functional area.

**4. (Optional) Select **Business Asset > Place in Service**** from the related actions menu of a depreciable capital asset.

Place the asset in service without issuing it to a worker.

Security: *Process: Business Assets* domain in the Business Asset Tracking functional area.

**5. Access the **Issue Assets** task.**

Issue assets to workers to make them the custodian of company property.

When you issue capital assets and change their location or worktags, Workday generates accounting to move their net book value.

Configure the *Asset Issue Event* business process and security policy in the Business Asset Tracking functional area.

**6. (Optional) [Transfer Assets](#) on page 1472.**

Transfer assets within the same company.

**7. (Optional) Select **Business Asset > Transfer to Different Company**** from the related actions menu of a registered asset.

You can transfer assets without suspended depreciation to a different company.

Both companies must have the same:

- Base currency.
- Company asset books.
- Primary asset book.
- Asset book fiscal schedules.

For capital assets, Workday transfers the net book value of the assets and creates operational transactions with accounting for both companies.

Configure these business processes and security policies in the Business Asset Tracking functional area:

- *Asset Intercompany Transfer In Event*
- *Asset Intercompany Transfer Out Event*

**8. Select **Business Asset > Remove Asset**** from the related actions menu of a registered asset.

Remove assets that you register by mistake. You can't remove assets with lifecycle events except for issue or transfer.

When you remove assets, Workday removes any posted depreciation and cost tracking activities on the assets. Workday also removes the workers on assets.

When you remove business assets created from project capitalization, Workday makes the capital project asset unavailable for further adjustments.

Additional conditions apply to remove these assets:

Asset Type	Condition
Registered from Supplier Invoice	You can remove assets that meet either of these conditions:

Asset Type	Condition
	<ul style="list-style-type: none"> <li>• You haven't posted any depreciation on the asset.</li> <li>• You cancel the supplier invoice.</li> </ul>
Registered from Receipt	<p>You can remove assets that meet either of these conditions:</p> <ul style="list-style-type: none"> <li>• You haven't posted any depreciation on the asset.</li> <li>• You cancel the receipt.</li> <li>• For leased assets that you create from a supplier contract, you cancel the contract.</li> </ul>
Discrete Composite	You remove all the components of the discrete composite asset.

Configure the *Asset Removal Event* business process and security policy in the Business Asset Accounting and Business Asset Tracking functional areas.

## Next Steps

For capitalized assets, your accountant performs asset accounting activities.

### Related Information

#### Tasks

[Dispose of Assets](#) on page 1504

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

## Register Assets

### Prerequisites

- Define the *Asset Registration Event* business process and corresponding security policy.
- (Optional) Automatically register assets or assign accounting information by adding these automated steps on the *Asset Registration Event* business process:
  - *Register Business Asset Automatically*
  - *Assign Asset Accounting Automatically*
- Register through a receipt and include the *Initiate Register Business Assets from Receipt* service step in the *Receipt* business process.
- Register through a supplier invoice and include the *Initiate Register Business Assets from Invoice* service step in the *Supplier Invoice Event* business process.
- Initiate registration for supplier contract receipt lines. Add the *Initiate Asset Registration Events from Supplier Contract Receipt* service step in the *Receipt* business process.

Asset registration can be initiated for supplier contract lines you define with *Intangible* as a default on the spend category.

### Context

To track an asset, register it with a company. You can register assets when you:

- Receive goods directly (not through procurement).
- Create a receipt for procured goods or supplier contract receipt lines.
- Create a supplier invoice for procured goods or supplier contract receipt lines.

## Steps

### 1. Registration methods differ:

- For manual registration, access the **Register Assets** task.
- For registration through the *Receipt* business process, click the related My Tasks.
- For registration through the *Supplier Invoice Event* business process, click the related My Tasks.

For registration through receipts and supplier invoices, Workday automatically routes the **Register Asset** task or the **Review Trackable Lines** task to the appropriate My Tasks. When reviewing trackable lines, you can register pooled assets as a single asset when they meet the asset pooling rules requirements. You can also override the asset pooling rules and register each asset individually. Use the **Register Assets** task to register similar assets that meet the asset pooling rules requirement.

### 2. As you complete the task, consider:

Option	Description
<b>Company</b>	A company with an asset book.
<b>Spend Category Item</b>	The acquired expense item or purchase item that you want to track as an asset. You can only select from items that have a tracked spend category. The spend category, when used in an asset accounting rule, identifies when the accounting treatment is other than expense.
<b>Asset Name</b> <b>Asset Description</b>	You can edit or enter information in these fields to reflect how your company tracks this asset.
<b>Asset Identifier</b> <b>Serial Number</b> <b>Manufacturer</b>	You can define these additional attributes to improve searching and tracking.
<b>Asset Class</b> <b>Asset Type</b>	Default values are based on the specified spend category, but you can change them. Workday uses these attributes for bonus depreciation rules and external reporting.
<b>Coordinating Cost Center</b>	Workday populates the cost center from the <b>Worktags</b> prompt when it has a cost center worktag and you enable the functionality in your tenant.  Select the <b>Auto Populate Coordinating Cost Center</b> check box in the <b>Business Assets Options</b> section on the <b>Edit Tenant Setup - Financials</b> task.
<b>Asset Coordinator</b>	Select the worker in possession of this asset.
<b>Acquisition Method</b>	Select the method for acquiring the asset, such as <i>Leased</i> or <i>Purchased</i> .
<b>Acquisition Date</b>	The document date automatically populates when the asset source is a purchase order receipt, supplier contract receipt, or supplier invoice. To initiate the assign accounting step of the appropriate business process, the date must be in the past.

Option	Description
<b>PO Number</b>	<p>The source document of the transaction that initiated the asset registration.</p> <p><b>Note:</b> Workday calculates taxes and freight from the purchase order for assets created from a receipt without a supplier invoice.</p>
<b>External Contract Number</b>	<p>When the business asset originates from a supplier contract line, Workday populates the supplier contract number and contract start date from the contract.</p>
<b>External Contract Start/End Date</b>	<p>The start and end dates of the supplier contract line for this asset. Workday requires contract dates for supplier contract-based assets.</p>
<b>Cost</b> <b>Currency</b> <b>Quantity</b>	<p>The cost of the asset at time of acquisition, in the base currency of the company that the asset belongs to. If the asset source document was in a foreign currency, Workday brings in the base currency amount as the asset cost. For nondiscrete composite assets, the cost is the sum of the component allocation costs. For pooled assets, the cost is the total cost of all items in the asset pool. <b>Quantity</b> displays how many assets are in an asset pool or how many are being used as part of a composite asset.</p>
<b>Location</b>	<p>The physical place where you store an asset or it is in use. If capitalizing a <i>project</i> asset, Workday populates the location from the project when it has a location worktag.</p>
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p> <p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul> <p>Leased assets inherit the worktags you entered on the supplier contract lines.</p>

When you initiate registration from the receipt and supplier invoice events, Workday automatically populates information from the source document.

## Result

The *Asset Registration Event* business process routes the transaction for review and approval. Once the asset registration is approved and completed, Workday changes the status for the asset from *Pending Registration* to *Registered*. Workday assigns a business asset ID, enabling you to track it. If the asset registration is denied or canceled, Workday removes the asset from the asset register, and changes the status of the asset to *Removed*. If the receipt and supplier invoice business processes both include a step that registers an asset, Workday doesn't duplicate registration.

For capital assets, Workday routes the **Assign Assets Accounting Information** task to the appropriate My Tasks. The assign accounting information service step must be in the *Asset Registration Event* or *Supplier Invoice Event* business process definition.

When a manually registered asset doesn't meet custom validation criteria, it generates a critical error. Select **Edit Asset Registration** from the related actions menu of the asset to fix the error so that Workday can complete the asset registration process.

## Next Steps

Issue or manually place in service, transfer, dispose, and reinstate to track the asset.

### Related Information

#### Tasks

[Assign Asset Accounting Information](#) on page 1497

[Create Lease-Type Supplier Contracts](#) on page 1589

[Review Trackable Lines for Assets](#) on page 1535

## Transfer Assets

### Prerequisites

- [Register Assets](#) on page 1469.
- Complete any asset lifecycle events in progress on the assets that you transfer.
- Configure the *Asset Transfer Event* business process and security policy in the Business Asset Tracking functional area.

### Context

You can transfer assets within the same company to different workers, locations, or sets of worktags.

Example: You move an asset from 1 cost center to another.

You can transfer:

- A single asset.
- Assets in bulk.

When transferring assets in bulk, you can also return assets to storage.

You can transfer assets with a status of:

- *In Service*.
- *Issued*.
- *Out of Service* when transferring a single asset.
- *Registered*.

You can't transfer leased assets that you register from lease-type supplier contracts.

## Steps

1. Access 1 of these tasks:

- **Transfer Assets** to transfer assets in bulk.
- Select **Business Asset > Transfer** from the related actions menu of an asset to transfer a single asset.

2. (Optional) When you transfer assets in bulk, enter filter criteria.

When you configure related worktags for the Spend Category worktag type using the **Maintain Related Worktag Usage** task, you must select a value in the **Spend Category** prompt.

3. Enter transfer-to values:

Option	Description
<b>Transaction Effective Date</b>	You can only transfer assets that you acquire before the transfer date.
<b>Return to Storage</b>	Select to remove the workers on assets. For Workday to return assets to storage, you must also transfer the assets to either: <ul style="list-style-type: none"> <li>• A different location.</li> <li>• Different worktags.</li> </ul> To return assets to storage in bulk without changing their location, you can use 1 of these web services: <ul style="list-style-type: none"> <li>• <i>Bulk Import Transfer Asset</i></li> <li>• <i>Transfer Asset</i></li> </ul> The <b>Return to Storage</b> option doesn't display when you transfer a single asset. To remove a worker from a single asset, you can clear the transfer-to worker. You don't have to change the location.
<b>Transfer To Worker</b>	Select to change the worker on assets. When you select a transfer-to worker: <ul style="list-style-type: none"> <li>• You can only transfer assets with a status of <i>Issued</i>.</li> <li>• Workday populates the transfer-to location and worktags from the transfer-to worker. You can change these values.</li> </ul>
<b>Transfer To Location</b>	Leave the prompt empty to: <ul style="list-style-type: none"> <li>• Retain the current location, when you transfer assets in bulk.</li> <li>• Clear the location, when you transfer a single asset.</li> </ul>

4. Click **OK** or **Submit**.

5. (Optional) When transferring assets in bulk, select assets.

6. (Optional) When transferring assets in bulk, click **OK**, **Submit**, and **Done**.

## Result

Workday initiates 1 *Asset Transfer Event* business process for each asset that you transfer.

When you complete the asset transfer, Workday:

- Moves the net book value of the asset and creates operational transactions with accounting for capital assets. See [Concept: Accounting Impact of Asset Lifecycle Events](#) on page 1511.
- Updates the status of the asset to *In Service* when you return assets to storage. Workday doesn't automatically suspend depreciation on the asset.

When you transfer assets to different workers or locations, Workday also adds a row to the **Custodian** tab on the **View Business Asset** report.

#### Related Information

##### Reference

[Workday Community: Business Asset - Lifecycle Event Availability](#)

## Register Composite Assets

### Prerequisites

Configure the *Asset Registration Event* business process and security policy in the Business Asset Accounting functional area.

### Context

Use the **Register Composite Asset** task to compose discrete and nondiscrete composite assets. Composite assets consist of different types of assets that you can use together before you place the assets in service. You can easily track and account for multiple registered assets with a single depreciable lifespan.

### Steps

1. Access the **Register Composite Asset** task.
2. As you complete the task, consider:

Option	Description
<b>Company</b>	A company with an asset book.
<b>Spend Category</b>	The acquired expense item or purchase item that you want applied to the composite asset for tracking. The spend category, when used in an asset accounting rule, identifies when the accounting treatment is other than expense.
<b>Item</b>	You can only select from tangible items that have a tracked spend category.
<b>Asset Name</b> <b>Asset Description</b>	You can change the default name and description to reflect how your company tracks this asset.
<b>Asset identifier</b> <b>Serial Number</b> <b>Manufacturer</b>	You can define these additional attributes to improve searching and tracking.
<b>Asset Class</b> <b>Asset Type</b>	Defaults to the available values from the selected spend category, but you can change them. Workday uses these attributes for bonus depreciation rules and external reporting.

Option	Description
<b>Coordinating Cost Center</b>	<p>Workday populates the cost center from the <b>Worktags</b> prompt when it has a cost center worktag and you enable the functionality in your tenant.</p> <p>Select the <b>Auto Populate Coordinating Cost Center</b> check box in the <b>Business Assets Options</b> section on the <b>Edit Tenant Setup - Financials</b> task.</p>
<b>Asset Coordinator</b>	Select the worker in possession of this asset.
<b>Discrete Component Lifecycles</b>	<p>Select to have Workday search for pooled or single assets that you add as part of the discrete composite asset. Clear to display search results listing registered pooled or single assets that you can add to the nondiscrete composite asset.</p>
<b>Acquisition Date</b>	<p>Workday uses the purchase order, receipt, supplier contract, or supplier invoice date to initiate the assign accounting step of the <i>Receipt</i> or <i>Supplier Invoice</i> business processes. If you change the date, enter an <b>Acquisition Date</b> that is in the past.</p>
<b>Location</b>	<p>Identify the custodial information of where the asset belongs. Workday populates the <b>Location</b> from the value you specify during asset registration.</p>
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p> <p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul>

3. After you submit, specify the search criteria to find and select the assets you want to use for building the composite asset.

Workday displays the updated quantity and total value of the composite asset based on the assets you selected.

4. When you're finished adding assets to the composite asset, preview and make edits to the composite asset details.

## Result

The *Asset Registration Event* business process routes the transaction for review and approval. Once the asset registration is approved and completed, Workday changes the asset status from *Pending Registration* to *Registered*. Workday creates the composite asset with a new asset ID and begins tracking it as a single asset. If the asset is a discrete composite asset, then each asset has separate lifecycle events. If the asset is a nondiscrete composite, then each asset shares lifecycle events.

When you include business assets created from project capitalization in composite assets, Workday makes the capital project asset unavailable for further adjustments.

## Next Steps

Issue or manually place in service, transfer, dispose, and reinstate to track the asset.

### Related Information

#### Concepts

[Concept: Composite Assets](#) on page 1510

[Concept: Pooled Assets](#) on page 1479

#### Tasks

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

## View Assets

### Prerequisites

- Register an asset.
- Configure these security domains in the Business Asset Tracking functional area:
  - *Process: Business Assets*
  - *View: Business Asset*

### Context

You can view assets to gain insight into:

- Accounting.
- Custodian activities.
- Depreciation details.
- Lifecycle events.
- Process history.

### Steps

1. Access the **Find Assets** standard report.

When you click the **Asset ID**, Workday displays the **View Business Asset** report for the selected asset.

2. As you review the header information and tabs, consider:

Option	Description
<b>General</b>	You see the preceding asset ID when you transfer assets: <ul style="list-style-type: none"> <li>• From another company.</li> <li>• Multiple times.</li> </ul>
<b>Custodian</b>	You establish custodianship when you register, issue, transfer, or dispose of the asset.

Option	Description
<b>Cost Detail</b>	View cost activity for the original asset acquisition cost and all asset lifecycle events that impact asset cost. Also displays net zero cost activity for issues and transfers when you change location or worktags.
<b>Lifecycle</b>	Click the <b>Event</b> link to drill down to details for corresponding transactions, including both historic and in-progress business process events.
<b>Process History</b>	<p>Lists events for every action taken on the asset since its creation.</p> <p><b>Note:</b> You can't make changes to assets when other events are in progress.</p>

3. Workday displays these additional tabs when you enter the related information. As you review these additional tabs for capital assets, consider:

Option	Description
<b>Historical Information</b>	<p>Includes information for depreciable capital assets that you transferred from another platform.</p> <p>Depreciation later recorded in Workday is based on the cost less historical accumulated depreciation and depreciates over the remaining useful life of the asset. The <b>Depreciation Start Date</b> on this tab is the date that the depreciation in Workday starts.</p> <p>When you view an asset in a nonaccounting asset book, historical accumulated depreciation includes historical bonus depreciation from a previous platform.</p>
<b>Books</b>	<p>After you assign asset accounting, Workday displays the <b>Books</b> tab. View a summary of the depreciation attributes and depreciation schedules for each book that contains a capital asset.</p> <p>To view assets by book, click the asset book name in the <b>Book View</b> column to display the <b>View Asset by Book</b> report.</p>
<b>Depreciation Summary</b>	<p>View a list of depreciation lines by period. Workday bases the depreciation or amortization schedule on the depreciation profile for the depreciable capital asset.</p> <p><b>Note:</b> If the <i>spend category</i> for the trackable asset is intangible, this tab displays the amortization schedule.</p> <p>Workday generates depreciation and amortization based on the depreciation profile associated with a depreciable capital asset.</p>

Option	Description
	Period zero displays the historical depreciation on the asset before you register it in Workday. Example: You register an asset with accumulated depreciation using the <i>Register Asset EIB</i> .
<b>Depreciation Detail</b>	Displays transaction details for each depreciation line in the <b>Depreciation Summary</b> tab, including depreciation adjustments by period. Workday generates depreciation adjustments for lifecycle events when the date falls within a period where Workday has already processed depreciation. Click the <b>Recorded On</b> link to see details about the transaction that created the depreciation expense line.

### Tasks

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

### Reference

[2022R1 What's New Post: Asset Depreciation Reporting and Usability](#)

## Adjust an Asset In Service Date

### Prerequisites

Configure the *Asset Adjust In Service Date Event* business process and security policy in the Business Asset Tracking functional area.

### Context

Workday populates the **Date Placed in Service** field on assets when you first perform 1 of these actions:

- Register them with the *Register Assets EIB*, specifying a value in the **Date Placed in Service** column.
- Place them in service.
- Issue them to workers.

You can adjust the in-service date for a depreciable asset that's in service or issued, provided that you haven't:

- Transferred the asset from another company or worktags.
- Partially disposed of the asset.
- Fully disposed of and then reinstated the asset.

For assets with historical depreciation that you've migrated from another system, you can adjust the in-service date in nonaccounting books only.

To report on assets that are in service and depreciate, we recommend that you filter by accounting treatment, as expensed assets can have an in-service date.

### Steps

1. From the related actions menu of the asset, select **Business Asset > Adjust Asset In Service Date**.

**2.** Complete the task:

Option	Description
<b>Date Placed in Service</b>	Enter the new in-service date in the <b>Proposed</b> field. You can't enter a future in-service date. The <b>Current Books</b> field lists asset books where you can adjust the in-service date.
<b>Restricted to Books</b>	Leave the field empty to adjust the in-service date in all eligible asset books.

**3.** Click **Submit**.

### Result

Workday:

- Reverses depreciation recorded before the new in-service date.
- Updates the depreciation schedule on the asset based on the new in-service date.

### Next Steps

Review the asset depreciation schedule and adjustments on the **Depreciation Summary** and **Depreciation Detail** tabs of the **View Business Asset** report.

#### Related Information

##### Reference

[Workday Community: Business Asset - Lifecycle Event Availability](#)

## Concept: Pooled Assets

Pooled assets are groups of similar tangible items that you register and track as a single asset in Workday. Example: 100 flash drives. Pooling assets is useful for tracking multiple low-value assets and enables you to keep your asset register clean and maintainable. You can pool assets that you register manually or assets that Workday registers from lines on receipts or supplier invoices. You can't pool assets that you create by capitalizing project transactions.

Pooled assets follow the asset book rules, and are subject to the *Spend* account posting rule. You can place pooled assets in service, and depreciate a capitalized pooled asset as a single asset. Asset lifecycle events equally apply to each asset included in the pool.

### Automatic and Manual Asset Pooling

You can set up asset pooling rules for Workday to automatically pool assets that meet your criteria.

You can manually pool assets:

- When you review trackable lines on a receipt or supplier invoice.
- When you register assets with the **Register Assets** task.

### Pooled and Composite Assets

You can register:

- Discrete composite assets that consume an entire asset pool.
- Nondiscrete composite assets that consume an asset pool fully or partially.

The pooled assets must meet the criteria for inclusion in a composite asset.

#### Related Information

##### Concepts

[Concept: Composite Assets](#) on page 1510

[Set Up Asset Pooling Rules](#) on page 1505

[Review Trackable Lines for Assets](#) on page 1535

[Steps: Track Assets](#) on page 1467

## Reference: Asset Statuses

Workday updates the status of assets as you perform lifecycle events on them.

The same asset can have different statuses in different asset books.

Status	Description	Examples
<i>Pending Registration</i>	Workday creates an asset through a business process workflow, and you haven't completed the asset registration.	Workday creates an asset from a supplier invoice, and: <ul style="list-style-type: none"> <li>Sets its status to <i>Pending Registration</i>.</li> <li>Creates a task in My Tasks for the business assets tracking specialist to complete the asset registration.</li> </ul>
<i>Registered</i>	You've configured the depreciation profile on the asset to place assets in service <i>Manually or When Issued</i> and you either: <ul style="list-style-type: none"> <li>Register the asset manually.</li> <li>Complete the asset registration.</li> </ul>	Your company purchases a new building. You register the building at the time of purchase, and place it in service when you obtain a certificate of occupancy.
<i>In Service</i>	The asset is in service. You can record depreciation on the asset. Workday assigns this status to an asset when you either: <ul style="list-style-type: none"> <li>Place the asset in service manually.</li> <li>Complete the asset registration or register the asset manually, when you've configured its depreciation profile to place assets in service <i>Upon Acquisition</i>.</li> <li>Resume depreciation, when the asset had a status of <i>In Service</i> before its suspension.</li> <li>Remove the worker on the asset.</li> <li>Register the asset with the <i>Register Assets EIB</i> and specify an in-service date.</li> </ul> <p>You can only record depreciation on assets that have a depreciation profile. You can't place expensed or</p>	You place heavy machinery in service without issuing it to a worker.

Status	Description	Examples
	nondepreciable assets in service manually, but they can have a status of <i>In Service</i> when you issue them and then remove the worker.	
<i>Issued</i>	<p>Workday assigns this status to an asset when you either:</p> <ul style="list-style-type: none"> <li>Issue it to a worker manually.</li> <li>Resume depreciation, when the asset had a status of <i>Issued</i> before its suspension.</li> </ul> <p>You can issue all types of assets to a worker. They don't have to be depreciable. When the asset is depreciable, you can record depreciation on the asset.</p>	You issue a laptop to a worker.
<i>Disposed</i>	You fully dispose of the asset.	You fully dispose the remaining amount on a partially disposed asset with a status of <i>In Service</i> . Workday changes the status of the asset to <i>Disposed</i> .
<i>Removed</i>	<p>You remove the asset.</p> <p>Restrictions apply to remove an asset. See <a href="#">Steps: Track Assets</a> on page 1467.</p>	You cancel an invoice and remove the assets that Workday registered from the invoice.
<i>Out of Service</i>	You suspend the asset depreciation.	You suspend the depreciation on a piece of heavy machinery while you repair it.
<i>Used by Composite</i>	The asset is a component of a nondiscrete composite asset.	You register a nondiscrete composite asset comprising 2 component assets. Workday changes the status of the 2 component assets to <i>Used by Composite</i> .

## Reference: Asset Tracking Event Availability

This table lists asset statuses and their available tracking events.

Status	Manually Place in Service	Issue	Transfer	Reinstate	Adjust In Service Date
<i>Pending Registration</i>	No	No	No	No	No
<i>Registered</i>	Yes	Yes	Yes	No	No
<i>In Service</i>	No	Yes	Yes	No	Yes
<i>Issued</i>	No	No	Yes	No	Yes

Status	Manually Place in Service	Issue	Transfer	Reinstate	Adjust In Service Date
Disposed	No	No	No	Yes	No
Removed	No	No	No	No	No
Out of Service	No	No	Yes	No	No

[Workday Community: Business Asset - Lifecycle Event Availability](#)

**FAQ: How do I stop tracking assets registered from supplier invoices?**

Depending on your tenant configuration and which lifecycle events you've already performed on the assets, you might be able to:

Action	Considerations
Remove the assets.	You can remove assets when you: <ul style="list-style-type: none"> <li>Cancel the supplier invoice.</li> <li>Haven't recorded any depreciation on the assets.</li> </ul>
Expense the assets.	You might be able to change the accounting treatment of depreciable capital assets to <i>Expense</i> .
Dispose of the assets.	You can dispose of assets and create manual journal entries to correct accounting.

When you enable the review of trackable lines, you can also prevent Workday from registering assets during the review of supplier invoice lines.

**Related Information****Tasks**

[Review Trackable Lines for Assets](#) on page 1535

[Assign Asset Accounting Information](#) on page 1497

[Steps: Track Assets](#) on page 1467

**Reference**

[Reference: Dispose of, Remove, or Delete Assets](#) on page 1516

**Troubleshooting: Asset Registration Errors**

**Can't change acquisition or in-service dates on assets.**

**Cause:** Some lifecycle events cause Workday to lock the dates on assets. Example: Workday locks the acquisition date of assets when you register them.

### Solution:

#### Steps

1. Take 1 of these actions:

- To reverse journal entries on assets eligible for removal, remove the assets.  
See [Steps: Track Assets](#) on page 1467.
- [Dispose of Assets](#) on page 1504.

When you can't remove the assets, or to keep accounting records of the assets, dispose of the assets.

After disposing of assets, you might need to create manual journal entries to correct your accounting.

2. [Register Assets](#) on page 1469

Manually reregister the assets with the correct acquisition date.

3. (Optional) To populate the in-service date on assets that you place in service manually or when issued, take 1 of these actions:

- Select **Business Asset > Place in Service** from the related actions menu of the assets.  
Security: *Process: Business Assets* domain in the Business Asset Tracking functional area.
- Access the **Issue Assets** task.

Configure the *Asset Issue Event* business process and security policy in the Business Asset Tracking functional area.

Enter the transaction effective date as the correct in-service date.

---

## Asset Accounting

### Setup Considerations: Asset Books

You can use this topic to help make decisions when planning your configuration and use of asset books. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What They Are

Asset books enable you to track and account for business assets.

## Business Benefits

- You can set up asset books to populate accounting treatments and depreciation profiles on business assets automatically, reducing manual data entry.
- You can account and report on the same asset in multiple books, enabling you to meet multiple accounting standards.

## Use Cases

Your organization needs to meet an accounting guideline or standard. You can set up:

- An accounting asset book to track and generate accounting for your business assets.
- Multiple nonaccounting books to track your assets for tax purposes.

## Questions to Consider

Questions	Considerations
How many asset books do you need to generate accounting for?	<p>To use multiple accounting books, you must first enable multibook asset accounting.</p> <p><b>Note:</b> You can't disable multibook asset accounting after you enable it.</p> <p>Workday populates the accounting treatment and depreciation profiles on assets from asset book rules. Assets can have different depreciation treatments and profiles by book. You can change the accounting treatment and depreciation profile on assets in the primary asset book when you assign asset accounting information. To change the cost and depreciation information on assets in nonprimary asset books, you can use the <i>Update Asset Book Configuration</i> web service after you register assets.</p> <p>When migrating from a single asset book to multiple books, create manual journals to move opening ledger account balances from the common book code to adjustment book codes.</p>
When do you want to place your assets in service?	<p>You can set up your depreciation profiles to place assets in service:</p> <ul style="list-style-type: none"> <li>• Manually or when issued.</li> <li>• Upon acquisition.</li> </ul> <p>The depreciation schedule is based on the date when you place an asset in service.</p> <p>Assets can be in service in some asset books and not others. Example: An asset is expensed in an asset book and depreciable in another book.</p>
What roles in your company need access to asset books?	You can assign security roles to domains that provide access to accounting or nonaccounting

Questions	Considerations
	books, or both. You can also provide roles such as tax managers with access to your tax books.
Can you use an existing asset book to create new asset books?	When you add an asset book to a company with assets, you can copy asset information from the existing book to the new one. The fiscal schedule of the new asset book should have fiscal periods from the earliest to the latest effective date for all cost activities that you copy. The depreciation start date for an asset is the earliest transaction effective date for the asset.
Does your company use different local and functional currencies?	To register, track, and depreciate assets independently in your local and functional currencies, you can enable multibook asset accounting and configure an alternate ledger currency. See <a href="#">Concept: Alternate Ledger Currency in Assets</a> .

## Recommendations

- Consolidate asset books across your organization. When you transfer assets between 2 companies, we recommend that both companies have the same asset books.
- When you account for assets in multiple books, place them in service upon acquisition to maintain the same date across your depreciation profiles.

## Requirements

- Set up spend categories to classify your business assets. Spend categories drive the accounting that posts the asset to the appropriate ledger account.
- Set up asset book rules to determine which accounting treatment and depreciation profile Workday applies to a business asset.

## Limitations

Workday doesn't enable you to:

- Pool project assets or business assets you create when you capitalize project transactions.
- Track assets with different quantities by book.
- Register assets in secondary books but not in the primary book.
- Transfer assets between companies with different base currencies. You can dispose of assets in the source company and register them in the destination company.

## Tenant Setup

Enable asset accounting for multiple books on the **Edit Tenant Setup - Financials** task and assign book codes to your asset accounting books.

## Security

Domains	Considerations
<a href="#">Set Up: Business Asset Accounting</a> in the Business Asset Accounting functional area	Enables you to maintain asset book rules and depreciation profiles.

Domains	Considerations
<i>Set Up: Company Asset Books</i> in the Business Asset Accounting functional area	Enables you to map asset books to companies.
<i>Set Up: Accounting Rules</i> in the Common Financial Management functional area	Enables you to set up account posting rules.
<i>Set Up: Ledger and Book</i> in the Common Financial Management functional area	Enables you to set up book codes and books for asset accounting.
<i>Set Up: Spend Categories</i> in the Common Financial Management functional area	Enables you to maintain spend categories.
<i>Set Up: Tenant Setup - Tenant Analyzer</i> in the System functional area	Enables you to run the <b>Tenant Analyzer</b> report.

## Business Processes

No impact.

## Reporting

Reports	Considerations
<b>Capital Assets without Accounting Information Assigned</b>	Identify depreciable and nondepreciable capital assets without asset accounting assigned. You have to assign accounting information for Workday to add assets to a company asset book.
<b>Tenant Analyzer</b>	Select the <b>Validations</b> tab in the <b>Financials</b> profile group to verify your tenant configuration of assets books against Workday recommendations.
<b>View Asset Books</b>	Use to: <ul style="list-style-type: none"> <li>Access asset book rules.</li> <li>View all asset books.</li> <li>View the companies that use each asset book.</li> </ul>
<b>View Company Asset Books</b>	Use to: <ul style="list-style-type: none"> <li>Add asset books to a company.</li> <li>Update asset books.</li> <li>Set up asset book restrictions.</li> </ul>

You can also access the **Workday Standard Reports** report and select the *Business Assets* and *Set Up Business Assets* report categories to view details on standard reports for assets.

## Integrations

Web Services	Considerations
<i>Get Asset Book Rules</i>	You can use this web service to retrieve asset book rules through the Enterprise Interface Builder (EIB).
<i>Get Asset Depreciation Schedules</i>	You can use this web service to retrieve depreciation schedules through the EIB.

Web Services	Considerations
<i>Get Asset Pooling Rules</i>	You can use this web service to retrieve asset pooling rules through the EIB.
<i>Put Asset Book Rules</i>	You can use this web service to update asset book rules through the EIB.
<i>Put Asset Pooling Rule</i>	You can use this web service to update asset pooling rules through the EIB.
<i>Register Asset</i>	<p>When you register assets with this web service, Workday registers assets in the primary asset book with the details you specify. Then, Workday registers assets in nonprimary asset books with:</p> <ul style="list-style-type: none"> <li>Cost and quantity details from the primary asset book, converted to the alternate ledger currency for asset books in an alternate ledger currency.</li> <li>The accounting treatment and depreciation profile from your asset book rules.</li> </ul> <p>Workday doesn't generate accounting.</p>
<i>Update Asset Book Configuration</i>	<p>You can use this web service to add secondary asset books or update asset book configuration details for assets. Examples:</p> <ul style="list-style-type: none"> <li>Depreciation details by book.</li> <li>Cost information by book.</li> </ul>
<i>Bulk Import Asset Book Configuration</i>	You can use this web service to add secondary asset books or update asset book configuration details for assets in bulk.

## Connections and Touchpoints

Features	Considerations
Account posting rules	You can set up account posting rules to direct where transaction journals post in your company ledger accounts.
Asset pooling rules	You can create rules for assets that you pool into 1.
Bonus depreciation rules	You can set up rules to apply bonus depreciation to assets in your nonaccounting asset books.
Company asset book restrictions	<p>You can assign or restrict assets to specific asset books based on:</p> <ul style="list-style-type: none"> <li>Spend category.</li> <li>Supplier contract type.</li> <li>Lease accounting method.</li> </ul>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Tasks

[Steps: Set Up Asset Accounting for Multiple Books](#) on page 1494

[Steps: Set Up Asset Books for a Company](#) on page 1491

### Examples

[Workday Community: Education, Government, and Nonprofit Multibook Asset Accounting Book Code Assets](#)

[2024R1 What's New Post: Alternate Ledger Currency in Assets](#)

## Steps: Set Up Asset Accounting

### Prerequisites

Set up asset tracking. See [Steps: Set Up Asset Tracking](#).

### Context

You can set up asset accounting to track the financial value of assets and record accounting for lifecycle events that you perform on assets. Example: You record depreciation on assets at the end of a fiscal period.

You can configure:

- Multiple accounting and nonaccounting asset books to register and track your assets differently based on the accounting standards and tax reporting requirements that you comply with.
- Asset book rules for Workday to populate accounting treatments and depreciation profiles on assets based on their information and asset book. Example: Workday registers an asset as a depreciable asset in 1 book and as an expense in another book.
- Business asset account posting rules to route the accounting for lifecycle events that you perform on assets.
- Business processes to customize your amount of manual oversight. Example: You review trackable lines on supplier invoices before Workday registers assets. See [Concept: Trackable Line Reviews](#) on page 1535.

## Steps

**1. Edit Business Process Security Policies.**

a) Configure these business processes and security policies:

- In the Business Asset Accounting functional area:
  - *Asset Adjustment Event*
  - *Asset Assign Accounting Event*
  - *Asset Cost Adjustment Event*
  - *Asset Impairment Event*
  - *Asset Reclassification Event*
  - *Asset Registration Event*
  - *Asset Useful Life Update Event*
- In the Business Asset Tracking functional area:
  - *Asset Disposal Event*
  - *Asset Reinstatement Event*

- b) To review trackable lines on receipts created from purchase order lines, add *Review Trackable Receipt Lines* as an *Action* step on the *Receipt* business process in the Procurement functional area.
- c) To review trackable lines on supplier invoices created from purchase order lines, add *Review Trackable Invoice Lines* as an *Action* step on the *Supplier Invoice Event* business process in the Supplier Accounts functional area.

**2. Set Up Account Posting Rules** on page 84.

Configure these account posting rules:

- *Accumulated Depreciation*
- *Business Asset Disposal Donation*
- *Business Asset Disposal Gain*
- *Business Asset Disposal Loss*
- *Business Asset Disposal Sale*
- *Depreciation Expense*
- *Impairment*
- *Spend*

**3. (Optional) Configure asset adjustment reasons.**

See [Steps: Set Up Asset Adjustment Reasons](#) on page 1490.

**4. Configure a primary accounting asset book for the main accounting standard that you report under. You can add additional nonaccounting asset books for reporting purposes.**

See [Steps: Set Up Asset Books for a Company](#) on page 1491.

**5. (Optional) When you report under multiple accounting standards, configure multibook asset accounting. Add accounting asset books for each of the accounting standards that you report under.**

See [Steps: Set Up Asset Accounting for Multiple Books](#) on page 1494.

**6. (Optional) Set Up Bonus Depreciation Rules** on page 1546.

Create bonus depreciation rules for capital assets in nonaccounting asset books. Workday applies the bonus depreciation when you place assets in service.

**7. (Optional) Set Up Asset Pooling Rules** on page 1505.

Configure asset pooling rules for Workday to combine identical assets on a receipt or supplier invoice line into a single asset.

**8. (Optional) Access the **Edit Tenant Setup - Financials** task.**

Select the **Always Go to Review Trackable Lines for Trackable Spend Category** check box in the **Business Assets Options** section when you:

- Enable the review of trackable lines.
- Don't want to bypass the review of trackable lines for a purchase order line that you've partially received and determined nontrackable in a previous review.

Security: *Set Up: Tenant Setup - Financials* in the System functional area.

See [Reference: Edit Tenant Setup - Financials](#).

**9. (Optional) Load assets that you track in other systems into Workday.**

See [Steps: Load Assets to New Workday Implementations](#) on page 1525.

## Next Steps

Perform lifecycle events for capital assets. See [Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501.

### Related Information

#### Concepts

[Concept: Accounting Impact of Asset Lifecycle Events](#) on page 1511

#### Reference

[2023R2 What's New Post: Custom Depreciation Rate Schedules](#)

## Steps: Set Up Asset Adjustment Reasons

### Prerequisites

Security: *Set Up: Business Asset Accounting* domain in the Business Asset Accounting functional area.

### Context

You can configure asset adjustment reasons for users to select when they access the **Adjust Asset** task from the related actions menu on assets. The **Adjust Asset** task enables users to change rate schedules on assets that:

- Use custom depreciation rate schedules. See [Create Custom Depreciation Rate Schedules](#) on page 1545.
- Are in service.

Example: To reflect the sales history of intangible assets, you change their 5-year rate schedule to a 3-year rate schedule.

Selecting an asset adjustment reason provides visibility and a better understanding of why rate schedules change. Example: *Updated sales curve based on sales history*.

### Steps

**1. Access the **Maintain Asset Adjustment Reasons** task.**

Add rows for the asset adjustment reasons that you want to enable users to select.

**2. Access the **Maintain Asset Adjustment Types** task.**

Add rows in the **Adjustment Reasons** grid for the **Update Rate Schedule** asset adjustment type, selecting the new asset adjustment reasons.

### Related Information

#### Reference

[2023R2 What's New Post: Custom Depreciation Rate Schedules](#)

## Steps: Set Up Asset Books for a Company

### Context

You can set up asset books to populate accounting treatments and depreciation profiles when you register capital assets. You can set up:

- Accounting books for journals and reporting, such as the International Financial Reporting Standards (IFRS) or U.S. Governmental Accounting Standards Board (GASB).
- Nonaccounting books for reporting purposes, such as federal tax, state tax, alternative minimum tax (AMT), or adjusted current earnings (ACE).

### Steps

1. (Optional) [Create Custom Depreciation Rate Schedules](#) on page 1545.

2. [Set Up Depreciation Profiles](#) on page 1542.

3. [Create Spend Categories](#).

4. Access the **Maintain Asset Books** task.

Create asset books with descriptions for your organization. The first time you set up asset books for a company, create an accounting book to use as the primary book.

Security: *Set Up: Business Asset Accounting* domain in the Business Asset Accounting functional area.

5. [Define Asset Book Rules](#) on page 1492.

6. [Add Asset Books to Companies](#) on page 1493.

7. (Optional) [Restrict Assets to Company Asset Books](#) on page 1491.

8. (Optional) Access the **View Company Asset Books** task.

To edit your asset books, click **Update Asset Books**.

Security: *Process: Business Asset Accounting* domain in the Business Asset Accounting functional area.

### Result

After you register capital assets and assign accounting information, Workday adds them to each asset book. Workday populates the accounting treatment and depreciation profile from the asset book rules that you set up.

When you apply an accounting treatment of *Depreciable Capital Asset*, Workday generates the depreciation schedule when you place assets in service.

## Restrict Assets to Company Asset Books

### Prerequisites

Security: *Setup: Company Asset Books* domain in Business Asset Accounting functional area.

### Context

You can assign or restrict assets to specific asset books for a company based on spend category, supplier contract type, or lease accounting method. Configuring asset restrictions enables you to restrict the cost of an asset to a specific company asset book.

### Steps

1. Access the **Maintain Company Asset Book Restrictions** task.

2. As you complete the task, consider:

Option	Description
<b>Spend Category</b>	Select from the categories set up to track items or the hierarchies that contain at least one trackable spend category. If you don't see the value that you want, use the <b>Maintain Spend Categories</b> task and select <b>Track Items</b> .
<b>Supplier Contract Type</b>	Specify a supplier contract type.
<b>Lease Accounting Method</b>	Workday generates lease accounting transactions using this value.
<b>Restrict to Company Asset Books</b>	Workday restricts assets to this company asset book.
<b>Primary Company Asset Book Override</b>	Workday populates the company primary book if the primary book of the company is listed in the <b>Restrict to Company Asset Books</b> prompt.

3. To evaluate whether the in-use restrictions are correct for a company, test them.

- Click the **Test Asset Book Restrictions** button.
- Enter the company, spend category, and lease and contract information as input criteria.
- Click **OK** to see the asset book restrictions for the specified company.

### Result

You can:

- Specify the company books an asset should include when you initially register the asset.
- Override the primary book of an asset if the company primary book doesn't exist on the asset.
- Complete all lifecycle events on an asset.

## Define Asset Book Rules

### Prerequisites

- [Create Spend Categories](#).
- [Set Up Depreciation Profiles](#).
- Set up asset books. See [Steps: Set Up Asset Books for a Company](#) on page 1491.
- Security: *Set Up: Business Asset Accounting* domain in the Business Asset Accounting functional area.

### Context

You can set up asset book rules that determine how Workday populates the accounting treatment and, where applicable, depreciation profile on assets.

Each asset book has its own set of rules, so an asset can have different accounting treatments and depreciation profiles in each book.

**Note:** You can configure asset book rules only in the primary currency of the company. For companies with an alternate ledger currency configured, see [Concept: Alternate Ledger Currency in Assets](#).

### Steps

- Access the **Maintain Asset Book Rules** task.

**2. Specify the conditions for a rule.**

As you complete the task, consider:

Option	Description
<b>Spend Category</b>	Select categories or hierarchies with at least 1 trackable spend category. When you don't see the category that you want, use the <b>Maintain Spend Categories</b> task and select the <b>Track Items</b> check box.
<b>Company</b>	Leave this field blank to apply the rule to all companies. When you specify a hierarchy and an <b>Amount Threshold</b> , all companies in the hierarchy must use the same base currency.
<b>Company Currency</b>	The currency for the <b>Amount Threshold</b> .
<b>Amount Threshold</b>	Workday compares the amount threshold against the absolute value of an asset cost. When the cost is greater than the threshold, Workday triggers the rule.
<b>Invoice Line Amount Basis</b>	When you specify an <b>Amount Threshold</b> , Workday evaluates assets based on their <i>Unit Cost</i> or <i>Extended Amount</i> .

**3. Specify the accounting treatment and depreciation profile that Workday populates on assets that satisfy the rule conditions.**

When asset book rules might change in the future, Workday recommends that you select a depreciation profile with a depreciation method of *Rate Schedule*. Rate schedules enable you to update the depreciation schedule on assets with posted depreciation, without the need to dispose of and register these assets again.

**4. Place the rules in the **Order** you want Workday to evaluate them.**

**5. (Optional) Click **Test Asset Book Rules** to verify the configuration of your asset book rules.**

### Result

When you register an asset, Workday automatically checks it against the asset book rules and assigns an accounting treatment and depreciation profile.

When no rules exist for a nonprimary asset book, Workday uses the rules of the primary company asset book.

When Workday doesn't find any matching rule, Workday applies the *Expense* accounting treatment.

## Add Asset Books to Companies

### Prerequisites

- Access the **Maintain Asset Books** task to create asset books.
- [Define Asset Book Rules](#) on page 1492.
- Security: *Set Up: Company Asset Books* domain in the Business Asset Accounting functional area.

### Context

You can track assets in multiple asset books for each company:

Nonmultibook Asset Accounting	Multibook Asset Accounting
<ul style="list-style-type: none"> <li>• 1 accounting book.</li> <li>• Multiple nonaccounting books.</li> </ul>	<ul style="list-style-type: none"> <li>• 1 primary accounting book.</li> <li>• Multiple nonprimary accounting books.</li> <li>• Multiple nonaccounting books.</li> </ul>

## Steps

1. Access the **Add Company Asset Book** task.
2. As you complete the task, consider:

Option	Description
<b>Ledger</b>	You can assign the same ledger to only 1 combination of accounting asset book and book code.  To track assets in an alternate ledger currency, select an alternate ledger. See <a href="#">Setup Considerations: Alternate Ledger Currencies</a> .
<b>Currency</b>	Workday populates the asset book currency from the ledger currency.
<b>Book Code</b>	Displays for accounting books when you enable multibook asset accounting.  Workday uses book codes to track financial transactions posted for lifecycle events on assets.  When you don't enable multibook asset accounting, Workday posts to the blank book code.  When you enable multibook asset accounting, assign a unique book code to each combination of accounting asset book and ledger.
<b>Fiscal Schedule</b>	Workday populates the <b>Fiscal Schedule</b> with <i>Standard Corporate Schedule</i> for the primary accounting book.

## Steps: Set Up Asset Accounting for Multiple Books

### Prerequisites

- Set up asset accounting. See [Steps: Set Up Asset Accounting](#).
- Create book codes to populate on asset accounting books. See [Steps: Create Book Codes and Books](#) on page 101.
- Choose a strategy to migrate capital assets that you already track in Workday to the new asset books. See [Concept: Strategies for Populating New Company Asset Books on Existing Assets](#) on page 1528.

### Context

Multibook asset accounting helps you to comply with multiple accounting and tax frameworks by enabling you to:

- Track and account for assets in more than 1 accounting asset book.
- Depreciate assets differently in each accounting asset book.

Example: You configure multibook asset accounting with 2 accounting asset books to meet the:

- International Financial Reporting Standards (IFRS).
- U.S. Governmental Accounting Standards Board (GASB).

When you enable multibook asset accounting, you need to assign unique book codes to each accounting book. Workday uses book codes to track financial transactions posted for lifecycle events on assets. You can combine book codes to create reporting books based on your accounting needs. See [Concept: Book Codes and Books](#) on page 102.

**Note:** You can't disable multibook asset accounting after you enable it.

## Steps

1. Access the **Edit Tenant Setup - Financials** task.

In the **Business Assets Options** section, select the **Enable Multibook Asset Accounting** check box.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

See [Reference: Edit Tenant Setup - Financials](#).

2. (Optional) When you switch from nonmultibook asset accounting to multibook asset accounting, create manual journals to move opening balances on asset ledger accounts from the common book code to adjustment book codes.

See [Steps: Process Accounting Journals](#) on page 109.

3. Create a multibook settlement ledger account to credit or debit for multibook asset transactions.

See [Steps: Create and Organize Ledger Accounts](#) on page 81.

4. [Set Up Account Posting Rules](#) on page 84.

Configure the *Business Asset Multibook Settlement* account posting rule.

5. Access the **View Company Asset Books** report.

When you have an existing accounting book, click **Update Asset Books** to assign a book code to it.

Security: *Process: Business Asset Accounting* domain in the Business Asset Accounting functional area.

6. Create accounting asset books and add them to your company.

Assign a book code to each accounting asset book, including the primary book.

See [Steps: Set Up Asset Books for a Company](#) on page 1491.

7. (Optional) To add assets that you already track in Workday to new asset books, take 1 of these actions:

- To migrate existing assets to new asset books with beginning balances, create an inbound EIB based on 1 of these web service operations:

- *Bulk Import Asset Book Configuration*
- *Update Asset Book Configuration*

Enter Yes in the **Add Only** column of the EIB spreadsheet.

Security: *Process: Non-Accounting Asset Books* domain in the Business Asset Accounting functional area.

See [Steps: Set Up EIBs Using Templates from Web Service Operations](#).

- [Add Assets to a Company Asset Book](#) on page 1526.

Copy existing assets and their historical transactions to the new asset books.

You can't use the **Add Assets to Company Asset Book** task to load assets in alternate ledger currency asset books.

## Next Steps

When you switch from nonmultibook asset accounting to multibook asset accounting:

- Run standard reports on business assets before and after the switch to identify and address differences. Access the **Workday Standard Reports** report and select *Business Assets* and *Set Up Business Assets* from the **Report Categories** prompt to view details on standard reports for assets.
- Verify that your custom reports accurately reflect your financial data. To ensure that custom reports take into account book codes that you populate on asset accounting books, review these elements and update as necessary:
  - Calculated fields.
  - Report data sources.
  - Report data source filters.

### Related Information

#### Examples

[The Next Level: Implementing Alternate Ledger Currency](#)

[The Next Level: Multibook Asset Accounting Concepts and Overview](#)

[Example Steps: Migrate Assets to a Secondary Asset Book](#) on page 1529

## Steps: Configure Intangible Business Assets

### Prerequisites

- To register assets from supplier contract receipt lines, add the *Initiate Asset Registration Events from Receipt for Supplier Contracts* service step to the *Receipt* business process.
- To create tasks in My Tasks to generate installments for supplier invoice schedules:
  - Add the **Review Schedule for Installment Generation** task to the *Receipt* business process.
  - Configure the *Create Supplier Contract Schedule Installments for Receipt* business process.
- To require approvals when you change the in-service date of assets, configure the *Asset Adjust In Service Event* process.
- To specify ledger accounts where Workday records accrued liability for assets that you register from supplier contract receipt lines, configure the *Business Asset Registration Accrued Liability* account posting rule.

### Context

You can configure Workday to:

- Register intangible assets from supplier contract receipt lines. Example: Broadcasting rights.
- Amortize intangible assets according to the supplier contract terms, enabling you to accurately reflect the value of assets in financial statements.

You can't register intangible assets directly from purchase orders or supplier invoices.

### Steps

#### 1. [Create Spend Categories](#).

Create spend categories for intangible business assets:

- Select *Procurement* from the **Spend Category Usage** prompt.
- Select these check boxes on the **Asset Tracking** section:
  - Track Items**
  - Intangible**

#### 2. [Set Up Depreciation Profiles](#) on page 1542.

Create depreciation profiles for intangible assets and select *Term* as the depreciation method for the amortization schedule.

**3.** Create a supplier contract with goods lines and define the contract terms.

As you create a contract type for the supplier contract:

- Select the **Scheduled Invoices** and **Receive Contract Line** check boxes.
- Don't select the **Manual Purchase Orders**, **Financial Lease**, or **Operating Lease** check boxes.

Workday can't initiate asset registration for intangible assets from contract types that include purchase orders, and you can't select intangible spend categories on goods lines for lease-type supplier contracts.

As you add goods lines to the supplier contract:

- In the **Item and Category** column, select a spend category that you've configured for intangible business assets.
- Enter a start and an end date in the **Dates** column.

Workday uses the contract start and end dates to determine the useful life of intangible assets.

- Enter a date in the **In Service Start Date** column.

Workday populates the in-service date of assets with this date.

See [Steps: Create Supplier Contracts](#).

**4.** Create a supplier invoice schedule for the supplier contract.

- a) In the **Date Options** section, select the **Defined Date** check box and select a date.
- b) When you process contract amendments, select the **Automatically Regenerate Installments** and **Automatically Submit Schedules** check boxes in the **Amendment Processing** section.

See [Steps: Create Supplier Invoice Schedules and Installments for Supplier Contracts](#).

**5.** [Register Assets](#) on page 1469.

Workday initiates the registration of intangible assets when you create supplier contract line receipts.

To manually register intangible assets, you can access the **Register Assets** task and enter supplier contract details.

**6.** [Assign Asset Accounting Information](#) on page 1497.

**7.** [Record Asset Depreciation and Amortization Expenses](#) on page 1547.

## Result

The **Assets** tab on the supplier contract displays assets registered from supplier contract receipt lines.

The **Acquisition Information** section on the **General** tab of assets displays receipt, supplier contract, and supplier contract line details.

## Next Steps

When you change dates on supplier contract lines, adjust the in-service date of intangible assets accordingly. See [Adjust an Asset In Service Date](#) on page 1478.

### Related Information

#### Concepts

[Setup Considerations: Lease Accounting](#) on page 1563

#### Tasks

[Add or Update Goods and Service Lines on Supplier Contracts](#)

## Assign Asset Accounting Information

### Prerequisites

- Register the asset.

- Configure the *Asset Assign Accounting Event* business process and security policy in these functional areas:
  - Business Asset Accounting
  - Business Asset Tracking

## Context

For capital assets with no processed depreciation, you can specify:

- Where the asset belongs.
- The depreciable attributes in the primary book.
- The residual value in the primary book.

## Steps

- Access the **Assign Asset Accounting Information** task in My Tasks.

Workday creates this task in My Tasks when the asset accounting rules populate an accounting treatment other than *Expense* at the time of registration. When the default accounting treatment is *Depreciable Capital Asset*, you can change the depreciation profile and related attributes that Workday populates. You can also change the accounting treatment, spend category, location, and worktags for the asset.

For leased assets that you register from a supplier contract, you can modify **Asset Class**, **Asset Type**, and the accounting book information.

- As you complete the **Asset Information**, consider:

Option	Description
<b>Spend Category</b> <b>Item</b>	To change the spend category, first change the item for the asset. Workday populates the spend category from the selected item.  When <b>Item</b> is blank, you can select any spend category.  You can't change the <b>Item</b> or <b>Spend Category</b> when the asset is from a supplier invoice line using a purchase item. Use the <b>Reclassify Asset</b> task to change the <b>Item</b> or <b>Spend Category</b> on this type of asset.  For leased assets, you can't change the <b>Item</b> or <b>Spend Category</b> .
<b>Date Acquired</b>	The date when you acquire the asset. The document date automatically populates when the asset source is a receipt, supplier invoice, or supplier contract receipt line. It's the start of the useful life of an asset when the date placed in service option on the depreciation profile is <i>Upon Acquisition</i> .

- As you complete the **Asset Details**, consider:

Option	Description
<b>Cost</b>	Workday locks the cost after you submit it for approval and you can't change it until it's approved.

Option	Description
	<b>Note:</b> You have to perform a cost adjustment to account for additional invoices or receipts.
<b>Accounting Treatment</b>	Drives how Workday accounts for an asset. You typically book expense assets to an income statement account and capital assets to a balance sheet account.
<b>Depreciation Profile</b>	Drives the <b>Place In Service</b> option and default values for the <b>Depreciation Method</b> , <b>Convention</b> , and <b>Useful Life</b> . You can change these default values independently.
<b>Convention</b>	Workday uses the <b>Convention</b> , along with the in-service date, to determine the depreciation start date.
<b>Asset Class</b> <b>Asset Type</b> <b>Business Use %</b>	<p>You can specify these attributes to use for external reporting, where an asset tax class or property type is relevant. You can use the attributes in bonus depreciation rules. Workday populates values based on the specified spend category. However, the asset class or asset type you select on the <b>Maintain Asset Shares</b> task override the values you select here.</p> <p>Workday displays <b>Asset Class</b> and <b>Asset Type</b> in the <b>Identification</b> column because they apply across all company asset books.</p>
<b>Coordinating Cost Center</b>	<p>Workday populates the cost center from the <b>Worktags</b> prompt when it has a cost center worktag and you enable the functionality in your tenant.</p> <p>Select the <b>Auto Populate Coordinating Cost Center</b> check box in the <b>Business Assets Options</b> section on the <b>Edit Tenant Setup - Financials</b> task.</p>
<b>Asset Coordinator</b>	Select the worker in possession of this asset.
<b>External Contract Number</b>	Workday populates the supplier contract number and start date from the contract when the business asset originates from a supplier contract line.
<b>External Contract Start/End Date</b>	<p>The start and end dates of the supplier contract line for this asset. Workday requires contract dates for supplier contract-based assets.</p> <p>You can't modify the contract start date. You can optionally enter or modify the end date of the supplier contract or adjust the asset in service date.</p>
<b>Location</b>	Identify the custodial information of where the asset belongs. Workday populates the <b>Location</b>

Option	Description
	from the value that you specify during asset registration.
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p> <p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul>
<b>Supplier Invoice Line</b>	<p>Identify the source of the spend booked to the ledger.</p> <p>If the asset registration occurs as part of the supplier invoice event, Workday automatically displays this value. If the source of the asset is the receipt event or manual registration, you can select the supplier invoice line.</p>
<b>Asset Shares</b>	Displays the number of times you're sharing the asset costs. Click the number to drill down and view line detail about the shared cost.

4. (Optional) Access the **Change Accounting Information** task from the related actions menu of a business asset.

The task is available regardless of the accounting treatment when there are no transfers or processed depreciation.

## Result

Workday populates the accounting information that you enter on the asset in the primary asset book. For secondary asset books, Workday populates the accounting information from your asset book rules.

When the accounting treatment is depreciable capital, Workday creates a depreciation/amortization schedule with a depreciation/amortization line for each period.

If you reference a supplier invoice line, Workday creates accounting entries to move the spend booked to the ledger when both conditions are true:

- The accounting treatment, spend category, location, or worktags on the asset differ from values on the supplier invoice line.
- The accounting treatment on either the supplier invoice line or asset isn't *Expense*.

For lease contracts, Workday generates accounting from the supplier invoice.

## Next Steps

To change depreciation information on assets in secondary asset books, you can use the *Update Asset Book Configuration* web service.

### Related Information

#### Tasks

[Register Assets](#) on page 1469

[Set Up Shared Costs of Assets](#) on page 1541

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

## Change Depreciation Accounting Status on an Asset

### Prerequisites

Security: *Process: Business Asset Accounting* in the Business Asset Accounting functional area.

### Context

Set the accounting status for depreciation expense lines or clear the accounted status on assets in an asset accounting book. Setting the accounting status helps you avoid generating accounting journals for depreciation expense for prior periods.

You can set the depreciation accounting status when:

- Registration and assign asset accounting are complete.
- There is at least 1 asset depreciation schedule that doesn't have expense lines posted.
- The asset doesn't have an In Progress event.

### Steps

1. From the related actions menu of an asset, select **Business Asset > Change Depreciation Accounting Status**.

The task is available until Workday posts depreciation expense using the **Record Depreciation Amortization Expense** task for that asset book.

2. As you complete the task, consider:

Option	Description
<b>Restricted to Asset Books</b>	Select asset books to set the depreciation expense status to <b>Accounted</b> .
<b>Set/Clear Accounted Status</b>	Select to either set or clear the accounted status.
<b>Depreciation Period On or Before</b>	Specify the date that you want the accounting status to take effect.

### Result

Workday sets the depreciation accounting status to **Accounted** for the selected fiscal periods and asset books.

## Steps: Perform Lifecycle Events for Capital Assets

### Prerequisites

Configure asset accounting.

## Context

You can apply lifecycle events to capital assets. These lifecycle events don't apply to expensed assets, which are assets that you capture for tracking purposes only.

## Steps

### [1. Assign or Change Asset Accounting Information.](#)

You can update these attributes for capital assets with no posted depreciation:

- Accounting treatment.
- Cost.
- Depreciation information.
- Custodial information.

### [2. Reclassify an Asset.](#)

You can reclassify the spend category of a capital asset. You can also change other details such as asset class, asset type, and useful life, for assets with posted depreciation.

### [3. Adjust the Cost of an Asset.](#)

You can adjust the acquisition cost after you capture an asset acquisition cost. You can also add tax, freight, or post-acquisition costs for items such as major repairs.

### [4. Correct or Adjust Useful Life.](#)

If you initially configure an asset with an incorrect life, you can correct it. When a change occurs in the estimated useful life of an asset, you can also adjust the useful life.

### [5. Impair an Asset.](#)

To reflect the current worth of assets when the fair market value falls below the net book value permanently, you can book impairments.

### [6. Record Asset Depreciation and Amortization Expense.](#)

You can record depreciation expenses for company assets.

### [7. You can select dates to suspend and resume depreciation for assets.](#)

See [Suspend and Resume Asset Depreciation](#) on page 1550.

### [8. Transfer assets from 1 company to another.](#)

See [Steps: Track Assets](#) on page 1467.

When the *Asset Intercompany Transfer In Event* business process of the transfer-to company includes the *Review Asset Intercompany Accounting* action step, Workday creates a task in My Tasks for the asset accountant. The asset accountant can review the accounting attributes for the new asset as part of the transfer transaction. Otherwise, Workday transfers the asset with the same attributes it had in the transfer-from company.

### [9. \(Optional\) Access the \*\*Adjust Asset\*\* task from the related actions menu of assets.](#)

You can change rate schedules on assets that use custom rate schedules and are in service. Workday applies the new rate schedule starting on the **Transaction Effective Date** that you select.

Security: Configure the *Asset Adjustment Event* business process in the Business Asset Accounting functional area.

## 10. Dispose of assets with lifecycle events for your company or company hierarchy.

See [Steps: Track Assets](#) on page 1467.

The *Asset Disposal Event* business process includes the *Complete Business Asset Accounting* step as a required step.

Workday sends a task to the asset accountant's My Tasks:

- When you dispose of a capital asset.
- When there are proceeds from a sale or a donation for an expensed asset.

The asset accountant can complete the accounting information for the disposal, such as putting worktags on the gain or loss.

## 11. Dispose of an Expired Asset.

You can find and dispose of intangible assets that have no residual value and are beyond their useful life as soon as they expire. If capital assets are no longer in service, you can partially dispose of assets by cost.

### Result

- You can identify and fix a journal error using the **Fix Operational Journal With Errors** task.
- You can use the *Get Asset* web service to create an outbound EIB and send asset data to an external tax depreciation service.

### Related Information

#### Tasks

[Steps: Set Up Asset Accounting](#) on page 1488

[Register Composite Assets](#) on page 1474

[Adjust an Asset In Service Date](#) on page 1478

#### Examples

[Set Up Outbound EIB](#)

[2023R2 What's New Post: Custom Depreciation Rate Schedules](#)

## Create Asset Shares

### Prerequisites

- Security: Configure the *Asset Share Event* business process and security policy in the Business Asset Tracking functional area.
- Register the asset.

### Context

Asset shares enable you to split asset cost and depreciation across multiple cost centers or other worktags.

### Steps

1. Access the **Find Assets** report.
2. To generate a list of assets that you want to share, enter the information in the list of prompts and fields.
3. From the related actions menu under the **Asset ID** column, select **Business Asset > Maintain Asset Shares**.
4. Enter either a **Share Percent** or an **Asset Share Amount**.

Workday automatically calculates and displays the value into the other field based on the value you enter. Continue adding rows until all the share percentages total 100 and the value in the **Amount to be Split** field is zero.

## 5. (Optional) Assign worktags to the asset share.

You can assign up to 1 worktag of each type to an asset share. Example: You can assign 1 cost center and 1 region to an asset share, but you can't assign 2 cost centers to the same asset share. You can assign the same worktag to several asset shares.

When you enable optional worktag balancing on the **Maintain Worktag Balancing Configuration** task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:

- Inherit optional balancing worktags based on the worktag types selected.
- Generate due to and due from entries to balance transactions.

## Result

Workday splits the depreciation schedule for the asset according to the shares that you set up. You can review the depreciation information on the **Depreciation Detail** tab when you view the asset.

# Dispose of Assets

## Prerequisites

- [Set Up Asset Disposal Types](#) on page 1466.
- Configure these business processes and security policies in the Business Asset Tracking functional area:
  - *Asset Disposal Event*
  - *Asset Reinstatement Event*

## Context

You can dispose of:

- Assets with lifecycle events.
- Intangible assets that you register manually or from supplier contracts.
- Leased assets that you register from supplier contracts when they reach their depreciation and contract end date.
- Leased assets that you register manually.

You can:

- Partially dispose of capital assets by cost or percentage. Example: You sell square footage from a building you own.
- Fully dispose of expired assets.

You can't dispose of assets that have other business processes in progress. Example: To dispose of assets that you are transferring to different worktags, first complete the transfer event.

You can also reinstate fully disposed assets. When you reinstate capital assets, Workday reverses recaptured bonus depreciation and returns it to the depreciation schedule on nonaccounting asset books. Workday also generates accounting to:

- Reinstate the accumulated depreciation.
- Reinstate the asset cost.
- Reverse any gain or loss booked for the disposal.

## Steps

### 1. Access 1 of these tasks:

- **Dispose Assets**
- **Dispose Expired Assets**

2. Complete the **Filter Criteria** step.
3. Click **OK**.
4. Select assets to dispose of.
5. (Optional) To partially dispose of assets that aren't expired, enter a value in 1 of these fields:
  - **Percent to Dispose**
  - **Cost to Dispose**
6. Click **OK**, **Submit**, and **Done**.

### Result

When you dispose of assets, Workday:

- Calculates accumulated depreciation and any gain or loss and creates a journal entry.
- Changes the status of fully disposed assets to *Disposed* and severs the relationship to workers.
- Doesn't change the status of partially disposed assets that are in service or issued to workers.
- Makes any related capital project assets unavailable for further adjustments.

### Next Steps

To reinstate an asset, select **Business Asset > Reinstate** from the related actions menu of the asset.

#### Related Information

##### Tasks

[Register Assets](#) on page 1469

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

## Set Up Asset Pooling Rules

### Prerequisites

Security: *Setup: Business Asset Accounting* domain in the Business Asset Accounting functional area.

### Context

You can configure asset pooling rules for Workday to automatically combine identical assets on a receipt or supplier invoice line into a single asset.

Workday doesn't apply asset pooling rules to:

- Project assets.
- Business assets that you create when you capitalize project transactions.

### Steps

1. (Optional) To override asset pooling rules, set up trackable line reviews for assets.
2. Access the **Maintain Asset Pooling Rules** task.
3. As you complete the task, consider:

Option	Description
<b>Company</b>	When you select a company hierarchy and enter a value for <b>Unit Cost Less Than</b> , then all companies in the hierarchy must have the same base currency.
<b>Spend Category</b>	You can only select spend categories with <b>Track Items</b> enabled.

Option	Description
<b>Items</b>	You can select either a spend category or items, but not both.
<b>Quantity Greater Than</b>	Workday pools assets on a receipt or supplier line when the quantity of items is greater than the number that you enter.
<b>Unit Cost Threshold</b>	<p>When you enter a nonzero amount:</p> <ul style="list-style-type: none"> <li>• Workday doesn't pool assets with a unit cost greater than the amount that you enter.</li> <li>• The <b>Company Currency</b> for the pooling rule must be the same as the base company currency.</li> </ul>
<b>Company Currency</b>	Workday populates the company currency from the base currency of the company or company hierarchy that you select. When the transaction currency differs from the rule currency, Workday converts the transaction amount to the currency of the rule to evaluate the rule.

## Result

When you register assets from a receipt or supplier invoice line, Workday:

- Evaluates the asset pooling rules in the order that you specify.
- Pools the assets that meet the criteria of your rules.

## Next Steps

You can:

- Run the **View Asset Pooling Rules** report to review your asset pooling rules.
- Override the asset pooling rules during your review of trackable lines.
- Run the **View Business Asset** report to review the available quantity, cost, and accounting details for the pooled asset.
- Register composite assets with the pooled asset.

As long as you haven't processed any depreciation on the pooled asset, you can use the **Assign Business Asset Accounting Information** task to update:

- The spend category.
- The accounting treatment.
- Other values for pooled assets.

## Related Information

### Concepts

[Concept: Pooled Assets](#) on page 1479

[Concept: Composite Assets](#) on page 1510

### Tasks

[Register Assets](#) on page 1469

[Register Composite Assets](#) on page 1474

## Reconcile Asset Activity and Ledger Accounts

### Prerequisites

Security: *Report Execution* domain in the Tenant Non-Configurable functional area.

### Context

These composite reports enable you to reconcile your asset activity and the accounting posted to your ledger accounts over a time period:

- **Asset to Ledger Reconciliation – Accumulated Depreciation.**
- **Asset to Ledger Reconciliation – Cost.**

You can run these reports periodically to locate and reconcile:

- Asset transactions that Workday doesn't automatically post to the ledger account, for which you need to create manual journals. Example: You register assets manually.
- Ledger transactions that Workday doesn't record on assets, for which you need to create asset adjustments. Example: When implementing Workday, you convert your existing assets and create manual journals for the historical accumulated depreciation on these assets.
- Timing differences. Example: You place an asset in service in January without registering the asset in Workday. You receive the invoice in February, after closing the fiscal period for January. You backdate the asset registration to January. Workday posts the depreciation for the asset in the closest open fiscal period, which is February.

**Note:** For companies with an alternate ledger currency configured, see reporting considerations in [Concept: Alternate Ledger Currency in Assets](#).

### Steps

1. Access the **Asset to Ledger Reconciliation – Accumulated Depreciation** report.
2. As you select your report parameters, consider:

Option	Description
<b>Company</b>	You can select either: <ul style="list-style-type: none"> <li>• A company.</li> <li>• A company hierarchy with consolidation details.</li> <li>• A company hierarchy where all the companies have matching account sets and either matching fiscal schedules or matching alternate fiscal schedules.</li> </ul>
<b>Period, Time Period, and Report Date Option</b>	These 3 options work together to filter the activity in the report. <p>The <b>Period</b> and <b>Time Period</b> options enable you to select the time period that you reconcile:</p> <ul style="list-style-type: none"> <li>• Select a fiscal period as a reference.</li> <li>• Select a time period from the reference period.</li> </ul> <p>The <b>Report Date Option</b> enables you to filter transactions by accounting, creation, or transaction date. This enables you to locate variances caused by timing differences, for instance for lifecycle events where the transaction and accounting dates are in different periods.</p>

Option	Description
	<p>Examples:</p> <ul style="list-style-type: none"> <li>To view transactions with an accounting date in January 2023, you select:           <ul style="list-style-type: none"> <li>The <i>2023 - Jan</i> option from the <b>Period</b> prompt.</li> <li>The <i>Current Period</i> option from the <b>Time Period</b> prompt.</li> <li>The <i>Accounting Date</i> option from the <b>Report Date Option</b> prompt.</li> </ul> </li> <li>To view transactions with a transaction date in 2023, you select:           <ul style="list-style-type: none"> <li>The <i>2023 - Jan</i> option from the <b>Period</b> prompt.</li> <li>The <i>Current Year</i> option from the <b>Time Period</b> prompt.</li> <li>The <i>Transaction Date</i> option from the <b>Report Date Option</b> prompt.</li> </ul> </li> </ul>

3. (Optional) Save your report parameters under a **Filter Name**.

4. Review the nonzero values in the **Variance** column.

A nonzero variance indicates that there's a difference over the selected time period between the:

- Depreciation transactions that you record on your assets.
- Journals that you or Workday post to the asset depreciation ledger accounts.

5. To locate and address the cause of nonzero variance, review the values in the other columns.

Drill down on these values to view the details of the transactions in each category for the selected:

- Ledger account.
- Spend category.
- Journal source.
- Time period.

Option	Description
<b>Depreciation Expense Line Detail (A)</b>	<p>The transactions on assets for which Workday creates depreciation expense lines.</p> <p>Examples:</p> <ul style="list-style-type: none"> <li>Post-acquisition cost adjustments.</li> <li>Changes to the useful life of assets.</li> <li>Depreciation that you record on assets.</li> </ul>
<b>Accumulated Depreciation Detail (B)</b>	<p>The transactions that change the accumulated depreciation amount on assets.</p> <p>Example: You partially dispose of an asset on which you've recorded depreciation.</p>
<b>Total Ledger Depreciation Activity</b>	<p>The journals that you or Workday post to asset depreciation ledger accounts.</p> <p>Example: Workday creates a journal when you record depreciation on an asset.</p>

**6. Access the Asset to Ledger Reconciliation – Cost report.**

**7. Review the values in the Total Variance column.**

A nonzero variance indicates that there's a difference over the selected time period between the:

- Cost activity that you record on your assets, with or without journals.
- Journals that you or Workday post to asset ledger accounts, with or without cost activity on the asset.

**8. To locate and address the cause of nonzero variance, review the values in the other columns.**

Drill down on these values to view the details of the transactions in each category for the selected:

- Ledger account.
- Spend category.
- Time period.

Option	Description
<b>Asset Cost Detail with Journals (A)</b>	The asset cost transactions for which Workday creates journals.  Example: Assets that Workday creates from supplier invoices, and that you've registered.
<b>Asset Cost Detail without Journals (B)</b>	The asset cost transactions for which Workday doesn't create journals.  Example: Assets that you register manually.  These transactions are more likely to require reconciliation.
<b>Ledger Detail with Asset Transactions (C)</b>	The journals that Workday creates from asset cost transactions.  Example: Journals that Workday creates from supplier invoices.
<b>Ledger Detail without Asset Transactions (D)</b>	The manual journals that you create on asset ledger accounts.  These journals are more likely to require reconciliation.

### Example

You run the **Asset to Ledger Reconciliation - Accumulated Depreciation** report for:

Field	Value
<b>Period</b>	October of the current year
<b>Time Period</b>	<i>Current Period</i>
<b>Report Date Option</b>	<i>Transaction Date</i>

You find variance of -246.89 USD for the ledger account *17000:Accumulated Depreciation* and the spend category *Hardware - Servers*. You review the amounts in the other columns and find:

- A depreciation expense line detail of 246.89 USD.
- A total ledger depreciation activity of -493.89 USD.

You drill down on the value in the **Total Ledger Depreciation Activity** column and find 2 journal lines for the same asset with an accounting date in October.

You run the **Asset to Ledger Reconciliation - Accumulated Depreciation** report again for:

Field	Value
<b>Period</b>	October of the current year
<b>Time Period</b>	<i>Current Period</i>
<b>Report Date Option</b>	<i>Accounting Date</i>

The variance for the ledger account *17000:Accumulated Depreciation* and the spend category *Hardware - Servers* is zero.

When you drill down on the value in the **Depreciation Expense Line Detail (A)** column, you find 2 depreciation lines for the same asset: 1 in September and 1 in October. From the drill-down report, you navigate to the supplier invoice from which you've registered the asset. You find that you created the supplier invoice in October and backdated it in September. You had already closed the ledger period for September, so Workday posted the depreciation in October.

#### Related Information

##### Reference

[2022R2 What's New Post: Business Asset Reporting](#)

## Concept: Composite Assets

You can group disparate, related assets into a composite asset. Each of the assets in the composite becomes a component asset.

You can register 2 types of composite assets:

- Discrete composite assets contain asset components that maintain their own costs, depreciation, and lifecycle events. Workday tracks separate lifecycle events for these assets.
- Nondiscrete composite assets contain asset components that maintain the same costs, depreciation, and lifecycle events. Workday tracks the same lifecycle event for these assets. Also, each asset that is part of a nondiscrete composite asset exists in reference only.

Example: You might want to use a camera, lens, and tripod together. You can register all 3 assets as 1 composite asset. Workday populates the acquisition method of composite assets with *Composed*.

Composite assets can include assets that you register individually and partial quantities from pooled assets.

Example: You might want to pool, register, and track 5 laptops as a single pooled asset. You can create a composite asset using 3 of the laptops from the pooled asset. Then you can add 2 monitors, 2 docking stations, 1 mouse, and 1 keyboard as components of the composite asset. You can continue to pool and track the remaining 2 laptops as a single asset.

Discrete and nondiscrete assets might have any of these attributes:

Attributes	Discrete Composite Assets	Nondiscrete Composite Assets
Accounting Treatment	Nondepreciable capital.	Expense, depreciable, or nondepreciable capital.
Spend Category and Items	Trackable and tangible.	Trackable and tangible.
Derived asset cost	Zero.	Sum of the allocation costs for all assets.

Assets must meet these criteria before you can group them in composite assets:

Component Asset Criteria	Discrete Composite Assets	Nondiscrete Composite Assets
Accounting information	Not required to have accounting assigned.	You've assigned accounting to the asset.
Accounting treatment	Depreciable, nondepreciable, or expense.	Depreciable or nondepreciable.
Quantity available before registration	The composite asset consumes the entire available quantity.	Doesn't have to equal the available quantity.
Residual value	Can have a residual value.	Can't have a residual value.
Status	Any status except <i>Removed</i> , <i>Disposed</i> , <i>Pending Registration</i> , or <i>Used by Composite</i> .	Must be in <i>Registered</i> status.
Total cost after composite asset registration	Workday doesn't update the cost of the component asset.	Workday updates the cost of the component asset based on how much you allocate to the composite asset.

Additionally, these assets:

- Must be tangible.
- Can't be composite assets.
- Must be trackable.
- Can't be leased assets.
- Can't already be in use in a composite asset.
- Can't have an event in progress.
- Must have the same asset books as the composite asset.
- Must have a company that matches the company of the asset you're registering or composing.
- Can't be used to capitalize a project transaction.

[Review Trackable Lines for Assets](#) on page 1535

[Steps: Set Up Asset Tracking](#) on page 1465

## Concept: Accounting Impact of Asset Lifecycle Events

Depending on the asset lifecycle event and the specifics of that transaction, Workday creates accounting to move spend or adjust depreciation for catchup.

### Assign/Change Asset Accounting or Adjust Asset Cost

For asset lifecycle events where you assign or change accounting or adjust cost, Workday creates accounting entries when all of these conditions are true:

- The asset cost activity is linked to a supplier invoice.
- The accounting treatment on the supplier invoice line or asset isn't *Expense*.
- The accounting treatment, spend category, worktags, or location on the supplier invoice line is different than on the asset.

These accounting entries move spend booked by the supplier invoice.

**Note:** Workday applies depreciation over the remaining useful life of the asset when you adjust the acquisition cost on assets with historical depreciation.

### Leased Assets

To generate lease accounting entries when you create supplier contracts, you must:

- Use trackable spend categories.
- Map ledger accounts to obligation, liability, or expense ledger account types for financial or operating leases.
- Set up account posting rules and posting rule conditions for liability, multibook settlement, and spend account posting rule types.

Example: When you create lease contracts using the *Financial Lease* or *Operating Lease* contract types, Workday posts these accounting entries:

Lease Type	Transaction	Journal Entries
<b>Financial</b>	Supplier Invoice	Debit Accrued Liability (Financial/Capital Lease Obligation) Debit Interest Credit Payables
	Asset Registration	Debit Spend Credit Accrued Liability
	Depreciation Expense	Debit Depreciation Expense Credit Accumulated Depreciation
<b>Operating</b>	Supplier Invoice	Debit Spend Credit Payables
	Supplier Payment	Debit Payables Credit Cash
	Asset Registration	Not applicable

### Dispose of Assets

The disposal type that you select when you dispose of assets drives the accounting. Each disposal type maps to a disposal method of either:

- *Discard*
- *Donation*
- *Sale*

These tables list the accounting entries for each accounting treatment and disposal method.

- *Depreciable Capital Asset* or *Non-depreciable Capital Asset* accounting treatment:

Disposal Method	Journal Entries	Considerations
Discard	Credit Spend Debit Accumulated Depreciation Debit Asset Disposal Loss	There's no disposal loss for fully depreciated assets.

Disposal Method	Journal Entries	Considerations
Donation	Credit Spend Debit Accumulated Depreciation Debit Asset Disposal Donation Debit Asset Disposal Loss or Credit Asset Disposal Gain	For disposal types that use a basis of fair market value: <ul style="list-style-type: none"><li>• When the fair market value is greater than the net book value, the result is a gain.</li><li>• When the fair market value is less than the net book value, the result is a loss.</li><li>• When the fair market value is equal to the net book value, the result is no gain or loss.</li></ul> For disposal types that use a basis of net book value, the result is no gain or loss
Sale	Credit Spend Debit Accumulated Depreciation Debit Asset Disposal Sale Debit Asset Disposal Loss or Credit Asset Disposal Gain	When the sale price is greater than the net book value, the result is a gain. When the sale price is less than the net book value, the result is a loss. When the sale price is equal to the net book value, the result is no gain or loss.

- Expense accounting treatment:

Disposal Method	Journal Entries	Considerations
Discard	No accounting	
Donation	Debit Asset Disposal Donation Credit Asset Disposal Gain	The accounting entry amount is the fair market value of the asset at disposal. There's no accounting for disposal types that use a basis of net book value.
Sale	Debit Asset Disposal Sale Credit Asset Disposal Gain	The accounting entry amount is the sale price.

In addition, asset disposals can have these accounting impacts:

- Workday records depreciation first and records depreciation expense and accumulated depreciation up to the disposal date.
- When you have multiple books, you can specify the amount of bonus depreciation to recapture in books where Workday records bonus depreciation.
- For partial disposals, Workday applies the specified percentage to the total current cost of the asset (which includes adjusted costs) in each asset book. If you specify a cost, Workday calculates the

percentage using the current cost in the primary asset book. The remaining cost of the asset continues to depreciate for the remaining life of the asset.

A partial disposal factor adjusts bonus depreciation and the residual value of the asset in all asset books. Workday also uses the factor if the cost of the asset differs across the asset books. To view how partial disposals affect the accumulated depreciation for assets, you can access the **Depreciation Summary** tab on the **View Business Asset** report.

### Transfer or Issue Assets

For asset transfer and issue lifecycle events, Workday creates accounting to move spend and accumulated depreciation when all these conditions are true:

- The accounting treatment of the asset isn't *Expense*.
- There's a change to the worktags, location, or company of the asset.

If you move an asset and there's unposted depreciation for the preceding location, Workday automatically posts it so that the ledger reflects the correct accumulated depreciation balance. When you've already posted depreciation belonging to the new location or worktags, Workday creates depreciation adjustments to move depreciation expenses to the new location or worktags.

### Depreciation Adjustments for Catchup Depreciation

For all lifecycle events on depreciable capital assets, Workday creates depreciation adjustments for periods on or after the transaction effective date that already have posted depreciation when you change either:

- The company, location, spend category, or worktags. These depreciation adjustments move the depreciation expense between location and worktags so the net impact to depreciation expense is zero.
- The cost. These depreciation adjustments record the difference between the posted depreciation and the depreciation that should have been posted for cost activities.

You can access the **View Business Asset** report to view specific depreciation adjustments on the **Depreciation Detail** tab.

### Accounting Dates

Workday only posts accounting in open ledger periods. When the period for an accounting date is closed, Workday posts in the next open period. Example: You register an asset from a supplier invoice with an invoice date in a closed ledger period. Workday registers the asset with:

- A transaction effective date as the asset acquisition date.
- An accounting date in the next open period.

For lifecycle events without accounting impact, Workday uses the transaction date as the accounting date, even when the ledger period is closed. Example: You register an asset manually with an acquisition date in a closed ledger period. Workday registers the asset with both a transaction effective date and an accounting date as the asset acquisition date.

### Related Information

#### Tasks

[Adjust an Asset In Service Date](#) on page 1478

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

[Steps: Track Assets](#) on page 1467

### Concept: Alternate Ledger Currency in Assets

You can register, track, and depreciate assets independently in your local and functional currencies when you:

- Configure an alternate ledger currency. See [Steps: Set Up Alternate Ledger Currency](#).

- Set up multibook asset accounting. See [Steps: Set Up Asset Accounting for Multiple Books](#).
- Associate nonprimary accounting books with the alternate ledger currency. See [Add Asset Books to Companies](#).

## Accounting Considerations

When you perform lifecycle events on assets, Workday:

- Creates 1 operational transaction for each asset book.
- Posts 1 journal to the ledger and book code configured for each asset book, for lifecycle events with accounting impact.

When displaying the accounting for asset transactions in the primary or alternate ledger, Workday doesn't link to the operational journal for the other ledger. You can access operational journals in the primary or alternate ledger currency from the **Cost Detail** tab on assets.

## Asset Book Rules Considerations

You can configure asset book rules only in the primary currency of the company, even for asset books in an alternate ledger currency. To prevent asset book rules from populating incorrect accounting treatments on assets when currency exchange rates change, Workday recommends that you periodically:

- Review asset book rules and convert amount thresholds in the primary currency of the company.
- Review and update the accounting treatment of assets registered since the last evaluation.

## Reporting Considerations

In standard reports, Workday uses the currency of the asset book you select to display amounts. When you don't select an asset book, Workday uses the currency of the primary asset book.

In custom reports, you can use the **Book Currency** report field on the Business Asset business object to display the asset book currency. The **Book Currency** report field returns either:

- The asset book currency, when you select an asset book.
- The currency of the primary asset book, when you don't select an asset book.

To reconcile asset activity and ledger accounts, Workday recommends that you:

- Copy the **Asset to Ledger Reconciliation – Accumulated Depreciation** and **Asset to Ledger Reconciliation – Cost** reports and enable the **Ledger Currency Mapping** prompt.
- Select a ledger currency mapping when you run the copied reports.

Selecting a ledger currency mapping enables you to view journal lines in the alternate ledger currency when you drill down on ledger amounts.

## In-Flight Supplier Invoices

When you create assets from supplier invoices and these assets are pending registration when you enable an alternate ledger currency, change and submit the supplier invoices after you complete the asset registration. This enables Workday to populate asset costs in your books in an alternate ledger currency.

## Reference: Asset Lifecycle Event Availability

This table lists asset lifecycle events and their availability based on asset status.

Lifecycle Event	Pending Registration	Registered	In Service	Issued	Disposed	Removed	Out of Service
Assign Asset Accounting Information	No	Yes	Yes	Yes	No	No	No
Change Asset Accounting Information	No	Yes	Yes	Yes	No	No	No
Record Depreciation	No	No	Yes	Yes	No	No	No

#### Related Information

##### Reference

[Workday Community: Business Asset - Lifecycle Event Availability](#)

#### Reference: Dispose of, Remove, or Delete Assets

Workday recommends that you dispose of assets that you no longer track in your accounting records. When you register assets by mistake, you can remove them. In restricted use cases, you might want to delete all assets from a company asset book permanently. You can still find assets that you dispose of, remove, or delete from an asset book with the **Find Assets** report.

Action	Considerations	Accounting
Dispose of Assets	You can dispose of assets that you no longer track in your accounting records. See <a href="#">Steps: Dispose Assets</a> .  Example: You sell assets.	When you fully dispose of assets, Workday generates accounting based on the asset disposal method. See <a href="#">Concept: Accounting Impact of Asset Lifecycle Events</a> .
Remove Business Assets	You can remove assets that you register by mistake, when they meet the conditions for removal. See <a href="#">Steps: Track Assets</a> .  When you create assets from project capitalization, you have to remove all the business assets that you create from the same project asset. See <a href="#">Capitalize Project Assets</a> .  Example: You remove assets created from canceled supplier invoices.	On assets that you remove, Workday also removes any: <ul style="list-style-type: none"><li>• Posted depreciation.</li><li>• Cost tracking activities.</li><li>• Workers.</li></ul> For business assets that you create when you capitalize project assets, Workday moves the uncapitalized cost back to the project assets.
Delete Assets from Company Asset Books	This restricted action deletes all assets from a nonaccounting or secondary accounting book.  You might need to delete all assets from an asset book:	Workday doesn't remove operational journals. To remove spend lines from ledger accounts, you can create manual journals.

Action	Considerations	Accounting
	<ul style="list-style-type: none"> <li>When you implement Workday. Example: You delete all assets that you migrated from your legacy system to fix an issue with the migration.</li> <li>To remove asset books from a company.</li> </ul> <p><b>Note:</b> You can't undo this action. When you delete all assets from an asset book, Workday permanently deletes their asset book configuration. Assets that you add back with the <b>Add Assets to Company Asset Book</b> task might not be in the same state they were in before you deleted them.</p> <p>To request that we temporarily enable this task for your tenant, contact your Customer Success Manager.</p>	

## Example: Set Depreciation Accounting Status for Company Asset Books

This example illustrates how to control when Workday can or can't create journals for prior periods.

### Context

As an assets accountant, you need to set the status of a depreciation expense line for an asset to **Accounted** on or before a specific date. Specifying a date helps you avoid creating journals for prior periods when you set the accounting status for depreciation expense lines.

### Prerequisites

- Register the asset.
- Configure asset accounting.
- Security: These domains in the Business Asset Accounting functional area:
  - Process: Business Asset Accounting*
  - Setup: Company Asset Books*

### Steps

- Access the **Add Assets to Company Asset Book** task.
- On the **Criteria** tab, enter these values:

Field	Value
Company	GMS USA
Company Asset Books to Add Assets to	Statutory
Source Asset Book	Accounting

Field	Value
<i>Exclude Assets Disposed Earlier Than</i>	Workday automatically populates the first day of the current fiscal year.
<i>Location</i>	Blank
<i>Asset ID</i>	Blank
<i>Depreciation Information</i>	Copy from Source Asset Book
<i>Depreciation Accounting Status</i>	Date until the depreciation period status of the asset is set to <b>Accounted</b> . Workday doesn't create journal entries for individual depreciation periods until the specified date.  Date to record depreciation until the depreciation period status of the asset is set to <b>Posted</b> . Workday creates journal entries for individual depreciation periods until the specified date.
<i>Bonus Depreciation</i>	Copy from Source Asset Book

3. Click **OK**.

### Result

Workday adds the new asset book and updates the accounting status for depreciation expense lines to **Accounted** until the date specified.

#### Tasks

[Add Assets to a Company Asset Book](#) on page 1526

## Example: Asset Roll Forward Composite Report

This example illustrates how to create a custom report that uses a matrix subreport to enable dynamic reporting.

### Context

As an asset accountant, you want to view the cost and accumulated depreciation of assets for a given reporting period. You want your report to:

- Group assets by *Spend Category*.
- Display columns that summarize changes in asset cost and accumulated depreciation.
- Create a pivot table from the journal source.
- Enable you to drill down to view the details for reported amounts.
- Calculate the summary for preceding and current reporting periods.

**Note:** Filters and data are specific to your Workday tenant and might be different from the suggested values in this example. Use these values as guidance.

### Prerequisites

- Security: These domains in the Financial Accounting functional area:
  - *Reports: Financial Accounting*
  - *Reports: Organization Financial Reporting*

- Security: These domains in the System functional area:
  - *Custom Report Creation*
  - *Manage: All Custom Reports*

## Steps

1. Access the **Create Custom Report** task and enter these values:

Field	Value
<b>Report Name</b>	Enter a unique name for your custom matrix subreport.
<b>Report Type</b>	<i>Matrix</i>
<b>Data Source</b>	<i>Journal Lines for Financial Reporting</i>

2. Select the **Optimized for Performance** check box.
3. Click **OK**.
4. From the **Data Source Filter** prompt, select *Journal Lines for Company and Reporting Time Period*.
5. In the **Matrix** tab, add this row to the **Row Grouping** grid:

Group by Field	Sort Rows
<i>Spend Category as Worktag</i>	<i>Row total - Descending</i>

6. Add this row to the **Column Grouping (Optional)** grid:

Group by Field	Sort Columns
<i>Journal Source</i>	<i>Column total - Descending</i>

7. Add this row to the **Define the Field(s) to Summarize** grid:

Summarization Type	Summarization Field	Format
<i>Sum</i>	<i>Translated Debit Minus Credit Amount</i>	<i>#,##0.00</i>

8. Click the **Drill Down** tab.
9. In the **Group By Fields** section, select the **Sort Dimensions Alphabetically** check box.
10. At the **Fields That Can Be Summarized** prompt, select **Specific Fields**.
11. Add this row to the **Drillable Fields** grid:

Field	Label Override	Sort
<i>Journal</i>	<i>Journal</i>	<i>Total - Descending</i>

12. Add these rows to the **Detail Data** grid:

Order	Field	Column Heading Override	Format
1	<i>Ledger Account</i>		
2	<i>Accounting Date</i>		
3	<i>Spend Category as Worktag</i>		
4	<i>Journal Source</i>	<i>Transaction</i>	

Order	Field	Column Heading Override	Format
5	<i>Translated Debit Amount</i>	Debit Amount	#,##0.00
6	<i>Translation Currency</i>	Currency	
7	<i>Worktags</i>		

13. Add these rows to the **Sort** grid:

Order	Field	Sort Direction
1	Ledger Account	Alphabetical - Ascending
2	Accounting Date	Alphabetical - Ascending

14. Click the **Filter** tab and add these rows to the **Filter on Instances** grid:

Order	And/Or	Field	Operator	Comparison Type	Comparison Value
1	And	<i>Ledger Account Type</i>	<i>exact match with the selection list</i>	<i>Value specified in this filter</i>	Asset
2	And	<i>Spend Category as Worktag</i>	<i>is not empty</i>		
3	And	<i>Journal Source</i>	<i>in the selection list</i>	<i>Prompt the user for the value</i>	<i>Default prompt</i>

15. Click the **Prompts** tab.

16. Select the **Populate Undefined Prompt Defaults** check box.

Workday populates the **Prompt Defaults** grid, then clears the check box.

17. Select the **Display Prompt Values in Subtitle** check box.

18. Verify these rows in the **Prompt Defaults** grid:

Order	Field	Prompt Qualifier	Label for Prompt	Default Type	Required	Do Not Prompt at Runtime
1	<i>Company</i>			<i>No default value</i>	Checked	Unchecked
2	<i>Ledger</i>			<i>No default value</i>	Checked	Unchecked
3	<i>Period</i>			<i>No default value</i>	Checked	Unchecked
4	<i>Time Period</i>		<i>Reporting Interval</i>	<i>No default value</i>	Checked	Unchecked
5	<i>Book</i>		<i>Accounting Book</i>	<i>No default value</i>	Unchecked	Unchecked
6	<i>Amount Type</i>			<i>No default value</i>	Checked	Unchecked

Order	Field	Prompt Qualifier	Label for Prompt	Default Type	Required	Do Not Prompt at Runtime
7	<i>Report Effective Date</i>			<i>No default value</i>	Unchecked	Checked
8	<i>Plan Structure</i>			<i>No default value</i>	Unchecked	Checked
9	<i>Calculate Translation Gain or Loss</i>			<i>No default value</i>	Unchecked	Checked
10	<i>Calculate Current Year Retained Earnings</i>			<i>No default value</i>	Unchecked	Checked
11	<i>Eliminations Only</i>			<i>No default value</i>	Unchecked	Checked
12	<i>Ledger Accounts and Summaries</i>			<i>No default value</i>	Unchecked	Checked
13	<i>Perform Intercompany Eliminations</i>			<i>No default value</i>	Unchecked	Checked
14	<i>Perform Interworktag Eliminations</i>			<i>No default value</i>	Unchecked	Checked
15	<i>Balancing Worktags</i>			<i>No default value</i>	Unchecked	Checked
16	<i>Journal Source</i>	<i>Default Prompt</i>		<i>No default value</i>	Checked	Unchecked
17	<i>Account Translation Rule Set</i>			<i>No default value</i>	Checked	Unchecked
18	<i>Translation Currency</i>			<i>No default value</i>	Checked	Unchecked

19. Click **OK**, then **Done**.

20. Access the **Create Custom Report** task and enter these values:

Field	Value
<b>Report Name</b>	Enter a unique name for your Asset Roll Forward Composite Report.
<b>Report Type</b>	Composite

21. Add this row to the **Business Object Enabled for Filtering and Grouping** grid:

Business Object	Hierarchy Structure
Spend Category	

22. Click **OK**.

23. From the related actions menu of column **C1**, select **Define > Control Field**.

24. Enter these values:

Field	Value
Column Name	Spend Category
Business Object	Spend Category

25. Click **OK**.

26. From the related actions menu of column **C2**, select **Define > Data**.

27. Enter these values:

Field	Value
Column Name	Assets Beginning Balance
Sub Report Name	Select the custom matrix subreport you previously created. Workday populates the <b>Map Sub Report Prompts</b> grid with the prompt values you defined in the subreport.

28. Specify these rows in the **Map Sub Report Prompts** grid:

Prompt Field	Value Type	Value
Amount Type	Specify Value	Beginning Balance
Journal Source	Specify Value	<ul style="list-style-type: none"> <li>• Asset Adjustment</li> <li>• Asset Disposal</li> <li>• Asset Impairment</li> <li>• Asset Reclassification</li> <li>• Asset Transfer</li> <li>• Asset Intercompany Transfer</li> <li>• Supplier Invoice</li> </ul>

29. From the **Field to Aggregate** prompt, select *Sum of Translated Debit Minus Credit Amount*.

30. Click **OK**.

31. Starting with column **C3**, repeat steps 26 to 30. Use the table below as reference for the **Column Name** and **Map Sub Report Prompts**.

Column	Column Name	Prompt Field	Value Type	Value
C3	Acquisition	Amount Type	Specify Value	Beginning Balance
C3	Acquisition	Journal Source	Specify Value	Supplier Invoice
C4	Adjustment	Amount Type	Specify Value	Activity
C4	Adjustment	Journal Source	Specify Value	Asset Adjustment
C5	Impairment	Amount Type	Specify Value	Activity

Column	Column Name	Prompt Field	Value Type	Value
C5	Impairment	<b>Journal Source</b>	Specify Value	<i>Asset Impairment</i>
C6	Reclassification	<b>Amount Type</b>	Specify Value	<i>Activity</i>
C6	Reclassification	<b>Journal Source</b>	Specify Value	<i>Asset Reclassification</i>
C7	Transfer	<b>Amount Type</b>	Specify Value	<i>Activity</i>
C7	Transfer	<b>Journal Source</b>	Specify Value	<ul style="list-style-type: none"> <li>• <i>Asset Transfer</i></li> <li>• <i>Asset Intercompany Transfer</i></li> </ul>
C8	Disposal	<b>Amount Type</b>	Specify Value	<i>Activity</i>
C8	Disposal	<b>Journal Source</b>	Specify Value	<i>Supplier Invoice</i>
C9	Asset Ending Balance	<b>Amount Type</b>	Specify Value	<i>Ending Balance</i>
C9	Asset Ending Balance	<b>Journal Source</b>	Specify Value	<ul style="list-style-type: none"> <li>• <i>Asset Adjustment</i></li> <li>• <i>Asset Disposal</i></li> <li>• <i>Asset Impairment</i></li> <li>• <i>Asset Reclassification</i></li> <li>• <i>Asset Transfer</i></li> <li>• <i>Asset Intercompany Transfer</i></li> <li>• <i>Supplier Invoice</i></li> </ul>
C10	Depreciation Beginning Balance	<b>Amount Type</b>	Specify Value	<i>Beginning Balance</i>
C10	Depreciation Beginning Balance	<b>Journal Source</b>	Specify Value	<ul style="list-style-type: none"> <li>• <i>Depreciation</i></li> <li>• <i>Depreciation Adjustment</i></li> </ul>
C11	Depreciation	<b>Amount Type</b>	Specify Value	<i>Activity</i>
C11	Depreciation	<b>Journal Source</b>	Specify Value	<i>Depreciation</i>
C12	Depreciation Adjustment	<b>Amount Type</b>	Specify Value	<i>Activity</i>
C12	Depreciation Adjustment	<b>Journal Source</b>	Specify Value	<i>Depreciation Adjustment</i>
C13	Depreciation Ending Balance	<b>Amount Type</b>	Specify Value	<i>Ending Balance</i>
C13	Depreciation Ending Balance	<b>Journal Source</b>	Specify Value	<ul style="list-style-type: none"> <li>• <i>Depreciation</i></li> </ul>

Column	Column Name	Prompt Field	Value Type	Value
				• Depreciation Adjustment

32. Click the gear icon to access the **Edit Composite Report Settings** task.

33. Click the **Prompts** tab.

34. In the **Runtime Date Prompts** section, enter:

Field	Value
<b>Effective Date</b>	<i>Use date and time at runtime</i>
<b>Entry Date</b>	<i>Use date and time at runtime</i>

35. Select the **Populate Undefined Prompt Defaults** check box.

Workday populates the **Prompt Defaults** grid, then clears the check box.

36. Verify these values in the **Prompt Defaults** grid:

Order	Field	Label for Prompt	Default Type	Required	No Not Prompt at Runtime
1	<i>Company</i>		<i>No default value</i>	Checked	Unchecked
2	<i>Ledger</i>		<i>No default value</i>	Checked	Unchecked
3	<i>Book</i>	Accounting Books	<i>No default value</i>	Unchecked	Unchecked
4	<i>Time Period</i>	Reporting Interval	<i>No default value</i>	Checked	Unchecked
5	<i>Period</i>		<i>No default value</i>	Checked	Unchecked
6	<i>Amount Type</i>		<i>No default value</i>	Checked	Unchecked
7	<i>Translation Currency</i>		<i>No default value</i>	Checked	Unchecked
8	<i>Account Translation Rule Set</i>		<i>No default value</i>	Checked	Unchecked

37. Click **OK**.

38. From the related actions menu of row **R1**, select **Define > Combine Data**.

39. Enter a name in the **Row Name** field.

40. Click **OK**.

41. From the related actions menu of row **R2**, select **Define > Calculation**.

42. Enter these values:

Field	Value
<b>Row Name</b>	Total
<b>Calculation Type</b>	Sum

Field	Value
Rows	R1 (Combine Data row)
Style	Decimal Number 2 Places

43. Click **OK**.

44. Click **Run**.

45. To create your report, select values from the required prompts.

## Result

The asset roll forward report:

- Accesses the journal line as its primary object.
- Uses reporting time periods as relative time spans.
- Includes journal lines that are in *Posted* or *Pro Forma* status.
- Excludes journal lines that are in *Canceled*, *Error*, or *Draft* status.

After you create your report definition, you can share it with organization members that have the appropriate security level.

## Related Information

### Tasks

[Steps: Create Composite Reports](#)

## Populate Asset Books

### Steps: Load Assets to New Workday Implementations

#### Prerequisites

Set up asset accounting. See [Steps: Set Up Asset Accounting](#) on page 1488.

#### Context

You can load assets from another system into Workday using the *Register Assets* web service, enabling you to track and account for these assets in Workday. Workday registers assets:

- In the primary accounting asset book, populating asset information from the web service.
- In nonprimary asset books, populating:
  - The cost and quantity details from the primary accounting asset book, converted to the alternate ledger currency for asset books in an alternate ledger currency.
  - The accounting treatment and depreciation profile that you configure in asset book rules.

Workday doesn't generate accounting when you register assets using the *Register Assets* web service.

You can't register assets:

- With different quantities by book.
- In nonprimary asset books but not in the primary accounting asset book.

#### Steps

1. To load assets, create an inbound EIB based on the *Register Assets* web service operation.

Configure the *Asset Registration Event* business process and security policy in the Business Asset Accounting functional area.

See [Steps: Set Up EIBs Using Templates from Web Service Operations](#).

**2.** (Optional) [Assign Asset Accounting Information](#) on page 1497.

Review how Workday populates cost and depreciation details on assets, and change information as necessary.

The task enables you to change depreciation information in the primary accounting asset book only.

**3.** (Optional) To change cost and depreciation information in nonprimary asset books, including costs in an alternate ledger currency, create an inbound EIB based on the *Update Asset Book Configuration* web service operation.

Security: *Put* access to *Process: Non-Accounting Asset Books* domain in the Business Asset Accounting functional area.

See [Steps: Set Up EIBs Using Templates from Web Service Operations](#).

## Add Assets to a Company Asset Book

### Prerequisites

- Configure asset accounting. See [Steps: Set Up Asset Accounting](#).
- Run the **Capital Assets without Accounting Information Assigned** report to identify depreciable and nondepreciable capital assets without asset accounting information. Workday doesn't add assets to company asset books until you assign accounting information to them.
- Set up asset books and add them to companies. See [Steps: Set Up Asset Books for a Company](#).
- [Define Asset Book Rules](#).
- [Set Up Bonus Depreciation Rules](#).
- Security: These domains in the Business Asset Accounting functional area:
  - *Process: Business Asset Accounting*
  - *Setup: Company Asset Books*

### Context

When you add new asset books to a company with existing assets, you can populate the new asset books using asset information from an existing company asset book.

**Note:** Workday recommends that you load existing assets to new books with beginning balances using the *Update Asset Book Configuration* web service. See [Concept: Strategies for Populating New Company Asset Books on Existing Assets](#).

The fiscal schedule of the new company asset book should have fiscal periods from the earliest to the latest effective date for all cost activities that you copy. The depreciation start date for an asset is the earliest transaction effective date for the asset.

You can copy asset information to a company asset book at any time. When you have a lot of assets, we recommend that you run the process during off hours.

### Steps

1. Access the **Add Assets to Company Asset Book** task. You can run the task for the whole book, a specific location, or for only a specific asset.
2. As you complete the **Criteria** tab, consider:

Option	Description
<b>Company</b>	Select the company to which you want to add assets.
<b>Company Asset Book To Add Assets To</b>	Workday adds assets to this company asset book that match the specified criteria including:

Option	Description
	<ul style="list-style-type: none"> <li>Expensed assets or assets registered with accounting information assigned but not placed in service.</li> <li>Assets that don't exist in this book yet.</li> <li>Assets that don't have a condition that prevents them from Workday adding them at this time.</li> </ul>
<b>Source Asset Book</b>	The source asset book that provides the basis for the asset cost in the new book. The source asset book includes historical cost and all cost activities. If you copy assets from the primary accounting book, then Workday excludes impairments from the cost activities making up the asset cost in the nonaccounting book.
<b>Exclude Assets Disposed Earlier Than</b>	Workday adds assets with a disposal date on or after this date. Workday doesn't add assets with a disposal date before this date. Workday automatically populates the first day of the current fiscal year.
<b>Location</b>	(Optional) Select the specific location that you want to run the job for. Workday copies only the assets for this location to the new asset book.
<b>Asset ID</b>	(Optional) Select the specific asset that you want to run the job for. Workday copies only this asset to the new asset book.
<b>Depreciation Accounting Status</b>	<p>Define when Workday can or can't create journals for prior periods by setting the:</p> <ul style="list-style-type: none"> <li>Status of a depreciation expense line for an asset to <b>Accounted</b> on or before a specific date.</li> <li>Date to record depreciation until the date indicated on a new depreciation schedule.</li> </ul>
<b>Depreciation Information</b>	Select to apply the depreciation from the new asset book rules or from the source asset book.
<b>Bonus Depreciation</b>	<p>Select to use:</p> <ul style="list-style-type: none"> <li>Bonus depreciation rules.</li> <li>Copy from the source asset book.</li> <li>No bonus depreciation if it doesn't apply.</li> </ul>

3. In the **Schedule** tab, set the start date, start time, and time zone for your task.

The job runs only once.

## Result

Workday adds assets that meet the specified criteria to the new company asset book.

## Next Steps

- Confirm that for the new asset book it's zero in the **Assets to Add** column. You can run the **View Company Asset Books** report to verify the count. The count includes assets disposed of in the current fiscal year that aren't in this book.
- If a count exists, you have more assets to add before the book is complete. Run the task again, and also verify that:
  - The assets don't have any transactions in process.
  - You assigned asset accounting.
  - The latest disposal date on disposed assets isn't before the specified date.
  - Every fiscal period exists for assets that you depreciate with a depreciation rate basis of **Number of Days**.
- Use the *Update Asset Book Configuration* web service to update the historical information when:
  - An asset has historical accumulated depreciation.
  - Workday populated the asset depreciation information based on asset book rules.
- Provide a depreciation start date to indicate when depreciation starts in Workday. Historical accumulated depreciation includes historical bonus depreciation, so you should update historical bonus depreciation. The depreciable cost in the Workday depreciation schedule excludes historical accumulated depreciation. The historical accumulated depreciation sums the depreciation on all cost activities that have a transaction effective date before the depreciation start date.

### Examples

[Example: Set Depreciation Accounting Status for Company Asset Books](#) on page 1517

### Concept: Strategies for Populating New Company Asset Books on Existing Assets

When you add new asset books to companies where you already track assets, you can populate the new asset books on existing assets using 1 of these strategies:

- Migrate assets to the new asset books, which Workday recommends.
- Add assets to the new books.

### Migrating Assets to a New Asset Book

You can migrate existing assets with 1 of these web services:

- *Bulk Import Asset Book Configuration*
- *Update Asset Book Configuration*

When you migrate assets to a new asset book, Workday loads the assets in the new book with beginning balances. Workday doesn't copy the historical transactions on the assets, eliminating the need for manual adjustments on historical transactions that don't apply to the new book.

With this method, you can specify:

- The beginning cost balances for the assets in the new book. Examples:
  - Original acquisition cost.
  - Residual value.
  - Fair market value.
- The depreciation information for the assets in the new book. Examples:
  - Depreciation start date.
  - Remaining useful life.
  - Accumulated depreciation.
  - Year-to-date depreciation.

Workday doesn't create accounting for the beginning cost and accumulated depreciation balances. You can create manual journals to load the beginning cost and accumulated depreciation balances to their respective ledger accounts.

Workday applies the worktags and shares from the latest lifecycle event on an asset to the new book.

### **Adding Assets to a New Asset Book**

You can copy assets to new asset books with the **Add Assets to Company Asset Book** task. Workday recommends that you only use this strategy to populate new asset books when:

- You need to produce reports on the historical transactions on assets in the new book.
- The book you copy assets from is similar to the new book, reducing the need for manual adjustments.
- The book you copy assets from has the same currency as the new book.

This method might require you to create manual adjustments to reconcile accounting differences between assets in the new book and in the existing book:

- Cost.
- Residual value.
- Accumulated depreciation.
- Useful life.

#### **Tasks**

[Add Assets to a Company Asset Book](#) on page 1526

[2022R2 What's New Post: Data Migration for Secondary Asset Books](#)

[The Next Level: Implementing Alternate Ledger Currency](#)

### **Example Steps: Migrate Assets to a Secondary Asset Book**

This example illustrates how to migrate assets to a secondary asset book with an EIB spreadsheet.

#### **Context**

Your company is implementing multibook asset accounting. You want to add all your assets in the Accounting book that don't have a status of *Disposed* to a new IFRS book.

#### **Prerequisites**

In this example, we assume that you've already:

- Set up multibook accounting for your company.
- Added the IFRS book to your company.
- Changed the **Integration Reference ID** of the IFRS asset book to ASSET\_BOOK\_IFRS.

#### **Steps**

1. Set up an inbound EIB for the *Update Asset Book Configuration* web service.

See [Example: Set Up an Update Asset Book Configuration EIB](#) on page 1530.

2. Download a template spreadsheet that contains the assets that you want to migrate, in the format required for the *Update Asset Book Configuration* EIB.

See [Example: Download an Update Asset Book Configuration Spreadsheet Template with Data](#) on page 1531.

3. Update the assets in the spreadsheet and load them with the Update Asset Book Configuration EIB.

For all the assets that you want to upload, specify:

- The **Add Only** field as *Y*.
- The **Asset Book** field as *ASSET\_BOOK\_IFRS*.

See [Example: Load Assets in Secondary Asset Books with an EIB](#) on page 1532.

## Next Steps

You can create manual journals to load the beginning cost and accumulated depreciation balances to their respective ledger accounts.

#### Reference

[2022R2 What's New Post: Data Migration for Secondary Asset Books](#)

### Example: Set Up an Update Asset Book Configuration EIB

This example illustrates how to set up an EIB for the *Update Asset Book Configuration* web service.

## Context

You've added a new IFRS asset book to your company. To migrate asset data to the new asset book, you set up an inbound EIB with the *Update Asset Book Configuration* web service.

## Prerequisites

Security:

- *Integration Build* domain in the Integration functional area.
- *Integration Process* domain in the Integration functional area.
- *Put access to Process: Non-Accounting Asset Books* domain in the Business Asset Accounting functional area.

## Steps

1. Access the **Create EIB** task.
2. Enter *Update Asset Book Configuration EIB* in the **Name** field.
3. Select the **Inbound** option.
4. Click **OK**.
5. Enter or review these values in the **General Settings** page:

Field	Value
<b>Name</b>	<i>Update Asset Book Configuration EIB</i>
<b>ID</b>	<i>UpdateAssetBookConfigurationEIB</i>

6. Click **Next**.
7. Enter or review these values in the **Get Data** page:

Field	Value
<b>Retrieval Method</b>	<i>Attach File at Launch</i>
<b>File Type</b>	<i>Web Service Spreadsheet Template</i>
<b>Web Service Operation</b>	<i>Update Asset Book Configuration</i>

8. Click **Next**.

9. Review these values in the **Transform** page:

Field	Value
<b>Transformation Type</b>	<i>Template Model</i>
<b>Template Model from Web Service Operation</b>	<i>Update Asset Book Configuration</i>

10. Click **Next**.

11. Review these values in the **Deliver** page:

Field	Value
<b>Delivery Method</b>	<i>Workday Web Service Operation</i>
<b>Template Model from Web Service Operation</b>	<i>Update Asset Book Configuration (Web Service)</i>

12. Click **Next**.

13. Click **OK** on the **Review and Submit** page.

## Result

You can find the new *Update Asset Book Configuration EIB* integration system with the **View Integration System** report.

## Next Steps

Download a spreadsheet template with data.

### Related Information

#### Tasks

[Set Up Inbound EIB](#)

### Example: Download an Update Asset Book Configuration Spreadsheet Template with Data

This example illustrates how to download an Update Asset Book Configuration spreadsheet template with data.

## Context

Your company is implementing multibook asset accounting. You want to prepare a spreadsheet that you can use to migrate your existing assets to the new IFRS asset book. You download a spreadsheet:

- With all your assets in the Accounting book that don't have a status of *Disposed*.
- In the format expected by the Update Asset Book Configuration EIB.

## Prerequisites

- You have an asset book named Accounting that contains the assets you want to migrate.
- You've created an inbound EIB for the *Update Asset Book Configuration* web service and named it Update Asset Book Configuration EIB.
- Security: These domains in the Integration functional area:
  - Integration Configure*
  - Integration Event*
  - Integrations: EIBs*

## Steps

- Access the **View Integration System** report.
- Enter *Update Asset Book Configuration EIB* in the **Integration System** prompt.

3. Click **OK**.
4. From the related actions menu of the integration system, select **Template Model > Edit**.
5. Click the **Edit Template with Data Options** button on the **Edit Template Model** page.
6. Select the **Condition Rule Filter** option on the **Edit Generate Spreadsheet Template with Data Options** page.
7. Add 2 rows to the **Rules Conditions** grid with these values:

And/Or	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
And	Asset Book	<i>in the selection list</i>	<i>Value specified in this filter</i>	Accounting
And	Status	<i>not in the selection list</i>	<i>Value specified in this filter</i>	Disposed

8. Click **Generate Spreadsheet Template with Data**.
9. Select the **Generate Spreadsheet with Data** check box.
10. Click **Submit**.
11. Click **Refresh** in the **View Background Process** page until the process completes.

## Result

1 file displays in the **Output Files** tab.

## Next Steps

Download the output file and:

- Verify that it contains all the assets that you want to add to the new IFRS asset book.
- Update the information in the spreadsheet.
- Load the assets with the Update Asset Book Configuration EIB.

## Related Information

### Tasks

[Generate EIB Spreadsheet Template](#)

### Example: Load Assets in Secondary Asset Books with an EIB

This example illustrates how to load assets in a secondary asset book with an Update Asset Book Configuration EIB.

## Context

Your company is implementing multibook asset accounting. You've downloaded an EIB spreadsheet with the assets that you want to migrate. You now update the spreadsheet and upload it in the EIB.

## Prerequisites

You've downloaded an EIB spreadsheet with all the assets in the Accounting book that don't have a status of *Disposed*.

The **Integration Reference ID** of the asset book where you want to migrate the assets is **ASSET\_BOOK\_IFRS**.

Security:

- *Integrations: EIBs* domain in the Integration functional area.

- *Integration Event* domain in the Integration functional area.
- Put access to *Process: Non-Accounting Asset Books* domain in the Business Asset Accounting functional area.

## Steps

### 1. Update the EIB spreadsheet:

- Remove all the assets that you don't want to migrate.
- For all the remaining rows, update the values in these columns:

Add Only	Asset Book
Y	ASSET_BOOK_IFRS

### 2. Review the values in the other fields, and update them as necessary, such as:

- **Depreciation Start Date**
- **Original Acquisition Cost**
- **Residual Value**
- **Fair Market Value**
- **Remaining Useful Life**
- **Accumulated Depreciation**
- **Year to Date Depreciation**

### 3. Create a trial run to check your spreadsheet against validation errors:

- Access the **View Integration System** report.
- Enter *Update Asset Book Configuration EIB* in the **Integration System** prompt.
- Click **OK**.
- From the related actions menu of the integration system, select **Integration > Launch / Schedule**.
- Review these values in the **Launch / Schedule Integration** page:

Field	Value
Integration	<i>Update Asset Book Configuration EIB</i>
Run Frequency	Run Now

- Click **OK**.
- Review or enter these values in the **Integration Criteria** grid on the **Schedule an Integration** page:

Provider	Field	Value Type	Value
(Attachment) <i>Update Asset Book Configuration (Web Service)</i>	<i>Integration Attachment</i>	Specify Value	<i>Create an Integration Attachment</i>
(Workday Web Service) <i>Update Asset Book Configuration (Web Service)</i>	<i>Validate Only Load</i>	Specify Value	Select the check box.

- Drop your spreadsheet in the **Attachment** section of the **Create Integration Attachment** page.
- Click **OK**.
- Click **OK** on the **Schedule an Integration** page.
- Click **Refresh** in the **View Background Process** page until the process completes.
- If you see a failure report in the **Output Files** tab, review and change the data in your spreadsheet to resolve the issues.

4. When you've run an error-free trial run, load the spreadsheet data with the EIB:
  - a) Access the **View Integration System** report.
  - b) Enter *Update Asset Book Configuration EIB* in the **Integration System** prompt.
  - c) Click **OK**.
  - d) From the related actions menu of the integration system, select **Integration > Launch / Schedule**.
  - e) Review these values in the **Launch / Schedule Integration** page:

Field	Value
<b>Integration</b>	<i>Update Asset Book Configuration EIB</i>
<b>Run Frequency</b>	<i>Run Now</i>

- f) Click **OK**.
- g) Review or enter these values in the **Integration Criteria** grid on the **Schedule an Integration** page:

Provider	Field	Value Type	Value
(Attachment) <i>Update Asset Book Configuration (Web Service)</i>	<i>Integration Attachment</i>	Specify Value	<i>Create an Integration Attachment</i>
(Workday Web Service) <i>Update Asset Book Configuration (Web Service)</i>	<i>Validate Only Load</i>	Specify Value	Clear the check box.

- h) Drop your spreadsheet in the **Attachment** section of the **Create Integration Attachment** page.
- i) Click **OK**.
- j) Click **OK** on the **Schedule an Integration** page.
- k) Click **Refresh** in the **View Background Process** page until the process completes.

## Result

You can access the **Find Assets** report for a selection of the business assets you migrated. When you drill down on the asset to view the business asset details:

- Access the **Cost Detail** tab and review the new row for the IFRS book.
- Access the **Books** tab on the **View Business Assets** page and review the new row for the IFRS book.
- From the **Books** tab, drill into the new IFRS book configuration. Review these fields on the **General Information** section of the **View Asset Depreciation Schedule** page:
  - **Asset Cost**
  - **Fair Market Value**
  - **Residual Value**
- When you specified depreciation information, access the **Historical Information** tab and review these columns for the IFRS book:
  - **Depreciation Start Date**
  - **Remaining Useful Life**
  - **Accumulated Depreciation**
  - **YTD Depreciation**

## Related Information

### Tasks

[Launch EIB Spreadsheet Upload](#)

## Review Trackable Lines

### Review Trackable Lines for Assets

#### Prerequisites

- Enable trackable line reviews for assets. See [Steps: Set Up Asset Accounting](#) on page 1488.
- Create a receipt or a supplier invoice with at least 1 trackable line and without capital project worktags.
- Configure the *Receipt* business process and security policy in the Procurement functional area.
- Configure the *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.

#### Context

When you enable the review of trackable lines, as you complete supplier invoice or receipt business processes, Workday creates trackable line review tasks in My Tasks. The tasks enable you to oversee how Workday registers assets.

#### Steps

- Access 1 of these tasks in My Tasks:

- Review Trackable Invoice Lines**
- Review Trackable Receipt Lines**

- Complete the task:

Option	Description
<b>Trackable</b>	Clear the check box to prevent Workday from creating assets.
<b>Pool</b>	To override asset pooling rules for trackable lines containing more than 1 item: <ul style="list-style-type: none"> <li>Select the check box for Workday to register 1 pooled asset.</li> <li>Clear the check box for Workday to register assets individually.</li> </ul>
<b>Accounting Treatment</b>	To override the accounting treatment from your asset book rules, change the accounting treatment. Example: Register the asset as an expense instead of a depreciable capital asset.

- Click **Approve**.

#### Related Information

##### Concepts

[Register Assets](#) on page 1469

[Register Composite Assets](#) on page 1474

[Set Up Asset Pooling Rules](#) on page 1505

#### Concept: Trackable Line Reviews

You can enable trackable line reviews on supplier invoice or purchase order receipt lines with trackable items before Workday registers assets from them. As you complete supplier invoice or receipt business processes, Workday creates tasks in My Tasks, enabling you to change the:

- Trackability of items on supplier invoice or receipt lines.
- Pooling options, which Workday populates from your asset pooling rules.

- Accounting treatment in the primary accounting book, which Workday populates from your asset book rules.

When you enable the review of trackable lines for both receipt and supplier invoices and create a receipt and a supplier invoice for the same purchase order line, Workday creates 2 My Tasks items. After you complete the first review for the same purchase order line, you can still access the other task in My Tasks, but you can no longer view or change asset tracking and accounting options.

### **Partial Receipt of Purchase Order Lines**

You might create multiple receipts or supplier invoices for the same purchase order line when you partially receive purchase order lines with trackable items. You can configure Workday to always prompt reviews for these lines on the **Edit Tenant Setup - Financials** task. See [Reference: Edit Tenant Setup - Financials](#).

### **Considerations**

- You can't review lines with capital project worktags.
- To review trackable lines with a leased spend category, the transaction must be connected to a supplier contract.
- For Workday to generate correct accounting when you enable the review of trackable lines on supplier invoices and receipts, separate trackable and nontrackable items into different lines.

## **Asset Maintenance**

---

### **Adjust Asset Costs**

#### **Prerequisites**

Configure the *Asset Cost Adjustment Event* business process and security policy in the Business Asset Accounting functional area.

#### **Context**

You can adjust the acquisition or post-acquisition cost of an asset by changing the:

- Total acquisition cost.
- Quantity of assets.
- Current residual value.

Based on the adjustment date, Workday:

- Generates accounting in your accounting asset book.
- Creates a depreciation adjustment transaction for each ledger period.
- Records the difference between the booked depreciation and the projected catchup depreciation.

When you approve or deny a post-acquisition cost adjustment to an asset you capitalized from a project transaction, Workday applies the decision to all the assets you created from the same capitalization.

**Note:** You can't make changes to assets when other events are in progress.

#### **Steps**

1. From the related actions menu of a registered capital asset, select 1 of these tasks:
  - **Business Asset > Adjust Acquisition Cost.**
  - **Business Asset > Adjust Post Acquisition Cost.**

2. As you complete the fields on the **Asset Details** grid, consider:

<b>Option</b>	<b>Description</b>
<b>Transaction Effective Date</b>	<p>When you adjust acquisition costs, Workday uses the <b>Acquisition Date</b> as the transaction effective date.</p> <p>When you adjust post-acquisition costs, you can enter any date during the life of the asset.</p>
<b>Supplier Invoice Line</b>	<p>When you adjust the asset cost to reflect a change to the amount on a supplier invoice line, select the supplier invoice line that creates the asset.</p> <p>When you select a supplier invoice line, you can enter an adjustment of up to:</p> <ul style="list-style-type: none"> <li>• The amount from the quantity split, when the selected supplier invoice line creates the asset from a quantity split.</li> <li>• The entire amount of the supplier invoice line, when none of the quantity splits on the supplier invoice line create the asset.</li> </ul> <p>Workday generates accounting to move the spend from the spend category, location, and worktags on the supplier invoice to the asset when they differ. When you remove the link to the supplier invoice line, Workday cancels the operational journal.</p>

3. (Optional) On the **Asset Books** grid, clear the asset books where you don't want to record the cost adjustment.

#### Related Information

##### Concepts

[Concept: Accounting Impact of Asset Lifecycle Events](#) on page 1511

##### Tasks

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

##### Reference

[2022R2 What's New Post: Capital Project Asset Quantities](#)

## Steps: Correct or Adjust Useful Life

### Prerequisites

Configure the *Asset Useful Life Update Event* business process and security policy in the Business Asset Accounting functional area.

### Context

You can correct the useful life of an asset if:

- You capitalize an asset with incorrect life.
- There's a change in its estimated useful life.

**Note:** You can't make changes to assets when other events are in progress.

## Steps

1. Select **Business Asset > Correct Useful Life** from the related actions menu of a registered capital asset.  
Enter the correct useful life. The transaction effective date is the acquisition date and you can't change it.
2. (Optional) Select **Business Asset > Adjust Useful Life** from the related actions menu of a registered capital asset.  
Change the default transaction effective date. For depreciable assets, this date and the depreciation convention of the asset determines the first date Workday recalculates depreciation lines for the revised useful life.  
You can propose a new depreciation end date for assets on a supplier contract with a spend category of *Intangible*. The depreciation end date is the:
  - End date of a contract when the asset source is a supplier contract line receipt.
  - Last active date in the depreciation schedule when you manually register the asset from a supplier contract.

## Result

Workday creates catchup depreciation adjustments for applicable useful life changes when:

- Ledger periods have processed depreciation.
- Depreciation expenses should be a different amount.

If the asset is in multiple company asset books, you can restrict the change to one or more company asset books using **Restricted to Books**. When you don't select a company, Workday applies the change to every company asset book.

**Note:** Workday posts depreciation adjustment transactions to the ledger for the primary company asset book only. It doesn't impact depreciation in nonprimary asset books.

## Related Information

### Concepts

[Concept: Accounting Impact of Asset Lifecycle Events](#) on page 1511

### Tasks

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

## Impair Assets

### Prerequisites

- Set up asset impairment reasons.
- Configure the *Asset Impairment Event* business process and security policy in the Business Asset Accounting functional area.

### Context

When the fair market value of an asset falls permanently below its net book value, you can impair the asset to:

- Reflect the current market value of the asset.
- Reduce the value of the asset on the balance sheet.
- Account for the asset impairment expense while the asset is still in use. The impairment expense is the nonrecoverable difference between the carrying amount and the fair market value of the asset.

You can't impair leased assets that you register from a supplier contract.

**Note:** You can't make changes to assets when other events are in progress.

## Steps

- From the related actions menu of the asset, select **Business Asset > Impair**.
- As you complete the **Asset Details** grid, consider:

Option	Description
<b>Impairment Amount in Primary Book Currency</b>	<p>When you enter an impairment amount, Workday:</p> <ul style="list-style-type: none"> <li>Converts the impairment amount to a percentage of the asset cost in the primary book.</li> <li>Uses the impairment percentage to populate the <b>Impairment Amount</b> in each asset book on the <b>Asset Books</b> grid.</li> </ul> <p>When the asset has different costs in different asset books, the impairment amount varies by asset book.</p>
<b>Impairment Percentage</b>	<p>When you enter an impairment percentage, Workday:</p> <ul style="list-style-type: none"> <li>Populates the <b>Impairment Amount in Primary Book Currency</b> with the corresponding impairment amount in the primary book.</li> <li>Uses the impairment percentage to populate the <b>Impairment Amount</b> in each asset book on the <b>Asset Books</b> grid.</li> </ul>
<b>Transaction Effective Date</b>	You can't impair suspended assets. For assets that you've suspended, enter a date that's after you resume depreciation.

- (Optional) On the **Asset Books** grid, clear the asset books where you don't want to record an impairment.
- (Optional) On the **Asset Books** grid, override the **New Market Value** in each asset book.

## Result

You can access the **View Business Asset** report to verify the new asset cost. The transaction displays the impairment amount as negative on the **Cost Detail** tab.

Workday creates depreciation adjustment transactions for impairments when:

- Ledger periods have processed depreciation.
- The impairment changes the depreciation expense amount.

## Related Information

### Tasks

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

## Reclassify Assets

### Prerequisites

- Register the asset.
- Assign accounting information to the asset.
- Post depreciation for the asset.

- Configure the *Asset Reclassification Event* business process and security policy in the Business Asset Accounting functional area.

## Context

You can reclassify the spend category for capital assets that aren't:

- Fully disposed.
- Impaired.

**Note:** You can't make changes to assets when other events are in progress.

## Steps

- Select **Business Asset > Reclassify** from the related actions menu of a business asset.
- As you complete the task, consider:

Option	Description
<b>Transaction Effective Date</b>	The date the reclassification occurs. Enter a date that's: <ul style="list-style-type: none"> <li>Within a ledger period.</li> <li>Before the current date.</li> <li>After the <b>Last Transaction Date</b>.</li> </ul>
<b>Item</b> <b>Spend Category</b>	If the asset is an item, first change the item for the asset. The selected item automatically populates the spend category. You can select any spend category if the <b>Item</b> field is empty. <p>You can change the <b>Item</b>, <b>Asset Class</b>, and <b>Asset Type</b> without changing the spend category.</p> <p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p>
<b>Asset Class</b>	The spend category configuration automatically populates the asset class when you change the spend category. You can override this value, but the value you select on the <b>Maintain Asset Shares</b> task will override any value entered here.
<b>Asset Type</b>	The spend category configuration automatically populates the asset type when you change the spend category. You can override this value, but the value you select on the <b>Maintain Asset Shares</b> task will override any value entered here.
<b>Useful Life</b>	Specify a <b>Proposed Useful Life</b> for the asset. You can specify a different useful life for each asset book. Workday automatically populates the value from the asset book rules based on the spend category in the primary and secondary

Option	Description
	accounting books. You can't change the useful life of fully depreciated assets in a book.
<b>Shares</b>	Displays the number of times you share the asset costs. Click the number to drill down and view line detail about the shared cost.

## Result

Workday debits the new spend category and credits the old spend category in the primary accounting book. If the depreciation for an asset has posted, Workday reverses the depreciation from the old category and posts the depreciation to the new category.

In the new spend category, Workday calculates depreciation from the depreciation start date of the reclassify event. Workday derives the depreciation start date from the transaction effective date and the depreciation convention. If you modified the useful life, Workday recalculates the depreciation based on the new value.

## Related Information

### Tasks

[Assign Asset Accounting Information](#) on page 1497

[Register Assets](#) on page 1469

## Set Up Shared Costs of Assets

### Prerequisites

- Register an asset.
- Configure the *Asset Share Event* business process and security policy in the Business Asset Tracking functional area.

### Context

You can set up registered assets to share costs. You can't share the cost of assets that are:

- Components of a nondiscrete composite asset.
- Discrete composite assets.
- Disposed or removed.

**Note:** You can't make changes to assets when other events are in progress.

### Steps

1. Access the **Maintain Asset Shares** task from the related actions menu of an asset.
2. As you complete the task, consider:

Option	Description
<b>Amount Split</b>	Equal to the sum of the <b>Asset Share Amount</b> values for all share lines.
<b>Amount to be Split</b>	The total asset cost. The amount changes as you add rows and enter the <b>Share Percent</b> or <b>Asset Share Amount</b> . The final <b>Amount to be Split</b> value must be zero.

Option	Description
<b>Share Percent</b>	When you adjust the asset cost or accounting, Workday uses the percentage to determine the amounts to apply to each line of the shared asset.
<b>Asset Share Amount</b>	Displays the shared amount for each line. The sum of all lines is equal to the <b>Amount Split</b> value.
<b>Asset Class</b> <b>Asset Type</b>	You can select the same <b>Asset Class</b> or <b>Asset Type</b> on more than 1 row. The <b>Asset Class</b> or <b>Asset Type</b> you select overrides your previous selections.
<b>Worktags</b>	Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values. When you Submit, Workday validates that you have selected allowed or required values based on your related worktag configuration.

## Next Steps

Review shared asset line splits to determine accounting cost sharing and the share of costs related to lifecycle events. Select the **Asset Shares** link on the **View Business Asset** or **View Asset by Book** tasks.

Create custom reports for the single asset and drill down to view the shared cost details. You can report by:

- Asset cost.
- Asset class.
- Asset type.

### Tasks

[View Assets](#) on page 1476

## Depreciation

---

### Set Up Depreciation Profiles

#### Prerequisites

Security: *Set Up: Business Asset Accounting* domain in the Business Asset Accounting functional area.

#### Context

Depreciation profiles enable you to configure how Workday creates depreciation schedules when you place depreciable capital assets in service.

## Steps

1. Access the **Create Depreciation Profile** task.
2. As you complete the task, consider:

Option	Description
<b>Depreciation Method</b>	Workday only displays the options relevant to the depreciation method that you select. See <a href="#">Reference: Depreciation Methods</a> on page 1554.
<b>Depreciation Percent</b>	<p>Enter the annual depreciation percentage that Workday applies to the asset cost or net book value for these depreciation methods:</p> <ul style="list-style-type: none"> <li>• <i>Declining Balance</i></li> <li>• <i>Declining Balance with switch to Straight Line</i></li> </ul> <p>Example: For the double declining balance method, enter 200.</p>
<b>Depreciation Threshold</b>	<p>When you select the <i>Declining Balance</i> method, enter a depreciation limit that is greater than zero and less than the cost of the asset. When the net book value of the asset falls under <b>Depreciation Threshold + Residual Value</b>, Workday fully depreciates the asset.</p>
<b>Rate Schedule</b>	<p>When you select the <i>Rate Schedule</i> Depreciation method, you can create or select a rate schedule for the depreciation profile.</p> <p><b>Note:</b> You can only use rate schedules with a depreciation convention of <i>Current Period</i>.</p>
<b>Depreciation Rate Basis</b>	<p>Select whether you want to calculate the depreciation expense by periods or by days.</p> <p>Example: When you select the <i>Straight Line</i> depreciation method:</p> <ul style="list-style-type: none"> <li>• With a <b>Depreciation Rate Basis</b> of <i>Number of Days</i>, the period depreciation amount varies with the number of days in each period.</li> <li>• With a <b>Depreciation Rate Basis</b> of <i>Periods</i>, the depreciation amount is the same for all the periods, with possible rounding differences.</li> </ul>
<b>Useful Life (Periods)</b>	<p>Enter the number of periods over which the asset is in use and depreciates. You can enter a useful life with these depreciation methods:</p> <ul style="list-style-type: none"> <li>• <i>Straight Line</i></li> <li>• <i>Declining Balance with switch to Straight Line</i></li> <li>• <i>Sum of Years Digits</i></li> </ul> <p>When you select the <i>Rate Schedule</i> depreciation method, Workday populates this field from the rate schedule. To change the useful life on the depreciation profile, update the rate schedule.</p>

Option	Description
<b>Place In Service Based On</b>	<p>Select <i>Manually</i> or <i>When Issued</i> to place the asset in service with 1 of these tasks:</p> <ul style="list-style-type: none"> <li>• The <b>Issue Assets</b> task.</li> <li>• The <b>Issue to a Worker</b> task from the related actions menu on the asset.</li> <li>• The <b>Place In Service</b> task from the related actions menu on the asset.</li> </ul> <p>Select <i>Upon Acquisition</i> for Workday to place the asset in service:</p> <ul style="list-style-type: none"> <li>• When you register the asset manually using the <b>Register Assets</b> task.</li> <li>• When Workday registers assets from a service step on the <i>Receipt</i> and <i>Supplier Invoice Event</i> business processes.</li> <li>• When you register assets from a supplier contract line.</li> </ul> <p>With multibook asset accounting, Workday recommends that you use the same <b>Place in Service</b> date for all the depreciation profiles, preferably upon acquisition.</p>
<b>Depreciation Convention</b>	<p>The <b>Depreciation Convention</b> that you select impacts:</p> <ul style="list-style-type: none"> <li>• The depreciation start date.</li> <li>• The depreciation amount for the first and last periods of the asset useful life.</li> </ul> <p>See <a href="#">Reference: Depreciation Conventions</a> on page 1557.</p>
<b>In Use</b>	<p>Workday selects this check box when at least 1 asset book rule uses this depreciation profile.</p>
<b>Inactive Depreciation Profile</b>	<p>Select this check box to prevent users from accidentally selecting this depreciation profile.</p> <p>You can't deactivate depreciation profiles that are in use.</p> <p>When you complete the <i>Assign Asset Accounting Information</i> business process step on assets before deactivating depreciation profiles, you can still register these assets.</p>

## Next Steps

- Create at least 1 asset book rule for Workday to populate your depreciation profile when you assign accounting information to assets.
- Run the **Find Depreciation Profile** report to review your depreciation profiles.
- Access the **Edit Depreciation Profile** task to maintain, deactivate, or reactivate depreciation profiles.

**Related Information****Tasks**[Adjust an Asset In Service Date](#) on page 1478[Assign Asset Accounting Information](#) on page 1497**Examples**[Example: Add Asset Details to Preview Depreciation Schedule](#) on page 1559

## Create Custom Depreciation Rate Schedules

**Prerequisites**Security: *Set Up: Business Asset Accounting* domain in the Business Asset Accounting functional area.**Context**

Rate schedules enable you to define custom depreciation percentages for each period that assets depreciate.

**Steps**

1. Access the **Create Rate Schedule** task.
2. As you complete the task, consider:

Option	Description
<b>Usage Count</b>	Displays how many depreciation profiles and asset book configurations use this rate schedule. You can delete rate schedules or edit period ranges on rate schedules only when their usage count is zero.
<b>Currency for Depreciable Basis</b>	Determines the decimal precision for the sample depreciation expense lines.
<b>Depreciable Basis</b>	Workday uses this amount to calculate the sample depreciation expense lines.

3. As you add rows for your depreciation period ranges, consider:

Option	Description
<b>Depreciation Percentage for Range</b>	Enter the total depreciation percentage between the <b>From Period</b> and the <b>To Period</b> . The depreciation percentages for all ranges must total 100.
<b>Periodic Rate</b>	Illustrates the percentage of depreciation for 1 period based on the information that you enter.
<b>Sample Depreciation Expense</b>	Illustrates the depreciation expense for 1 period based on the information that you enter. This informational field doesn't reflect lifecycle events that you perform on assets.

**Example**

To track intangible assets following a 3-year sales curve with an estimated amortization of 56% for the first year, 24% for the second year, and 20% for the third year, you create a rate schedule with these period ranges:

From Period	To Period	Depreciation Percentage for Range
1	12	56%
13	24	24%
25	36	20%

## Next Steps

To populate rate schedules on assets, create new depreciation profiles with a depreciation method of **Rate Schedule** and update your asset book rules.

#### Reference

[2023R2 What's New Post: Custom Depreciation Rate Schedules](#)

## Set Up Bonus Depreciation Rules

### Prerequisites

- Set up asset books.
- Set up asset classes.
- Set up asset types.
- Security: *Set Up: Business Asset Accounting* domain in the Business Asset Accounting functional area.

### Context

You can set up bonus depreciation rules on your nonaccounting asset books.

### Steps

1. Access the **Maintain Bonus Depreciation Rules** task.
2. As you complete the task, consider:

Option	Description
<b>Asset Book</b>	You can define bonus depreciation rules only on nonaccounting books.
<b>Company</b>	Select the company or hierarchy to which the rule applies. Leave empty for the rule to apply to assets in all your companies.
<b>Acquisition Date</b>	You can restrict the bonus depreciation rule to assets that you acquire between a <b>From</b> and a <b>To</b> date.  When you only enter a <b>From</b> date, Workday evaluates all the assets with an acquisition date on or after that date.  When you only enter a <b>To</b> date, Workday evaluates all the assets with an acquisition date on or before that date.
<b>In Service Date</b>	You can restrict the bonus depreciation rule to assets that you place in service between a <b>From</b> and a <b>To</b> date.

Option	Description
	<p>When you only enter a <b>From</b> date, Workday evaluates all the assets that you placed in service on or after that date.</p> <p>When you only enter a <b>To</b> date, Workday evaluates all the assets that you placed in service on or before that date.</p>
<b>Asset Class</b> <b>Asset Type</b>	Select the asset classes or types to which the bonus depreciation percentage applies. Leave empty for the rule to apply to the assets in all asset classes and asset types.
<b>Location</b>	You can only select hierarchies with at least 1 location that has asset usage. Leave empty for the rule to apply to the assets in all locations.
<b>Default Bonus Depreciation Percent</b>	The percentage of bonus depreciation that Workday applies to the assets matching the rule criteria. You can leave the percent as <i>0</i> when you explicitly want to set up a rule where no bonus depreciation applies.
<b>Minimum Days for Recapture</b>	<p>This value is informational only. You can use this value:</p> <ul style="list-style-type: none"> <li>• In the asset disposal business process definition, in a condition rule.</li> <li>• As an indication on when you might want to recapture bonus depreciation for assets that you dispose before the minimum number of days.</li> <li>• In custom reports.</li> </ul>

3. (Optional) Order the rules from most to least restrictive.
4. (Optional) Click **Test Bonus Depreciation Rules** to view how Workday evaluates the bonus depreciation rules on sample asset information.

## Result

When you place an asset in service, Workday evaluates the rules in the order that you define to determine the percentage of bonus depreciation. Workday stops evaluating rules on the first match. If an asset doesn't match any of your bonus depreciation rules, Workday applies a bonus depreciation of zero percent.

You can view the bonus depreciation amount on the **Depreciation Detail** tab on the **View Business Asset** page.

## Record Asset Depreciation and Amortization Expenses

### Prerequisites

Security: Process: *Business Asset Accounting* domain in the Business Asset Accounting functional area.

### Context

You can schedule Workday to record depreciation and amortization expenses for company assets once or recurringly.

## Steps

1. Access the **Record Depreciation Amortization Expense** task.

2. Select a **Run Frequency**.

The run frequency controls the **Schedule** tab, where you can configure how often Workday records depreciation and amortization expenses.

Workday selects all unprocessed depreciation and amortization lines up to and including the period when the task runs.

3. Enter a **Request Name**.

Workday displays the request name in reports.

4. As you complete the **Record Depreciation Amortization Expense** tab, consider:

Option	Description
<b>Company</b>	You can run the task for company hierarchies where all companies have the same fiscal schedule.
<b>Depreciation</b> <b>Amortization</b>	When you select both the <b>Depreciation</b> and <b>Amortization</b> check boxes, Workday records them on the same schedule.
<b>Posting Date</b>	<p>Displays when you select the <i>Run Now</i> or <i>Run Once in the Future</i> run frequency.</p> <p>Select a date in an open ledger period.</p> <p>When calculating year-to-date depreciation, Workday deems depreciation expenses effective as of the last day of the period you post them in. Example: You record depreciation expenses with a posting date of December 10:</p> <ul style="list-style-type: none"> <li>On December 14, the Depreciation Recorded Year to Date field on the Accounting tab of assets doesn't include the December 10 depreciation expense.</li> <li>On December 31, the Depreciation Recorded Year to Date field on the Accounting tab of assets includes the December 10 depreciation expense.</li> </ul>
<b>Posting Date Option</b>	<p>Displays when you select a recurring run frequency.</p> <p>Workday determines the accounting date for a given depreciation run based on the <b>Posting Date Option</b> that you select:</p> <ul style="list-style-type: none"> <li>When you select <i>Current Period</i>, Workday posts the depreciation or amortization expense on the last day of the period when the task runs.</li> <li>When you select <i>Previous Period</i>, Workday posts the depreciation or amortization expense on the last day of the period before the task runs.</li> </ul>

Option	Description
	When the task runs during a closed period, Workday posts the depreciation or amortization expense on the last day of the next open period.
<b>Asset ID</b>	<p>When you can't find an asset, make sure that:</p> <ul style="list-style-type: none"> <li>The asset has accounting information assigned.</li> <li>The asset has depreciation or amortization expenses to post based on the posting date.</li> <li>The spend category on the asset has an associated depreciation profile.</li> <li>The <b>Process History</b> tab on the <b>View Business Asset</b> report doesn't display other events in progress.</li> </ul>
<b>Run Preview</b>	<p>Displays when you select the <i>Run Now</i> or <i>Run Once in the Future</i> run frequency.</p> <p>This check box enables you to verify the details of depreciation or amortization expenses before Workday records them.</p> <p>The preview might take several seconds to load.</p>

5. As you complete the **Schedule** tab, consider:

Option	Description
<b>Catch Up Behavior</b>	Workday uses this field to determine how many times to run the task after maintenance issues cause errors. You can limit the task to run once instead of catching up all missed occurrences.

The **Schedule** tab displays when you select a recurring run frequency.

## Result

Workday posts depreciation and amortization expenses to:

- All company asset books. When the asset is in multiple books, set up asset book restrictions to specify which ones to post to.
- Ledgers as 1 journal per company, summarized by spend category, location, and worktags. The journal accounting date is the posting date that you specify in your account posting rules for depreciation and accumulated depreciation.

## Next Steps

Run the **Scheduled Future Processes** report and access the related actions menu on your scheduled process to:

- View details about scheduled depreciation and amortization runs.
- Reschedule runs.
- Set up notifications when scheduled runs fail or complete.

## Related Information

### Tasks

[Manage Scheduled Future Processes](#)

## Suspend and Resume Asset Depreciation

### Prerequisites

- [Assign Asset Accounting Information](#) on page 1497.
- Place assets in service.
- Security: *Process: Business Asset Accounting* domain in the Business Asset Accounting functional area.

### Context

You can suspend and resume depreciation for assets.

Workday:

- Sets the status of business assets that you suspend to *Out of Service*.
- Extends the useful life of assets by the number of days suspension occurred.
- Sets the depreciation amount to zero for periods where depreciation suspension fully occurred.

To view when you suspended and resumed depreciation for assets by book, access the **In Service Schedule** tab on the **View Asset by Book** report.

**Note:** You can't make changes to assets when other events are in progress.

### Steps

1. From the related actions menu of an asset in service, select **Business Asset > Suspend Depreciation**.
2. As you complete the task, consider:

Option	Description
<b>Restricted to Books</b>	When an asset is in multiple company asset books, either: <ul style="list-style-type: none"> <li>• Select the books where you want to apply the change.</li> <li>• Leave the field blank to apply the change in every book.</li> </ul>
<b>Suspend Schedule</b>	Displays the dates when you suspend and resume depreciation by asset book.

3. From the related actions menu of a suspended asset, select **Business Asset > Resume Depreciation**.
4. As you complete the task, consider:

Option	Description
<b>Transaction Effective Date</b>	You can't schedule depreciation to resume at a future date.  You can cancel depreciation suspension by resuming depreciation on the same effective date as the latest suspension date on the asset. Workday clears the latest <b>In-Service To Date</b> and doesn't create any new entry in-service schedule.  You can enter a future date only to cancel depreciation suspension.

## Related Information

### Tasks

[Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501

## Cancel Depreciation Transactions

### Prerequisites

- [Record Asset Depreciation and Amortization Expenses](#) on page 1547.
- Security: *Process: Business Asset Accounting* domain in the Business Asset Accounting functional area.

### Context

When you record depreciation on assets with the **Record Depreciation Amortization Expense** task, Workday creates multiple depreciation transactions that group depreciation expenses for multiple assets with the same:

- Company.
- Ledger period.
- Spend category.

You can cancel depreciation transactions as long as you haven't:

- Closed the period or started closing the period.
- Disposed of any of the assets.
- Recorded subsequent depreciation on any of the assets.

You can't cancel depreciation or depreciation adjustments that Workday posts automatically when you perform lifecycle events on assets such as transfers, reclassifications, or disposals.

You can't cancel depreciation transactions when you select the **Always Reverse Operational and Noncontrolling Interest Journals** check box in the **Journal Options** section on the **Edit Tenant Setup - Financials** task.

### Steps

1. Access the **Process Monitor** report.

You can filter by:

- **Process Type** as *Job*.
- **Process** as *Record Depreciation Amortization Expense*.

2. From the **Request** column in the **Background Processes** grid, access the request with depreciation transactions to cancel.
3. (Optional) Drill down on depreciation transaction details from the **Count** column in the **Depreciation Expense Details** grid on the **View Background Process** task.
4. From the related actions menu on each depreciation transaction to cancel, select **Depreciation Transaction > Cancel**.

When canceling depreciation transactions for multiple periods, start with the latest period.

You can also access depreciation transactions from the **Status** column on the **Depreciation Detail** tab of assets.

### Result

When there are no errors, Workday cancels the depreciation expenses posted for all assets in the depreciation transaction.

When there are errors, Workday doesn't cancel any depreciation expense.

## Example

To correct depreciation posted in the wrong period due to an erroneous posting date, you:

- Locate all depreciation transactions associated with the request.
- Cancel them individually.
- Run the **Record Depreciation Amortization Expense** task again with the correct posting date.

## Concept: Depreciation Profiles

Depreciation profiles provide the building blocks for Workday to create depreciation schedules.

When you assign accounting information to an asset, Workday populates the depreciation profile on the asset from:

- Asset book rules.
- The asset information.

Then, Workday populates these depreciation details on the asset from the depreciation profile, when applicable:

- Depreciation convention.
- Depreciation method.
- Depreciation percent.
- Depreciation threshold.
- Rate schedule.
- Useful life.

When you place a capital asset in service, Workday creates the depreciation schedule based on the depreciation details on the asset.

An asset can have different depreciation profiles in different asset books.

## Changing Depreciation Details on Assets

You can access the **Change Accounting Information** task from the related actions menu of assets with no posted depreciation to change their depreciation details. When you change depreciation details on assets, Workday doesn't apply these changes to the depreciation profile.

After you start recording depreciation on assets, you can no longer change the depreciation:

- Convention
- Method
- Percent
- Threshold

You can still adjust:

- The rate schedule on assets that use custom depreciation rate schedules. See [Steps: Perform Lifecycle Events for Capital Assets](#) on page 1501.
- The useful life. See [Steps: Correct or Adjust Useful Life](#) on page 1537.

## Maintaining Depreciation Profiles

Changes to depreciation profiles aren't retroactive. When you edit a depreciation profile, your changes only apply to assets that you register after the change.

You can delete depreciation profiles that you've never selected in asset book rules or on assets. You can no longer delete depreciation profiles after you use them, but you can deactivate any depreciation profiles that your asset book rules no longer use.

## Concept: Bonus Depreciation Rules

Bonus depreciation rules enable you to apply an additional depreciation percentage during the first depreciation period of an asset.

You can define bonus depreciation rules only on nonaccounting books.

You can restrict the applicability of bonus rules to assets:

- That you acquire or place in service during a given time period.
- With given asset classes.
- With given asset types.
- In given locations.

## Calculation

Workday calculates the bonus depreciation amount as:

Bonus depreciation amount = Bonus depreciable basis x Bonus depreciation percentage

## Bonus Depreciable Basis

Workday applies the bonus depreciation percentage to the:

- Asset acquisition costs.
- Post-acquisition cost adjustments with a transaction effective date either:
  - Before the asset starts depreciating.
  - In the first depreciation period of the asset, based on the depreciation convention on the asset.

You can specify a maximum depreciable amount for an asset with the *Update Asset Book Configuration* web service.

## Examples

This table illustrates how Workday calculates the bonus depreciation on an asset with these sample values:

- Bonus depreciation percentage: 50.
- Acquisition cost: 10,000 USD.
- Date placed in service: 01/31.
- Maximum bonus depreciation basis in the book: 16,000 USD.
- Post-acquisition cost adjustments:
  - 5,000 USD on 02/03.
  - 2,000 USD on 07/15.

Depreciation Convention	Depreciation Start Date	Bonus Depreciable Basis (USD)	Bonus Depreciation (USD)
Half Year	07/01	16,000 Calculated as the minimum of: • 10,000 + 5,000 + 2,000 = 17,000	8,000 Calculated as 16,000 x 50 / 100

Depreciation Convention	Depreciation Start Date	Bonus Depreciable Basis (USD)	Bonus Depreciation (USD)
		<ul style="list-style-type: none"> <li>• 16,000</li> </ul>	
<i>Half Year Pro Rata</i>	01/31	10,000 Calculated as the minimum of: <ul style="list-style-type: none"> <li>• 10,000</li> <li>• 16,000</li> </ul>	5,000 Calculated as $10,000 \times 50 / 100$
<i>Mid-Month</i>	01/16	10,000 Calculated as the minimum of: <ul style="list-style-type: none"> <li>• 10,000</li> <li>• 16,000</li> </ul>	5,000 Calculated as $10,000 \times 50 / 100$
<i>Mid-Quarter</i>	02/15	15,000 Calculated as the minimum of: <ul style="list-style-type: none"> <li>• <math>10,000 + 5,000 = 15,000</math></li> <li>• 16,000</li> </ul>	7,500 Calculated as $15,000 \times 50 / 100$

## Reference: Depreciation Methods

Workday supports most standard depreciation methods.

In this table, the depreciable basis for an asset is the cost for the asset - the bonus depreciation amount - the residual value.

Depreciation Method	Description	Options
<i>Declining Balance</i>	<p>Workday applies the annual depreciation percentage to the asset depreciable basis (during the first year) or net book value (during the subsequent years).</p> <p>The depreciation expense is greater during the earlier years that the asset is in service, and declines in the subsequent years.</p> <p>When the depreciation expense for a period brings the net book value under the <b>Depreciation Threshold + Residual Value</b>, Workday fully depreciates the asset during this period.</p>	<ul style="list-style-type: none"> <li>• <b>Depreciation Percent</b></li> <li>• <b>Depreciation Threshold</b></li> <li>• <b>Depreciation Rate Basis</b></li> </ul>
<i>Declining Balance with switch to Straight Line</i>	<p>Each period, Workday calculates:</p> <ul style="list-style-type: none"> <li>• The depreciation amount from the straight-line method.</li> </ul>	<ul style="list-style-type: none"> <li>• <b>Depreciation Percent</b></li> <li>• <b>Depreciation Rate Basis</b></li> <li>• <b>Useful Life (Periods)</b></li> </ul>

Depreciation Method	Description	Options
	<ul style="list-style-type: none"> <li>• The depreciation amount from the declining balance method.</li> </ul> <p>When the amount from the declining method is greater than the amount from the straight-line method, Workday applies the declining balance method.</p> <p>When the amount from the declining method is less than the amount from the straight-line method, Workday uses the straight-line method for the remaining periods.</p>	
<i>Rate Schedule</i>	<p>Each period, Workday applies the periodic rate from your rate schedule to the asset depreciable basis.</p> <p>When you perform transactions on assets that modify the depreciation schedule, Workday creates a new rate schedule with a name that ends with (Workday-Created). You can't view, edit, or delete rate schedules that Workday creates directly. You can only modify these rate schedules through transactions on assets.</p> <p>When you lengthen the useful life for assets, Workday adds periods with zero depreciation after the last period in the rate schedule.</p> <p>When you shorten the useful life for assets, Workday adds the prorated depreciation expense from the periods that you remove to the periods after the transaction effective date.</p> <p>When you suspend and resume depreciation on assets, Workday adds periods to the depreciation schedule to catch up the periods when you suspend the assets.</p> <p>For historical assets, Workday resumes depreciation from the depreciation start date that you specify when you register the assets in Workday. Example: You register a historical asset with 6 periods of depreciation</p>	<ul style="list-style-type: none"> <li>• <b>Depreciation Rate Basis</b></li> <li>• <b>Depreciation Convention as Current Period</b></li> <li>• <b>Useful Life (Periods)</b> as the number of periods in the rate schedule.</li> </ul>

Depreciation Method	Description	Options
	from another system. The first period that the asset depreciates in Workday, Workday applies the periodic rate from period 7.	
<i>Straight Line</i>	<p>When the depreciation rate basis is <i>Periods</i>, Workday calculates the period depreciation expense as the asset depreciable basis divided by the number of periods in the useful life for the asset.</p> <p>When the depreciation rate basis is <i>Number Of Days</i>, Workday calculates:</p> <ul style="list-style-type: none"> <li>• The daily depreciation expense as the asset depreciable basis ÷ the number of days in the useful life for the asset.</li> <li>• The period depreciation expense as the daily depreciation expense × the number of days in the period.</li> </ul> <p>The rounding of depreciation expenses might cause slight variations between periods.</p>	<ul style="list-style-type: none"> <li>• <b>Depreciation Rate Basis</b></li> <li>• <b>Useful Life (Periods)</b></li> </ul>
<i>Sum of Years Digits</i>	<p>Workday recognizes most of the depreciation in the earlier periods that assets are in service.</p> <p>The sum of years' digits is the sum of the remaining years of useful life for each year.</p> <p>Workday steps down the depreciation at the start of each fiscal year. When the first year of depreciation is a partial year, Workday adds the under-depreciated portion of the year to the subsequent years.</p> <p>Example: You have an asset with 5 years of useful life and a depreciation convention of <i>Current Period</i>. You place the asset in service in January. The sum of years' digits is <math>5 + 4 + 3 + 2 + 1 = 15</math>. The depreciation for the first year is <math>5 \div 15</math>, or 33.33%, of the asset depreciable basis.</p>	<ul style="list-style-type: none"> <li>• <b>Depreciation Rate Basis as Periods</b></li> <li>• <b>Useful Life (Periods)</b></li> </ul>
<i>Term</i>	You can select this depreciation method for assets that you create	<b>Depreciation Rate Basis</b>

Depreciation Method	Description	Options
	<p>from supplier contracts within or outside of Workday, including leased and intangible assets.</p> <p>When assigning term depreciation to assets, either through asset book rules or when manually assigning accounting information, you must specify:</p> <ul style="list-style-type: none"> <li>• Contract start and end dates, for assets that you register from a supplier contract in Workday.</li> <li>• External contract start and end dates, for assets that you register manually.</li> </ul> <p>Workday determines the useful life for assets based on:</p> <ul style="list-style-type: none"> <li>• The start and end dates on the supplier contract.</li> <li>• The number of days you suspend assets.</li> </ul> <p>To calculate the period depreciation, Workday applies the calculations from the straight-line method.</p> <p><b>Note:</b> When you want to continue depreciating assets that you migrate from an external system, we recommend that you use the straight-line depreciation method. Workday doesn't enable you to register these assets in secondary asset books with term depreciation.</p>	

#### Related Information

##### Reference

[2023R2 What's New Post: Custom Depreciation Rate Schedules](#)

#### Reference: Depreciation Conventions

The depreciation convention that you select impacts:

- The depreciation start date of assets.
- The amount for the depreciation expense in the first period, month, quarter, or year that you place assets in service.
- The amount for the depreciation expense in the year of disposal.

Depreciation Convention	Depreciation Start Date	Additional Considerations
<i>Current Period</i>	The first day of the period that you place assets in service.	In the first period that you place assets in service, Workday records a depreciation amount for the full period.
<i>Current Period Pro-rata</i>	The day that you place assets in service.	In the first period that you place assets in service, Workday prorates the depreciation amount to the number of days that assets are in service.
<i>Half Year</i>	The middle day of the fiscal year that you place assets in service.  Example: The first day of the seventh period in a 12-period fiscal year.	In the first fiscal year that you place assets in service, Workday records a depreciation amount for half a year.  Adjustments and cost activities are effective as of the middle day of the fiscal year. Example: July 1st for calendar years.
<i>Half Year Pro-rata</i>	The day that you place assets in service.	To calculate depreciation during the first fiscal year, Workday first calculates the first year depreciation amount using the <i>Half Year</i> accounting convention. Then, Workday distributes the first year depreciation amount across the first year periods from the date that you place assets in service.  When you dispose of an asset that still has useful life left, Workday adjusts the depreciation amount of the last year to catch up the depreciation amount of the half year.  Adjustment and cost activities after acquisition follow the current period convention.
<i>Mid-Month</i>	The middle day of the month that you place assets in service.	In the first month that you place assets in service, Workday records a depreciation amount for half a month. When the <b>Depreciation Rate Basis</b> is <i>Period</i> , the depreciation amount for the first and last periods is half the regular period amount.
<i>Mid-Quarter</i>	The middle day of the fiscal quarter that you place assets in service.	In the first quarter that you place assets in service, Workday records a depreciation amount for half a fiscal quarter.

Depreciation Convention	Depreciation Start Date	Additional Considerations
<i>Modified Half-Period</i>	For assets that you place in service in the first half of the fiscal period: the first day of the period that you place assets in service.  For assets that you place in service in the second half: the first day of the period following the date that you place assets in service.	For assets that you place in service in the first half of the period, Workday uses the <i>Current Period</i> convention. For assets that you place in service in the second half, Workday uses the <i>Next Period</i> convention.
<i>Next Period</i>	The first day of the period following the date that you place assets in service.	

## Example: Add Asset Details to Preview Depreciation Schedule

This example illustrates how you can preview the depreciation schedule for an asset before you register it.

### Context

As an asset accountant, you can view the depreciation calculations for each fiscal period before you register an asset. You can enter the asset depreciation and cost details using the **Preview Depreciation Schedule** report to generate depreciation schedules.

### Prerequisites

Set up a company, asset book, fiscal schedule, and fiscal years.

### Steps

1. Access the **Preview Depreciation Schedule** report.
2. In the **General Information** section, enter these values:

Field	Value
<b>Asset ID</b>	Blank
<b>Company</b>	GMS USA
<b>Asset Book</b>	Workday automatically populates this field with the primary asset book.
<b>Fiscal Schedule</b>	Workday automatically populates the schedule.
<b>Worktags</b>	Blank
<b>Location</b>	Blank
<b>Asset Shares</b>	Workday automatically populates this field from the selected Asset ID.

3. In the **Depreciation Information** section, enter these values:

Field	Value
<b>Depreciation Profile</b>	Blank
<b>Depreciation Method</b>	Straight Line

Field	Value
<b>Depreciation Rate Basis</b>	Periods
<b>Useful Life (Periods)</b>	24
<b>Depreciation Posting Frequency</b>	Workday automatically populates the frequency.
<b>Place In Service Based On</b>	Upon Acquisition
<b>Depreciation Convention</b>	Current Period

4. In the **Asset Details** section, enter these values:

Field	Value
<b>Currency</b>	Workday automatically populates the currency.
<b>Asset Cost</b>	13,000.00
<b>Residual Value</b>	1,000.00
<b>Bonus Depreciation %</b>	Blank  You can specify the bonus depreciation for any asset book, but you can only use bonus depreciation in nonaccounting books.
<b>Accumulated Depreciation</b>	Blank
<b>Historical Bonus Depreciation</b>	Blank
<b>Year to Date Depreciation</b>	Workday displays this field only when you enter accumulated depreciation, and the <b>Depreciation Method</b> isn't <i>Straight Line</i> or <i>Term</i> .
<b>Remaining Useful Life</b>	Workday displays this field only when you enter accumulated depreciation.
<b>Acquisition Date</b>	Current Period
<b>Date Placed in Service</b>	Workday automatically populates the date and places the asset in service upon acquisition.
<b>Depreciation Start Date</b>	Workday displays this field only when you enter accumulated depreciation.

5. Click **Calculate**.

Workday generates a depreciation schedule.

6. Click **OK** to export the report.

## Result

The asset accountant can:

- View the depreciation schedule before registering an asset.
- Ensure that generated depreciation expense lines are correct.

## Related Information

### Tasks

[Set Up Depreciation Profiles](#) on page 1542

## Example: Schedule Asset Depreciation and Amortization Expense Runs

This example illustrates how to schedule monthly asset depreciation and amortization runs so Workday automatically posts depreciation or amortization expenses.

### Context

You schedule depreciation and amortization runs for Global Modern Services, Inc. (USA) for the upcoming tax year.

Your fiscal year starts on January 1st.

Your company records depreciation and amortization expenses on the 4th day of every month at 10 am. When the 4th day of a given month falls on weekends or holidays, you record depreciation and amortization expenses on the next business day.

### Prerequisites

Security: Process: Business Asset Accounting domain in the Business Asset Accounting functional area.

### Steps

1. Access the **Record Depreciation Amortization Expense** task.
2. Select the *Monthly Recurrence* option from the **Run Frequency** prompt.
3. Click **OK**.
4. Enter *Monthly Depreciation Amortization Run* in the **Request Name** field.
5. Enter or select these values on the **Filter Criteria** section:

Option	Value
Company	Global Modern Services, Inc. (USA)
Posting Date Option	Prior Period

6. Enter or select these values on the **Schedule** tab:

Option	Value
Recurrence Type	Day(s) of the Month and 4th
Start Time	10:00 AM
Start Date	January 4 of next year
End Date	December 4 of next year

7. Click **OK** and **Done**.
8. Access the **Scheduled Future Processes** report.
9. To filter the list of results, select these values:

Option	Value
Recurrence Start Date	January 4 of next year
Process	Record Depreciation Amortization Expense

10. Click **OK**.
11. Locate the row with **Scheduled Process** as *Monthly Depreciation Amortization Run*.
12. From the related actions menu on the *Monthly Depreciation Amortization Run* scheduled process, select **Schedule Future Process > View All Occurrences**.

**13.**Select these values:

Option	Value
<b>Start Time</b>	January 1 of next year at 12:00:00 AM
<b>End Time</b>	December 5 of next year at 12:00:00 AM

**14.**Click **OK**.

**15.**On the **Recurrence Details** grid, locate the recurrences with fire times on weekends or holidays.

**16.**For each of these recurrences:

- a) Click **Edit** next to the fire time.
- b) Select these values:

Option	Value
<b>Fire Date</b>	The following business day
<b>Fire Time</b>	10:00 AM

- c) Click **OK** and **Done**.

## Concept: Leased Assets

---

Leased assets have spend categories that you've configured for lease accounting. See [Create Spend Categories for Lease Accounting](#) on page 1578.

### Leased Assets from Supplier Contracts Within Workday

When you fully receive lease-type supplier contracts, Workday creates leased assets that you can register, track, and depreciate in Workday. Workday populates asset details from the supplier contract and restricts the actions that you can directly perform on leased assets. When you amend supplier contracts, Workday updates asset details. See [FAQ: Assets on Lease-Type Supplier Contract Amendments](#) on page 1588.

You can't issue these assets to workers.

### Leased Assets from External Supplier Contracts

You can also manually register leased assets in Workday while maintaining lease contract information on external applications.

When you manually register leased assets:

- Select the *Leased* acquisition method.
- For leased assets with term depreciation, enter external contract start and end dates.

### Related Information Concepts

[Setup Considerations: Lease Accounting](#) on page 1563

### Examples

[Workday Community: Business Asset - Lifecycle Event Availability](#)

# Lease Accounting

---

## Lease Accounting Setup

---

### Setup Considerations: Lease Accounting

You can use this topic to help make decisions when planning your configuration and use of lease accounting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Lease accounting in Workday automatically generates lease transactions from supplier contracts. You can then create financial reporting on your right-of-use (ROU) assets and lease liabilities. This reporting can help you comply with the current accounting standards under U.S. Generally Accepted Accounting Principles (GAAP), U.S. Governmental Accounting Standards Board (GASB), and International Financial Reporting Standards (IFRS).

### Business Benefits

With Workday lease accounting, you can:

- Record and process full lifecycle accounting of a lease using only Workday, without other integrations and applications.
- Create lease-type supplier contracts for financial leases, operating leases, and short-term operating leases.
- Generate data needed for quantitative disclosure requirements.
- Generate comparative financial statements from before and after the U.S. GAAP, GASB, and IFRS changes to the accounting standards.
- Compare your operating lease-type supplier contracts under different accounting methods by creating alternate contracts.
- Import active, in-progress lease contracts into Workday without duplicating historical transactions.

### Use Cases

You can create lease-type supplier contracts in Workday that enable you to record your lease contracts and transactions. You can represent any combination of these lease contracts:

- Financial leases.
- Operating leases for IFRS or U.S. GASB.
- Operating leases for comparative and retrospective reporting.
- Operating leases for U.S. GAAP.

## Questions to Consider

Questions	Considerations
<p>What are your financial and statutory reporting requirements?</p> <p>How do your debt or bank covenants require you to report lease accounting transactions?</p>	<p>The location and structure of your organization determines your financial reporting obligations. Each country expects companies to provide financial statements in accordance with statutory requirements. You might need to report for both accounting standards if you operate in both the U.S. and a country that follows IFRS.</p> <p>Your debt or bank covenants might also require comparative or retrospective financial reporting that differs from the statutory requirements set by your local or national government.</p> <p>Before you configure lease accounting, confirm your financial reporting obligations. You might need to configure any combination of these lease-type supplier contracts:</p> <ul style="list-style-type: none"> <li>• Financial lease.</li> <li>• Operating lease that uses <i>ROU Asset Depreciation Expense</i>.</li> <li>• Operating lease that uses <i>ROU Asset Operating Expense</i>.</li> <li>• Operating lease that uses <i>Straight Line Expense</i>.</li> <li>• Short-term operating lease.</li> </ul>
<p>What lease contracts types do you need to record in Workday?</p>	<p>If you plan to record financial leases or operating leases that use <i>ROU Asset Depreciation Expense</i>, you can expect additional effort to configuring asset accounting. Asset accounting requires these additional steps to set up the business asset accounting and business asset tracking functional areas.</p> <ul style="list-style-type: none"> <li>• Configure asset accounting.</li> <li>• Configure the <i>Receipt Event</i> business process.</li> <li>• Create spend categories with asset tracking and lease.</li> </ul> <p>You can also represent lease contracts in Workday under the former lease accounting standards. Consider configuring a contract type for operating leases that uses the <i>Straight Line Expense</i> accounting method. You can then use that contract type to create reporting that compares your lease contracts under different standards.</p>
<p>Do you have active, ongoing lease contracts that you need to record in Workday?</p>	<p>If you have active, ongoing lease contracts, consider migrating them into Workday and updating the installment status. Workday enables you to generate accounting transactions for your lease contracts from any installment period. This functionality enables you to import ongoing lease contracts by representing partially fulfilled contracts.</p>

Questions	Considerations
	<p>Example: Your contract started in 2015 and finishes in 2025. When you update your paid installments with a status of <i>Accounted</i>, Workday recognizes those transactions as posted and doesn't generate additional transactions.</p> <p>Specify the installment status before you generate expense recognition accounting. Use the <b>Mass Update Lease Contract Installment to Available or Accounting Status</b> task to specify the status.</p> <p>If you reverse an installment with an <i>Accounted</i> status after you amend a contract, you might see a <b>Manual Journal Required</b> column on your expense recognition schedule. Workday displays this column when you need to provide an accounting journal that adjusts your ledgers for the reversed installment.</p>
How do you want Workday to record financial lease transactions?	<p>You can create financial leases without configuring lease accounting. Workday automatically records the transactions of depreciable capital assets from financial leases to the common book code. You can change this behavior by configuring a book code for financial lease contracts on the <b>Maintain Lease Contract Book Code Configuration</b> task.</p> <p>If you later decide you don't want to use the common book code, you can create a new book code configuration when you set up lease accounting. You can't change or remove a book code configuration after use.</p>

## Recommendations

Functionality	Considerations
Spend categories	<p>Consider what equipment or facilities that you expect to lease. We recommend that you configure spend categories for each kind of lease you use. Example: Spend categories for vehicles, production machinery, office buildings, and laptops.</p> <p>You can't change a spend category once it's in use.</p>
Alternate lease-type supplier contracts	<p>Workday recommends that you use alternate lease-type supplier contracts when you might need to compare contracts under different accounting standards or interest rates. Alternate lease-type supplier contracts save you the effort of creating and maintaining multiple separate contracts to represent the same contract terms.</p> <p>If you want to create an alternate lease-type supplier contract, you must:</p> <ul style="list-style-type: none"> <li>• Set up lease contract book code configurations.</li> </ul>

Functionality	Considerations
	<ul style="list-style-type: none"> <li>• Use a different accounting method than the original and other alternate contracts.</li> <li>• Use the same payment type as the original contract.</li> <li>• Configure <b>Receive Contract Lines</b> if you want to use <i>ROU Asset Depreciation Expense</i>.</li> </ul>
Multibook asset accounting	<p>Workday strongly recommends that you configure multibook asset accounting when you want to create financial leases or operating leases that use <i>ROU Asset Depreciation Expense</i>.</p> <p>When you enable multibook asset accounting, you must also configure the <b>Business Asset Multibook Settlement</b> account posting rule.</p> <p>When you don't configure multibook asset accounting, Workday automatically books asset transactions to the common book code.</p>

## Requirements

No impact.

## Limitations

You can't select grant worktags on the **Goods Lines** section when you create a lease-type supplier contract. Workday doesn't support award cost processing functionality with lease-type supplier contracts.

For leased assets generated from fully received lease-type supplier contracts, you can't issue them to workers.

When working with lease amendments, you can't:

- Create amendments for multicompany leases.
- Create amendments for short-term operating leases.
- Create an amendment from an alternate lease-type supplier contract.
- Create alternate lease-type supplier contracts after you amend the original contract. If you need to create alternate lease-type supplier contracts, do so before you create the amendment.
- Copy amended lease-type supplier contracts. If you need to copy your lease-type supplier contract, do so before you create the amendment.

You can only create these amendments to lease-type supplier contracts:

- Lease extensions.
- Non-CPI payment changes.
- Worktag change.

Workday only supports:

- Fully recoverable tax for lease accounting.
- Fiscal years with calendar months on expense recognition schedules.

## Tenant Setup

Select *Lease Accounting* on the **Lease Accounting** section of the **Edit Tenant Setup - Financials** task to enable the feature.

Enable multibook asset accounting on the **Edit Tenant Setup - Financials** task when you select *Operating Lease IFRS or Public Sector* and at least 1 of these options:

- *Modified or Full Retrospective Reporting*
- *Operating Lease US GAAP*

## Security

Configure these security domains in the Common Financial Management functional area:

Domains	Considerations
<i>Set Up: Accounts</i>	Set up account sets.
<i>Set Up: Accounting Rules</i>	Set up account posting rules.
<i>Set Up: Journal Source</i>	Configure operational transactions for lease accounting.
<i>Set Up: Spend Categories</i>	Set up spend categories for lease accounting.

Configure these security domains in the Supplier Contract functional area:

Domains	Considerations
<i>Process: Supplier Contract - Expense Recognition</i>	Create expense recognition accounting and view expense recognition schedules. You can use this domain to schedule automatic creation of expense recognition accounting for lease-type supplier contracts.
<i>Set Up: Supplier Contract Accounting</i>	Assign book codes to lease-type supplier contract configurations.
<i>Set Up: Supplier Contracts</i>	Configure lease supplier contract types and lease amendment types.

If you want to create lease-type supplier contracts with depreciable capital assets, configure these security domains:

Domains	Considerations
<i>Process: Supplier Contract - Receipt</i> in the Supplier Contracts functional area	Create receipts on supplier contracts.
<i>Set Up: Ledger and Book</i> in the Common Financial Management functional area	Set up book codes for lease accounting.
<i>Set Up: Company Asset Books</i> in the Business Asset Accounting functional area	Restrict transactions on company asset books.
<i>Set Up: Business Asset Accounting</i> in the Business Asset Accounting functional area	Maintain asset books and view depreciation profiles and schedules.

You can also set up the *Access Supplier Contract Type (Segmented)* domain on the Supplier Contracts functional area to help you control access to any supplier contract types. When you configure a worker to have access to a lease contract, they also have access to the alternate contract.

## Business Processes

Business Processes	Considerations
(Optional) <i>Alternate Supplier Contract Event</i>	Create alternate contracts for leases.
(Optional) <i>Asset Registration Event</i>	Register assets. Configure this business process if you want to create: <ul style="list-style-type: none"> <li>• Financial lease contracts.</li> <li>• Operating lease contracts with an accounting method of <i>ROU Asset Depreciation Expense</i>.</li> </ul>
(Optional) <i>Receipt Event</i>	Create and approve receipts for contract lines.
(Optional) <i>Supplier Contract Amendment Event</i>	Create amendments for lease-type supplier contracts.
<i>Supplier Contract Event</i>	Create and approve lease-type supplier contracts.
<i>Supplier Invoice Event</i>	Create and approve lease-type supplier invoices for supplier invoice installments.
<i>Supplier Contract Invoice Schedule Event</i>	Create supplier invoice schedules and installments for leases.
<i>Supplier Lease Contract Cancellation Event</i>	Cancel lease-type supplier contracts.

## Reporting

You can use these standard reports for quantitative disclosures for financial reporting:

Reports	Considerations
<b>Lease Accounting - Interest Expense for Leases</b>	The interest expense of lease-type supplier contracts in the installment period you specify.
<b>Lease Accounting - Operating Lease Cost</b>	The costs of operating lease-type supplier contracts in the installment period you specify.
<b>Lease Accounting - Scheduled Cash Payments</b>	Scheduled cash payments for amounts used to measure lease liabilities. Enables you to review payments that reduce your lease liability in the installment periods you specify.
<b>Lease Accounting - Supplemental Non-Cash</b>	The supplemental noncash details of lease liabilities that originate from ROU assets.
<b>Lease Accounting - Variable Lease Cost</b>	Variable lease costs on installment periods you specify that are linked to supplier invoices of lease-type supplier contracts.
<b>Lease Accounting - Weighted Average Discount Rate</b>	The weighted average discount rate of the remaining lease payments on lease-type supplier contracts as of a specified date.
<b>Lease Accounting - Weighted Average Lease Term</b>	The weighted average lease term of your lease-type supplier contracts as of a specified date.

You can use these standard reports for reconciliation:

Reports	Considerations
<b>Finance Lease Accounting Balance Sheet Reconciliation</b>	The lease liability balances of finance lease-type supplier contracts as of a specific installment period. Also reconciles the remaining amounts to the resulting ledger account balances.
<b>Operating Lease Accounting Balance Sheet Reconciliation</b>	The lease liability and ROU asset balances of operating lease-type supplier contracts as of a specific installment period. Also reconciles the remaining amounts to the resulting ledger account balances.

You can also use the **Assets Net Book Value** report to view the net value of individual assets in a company.

### Integrations

Web Services	Considerations
<i>Get Supplier Contracts</i>	Retrieves all the information associated with your supplier contract. Enables you to view detailed information across multiple lease-type supplier contracts.
<i>Put Lease Contract Book Code Configurations</i>	Creates lease contract book code configurations. Enables you to set up many contract types to book code configurations at once.
<i>Put Supplier Contract Type</i>	Creates supplier contract types. Enables you to set up many supplier contract types at once.
<i>Put Supplier Contract Type Security Segment</i>	Creates segmented security on supplier contract types. Enables you to grant access to multiple supplier contract types across many roles.
<i>Submit Receipt</i>	Creates asset receipts. Enables you to create receipts for multiple lease-type supplier contracts.
<i>Submit Supplier Contract</i>	Enables you to create many lease-type supplier contracts quickly. You can use the web service to help you record large numbers of lease contracts.

### Connections and Touchpoints

Functional Areas	Considerations
(Optional) Business Asset Accounting (Optional) Business Asset Tracking	Record and track the transactions of your leased assets.
Procurement	Create and process the receipts of lease-type supplier contracts.
Supplier Accounts	Generate supplier invoice installments on the supplier invoice schedule of a lease-type supplier contract.
Supplier Contracts	Create a lease from a supplier contract that uses a lease contract type.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## **Setup Considerations: Multibook Asset Accounting for Leases**

You can use this topic to help make decisions when planning your configuration and use of multibook asset accounting when you want to use lease accounting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### **What It Is**

Multibook asset accounting tracks an asset in multiple books and enables you to meet statutory reporting requirements for lease contracts. You set up the accounting methods used in each book to track and report on the same asset for different accounting standards.

### **Business Benefits**

This functionality helps you comply with standards under U.S. Generally Accepted Accounting Principles (GAAP), U.S. Governmental Accounting Standards Board (GASB), and International Financial Reporting Standards (IFRS). Enabling multibook asset accounting makes it easier for you to:

- Register and depreciate the same assets multiple ways.
- Assign assets to the appropriate accounting books.
- Prepare financial statements under multiple accounting standards.

### **Use Cases**

- Your organization has operating lease contracts under both ASC 842 and IFRS 16. The organization registers assets and associates them with the contract under IFRS 16 to record depreciation and amortization expense. Under ASC 842, the organization doesn't register and associate assets with the contract. You amortize assets through the expense recognition schedule or lease expense for ASC 842. Workday adds the asset to the IFRS book but not the GAAP book.
- Your organization has operating lease contracts under both IFRS 16 and IAS 17. The organization registers assets and associates them with the contract under IFRS 16 to record depreciation and

amortization expense. Under IAS 17, the organization doesn't register and associate assets with the contract. You don't require balance sheet presentation for operating leases before the new standards. Workday adds the asset to the IFRS 16 book, but not the book under the former IFRS standards.

- Your organization has operating lease contracts under GASB 87 and must also report under former GASB standards. The organization registers assets and associates them with the contract under GASB 87 to record depreciation and amortization expense. Under the former GASB standards, you don't register and associate assets with the contract. You don't require balance sheet presentation for operating leases before the new standards. Workday adds an asset to the GASB 87 book, but not the book under the former GASB standards.

### Questions to Consider

Questions	Considerations
Which accounting standards do you need to prepare for?	<p>You don't need to enable multibook asset accounting when you prepare financial statements for:</p> <ul style="list-style-type: none"> <li>ASC 842 only.</li> <li>IFRS 16 only and your lease-type contracts have a start date on or after the adoption date of the current standard.</li> <li>GASB 87 only and your lease-type supplier contracts have a start date on or after the adoption date of the current standard.</li> </ul>
Do you need to depreciate assets over the term of the lease contract?	If yes, use the term depreciation method to depreciate the asset on a straight-line basis for the length of the contract. Otherwise, you can use any other depreciation method, but you must update the asset book rules to match the depreciation profile.

### Recommendations

- For operating leases under IFRS 16 or GASB 87, don't use the same book codes that you use for lease-type supplier contracts when you report under multiple standards. Different book codes help prevent duplication of asset cost and depreciation expense when reporting. You can combine these book codes in a single book to simplify reporting.
- Set up account posting rules for the **Multibook Settlement** ledger account with the *Spend Category* dimension to record journal entries.
- Register leased assets through a supplier contract receipt and include the *Initiate Asset Registration Events from Receipt for Supplier Contracts* service step in the *Receipt* business process.
- Decide which books to use for what accounting standards. Assign or restrict assets to specific asset books based on your needs.
- Set up depreciation profiles to automatically create depreciation schedules for your assets when you register them.

### Requirements

Enable these functional areas to create financial leases and operating leases with an accounting method of right-of-use (ROU) asset depreciation expense:

- Business Asset Accounting
- Business Asset Tracking

## Limitations

No impact.

## Tenant Setup

To enable asset accounting for multiple books, select the **Enable Multibook Asset Accounting** check box in the **Business Assets Options** section on the **Edit Tenant Setup - Financials** task. Also enable **Lease Accounting** on the **Edit Tenant Setup - Financials** task. After enabling the tenant-level option, assign book codes to the asset accounting books for your company.

## Security

Domains	Considerations
<i>Set Up: Ledger and Book</i> in the Common Financial Management functional area	Provides access to set up book codes and books for asset accounting.
<i>Set Up: Accounting Rules</i> in the Common Financial Management functional area	Provides access to set up account posting rules.
These domains in the Business Asset Accounting functional area: <ul style="list-style-type: none"> <li>• <i>Set Up: Company Asset Books</i></li> <li>• <i>Set Up: Business Asset Accounting</i></li> </ul>	Provides access to map asset books to companies and assign book codes to accounting books.
<i>Set Up: Business Asset Accounting</i> in the Business Asset Accounting functional area	Provides access to maintain asset books and create depreciation profiles and schedules.

## Business Processes

No impact.

## Reporting

Use the **Assets Net Book Value** report to:

- View the net value of individual assets in a company.
- View accumulated and year-to-date depreciation.

## Integrations

No impact.

## Connections and Touchpoints

Multibook asset accounting for leases interacts with these other areas in Workday:

Features	Considerations
Lease accounting	Configure multibook asset accounting for use with lease accounting to help you report on IFRS or GASB and alternate lease-type supplier contracts for different accounting standards.
Supplier contracts	Select a supplier contract type when you create a supplier contract.

Features	Considerations
	<p>Based on your configuration, Workday determines whether to treat your lease-type supplier contracts as:</p> <ul style="list-style-type: none"> <li>Depreciable capital assets that you must register as business assets.</li> <li>Nondepreciable capital assets.</li> </ul>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[The Next Level: Multibook Asset Accounting - Lease Contract Conversion Guide](#)

### Examples

[Example: Set Up Operating Leases for IFRS and GASB Accounting](#) on page 1582

## Steps: Set Up Security for Lease Accounting

### Context

You can set up security for lease accounting to determine who can:

- Set up spend categories for lease-type supplier contracts.
- Configure your account posting rules for lease accounting.
- Create, edit, and view lease-type supplier contracts.
- Create, edit, and view lease-type supplier invoices.
- Set up lease contract book code configurations.
- Create expense recognition accounting.
- Create alternate lease-type supplier contracts.
- Create lease amendments on lease-type supplier contracts.

## Steps

### 1. Access the **Maintain Functional Areas** task.

Select the **Enabled** check box for these functional areas:

- (Optional) Business Asset Accounting
- (Optional) Business Asset Tracking
- Procurement
- Supplier Accounts
- Supplier Contracts

Enable the Business Asset Accounting and Business Asset Tracking functional areas when you want to create these lease-type supplier contracts.

- Financial leases.
- Operating leases that use the ROU asset depreciation expense accounting method.

Security: *Security Configuration* domain in the System functional area.

### 2. Set up these business processes and security policies:

- *Alternate Supplier Contract Event*
- (Optional) *Asset Registration Event*
- *Supplier Contract Event*
- (Optional) *Supplier Contract Amendment Event*
- *Supplier Contract Invoice Schedule Event*
- *Supplier Lease Contract Cancellation Event*

Set up the *Asset Registration Event* when you want to create these lease-type supplier contracts:

- Financial leases.
- Operating leases that use the ROU asset depreciation expense accounting method.

See [Steps: Configure Business Process Definitions](#).

**3. Access the Domain Security Policies for Functional Area report.**

Select **Domain Security Policy > Enable** from the related actions menu of these domain security policies.

- (Optional) *Access Supplier Contract Type (Segmented)*
- *Process: Supplier Contract*
- *Process: Supplier Contract - Expense Recognition*
- *Process: Supplier Contract - Initial Recognition of Lease*
- *Process: Supplier Contract - Mass Action*
- (Optional) *Process: Supplier Contract - Receipt*
- *Set Up: Accounts*
- *Set Up: Accounting Rules*
- *Set Up: Journal Source*
- *Set Up: Supplier Contracts*
- *Set Up: Supplier Contract Accounting*
- *Set Up: Spend Categories*
- (Optional) *Set Up: Supplier Contract Security Segments*

Set up the *Process: Supplier Contract - Receipt* security domain when you want to create these lease-type supplier contracts:

- Financial leases.
- Operating leases that use the ROU asset depreciation expense accounting method.

If you configure the *Supplier Contract Amendment Event* business process and security policy, you must configure your domain security group policies for the **Create Lease Amendment** task.

Security: These domains in the System functional area:

- *Security Activation*
- *Security Configuration*

**4. Activate Pending Security Policy Changes.**

## Steps: Set Up Lease Accounting

### Prerequisites

Set up security for lease accounting.

### Context

You can configure lease accounting to calculate and then generate lease accounting transactions. You can then report on the transactions as part of your financial statements.

### Steps

**1. Access the Edit Tenant Setup - Financials task.**

Select the *Lease Accounting* option in the **Lease Accounting** section and select the use cases that apply.

Select **Enable Tax Point Date Configuration for Transaction Taxes** if you want to configure the tax point date type for transaction tax codes.

See [Reference: Edit Tenant Setup - Financials](#).

**2. Create Spend Categories for Lease Accounting** on page 1578.

**3. Set Up Supplier Contract Types for Lease Accounting** on page 1580.

**4.** (Optional) [Assign Book Codes to Lease Contracts](#) on page 1582.

Set up book code configurations when you select 2 or more options for lease accounting on the **Edit Tenant Setup - Financials** task.

**5.** (Optional) Configure asset accounting.

Configure asset accounting if you want to create these types of lease-type supplier contracts:

- Financial leases.
- Operating leases that use the ROU asset depreciation expense accounting method.

See: [Steps: Set Up Asset Accounting](#) on page 1488.

**6.** (Optional) [Steps: Set Up Multibook Asset Accounting for Leases](#) on page 1577.

**7.** Access the **Edit Account Set** task.

Configure ledger accounts for lease accounting that map:

- Financial or operating lease liabilities to the *Liability* ledger account type.
- Lease expenses to the *Expense* ledger account type.
- Interest expenses to the *Expense* ledger account type.
- Financial and operating lease ROU assets to the *Asset* ledger account type.

Workday recommends you set up accounts for specific transaction types. Examples:

- *Financial Lease Liability*
- *Operating Lease Liability*
- *Lease Expense*
- *Leased Laptops*
- *Interest Expense - Lease*

Security: *Set Up: Accounts* domain in the Common Financial Management functional area.

**8.** [Define Account Posting Rules for Lease Accounting](#) on page 1579.

**9.** Access the **Maintain Journal Source Mapping to Operational Transactions** task.

Configure these operational transactions for lease accounting:

- **Initial Recognition of Lease Journal Entry Source.**
- **Expense Recognition Journal Entry Source.**

Configure the **Initial Recognition Adjustment of Lease Journal Entry Source** operational transaction to create amendments to lease-type supplier contracts.

Security: *Set Up: Journal Source* domain in the Common Financial Management functional area.

**10.**(Optional) Access the **Maintain Supplier Contract Lease Amendment Types** task.

Create amendment types that you want to use for amendments to your lease-type supplier contracts.

Security: *Set Up: Supplier Contracts* domain in the Supplier Contracts functional area.

**11.**(Optional) Access the **Maintain Worktag Usage** report.

On **Accounting Journal**, include these worktag types:

- **Supplier Contract**
- **Alternate Supplier Contract**

Security: *Set Up: Enable Worktags* domain in these functional areas:

- Common Financial Management
- Worktags

## 12.(Optional) Access the Schedule Automatic Receipt of Contract Lines for Leases task.

Workday recommends that you schedule automatic receipt of contract lines when you use these lease-type supplier contracts:

- Financial leases.
- Operating leases that use the ROU asset depreciation expense accounting method.

Workday only creates receipts for contract start dates that are on or before the configured processing date. After receiving the contract lines, you must register the asset before Workday generates a correlating business asset and depreciation schedule.

Security: Process: *Supplier Contract - Receipt* domain in the Supplier Contracts functional area.

#### Examples

[Example: Set Up Operating Leases for IFRS and GASB Accounting](#) on page 1582

## Steps: Set Up Multibook Asset Accounting for Leases

### Prerequisites

Security: These domains in the Business Asset Accounting functional area:

- *Set Up: Company Asset Books*
- *Set Up: Business Asset Accounting*

Security: *Set Up: Ledger and Book* domain in the Common Financial Management functional area.

### Context

Configure your tenant for multibook asset accounting. Multibook accounting helps you report on lease contracts for U.S. Governmental Accounting Standards Board (GASB) and International Financial Reporting Standards (IFRS), as well as alternate lease-type supplier contracts for different accounting standards.

### Steps

1. Enable asset accounting for multiple books.
  - a) Access the **Edit Tenant Setup - Financials** task.
  - b) In the **Business Assets Options** section, select the **Enable Multibook Asset Accounting** check box.
2. Access the **Maintain Book Codes** task to create new lease book codes.

**3. Access the Maintain Asset Books task.**

Associate a book code to that asset book when you select the **Accounting Book** check box for an asset book. The book code is a requirement when you set up a company asset book.

**4. Access the Maintain Lease Contract Book Code Configuration task.**

Configure book codes associated with a lease-type supplier contract. The book codes can't be the same as the book codes that you use on the **Add Company Asset Book** task.

**5. Access the Maintain Company Asset Book Restrictions task.**

Restrict assets to specific asset books when you want to record lease-type contracts for any of the multibook asset accounting scenarios.

You can select these specific scenarios in the **Lease Accounting** section on the **Edit Tenant Setup - Financials** task:

Scenario 1:

- *Modified or Full Retrospective Reporting*
- *Operating Lease IFRS or Public Sector*

Scenario 2:

- *Modified or Full Retrospective Reporting*
- *Operating Lease IFRS or Public Sector*
- *Operating Lease US GAAP*

Scenario 3:

- *Operating Lease IFRS or Public Sector*
- *Operating Lease US GAAP*

**6. Access Maintain Asset Book Rules task.**

Asset book rules apply to all companies but you can restrict a rule to specific companies by adding it as criteria for individual rules.

## Create Spend Categories for Lease Accounting

#### Prerequisites

- Set up security for lease accounting.

- Security: *Set Up: Spend Categories* domain in the Procurement functional area.

### Context

You configure spend categories to direct operational journals for lease transactions towards applicable account sets. You assign spend categories on the goods lines when you create a lease-type supplier contract.

### Steps

1. Access the **Maintain Spend Categories** task.
2. Select the transaction types you want from the **Spend Category Usage** prompt.

Select these transaction types:

- *Procurement*
- *Supplier Invoice*

3. Select the **Lease** and **Track Items** check boxes on the **Asset Tracking** section.

If you enable *Operating Lease IFRS or Public Sector* and at least 1 other lease accounting option in your tenant, you can create alternate lease-type supplier contracts for operating leases.

You can change spend category attributes if the spend category isn't in use.

## Define Account Posting Rules for Lease Accounting

### Prerequisites

- Set up lease accounting.
- Create an account set for lease accounting.
- Security: *Set Up: Accounts* domain in the Common Financial Management functional area.

### Context

You can define the account posting rules and posting rule conditions for your lease ledger accounts. You can use the posting rules to determine the ledger accounts Workday records and posts lease transactions to.

### Steps

1. Access the **View Account Posting Rule Set** report.
2. Set up account posting rules for lease accounting.

Workday automatically uses the **Spend** account posting rule for new lines on your lease-type supplier invoice. You have to set up these rules for lease transactions:

- **Lease Asset**.
- **Lease Asset Contra**.
- **Lease Expense**.
- **Lease Liability**.
- (Optional) **Business Asset Multibook Settlement** when you enable multibook asset accounting in your tenant.

3. Click **Edit Posting Rule** for each lease transaction.

As you complete this task, consider:

Option	Description
<b>Dimension</b>	Select these dimensions: <ul style="list-style-type: none"> <li>• <i>Accounting Treatment</i></li> <li>• <i>Interest</i></li> <li>• <i>Lease Accounting Method</i></li> <li>• <i>Lease Type</i></li> <li>• <i>Spend Category</i></li> </ul>

### Result

Workday creates journal entries that record:

- Amortization of lease liabilities.
- Amortization of right-of-use (ROU) assets.
- Depreciation expenses.
- Initial recognition entries.
- Interest for operating and financial leases.
- Lease expenses.

### Next Steps

Set up supplier contract types for lease accounting.

#### Related Information

[Steps: Set Up Lease Accounting](#) on page 1575

[Set Up Account Posting Rules](#) on page 84

[Create Spend Categories for Lease Accounting](#) on page 1578

## Set Up Supplier Contract Types for Lease Accounting

### Prerequisites

Security: *Set Up: Supplier Contracts* domain in the Procurement functional area.

### Context

You can select a supplier contract type when you create a supplier contract. The lease supplier contract type determines the account posting rules and ledger accounts Workday records your transaction to. Your configuration helps Workday determine whether to treat your lease-type supplier contracts as:

- Depreciable capital assets that you must register as business assets.
- Non-depreciable capital assets.

### Steps

1. Access the **Maintain Supplier Contract Types** task.

**2. Set up supplier contract types for lease accounting.**

Select the **Variable Payment** check box if you want to specify the payment amount and schedule of your lease-type supplier contracts. Workday considers a contract type to have a fixed payment type when you don't select the check box.

The supplier contract types you set up also determine the alternate lease-type supplier contracts you can create.

As you complete this task, consider:

Option	Description
<b>Financial Lease</b>	Select these check boxes: <ul style="list-style-type: none"> <li>• <b>Financial Lease</b></li> <li>• <b>Receive Contract Lines</b></li> <li>• <b>Scheduled Invoices</b></li> <li>• (Optional) <b>Variable Payment</b></li> </ul>
<b>Operating Lease</b>	Select these check boxes if you want an accounting method of <i>ROU Asset Operating Expense</i> or <i>Straight Line Expense</i> : <ul style="list-style-type: none"> <li>• <b>Operating Lease</b></li> <li>• <b>Scheduled Invoices</b></li> <li>• (Optional) <b>Variable Payment</b></li> </ul> Select these check boxes for an accounting method of <i>ROU Asset Depreciation Expense</i> : <ul style="list-style-type: none"> <li>• <b>Operating Lease</b></li> <li>• <b>Receive Contract Lines</b></li> <li>• <b>Scheduled Invoices</b></li> <li>• (Optional) <b>Variable Payment</b></li> </ul>
<b>Short Term Operating Lease</b>	Select these check boxes for short-term operating leases: <ul style="list-style-type: none"> <li>• <b>Scheduled Invoices</b></li> <li>• <b>Short-Term Operating Lease</b></li> <li>• (Optional) <b>Variable Payment</b></li> </ul>

### Next Steps

- Configure book codes for your lease-type supplier contracts if you want to create operating lease contracts and select 2 lease accounting use cases when configuring your tenant.
- You can select contract types you configure for lease accounting on the **Create Supplier Contract** task.

### Related Information

#### Reference

[Reference: Accounting Methods for Lease-Type Supplier Contracts](#) on page 1594

## Assign Book Codes to Lease Contracts

### Prerequisites

Security: Set Up: *Supplier Contract Accounting* domain in the Procurement functional area.

### Context

You can set up book code configurations for each company that uses lease accounting. Book code configurations help you group lease accounting transactions under different reporting requirements. You can then generate financial reports under different lease accounting reporting requirements.

When you create a lease contract, Workday generates the operational journals of the initial recognition entry and expense recognition installments in the book codes you provide. Workday records transactions from supplier invoices of lease-type supplier contracts to the common book code.

### Steps

1. Access the **Maintain Lease Contract Book Code Configuration** task.

2. Assign contract types to book codes by company or company hierarchy.

You don't have to configure book codes for financial leases. If you don't configure book codes, Workday records all related lease transactions to the common book code.

3. (Optional) Set up book code configurations for alternate lease-type supplier contracts.

### Next Steps

Create a lease-type supplier contract.

### Related Information

#### Concepts

[Concept: Lease Accounting](#) on page 1595

#### Tasks

[Create Alternate Lease-Type Supplier Contracts](#) on page 1591

#### Reference

[Reference: Accounting Methods for Lease-Type Supplier Contracts](#) on page 1594

## Example: Set Up Operating Leases for IFRS and GASB Accounting

This example illustrates how to configure Workday to create operating lease-type supplier contracts for:

- International Financial Reporting Standards (IFRS)
- U.S. Government Accounting Standards Board (GASB)

### Context

Kim needs to configure Workday to enable her accountant, Jim, to create operating lease-type supplier contracts. The contracts Jim wants to create need to align with the latest IFRS 16 standards on lease accounting, effective January 1, 2019.

Jim needs to record contracts that represent the lease liabilities and right-of-use (ROU) assets of an office building that their company, MBAA Services, has a multiyear lease for. Current IFRS standards consider the building a depreciable capital asset. He also needs to record contracts under the former accounting standards, which don't recognize operating leases as depreciable capital assets, to provide financial statements for existing bank covenants. To meet these requirements, Kim needs to set up lease accounting and multibook asset accounting (MBAA).

## Prerequisites

- Configure asset accounting.
- Configure asset tracking.
- Configure depreciation profiles.
- Configure these business processes:
  - *Asset Assign Accounting Event*
  - *Asset Registration Event*
- Configure these security domains in the Business Asset Accounting functional area:
  - *Set Up: Business Asset Accounting*
  - *Set Up: Company Asset Books*
- Configure these security domains in the Common Financial Management functional area:
  - *Set Up: Spend Categories*
- Configure these security domains in the Supplier Contracts functional area:
  - *Process: Supplier Contract*
  - *Set Up: Supplier Contract Accounting*
  - *Set Up: Supplier Contracts*

## Steps

1. Access the **Edit Tenant Setup - Financials** task.
2. In the **Lease Accounting** section, select these options:
  - *Operating Lease IFRS or Public Sector*
  - *Modified or Full Retrospective Reporting*
3. In the **Business Assets Options** section, select the **Enable Multibook Asset Accounting** check box.
4. Click **OK**.
5. Access the **Maintain Spend Categories** task.
6. Select **Maintain Spend Categories without Hierarchy**.
7. Click **OK**.
8. Add a new spend category.  
In the **Spend Category Detail** section, enter Leased Buildings on the **Spend Category Name** field and select these **Spend Category Usage** options:
  - *Procurement*
  - *Supplier Invoice*
9. Select these check boxes on the **Asset Tracking** section:
  - **Track Items**
  - **Lease**
10. Click **OK**.
11. Access the **Maintain Supplier Contract Types** task.
12. Add rows for supplier contracts and input these values:

Contract Name	Options
Financial Lease Fixed Payment	Select these check boxes: <ul style="list-style-type: none"> <li>• <b>Scheduled Invoices</b></li> <li>• <b>Receive Contract Lines</b></li> <li>• <b>Financial Lease</b></li> </ul>

Contract Name	Options
Financial Lease Variable Payment	Select these check boxes: <ul style="list-style-type: none"><li>• <b>Scheduled Invoices</b></li><li>• <b>Receive Contract Lines</b></li><li>• <b>Financial Lease</b></li><li>• <b>Variable Payment</b></li></ul>
Operating Lease Fixed Payment	Select these check boxes: <ul style="list-style-type: none"><li>• <b>Scheduled Invoices</b></li><li>• <b>Receive Contract Lines</b></li><li>• <b>Operating Lease</b></li></ul>
Operating Lease Variable Payment	Select these check boxes: <ul style="list-style-type: none"><li>• <b>Scheduled Invoices</b></li><li>• <b>Receive Contract Lines</b></li><li>• <b>Operating Lease</b></li><li>• <b>Variable Payment</b></li></ul>
Straight Line Expense Fixed Payment	Select these check boxes: <ul style="list-style-type: none"><li>• <b>Scheduled Invoices</b></li><li>• <b>Operating Lease</b></li></ul>
Straight Line Expense Variable Payment	Select these check boxes: <ul style="list-style-type: none"><li>• <b>Scheduled Invoices</b></li><li>• <b>Operating Lease</b></li><li>• <b>Variable Payment</b></li></ul>

13. Click **OK**.

14. Access the **Maintain Book Codes** task.

15. Add rows and enter these book code names:

- *Financial Leases and Fixed Assets*
- *Operating Lease IFRS 16*
- *Operating Lease IFRS 16 Assets*
- *Straight Line Expense*

16. Click **OK**.

17. Access the **Maintain Books** task.

18. Add books and input these values:

Name	Includes Book Codes	Includes Blank Book Code
<i>Operating Lease IAS 17</i>	Select: <ul style="list-style-type: none"><li>• <i>Financial Leases and Fixed Assets</i></li><li>• <i>Straight Line Expense</i></li></ul>	Select.
<i>Operating Lease IFRS 16</i>	Select: <ul style="list-style-type: none"><li>• <i>Financial Leases and Fixed Assets</i></li><li>• <i>Operating Lease IFRS 16</i></li></ul>	Select.

Name	Includes Book Codes	Includes Blank Book Code
	<ul style="list-style-type: none"> <li>Operating Lease IFRS 16 Assets</li> </ul>	

19.Click OK.

20.Access the **Maintain Lease Contract Book Code Configuration** task.

21.Add a row and select *M500.1 Assets MBAA Services* from the **Company or Company Hierarchy** prompt.

22.Add these book code configurations:

Lease Type	Accounting Method	Book Code
<ul style="list-style-type: none"> <li>Operating Lease Fixed Payment</li> <li>Operating Lease Variable Payment</li> </ul>	<i>ROU Asset Depreciation Expense</i>	<i>Operating Lease IFRS 16</i>
<ul style="list-style-type: none"> <li>Straight Line Expense Fixed Payment</li> <li>Straight Line Expense Variable Payment</li> </ul>	<i>Straight Line Expense</i>	<i>Straight Line Expense</i>

23.Click OK.

24.Access the **Maintain Asset Books** task.

25.Add these new asset books and select the **Accounting Book** check box on each row:

- Financial Leases and Fixed Assets
- Operating Lease IFRS 16

26.Click OK.

27.Access the **Maintain Asset Book Rules** task.

28.Select *Operating Lease IFRS 16 Assets* from the **Asset Book** prompt.

29.Click OK.

30.Configure an asset book rule using these values:

Field	Value
<b>Spend Category</b>	<i>Leased Buildings</i>
<b>Resulting Accounting Treatment</b>	<i>Depreciable Capital Asset</i>
<b>Resulting Depreciation Profile</b>	<i>Term - Current Period - Upon Acquisition</i>

31.Click OK.

32.Access the **Add Company Asset Book** task.

33.Select *M500.1 Assets MBAA Services* from the **Company** prompt.

34.Click OK.

35.Select these books from the **Asset Book** prompt:

Asset Book	Book Code
<i>Financial Leases and Fixed Assets</i>	<i>Financial Leases and Fixed Assets</i>
<i>Operating Lease IFRS 16</i>	<i>Operating Lease IFRS 16 Assets</i>

36.Click OK.

- 37.** Access the **Maintain Company Asset Book Restrictions** task.  
**38.** From the **Company** prompt, select *M500.1 Assets MBAA Services*.  
**39.** Click **OK**.  
**40.** Configure these asset book restrictions:

Spend Category	Supplier Contract Type	Lease Accounting Method	Restrict to Company Asset Books	Primary Company Asset Book Override
Leased Buildings	<ul style="list-style-type: none"> <li><i>Operating Lease Fixed Payment</i></li> <li><i>Operating Lease Variable Payment</i></li> </ul>	<i>ROU Asset Depreciation Expense</i>	<i>Operating Lease IFRS 16</i>	<i>Operating Lease IFRS 16</i>
Leave blank.	Leave blank.	Leave blank.	<i>Financial Leases and Fixed Assets</i>	<i>Financial Leases and Fixed Assets</i>

- 41.** Click **OK**.  
**42.** Access the **Edit Account Set** task.  
**43.** Select *Corporate* from the **Account Set** prompt.  
**44.** Click **OK**.  
**45.** Add ledger account rows and populate these fields on the **Add Row for Edit Account Set** page:

Identifier	Account Name	Ledger Account Type
8100	<i>Interest Expense - Lease</i>	<i>Expense</i>
6501	<i>Lease Expense</i>	<i>Expense</i>
1520	<i>Multibook Settlement Account</i>	<i>Asset</i>
2114	<i>Operating Lease Liability</i>	<i>Liability</i>
1539	<i>Operating Lease ROU Asset Leased Buildings</i>	<i>Asset</i>
1551	<i>ROU Leased Asset Contra</i>	<i>Asset</i>

- 46.** Click **Done**.  
**47.** Access the **View Account Posting Rule Set** report.  
**48.** Select *Standard Account Posting Rule* from the **Account Posting Rule Set** prompt.  
**49.** Click **OK**.  
**50.** Click **Edit Posting Rule** and configure these account posting rules:

Account Posting Rule	Resulting Ledger Account	Dimension	Values
Business Asset Multibook Settlement	<i>1520:Multibook Settlement Account</i>	<i>Lease Type</i>	<i>Operating</i>
Lease Asset	<i>1539:Operating Lease ROU Asset Leased Buildings</i>	<i>Lease Type</i>	<i>Operating</i>
		<i>Spend Category</i>	<i>Leased Buildings</i>

Account Posting Rule	Resulting Ledger Account	Dimension	Values
Lease Asset Contra	1551:ROU Leased Asset Contra	Leave blank.	Leave blank.
Lease Expense	8100:Interest Expense - Lease	Interest	Interest
		Lease Type	Operating
	6501:Lease Expense	Lease Type	Operating
Lease Liability	2114:Operating Lease Liability	Lease Type	Operating

51. Click OK.

52. Access the **Maintain Journal Source Mapping to Operational Transactions** task.

53. Configure these journal entry sources:

Journal Entry Source	Operational Transaction
Asset Adjustment Journal Entry Source	Asset Adjustment
Asset Assign Accounting Journal Entry Source	Asset Accounting Assignment
Asset Disposal Journal Entry Source	Asset Disposal
Asset Removal Journal Entry Source	Asset Removal
Depreciation Adjustment Journal Entry Source	Depreciation Adjustment
Depreciation Journal Entry Source	Depreciation
Expense Recognition Journal Entry Source	Expense Recognition
Initial Recognition of Lease Journal Entry Source	Initial Recognition of Lease

54. Click OK.

55. Access the *Receipt (Default Definition)* business process.

56. Access **Business Process > Edit Definition** from the related action menu.

57. Select these business process step values:

Order	Type	Specify
b	Action	Review Trackable Receipt Lines
c	Service	Initiate Asset Registration Events from Receipt for Supplier Contracts

58. Click OK.

## Result

Jim can create lease-supplier contracts and record lease accounting transactions for M500.1 Assets MBAA Services that align with former and current IFRS accounting standards.

## FAQ: Assets on Lease-Type Supplier Contract Amendments

- How do I add a review step to the Supplier Contract Amendment Event business process for leased assets?
- Can I update the asset cost and useful life on approved supplier contract amendments?
- Can I perform all asset-tracking lifecycle events when I have a business process event in progress?

**How do I add a review step to the Supplier Contract Amendment Event business process for leased assets?**

To review the asset adjustments made when you approve a lease-type supplier contract:

1. Configure the business process security policy on the **Supplier Contract Amendment Event** business process.
2. Add **Review Asset Adjustment for Contract Amendment** as an **Action Step** on the business process.
3. Select a **Group** to assign on the new business process step.

**Can I update the asset cost and useful life on approved supplier contract amendments?**

When you approve the amended contract, Workday automatically updates the asset cost without requiring additional approvals. If the depreciation method is *Term*, Workday automatically updates the useful life. If the depreciation method isn't *Term* or *Declining Balance*, you can update the useful life during the review step.

**Can I perform all asset-tracking lifecycle events when I have a business process event in progress?**

When you create a contract amendment and save for later the business process step, some lifecycle events aren't available. These lifecycle events are unavailable for all assets on a lease-type supplier contract:

- *Adjust Asset Acquisition Cost*
- *Adjust Asset Post Acquisition Cost*
- *Adjust Asset Useful Life*
- *Change Asset Book Configuration Information for Non-Accounting Book*
- *Correct Asset Useful Life*
- *Dispose Assets*
- *Reinstate Asset*
- *Remove Asset*

# Lease Accounting Generation

---

## Steps: Record Active Lease-Type Supplier Contracts

### Prerequisites

Set up lease accounting.

### Context

You can represent active lease contracts by changing the status of expense recognition and supplier invoice installments to *Accounted*. This status prevents creation of duplicate historical lease accounting transactions. Changing the installment status enables you to generate accounting transactions from any installment period on the lease-type supplier contract.

### Steps

1. Create lease-type supplier contracts with the *Submit Supplier Contract* web service.

You can also manually [Create Lease-Type Supplier Contracts](#) on page 1589.

2. (Optional) [Receive Directly Against Supplier Contracts](#).

You must receive contract lines for:

- Financial leases.
- Operating leases that use the ROU asset depreciation expense accounting method.

3. (Optional) [Register Assets](#) on page 1469.

You must register contract lines for:

- Financial leases.
- Operating leases that use the ROU asset depreciation expense accounting method.

4. Access the **Mass Update Lease Contract Installment to Available or Accounted Status** task.

Select the installments you want to update. Workday doesn't generate additional expense recognition accounting on installments with an *Accounted* status.

Security: Process: *Supplier Contract - Mass Action* domain in the Supplier Contracts functional area.

### Related Information

#### Tasks

[Create Alternate Lease-Type Supplier Contracts](#) on page 1591

## Create Lease-Type Supplier Contracts

### Prerequisites

- Create fiscal periods that span the length of the contracts.
- Configure the *Supplier Contract Event* business process and security policy in the Supplier Contracts functional area.

### Context

You can configure lease-type supplier contracts to set up schedules and installments for lease transactions, enabling you to fulfill statutory reporting requirements. For depreciable capital assets, you must also fully receive receipt lines for approved lease-type supplier contracts to register and assign accounting to your leased assets. You can receive receipt lines for:

- Financial lease contracts.
- Operating lease contracts that use the ROU asset depreciation expense accounting method.

## Steps

1. Access the **Create Supplier Contract** task.
2. As you complete the task, consider:

Option	Description
<b>Prepaid Lease Payment</b>	Workday doesn't include the prepaid lease payment when calculating the present value of future cash payments. Workday instead includes prepaid lease payments in your ROU asset value when the contract type is: <ul style="list-style-type: none"> <li>• Financial lease.</li> <li>• Operating lease and doesn't use the straight line expense accounting method.</li> </ul>
<b>First Payment Installment Date</b>	Provide the first date of regular payments on your variable payment lease-type supplier contract. Providing a date helps support variance in payment dates when you combine multiple prepaid lease payment installments into 1 payment.
<b>Additional Payment</b>	Select this check box to add another payment line on the <b>Payment Information</b> grid when Workday doesn't generate enough payments to reflect your actual payment schedule.

3. As you complete the **Goods Lines** section, consider:

Option	Description
<b>Company</b>	Select a company with an active intercompany profile associated with the header company if you want to create a multicountry lease-type supplier contract.
<b>Percentage</b>	If you have multiple goods lines, you can provide a percentage between 1 and 99. Workday automatically calculates the <b>Extended Amount</b> and <b>Unit Cost</b> using the percentage.  For multicountry contracts, Workday distributes these payment transactions by percentage between all initial recognition entries: <ul style="list-style-type: none"> <li>• Initial direct costs.</li> <li>• Lessor incentives.</li> <li>• Prepaid lease payments.</li> </ul>
<b>Unit Residual Value</b>	Workday uses the amount that you enter to calculate the lowest possible value of your amortized assets.
<b>Tax Point Date Type</b>	Select 1 of these options to configure when Workday records your VAT receivable: <ul style="list-style-type: none"> <li>• <i>Invoice/Adjustment</i></li> <li>• <i>Invoice/Adjustment Received Date</i></li> <li>• <i>Payment Date</i></li> </ul>

## Next Steps

[Generate Expense Recognition Accounting for Lease Contracts](#) on page 1592.

When you create lease-type supplier contracts for asset accounting, you must also:

- Receive all contract lines by creating a receipt from the related actions menu of approved contracts.
- Configure the *Asset Registration Event* business process to register leased assets and assign accounting.

## Related Information

### Tasks

[Register Assets](#) on page 1469

[Steps: Create Supplier Contracts](#)

[Add or Update Goods and Service Lines on Supplier Contracts](#)

### Reference

[Reference: Accounting Methods for Lease-Type Supplier Contracts](#) on page 1594

## Create Alternate Lease-Type Supplier Contracts

### Prerequisites

- Set up lease contract book code configurations.
- Create operating lease-type supplier contracts.
- Create fiscal periods that span the length of the contracts.
- Configure the *Alternate Supplier Contract Event* business process and security policy in the Supplier Contracts functional area.

### Context

You can create alternate lease-type supplier contracts to represent a lease-type supplier contract under different accounting methods. Representing your lease-type supplier contracts using different accounting methods can help you:

- Compare lease accounting transaction amounts under other accounting standards.
- Meet financial reporting obligations of countries that you operate in.

### Steps

1. Access the **Mass Generate Alternate Lease Contracts** task.

2. Select all contracts for which you want alternate contracts.

When you select supplier contracts with empty fields or prompts, Workday uses the values you specify in these fields:

- **Default Alternate Accounting Method**
- **Default Alternate Interest Rate**
- **Default Alternate Contract Type**

3. (Optional) Select **Alternate Contract Type**.

You can only create alternate contracts that use the same payment type as the original contract.

4. (Optional) Select an **Alternate Accounting Method**.

Configure **Receive Contract Lines** on the contract type to create alternate contracts that use the ROU asset depreciation expense accounting method.

5. (Optional) Select an **Alternate Interest Rate**.

When you amend a lease-type supplier contract, you can provide a different interest rate on any associated alternate contracts. Those alternate contracts can't use the straight line expense accounting method.

## Result

Workday generates any related expense recognition schedules and installments in *Draft* status.

## Next Steps

Approve your alternate lease-type supplier contracts.

#### Tasks

[Steps: Record Active Lease-Type Supplier Contracts](#) on page 1589

## Generate Expense Recognition Accounting for Lease Contracts

### Prerequisites

- Create a lease-type supplier contract.
- Security: *Process: Supplier Contract - Expense Recognition* domain in the Supplier Contracts functional area.

### Context

You can manually generate expense recognition accounting to record your lease transactions as operational journals on your ledger. You can also schedule Workday to generate the accounting for installments up to a specified number of days from the scheduled recurrence.

### Steps

1. Access the **Create Expense Recognition Accounting** task.

Alternatively, from the related actions menu of **Expense Recognition Installment** in a contract, you can select the **Expense Recognition Installment > Create Expense Recognition Accounting** related action.

2. (Optional) Access the **Schedule Expense Recognition Accounting** task.

When you select a filter criteria of **Installment Date Days Ahead** for monthly recurrence schedules, enter a number to include installments that have an installment date up to this number of days after the run date.

**Example:** You enter 15 for **Installment Date Days Ahead**. Workday generates accounting for all installments with an installment date up to 15 days from the scheduled recurrence.

### Result

Workday generates expense recognition accounting and:

- Sets the statuses of expense recognition schedule installments to *Complete*.
- Records your installments as operational journals on your ledger.

## Create Worktag Change Amendments

### Prerequisites

- Add **Worktag Change** as a supplier contract lease amendment type. See [Steps: Set Up Lease Accounting](#) on page 1575.
- Configure the *Supplier Contract Amendment Event* business process and security policy in the Supplier Contracts functional area.

## Context

You can update the worktags on the goods lines of your lease-type supplier contract for financial or operating lease contracts.

## Steps

- From the related actions menu of a lease-type supplier contract, select **Supplier Contract > Create Lease Amendment**.
- Complete the task:

Option	Description
<b>Amendment Type</b>	Select <b>Worktag Change</b> .
<b>Amendment Signed Date</b>	<p>Select a date that's the first day of the period that's after the most recent expense recognition or supplier invoice accounting date.</p> <p>You can select a date that's 1 period in the future. Workday uses this date to determine:</p> <ul style="list-style-type: none"> <li>When to apply the change in worktags to expense recognition and supplier invoice installments.</li> </ul> <p>Example: The worktag change amendment signed date is 2025-09-01. Workday maintains the worktags for installments prior to this date and applies the change for future installments.</p> <ul style="list-style-type: none"> <li>The remaining ROU asset and lease liability balances to reclassify.</li> <li>The transaction effective date for business assets transfers.</li> </ul>

- Click **OK**.
- In the **Goods Lines** tab, edit the **Worktags** for the applicable goods lines.  
You can't change the spend category worktag.
- Click **Submit**.

## Result

After you approve the amendment, Workday applies the change in worktags only to future expense recognition and supplier invoice installments as of the amendment signed date.

For lease-type supplier contracts with a ROU asset depreciation expense accounting method, Workday initiates an *Asset Transfer Event* business process to transfer the business asset to the new worktags so that the worktags apply to future depreciation expense installments. For the transfer, Workday uses the:

- Amendment signed date as the asset transfer effective date.
- Depreciation convention configured for the asset book as the depreciation start date for this transfer.

Workday reclassifies:

- The remaining ROU asset and lease liability balances for operating leases with a ROU asset operating expense accounting method. For multicurrency leases, Workday uses the currency rate of the initial recognition or the last initial recognition adjustment as the currency rate on the initial recognition adjustment for the amendment.
- The remaining liability balances for the lease contracts with a ROU asset depreciation expense accounting method. For multicurrency leases, Workday uses the currency rate of the most recent initial

recognition or initial recognition adjustment as the currency rate on the initial recognition adjustment for the amendment.

- The asset cost and accumulated depreciation for lease contracts with a ROU asset depreciation expense accounting method.

## **Reference: Accounting Methods for Lease-Type Supplier Contracts**

---

You can use 3 types of accounting methods in Workday to create your operating lease-type supplier contracts.

Accounting Method	Description
<b>ROU Asset Depreciation Expense</b>	<p>Calculates and records interest expense accruals. Records depreciation expense of the ROU asset in the Business Asset Accounting functional area. Workday calculates ROU asset and lease liability using:</p> <ul style="list-style-type: none"> <li>Initial direct costs.</li> <li>Interest rate.</li> <li>Lease payment amounts.</li> <li>Lessor incentives.</li> <li>Payment frequency.</li> <li>Prepaid lease payment.</li> </ul>
<b>ROU Asset Operating Expense</b>	<p>Calculates and records lease expense accruals and interest accretion. Workday calculates ROU asset and lease liability using:</p> <ul style="list-style-type: none"> <li>Initial direct costs.</li> <li>Interest rate.</li> <li>Lease payment amounts.</li> <li>Lessor incentives.</li> <li>Payment frequency.</li> <li>Prepaid lease payment.</li> </ul>
<b>Straight Line Expense</b>	<p>Calculates and records lease expense accruals. Workday doesn't record a ROU asset or lease liability as of the contract start date.</p>

#### **Related Information**

##### **Tasks**

[Set Up Supplier Contract Types for Lease Accounting](#) on page 1580

## Concept: Lease Accounting

Lease accounting enables you to recognize the lease liabilities and right of use (ROU) assets of your lease contracts. You need to record your lease liabilities and right of use (ROU) assets on financial statements when you operate in:

- Countries that follow U.S. GAAP or IFRS accounting standards.
- Public sectors that follow standards created by GASB.

### Contract Types and Accounting Methods

Workday enables you to create lease contract types that you can use on a supplier contract to represent your lease contracts. Workday treats lease-type supplier contracts differently than supplier contracts by generating an initial recognition journal and expense recognition schedule. Lease-type supplier contracts also automatically generate a supplier invoice, instead of requiring manual creation of invoices.

You can create 3 kinds of lease-type supplier contracts:

- Financial leases.
- Operating leases.
- Short-term operating leases.

You can only configure contracts with a term of 1 year or less as short-term operating leases. Short-term operating leases differ from regular leases in that you can't:

- Create an alternate contract.
- Generate an initial recognition journal.
- Track the lease as a business asset.

When you create an operating lease, you must also select an accounting method:

Accounting Method	Usage
<i>ROU Asset Depreciation Expense</i>	Helps you represent your operating lease as a depreciating ROU asset. Workday treats this accounting method like a financial lease, requiring you to track and record the lease as a business asset. You might use this option when your organization needs to report under IFRS or U.S. GASB accounting standards.
<i>ROU Asset Operating Expense</i>	Helps you represent the terms of your operating lease as an operating expense. You might use this option when your organization needs to report under U.S. GAAP.
<i>Straight Line Expense</i>	Helps you represent the terms of your original operating lease under the former accounting standards. Doesn't generate an initial recognition journal. You might use this option when your organization needs to provide retrospective reporting.

### Expense Recognition Accounting

After you approve a lease-type supplier contract, you must create expense recognition accounting to generate journals. You can create expense recognition accounting from:

- The **Create Expense Recognition Accounting** related action on an expense recognition installment.

- The **Create Expense Recognition Accounting** task.
- The **Schedule Expense Recognition Accounting** task.

### **Alternate Lease-Type Supplier Contracts**

You can create alternate lease-type supplier contracts from your operating leases to generate financial statements for both the current and former lease accounting standards.

You can't directly amend alternate lease-type supplier contracts. However, when you amend an original lease-type supplier contract, you can update the interest rate of an alternate contract. You can only update the interest rate when the alternate contract doesn't use the straight line expense accounting method.

### **Amendments**

You can create amendments to financial or operating lease-type supplier contracts to change the contract terms. You can't create amendments for short-term operating lease-type supplier contracts. Amendments require you to specify an amendment type that can be either:

- *Lease Extension*
- *Non-CPI Payment Change*
- *Worktag Change*

Before you can create an amendment, you must fulfill these conditions on your contract:

- Approve the original and associated alternate contracts.
- Receive all contract lines with depreciating assets.
- Register all contract lines with depreciating assets.
- Ensure the initial recognition journal has a status of *Posted*.

## **FAQ: Lease Accounting**

**How do I relate supplier invoices generated outside of a lease contract to a lease contract to reconcile the accounting?**

1. Ensure that the supplier invoice installments from the lease accounting are in *Accounted* status to prevent Workday from generating the invoices.
2. Access the **Create Journal** task and reclassify the debit from the supplier invoice to lease liability by:
  - Excluding the supplier contract worktag from the credit line.
  - Adding it to the debit line.

**When loading historical operating leases into Workday, how do I adjust the ROU Asset/Lease liability for the period between setup and the new lease accounting?**

1. Access the **Create Journal** task to create a manual journal entry to reverse the initial recognition entry.
2. Access the **Mass Update Lease Contract Installment to Available or Accounted Status** task to update the expense recognition and supplier invoice installments into *Accounted* status. This action prevents Workday from generating accounting for historical transactions.

## Supplier Accounts

---

### Prepaid Supplier Spend

---

#### Steps: Set Up Prepaid Supplier Spend

##### Prerequisites

- Configure these business processes and security policies in the Suppliers functional area:
  - *Prepaid Spend Amortization Event*.
  - *Prepaid Spend Amortization Schedule Event* for the *Schedule* prepaid amortization type.
  - *Receipt* in the Procurement functional area.
- Include the *Create Supplier Invoice from Receipt* action step to amortize after receipts are settled and paid.
- Set up the *Prepaid Spend* account posting rule.
- Define journal sources and transactions, account posting rules, and additional commitment accounting requirements.

##### Context

To procure goods and services in accounting periods that occur before the periods when spend is amortized, you can define one of these 3 prepaid specifications on invoices or purchase orders:

- Manual: Available for selection on purchase orders and invoices. When you create an invoice with the Prepaid Amortization Type as Manual, you can only amortize it after you pay the invoice. Once you pay the invoice, access the related actions of the supplier invoice and select **Supplier Invoice > Create Prepaid Spend Amortization**. Select the accounting date to create an operational transaction to post the amortization.
- Receipt: Available only for selection on purchase orders and purchase order invoices. To amortize receipts, you must enter the invoice before recording the receipt. Workday amortizes the amount of each receipt that you record. Example: If you receive an invoice of \$1000.00 in 2 receipts of \$500.00 each, Workday will amortize \$500.00 each time you record the receipt.
- Schedule: Available for selection on purchase orders and invoices. See [Create Amortization Schedules for Prepaid Purchase Orders](#) on page 1599.

## Steps

**1. (Optional) Create Purchase Orders.**

Select:

- a. **Prepaid** on purchase order lines.
- b. An **Amortization Type** in the **Prepaid Details** tab from:

- Manual
- Receipt
- Schedule

When you specify prepaid information in purchase orders, the details automatically populate supplier invoices and receipts.

**2. (Optional) Create Amortization Schedules for Prepaid Purchase Orders** on page 1599.

When you create a prepaid purchase order amortization schedule, the details persist to the prepaid supplier invoice amortization schedule.

**3. Create Supplier Invoices** on page 1618.

You can also create a Non-PO supplier invoice. See [Create a Non-PO Supplier Invoice](#) on page 1631.

**4. (Optional) From the related actions menu of a supplier invoice, access the Change Prepaid Amortization Type task.**

You can change the prepaid amortization type on supplier invoices before you create amortizations. Invoices must be:

- Prepaid
- Not related to an accounting adjustment

Security: Process: *Supplier Invoice – Prepayments* domain

**5. Create Amortization Schedules and Installments for Prepaid Supplier Invoices** on page 1600.

**6. (Optional) Create Amortization Schedules and Installments for Prepaid Supplier Invoices from Accounting Adjustments** on page 1602.

Use an accounting adjustment to reclassify supplier invoices to prepaid. You can manually amortize prepaid installments or create amortization schedules for prepaid accounting adjustment transaction lines.

**7. Create Accounting for Prepaid Spend Amortization Installments** on page 1603.

## Result

Workday posts operational accounting to ledger accounts you define in the *Prepaid Spend* account posting rule. New accounting credits the account used by the *Prepaid Spend* posting rule and debits the account used in the *Spend Account* posting rule.

## Example

Your organization prepays supplier invoices:

- For an annual event before the accounting period of the event, and amortizes spend when the event occurs.
- For an annual insurance policy to receive a supplier discount and amortize it monthly for 12 months, rather than accounting for it all in January.
- By a recurring schedule for a lease you pay quarterly and amortize monthly.

## Next Steps

- In the **Prepaid Details** tab:
  - View accounting information in the prepaid supplier invoice.
  - View prepaid purchase orders and supplier invoice schedules in each business document type.
- View prepaid supplier invoice installments and accounting from prepaid supplier invoice schedules.

## Related Information

### Reference

[The Next Level: Prepaid Spend Amortization on Supplier Invoice](#)

## Create Amortization Schedules for Prepaid Purchase Orders

### Prerequisites

- Specify *Schedule* as the **Prepaid Amortization Type** in the purchase order **Prepaid Details** tab.
- Security: *Process: Purchase Order* domain in the Procurement functional area.

### Context

Create amortization schedules for prepaid purchase order lines. Define multiple amortization schedules to group purchase order lines onto separate schedules with different amortization dates.

### Steps

1. From an approved or issued prepaid purchase order, access the related actions menu and select **Create Prepaid Spend Amortization Schedule**.
2. As you complete the task, consider:

Option	Description
<b>Frequency</b>	Select a <b>Frequency</b> for generating installments, such as <i>Quarterly</i> or <i>Monthly</i> .
<b>Number of Prepaid Installments</b>	Enter the number of installments for the amortization schedule.
<b>Prepaid Amortization Date</b>	<ul style="list-style-type: none"> <li>• <b>Use Invoice Date</b> - The schedule begins on the invoice start date.</li> <li>• <b>From Date</b> - Amortization begins on the date you specify.</li> </ul> <p>Example: Specify July 1 to amortize the first installment 7/1 and subsequent installments on the first of the next scheduled installment period.</p>
<b>Add Lines</b>	<p>Check <b>Add Lines</b> for each prepaid line or line split to include on the schedule.</p> <p>You can create separate schedules for purchase order lines.</p>

### Result

- After you save amortization schedules, you can view them from the **Prepaid Details** tab in the purchase order.
- Workday copies purchase order amortization schedules to related supplier invoice amortization schedules, which you can change as needed.

- Changes made to the purchase order amortization schedule apply only to supplier invoices that you create after the change. Workday doesn't update existing supplier invoices.

## Next Steps

Generate prepaid amortization installments in supplier invoices from the prepaid amortization schedules.

### Related Information

#### Tasks

[Create Purchase Orders](#)

## Create Amortization Schedules and Installments for Prepaid Supplier Invoices

### Prerequisites

- Configure the *Prepaid Spend Amortization Schedule Event* business process and security policy in the Supplier Accounts functional area.
- Specify *Schedule* as the **Prepaid Amortization Type** in the supplier invoice **Prepaid Details** tab.

### Context

You can generate installments for prepaid amortization schedules. Consider that:

- If you set up amortization schedules for a supplier invoice related to a purchase order, Workday automatically populates the supplier invoice amortization schedule from the purchase order, but you can change it as needed.
- If you generate prepaid amortization installments before approving the supplier invoice, Workday clears the installments as a safeguard in case you change invoice line extended amounts during the review step.
- You can use the Submit Prepaid Spend Amortization Schedule web service to create custom schedules for prepaid spend amortizations.

### Steps

- From a saved or submitted supplier invoice, select the **Create Prepaid Spend Amortization Schedule** related action or access the **Supplier Invoice Workbench**.
- As you complete the task, consider:

Option	Description
<b>Frequency</b>	Select a <b>Frequency</b> for generating installments, such as <i>Quarterly</i> or <i>Monthly</i> .
<b>Number of Installments</b>	Enter the number of installments for the amortization schedule.
<b>Schedule On Hold</b>	<p>Check to place the schedule on hold, which prevents amortization accounting from processing.</p> <p>You can release schedules from the <b>On Hold</b> status when you're ready to process amortization accounting.</p>
<b>Prepaid Amortization Date</b>	<ul style="list-style-type: none"> <li><b>Use Invoice Date</b> - The schedule begins on the invoice start date.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>• <b>From Date</b> - Amortization begins on the date you specify. Example: Specify July 1 to amortize the first installment 7/1 and subsequent installments on the first of the next scheduled installment period.</li> </ul>
<b>Add Lines</b>	<p>Check <b>Add Lines</b> for each prepaid line or line split for the schedule.</p> <p>You can create multiple schedules for the supplier invoice if you require different installment details for groups of lines. You can also create a schedule for a single line.</p>

3. Click **Save and Continue**.

4. Select:

- **Generate Installments**

If you generate installments, you can't change completed or amortized installments on a prepaid spend amortization schedule in draft status.

- **Edit Schedule**

Update installment and date information, **Add Lines**, or **Remove Lines** on the amortization schedule.

- **Put Schedule On Hold or Release Schedule From Hold**

5. Click **Customize Installments** to modify installment dates and amounts. Consider that you can:

- Customize installments on a prepaid spend amortization schedule in draft status.
- Change worktags on available installments without affecting completed installments.
- Not change billable worktags in prepaid installments.
- Not change billable project worktags in available installments, to prevent billing errors.

When you change worktags on available installments, Workday:

- Hides inherited worktags in the installments lines.
- Populates the related worktags of the cost center restricted to a specific company if configured.
- Supports worktag balancing.
- Supports worktag validations in the installment lines based on your supplier invoice setup.

6. Create additional amortization schedules for prepaid lines on the invoice as needed.

7. Click **Submit**.

## Result

- Access a schedule to view related installments from the supplier invoice **Prepaid Details** tab.
- View amortization accounting from the **Accounting** related action of a posted amortization installment.

## Next Steps

Release available prepaid spend amortization installments and generate accounting:

- Use the **Schedule Prepaid Spend Amortization Installments** task to schedule amortization installments.
- From the **View Prepaid Spend Amortization Schedule** report, select the **Prepaid Spend Amortization Installment > Amortize** related action from an installment.

## Related Information

### Tasks

[Steps: Set Up Prepaid Supplier Spend on page 1597](#)

## Create Amortization Schedules and Installments for Prepaid Supplier Invoices from Accounting Adjustments

### Prerequisites

- Specify *Schedule* or *Manual* as the **Prepaid Amortization Type** in the accounting adjustment **Prepaid Details** tab.
- Configure the *Prepaid Spend Amortization Event* business process and security policy in the Supplier Accounts functional area.
- Security: *Process: Supplier Invoice - Prepayments* domain in the Supplier Accounts functional area.

### Context

Create amortization schedules or manually amortize prepaid installments for prepaid accounting adjustment transaction lines. You can also record prepaid spend amortization operational journals from prepaid schedule installments and directly link to the supplier invoice and accounting adjustment transaction.

### Steps

The prepaid amortization types must be *Schedule* or *Manual*. From the related actions menu of the accounting adjustment for a paid supplier invoice:

Option	Description
<b>Schedule</b>	<p>a. Select <b>Accounting Adjustment &gt; Create Prepaid Spend Amortization Schedule</b>.</p> <p>b. Select a <b>Frequency</b> for generating installments, such as <i>Quarterly</i> or <i>Monthly</i>.</p> <p>c. Enter the number of installments for the amortization schedule.</p> <p>d. Select a <b>Prepaid Amortization Date</b>:</p> <ul style="list-style-type: none"> <li>• <b>Use Invoice Date</b>, the schedule begins on the invoice start date.</li> <li>• <b>From Date</b>, amortization begins on the date you specify.</li> </ul> <p>e. Select <b>Add Lines</b> for each prepaid line or line split for the schedule.</p> <p>f. Click <b>Save and Continue</b>.</p> <p>g. Select:</p> <ul style="list-style-type: none"> <li>• <b>Generate Installments</b></li> <li>• <b>Edit Schedule</b></li> </ul> <p style="margin-left: 20px;">Update installment and date information, <b>Add Lines</b>, or <b>Remove Lines</b> on the amortization schedule.</p> <p>h. Click <b>Put Schedule on Hold or Release Schedule From Hold</b></p> <p>i. Click <b>Customize Installments</b> to modify installment dates and amounts.</p>

Option	Description
<b>Manual</b>	<ul style="list-style-type: none"> <li>a. Select <b>Accounting Adjustment &gt; Create Prepaid Spend Amortization</b>.</li> <li>b. Specify the <b>Accounting Date</b> for prepaid spend amortization on the accounting adjustment transaction.</li> </ul>

## Result

Workday creates new accounting that credits the account used by the *Prepaid Spend* posting rule.

## Next Steps

Release available prepaid spend amortization installments and generate accounting:

- Use the **Schedule Prepaid Spend Amortization Installments** task to schedule amortization installments.
- From the **View Prepaid Spend Amortization Schedule** report, select the **Prepaid Spend Amortization Installment > Amortize** related action from an installment.

View the prepaid amortization schedule and details of the accounting adjustment in the **Prepaid Details** tab of the supplier invoice.

## Related Information

### Tasks

[Steps: Set Up Prepaid Supplier Spend](#) on page 1597

## Create Accounting for Prepaid Spend Amortization Installments

### Prerequisites

- Configure the *Receipt* business process with an action step to *Review Schedule for Installment Generation*.
- Generate amortization installments in prepaid supplier invoice amortization schedules.

### Context

Create a schedule to generate supplier invoice amortization installment accounting. You can also amortize installments from a prepaid spend amortization schedule manually, from a supplier invoice prepaid schedule.

### Steps

1. Determine whether to create prepaid amortization accounting for individual installments using the **Schedule Prepaid Spend Amortization Installments** process, or the **Amortize** related action on an scheduled installment:

Option	Description
<b>Schedule</b>	<ul style="list-style-type: none"> <li>• Access the <b>Schedule Prepaid Spend Amortization Installments</b> task.</li> <li>• Select the <b>Run Frequency</b>.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>To run the schedule, set the <b>Accounting Date Days Ahead</b> for the number of days before the accounting date on the installment.</li> <li>If you don't enter a value, Workday runs the schedule on the defined accounting date.</li> <li>Specify the <b>Company</b> or companies for this amortization schedule.</li> <li>(Optional) Select one or more <b>Frequency</b> types in supplier invoice prepaid schedules.</li> <li>For all run frequencies except <i>Run Now</i>, access the <b>Schedule</b> tab and complete the <b>Recurrence Criteria</b> and <b>Range of Recurrence</b> options.</li> </ul>
<b>Manual</b>	<ul style="list-style-type: none"> <li>Access the prepaid supplier invoice amortization schedule with the installments you want to amortize.</li> <li>Select the <b>Prepaid Details</b> tab.</li> <li>Select a <b>Schedule for Supplier Invoice</b> in the <b>Prepaid Spend Amortizations Schedule</b> list.</li> <li>To create prepaid amortization accounting, select the <b>Prepaid Spend Amortization Installment &gt; Amortize</b> related action from the installments.</li> </ul>

- Review the accounting for prepaid installments.
  - Select the **Prepaid Details** tab in the supplier invoice.
  - From the **Prepaid Spend Amortization** list, select the **View Accounting** related action from an installment.

## Result

- Workday creates new accounting that credits the account used by the *Prepaid Spend* posting rule and debits the account used by the *Spend Account* posting rule.
- For invoices with prepaid lines, Workday generates liquidation accounting when you approve the prepaid amortization, not the invoice. For invoices with non-prepaid lines, Workday generates liquidation accounting when you approve the invoice.
- When you amortize an installment from a prepaid spend amortization schedule created from an approved accounting adjustment, Workday:
  - Credits the prepaid account for the worktags from the accounting adjustment line.
  - Debits the spend account for the worktags from the installment line.

### Tasks

[Steps: Set Up Prepaid Supplier Spend on page 1597](#)

## Invoice Retention

---

### Steps: Set Up Retention

#### Context

You can set up retention to capture and track retention amounts using purchase orders and supplier contracts. When you retain a portion of the payment to a vendor, you can:

- Specify the retention as a percentage of the purchase order or supplier contract.
- Track how much is being retained per project.

#### Steps

1. Configure the *Retention Payable* account posting rule for your company.

The *Retention Payable* account posting rule identifies the retention payable account where you want to record a retention amount.

See [Set Up Account Posting Rules](#) on page 84.

2. **Steps: Create Supplier Contracts.**

On the **Maintain Supplier Contract Types** task, specify a **Contract Type** for retention. Select the **Allow Retention** check box to enable retention.

#### Next Steps

Define the retention terms by specifying the retention percentage and estimated retention release date.

#### Related Information

##### Tasks

[Create Supplier Invoices](#) on page 1618

[Steps: Create Supplier Contracts](#)

[Create Purchase Orders](#)

[Add or Update Goods and Service Lines on Supplier Contracts](#)

[Add or Update Project-Based Service Lines on Supplier Contracts](#)

## Release Retention

#### Prerequisites

Security: *Process: Supplier Invoice* domain in the Supplier Accounts functional area.

#### Context

You can release the remaining balance of a retention amount at any time during the life of a purchase order or supplier contract.

#### Steps

1. Access the **Find Purchase Orders** or **Find Supplier Contracts** report.
2. From the related actions menu of a purchase order or supplier contract, select **Retention > Release Retention**.
3. Select the purchase order or supplier contract line to add it to a supplier invoice to release retention.
4. In the **Release Amount** field, specify the amount of the retention balance to release.

## Result

Workday tracks the retention balances on your purchase orders or supplier contracts and updates your retention balances.

## Next Steps

Access the **Supplier Retention Balances** or **Retention Payables to Supplier Balances Reconciliation** reports to view summaries of retention data.

# Invoicing and Payables

---

## Steps: Set Up Supplier Invoices

### Prerequisites

Configure the *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.

### Context

You can streamline invoice creation by configuring supplier invoices to populate payment details, review invoice matching, apply budget check, route to an assigned approver, and more. Supplier invoices also include fields to capture payment purpose codes, statutory invoice types, supplier invoice reference numbers, and control total amounts on the supplier invoice header document.

Supplier invoices and procurement documents help to ensure adequate financial controls are in place before you settle a payment with a vendor.

In addition, based on pre-configured business rules and logic, an asset can be created based on amount-thresholds and discounts taken for prompt payments.

Duplicate check is available via class reference fields (crf's) and days payable outstanding can be measured utilizing custom report creation.

### Steps

1. (Optional) [Edit Domain Security Policies](#).

Configure the *Process: Supplier Invoice - Invoice Workbench* security domain in the Supplier Accounts functional area. Enable your organization to use the **Supplier Invoice Workbench** task to create supplier invoices from Procurement documents.

**2. (Optional) Edit Business Processes.**

On the Supplier Invoice Event business process, you can:

a) **Edit Business Process Security Policies.**

On the *Supplier Invoice Event* business process security policy, add the Approvers security group to the Approved action. This configuration enables you to route a supplier invoice to a unique approver in your organization.

b) Set up the *Supplier Accounts Match Process* action step after the completion step in the *Supplier Invoice Event* business process. This set up ensures processing accuracy in ordering, receiving, and invoicing.

c) Set up the *Initiate Supplier Accounts Match Event for Related Supplier Invoices* service step on the *Supplier Invoice Event* business process.

Use invoice adjustments to initiate the supplier accounts match event for related supplier invoices. You can use a supplier invoice adjustment to correct a previous match exception on a supplier invoice.

d) Set up the *Check Budget* completion step in the *Supplier Invoice Event* business process. This configuration enables you to apply budget check on supplier invoices to ensure the availability of funds.

**3. (Optional) Access the **Maintain Invoice Types by Country** report.**

Configure country-based invoice types for expense reports and supplier invoices, for accurate reporting that complies with local government requirements.

Security: *Set Up: Tax* domain in the Common Financial Management functional area.

**4. (Optional) Set up worktags and spend categories to populate based on the supplier.**

See [Steps: Set Up Spend Category and Worktag Defaulting on Supplier Invoices](#) on page 1607.

**5. (Optional) Set up remittance advices for your suppliers.**

You can either:

- Configure and assign remittance advices in PDF or CSV file format to suppliers using setup rules.

See [Steps: Set Up Remittance Advices Using Setup Rules](#).

- Configure and assign a remittance advice CSV integration directly on each supplier object.

See [Steps: Set Up Supplier Remittance Integration](#).

**6. (Optional) Access the **Configure Optional Fields** task.**

Hide or make optional fields required on supplier invoices and supplier invoice adjustments. See [2025R1 Feature Release Note: Hide or Show Optional Fields on Supplier Invoices](#).

### Related Information

#### Concepts

[Concept: Supplier Invoices](#) on page 1652

#### Tasks

[Create Supplier Invoices](#) on page 1618

#### Reference

[The Next Level: Receipts and Procurement-Related Supplier Invoices in Workday](#)

## Steps: Set Up Spend Category and Worktag Defaulting on Supplier Invoices

### Context

You can configure spend categories and worktags to populate on nonpurchase order invoice lines based on the supplier. Configure this feature to reduce:

- Processing and reviewing time spent on invoices.
- Errors in supplier invoice processing.

## Steps

1. Configure these business processes and security policies in the Suppliers functional area according to your company requirements:
  - *Supplier Event*
  - *Supplier Change Event*
2. (Optional) Set up the Review Supplier Related Worktags action step on the *Supplier Event* business process.  
For new suppliers, the action step enables you to review and approve related worktags.
3. (Optional) Set up the Review Supplier Change Related Worktags action step on the *Supplier Change Event* business process.  
For existing suppliers, the action step enables you to review and approve related worktag changes.
4. [Configure Related Worktags](#).  
Set up the Allowed Worktag Types for suppliers. If you mark a worktag type as required, then assign a default worktag type to new and existing suppliers.
5. [Create Suppliers or Change Supplier Information](#).  
For new or existing suppliers, configure:
  - Default worktags on the **Related Worktags** tab.
  - A default spend category on the **Procurement Options** tab.

Workday displays the **Default Spend Category** field on the **Invoicing Setup** report on the Invoices and Payments profile group of the supplier profile.
6. (Optional) Access the **Maintain Worktag Type Precedences** task.  
Configure the order of priority for applying default related worktags. When left blank, Workday doesn't populate the **Default Spend Category** and **Related Worktags** fields on these web services:
  - Import Supplier Invoice
  - Submit Supplier Invoice
  - Submit Supplier Invoice Adjustment
  - Submit Supplier Invoice Contract
  - Submit Supplier Invoice Request

## Result

When you create supplier invoices, Workday populates your default spend category and worktags from the supplier.

## Steps: Set Up Suppliers for National Account Invoicing

### Context

Set up national account invoicing for a supplier to invoice many different suppliers. This increases the efficiency of supplier invoice processing because a national account supplier can invoice any supplier, including suppliers that don't match the supplier information on the purchase order.

## Steps

- Set up a company for which you want to enable the selection of a different supplier on the invoice that doesn't match the supplier on the purchase order.

See [Steps: Set Up Companies](#) on page 58.

- Access the **Edit Supplier Account Options** task as a related action on the company that you set up.

To select a supplier that is different than the supplier on the purchase order, select the **Allow Different Invoicing and Purchasing Supplier** check box.

- [Change Supplier Information](#).

When you create a supplier change request as a related action on a supplier, select the **Invoice Any Supplier** check box on the **Procurement Options** tab to specify that this supplier can invoice any supplier.

## Result

You can now select a supplier on a supplier invoice that is different than the supplier on the purchase order.

## Next Steps

Create a supplier invoice.

[Create Suppliers](#)

## Steps: Set Up VAT on Supplier Payments

### Prerequisites

[../../../../payroll/company-relationships-usa-single-legal-entity/son1394126853637.dita](#)

### Context

You can calculate and automatically post the accounting for Value Added Tax (VAT) and Goods and Services (GST) when you pay rather than invoice suppliers. You can record unrecognized VAT when you approve supplier invoices and book VAT receivables. When you apply payments to existing invoices before you set up VAT on supplier payments, those payments use the general accounting to process associated payments.

## Steps

- [Steps: Set Up Companies](#) on page 58.
- Access the **Edit Company Tax Details** task from the related actions menu of your company.

Select the **VAT on Payment** check box and select options from these prompts:

- Default Tax Applicability**
- Default Tax Code**

Security:

- Set Up: Company General* domain in the Common Financial Management functional area.
- Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.
- Set Up: Tax* domain in the Common Financial Management functional area.

**3. Access the View Account Posting Rule Set report.**

Select a **Default Ledger Account** for these account posting rules:

- Transaction Tax
- Transaction Tax on Payment

Security:

- *Set Up: Account Rules* domain in the Common Financial Management functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

## Steps: Set Up Configurable Attributes on Supplier Invoices

### Context

You can set up configurable attributes to use as dynamic free-text fields to capture additional information on supplier invoices, invoice adjustments, or supplier invoice requests. You can drive reporting and set up custom validations based on the configurable attributes.

### Steps

**1. Access the Create Supplier Invoice Attribute Template task.**

Create a template and its configurable attributes. Each template you create corresponds to the dynamic additional fields that display on supplier invoice documents. You can assign the same template to multiple companies. However, each company can only have 1 template assigned at any time.

You can only change templates that aren't already in use on an invoice. You can't make changes to an existing template, but you can create new templates using the same additional fields.

**Note:** Configurable attributes display in numerical order based on the sequence of their associated report fields, regardless of the order in which you create them.

Example: You first name Configurable Attribute 06 as Company 1, then you name Configurable Attribute 03 as Company 2. On the supplier invoice document, Workday displays first Company 2, then Company 1.

Security: *Set Up: Supplier Accounts* domain in the Supplier Accounts functional area.

**2. Access the Edit Supplier Accounts Options task.**

Enter the company to which you want to assign the configurable attribute template. On the **Supplier Invoice Attribute Template** tab, select the configurable attribute template you created to display on supplier invoice documents.

Security:

- *Set Up: Supplier Accounts* domain in the Supplier Accounts functional area.
- Security: *Set Up: Company General* domain in the Common Financial Management functional area.

**3. (Optional) Create Supplier Invoices** on page 1618.

On the **Additional Fields** tab, enter the information you want to record on the configurable attribute fields you created. The tab displays the configurable attributes based on the company at the header.

## Result

You can use the configurable attribute report fields to create custom reports and validations based on the values recorded on supplier invoice documents.

## Steps: Set Up Supplier Refunds

### Prerequisites

- Configure the Unapplied Supplier Refunds account posting rule.
- Configure the ID Generator for Supplier Refund prompt on the **Edit Tenant Setup - Financials** task.
- Configure the *Supplier Refund Event* business process and security policy in the Supplier Accounts functional area.
- Security: These domains in the Supplier Accounts functional area:
  - *Process: Supplier Refund*
  - *Process: Supplier Refund – Add Attachment*
  - *Process: Supplier Refund – Cancel*
  - *Process: Supplier Refund – Change*
  - *Process: Supplier Refund – Reporting*
  - *Process: Supplier Refund – View*

### Context

You can create and associate supplier refunds to supplier invoice adjustments, which clear negative balances due to a supplier. You can use supplier refunds along with ad hoc bank transactions to record unapplied refunds.

### Steps

1. (Optional) [Configure Custom Validation Messages](#) on page 54.

Select the Supplier Refund category to configure custom validations for supplier refunds.

2. (Optional) [Create Ad Hoc Bank Transactions](#) on page 2021.

Select the Unapplied Supplier Refunds ledger account.

3. Access the **Record Supplier Refund** task.

Apply a supplier refund to 1 or more approved and unpaid supplier invoice adjustments. For tracking, Workday recommends using the **Deposit Reference** field to associate an existing bank deposit and refund.

You can't use supplier invoice adjustments that:

- Are associated to a grant with an effective award line type, such as cost reimbursable, fixed, or prepaid.
- Are part of a netting transaction during the application of the refund.
- Contain lines with VAT on payment.
- Contain lines with withholding tax set to payment realization.
- Have a status of Not Matched.

Security: *Supplier Refund Event* business process.

4. (Optional) For 1099 MISC Suppliers, we recommend running the **Find Supplier Refunds** report to determine if a supplier invoice adjustment and a refund amount differ. If there's a difference in the amount, create a 1099 MISC adjustment.

## Result

When you approve a supplier refund, we:

- Record an exchange gain and loss if the exchange rate differs between the invoice adjustment and the refund.
- Debit Unapplied Supplier Refunds and credit Payables.
- Generate worktag balancing journals.

## Steps: Set Up Machine Learning Prompt Recommendations for Supplier Invoices and Supplier Invoice Requests

### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.
- To train the supplier invoice automation worktag or tax attributes recommendation model, you need a minimum of 3,000 historical supplier invoices.
- Configure the Innovation Services functional area and configure security policy permissions for these domains:
  - *Manage: Innovation Services*
  - *View: Innovation Services*

### Context

You can enable machine learning recommendations for cost center, location, region and tax attributes on supplier invoice lines. This increases the efficiency of the supplier invoice process and reduces the number of miscategorized invoices.

## Steps

1. **Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.  
<..../manage-workday/tenant-configuration/Machine-Learning-and-Innovation-Services/enable-innovation-services-feature-and-data-contribution.dita>.
  - a. In the **Innovation Service Opt-In** tab, select the **Financial Management Machine Learning GA Features** service check box.
  - b. In the **Data Select Opt-In** tab, select the **Supplier Invoice Data** check box.
    - If available, select **Opt in to Additional Data** checkbox.
  - c. In the **Feature Availability Status** tab, verify that the **Supplier Invoice Data** feature status is *In Progress*. It takes up to 2 weeks to display the supplier invoice worktag recommendations in your tenant. Workday then displays a status of *Available*.
2. Access the **Edit Tenant Setup - Machine Learning** task.  
 Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.  
 Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.
3. Access the **Maintain Machine Learning Prompt Recommendations** task.
  - a) On the initiation page, select the *Accounts Payable* product area.
  - b) In the **Supplier Invoices** grid, select the **Enable Machine Learning Recommendations** check box for the worktag, spend category, or tax attribute types you want to receive recommendations for.
  - c) In the **Supplier Invoices Request** grid, select the **Enable Machine Learning Recommendations** check box for the worktag or spend category you want to receive recommendations for.
 Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.
4. Access **Maintain Worktag Usage**.  
 For worktag recommendations:
  - a. Select **Supplier Invoice**.
  - b. Click **Edit Worktag Usage**.
  - c. In the **Primary Worktags Type** grid, add the worktag types you want to receive machine learning recommendations for.

**Note:** You can only add a worktag type under either **Primary Worktag Types** or **Additional Worktag Types**. If a worktag type you want to include under **Primary Worktag Types** is included under **Additional Worktag Types**, delete it from **Additional Worktag Types** first.

## Result

Workday displays the *Recommended* option and recommendations for **Cost Center**, **Location**, and **Region** worktags and Tax Attributes on supplier invoice lines.

## Create a Supplier Invoice Request

### Prerequisites

- If using invoice types, configure invoice types by country.
- Define the *Supplier Invoice Request Event* business process and security policy.
- Security: *Self-Service: Supplier Invoice Request* domain in the Supplier Accounts functional area.

## Context

Create a payment request for goods or service lines in Workday by adding invoice information to the request. After Workday approves the payment requests, it automatically converts them into supplier invoices.

## Steps

1. Access the **Create Supplier Invoice Request** task.
2. As you complete the **Primary Information** section, consider:

Option	Description
<b>Invoice Date</b>	<p>Enter the date for the supplier invoice. If the supplier has specific payment terms, this date controls the due date.</p> <p>Example: If the payment terms are <i>Net 30</i>, the <b>Due Date</b> field is 30 days after the invoice date. If the date falls within a closed period, Workday posts accounting to the next available period.</p>
<b>Company</b>	<p>The company responsible for invoice payments.</p> <p>To invoice a supplier that is different than the purchase order supplier, select the company that has <b>Allow Different Invoicing and Purchasing Supplier</b> checked.</p>
<b>Supplier</b>	<p>Select the supplier for the invoice. Workday displays the suppliers that are available for use with the selected company or company hierarchy.</p> <p>To invoice a supplier that is different than the purchase order supplier, select the supplier that has <b>Invoice Any Supplier</b> checked.</p>
<b>Remit-To Connection</b>	<p>If the supplier has a <i>Default</i> remit-to connection, it displays in this field. You can update the automatically populated value as needed.</p>
<b>Currency</b>	<p>Workday automatically populates the preferred currency of the supplier; otherwise, it's the company currency. You can change the currency to any of the accepted currencies defined for the supplier.</p>
<b>Control Total Amount</b>	<p>Enter an amount if you know what the total invoice is and you want to ensure that the computed <b>Total Invoice Amount</b> matches your expectation.</p>
<b>Supplier's Invoice Number</b>	<p>If you've received the supplier document, enter its invoice number.</p> <p>Example: If the supplier provided a supplier invoice, enter the invoice number from the supplier document.</p>

3. As you complete the **Additional Information** section, consider:

Option	Description
<b>Ship-To Address</b>	Workday uses this address when evaluating tax rules to determine tax code and tax applicability overrides for the transaction lines.
<b>Payment Terms</b>	Workday automatically populates the payment terms from the supplier, but you can change the terms if needed.
<b>Handling Code</b>	<p>Select a payment handling code for this invoice, such as <i>Hold Payment for Pickup</i> or <i>Overnight Payment</i>.</p> <p>This field displays when you set up payment handling instructions.</p>
<b>Reference Type</b>	You can select an international reference type for the supplier invoice.
<b>Reference Number</b>	If you select a reference type for the supplier invoice, you must enter a reference number of up to 140 characters.
<b>Statutory Invoice Type</b>	If you use invoice types to categorize your supplier invoices in compliance with government requirements, select an invoice type.
<b>Freight Amount</b>	Allocate these landing costs from the transaction header back to the lines. This action requires that at least 1 line has a spend category eligible for allocation of freight and other charges, as set on the <b>Maintain Spend Categories</b> task.
<b>Tax Amount</b>	<p>Workday displays the tax amount due to the supplier. If the company tax option is <i>Enter tax Due to Supplier</i>, the tax amount defaults to the invoice header, when you create an invoice from the supplier invoice request.</p> <p>To trigger tax defaulting rules on invoices created from supplier invoice requests, enable company tax options for supplier invoice request invoices at the tenant level.</p> <p>If the company tax option is <i>Calculate Tax Due to Supplier</i> or <i>Calculate Self-Assessed Tax</i>, and you set up tax defaulting rules, then Workday populates these fields at the supplier invoice line:</p> <ul style="list-style-type: none"> <li>• <b>Tax Applicability</b></li> <li>• <b>Tax Code</b></li> <li>• <b>Tax Option</b></li> <li>• <b>Tax Recoverability</b></li> </ul> <p>If you enter a negative value, Workday allocates the Tax Amount to a negative or zero-cost line.</p>
<b>Memo</b>	Enter or update a memo for the invoice request header.

4. As you complete the **Lines** tab, consider:

<b>Option</b>	<b>Description</b>
<b>Item Description</b>	<p>Include a description to help you and your suppliers more easily identify specific items.</p> <p>If a description is available, Workday automatically populates a description when you select the item.</p>
<b>Spend Category</b>	<p>The spend category links items to corresponding accounting posting rules and provides additional details for reporting. If you select an item, the value automatically updates to the one assigned to the item and you can't change it.</p> <p>The spend category for the invoice line requires the <i>Supplier Invoice</i> spend category usage type.</p>
<b>Quantity</b>	<ul style="list-style-type: none"> <li>• For goods lines, enter the number of items.</li> <li>• For service lines, Workday automatically updates the quantity to zero.</li> </ul>
<b>Unit Cost</b>	<p>Based on the selected item. If the currencies for the <b>Item</b> and invoice differ, Workday automatically converts this value to the <b>Currency</b> of the invoice.</p>
<b>Item Identifiers</b>	<p>Item identifiers for the catalog item, punchout item, or purchase item.</p> <p>When you configure supplier invoices with primary item identifiers on the <b>Maintain Item Identifier Type Display Options</b> task, Workday displays up to 3 item identifiers in columns. You can select the remaining items that aren't marked as primary item identifiers in the <b>Additional Item Identifiers</b> column.</p>
<b>Item Tags</b>	<p>Item tags associated with the catalog item, punchout item, or purchase item.</p>
<b>Extended Amount</b>	<ul style="list-style-type: none"> <li>• For goods lines, <b>Quantity</b> times <b>Unit Cost</b>. If you change the <b>Extended Amount</b>, Workday recalculates the <b>Unit Cost</b>. If you change the <b>Unit Cost</b>, Workday recalculates the <b>Extended Amount</b>.</li> <li>• For service lines, Workday populates the <b>Extended Amount</b> automatically. You can modify the <b>Amount to Invoice</b> as needed.</li> </ul> <p>To create zero cost lines, you must have at least 1 other line item that makes the total invoice amount greater than zero. When you create zero cost lines, Workday allocates the:</p> <ul style="list-style-type: none"> <li>• <b>Tax Amount</b> to a single zero cost line when other lines don't specify a tax applicability.</li> <li>• The <b>Freight Amount</b> field to the last zero cost line on the invoice.</li> </ul>

Option	Description
<b>Worktags</b>	Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.
<b>Billable</b>	<p>This option displays if the invoice line includes a billable project worktag. Select <b>Billable</b> if the line or line split is billable to the project.</p> <p>The <b>Billable</b> option doesn't impact accounting if you include it as a dimension in account posting rule conditions.</p>
<b>Memo</b>	Enter or update a memo for the invoice request line.
<b>Internal Memo</b>	<p>Enter information to display internally for other users in your company, such as payment instructions or tax specifications.</p> <p>The contents of the <b>Internal Memo</b> field don't transfer to the supplier invoice created from the supplier invoice request.</p>
<b>Splits</b>	<p>Click to split lines by <i>Amount</i> or <i>Quantity</i>. You can then specify the amounts or quantities for the split, enter a memo, and select specific worktags for each line split.</p> <p>You can split service lines by amount only.</p>

5. Use the **Attachments** tab to upload or drag and drop files, such as supplier invoice supporting documents.  
Workday supports the file types listed in the **Edit Tenant Setup - System** task for business document attachments.
6. Submit the supplier invoice request for approval, or **Save for Later**.

## Result

- Workday initiates the *Supplier Invoice Request Event* business process for review and approval. If the business process definition includes an approval step, reviewers can modify the supplier invoice before they approve it.
- Use the **Find Supplier Invoice Requests** report to access and update existing invoice requests that you save or submit.

## Related Information

### Tasks

[Configure Questionnaires and Questions](#)

## Create Supplier Invoices

### Prerequisites

- Configure the *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.
- To use invoice adjustments to initiate the supplier accounts match event for related supplier invoices, configure the *Initiate Supplier Accounts Match Event for Related Supplier Invoices* service step on the *Supplier Invoice Event* business process.
- To route the invoice to a designated approver, configure the Supplier Invoice Designated Approver security group on the Approval step of the *Supplier Invoice Event* business process. You can do this only for the Approval step and not for the Review Supplier Invoice step on the business process.
- Include the *Check Budget* completion step in the *Supplier Invoice Event* business process to check budgets on supplier invoices.
- To match supplier invoices to related documents, include the *Supplier Accounts Match Process* action step after the completion step in the *Supplier Invoice Event* business process.
- For the supplier, create a procurement document with one or more lines not previously added to a supplier invoice.
- If using invoice types, configure invoice types by country.
- Security: *Process: Supplier Invoice - Invoice Workbench* domain in the Supplier Accounts functional area.

### Context

You can create invoices for goods and services lines that haven't already been used in a supplier invoice. Select lines from purchase orders, supplier contracts, receipts, timesheets, and task logs.

### Steps

- (Optional) Access the **Edit Company Accounting Details** task , and select the *Supplier Invoice* option for the **Allow Accounting by Approval Date** prompt to use the approval date as the accounting date on your customer invoices and adjustments or to order document sequence numbers by accounting date.  
Security: *Set Up: Company Accounting* domain in the Common Financial Management functional area.
- Access the **Create Supplier Invoice** or **Supplier Invoice Workbench** task.
- As you complete the **Invoice Information** section, consider:

Option	Description
<b>Company</b>	Select the company responsible for invoice payments.  To invoice a supplier that is different from the purchase order supplier, select the company that has <b>Allow Different Invoicing and Purchasing Supplier</b> checked.
<b>Supplier</b>	Select the supplier for the invoice. Workday displays only on-hold or active suppliers that are available for use with the selected company or company hierarchy.  To invoice a supplier that is different from the purchase order supplier, select the supplier that has <b>Invoice Any Supplier</b> checked.

Option	Description
<b>Currency</b>	<p>Workday populates this field with the supplier currency, or the company currency, in that order of priority. You can select any accepted currency defined for the supplier.</p> <p>For an invoice created from the supplier portal or a purchase order, we populate the currency from the purchase order.</p>
<b>Invoice Date</b>	<p>If you've defined payment terms for this supplier, the invoice date controls the due date.</p> <p>Example: The payment terms are <i>Net 30</i>. The <b>Due Date</b> is 30 days after the invoice date. If the date is in a closed period, Workday posts accounting to the next available period.</p>
<b>Invoice Received Date</b>	<p>Enter the date on which your company receives the invoice from the supplier.</p> <p>You might want to track the date on which your company receives an invoice for reporting purposes or to analyze the amount of time it takes to process it. The invoice received date provides a measurement of the efficiency in the organization, based on how long it takes from the time the invoice arrives until it's posted.</p>
<b>Accounting Date Override</b>	<p>Enter a date in an open accounting period.</p> <p>This field displays when you enable <b>Allow Accounting in Arrears</b> for <i>Supplier Invoice</i> on the <b>Edit Company Accounting Details</b> task. Depending on how you configure the company accounting, <b>Accounting Date Override</b> might be optional or required.</p> <p>Example: You provide a service, but don't create the invoice until the next accounting period, so you select the service date as the accounting override date.</p>
<b>Tax-Only</b>	<p>Select to create a tax-only invoice to track and pay taxes to suppliers or tax authorities. For accounting purposes, Workday processes the invoice lines as tax-only lines and excludes accounting for spend amounts.</p> <p>Workday also:</p> <ul style="list-style-type: none"> <li>• Displays the <b>Reference Invoice</b> prompt in the header.</li> <li>• Populates the <b>Total Invoice Amount</b> from the <b>Tax Amount</b>.</li> <li>• Clears and locks the <b>Freight Amount</b> and <b>Other Charges</b>.</li> </ul>

Option	Description
<b>Payment Terms</b>	<p>Workday populates the payment terms from the remit-to connection or the supplier, in that order of priority. You can change the value if needed.</p> <p>For an invoice created from the supplier portal or a purchase order, we populate the <b>Payment Terms</b> from the purchase order.</p>
<b>Reference Type</b>	<p>If you select an international reference type, enter a <b>Reference Number</b> of up to 140 characters.</p>
<b>Default Tax Option</b>	<p>Workday populates this value from the company accounting details, and uses this value to populate the tax option on invoice lines. You can select a different value.</p> <p>To enable tax default rules for invoices created from supplier invoice requests, enable company tax options for supplier invoice request invoices at the tenant level.</p> <p>When the supplier invoice request doesn't specify taxes and the company default is the <i>Calculate Tax Due to Supplier</i> or <i>Calculate Self-Assessed Tax</i> option, Workday populates these fields at the supplier invoice line:</p> <ul style="list-style-type: none"> <li>• <b>Tax Applicability</b></li> <li>• <b>Tax Code</b></li> <li>• <b>Tax Option</b></li> <li>• <b>Tax Recoverability</b></li> </ul> <p>When the supplier invoice request specifies taxes, Workday:</p> <ul style="list-style-type: none"> <li>• Populates the <i>Enter Tax Due to Supplier</i> option.</li> <li>• Doesn't populate the tax fields at the invoice line.</li> </ul>
<b>Default Tax Code</b>	<p>Workday populates the default tax code from the supplier profile, and uses this value to populate the tax code on invoice lines. You can select a different value.</p> <p>You can't enter default tax codes when you enable third-party tax. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>
<b>Default Withholding Tax Code</b>	<p>Workday populates the default tax code from the supplier profile, and uses this value to populate the tax code on invoice lines. You can select a different value.</p> <p>You can't enter default tax codes when you enable third-party withholding tax. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>

Option	Description
<b>Ship-To Address</b>	<p>Workday uses this address when evaluating tax rules to determine tax code and tax applicability overrides for transaction lines.</p> <p>For intercompany invoices, Workday uses your most recent company effective ship-to address on the header and lines to support default tax information at the line level.</p>
<b>Referenced Invoices</b>	Select existing invoices to create a header-level reference.

4. Click the **Purchase Orders**, **Supplier Contracts**, **Receipts**, **Timesheets**, **Task Logs**, **Ad Hoc Lines**, **Customer Invoices**, or **Release Retention** buttons to select lines for the invoice.

You can select uninvoiced lines from 1 or more business documents. You can use them as criteria to narrow your search.

Option	Description
<b>Company</b>	Search for specific companies for items to add to the invoice. The header company of the invoice is the default, but you can add items from other companies. Available companies are based on the invoice intercompany profile of the header company.
<b>Purchase Order Supplier</b>	You can invoice a supplier that is different from the purchase order supplier.
<b>Document Date On or After</b> <b>Document Date On or Before</b>	Narrows lines to a specific date range.
<b>Purchase Orders Selected</b>	Limits results to lines from specific purchase orders, receipts, timesheets, or task logs.
<b>Item</b>	Returns just the receipt lines that contain this item.
<b>Spend Category</b>	<p>Returns the receipt lines or task-log lines tagged with this spend category.</p> <p>The spend category for the invoice line requires the <i>Supplier Invoice</i> spend category usage type.</p>
<b>Contingent Worker</b>	Returns just the timesheet lines for this contingent worker.
<b>Job Profile</b>	Returns just the timesheet lines related to this job profile.
<b>Locations</b>	Returns just the timesheet lines from this location.
<b>Project</b>	Returns just the task logs associated with this project.

5. Click **Ad Hoc Lines** to add non-PO lines to the supplier invoice.
6. Click **Release Retention** to add lines from purchase orders or supplier contracts to the supplier invoice for retention release.
7. Click **Complete Supplier Invoice**.

8. As you complete the **Invoice Information** section, consider:

Option	Description
<b>Remit-To Connection</b>	You can update the default as needed.
<b>Control Total Amount</b>	Enter an amount to verify against the computed <b>Total Invoice Amount</b> .
<b>Freight Amount</b> <b>Other Charges</b>	Allocate these landing costs from the transaction header back to the lines. Add a <i>spend category</i> that's eligible for allocation of freight and other charges to at least 1 line, as set up on the <b>Maintain Spend Categories</b> task.  Example: You purchase a large piece of equipment and have 1 line for the equipment itself and another for installation.
<b>Worktag Split Template</b>	Select a template to populate on all new lines on the invoice.  When you select a new or different template at the header, Workday doesn't populate the template on existing lines with an extended amount.  To set up worktag split allocation templates for supplier invoices, access the <b>Create Worktag Split Template</b> task.

9. As you complete the **Terms and Taxes** section:

Option	Description
<b>Discount Date</b>	Calculated automatically based on <b>Payment Terms</b> with a discount for early payment, and <b>Invoice Date</b> .
<b>Due Date Override</b>	Select a different due date if there's an exception to the terms.
<b>Override Payment Type</b>	Select a different payment type for the supplier.
<b>Originating Country Payment Purpose</b>	Select a payment purpose code if the country sending this invoice payment requires it. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.  See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.
<b>Receiving Country Payment Purpose</b>	Select a payment purpose code if the country receiving this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.  See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.
<b>Withholding Tax Amount</b>	Workday calculates the withholding tax from the invoice lines when tax amounts have a

Option	Description
	<p>realization point at invoice time. We don't include tax amounts that have a realization point at time of payment in this total. To override this calculated amount, you can change calculated tax by tax rate on the <b>Tax</b> tab.</p> <p>You can create a withholding tax exemption on a withholding tax rate for a supplier. Workday automatically applies the exempt withholding percentage on the supplier invoice when calculating the withholding tax.</p>
<b>Update Tax</b>	<p>Click to recalculate tax amounts displayed in the header after you update tax on invoice lines.</p> <p>Workday automatically updates tax when you submit or save for later.</p> <p>Workday disables the button when you enable third-party tax. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>

When you create a supplier invoice from a purchase order or supplier contract, the invoice header amounts for landed cost equal the uninvoiced amounts from the purchase order or supplier contract.

When you create an invoice from a receipt, the invoice header amounts for landed cost equal the sum of allocations from received purchase order or supplier contract lines. Workday prorates the amounts based on receipt quantity or amount (including over-receiving).

**10.** As you complete the **Invoice Reference Information** section, consider:

Option	Description
<b>Ship-To Address</b>	Workday uses this address when evaluating tax rules to determine tax code and tax applicability overrides for the transaction lines.
<b>Handling Code</b>	This field displays when you configure payment handling instructions.
<b>On Hold</b>	Select to hold payment on this invoice.
<b>Supplier Document Received</b>	Select when the supplier has provided an invoice or other relevant document. By default, Workday delivers duplicate validation enabled for this field. To validate against your own conditions, you can disable this option using the <b>Tenant Setup - Financials</b> task. You can use the <b>Maintain Custom Validations</b> task to establish your own condition rules for supplier invoices.
<b>Supplier's Invoice Number</b>	<p>If you've received the supplier document, enter its reference number.</p> <p>Example: The supplier provided an invoice. Enter the invoice number from the supplier document.</p>
<b>External PO Number</b>	If you use a procurement system other than Workday, enter that purchase order number.

Option	Description
<b>Statutory Invoice Type</b>	If you use invoice types to categorize your supplier invoices in compliance with government requirements, select an invoice type.
<b>Supplier Contract / Default Supplier Contract</b>	<p>Select a <b>Supplier Contract</b> if the company and supplier match those on this invoice. After you approve the supplier invoice, Workday automatically subtracts the invoice amount from the remaining contract balance.</p> <p><b>Default Supplier Contract</b> displays when you select the <b>Enable Consolidation of Requisitions Across Supplier Contracts</b> check box during tenant setup.</p>
<b>Total Contract Amount</b>	Provided by the selected contract.
<b>Document Link</b>	<p>If you store supporting documents or images in an external repository, then enter the URL to that location. Once you save the transaction, Workday displays the URL as a live hyperlink to the image. Approvers can reference this document before approving the transaction.</p> <p>If the location of the supporting documents or images changes, you must update the URL.</p> <p>Workday ensures that the link has a valid Uniform Resource Identifier (URI) pattern, as defined by your security administrator. This process helps avoid malicious content in external links.</p> <p>To set up a valid URI, select <i>Supplier Invoice Document Link</i> from the <b>Supplier External URI Link Type</b> prompt on the <b>Maintain External Link Validation</b> task.</p>
<b>Memo</b>	<p>You can set up Workday to print this information on the <b>Memo</b> field of the check to pay this invoice.</p> <p>To configure this functionality on the supplier, select the <i>Use Invoice Memo</i> option on the <b>Create Supplier</b> or <b>Create Supplier Change</b> task.</p> <p>If multiple invoices have memos, Workday organizes the memos in a series on the check.</p> <p>You can also use the <b>Put Supplier Payment Memo</b> web service task to capture and store additional information in the <b>Memo</b> field at the header of the supplier payment. Example: Enter and track withholding tax ID numbers.</p>
<b>Approver</b>	<p>Select a designated approver to review and approve the supplier invoice.</p> <p>To set up a designated approver, add the related <b>Supplier Invoice Designated Approver</b> security</p>

Option	Description
	group to the <i>Supplier Invoice Event</i> business process security policy.

11. As you complete the **Invoice Lines** tab, consider:

Option	Description
<b>Company</b>	<p>Displays the company to which the supplier invoice belongs. If the company enables intercompany transactions, you can select from the intercompany transactions included in its intercompany profile.</p> <p>If you're creating an invoice from a multicompny purchase order, your purchase order line company populates as the invoice line company when the company is from a:</p> <ul style="list-style-type: none"> <li>• Purchase order.</li> <li>• Receipt.</li> <li>• Task log for purchase orders.</li> </ul>
<b>Item</b>	For new lines, select the item.
<b>Item Description</b>	<p>Include a description to help you and your suppliers more easily identify specific items.</p> <p>If a description is available, Workday automatically populates a description when you select the item.</p>
<b>Spend Category</b>	<p>Select categories to link items to corresponding accounting posting rules and provide additional details for reporting. When you select an item, Workday populates the value assigned to the item and you can't change it.</p> <p>The spend category for the invoice line requires the <i>Supplier Invoice</i> spend category usage type.</p>
<b>Supplier Item Identifier</b>	Displays the supplier item identifier when you associate the line to a supplier item, such as a catalog or punchout item.
<b>Supplier Contract</b>	<p>Select the supplier contract for the supplier invoice line.</p> <p>When the selected supplier contract is linked to a catalog, Workday limits the item selection based on catalog to those specific catalog items.</p> <p>You can't edit the supplier contract when you select an item.</p> <p>Displays if you select the <b>Enable Consolidation of Requisitions Across Supplier Contracts</b> check box during tenant setup.</p>

Option	Description
<b>Ship-To Address</b>	<p>Workday automatically populates from the <b>Ship-To Address</b> field on the header, but you can change it.</p> <p>This address determines the tax code, tax applicability, and withholding tax code using <b>Tax Rules for Country</b>.</p>
<b>Tax Applicability</b>	<p>Indicate whether the line is taxable and, if taxable, its recoverability. You can use tax applicability to filter transactions in reporting. This check box populates from the item-specific tax rule based on the line ship-to address, first by purchase item and then by spend category. If there's no match, itpopulates from the purchase item. Otherwise, itpopulates from the spend category.</p>
<b>Tax Code</b>	<p>If taxable, the code populates from the <b>Default Tax Code</b> on the header, which you can override.</p> <p>To enable Workday to populate your tax codes, use the <b>Create Transaction Tax Rule for Country</b> task.</p> <p>For companies that operate as customers on direct intercompany invoices, Workday populates tax codes from customer invoice lines to supplier invoice lines. To disable this functionality and enable Workday to populate the tax code from <b>Tax Rules for Country</b>, access the <b>Maintain Companies as Customers or Suppliers</b> task and clear the <b>Copy Tax Fields</b> check box.</p>
<b>Withholding Tax Code</b>	<p>The code populates from the <b>Default Withholding Tax Code</b> on the header, which you can override.</p> <p>For companies that operate as customers on direct intercompany invoices, Workday populates withholding tax codes from customer invoice lines to supplier invoice lines. To disable this functionality, access the <b>Maintain Companies as Customers or Suppliers</b> task and clear the <b>Copy Tax Fields</b> check box.</p>
<b>Tax Point Date Type</b>	<p>Select the type of tax point date for the invoice line and specify a tax point date if the type is <b>Goods/Service Delivery Date</b>. Workday populates tax point date type with <b>Invoice/Adjustment Date</b> unless you select the <b>VAT on Payment</b> check box for a company. If you select the <b>VAT on Payment</b> check box on the <b>Edit Company Tax Details</b> task, Workday sets the tax point date type as <b>Payment Date</b>.</p>

Option	Description
<b>Tax Point Date</b>	When you select <b>Goods/Service Delivery Date</b> for the tax point date type, you must enter a tax point date.
<b>Tax Recoverability</b>	<p>Workday automatically populates the recoverable percentage on the transaction line based on the specified tax applicability and tax code. You can override this selection. When you specify the tax recoverability, Workday applies the recoverable percentage and the allocation method to the tax amount for tax rates within a tax code.</p> <p>Use the <b>Maintain Tax Recoverabilities</b> task to specify the tax recoverability of multiple tax rates for each tax code.</p>
<b>Tax Option</b>	Select <i>Calculate Self-Assessed Tax</i> when suppliers or payees don't charge tax. This option enables you to post your tax liability to a separate ledger account. Otherwise, select <i>Calculate Tax Due to Supplier</i> to post the tax payment made to the supplier or payee.
<b>Quantity</b>	<p>For:</p> <ul style="list-style-type: none"> <li>• Goods lines, enter the number of items.</li> <li>• Service lines, Workday sets the quantity to zero.</li> </ul>
<b>Unit Cost</b>	Based on the selected item. When the currencies for the <b>Item</b> and invoice differ, Workday automatically converts this value to the currency of the invoice. Workday uses the current currency conversion rate between the 2 currencies as defined for the default currency rate type from the tenant setup. For service lines, the unit cost is always zero.
<b>Extended Amount</b>	<ul style="list-style-type: none"> <li>• For goods lines, <b>Quantity</b> times <b>Unit Cost</b>. If you change the <b>Extended Amount</b>, Workday recalculates the <b>Unit Cost</b>. If you change the <b>Unit Cost</b>, Workday recalculates the <b>Extended Amount</b>.</li> <li>• For service lines, Workday populates the <b>Extended Amount</b> automatically. You can modify the <b>Amount to Invoice</b> as needed.</li> </ul> <p>To create zero-cost lines, you must have at least 1 other line item that makes the <b>Total Invoice Amount</b> greater than zero. When you create zero-cost lines, Workday allocates the:</p> <ul style="list-style-type: none"> <li>• <b>Tax Amount</b> to a single zero-cost line when other lines don't specify a tax applicability.</li> <li>• Amount from the <b>Freight Amount</b> and <b>Other Charges</b> fields to the last zero-cost line on the</li> </ul>

Option	Description
	invoice, when other lines don't use freight or other spend categories.
<b>Alternate Item Identifiers</b>	<p>Alternate item identifiers for the catalog item, punchout item, or purchase item.</p> <p>When you configure supplier invoices with primary item identifiers on the <b>Maintain Item Identifier Type Display Options</b> task, Workday displays up to 3 item identifiers in columns. You can select the remaining items that aren't marked as primary item identifiers in the <b>Additional Item Identifiers</b> column.</p>
<b>Item Tags</b>	Item tags associated with the catalog item, punchout item, or purchase item.
<b>Retention Details</b>	<p>When you select <i>Retention</i> on a purchase order or supplier contract, Workday displays the <b>Retention Details</b> column for the line.</p> <p>You can't modify <b>Payment Amount</b> and <b>Percent to Retain</b>.</p>
<b>Prepaid</b>	<p>Check or uncheck <b>Prepaid</b> to update the prepaid status for the line.</p> <p>Workday automatically enables the <b>Has Prepaid Line(s)</b> option in the <b>Prepaid Details</b> tab it after you select a line.</p> <p>Spend categories for prepaid lines must either be:</p> <ul style="list-style-type: none"> <li>• Non-trackable</li> <li>• Trackable with the <i>Expense</i> accounting treatment</li> </ul> <p>When tax isn't allocated on a prepaid line, it won't be included in the prepaid accounting in related invoices. Instead, it will use the <i>Transaction Tax</i> account posting rule.</p>
<b>Memo</b>	Enter or update a memo for the supplier invoice.
<b>Worktags</b>	Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.
<b>Billable</b>	<p>When the invoice line includes a billable project worktag, you can select <b>Billable</b> if the line or line split is billable to the project.</p> <p>This selection doesn't impact accounting when you include it as a dimension in account posting rule conditions.</p>

Option	Description
<b>Worktag Split Template</b>	<p>Populates from the header template when you create a new line.</p> <p>You can select a new template or override it based on the company at the line.</p>
<b>Splits</b>	<p>Click to split lines by <i>Amount</i> or <i>Quantity</i>. You can then specify the amounts or quantities for the split, enter a memo, and select specific worktags for each line split.</p> <p>You can split service lines only by amount.</p> <p>For zero cost lines, you can only split items by quantity.</p>

12. Use the **Tax** tab to review the tax codes and their applicability as specified on the invoice lines. If several lines share the same tax, this tab consolidates them and totals the amount with this tax.
13. To specify the retention release amount on a purchase order or supplier contract, access **Retention Release Lines** and enter a **Release Amount**.
14. Use the **Retention Details** tab to view the total amount retained and total amount released on this invoice when you select **Retention** for a purchase order, or a supplier contract.
15. (Optional) As you complete the **Currency Rate** tab, consider:

For foreign currency invoices, you can make adjustments to achieve a different conversion rate. Any changes you make on the **Currency Rate** tab register in the **Effective Currency Rate** field, that displays the rate used for accounting to convert installment amounts to ledger currency. Any overrides that you enter trigger the selection of the **Rate Override** check box.

Option	Description
<b>Currency Rate Type Override</b>	Select an option to override the default rate type used to look up the exchange rate.
<b>Currency Rate Date Override</b>	Select a date to override the default rate date used to look up the exchange rate.
<b>Currency Rate Manual Override</b>	Enter a currency rate to override the exchange rate or provide a rate when a default rate isn't available.
<b>Defaults</b>	This section displays the tenant default currency rate based on the invoice date.

16. To define any supplier invoice line as prepaid, access the **Prepaid Details** tab and select the **Prepaid Amortization Type**.

If you've defined prepaid details in the underlying purchase order, they default in the supplier invoice, which you can update.

Option	Description
<b>Manual</b>	<p>Select to amortize manually the prepaid spend amortization on a future date. Optionally enter the <b>Expected Amortization Date</b> for tracking and reporting purposes.</p> <p>You can use the <b>Expected Amortization Date</b> for reporting and to create custom alerts, but Workday doesn't validate against this date.</p>

Option	Description
	Settle and pay manual prepaid amortization-type payments, before you amortize the spend.
<b>Receipt</b>	<p>Select to amortize prepaid spend after the <i>Receipt</i> business process completes for:</p> <ul style="list-style-type: none"> <li>• Purchase orders</li> <li>• Supplier invoices generated from POs or supplier contracts</li> </ul>
<b>Schedule</b>	Specify to define a schedule for amortizing prepaid spend after the purchase order approval.

**17.** Use the **Attachments** tab to upload or drag and drop files, such as supplier invoice supporting documents.

Workday supports the file types listed in the **Edit Tenant Setup - System** task for business document attachments.

You can associate supplier invoice attachments with customer invoices for billable transactions. When a supplier invoice is ready to be billed, we prevent you from changing attachments on the supplier invoice or supplier invoice adjustment.

**18.** Access the **Work Queue Information** tab to add **Work Queue Tags**, **Work Queue Notes**, and other details to display for the invoice on the **Supplier Invoice Work Area** report.

To view the **Work Queue Information** tab, configure these security domains:

- *Process: Supplier Invoice Work Queue*
- *Manage: Supplier Invoice Work Queue*

**19.** Click **Submit**. Workday forwards the supplier invoice for approval.

## Result

- Workday initiates the *Supplier Invoice Event* business process for review and approval. If the business process definition includes an approval step, reviewers can modify the supplier invoice before they approve it.
- When you view the transaction:
  - **Line Details** display the accounting distribution of any landed cost amounts allocated from the header to the lines and the total **Gross Amount** (net extended amount plus allocated tax, freight, and other charges). Workday uses the gross amount for:
    - Debit entry of spend accounting.
    - Receipt accruals.
    - Budget checking of spend transactions.
    - Default acquisition cost during asset registration.
  - The **Tax** tab displays the recoverable percent and distribution of recoverable and nonrecoverable tax amounts based on the:
    - Tax applicability.
    - Tax code.
    - Taxable amount.
  - Workday automatically creates operational journals in the company currency for approved transactions. If the transaction and company currencies differ, Workday converts the amounts to the company currency.

- When the *Supplier Invoice Event* business process completes, Workday processes accounting for supplier invoices:
  - Non-prepaid lines use the Spend account posting rule.
  - Prepaid lines use the Prepaid Spend account posting rule.
- For supplier invoices that are:
  - Zero-cost, Workday marks the invoice as paid when it's approved and keeps it out of the settlement run, unless:
    - The company has configured VAT on payment.
    - The Tax Point Date Type is Payment Date.
    - There's a withholding tax rate with payment realization on the invoice line.
  - Negative, you can settle the invoice through a settlement run that includes other invoices with positive total amounts.
- Use the **Find Supplier Invoices** report to access and update existing invoices that you save or submit.

## Next Steps

- If matching supplier invoices to related business documents, configure the *Supplier Accounts Match Event* business process.
- If matching supplier invoices to supplier contracts, you must create the invoice on the **Supplier Invoice Workbench** task.
- To view the list of Workday-provided reports and their descriptions, access the **Workday Standard Reports** report and select the *Supplier Accounts* option.
- To pay approved invoices, suppliers must be in active status.
- To cancel the supplier invoice and generate a new supplier invoice adjustment, use the **Convert to Supplier Invoice Adjustment** related action on the supplier invoice.
- Settle the approved supplier invoices. The settlement process creates and settles the invoiced payments. When the process completes, Workday updates the accounting entries for each payment.

## Create a Non-PO Supplier Invoice

### Prerequisites

- Configure the *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.

- To create non-PO supplier invoices in the Supplier Invoice Workbench, set up Security: Process: *Supplier Invoice - Invoice Workbench* domain in the Supplier Accounts functional area.

## Context

You can create a supplier invoice that isn't based on a purchase order. These are sometimes referred to as standalone supplier invoices, or non-purchase order transactions. You can enter details about the invoice, the payment terms, and taxes. You might need to record a standalone supplier invoice for utility payments, tax liabilities, and other scenarios.

## Steps

1. (Optional) Access the **Edit Company Accounting Details** task , and select the *Supplier Invoice* option from the **Allow Accounting by Approval Date** prompt to use the approval date as the accounting date on your customer invoices and adjustments or to order document sequence numbers by accounting date.

Security: *Set Up: Company Accounting* domain in the Common Financial Management functional area.

2. Access the **Create Supplier Invoice** task.

Access the **Supplier Invoice Workbench** task.

3. As you complete the **Invoice Information** section, consider:

Option	Description
<b>Company</b>	Select the company responsible for invoice payments.
<b>Supplier</b>	Select from the suppliers that are available for use with the selected company or company hierarchy.
<b>Remit-To Connection</b>	If the supplier has a default remit-to connection, it displays in this field. You can update the default as needed.
<b>Currency</b>	Defaults to the preferred currency of the supplier if specified on the supplier; otherwise, it's the company currency. You can change the currency to any of the accepted currencies defined for the supplier.
<b>Invoice Date</b>	If you've defined payment terms for this supplier, the Invoice Date controls the due date.  Example: The payment terms are <i>Net 30</i> . The <b>Due Date</b> will be 30 days after the invoice date. If the date is in a closed period, Workday posts accounting to the next available period.
<b>Accounting Date Override</b>	Enter a date in an open accounting period.  This field displays when you enable <b>Allow Accounting in Arrears</b> for <i>Supplier Invoice</i> on the <b>Edit Company Accounting Details</b> task. Depending on how you configure the company accounting, Accounting Date Override might be optional or required.  Example: You provide a service, but don't create the invoice until the next accounting period, so

Option	Description
	you select the service date as the accounting override date.
<b>Control Total Amount</b>	Enter an amount if you know what the total invoice is and you want to ensure that the computed <b>Total Invoice Amount</b> matches your expectation.
<b>Freight Amount</b> <b>Other Charges</b>	<p>Allocate these landing costs from the transaction header back to the lines. Add a <i>spend category</i> that's eligible for allocation of freight and other charges to at least 1 line, as set up on the <b>Maintain Spend Categories</b> task.</p> <p>Example: You purchase a large piece of equipment and have 1 line for the equipment itself and another for installation.</p>

4. As you complete the **Terms and Taxes** section, consider:

Option	Description
<b>Payment Terms</b>	You can change the terms.
<b>Discount Date</b>	Calculated automatically based on <b>Payment Terms</b> that have a discount for early payment, and <b>Invoice Date</b> .
<b>Due Date Override</b>	Select a different due date if there's an exception to the terms.
<b>Override Payment Type</b>	Select a payment type if there's an exception to the terms.
<b>Originating Country Payment Purpose</b>	<p>Select a payment purpose code if the country sending this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.</p>
<b>Receiving Country Payment Purpose</b>	<p>Select a payment purpose code if the country receiving this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.</p>
<b>Default Tax Option</b>	<p>Workday populates:</p> <ul style="list-style-type: none"> <li>• This value from the company accounting details.</li> <li>• The tax option at the line from the header, but you can override it at the line level.</li> </ul> <p>Workday automatically populates</p>

Option	Description
<b>Default Tax Code</b>	<p>Workday populates the default tax code from the supplier profile. If the default tax code isn't set up or to override it, select a tax code.</p> <p>Workday populates the tax code at the line level from the header, but you can override it.</p>
<b>Default Withholding Tax Code</b>	<p>Workday populates the default withholding tax code from the supplier profile. If the default withholding tax code isn't set up or to override it, select a withholding tax code.</p> <p>Workday populates the withholding tax code at the line from the header, but you can override it at the line level.</p>
<b>Tax Amount</b>	<p>If you selected to calculate tax, Workday displays the sum of the calculated tax amounts from the taxable lines, based on tax code you specify for each line. To override this calculated amount, you can change calculated tax by tax rate on the <b>Tax</b> tab.</p> <p>If you select to enter tax due to the supplier, enter the tax amount for the transaction. You must have at least 1 line with a tax applicability that is taxable and enabled for allocation.</p> <p>The tax allocated to the lines is only the nonrecoverable amount for the transaction and doesn't always add up to this header amount.</p> <p>If you enter a negative value, Workday allocates the tax amount to a negative or zero-cost line.</p>
<b>Withholding Tax Amount</b>	<p>Workday calculates the withholding tax from the invoice lines when tax amounts have a realization point at invoice time.</p> <p>This total doesn't include tax amounts that have a realization point at time of payment. To override this calculated amount, you can change calculated tax by tax rate on the <b>Tax</b> tab.</p>
<b>Update Tax</b>	<p>Click to recalculate the tax displayed in the header when you update tax on an invoice line.</p> <p>Workday also recalculates the header tax automatically when you submit or save for later.</p>

5. Enter details in the **Invoice Reference Information** section:

Option	Description
<b>Ship-To Address</b>	<p>Workday uses this address when evaluating tax rules to determine tax code and tax applicability overrides for the transaction lines.</p>
<b>On Hold</b>	<p>Select to hold payment on this invoice.</p>

Option	Description
<b>Supplier Document Received</b>	Select if the supplier provided an invoice or other relevant document.
<b>Supplier's Invoice Number</b>	<p>If you receive the supplier document, enter its reference number.</p> <p>Example: If the supplier provided a supplier invoice, enter its invoice number.</p> <p>Duplicate validation is automatically enabled for this field. To validate against your own conditions, you can disable this option using the <b>Edit Tenant Setup - Financials</b> task and then use the <b>Maintain Custom Validations</b> task to establish your own condition rules for supplier invoices.</p>
<b>External PO Number</b>	If you use a procurement system other than Workday, enter the purchase order number.
<b>Supplier Contract</b>	Select a contract if the company and supplier on the contract match the invoice. Workday subtracts the invoice amount from the remaining contract balance after the supplier invoice is approved.
<b>Document Link</b>	If you store your document images in an external repository, enter the URL for that location instead of including the image as a file attachment. Workday displays the image, or the URL as a link to the image. Each link must begin with a valid URL pattern as defined by your security administrator.
<b>Memo</b>	<p>When you print a check for payment of this supplier invoice, the value that you enter here prints in the memo field of the check. Select the <b>Use Invoice Memo</b> option in <b>Default Supplier Payment Memo</b> for the supplier.</p> <p>Use the <b>Create Supplier</b> or <b>Create Supplier Change</b> task to configure the invoice memo. If more than 1 invoice for the check to the supplier has a memo, Workday concatenates the memos on the check.</p>

6. As you complete the **Invoice Lines** tab, consider:

Option	Description
<b>Company</b>	Defaults to the company to which the supplier invoice belongs. If the company allows intercompany transactions, you can select from the options included in its intercompany profile.
<b>Item</b>	For new lines, select the item.
<b>Spend Category</b>	The spend category links items to corresponding accounting posting rules and provides additional details for reporting. If you select an item, Workday populates the spend category assigned to the item and you can't change it.

Option	Description
	The spend category for the invoice line requires the <i>Supplier Invoice</i> spend category usage type.
<b>Tax Applicability</b>	If the line is taxable select its recoverability. You can use tax applicability to filter transactions in reporting. Workday populates the options from the item-specific tax rule based on ship-to address, first by purchase item and then by spend category. If there's no match, it automatically populates from the purchase item. Otherwise, it automatically populates from the spend category.
<b>Tax Code</b>	<p>If the item is taxable, the code populates from the <b>Default Tax Code</b> on the header, which you can override.</p> <p>To set up default tax codes, use the <b>Create Transaction Tax Rule for Country</b> task.</p>
<b>Withholding Tax Code</b>	The code populates from the <b>Default Withholding Tax Code</b> on the header, which you can override.
<b>Tax Point Date Type</b>	Select the type of tax point date for the invoice line and specify a tax point date if the type is <b>Goods/Service Delivery Date</b> . Workday populates tax point date type with <b>Invoice/Adjustment Date</b> unless you select the <b>VAT on Payment</b> check box for a company. If you select the <b>VAT on Payment</b> check box on the <b>Edit Company Tax Details</b> task, Workday sets the tax point date type as <b>Payment Date</b> .
<b>Tax Point Date</b>	When you select <b>Goods/Service Delivery Date</b> for the tax point date type, you must enter a tax point date.
<b>Tax Recoverability</b>	<p>Workday automatically populates the recoverable percentage on the transaction line based on the specified tax applicability and tax code. You can override this selection. When you specify the tax recoverability, Workday applies the recoverable percentage and the allocation method to the tax amount for tax rates within a tax code.</p> <p>Use the <b>Maintain Tax Recoverabilities</b> task to specify the tax recoverability of multiple tax rates for each tax code.</p>
<b>Tax Option</b>	Select <i>Calculate Self-Assessed Tax</i> when suppliers or payees don't charge tax. This option enables you to post your tax liability to a separate ledger account. Otherwise, select <i>Calculate Tax Due to Supplier</i> to post the tax payment made to the supplier or payee.
<b>Quantity</b>	<ul style="list-style-type: none"> <li>• For goods lines, enter the number of items.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>For service lines, Workday sets the quantity to zero.</li> </ul>
<b>Unit Cost</b>	<p>Based on the selected item. If the currency for the <b>Item</b> and invoice differ, Workday converts this value to the invoice <b>Currency</b>. Workday uses the current currency conversion rate between the 2 currencies as defined for the default currency rate type (which is part of tenant setup).</p> <p>For service lines, the unit cost is always zero.</p>
<b>Extended Amount</b>	<ul style="list-style-type: none"> <li>For goods lines, <b>Quantity</b> times <b>Unit Cost</b>. If you change the <b>Extended Amount</b>, Workday recalculates the <b>Unit Cost</b>. If you change the <b>Unit Cost</b>, Workday recalculates the <b>Extended Amount</b>.</li> <li>For service lines, Workday populates the <b>Extended Amount</b> automatically. You can modify the <b>Amount to Invoice</b> as needed.</li> </ul>
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p>
<b>Billable</b>	<p>Displays when the invoice line includes a billable project worktag. Select when the line or split is billable to the project.</p> <p>This check box doesn't impact accounting if you include it as a dimension in account posting rule conditions.</p>
<b>Prepaid</b>	<p>Select to prepay this line.</p> <p>Workday automatically checks <b>Has Prepaid Line(s)</b> in the <b>Prepaid Details</b> tab after you select prepaid lines.</p> <p>Spend categories for prepaid lines must be either:</p> <ul style="list-style-type: none"> <li>Nontrackable.</li> <li>Trackable with the <i>Expense</i> accounting treatment.</li> </ul> <p>When tax isn't allocated on a prepaid line, it isn't included in the prepaid accounting in related invoices. Instead, it uses the <i>Transaction Tax</i> account posting rule.</p>
<b>Splits</b>	<p>Click to split lines by <i>Amount</i> or <i>Quantity</i>. You can then specify the amounts or quantities for the split, enter a memo, and select specific worktags for each line split.</p>

Option	Description
	You can split service lines by amount only.

7. Use the **Tax** tab to review the tax codes and their applicability as specified on the invoice lines.  
If several lines share the tax, this tab consolidates them and totals the amount with this tax.
8. To set up prepaid supplier spend, access the **Prepaid Details** tab and select a **Prepaid Amortization Type**:

Option	Description
<b>Manual</b>	Select to manually amortize the prepaid spend amortization on a future date. Optionally enter the <b>Expected Amortization Date</b> . You can use the <b>Expected Amortization Date</b> for reporting and to create custom alerts, but Workday doesn't validate against this date. Manual prepaid amortization type payments must be settled and paid before you can amortize spend.
<b>Schedule</b>	Specify to define a schedule for amortizing prepaid spend from installments on a prepaid supplier invoice amortization schedule.

9. Use the **Attachments** tab to upload or drag and drop files, such as supplier invoice supporting documents.  
Workday supports the file types listed in the **Edit Tenant Setup - System** task for business document attachments.
10. Click **Submit**.  
Workday creates the supplier invoice when you submit or save. The invoice number displays toward the top.

## Result

- Workday initiates the *Supplier Invoice Event* business process for review and approval. If the business process definition includes an approval step, reviewers can modify the supplier invoice before they approve it.
- When you view the transaction:
  - **Line Details** display the accounting distribution of any landed cost amounts allocated from the header to the lines and the total **Gross Amount** (net extended amount plus allocated tax, freight, and other charges). Workday uses the gross amount for:
    - Debit entry of spend accounting.
    - Receipt accruals.
    - Budget checking of spend transactions.
    - Default acquisition cost during asset registration.
  - The **Tax** tab displays the recoverable percent and distribution of recoverable and nonrecoverable tax amounts based on the:
    - Tax applicability.
    - Tax code.
    - Taxable amount.

- Workday automatically creates operational journals in the company currency for approved transactions. If the transaction and company currencies differ, Workday converts the amounts to the company currency.
- When the *Supplier Invoice Event* business process completes, Workday processes accounting for supplier invoices:
  - Non-prepaid lines use the Spend account posting rule.
  - Prepaid lines use the Prepaid Spend account posting rule.
- Use the **Find Supplier Invoices** report to access and update existing invoices that you save or submit.

## Next Steps

If you selected *Schedule* as the prepaid amortization type, access **Create Prepaid Spend Amortization Schedule** from the related actions menu of the supplier invoice to create the schedule and generate spend amortization installments.

## Modify, Copy, or Find Duplicate Supplier Invoices

### Prerequisites

Security: *Process: Supplier Invoice - Reporting* domain in the Supplier Accounts functional area.

### Context

After you create a supplier invoice, you can perform several actions to modify it.

Security permissions vary by action. If you can't select an action:

- You don't have permission.
- The action isn't available for the current status of the invoice.

### Steps

1. Access the supplier invoice by:

- Using the **Find Supplier Invoices** report.
- Entering the supplier invoice number in the search bar. To expedite your search, or if your search doesn't return the supplier invoice, use the prefix *supinv:* in lowercase followed by the journal number. Example: *supinv: S/INV-1372*.

2. Select from these related actions on a supplier invoice:

Action	Description
<b>Edit</b>	Edit a supplier invoice in <i>Draft</i> status. Example: <ul style="list-style-type: none"> <li>• Edit amounts or worktags on an existing line.</li> <li>• Add more ad hoc (non-PO) lines.</li> </ul> You can't edit a supplier invoice once a payment applied.
<b>Workbench</b>	Use the <b>Supplier Invoice Workbench</b> task to add lines to supplier invoices from:

Action	Description
	<ul style="list-style-type: none"> <li>• Purchase Orders</li> <li>• Supplier Contracts</li> <li>• Receipts from:           <ul style="list-style-type: none"> <li>• Purchase Orders</li> <li>• Supplier Contracts</li> </ul> </li> <li>• Task Logs</li> <li>• Ad Hoc Lines</li> </ul>
<b>Cancel</b>	To cancel a supplier invoice, first cancel existing full or partial payments. You can also cancel invoices through a web service.
<b>Change</b>	<p>You can change a supplier invoice before or after approval; however, the invoice must not have payments applied to it.</p> <p>Example: you can edit amounts or worktags on an existing line, or add more ad hoc (non-PO) lines. The <i>Supplier Invoice Event</i> business process starts over as if you just submitted the invoice. You can't change a supplier invoice once a payment applied.</p>
<b>Copy</b>	Create a supplier invoice by copying an existing invoice as the starting point. The <b>Copy</b> option helps you create complex invoices with multiple lines that have similar information as the existing invoice.
<b>Create Adjustment</b>	Create a new transaction for the invoice. Supplier invoice adjustments can reduce or increase the liability.
<b>Create Prepaid Spend Amortization Schedule</b>	For invoices with prepaid lines, create a schedule to generate installments to amortize prepaid invoices.
<b>Find Possible Duplicates</b>	<p>Enter the criteria from your invoice that matches critical or warning messages.</p> <p>Example: Search for duplicates for a specific supplier by:</p> <ul style="list-style-type: none"> <li>• Supplier reference number.</li> <li>• External PO number.</li> <li>• Information from an error message when creating an invoice.</li> </ul> <p>Workday checks your criteria against existing invoices and invoice history.</p>
<b>Hold from Payment</b>	<p>Hold the supplier invoice from being available for payments against it.</p> <p>When you cancel an invoice marked to hold from payment, the value of the <b>Hold From Payment</b> field remains the same.</p>

Action	Description
<b>Pay Invoice</b>	To settle approved supplier invoices, select <b>Pay Invoice</b> . Workday opens the <b>View Settlement Run</b> task where you can process full or partial payments and modify invoice details.

You also can make changes through the *Supplier Invoice Event* business process definition. If the business process includes an approval step, reviewers can modify the invoice before they approve it.

- [Create Receipts](#)

## Adjust Supplier Invoices

### Prerequisites

- Configure the *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.
- Create invoice adjustment reasons on the **Maintain Invoice Adjustment Reasons** task.
- To create supplier invoice adjustments from returns to suppliers, configure the *Return to Supplier Event* business process with the *Create Supplier Invoice Adjustment from Return* action after the completion step.

### Context

To increase or decrease the amount due to a supplier, you can create a supplier invoice adjustment. An adjustment is a new transaction, with its own document number, that is separate from but linked to the original invoice. Adjustments are debitand credit memos.

### Steps

1. (Optional) To use the approval date as the accounting date on your customer invoices and adjustments or to order document sequence numbers by accounting date, access the **Edit Company Accounting Details** task, and select the *Supplier Invoice* option from the **Allow Accounting by Approval Date** prompt.  
Security: *Set Up: Company Accounting* domain in the Common Financial Management functional area.
2. Access the **Create Supplier Invoice Adjustment** task or select **Create Adjustment** from the related actions menu of the supplier invoice.

When you use the **Create Adjustment** related action, Workday associates the invoice adjustment lines to the:

- Original purchase order.
- Receipt.
- Reference supplier invoice.
- Supplier contract.

You can create supplier invoice adjustments from a single supplier invoice or a single return. You can't reference lines from separate procurement documents.

Standalone supplier invoice adjustments created directly on the **Create Supplier Invoice Adjustment** task don't update commitment accounting.

3. As you complete the **Invoice Adjustment Information** section, consider:

Option	Description
<b>Accounting Date Override</b>	<p>The accounting override date you enter must be in an open accounting period.</p> <p>This field displays when you set up the <b>Edit Company Accounting Details</b> task.</p> <p>Example: You provide a service, but don't create the invoice until the next accounting period. You can select the service date as the accounting override date.</p>
<b>Control Total Amount</b>	<p>Enter if you know what the total adjustment is. This amount ensures that the computed total in <b>Total Adjustment Amount</b> matches the control total.</p>
<b>Tax Option</b>	<p>Workday automatically populates this value from the company accounting details.</p> <p>Workday automatically populates the tax option at the line from the header, but you can override it at the line level.</p>
<b>Ship-To Address</b>	<p>Workday uses this address when evaluating tax rules to determine tax code and tax applicability overrides for the transaction lines.</p>
<b>Tax Amount</b>	<p>If you selected to calculate tax, Workday displays the sum of the calculated tax amounts from the taxable lines, based on tax code you specify for each line. To override this calculated amount, you can change calculated tax by tax rate on the <b>Tax</b> tab.</p> <p>If you select to enter tax due to the supplier, enter the tax amount for the transaction. You must have at least 1 line with a tax applicability that is taxable and enabled for allocation.</p> <p>The tax allocated to the lines is only the nonrecoverable amount for the transaction and doesn't always add up to this header amount.</p> <p>If you enter a negative value, Workday allocates the tax amount to a negative or zero-cost line.</p>
<b>Withholding Tax Amount</b>	<p>Workday calculates the withholding tax from the invoice lines when tax amounts have a realization point at invoice time.</p> <p>The total doesn't include tax amounts that have a realization point at time of payment. To override this calculated amount, you can change calculated tax by tax rate on the <b>Tax</b> tab.</p>
<b>Freight Amount</b> <b>Other Charges</b>	<p>Allocate these landing costs from the transaction header back to the lines. Add a <i>spend category</i> that's eligible for allocation of freight and other</p>

Option	Description
	<p>charges to at least 1 line, as set up on the <b>Maintain Spend Categories</b> task.</p> <p>Example: You purchase a large piece of equipment and have 1 line for the equipment itself and another for installation.</p>
<b>Worktag Split Template</b>	<p>Based on the company, select a template to populate on all new lines on the invoice.</p> <p>Workday doesn't populate the template on existing lines with an extended amount, when you make a change, or select different templates at the header.</p> <p>To set up worktag split templates for supplier invoices, access the <b>Create Worktag Split Template</b> task.</p>

4. As you complete the **Invoice Adjustment Reference Information** section, consider:

Option	Description
<b>Reference Invoice</b>	<p>You can create a standalone supplier invoice adjustment and either:</p> <ul style="list-style-type: none"> <li>Leave the value blank.</li> <li>Select a value if this adjustment applies to a specific invoice.</li> </ul>
<b>Originating Country Payment Purpose</b>	<p>Select a payment purpose code if the country sending this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.</p>
<b>Receiving Country Payment Purpose</b>	<p>Select a payment purpose code if the country receiving this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.</p>
<b>On Hold</b>	<p>Select to hold settling this adjustment.</p> <p>If the payment terms include a discount, the <b>Discount Date</b> displays.</p>
<b>External PO Number</b>	<p>Enter for purchase orders that Workday didn't generate.</p>
<b>Statutory Invoice Type</b>	<p>Select if you use invoice types to categorize your supplier invoices in compliance with government requirements.</p>

5. As you complete the **Adjustment Lines** tab, consider:

Option	Description
<b>Business Document</b>	<p>You can view the original purchase order or supplier contract and supplier invoice related to the adjustment line.</p> <p>Click <b>Matching</b> to view a summary of all document lines related to the adjustment, including:</p> <ul style="list-style-type: none"> <li>• Receipts</li> <li>• Returns</li> <li>• Other invoices and adjustments related to the originating document.</li> </ul> <p>Workday supports line-level allocation from the supplier invoice adjustment to Procurement-related documents.</p>
<b>Tax Applicability</b>	<p>Indicates whether the line is taxable and, if taxable, its recoverability. You can use tax applicability to filter transactions in reporting. It automatically populates from the item-specific tax rule based on ship-to address, first by purchase item and then by spend category. If there's no match, it automatically populates from the purchase item. Otherwise, it automatically populates from the spend category.</p>
<b>Tax Code</b>	<p>If taxable, the code automatically populates from the <b>Default Tax Code</b> on the header, which you can override.</p>
<b>Tax Point Date Type</b>	<p>Select the type of tax point date for the invoice line and specify a tax point date if the type is <b>Goods/Service Delivery Date</b>. Workday populates tax point date type with <b>Invoice/Adjustment Date</b> unless you select the <b>VAT on Payment</b> check box for a company. If you select the <b>VAT on Payment</b> check box on the <b>Edit Company Tax Details</b> task, Workday sets the tax point date type as <b>Payment Date</b>.</p>
<b>Tax Recoverability</b>	<p>Workday automatically populates the recoverable percentage on the transaction line based on the specified tax applicability and tax code. You can override this selection. When you specify the tax recoverability, Workday applies the recoverable percentage and the allocation method to the tax amount for tax rates within a tax code.</p>
<b>Tax Option</b>	<p>Select <i>Calculate Self-Assessed Tax</i> when suppliers or payees don't charge tax. This option enables you to post your tax liability to a separate ledger account. Otherwise, select <i>Calculate Tax</i>.</p>

Option	Description
	<i>Due to Supplier</i> to post the tax payment made to the supplier or payee.
<b>Extended Amount</b>	<p>For zero cost lines, you must have at least 1 other line item that makes the <b>Total Adjustment Amount</b> greater than zero. When you create zero cost lines, Workday allocates the:</p> <ul style="list-style-type: none"> <li>• <b>Tax Amount</b> to a single zero cost line when other lines don't specify a tax applicability.</li> <li>• Amount from the <b>Freight Amount</b> and <b>Other Charges</b> fields to the last zero cost line on the invoice.</li> </ul>
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p>
<b>Worktag Split Template</b>	<p>Workday populates the field from the header template when you create a new line.</p> <p>You can select a new template or override it based on the company at the line.</p>

6. Click **Submit**.

## Result

- Workday generates an invoice adjustment number for the adjustment and initiates the *Supplier Invoice Event* business process for transaction review and approval.
- You can update specific fields on unpaid approved supplier invoices without triggering the reapproval process using these tasks (secured to the Process: *Supplier Invoice - Mass Action* domain in the xyz functional area):
  - **Change Approved Supplier Invoices**
  - **Mass Change Approved Supplier Invoices**

## Next Steps

- You can cancel a supplier invoice adjustment when you haven't already applied or canceled payments.
- To make a supplier invoice adjustment unavailable for payment, select **Hold from Payment** from the related actions menu of the supplier invoice adjustment.
- When you enable activity streams for Workday objects, use the **Find Supplier Invoices** report to view your supplier invoice adjustment and enter comments into the activity stream.
- If you need to convert an existing supplier invoice adjustment into a supplier invoice, you can use the **Convert to Supplier Invoice** related action. This action cancels the supplier invoice adjustment and generates a new supplier invoice.

## Add Hold Reasons to Supplier Invoices and Supplier Invoice Adjustments

#### Prerequisites

As you configure supplier invoice hold reasons, consider:

- Workday does not deliver any default invoice hold reasons to customer tenants. You have the flexibility to add the hold reasons that make the most sense for your business needs.
- This field is not automatically delivered in the Find Supplier Invoices report. If you want to add the Supplier Invoice Hold Reason onto this report, copy the standard report and add the field to the report columns.
- You can use custom validations on the supplier invoice to require a hold reason when a supplier invoice or invoice adjustment is on hold.

#### Context

We enable you to specify a configurable reason code when you place a supplier invoice or supplier invoice adjustment on hold from payment.

#### Steps

Access the **Maintain Supplier Invoice Hold Reasons** task.

#### Result

#### Example

#### Next Steps

## Process Supplier Invoices for Remit-To Connections

#### Prerequisites

- Create remit-to connections for suppliers.
- If processing invoices using a supplier contract, create a supplier contract and specify a supplier contract type that includes *Scheduled Invoices*.
- Security: *Process: Supplier Invoice - Invoice Workbench* domain in the Supplier Accounts functional area.

#### Context

Remit supplier invoices and payments to the different addresses, email addresses, and settlement bank accounts you specified on remit-to connections.

#### Steps

1. Access the **Create Supplier Invoice** or **Supplier Invoice Workbench** task.

2. As you complete the invoice, select the **Remit-To Connection** from the prompt.  
You can also select a **Remit-To Connection** for supplier invoices from the **Create Supplier Invoice Schedule for Supplier Contract** task to set up and generate invoice installments for the contract.
3. Use the **Remit-To Connection** related action to preview supplier connection details.  
The **Supplier Connection** preview helps workers ensure that they remit the invoice to the correct remit-to location.  
Workday updates the **Default Payment Type** with the payment type you specified on the supplier connection. You can select a different payment type from the **Override Payment Type** prompt.
4. **Submit** and approve supplier invoices.
5. Access the **Create Settlement Run** task.
6. Select suppliers from the **Suppliers** prompt.  
The **Payee** column displays remit-to connection payees.
7. Select **Preview** to preview payments by **Payee** and **Payment Type** for suppliers and remit-to connections.

## Result

When you process invoices with a different **Remit-To Supplier** than the supplier on the invoice, Workday captures all accounting and reporting details for the supplier you use on the invoice.

## Set Up Role-Based Routing for Supplier Invoice Event

### Prerequisites

Configure the *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.

### Context

Route invoices to specific roles based on cost center, company, spend category, supplier and more.

### Steps

1. [Set Up Assignable Roles](#).  
Create a new assignable role for the specific role-based routing you want to use and select a value from the **Enabled for** prompt, such as:
  - Supplier
  - Cost Center
  - Company
2. [Create Role-Based Security Groups](#).  
Create a role-based (unconstrained) security group and select the assignable role you created from the **Assignable Role** field.
3. [Edit Domain Security Policies](#).  
Edit Permissions for the domain security policy to add the role-based security group you created.

#### 4. Edit Business Process Security Policies.

Add the role-based security group to *Supplier Invoice Event* business process security policy.

#### 5. Edit Business Processes.

Add the role-based security group to Supplier Invoice Business Process Definition.

#### 6. Add the role to your **Enabled for** value on the object.

#### Related Information

##### Tasks

[Create Supplier Invoices](#) on page 1618

## Set Up Routing through a Management Chain

#### Prerequisites

- Configure the *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.
- Configure the Supplier Invoice Designated Approver security group on the Approval and Review steps of the *Supplier Invoice Event* business process to route the invoice to a designated approver.

#### Context

You can route supplier invoices for approval through the management chain of a supervisory organization.

#### Steps

- Access the **Edit Tenant Setup – Financials** task.
- Select the **Enable Management Approval Chain Routing** check box.
- Access the **Create Calculated Field** task, and create a calculated field with these settings to identify the manager in the supervisory organization management chain:
  - Business Object = Event
  - Function = Aggregate Related Instances
  - Source Field = Workers Possibly Assigned Next
  - Condition = Any is True
  - Fields To Aggregate = Management Level
- Access the **Supplier Invoice Event** business process and from the **related actions** menu, create these condition rules.
  - A condition rule that uses the calculated field to determine who in the management chain to route the supplier invoice to.
  - A condition rule for each management level group.
- Access the **Supplier Invoice** business process. Add an **Approval Chain** action step to the **Security Group as Manager** to start the management chain routing:
  - Add the condition rule you created for the management level group to the **While Running** condition on the **Supplier Invoice** business process step. If you have multiple management levels for which you want to route invoices for approval, add additional steps for each management level in the business process.
  - If you want to route the invoice to managers on the basis of the invoice amount, create condition rules for the entry threshold.
- In the **Approver** field of the supplier invoice, enter the name of the worker with the management chain you want to use for approval.

## Result

- Workday initiates the *Supplier Invoice Event* business process for review and approval. If the business process definition includes an approval step, reviewers can modify the supplier invoice before they approve it.
- Workday routes supplier invoices for approval through the management chain you specify.

# Use Workday-Delivered Supplier Accounts Discovery Boards

## Prerequisites

- Set up your tenant for Drive.
- Security: *Discovery Boards: Manage Delivered Discovery Boards* domain in the System functional area.

## Context

You can use Workday-delivered Supplier Accounts discovery boards as a starting point when configuring discovery boards. You can make copies of Workday-delivered discovery boards and share them using Drive.

You can use Supplier Accounts discovery boards to view data such as:

- The average time to approve a supplier invoice.
- The average number of days from the time you enter an invoice to the time you approve it.
- The amount of discounts a supplier takes.
- The top ten suppliers.

You can customize copied discovery boards by:

- Adding visualizations to the discovery board.
- Editing the copied discovery boards in Drive.
- Removing visualizations.

**Note:** Changes Workday makes to Workday-delivered discovery boards don't apply to copies you make of discovery boards.

## Steps

1. Access the **Delivered Discovery Boards** report.
2. Select the **Accounts Payable Discovery Board**.
3. Click **Make a Copy** and enter a location for the copy.

The twenty Workday-delivered visualizations open and display on these four tabs:

- Spend
- Supplier Analysis
- Discounts
- Process Efficiency

**Note:** When Workday opens the visualizations, you might see some visualizations with two exclamation marks. This means that the visualization has no prompt criteria.

4. Select each visualization you want to make changes to, and click **Edit** to set up the prompts, run reports, and retrieve data.
5. Click **Select prompt values** to enter prompt values for the visualization.

## Result

Workday displays a link to the discovery board copy in Drive.

## Next Steps

You can:

- Customize the discovery board by adding visualizations.
- Share the discovery board with other users.

## Configure Email Ingestion for Supplier Accounts

### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

Configure the *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.

### Context

You can use email ingestion to enable a Workday tenant to receive inbound supplier accounts emails in specific domains. When you enable email ingestion, Workday automatically scans emails for invoices using OCR (Optical Character Recognition). Example: When an authorized vendor submits an email invoice, Workday automatically processes the email content into a supplier invoice request.

### Steps

#### 1. [Enable Innovation Services Feature and Machine Learning Data Contributions](#)

On the **Available Services** tab, in the **Cross Application Services** category, select the **Email Ingestion** service to enable it.

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

#### 2. Access the **Edit Tenant Setup - Machine Learning** task.

Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

#### 3. Access the **Create Security Group** task.

Create a segment-based security group and select the suppliers, supplier groups, or supplier categories that you want to include in the segment. Included values can cross multiple segments or be mutually exclusive. Workday recommends that you build from least to most restrictive segment.

Security: *Security Configuration* domain in the System functional area.

**4. Access the Domain Security Policies for Functional Area report.**

In the System functional area, select the *Set Up: Inbound Email* domain and click **Edit Permissions** to grant your segmented security group access to the domain.

Security: *Security Configuration* or *Security Activation* domain in the System functional area.

**5. Access the Edit Tenant Setup - System task.**

In the **System Setup** section, select **Allow Attachments within Emails** to ensure that email ingestion can receive attachments into your tenant.

Security: *Set Up: Tenant Setup - System* domain in the System functional area.

**6. Access the Create Email Ingestion Receiving Domain task.**

Create a receiving domain for email ingestion and configure it in your DNS provider configuration.

Option	Description
<b>Subdomain</b>	Enter the subdomain for the Email Ingestion domain. Example: Invoices
<b>Domain</b>	Enter the domain to use for Email Ingestion. Example: GMS.com

Example: If your subdomain is Invoices and your domain is GMS.com, your Email Ingestion receiving domain is Invoices.GMS.com.

Security: *Set Up: Inbound Email* domain in the System functional area.

**7. Copy the Canonical Names (CNAMEs) and Mail Exchange (MX) values into the DNS host.**

**8. Access the Verify Email Ingestion Receiving Domain task.**

a) Select your receiving domain from the **Receiving Domain** prompt.

b) Click **Refresh** to ensure that the values in the **Verified** column of the **DNS Records** grid change to **Yes**.

Security: *Set Up: Inbound Email* domain in the System functional area.

**9. Access the Configure Email Ingestion Settings task.**

Option	Description
<b>Notification Type</b>	Select the Supplier Invoice notification type to which you want to link the receiving domain.
<b>Receiving Domain</b>	Select the receiving domain to use with the selected notification type.
<b>Allowed Senders</b>	(Optional) Add a row for each email address from which you want the receiving domain to accept inbound emails.

Security: *Set Up: Inbound Email* domain in the System functional area.

**10. Configure the Email Ingestion Tab in the Work Area.**

### Result

Workday processes emails for the notification types you configure into your Workday tenant. Workday routes any email attachments to OCR for scanning and invoice creation.

### Example

When an authorized vendor submits an email invoice, Workday automatically processes the email content as a supplier invoice request.

## Next Steps

After emails start delivering through your domain, you can access the **Inbound Email Ingestions By Date Range** report to track the:

- Status of system events launched by inbound emails.
- Type of requests received through the domain.
- Issues that might cause the process to fail.

If you opt out of the Email Ingestion Innovation Service, you must also:

- Run the **Delete Email Ingestion Settings** task.
- Run the **Delete Email Ingestion Receiving Domain** task.
- Work with your IT Administrator to remove the information added for Email Ingestion from your DNS configuration.

## Concept: Supplier Invoices

### Create Supplier Invoices

Use the **Supplier Invoice Workbench** to create invoices that record purchase events and create liability. Supplier invoices use data that you enter or defaults from a purchase order, receipt, timesheet, task log, supplier contract, or customer invoice. Invoices reflect the receipt of goods or acknowledge services provided, unless you pay for them in advance. Prepaid supplier invoices enable you to amortize spend in accounting periods that occur before the periods that you receive the goods or services on the invoice.

You can also create a supplier invoice:

- Manually.
- By copying an existing supplier invoice.

### Manage Supplier Invoices

Manage supplier invoices after submitting them for approval:

Option	Description
Cancel	Cancel any unpaid invoices and invoice adjustments.

Option	Description
Change	<p>Change an invoice or adjustment after you submit it but before it's paid.</p> <p>To disable changes to supplier invoices or adjustments related to a closed accounting ledger period, select the <b>Disallow Change to Operational Transactions in Closed Periods</b> check box on the <b>Edit Company Accounting Details</b> task.</p> <p>You can change specific fields on unpaid approved supplier invoices without triggering the reapproval process using these tasks that are secured to the <i>Process: Supplier Invoice - Mass Action</i> domain:</p> <ul style="list-style-type: none"> <li>• <b>Change Approved Invoice</b></li> <li>• <b>Mass Change Approved Supplier Invoices</b></li> </ul> <p>The <b>Mass Change Approved Supplier Invoices</b> task enables you to change these fields:</p> <ul style="list-style-type: none"> <li>• Due Date</li> <li>• Due Date Override</li> <li>• Default Payment Type</li> <li>• Override Payment Type</li> <li>• Reference Type</li> <li>• Handling Code</li> <li>• On Hold</li> <li>• Supplier Document Received</li> <li>• Supplier's Invoice Number</li> <li>• External PO Number</li> <li>• Statutory Invoice Type</li> <li>• Document Link</li> <li>• Memo</li> </ul>
Correct	<p>Finance Administrators can correct the supplier invoice after it's submitted. You can use the <b>Correct Supplier Invoice</b> task to change details such as the prepaid amortization type on invoices.</p> <p>To disable corrections to supplier invoices or invoice adjustments related to a closed accounting ledger period, select the <b>Disallow Change to Operational Transactions in Closed Periods</b> check box on the <b>Edit Company Accounting Details</b> task.</p>
Review	<p>Route the supplier invoice for review by adding a review step to the <i>Supplier Invoice Event</i> business process. Enable changes to the supplier invoice during the approval step.</p>
Approve	<p>Route the supplier invoice for approval by adding an approval step to the <i>Supplier Invoice Event</i> business process. You can approve or send back invoices without making changes to invoices.</p>
Revise	<p>Revise is available when you send back the supplier invoices from review or approval.</p>
Hold	<p>Make the invoice unavailable for payment.</p>

Option	Description
Rescind	Restore all Workday data to the state it was in before you created the invoice. Rescind is an internal process that you can't set up. However, you can view it on the invoice Process History tab when the Supplier Invoice Event business process restarts after you change an invoice that was already in progress.

**Note:** Consider that you can't submit supplier invoices for processing on these tasks when they include prepaid lines or a billable project worktag:

- Change Supplier Invoice
- Correct Supplier Invoice
- Edit Supplier Invoice
- Review Supplier Invoice
- Revise Supplier Invoice

You can create an invoice adjustment to change the liability. Usually you decrease the liability, which is a credit memo adjustment. Often, suppliers issue credit memos for returns, damaged merchandise, and price adjustments. You can also adjust an invoice to increase the liability by creating a debit memo adjustment.

When you create a supplier invoice adjustment from a return to a supplier, Workday:

- Creates allocations back to the original Procurement document.
- Updates the balances of the quantity to invoice and receive on the purchase order or contract.

## Pay Suppliers

To pay an invoice or an ad hoc payment, use the Workday settlements infrastructure.

If you don't have an invoice from the supplier, create an ad hoc payment instead.

Before starting the payment process, you can control which payments to make:

Task	Description or Prerequisite
<b>Hold from Payment</b>	Make a supplier invoice or adjustment unavailable for payment. Available as a related action from an invoice.
<b>Allow Payment</b>	To enable payments for invoices previously held from payment, remove the hold. Available as a related action from an invoice.
<b>Create Ad Hoc Payment</b>	Create a payment item for your supplier if you don't have an invoice.

## Supplier Matching

To ensure that you can invoice what you order or receive, Workday supports supplier matching. You can configure match condition rules to enable 3-way or 2-way matching. You can also configure match exception reasons, route match exceptions and match overrides for approval.

## IRS 1099 MISC and 1096 Data

View 1099 MISC payments before printing forms using the **1099 MISC Report** report and drilling into the **Total Amount** column. First set up:

- 1099 MISC categories.
- Suppliers as 1099 MISC supplier.

Companies with 250 or more 1099 suppliers must file electronically with IRS. The **Generate 1099 MISC Electronic Filing** task creates an electronic file to load IRS reporting to the IRS site. You can file forms for multiple companies using single transmitter.

To view data for your IRS 1096 forms before you print it, create a 1099 MISC print run.

### **Negative and Zero-Cost Invoices**

You can create negative and zero-cost supplier invoices from purchase orders and receipts. However, you can't create negative or zero-cost supplier invoice adjustments.

Consider that negative invoices don't support:

- Retention, but you can manually adjust retention on the original supplier invoice.
- Accounting for invoices that include inventory items.

You can also generate negative supplier invoices or submit negative installments when you create schedules and generate installments from a supplier contract.

To prevent your users from creating negative or zero-cost supplier invoices, you can add a custom validation to the **Create Supplier Invoice** task.

### **Financial Accounting**

With Workday transactions, the operational transaction is separate from the accounting. You can complete an operational transaction even if the accounts set up are in error, or Workday can't find an open period. This process is transparent to the operational user.

Therefore, if you enter a supplier invoice in a closed period, Workday looks for an open period to enter the transaction. Workday can still process the invoice and make the payment.

If Workday can't find an open period, then it generates a transaction accounting error. An accountant can fix these errors by opening a period and using the **Fix Operational Journals With Errors** task to reprocess the accounting into an open period.

### **Concept: Tax-Only Supplier Invoices**

Tax-only supplier invoices enable you to track and pay taxes to suppliers or tax authorities configured as suppliers. Workday processes tax-only supplier invoice lines as tax-only lines and excludes accounting for spend in the extended amounts.

You can create tax-only supplier invoices when:

- The original supplier invoice you received omitted tax charges.
- A supplier sends a supplementary invoice with the tax-only (VAT) amount.
- You import goods or services and need to pay the tax-only (VAT) amount directly to a tax authority.

When you create a tax-only supplier invoice:

- You can link the invoice to the original supplier invoices.

- You can create a negative invoice for tax adjustments and reporting.
- Workday ignores the extended amount from the lines in the total invoice amount.
- The invoice uses the tax declaration and reporting framework.

When you create a tax-only supplier invoice, you can't:

- Check invoice lines as prepaid.
- Enter header-level charges such as freight or other charges.
- Convert the invoice into an intercompany supplier invoice.
- Link the invoice to other documents such as purchase orders, receipts, or supplier contracts.
- Include extended amounts in tax forms 1099 MISC and 1042-S.

## **Concept: AP Accruals and AP Helpdesk**

Auditoria.AI SmartBots for Workday provides these accounts payable (AP) features to help you manage tasks in your procure-to-pay process:

- AP Accruals
- AP Helpdesk

You can integrate only the Gmail and Microsoft Outlook email platforms with the Auditoria.AI SmartBots for Workday product offering, and:

- Subscriptions to these email platforms aren't included as part of the product offering.
- Integrations between these email platforms and the product offering aren't included as part of the Service.

**Note:** To use these features, you must subscribe to Innovation Services if you're on the MSA-type (see below) subscription service agreement. If you haven't subscribed to Innovation Services, contact your account executive to request the Innovation Services Addendum. For more information, see [Workday Innovation Services](#) on Workday Community.

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

**Note:** To learn more about updates, fixes and known issues, see

### **AP Accruals**

AP Accruals uses SmartBots to email internal stakeholders and suppliers for accrual estimates and accesses data from these business documents in Workday Financial Management:

- Purchase orders (POs).
- Supplier bills.
- Suppliers.

On the AP Accruals dashboard, you can view:

- Email threads when suppliers respond to accrual estimate requests.
- Statuses for accrual estimate requests and journal entries.

SmartBots use data from supplier responses to generate draft journal entries, which you can modify before posting to Workday.

You can assign suppliers to accrual groups, and then assign owners who can review and approve the accruals for each group. You can also drill down on accrual groups to view details for:

- Journal lines.
- PO data.
- Record data.
- Vendor summaries.

## AP Helpdesk

AP Helpdesk connects to Workday Financial Management, enabling you to access Workday data from:

- Invoices
- Payments
- POs
- Suppliers

SmartBots use this data to complete tasks and process internal and supplier queries by:

- Automating and escalating queries to team members.
- Classifying emails by intent and sender type.
- Flagging potential duplicate invoice submissions.
- Verifying authorized contacts and sending replies.

You can also use the helpdesk dashboard to:

- Access a shared mailbox to view all emails.
- View metrics on mailbox activity, including email volume, SmartBot-detected intents, and SmartBot actions.

We assign priority levels to dashboard tasks and categorize them into 1 of these tabs:

Option	Description
<b>SmartBot Tasks</b>	<p>Displays the tasks that SmartBots resolved. You can drill down on each task to view:</p> <ul style="list-style-type: none"> <li>• Applied email labels.</li> <li>• Associated suppliers.</li> <li>• Email attachments, summaries, and threads.</li> <li>• Replies sent by SmartBots, which are based on custom templates.</li> </ul>
<b>User Tasks</b>	<p>Displays tasks that SmartBots escalate to team members, who can assign themselves or others to resolve the tasks manually.</p>
<b>Review Tasks</b>	<p>Enables team members to review, edit, and approve SmartBot responses.</p>

Option	Description
	<p>You can also:</p> <ul style="list-style-type: none"> <li>• Adjust SmartBot-detected intents and extracted values before you reprocess them.</li> <li>• Enroll suppliers directly for email monitoring.</li> </ul>

## Offboarding

To complete the offboarding process, and regardless of your service agreement, send a discontinue notification through your Workday Customer Success Manager (CSM) or support channels.

If you enabled the feature through Innovation Services, you must also opt out of the service through Innovation Services Enablement. If you opt out, the functionality might be available to end users until Workday validates your opt-out request.

## Reference: Volumes on Supplier Invoice Lines

When processing supplier invoice transactions, consider the volume of lines that you can submit at once to create supplier invoices automatically.

Document	Volume Limit
Supplier invoice	5000 lines
Supplier invoice created from a customer invoice.	1000 lines
Supplier invoice created from a supplier contract.	1000 lines
Supplier invoice created from a purchase order.	1000 lines  For more than 1000 lines, Workday enables you to select up to 5000 lines manually.
Supplier Invoice created from receipt.	5000 lines
Submit Supplier Invoice web service.	5000 lines
Import Supplier Invoice web service.	No limit

## Reference: Supplier Invoice Split Screen

You can use the **Split Screen Default Option** prompt on the **Edit Tenant Setup – Financials** task to set up a split screen view preference for attachments on supplier invoices and invoice adjustments.

When you set up the feature, you can:

- View the split screen on these tasks:
  - Edit Supplier Invoice
  - Edit Supplier Invoice Adjustment
  - View Supplier Invoice
  - View Supplier Invoice Adjustment
- Not view the split screen on Review, Revise, Approve, Create, Copy, or Correct tasks.
- Expand or collapse attachments.
- Flip through the pages of an attachment.
- View a different attachment on the same invoice document.
- Add an attachment to an invoice in progress and save it, then view the attachment on the split screen.
- View a single screen if the invoice doesn't have any attachments.

Workday supports these attachment file formats:

- .DOC
- .DOCX
- .GIF
- .JPG
- .JPEG
- .PDF
- .PNG

The split screen feature offers these options:

Split Screen	Description
<b>Always Expanded</b>	The attachment display to the right of the supplier invoice upon initial load. You can hide it as needed.
<b>Always Collapsed</b>	The attachment collapsed to the right of the supplier invoice upon initial load. You can expand it as needed.
<b>Off</b>	Disable the use of the split screen on supplier invoices and invoice adjustments.

[Adjust Supplier Invoices](#) on page 1641

## Example: Create Payables Aging Reports

This example illustrates how to verify the effective date of cancellation of a supplier invoice when you run the Payables Aging financial report for a closed period.

### Context

You post a supplier invoice in January. Then you reconcile and close the January accounting period. In February, you find out that you have to cancel the invoice.

## Prerequisites

- Security: Reports: Supplier Accounts in the Supplier Accounts functional area.
- Security: Reports Financial Accounting in the Financial Accounting functional area.
- Security: Process: Period End in the Common Financial Management functional area.
- Open the January accounting period.

## Steps

1. Access the **Find Supplier Invoices** report and find the supplier invoice #A010319 with an invoice date in January.
2. Run the **Payables Aging** financial report for January.
3. Access the **Trial Balance** report and check that the trial balance for January matches the payables aging report summary totals.
4. Access the **Mass Update Period Ledger Status** task and close the period for January, and open February.
5. Access the **Find Supplier Invoices** report, find, and cancel invoice #A010319.
6. Rerun the **Payables Aging** financial report for:
  - a. January to verify that the total of the report didn't change.
  - b. February to verify that the canceled invoice isn't on the report.

## Result

Since the January accounting period is closed, the invoice you canceled (#A010319) posts the **Cancel Accounting Date** to the first day of the next open accounting period, February 1st. The **Cancel Accounting Date** is the same date as the **Accounting Date** of the reversal operational journal. You can view the **Cancel Accounting Date** when you select **Accounting > View Accounting** from the related actions menu of the invoice.

## Example: Set Up UK Payment Practices and Performance Reporting

This example illustrates how to configure payment practices and performance reports for supplier invoices, in accordance with United Kingdom legislation.

### Context

As an accounts payable specialist in a UK company, you want to collect this information for UK-compliant reporting:

- Average number of days it takes suppliers to make payments.
- Percentage of payments made within specific time ranges.
- Percentage of payments due that suppliers didn't pay during the agreed payment periods.

## Prerequisites

- Create the supplier in Workday and verify that the status is *Approved*.
- Configure the *Supplier Change Event* business process and security policy.

## Steps

1. Access the **Edit Supplier Account Options** task on the company record.
2. Select the **Enable Payment Practices Reporting** check box to display the **Payment Practices** check box on these tasks:
  - **Create Supplier Invoice**
  - **Create Supplier Invoice Adjustment**

3. Click **Done**.
4. To configure the **Payment Practices** check box to be checked automatically, access the **Maintain Supplier Classifications** task.
5. On the grid, add **UK Payment Practices** as the **Classification Name** and **United Kingdom** as the **Country**.

As you complete this task, configure the classification using these specific values:

Field Title	Supplier Classification Type	Required	Possible Answers
Add <b>Significant UK Connection</b> .	Select <b>Multiple Choice - Single Select</b> .	Select the <b>Required</b> check box.	Enter these possible answers on separate lines: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Add a field and enter <b>Financial Services Related</b> .	Select <b>Multiple Choice - Single Select</b> .	Select the <b>Required</b> check box.	Enter these possible answers on separate lines: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

6. Click **OK**.
7. To apply the classification to a supplier, access the supplier record, select the **Classification** tab, and for **Supplier Classifications**, select:
  - a) **No** for **Financial Services Related**.
  - b) **Yes** for **Significant UK Connection**.

## Result

You can generate reports compliant with UK payment practices and performance reporting:

- **Payment Practices**: Displays all the supplier invoices using the payment practices functionality. When you run the report with the **Payment Practices** check box unchecked, Workday extracts all paid or due invoices for the reporting period.
- **Payment Practices - Average Payment Days**: Displays the average number of days it takes to pay UK suppliers during a reporting period.
- **Payment Practices - Payment Days Ranges**: Displays the percentage of payments made to UK suppliers within:
  - 30 days.
  - 31 to 60 days.
  - 61 or more days.
- **Payment Practices - Proportion of Invoices Past Due**: Displays the percentage of past due invoices that suppliers didn't pay within the reporting period.

## Supplier Invoice Work Area

### Steps: Set Up Supplier Invoice Work Area

#### Context

The Supplier Invoice Work Area helps you to track and manage supplier invoices in Draft status in a single place. You can also prioritize, assign, and configure rules for supplier invoices, as well as correct EDI 810

invoices in error. The Supplier Invoice Work Area also enables you to have visibility into invoice flow timing and exceptions.

## Steps

**1. (Optional) Access the **Maintain Supplier Invoice Work Queue Tags** task.**

Create work queue tags to classify and prioritize supplier invoices.

Security: *Set Up: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.

**2. (Optional) Access the **Maintain Supplier Invoice Work Queue Tag Assignment Rules** task.**

Select how to apply the Work Queue Tags you created on supplier invoices. You can configure assignment rule priority based on supplier, supplier groups, currency, and more.

Security: *Set Up: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.

**3. (Optional) Access the **Maintain Supplier Invoice Assignment Rules** task.**

Set up rule-based routing to send supplier invoices to specific assignees or the creator of the invoice.

The task evaluates rules 1 at a time, in the order they display. When a rule applies to a supplier invoice, we route the invoice to the assignee you selected.

When you don't configure assignment rules, the invoices have no assignee.

We recommend leaving the bottom assignment rule without conditions and assigned to a specific worker. This configuration helps capture all invoices to which the assignment rules don't apply.

Security: *Set Up: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.

**4. (Optional) Access the **Maintain External Supplier Invoice Source** task.**

Create custom external sources of supplier invoices. You can apply sources to supplier invoices using web service. Workday delivers these sources:

- Web services
- EDI 810
- REST API

Security: *Set Up: Supplier Accounts* domain in the Supplier Accounts functional area.

**5. Access the **Maintain Supplier Invoice System Validation** task.**

Select which validation errors to ignore when you create supplier invoices using the EDI 810 integration. When applicable, Workday creates a supplier invoice in Draft status and directs it to the Supplier Invoice Work Area. You can change and correct the invoice to complete processing.

Security: *Set Up: Supplier Accounts* domain in the Supplier Accounts functional area.

**6. Access the **Supplier Invoice Work Area** report.**

View, edit, and process supplier invoices assigned to you. You can click **Search** to find specific invoices in draft status. Workday saves your search preferences, but you can reset them.

See [Reference: Supplier Invoice Work Area](#) on page 1668.

Security: *Process: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.

## Related Information

### Tasks

[Create Supplier Invoices](#) on page 1618

### Reference

[2020R2 What's New Post: Supplier Invoice Work Area](#)

## Steps: Set Up OCR for Supplier Invoices

### Prerequisites

You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA and ISA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

**Note:** To initiate OCR model training for Workday tenants, you need to scan at least one invoice through either the **Upload and Scan** tab in the **Supplier Invoice Work Area** or through **Email Ingestion**.

- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.
- Configure these security domains in the Supplier Accounts functional area:
  - *Manage: Supplier Invoice Work Queue*
  - *Process: Supplier Invoice Work Queue*
  - *Reports: OCR Supplier Invoice*
  - *Set Up: Supplier Invoice Work Queue*
  - *Process: Supplier Invoice - Core*, with unconstrained security group access to give workers the ability to edit the **Company** field on the supplier invoice, when OCR leaves the value blank.
- Configure the file extensions that you want to use in your tenant. Workday supports these file extensions:
  - **PDF**
  - **JPG**
  - **JPEG**
  - **TIF**
  - **TIFF**
  - **GIF**
  - **PNG**
  - **BMP**
  - **WEBP**

### Context

You can configure Optical Character Recognition (OCR) to enable Workday to scan and create supplier invoices directly from uploaded images. Set up rules to classify and prioritize document processing, and specify invoice assignments for workers. OCR scanning accelerates supplier invoice processing and reduces manual effort.

## Steps

- Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

[Enable Innovation Services Feature and Machine Learning Data Contributions.](#)

- In the **Innovation Service Opt-In** tab, select the **Financial Management Machine Learning GA Features** service check box.

- In the **Data Select Opt-In** tab, select the **Supplier Invoice Data** check box.

- If available, select **Opt in to Additional Data** checkbox.

**Note:** Opting into additional data categories allows Workday to determine how well the machine learning model is performing and may be used in the future to improve its ability to identify and match invoice lines to purchase order lines.

- In the **Feature Availability Status** tab, verify that the Supplier Invoice Data feature status is *In Progress*. It takes up to 2 weeks to display the supplier invoice worktag recommendations in your tenant. Workday then displays a status of *Available*.

- Access the **Edit Tenant Setup - Machine Learning** task.

Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

- Access the **Maintain Machine Learning Prompt Recommendations** task.

- On the initiation page, select the *Accounts Payable* product area.

- In the **Supplier Invoices** grid, select the **Enable Machine Learning Recommendations** check box for the worktag or tax attribute types you want to receive recommendations for.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

- (Optional) Access the **Edit Tenant Set Up - Financials** task.

Select from these options in the **Supplier Accounts Options** section:

Option	Description
<b>Hide Custom Validations on the Work Queue</b>	Some custom validations might conflict with the <b>Supplier Invoice Work Area</b> report. Select to turn those custom validations off.

See [Reference: Edit Tenant Setup - Financials](#).

- (Optional) Access the **Edit Supplier Accounts OCR Tenant Options** task.

As you complete the task, consider these options:

Option	Description
<b>Hide OCR Supplier Invoice Custom Validations on the Work Queue</b>	Some OCR custom validations might conflict with the <b>Supplier Invoice Work Area</b> report. Select to turn those OCR custom validations off.
<b>Disable Payment Terms for OCR Supplier Invoice</b>	Select to ignore the payment terms that OCR finds, then Workday populates the payment terms from the supplier. If OCR doesn't find a supplier, then the payment terms populate from the scanned invoice.
<b>Disable Line Level OCR Scanning</b>	<ul style="list-style-type: none"> <li><i>Empty:</i> Select to use OCR line-level details. Workday uses OCR values to try to link purchase order lines to supplier invoice lines. If purchase order lines aren't related to any</li> </ul>

Option	Description
	<p>invoice lines, Workday suggests you run the <b>Purchase Order Override</b> task.</p> <p><b>All Invoices:</b> Select to ignore OCR line-level details for all invoices.</p> <p>If the supplier invoice is related to a purchase order, then Workday populates line information from the uninvoiced purchase order lines.</p> <p>If the supplier invoice isn't related to a purchase order, Workday automatically creates a single supplier invoice line with the <b>Invoice Total</b>.</p> <p><b>PO Related:</b> Select to ignore OCR line-level details only when related to a purchase order.</p> <p>If related to a purchase order, Workday populates line level information based on uninvoiced purchase order lines.</p> <p>If not related to a purchase order, then Workday uses OCR line-level details to populate the lines.</p>
<b>OCR Supplier Invoice Empty Date Behavior</b>	If OCR doesn't recognize the date, you must select either <i>Current Date</i> or <i>Received Date</i> . If you leave the field empty, then Workday uses the <i>Current Date</i> option.
<b>Disable OCR Supplier Matching</b>	Select to ignore machine learning recommendations for suppliers.
<b>Disable Due Date for OCR Supplier Invoice</b>	Select to ignore the <b>Due Date</b> from OCR and use the due date from the Payment Terms settings. When this check box is clear, then Workday populates the <b>Due Date Override</b> field.
<b>Disable Currency for OCR Supplier Invoice</b>	Select to ignore the currency from OCR and use the default currency from the supplier.
<b>Disable Machine Learning PO Matching</b>	Select to ignore machine learning recommendations for purchase orders. When you select this option, Workday still uses application logic to match purchase orders.
<b>Do Not Apply Sequence ID When Company Is Empty</b>	If you configure a unique sequence ID for a company, and OCR detects that the company is empty, then Workday doesn't apply a sequence ID.
<b>Create Supplier Invoice Adjustments from OCR</b>	Select to create a supplier invoice adjustment when the <b>Total Amount</b> on the supplier invoice is negative.

Security: *Set Up: Supplier Invoice Work Queue* and *Set Up: Tenant Setup - Financials* domains.

6. Access the **Maintain Supplier Invoice Assignment Rules** task.  
Set up rule-based routing to send supplier invoices to specific assignees.  
Security: *Set Up: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.
7. Access the **Maintain Supplier Invoice Work Queue Tags** task.  
Create work queue tags to classify and prioritize supplier invoices from OCR scanning.  
Security: *Set Up: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.
8. Access the **Maintain Supplier Invoice Work Queue Tag Assignment Rules** task.  
Set up assignment rule priority based on payment terms, suppliers, currency, and more for your work queue tags.  
Security: *Set Up: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.
9. (Optional) [Configure Custom Validation Messages](#) on page 54.  
Set up custom validations for the **OCR Supplier Invoice** transaction type.
10. Access the **Configure Profile** task.  
Select the *Supplier Invoice Work Area* option. Then select and reorder the tabs you want to use in the **Supplier Invoice Work Area** report.  
Security: *Set Up: System* domain.
11. [Scan and Submit Supplier Invoices](#) on page 1666.  
Upload a file to capture, route, and collect supplier invoice information to submit in Workday.

## Next Steps

To view OCR scanning results, use the **Supplier Invoice OCR Scanning Details** report.

To review the list of data fields extracted from the tenant, click **View Data Collected** on the **Maintain Innovation Services Data Selection Opt-In** task.

## Scan and Submit Supplier Invoices

### Prerequisites

- Set up Optical Character Recognition (OCR) for supplier invoices.
- Configure these security domains:
  - *Process: Supplier Invoice Work Queue*, to access the tabs: Overview, Upload and Scan, My Work Queue, Pending Approval.
  - *Manage: Supplier Invoice Work Queue*, to access the tabs: Manager Overview and Supplier Invoice Cycle Times.

### Context

You can use OCR on your desktop application to capture, route, and collect supplier invoice information to submit in Workday. OCR supports file attachments with up to 15 pages.

When you upload a supplier invoice for OCR scanning, Workday creates a draft invoice and attaches the original file. You can then edit or submit the supplier invoice for approval.

### Steps

1. Access the **Supplier Invoice Work Area** report.
2. On the **Overview** tab, the **Totals** and **Priority** sections display information based on the logged in user's search criteria used in the **My Work Queue** and **Pending Approval** tabs.

3. On the **Upload and Scan** tab, consider:

<b>Option</b>	<b>Description</b>
<b>Search Criteria</b>	<p>Expand the section and click <b>Search</b> to find specific invoices.</p> <p>Select the <b>Include Invoices Without Creator</b> check box to include invoices from integrations.</p>
<b>Upload Supplier Invoices for OCR</b>	<p>When the <b>Company</b> field is empty, then the Machine Learning algorithm populates a company.</p> <p>When the <b>Assignee</b> field is empty, we use the Supplier Invoice Assignment Rules to assign the invoice.</p> <p>For better performance, we suggest uploading less than 50 attachment files at once.</p>
<b>Mass Cancel</b>	<p>Click to cancel your invoice submissions. To enable the button, configure the Security: <i>Process: Supplier Invoice - Cancel</i> domain.</p>
<b>Mass Retry</b>	<p>When scans are in a status of <i>Error</i> or <i>Canceled</i>, then you can click this button to submit the attachment files for OCR scanning again.</p>
<b>Create Supplier Invoice</b>	<p>When scans are in a status of <i>Error</i> or <i>Canceled</i>, you can click this button to create a supplier invoice manually.</p> <p>When you populate the purchase order field, the supplier invoice lines populate from uninvoiced purchase order lines.</p>

4. The **My Work Queue** tab displays draft invoices. You can view invoices assigned to you or select different search parameters to populate your work queue. Workday saves the parameters that you used last.

As you work through your work queue, consider:

<b>Option</b>	<b>Description</b>
<b>Edit</b>	<p>Click to access the <b>Edit Supplier Invoice</b> task to complete and submit the invoice.</p>
<b>Override PO</b>	<p>When OCR doesn't find related purchase order lines, you can access the task and regenerate the invoice, then link purchase order lines.</p>
<b>Override Contract</b>	<p>When OCR doesn't find a related supplier contract, you can access the task and regenerate the invoice, then link supplier contract lines.</p>
<b>OCR Scanning Details</b>	<p>Displays the details of the scan.</p> <p>Security: <i>Reports OCR Supplier Invoice</i></p>
<b>Invoice Exceptions</b>	<p>You can drill-down to view the <b>Errors and Warnings</b> grid that displays the supplier invoice Custom Validation Exceptions.</p>

Option	Description
<b>OCR Exceptions</b>	You can drill down to view the <b>Errors and Warnings</b> grid that displays the OCR supplier invoice Custom Validation Exceptions.
<b>Work Queue Tags</b>	<p>Workday organizes invoices by date. However, an invoice with a <i>Move to Top of Work Queue</i> work queue tag, displays at the top of the grid.</p> <p>To update the work queue tags on invoices, click <b>Mass Edit Work Queue Tags</b>.</p>
<b>Mass Reassign</b>	You can reassign invoices to a different worker.
<b>Mass Edit Work Queue Tags</b>	Click to override your existing work queue tags on the invoices.
<b>Mass Cancel</b>	<p>Click to cancel the supplier invoices.</p> <p>To use the task, enable the Security: <i>Process: Supplier Invoice - Cancel</i> domain.</p>
<b>Mass Convert</b>	<p>You can convert supplier invoices to invoice adjustments and invoice adjustments to supplier invoices. When you:</p> <ul style="list-style-type: none"> <li>Convert documents, Workday cancels the originating document and creates a new one.</li> <li>Use the <b>Mass Convert</b> option, you can only select either supplier invoices or supplier invoice adjustments to convert in a single batch.</li> </ul> <p>To use the task, enable the <i>Process: Supplier Invoice – Core</i> domain.</p>

- On the **Pending Approval** tab, you can view supplier invoices *In Progress* based on your configured parameters.
- On the **Supplier Invoice Cycle Times** tab, you can track turnover days for the supplier invoices.

#### Reference: Supplier Invoice Work Area

The **Supplier Invoice Work Area** report displays all supplier invoices assigned to you and in *Draft* status. This report gives you greater insight into invoice processing and exceptions. On the report, these options help you process invoices more efficiently:

The **Manager Overview** tab displays team performance. You can add or change parameters to evaluate progress by company, assignee, and date range. You can also view invoices by priority and liability, or by assignee. To view the tab, your users must have access to the *Manage: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.

The **My Work Queue** tab provides you with actions to take for 1 or multiple supplier invoices. On the tab, consider:

Option	Description
<b>Search</b>	Enables you to enter specific criteria for different users and invoices. The search criteria saves for the next time users access the report, but they can reset it.

Option	Description
	You can save filter and sorting criteria in the grid after you click <b>Search</b> once.
<b>Include Unassigned Invoices</b>	Select to search for draft invoices.
<b>Assignee</b>	<p>Populates from the Supplier Invoice Assignment Rule. When there's no assignment rule configured, you can:</p> <ul style="list-style-type: none"> <li>• Select only from users authorized to edit invoices.</li> <li>• Manually enter the name of a different assignee.</li> </ul>
<b>Edit Invoice</b>	Gives you access to the <b>Edit Supplier Invoice</b> task to complete and then submit the supplier invoice.
<b>Override PO</b>	<p>You can add specific purchase order lines to a supplier invoice. Select either:</p> <ul style="list-style-type: none"> <li>• A purchase order.</li> <li>• Purchase order lines.</li> <li>• The supplier invoice lines you want to keep. You can only select to keep lines from a supplier invoice that is related to the purchase order you selected on the <b>Purchase Order</b> field.</li> </ul>
<b>Override Contract</b>	<p>You can change supplier contract details on supplier invoices and invoice adjustments. The contract override function supports contracts that include multiple:</p> <ul style="list-style-type: none"> <li>• Suppliers</li> <li>• Companies</li> </ul>
<b>External Source</b>	Indicates the integration source of a supplier invoice. You can configure custom external sources for supplier invoices on the <b>Maintain External Supplier Invoice Source</b> task.
<b>Invoice Exceptions</b>	You can drill down to view the <b>Errors and Warnings</b> grid that displays custom validations and EDI 810 exceptions for the supplier invoice.
<b>Edit Notes</b>	You can enter or change notes. After you add notes, Workday displays the <b>Notes</b> and <b>View Notes</b> columns.
<b>Work Queue Tags</b>	<p>Workday organizes invoices by date. However, an invoice with a <i>Move to Top of Work Queue</i> Work Queue Tag display at the top of the grid.</p> <p>To update the Work Queue Tags on invoices, click <b>Mass Edit Work Queue Tags</b>.</p>
<b>Days Since Created</b>	The number of days since the creation of the supplier invoice.

Option	Description
<b>Process History</b>	Displays supplier invoices sent back. You can drill down to view a grid that includes the date and reason for the send back.
<b>Mass Reassign</b>	You can assign invoices to a different assignee. You can click <b>Search</b> to find an invoice and reassign it to yourself or a different assignee.
<b>Mass Edit Work Queue Tags</b>	Use it to override the work queue tags on the invoice. Select <b>Rerun Assignment Rules</b> to change the assignee on multiple supplier invoices when assignment rules are based on work queue tags.
<b>Mass Cancel</b>	You can use the <b>Mass Cancel</b> button to cancel 1 or multiple invoice documents at a time. To use the <b>Mass Cancel</b> button, set up the <i>Process: Supplier Invoice</i> and <i>Process: Supplier Invoice – Cancel</i> security domains.
<b>Mass Convert</b>	You can convert multiple supplier invoices to invoice adjustments and the other way around. Consider that when you convert an invoice document, Workday cancels the originating invoice and creates a new one. To enable the button, set up the <i>Process: Supplier Invoice – Core</i> security domain in the Supplier Accounts functional area.

The **Pending Approval** tab displays the number of days that supplier invoices you submitted have been waiting for approval.

The **Supplier Invoice Cycle Times** tab helps you track turnover days for supplier invoices. To view the tab, your users must have access to the *Manage: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.

## Recurring Supplier Invoices

### Create Recurring Supplier Invoices

#### Prerequisites

- For recurring invoices with variable amounts, route invoices for review and enable users to change amounts as necessary.  
Include the *Review Supplier Invoice* action step in the *Supplier Invoice Event* business process. Add a condition rule that checks for *Variable* recurring supplier invoices.
- Set up supplier payment terms.
- Configure the *Recurring Supplier Invoice* business process and security policy in the Supplier Accounts functional area.

#### Context

Define a supplier invoice template to create supplier invoices for goods and services your company incurs regularly. Determine whether recurring supplier invoices have *Fixed* or *Variable* installment amounts.

## Steps

1. Access the **Create Recurring Supplier Invoice** task.
2. In the **Invoice Information** fields, specify header details.

Workday populates the **Currency** from the supplier. If the supplier doesn't have a default currency, then Workday populates the **Currency** from your company settings. The currency you select must be acceptable to the supplier.

3. Complete the fields in **Terms and Amounts**:

Option	Description
<b>Payment Terms</b>	Select the payment terms for this contract.  Example: 2% 10, net 30 or Net 45.
<b>Fixed</b>	Select if the invoice amounts are constant and users can't change the installments.
<b>Variable</b>	Select if you want to enable changing the <b>Unit Cost</b> , <b>Quantity</b> , or <b>Extended Amount</b> of installments.
<b>Frequency Type</b>	Select the frequency for recurring invoices, such as monthly or quarterly.
<b>Default Tax Option</b>	Workday populates this value from the company accounting details.  Workday automatically populates the tax option at the line from the header, but you can override it at the line level.
<b>Default Tax Code</b>	Workday populates the default tax code from the supplier. You can enter a different tax code if needed.  Workday automatically populates the tax code at the line from the header, but you can override it at the line level.  If you use a third-party tax service integration, Workday hides the field to support tracking and reporting on third-party tax calculations. You can set up a third-party service integration on the <b>Edit Company Tax Details</b> task.
<b>Default Withholding Tax Code</b>	Workday populates the default withholding tax code from the supplier profile. You can enter a different withholding tax code if needed.  Workday automatically populates the withholding tax code at the line from the header, but you can override it at the line level.
<b>Effective Date</b>	Enter the date that this recurring supplier invoice is effective.
<b>First Invoice Date</b>	Specify the date to issue the first invoice.
<b>End Date</b>	Specify the date the recurring supplier invoice ends to ensure additional invoices won't process.

Option	Description
	Skip this field to calculate the end date based on <b>Total Amount</b> .
<b>Total Amount</b>	Specify a total if you haven't specified a <b>Contract End Date</b> .  The total amount calculates the sum of all recurring installments against the total amount and enforces the amount limit.

4. Complete the fields on the **Recurring Invoice Lines** tab:

Option	Description
<b>Company</b>	If you select a different company than the company on the header, you must set up intercompany relationships to enable transactions between them.
<b>Item</b>	Either select an <b>Item</b> or <b>Spend Category</b> .  There must be a currency conversion rate loaded into Workday if the currency associated with the item is different from the currency in the header.  If you create a zero-cost recurring supplier invoice, you can add free items to a purchase when you have recurring invoice contracts.
<b>Item Description</b>	If you selected an <b>Item</b> , you can overwrite the <b>Item Description</b> .
<b>Tax Applicability</b>	Indicates whether the line is taxable and, if taxable, its recoverability. You can use tax applicability to filter transactions in reporting. It automatically populates from the item-specific tax rule based on ship-to address, first by purchase item and then by spend category. If there's no match, it automatically populates from the purchase item. Otherwise, it automatically populates from the spend category.
<b>Tax Code</b>	If taxable, the code automatically populates from the <b>Default Tax Code</b> on the header, which you can override.
<b>Withholding Tax Code</b>	The code automatically populates from the <b>Default Withholding Tax Code</b> on the header, which you can override.
<b>Tax Recoverability</b>	Workday automatically populates the recoverable percentage on the transaction line based on the specified tax applicability and tax code. You can override this selection. When you specify the tax recoverability, Workday applies the recoverable percentage and the allocation method to the tax amount for tax rates within a tax code.

Option	Description
	Use the <b>Maintain Tax Recoverabilities</b> task to specify the tax recoverability of multiple tax rates for each tax code.
<b>Tax Option</b>	Select <i>Calculate Self-Assessed Tax</i> when suppliers or payees don't charge tax. This option enables you to post your tax liability to a separate ledger account. Otherwise, select <i>Calculate Tax Due to Supplier</i> to post the tax payment made to the supplier or payee.
<b>Quantity</b>	Specify a <b>Quantity</b> for an installment.
<b>Unit Cost</b>	Enter the cost for each unit.
<b>Extended Amount</b>	If you select a quantity and unit cost, Workday calculates the extended amount; otherwise, you can enter a total amount.
<b>Memo</b>	Enter a specific memo for this invoice line.
<b>Worktags</b>	Select one or more <b>Worktags</b> , such as cost center and location.

5. (Optional) As you complete the **Currency Rate** tab, consider:

For foreign currency invoices, you can make adjustments to achieve a different conversion rate. Any changes you make on the **Currency Rate** tab register in the **Effective Currency Rate** field, that displays the rate used for accounting to convert installment amounts to ledger currency. Any overrides that you enter trigger the selection of the **Rate Override** check box.

Option	Description
<b>Currency Rate Type Override</b>	Select an option to override the default rate type used to look up the exchange rate.
<b>Currency Rate Date Override</b>	Select a date to override the default rate date used to look up the exchange rate.
<b>Currency Rate Manual Override</b>	Enter a currency rate to override the exchange rate or provide a rate when a default rate isn't available.
<b>Defaults</b>	This section displays the tenant default currency rate based on the invoice date.

## Result

Once the recurring supplier invoice is approved, the **Scheduled Installments** tab displays pending and paid installments.

## Next Steps

From the **Scheduled Installment** related actions:

- Generate the next supplier invoice.
- Skip the installment.

## Related Information

### Tasks

[Create Recurring Supplier Invoices Manually](#) on page 1674

[Steps: Set Up Withholding Taxes](#) on page 673

### Schedule Recurring Supplier Invoices

#### Prerequisites

- Create a recurring supplier invoice.
- Security: *Process: Recurring Supplier Invoice* and *Process: Supplier Contracts* domains in the Supplier Contracts functional area.

#### Context

Set up schedules for recurring supplier invoices when you want to create supplier invoices before the due date. The recurrence can be on a daily, weekly, or monthly schedule. Workday automatically creates these supplier invoices and payments for you on the schedule that you set up.

#### Steps

1. Access the **Schedule Supplier Invoice Auto-Create** task.
2. Select the **Run Frequency**:
  - Run Now
  - Run Once in the Future
  - Daily Recurrence
  - Weekly Recurrence
  - Monthly Recurrence
3. Set the **Calendar Days Prior to Scheduled Date** to the number of days before the scheduled invoice date.  
When the scheduler runs, it calculates the number of days before the scheduled invoice date and generates those invoices.
4. Access the **Schedule** Tab.
5. Complete the fields for **Recurrence Criteria** and **Range of Recurrence**.

#### Result

Once complete, the **Additional Info** tab displays and lists the **Next 10 Scheduled Launches**.

### Create Recurring Supplier Invoices Manually

#### Prerequisites

Security: *Process: Recurring Supplier Invoice* and *Process: Supplier Contracts* domains in the Supplier Contracts functional area.

#### Context

You can use scheduled installments for recurring supplier invoices as the basis for creating manual invoices. When you process a recurring supplier invoice from a scheduled installment manually, you can modify the invoice and skip an installment when needed.

## Steps

1. Access the **Find Recurring Supplier Invoices** report and specify criteria to find and view a recurring supplier invoice.
2. Select a recurring invoice for the supplier contract to manually process.
3. From the **Scheduled Installments** tab, select **Scheduled Installment > Generate Supplier Invoice** from the related actions of an installment.
4. To skip an invoice from processing, select **Scheduled Installment > Skip Installment** from the related actions of an installment.

## Result

The supplier invoice is routed for approval.

## Worktag Split Templates

### Setup Considerations: Worktag Split Templates

You can use this topic to help make decisions when planning your configuration and use of worktag split templates. It explains:

- Why to set them up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

You can create templates to split lines on supplier invoices and adjustments.

### Business Benefits

- Saves you time when you automatically populate split percentages and worktag dimensions from the header template to the line on invoices or adjustments.
- Reduces potential transaction errors from manual processing.
- Enables you to split lines by percentage, then select specific worktags for each line to split based on the percentage ratios on the template configuration.

### Use Cases

- Split a supplier invoice line for utilities across various departments.
- Distribute funds across various sources when your organization receives Federal or State funds, or endowments.
- Split benefit provider payments to different cost centers based on established percentages.
- Separate invoices for trading costs or exchange fees among different trading desks.
- Apply template splits to your transactions based on document date and effective date.

### Questions to Consider

Questions	Considerations
How can you apply allocation percentages to invoices?	Determine allocation percentages in advance. You can configure templates to apply percentages to supplier invoices or invoice adjustments.

Questions	Considerations
How can I restrict the access to templates?	Workday supports 3 sharing options that enable you to configure access for selected users and groups.

## Recommendations

- Workday treats invoice lines with an extended amount as existing lines. When you select a new template or change the template at the invoice header, Workday doesn't populate that template on existing lines. To change the template, you can manually override it at the line.
- When you change the invoice date on a document with a template, reselect the template on existing lines to apply the correct template version.
- When you copy an invoice, Workday populates the invoice date and the latest template version based on the current date.

## Requirements

- Set up the Supplier Accounts functional area.
- Set up supplier invoices.
- Configure worktags for transactions.

## Limitations

- The templates you create apply only to transactions in the Supplier Accounts functional area.
- You can only apply templates to supplier invoices and supplier invoice adjustments.
- Worktag split templates create splits only by percentage, not amount.

## Tenant Setup

No impacts.

## Security

Users secured to the *Set up: Worktag Split Allocation Template* domain in the Supplier Accounts functional area can create, edit, and view the worktag split templates.

## Business Processes

No impacts.

## Reporting

Use the **View Worktag Split Template** report to add or change split details of a template, when the template isn't in use on a document.

Use the **Worktag Allocation Template** and **Worktag Split Template Criteria** report data sources to create custom reports .

## Integrations

Web Service	Considerations
Get Worktag Split Template Criteria	Retrieve data from worktag split templates in Workday based on company, company hierarchy, or criteria name.

Web Service	Considerations
Get Worktag Split Templates	Retrieve data from worktag split templates in Workday based on template name, active status, or template criteria.
Put Worktag Split Template	<p>Create or update a worktag split template. You can update sharing options and template criteria.</p> <p>Workday recommends that you use this integration on templates that aren't in use. You can also use this web service to deactivate a template.</p>
Put Worktag Split Template Criteria	<p>Create or edit template criteria. You can edit criteria name, company, company hierarchy, or description field information.</p> <p>Workday recommends that you use this integration on templates that aren't in use. You can use this web service to update the <b>Template Criteria Name</b> or <b>Description</b> field.</p>

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Reference

[Workday 33 What's New Post: Worktag Split Allocation Templates on Suplier Invoices](#)

## Steps: Set Up Worktag Split Templates

### Prerequisites

- Review setup considerations for Worktag Split Templates.
- Security: *Set up: Worktag Split Allocation Template* domain in the Supplier Accounts functional area.

### Context

You can create worktag split templates and template criteria to apply to supplier invoices, and invoice adjustments at the line. Using templates saves you time by automatically allocating line splits by amount.

### Steps

#### 1. (Optional) [Create Role-Based Security Groups](#).

To restrict access to the worktag split template tasks:

- Set up unconstrained security groups by organizational role, such as Accounts Payable Specialist.
- Grant the security groups permission to the *Set up: Worktag Split Allocation Template* domain.

#### 2. Access the [Create Worktag Split Template Restrictions](#) task.

Create restrictions for worktag split templates. You can restrict template criteria to a company or company hierarchy.

Security: *Set up: Worktag Split Allocation Template* domain in the Supplier Accounts functional area.

### 3. Access the **Create Worktag Split Template** task.

Create worktag split templates to apply to supplier invoices or invoice adjustments.

- Select the **Shared with all authorized users** option to enable all users with access to the *Set up: Worktag Split Allocation Template* domain to access the worktag split template tasks.
- Select the **Shared with specific users and groups** option to restrict access to a template according to company needs.

Security: *Set up: Worktag Split Allocation Template* domain in the Supplier Accounts functional area.

#### **Related Information**

##### **Tasks**

[Create Supplier Invoices](#) on page 1618

## Gapless Invoice Sequence

### **Setup Considerations: Gapless Sequencing**

You can use this topic to help make decisions when planning your configuration and use of gapless sequence numbers on invoices. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### **What It Is**

Gapless sequencing enables you to create and assign sequential gapless invoice numbers in 1 or more ledger year or ledger period for a company. This number displays in place of the standard invoice number on both customer and supplier invoices. You can sequence the numbers by:

- Approval date of a customer invoice.
- Posting date of a supplier invoice.
- Accounting date.

When you enable the functionality, Workday creates a sequence generator. You can configure the sequence generator to:

- Reset every ledger period, ledger year, or calendar year to match with the posting period of a given invoice type.
- Define the sequence pattern of the invoice numbers.

#### **Business Benefits**

Using gapless sequencing:

- Increases visibility of your transaction details and reduces auditing concerns.
- Helps you comply with local tax authority reporting requirements.
- Enables you to meet the statutory invoicing requirements.

#### **Use Cases**

- Your company bills in a country that requires a gapless sequence number on invoices.
- When there's an audit of your company, auditors can select a random invoice number to test and not find that number, causing concerns. They would then require additional evidence to prove that the invoice really doesn't exist.

## Questions to Consider

Questions	Considerations
When do you want to start assigning gapless numbers to your invoices?	Workday creates gapless sequence generators after the start of a new period or a fiscal year when no sequence generators exist for a company.
When can you change the rule configuration or the sequence generator lifespan?	Changes only apply to: <ul style="list-style-type: none"> <li>• New sequence generators in the next open period.</li> <li>• Unused generators in the existing open period.</li> </ul>
Do you want to continue using auto-application rules with remittance advice type?	You can continue to use the auto-application rules. The remittance advice type has the option to reference a <i>Gapless Invoice Number</i> , if it exists.
Do you need to enforce any date restrictions on customer invoices?	Workday assigns the gapless invoice number to customer invoices upon invoice approval. Invoices can be out of order based on if you're using invoice dates or accounting dates in arrears. If you want the gapless sequence to be chronological by either of these dates, use custom validations to restrict the dates to the current day.

## Recommendations

- You can't change the sequence generators once they are in use. Verify the pattern in your sandbox first to ensure that the sequence numbers are as per your expectations.
- When you want to sequence each invoice document type together, use the same sequence generator rule. To have a separate sequence for each invoice document, create different rules.
- To avoid creating gaps, don't reopen a closed period when you want to apply the gapless document number to newly approved supplier invoices and adjustments. When the accounting date is before the accounting date of the last document, the sequence can have a gap.
- To avoid confusion, give your gapless invoice numbers a different format than the existing invoice numbers. You can use your company and country-specific sequencing rules to determine the pattern of gapless numbers.
- To meet local statutory reporting requirements for operational transactions, you can configure your companies to allow accounting by the customer invoice approval date.

## Requirements

- To create gapless sequence generators, enable the functionality for a desired company.
- Specify the gapless sequencing start period to determine when Workday will start creating generators.
- To have a gapless number, the customer invoices must be in approved status. However, for supplier invoices, you must close the period.
- Configure or select a sequence generator rule for each invoice, credit adjustment, debit adjustment, and credit-rebill. Workday assigns the gapless invoice number based on these rules.
- To include the gapless invoice number on an invoice, update your custom BIRT layout because it's a separate attribute from the standard invoice number.

## Limitations

- After Workday assigns a gapless sequence number to an invoice, you can't cancel or change that invoice anymore. Instead, use invoice adjustments to make modifications.
- When you change an existing configuration rule, the updates apply to only new sequence generators.

- You can edit or replace the sequence generators only if they aren't in use.

## Tenant Setup

No impact.

## Security

Configure these security domains for gapless sequencing:

Domain	Considerations
<i>Set up: Company General</i> domain in the Common Financial Management functional area.	Users secured to this domain can enable the gapless sequence functionality and configure sequence generator rules.
<i>Set Up: Tax</i> domain in the Common Financial Management functional area.	Users secured to this domain can configure gapless sequence generator rules on approved customer or supplier invoices by statutory invoice type.
<i>Public Reporting Items</i> domain.	Users secured to this domain can create custom reports to display the invoice number or gapless document number.

## Business Processes

To configure a chronological gapless sequence number on customer invoices when the invoice document date isn't the current date, you can add custom validations in your business process rule conditions.

## Reporting

If the gapless number exists in a given period, you can use all the existing standard reports to track invoices with a gapless document number for a company.

You can use the **Invoice date is in Closed Period** custom report field on the *Customer Invoice Document* business object in your custom validations to configure chronological gapless sequence number on customer invoices.

## Integrations

You can use these web services for gapless sequencing:

Web Service	Considerations
<i>Get Company ID Definitions</i> <i>Put Company ID Definitions</i>	Retrieves the required IDs to let you enable gapless sequencing for a company.
<i>Get Customer Invoices</i> <i>Get Customer Invoice Adjustments</i>	Update your EIB templates for these web services to support gapless invoice numbers.
<i>Import Customer Invoice</i>	Enables you to add or update customer invoices with gapless sequence number.
<i>Submit Customer Invoice</i> <i>Submit Customer Invoice Adjustment</i>	Enables you to create customer invoices and adjustments with gapless sequence number.

When you enable this functionality, update your integration templates to use the gapless invoice number instead of the standard invoice number.

## Connections and Touchpoints

When you enable the gapless sequencing for a company, it extends to all invoices and adjustments originating from awards, billing schedules, and billable projects.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Gapless Invoice Number Sequencing

### Prerequisites

- Set up the company you want to create gapless sequence generators for.
- Set up the ledger periods you want to assign the sequence to.
- Review setup considerations for gapless sequencing.

### Context

You can assign unique gapless invoice numbers to approved invoices based on a ledger period. Gapless invoice numbers help you comply with transaction tax reporting requirements in countries that require chronological gapless sequencing by invoice type for operational transactions.

To maintain a continuous sequence, after Workday assigns gapless numbers to invoices you can't:

- Cancel or make changes to the invoices.
- Disable the gapless sequencing functionality.

### Steps

1. [Configure Invoice Sequence Generator Rules](#) on page 774.

2. Access the **Edit Company ID Definitions** task.

On the **Gapless Document Sequence Settings** tab, select the check box for the type you want to configure:

- **Enable Gapless Sequencing for Customer Invoices**
- **Enable Gapless Sequencing for Supplier Invoices**

Security: *Set Up: Company General* domain in the Common Financial Management functional area.

3. Select a sequence generator rule configuration for each invoice type.

- Select the same sequence generator rule configuration for each invoice type to sequence all invoice types together. For multiple companies, Workday assigns separate sequences for their invoices even if they have the same sequence generator rule configured.
- To sequence invoice types separately, select a different rule configuration for the sequence generator.

4. For customer invoices, select a ledger period from the **Customer Invoice Gapless Sequencing Start Period** prompt. Workday assigns the sequence number when you approve the invoices.

For supplier invoices, select a ledger period from the **Supplier Invoice Gapless Sequencing Start Period** prompt. Workday assigns the sequence number when you close the period.

When you open a ledger period, Workday creates sequence generators for the customer or supplier invoice types you select.

5. (Optional) To order gapless sequence numbers by accounting date for customer invoices and adjustments, access the **Edit Company Accounting Details** task.

Set the **Allow Accounting by Approval Date** prompt to *Customer Invoice*.

Security: *Set Up: Company Accounting* domain in the Common Financial Management functional area.

## Result

When you post invoices in a period with a gapless sequence generator, Workday automatically assigns a **Gapless Sequence Number** and displays it instead of the **Invoice Number** field on the invoices.

After Workday creates the sequence generators, you can view the details in the **Invoice Gapless Sequence Generators** grid on the same task.

## Configure Invoice Sequence Generator Rules

### Prerequisites

Security: *Set up: Company General* domain in Common Financial Management functional area.

### Context

To comply with global auditing standards, you can:

- Define rules for the sequence generators so that Workday can assign gapless sequence numbers to invoice documents in the desired format.
- Configure separate sequence rules for each invoice, invoice adjustment, and invoice rebill documents.
- Create separate rules for Statutory Invoices in the **Sequence Generator Rule Conditions** section.

These sequencing rules determine the:

- Order of the sequence.
- Lifespan of each sequence generator.
- Timeframe when Workday sequences your documents.

Workday creates gapless sequence generators for each invoice document type when you close and reopen a period for the specified company. When the period already has an active generator, Workday doesn't create a new generator.

After a sequence generator assigns a sequence number to an invoice, you can't:

- Disable gapless sequencing for the company.
- Change the lifespan.

Though, Workday enables you to edit the format string.

### Steps

1. Access the **Create Invoice Sequence Generator Rule Configuration** task.
2. As you complete the task, consider:

Option	Description
<b>Sequence Generator Lifespan</b>	Select a value to specify the duration for the sequence generator. <ul style="list-style-type: none"> <li>• The sequence generator only assigns gapless sequence numbers to invoices posted in your selected lifespan.</li> <li>• The sequence number resets at the beginning of each new period or year.</li> <li>• Workday starts and stops a new sequence based on the lifespan you select.</li> </ul>

3. As you complete the **Default Sequence Generator Rule** and **Sequence Generator Rule Conditions** sections, consider:

Option	Description
<b>Sequence Start Number</b>	Enter any number that you want to begin the sequence with. You can also enter a number that is in continuation of an existing sequence from another ID generator.
<b>Sequence Increment</b>	Workday automatically sets the value to 1 so that the sequence numbers are in gapless order.
<b>Sequence Length</b>	<p>Enter a number to specify the length of the gapless sequence number string. Workday sorts invoice sequences based on this configuration when you generate reports.</p> <p>Example: When you enter a <b>Sequence Length</b> of 3, Workday displays the sequence number:</p> <ul style="list-style-type: none"> <li>• 1 as 001.</li> <li>• 321 as 321.</li> </ul>
<b>Sequence Format String</b>	<p>Enter custom text and these variables rules to ensure that Workday doesn't duplicate sequence numbers across multiple generator lifespans:</p> <ul style="list-style-type: none"> <li>• <b>[aa]</b>: Inserts only the last 2 digits of the calendar year.</li> <li>• <b>[aaaa]</b>: Inserts the 4-digit calendar year.</li> <li>• <b>[A]</b>: Inserts a 1- or 2-digit calendar month.</li> <li>• <b>[AA]</b>: Inserts a 2-digit calendar month.</li> <li>• <b>[f]</b>: Inserts the entire fiscal year number.</li> <li>• <b>[ff]</b>: Inserts the fiscal year name.</li> <li>• <b>[pp]</b>: Inserts the fiscal period name.</li> <li>• <b>[seq]</b>: Inserts the next sequence number.</li> </ul> <p>Include <b>[seq]</b> in the format string of any rule configuration to populate the sequence number.</p> <p>When you select <i>Ledger Year</i> as the sequence generator lifespan, the format string can include:</p> <ul style="list-style-type: none"> <li>• <b>[f]</b></li> <li>• <b>[ff]</b></li> </ul> <p>When you select <i>Ledger Period</i> as the sequence generator lifespan, the format string can include:</p> <ul style="list-style-type: none"> <li>• <b>[f]</b></li> <li>• <b>[ff]</b></li> <li>• <b>[pp]</b></li> </ul>
<b>Statutory Invoice Type</b>	Select a country-specific statutory invoice type when you use invoice types to categorize your invoices in compliance with government requirements.

Option	Description
	Workday displays options in this field only when you configure a statutory invoice for the company in a specific country.

### Result

Workday creates a gapless sequence generator for each invoice document type, for the specified period, for a given company.

### Example

You want to create a sequence generator for the May 2019 ledger period or ledger year and the November 2019 calendar month or calendar year:

#### Default Sequence Generator Rule Values

Field	Value
<b>Sequence Start Number</b>	1
<b>Sequence Length</b>	3
<b>Sequence Format String for a Ledger Period</b>	<i>INV-[f]-[pp]-[seq]</i>
<b>Sequence Preview</b>	<i>INV-2019-05-001</i>
<b>Sequence Format String for a Ledger Year</b>	<i>INV-[f]-[seq]</i>
<b>Sequence Preview</b>	<i>INV-2019-001</i>
<b>Sequence Format String for a Two Digit Calendar Year</b>	<i>INV-[aa]-[seq]</i>
<b>Sequence Preview</b>	<i>INV-19-001</i>
<b>Sequence Format String for a Four Digit Calendar year and a Two Digit Calendar Month</b>	<i>INV-[aaaa]-[AA]-[seq]</i>
<b>Sequence Preview</b>	<i>INV-2019-11-001</i>

## Supplier Accounts Hub

---

### Steps: Set Up Supplier Accounts Hub

#### Prerequisites

Security: These domains in the Supplier Accounts functional area:

- *Reports: Supplier Accounts*
- *View: Supplier Accounts Hub*
- *View: Supplier Accounts Manager Metrics - View*

#### Context

You can quickly and easily access commonly used supplier accounts reports and tasks from the Supplier Accounts Hub.

## Steps

1. Edit these domain security policies to provide access to Supplier Accounts Hub:

- *View: Supplier Accounts Hub*(to access Supplier Accounts Hub)
- *Reports: Supplier Accounts*(to access all reports)
- *View: Supplier Accounts Manager Metrics*(to access Manager Metrics)

2. [Set Up Hubs](#).

As you configure the Supplier Accounts Hub, in the Maintain Hubs report, consider:

Tab	Description
<b>Announcements</b>	Enter announcements to display at the top of the Supplier Accounts hub Overview page.
<b>Navigation Item Action Override</b>	You can reorder or hide delivered sections and create navigation items and groups. You can also: <ul style="list-style-type: none"> <li>• Add custom reports.</li> <li>• Add custom dashboards.</li> <li>• Add Extend applications.</li> <li>• Organize and group navigation experiences.</li> <li>• Relabel navigation groups and items.</li> </ul>
<b>Suggested Links</b>	Configure to display tasks, reports, custom dashboards, and external links. Select a security group or predefined rule that defines who can view the suggested links.

Security: These domains in the System functional area:

- *Set Up Tenant: Setup - General*
- *Set Up Tenant: Setup - Hub*

3. (Optional) Enable the Supplier Accounts Hub as a worklet or home page.

- To add the hub as a worklet, access the **Configure My Worklet Landing Pages** task, and select *Home*. In the Configure Worklets grid, add a new row and select *Supplier Accounts Hub*. Then from your global navigation menu, select **Add Apps**, and select *Supplier Accounts Hub*.
- To display the Supplier Accounts Hub as your home page, access your user account preferences. In the **Account Preferences** section, select *Supplier Accounts Hub* as your preferred home page.

[Steps: Set Up Supplier Invoice Work Area](#) on page 1661

#### Examples

[2024R2 Feature Release Note: Supplier Accounts Hub](#)

## Concept: Supplier Accounts Hub

The Supplier Accounts Hub is a centralized workspace for Accounts Payable managers and specialists to access frequently used tasks, reports, and key metrics. You can reconfigure your hub to include announcements, Workday-delivered tasks and reports, and add custom reports and dashboards.

### Work Area

The hub includes all existing components of the Supplier Invoice Work Area including:

- The **Work Area Overview** section, which provides you with:
  - *Totals for Work Area*: includes the total number of invoices in the Work Queue that are being scanned, with errors, and pending submission or approval.
  - *Priority for Work Queue*: displays past due supplier invoices in the Work Queue by worktag.
  - *Supplier Invoice Document by Source*: click **Edit Parameters** to edit search parameters for supplier invoice documents.
  - *Paid on time Invoices*: click **Edit Parameters** to edit search parameters for paid on time invoices.
  - *Exceptions for Work Queue*: includes several grids that display the scanning, OCR, and invoice Custom Validation Exception messages for your supplier invoices.
- The **My Work Queue** section provides you with actions to take for 1 or multiple supplier invoices.
- The **Upload and Scan** section enables you to capture, route, and collect OCR supplier invoice information to submit in Workday. OCR supports file attachments with up to 15 pages.
- The **Email Ingestion** section enables you to parse and extract data from emails sent into Workday. Workday applications can use the extracted data to create tickets and tasks automatically, which saves you time and eliminates manual work.
- The **Processor Metrics** section, which includes these components:
  - *Pending Approval*: displays the number of days that supplier invoices you submitted have been waiting for approval.
  - *Supplier Invoice Cycle Times*: helps you track turnover days for supplier invoices. To view the tab, your users must have access to the *Manage: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.

## Manager Metrics

Manager Metrics are specific to the Supplier Accounts Hub. This section provides you with key performance metrics for your teams and processes. Use the hub filters to customize the data that displays in your metrics. By default, Workday filters data by invoice creation date for the previous 3 months.

In the **Team Metrics** section, you can view and drill down into these data visualizations:

- *Draft Invoices by Creator*: Measures the number of draft invoices created by a user. The user 'Blank' represents invoices created via third-party tools. You can view report details to drill down further for external system ID reference sources.
- *Draft and Canceled Invoices by Assignee*: Measures the number of draft or canceled invoices by assignee. The user 'Blank' represents invoices not configured via the Supplier Invoice Assignment Rule task, or not manually assigned.
- *Invoices Submitted to Business Process*: Measures the number of invoices submitted to the business process. The user 'Blank' represents invoices created via third-party tools. You can view report details to drill down further for external system ID reference sources.

In the **Process Metrics** section, you can view and drill down into these data visualizations:

- *Invoice Sources*: The count of invoices by Workday delivered source for approved invoices. Grouping by month is based on the date that the invoice was created in Workday.
- *PO vs Non PO*: The count of approved invoices categorized by invoices created from a purchase order versus invoices not created from a purchase order. Grouping by month is based on the date that you create the invoice in Workday.

In the **Invoice Cycle Times** section, you can view and drill down into these data visualizations:

- *Time to Entry*: Measures the average number of days between the Invoice Date or invoice received date if available and the invoice creation date.
- *Time in Resolution*: Measures the average number of days between the invoice creation date and the first invoice submit date.
- *Time in Approval*: Measures the average number of days between the first invoice submit date and final approval date.

- *Time to Payment:* Measures the average number of days between invoice creation and full payment.

In the **Work Area Manager Overview** section, you can add or change parameters to evaluate progress by company, assignee, and date range. You can also view invoices by priority and liability, or by assignee. To view the section, your users must have access to the *Manage: Supplier Invoice Work Queue* domain in the Supplier Accounts functional area.

### Suggested Links

Workday provides you with links to common tasks and reports. You can remove these links, or customize this section with additional reports and external links. Select a security group or predefined rule that defines who can view the suggested links.

## Down Payments

---

### Create a Down Payment Invoice from a Supplier Invoice

#### Prerequisites

- Configure the account posting rule: Down Payment for Supplier.
- Configure the business process security policy.
- (Optional) Create a custom settlement filter for down payment invoices by selecting the Down Payment check box in the Create Custom Settlement Filter task.
- (Optional) Update existing custom validations and custom reports to include or exclude down payment invoices.

#### Context

Create a down payment invoice for goods and services lines that you use in a supplier invoice. Select lines from purchase orders, supplier contracts, receipts, timesheets, and task logs.

#### Steps

1. Access the **Create Supplier Down Payment Invoice** task.
2. Enter or update details in the **Invoice Information** section. As you complete the task, consider:

Option	Description
<b>Company</b>	The company responsible for the invoice down payment.  To invoice a supplier that is different than the purchase order supplier, select the company that has <b>Allow Different Invoicing and Purchasing Supplier</b> checked.
<b>Supplier</b>	Select the supplier for the down payment invoice. Workday displays only on hold or active suppliers that are available for use with the selected company or company hierarchy.  To create a down payment invoice for a supplier that is different than the purchase order supplier, select the supplier that has <b>Invoice Any Supplier</b> checked.

Option	Description
<b>Remit To Connection</b>	Create supplier connections to remit invoices and payments to different supplier addresses, email addresses, and settlement bank accounts.
<b>Currency</b>	<p>Workday automatically populates this field with the supplier currency, or the company currency, in that order of priority. You can change it to any of the accepted currencies defined for the supplier.</p> <p>For a down payment invoice created from the supplier portal or a purchase order, we populate the <b>Currency</b> from the purchase order.</p>
<b>Invoice Date</b>	<p>Enter the date on which you create the down payment invoice. If this supplier has defined payment terms, then the invoice date controls the due date.</p> <p>Example: If the payment terms are <i>Net 30</i>, the <b>Due Date</b> field is 30 days after the invoice date for the down payment. If the date falls within a closed period, Workday posts accounting to the next available period.</p>
<b>Invoice Received Date</b>	<p>Enter the date on which your company receives the down payment invoice from the supplier.</p> <p>You might want to track the date on which your company receives an invoice for reporting purposes or to analyze the amount of time it takes to process a supplier invoice down payment. The invoice received date provides a measurement of the efficiency in the organization, based on how long it takes from the time the invoice arrives until it's posted.</p>
<b>Control Total Amount</b>	<p>Enter an amount if you know what the total down payment invoice is and you want to ensure that the computed</p> <p>Total Invoice Amount</p> <p>matches your expectation.</p>

3. Enter additional details in the **Terms and Taxes** section:

Option	Description
<b>Payment Terms</b>	Specify the payment terms that you agreed to with your supplier.
<b>Discount Date</b>	Calculated automatically based on <b>Payment Terms</b> with a discount for early payment, and <b>Invoice Date</b> .
<b>Due Date</b>	Calculated automatically.
<b>Due Date Override</b>	Select a different due date if there's an exception to the terms.
<b>Default Payment Type</b>	If you select

Option	Description
	<i>Credit Card</i> , you can select the credit card of a worker from the Credit Card prompt.
<b>Override Payment Type</b>	Select a different payment type for the supplier.
<b>Reference Type</b>	If you select an international reference type, enter a <b>Reference Number</b> of up to 140 characters.
<b>Originating Country Payment Purpose</b>	<p>Select a payment purpose code if the country sending this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.</p>
<b>Receiving Country Payment Purpose</b>	<p>Select a payment purpose code if the country receiving this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.</p>
<b>Default Tax Option</b>	<p>Workday uses this value to populate the tax option on down payment invoice lines.</p> <p>You can't enter default tax options when you enable third-party tax. Workday doesn't support third-party tax on down payment invoices. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>
<b>Default Tax Code</b>	<p>Workday populates the default tax code from the supplier profile, and uses this value to populate the tax code on down payment invoice lines. You can select a different value.</p> <p>You can't enter default tax codes when you enable third-party tax. Workday doesn't support third-party tax on down payment invoices. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>
<b>Tax Amount</b>	<p>When you choose to use Workday to calculate tax, Workday displays the sum of the calculated tax amounts from the taxable lines, based on tax code you specify for each line. To override the tax amount calculated by Workday, you can change values in the <b>Tax by Tax Rate</b> column on the <b>Tax</b> tab.</p> <p>When you choose to enter tax, you can enter the tax amount for the transaction. You must have at least 1 line with a tax applicability that is taxable and enabled for allocation.</p>

Option	Description
	The tax allocated to the lines is only the nonrecoverable amount for the transaction and doesn't always add up to this header amount.
<b>Update Tax</b>	<p>Click to recalculate tax amounts displayed in the header after you update tax on down payment invoice lines.</p> <p>Workday automatically updates tax when you submit or save for later.</p> <p>Workday disables the button when you enable third-party tax. Workday doesn't support third-party tax on down payment invoices. See <a href="#">Concept: Third-Party Tax Service Integrations</a> on page 734.</p>

When you create a supplier invoice down payment from a purchase order or supplier contract, the invoice header amounts for landed cost equal the uninvited amounts from the purchase order or supplier contract.

When you create an invoice from a receipt, the invoice header amounts for landed cost equal the sum of allocations from received purchase order or supplier contract lines. Workday prorates the amounts based on receipt quantity or amount (including over-receiving).

4. Enter details in the **Invoice Reference Information** section:

Option	Description
<b>Ship-To Address</b>	Workday uses this address when evaluating tax rules to determine tax code and tax applicability overrides for the transaction lines.
<b>Handling Code</b>	<p>Select a payment handling code for this invoice, such as</p> <p><i>Hold Payment for Pickup</i> or <i>Overnight Payment</i>.</p> <p>This field displays when you configure payment handling instructions.</p>
<b>On Hold</b>	Select to hold payment on this invoice.
<b>Supplier Document Received</b>	Select if the supplier provided an invoice or other relevant document.
<b>Supplier's Invoice Number</b>	<p>If you've received the supplier document, enter its reference number.</p> <p>Example: If the supplier provided a supplier invoice, enter the invoice number from the supplier document.</p> <p>By default Workday delivers duplicate validation enabled for this field. To validate against your own conditions, you can disable this option using the <b>Tenant Setup - Financials</b> task and then use the <b>Maintain Custom Validations</b> task to establish your own condition rules for supplier invoices.</p>

Option	Description
<b>External PO Number</b>	If you use a procurement system other than Workday, enter the purchase order number.
<b>Referenced Invoices</b>	Select existing invoices to create a header-level reference.
<b>Statutory Invoice Type</b>	If you use invoice types to categorize your supplier invoice down payments in compliance with government requirements, select an invoice type.
<b>Document Link</b>	If you store your document images in an external repository, enter the URL to that image location instead of including the image as a file attachment. Once saved, Workday displays the URL as a live link to the image. Each link must begin with one of the valid URL patterns as defined by your security administrator, or Workday doesn't allow the link.
<b>Memo</b>	<p>When you print a check for payment of this supplier invoice, the value that you enter here prints in the <b>Memo</b> field of the check. Select the <b>Use Invoice Memo</b> option in <b>Default Supplier Payment Memo</b> for the supplier.</p> <p>Use the <b>Create Supplier</b> or <b>Create Supplier Change</b> task to configure the invoice memo. If more than 1 invoice for the check to the supplier has a memo, Workday concatenates the memos on the check.</p>
<b>Approver</b>	<p>Select a designated approver to review and approve the supplier invoice down payment.</p> <p>To set up a designated approver, add the related Supplier Invoice Designated Approver security group to the <i>Supplier Invoice Event</i> business process security policy.</p>

5. In **Down Payment Details**, Workday selects the **Down Payment** check box if the invoice is a down payment invoice. This enables you to enter down payment lines.
6. On the **Down Payment Line** tab, add lines and provide details for down payment lines you select from other business documents.

Option	Description
<b>Spend Category</b>	<p>Select a spend category to apply the down payment line to all items in that category.</p> <p><b>Note:</b> With Asset Tracking, a spend category is not allowed.</p>
<b>Ship From</b>	Workday only displays this prompt when you enable bill-from and ship-from address options on the <i>Edit Customer Account Options</i> task for the invoice company.

Option	Description
	Workday automatically populates the Ship-from address when the company's primary address is currently in use for shipping.
<b>Tax</b>	<p>Enter an optional tax applicability and tax code for the down payment line.</p> <p>On down payment invoices, Workday doesn't support:</p> <ul style="list-style-type: none"> <li>• Withholding tax.</li> <li>• Third-party tax.</li> </ul>
<b>Down Payment Amount</b>	Enter the down payment amount. This amount is the same as the Extended Amount for a regular supplier invoice.
<b>Memo</b>	Enter an optional memo.
<b>Worktags</b>	<p>You can select a worktag cost center to apply to the down payment line.</p> <p><b>Note:</b> Project-related and grants related worktags are not supported.</p>

7. Use the **Tax** tab to review a summary of all the tax codes and their applicability as specified on the invoice lines.

If several lines share the same tax, this tab consolidates them and totals the amount with this tax.

8. (Optional) As you complete the **Currency Rate** tab, consider:

For foreign currency invoices, you can make adjustments to achieve a different conversion rate. Any changes you make on the **Currency Rate** tab register in the **Effective Currency Rate** field, that displays the rate used for accounting to convert installment amounts to ledger currency. Any overrides that you enter trigger the selection of the **Rate Override** check box.

Option	Description
<b>Currency Rate Type Override</b>	Select an option to override the default rate type used to look up the exchange rate.
<b>Currency Rate Date Override</b>	Select a date to override the default rate date used to look up the exchange rate.
<b>Currency Rate Manual Override</b>	Enter a currency rate to override the exchange rate or provide a rate when a default rate isn't available.
<b>Defaults</b>	This section displays the tenant default currency rate based on the invoice date.

9. Use the **Attachments** tab to upload or drag and drop files, such as supplier invoice down payment supporting documents.

Workday supports the file types listed in the **Edit Tenant Setup - System** task for business document attachments.

You can associate supplier invoice down payment attachments with customer invoices for billable transactions. When a supplier invoice down payment is ready to be billed, we prevent you from changing attachments on the supplier invoice down payment.

**10.** Use the **Work Queue Information** tab to add **Work Queue Tags**, **Work Queue Notes**, and other details that will display for the invoice in the **Supplier Invoice Work Area** report.

To view the **Work Queue Information** tab, configure these security domains:

- *Process: Supplier Invoice Work Queue*
- *Manage: Supplier Invoice Work Queue*

**11.** Submit the supplier down payment invoice for approval.

### Result

Workday initiates the *Supplier Invoice Event* business process for review and approval. If the business process definition includes an approval step, reviewers can modify the supplier invoice down payment before they approve it.

### Next Steps

- To view the list of Workday-provided reports and their descriptions, access **Workday Standard Reports** report, and select the *Supplier Accounts* option.
- To pay approved down payment invoices, suppliers must be in active status.
- Settle the approved down payment invoices. The settlement process creates and settles the invoiced payments. When the process completes, Workday updates the accounting entries for each payment.

## Create a Down Payment Invoice from a Purchase Order

### Prerequisites

- Configure the account posting rule: Down Payment for Supplier.
- Configure the business process security policy.
- (Optional) Create a custom settlement filter for down payment invoices by selecting the Down Payment check box in the Create Custom Settlement Filter task.
- (Optional) Update existing custom validations and custom reports to include or exclude down payment invoices.

### Context

Create a down payment for a purchase order for goods and services lines that you haven't used in a supplier invoice. Select lines from purchase orders, supplier contracts, receipts, timesheets, and task logs.

### Steps

1. Access **View Purchase Order** and open the purchase order for which you want to create a down payment invoice.
2. From the purchase order's related actions, select **Down Payment > Create**.
3. Access the **Create Supplier Down Payment Invoice** task.
4. Enter or update details in the **Invoice Information** section. As you complete the task, consider:

Option	Description
<b>Company</b>	The company responsible for the purchase order down payment.  To invoice a supplier that is different than the purchase order supplier, select the company that has <b>Allow Different Invoicing and Purchasing Supplier</b> checked.

Option	Description
<b>Supplier</b>	<p>Select the supplier for the down payment invoice. Workday displays only on hold or active suppliers that are available for use with the selected company or company hierarchy.</p> <p>To create a down payment invoice for a supplier that is different than the purchase order supplier, select the supplier that has <b>Invoice Any Supplier</b> checked.</p>
<b>Remit To Connection</b>	<p>Create supplier connections to remit invoices and payments to different supplier addresses, email addresses, and settlement bank accounts.</p>
<b>Currency</b>	<p>Workday automatically populates this field with the supplier currency, or the company currency, in that order of priority. You can change it to any of the accepted currencies defined for the supplier.</p> <p>For a down payment invoice created from the supplier portal or a purchase order, we populate the <b>Currency</b> from the purchase order.</p>
<b>Invoice Date</b>	<p>Enter the date on which you create the down payment invoice. If this supplier has defined payment terms, then the invoice date controls the due date.</p> <p>Example: If the payment terms are <i>Net 30</i>, the <b>Due Date</b> field is 30 days after the invoice date for the down payment. If the date falls within a closed period, Workday posts accounting to the next available period.</p>
<b>Invoice Received Date</b>	<p>Enter the date on which your company receives the purchase order from the supplier.</p> <p>You might want to track the date on which your company receives a purchase order for reporting purposes or to analyze the amount of time it takes to process a purchase order. The invoice received date provides a measurement of the efficiency in the organization, based on how long it takes from the time the invoice arrives until it's posted.</p>
<b>Control Total Amount</b>	<p>Enter an amount if you know what the total down payment invoice is and you want to ensure that the computed</p> <p>Total Invoice Amount</p> <p>matches your expectation.</p>

5. Enter additional details in the **Terms and Taxes** section:

Option	Description
<b>Payment Terms</b>	<p>Specify the payment terms that you agreed to with your supplier.</p>

Option	Description
<b>Discount Date</b>	Calculated automatically based on <b>Payment Terms</b> with a discount for early payment, and <b>Invoice Date</b> .
<b>Due Date</b>	Calculated automatically.
<b>Due Date Override</b>	Select a different due date if there's an exception to the terms.
<b>Default Payment Type</b>	If you select <i>Credit Card</i> , you can select the credit card of a worker from the Credit Card prompt.
<b>Override Payment Type</b>	Select a different payment type for the supplier.
<b>Reference Type</b>	If you select an international reference type, enter a <b>Reference Number</b> of up to 140 characters.
<b>Originating Country Payment Purpose</b>	<p>Select a payment purpose code if the country sending this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.</p>
<b>Receiving Country Payment Purpose</b>	<p>Select a payment purpose code if the country receiving this invoice payment requires a purpose code. This field displays when you enable Payment Purpose Codes on the <b>Edit Tenant Setup - Financials</b> task.</p> <p>See <a href="#">Steps: Set Up Payment Purpose Codes</a> on page 2141.</p>
<b>Default Tax Option</b>	<p>Workday automatically populates this value from the company accounting details.</p> <p>Workday automatically populates the tax option at the line from the header, but you can override it at the line level.</p> <p>To enable tax defaulting rules for invoices created from supplier invoice requests, enable company tax options for supplier invoice request invoices at the tenant level.</p> <ul style="list-style-type: none"> <li>• When the supplier invoice request doesn't specify taxes and the company default is the <i>Calculate Tax Due to Supplier</i> or <i>Calculate Self-Assessed Tax</i> option, Workday populates these fields at the supplier invoice line:           <ul style="list-style-type: none"> <li>• <b>Tax Applicability</b></li> <li>• <b>Tax Code</b></li> <li>• <b>Tax Option</b></li> <li>• <b>Tax Recoverability</b></li> </ul> </li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>When the supplier invoice request specifies taxes, Workday: <ul style="list-style-type: none"> <li>Populates the <i>Enter Tax Due to Supplier</i> option.</li> <li>Doesn't populate the tax fields at the invoice line.</li> </ul> </li> </ul>
<b>Default Tax Code</b>	<p>Workday automatically populates the default tax code from the supplier profile. If the supplier profile doesn't have a defined tax code or to override it, select a tax code.</p> <p>Workday automatically populates the tax code at the line from the header, but you can override it at the line level.</p>
<b>Tax Amount</b>	<p>If you selected to calculate tax, Workday displays the sum of the calculated tax amounts from the taxable lines, based on tax code you specify for each line. To override this calculated amount, you can change calculated tax by tax rate on the <b>Tax</b> tab.</p> <p>If you select to enter tax due to the supplier, enter the tax amount for the transaction. You must have at least 1 line with a tax applicability that is taxable and enabled for allocation.</p> <p>The tax allocated to the lines is only the nonrecoverable amount for the transaction and doesn't always add up to this header amount.</p> <p>If you enter a negative value, Workday allocates the tax amount to a negative or zero-cost line.</p>
<b>Update Tax</b>	<p>Select <b>Update Tax</b> if you update tax on an invoice line and want to recalculate the tax displayed in the header.</p> <p>If you update taxes on an invoice line, Workday automatically recalculates the header tax when you submit or save for later.</p> <p>If you use a third-party tax service integration, Workday hides the field to support tracking and reporting on third-party tax calculations. You can set up a third-party service integration on the <b>Edit Company Tax Details</b> task.</p>

When you create a down payment invoice from a purchase order or supplier contract, the invoice header amounts for landed cost equal the uninvoiced amounts from the purchase order or supplier contract.

When you create a down payment invoice from a receipt, the invoice header amounts for landed cost equal the sum of allocations from received purchase order or supplier contract lines. Workday prorates the amounts based on receipt quantity or amount (including over-receiving).

6. Enter details in the **Invoice Reference Information** section:

<b>Option</b>	<b>Description</b>
<b>Ship-To Address</b>	Workday uses this address when evaluating tax rules to determine tax code and tax applicability overrides for the transaction lines.
<b>Handling Code</b>	<p>Select a payment handling code for this invoice, such as <i>Hold Payment for Pickup</i> or <i>Overnight Payment</i>. This field displays when you configure payment handling instructions.</p>
<b>On Hold</b>	Select to hold payment on this invoice.
<b>Supplier Document Received</b>	Select if the supplier provided an invoice or other relevant document.
<b>Supplier's Invoice Number</b>	<p>If you've received the supplier document, enter its reference number.</p> <p>Example: If the supplier provided a supplier invoice, enter the invoice number from the supplier document.</p> <p>By default Workday delivers duplicate validation enabled for this field. To validate against your own conditions, you can disable this option using the <b>Tenant Setup - Financials</b> task and then use the <b>Maintain Custom Validations</b> task to establish your own condition rules for supplier invoices.</p>
<b>External PO Number</b>	If you use a procurement system other than Workday, enter the purchase order number.
<b>Referenced Invoices</b>	Select existing invoices to create a header-level reference.
<b>Statutory Invoice Type</b>	If you use invoice types to categorize your supplier invoices in compliance with government requirements, select an invoice type.
<b>Document Link</b>	If you store your document images in an external repository, enter the URL to that image location instead of including the image as a file attachment. Once saved, Workday displays the URL as a live link to the image. Each link must begin with one of the valid URL patterns as defined by your security administrator, or Workday doesn't allow the link.
<b>Memo</b>	<p>When you print a check for payment of this supplier invoice, the value that you enter here prints in the <b>Memo</b> field of the check. Select the <b>Use Invoice Memo</b> option in <b>Default Supplier Payment Memo</b> for the supplier.</p> <p>Use the <b>Create Supplier</b> or <b>Create Supplier Change</b> task to configure the invoice memo. If more than 1 invoice for the check to the supplier</p>

Option	Description
	has a memo, Workday concatenates the memos on the check.
<b>Approver</b>	<p>Select a designated approver to review and approve the supplier invoice.</p> <p>To set up a designated approver, add the related Supplier Invoice Designated Approver security group to the <i>Supplier Invoice Event</i> business process security policy.</p>

7. In **Down Payment Details**, click the **Down Payment** check box to enter down payment lines.
8. On the **Down Payment Line** tab, add lines and provide details for lines you select from other business documents.
9. Use the **Tax** tab to review a summary of all the tax codes and their applicability as specified on the invoice lines.  
If several lines share the same tax, this tab consolidates them and totals the amount with this tax.

**10.(Optional)** As you complete the **Currency Rate** tab, consider:

For foreign currency invoices, you can make adjustments to achieve a different conversion rate. Any changes you make on the **Currency Rate** tab register in the **Effective Currency Rate** field, that displays the rate used for accounting to convert installment amounts to ledger currency. Any overrides that you enter trigger the selection of the **Rate Override** check box.

Option	Description
<b>Currency Rate Type Override</b>	Select an option to override the default rate type used to look up the exchange rate.
<b>Currency Rate Date Override</b>	Select a date to override the default rate date used to look up the exchange rate.
<b>Currency Rate Manual Override</b>	Enter a currency rate to override the exchange rate or provide a rate when a default rate isn't available.
<b>Defaults</b>	This section displays the tenant default currency rate based on the invoice date.

11. Use the **Attachments** tab to upload or drag and drop files, such as purchase order down payment supporting documents.

Workday supports the file types listed in the **Edit Tenant Setup - System** task for business document attachments.

You can associate purchase order down payment attachments with customer invoices for billable transactions.

12. Use the **Work Queue Information** tab to add **Work Queue Tags**, **Work Queue Notes**, and other details that will display for the invoice in the **Supplier Invoice Work Area** report.

To view the **Work Queue Information** tab, configure these security domains:

- *Process: Supplier Invoice Work Queue*
- *Manage: Supplier Invoice Work Queue*

13. Submit the purchase order down payment for approval.

## Result

Workday initiates the *Supplier Invoice Event* business process for review and approval. If the business process definition includes an approval step, reviewers can modify the purchase order down payment before they approve it.

## Next Steps

- To view the list of Workday-provided reports and their descriptions, access **Workday Standard Reports** report, and select the *Supplier Accounts* option.
- To pay approved down payment invoices, suppliers must be in active status.
- Settle the approved down payment invoices. The settlement process creates and settles the invoiced payments. When the process completes, Workday updates the accounting entries for each payment.

# Invoice Netting

---

## Setup Considerations: Invoice Netting

You can use this topic to help make decisions when planning your configuration and use of invoice netting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

When you have external or direct intercompany customers that are also your suppliers, you can net their invoices and settle the balance as a single payable or receivable amount. Example: A food service organization sells goods to its customers and also buys certain goods from them, making them suppliers too.

To use netting functionality, you need to configure the netting rules to establish relationships between the customers, sponsors, and suppliers for a given company. Workday enables you to create invoice eligibility criteria to determine which customer and supplier invoices can net. This functionality doesn't extend to multicountry netting.

You can:

- Schedule the netting transactions for automatic processing.
- Print a netting statement that you can add as an attachment to the supplier payment email.
- Customize netting statement layout using the netting Business Intelligence and Reporting Tools (BIRT) form in Workday Studio Report Designer.

## Business Benefits

When you uptake netting functionality, Workday enables you to:

- Eliminate the workaround of calculating the differences between supplier invoice and customer invoice amounts, records the payment in the journals automatically, and offsets the appropriate transactions.
- Simplify your settlement process by eliminating the need to process supplier and customer invoices separately, improving efficiency.
- Reduce your operational costs by eliminating multiple bank settlements.
- Improve your financial cash forecasting because you can now appropriately fund relevant accounts.

- Improve your collections risk because you can now offset overall receivables with payables at once.

### Use Cases

- Suppliers and customers are the same business entity, but have different profiles who have an agreement to net the consolidated payables and receivables amount. They can record the invoices and generate a netting transaction at the end of each period that nets everything.
- Suppliers and customers are the same business entity who have an agreement to net the transactions. The customer sends an invoice for each sale. The supplier contacts the customer to offset the amount of the purchase order at the end of the payment term. When the customer agrees, the supplier makes payment for the offset amount by bank transfer.
- Suppliers and Customer are different business entities and you can net the transaction as per your agreement.

### Questions to Consider

Question	Considerations
Do you have contracts or external agreements with your business entities?	<p>Ensure you finalize the netting agreements first as they determine how you configure your netting rules. For a single company, you can configure netting rules to establish relationships between specific:</p> <ul style="list-style-type: none"> <li>• Customers and suppliers.</li> <li>• Award sponsors and suppliers.</li> <li>• Customers plus sponsors and suppliers.</li> </ul>
Do you need to net specific invoices when older invoices are still open?	<p>You can manage which invoices to net by:</p> <ul style="list-style-type: none"> <li>• Defining the netting priority of invoices when you configure invoice eligibility rules.</li> <li>• Selecting specific invoices and adjustments when you run the netting process manually.</li> </ul>
Can you net any customer and supplier invoice?	<p>You can only include those invoices in a netting transaction that have open balances, even if only the partial amount is eligible for netting.</p>
Do you have past due invoices that are part of dunning?	<p>Even when an invoice is part of a netting transaction, Workday includes that invoice in the dunning as long as the netting transaction is in a draft status. To exclude that invoice from dunning, first complete the netting transaction.</p>
Does the netting process also include invoices that aren't yet due?	<p>Netting functionality uses the invoice date to determine if an invoice is eligible for netting transaction. Therefore, it can include invoices that aren't yet due.</p> <p>Once the netting transaction is complete, Workday settles the net payable on the due date of that invoice as per the payment terms.</p>
Do you have payment discounts as part of your payment terms?	<p>When you net supplier and customer invoices, Workday calculates the payment discount only on the balance remaining after the netting transaction is complete.</p>

Question	Considerations
Do you need to cancel a netting transaction and what is the impact?	<p>When you cancel a netting transaction, Workday:</p> <ul style="list-style-type: none"> <li>• Reverts the payment status on the supplier and customer invoices.</li> <li>• Reverses the accounting entries for the transaction amount on the same ledger period as long as the period is open. Otherwise, Workday reverses the accounting entries in the next open period.</li> <li>• Releases the supplier invoices and customer invoices. You can then include those invoices in another netting transaction or a settlement run.</li> </ul>
Can you edit a netting transaction?	<p>You can edit a netting transaction but can't change the header information. You can, however, add or remove invoices, change invoice amounts, and add attachments.</p>
Can you net invoices in different transaction currency?	<p>You can net in a different transaction currency but both the supplier invoices and customer invoices must be in the same currency.</p> <p>When the netting transaction currency is different from the invoice currency, the difference between the 2 exchange rates creates a realized exchange gain or loss journal entry.</p>
Do you have worktag balancing enabled in your tenant?	<p>When you define netting rules, Workday enables you to specify the worktags, including optional worktag balancing.</p> <p>Workday uses the worktag you specify to calculate interworktag balancing entries when netting customer and supplier invoices.</p>
Do you need to net invoices originating from awards?	<p>When you run netting, Workday enables you to bill both indirect and direct award costs to the sponsor.</p>
Do you use scheduled settlement runs for remittance?	<p>Workday recommends that you process your netting transactions before the scheduled settlement runs. Once you start the netting run, the included invoices aren't available for settlement or payment until after the netting transaction is complete.</p>
Do you need to void a check after the settlement is complete?	<p>When you void a check after the settlement is complete, then the associated invoices become eligible again for netting.</p>
Can you send netting statements to your suppliers?	<p>Workday enables you to print a netting statement from the related actions menu of the netting transaction that you can later add as an attachment to the remittance email.</p> <p>You can only include those netting statements that have a print run type of <i>Final</i>.</p>

Question	Considerations
Do you have a large number of customers that are also your suppliers?	Workday provides web services to mass load the netting rules instead of manually creating 1 rule at a time .

## Recommendations

- Configure your business policy to include a review step. It enables you to correct netting errors, add or remove invoices before the netting transaction is complete because you can't change the transaction once it's approved.
- When there are errors in the netting transaction, cancel the transaction and create a new transaction, or create an adjustment.
- Use detailed descriptive netting rule names to identify the company, customer, and supplier relationship that you want to net for. It helps you easily identify the rule to use when you create a netting transaction.
- When configuring netting rules, select company hierarchy, or multiple customers and suppliers to include invoices from several entities within the same 1 company.
- To determine which invoices to net first, specify a netting priority when configuring the invoice eligibility rules.
- When you create invoice eligibility rules, you can make the rules more restrictive by specifying invoice type or dates to exclude certain invoices from netting, such as sponsor.

## Requirements

- Enable generation of unique IDs for netting transactions at tenant or company level.
- Configure at least 1 netting rule to define the netting relationship between the desired customers and suppliers for a given company.
- Configure invoice eligibility rules to define which customer invoices can be part of the netting transaction.
- To attach a netting statement to the supplier remittance email, first settle the netted invoice and generate a final netting statement.
- To enable direct intercompany invoice netting, access the **Maintain Companies as Customers or Supplier** task, and select **Enable Netting** for every business entity that you want to be able to net direct intercompany transactions for.

## Limitations

- Netting doesn't include 1099 suppliers.
- You can only net 1 company at a time.
- Netting doesn't include discount calculations. Workday applies the discount to the final balance during the settlement process.
- You can't net supplier invoices with customer invoices when they have different transaction currencies. Though, the netting transaction currency can be different than the company currency.
- You can't select the invoices that are part of a settlement run. You can settle the remaining balance on the invoices after approving the netting transaction.
- Workday doesn't include invoices that have pending activity, are on hold, or in dispute.
- You can't change a netting transaction once it's approved. However, you can create an additional supplier or customer invoice adjustment when the netting transaction is incorrect.

## Tenant Setup

Use the **Edit Tenant Setup - Financials** task to enable the netting transaction ID sequence generator in your tenant.

## Security

Domains	Considerations
<i>Setup: Netting Rule</i> in the Common Financial Management functional area.	Enables you to create netting rules.
<i>Process: Netting Transaction</i> in the Customer Accounts and Supplier Accounts functional area.	Enables you to create netting transactions. Workday uses netting rules and invoice eligibility rules to retrieve invoices for netting. In Workday, all netting transactions occur by netting relationships. You can only view customers and suppliers that you have access to.
Subdomains for <i>Process: Netting Transaction</i> in the Customer Accounts and Supplier Accounts functional area: <ul style="list-style-type: none"> <li>• <i>Process: Netting Transaction – Add Attachment</i></li> <li>• <i>Process: Netting Transaction – Cancel</i></li> <li>• <i>Process: Netting Transaction – Change</i></li> <li>• <i>Process: Netting Transaction – Reporting</i></li> <li>• <i>Process: Netting Transaction – View</i></li> </ul>	Enables you to secure access to a specific netting feature, giving you more control over users' activities.

## Business Processes

Configure the *Netting Transaction Event* business process to review, edit, and approve netting transactions.

## Reporting

- Use the **Find Netting Transactions** report to view the:
  - Netting transactions completed in a given period.
  - Netting rule used for each transaction.
  - Number of supplier and customer invoices netted.
 You can drill down on all the parameters to access the details.
- Workday provides these report data sources for creating custom reports:
  - **Netting Customer Invoice Application**
  - **Netting Rules**
  - **Netting Supplier Application Activity**
  - **Netting Transactions**
  - **Netting Transaction for Netting Transaction Printing Run**

Workday also includes netting activity in these existing customer and supplier reports:

- Customer Activity Details and Summary
- Customer Balance Details and Summary
- Customer Open Items
- Customer Statements
- Invoice Aging - Composite View
- Receivables Aging Detail and Summary
- Sponsor Statements
- View Customer Invoices
- Payables Aging

- Payables Aging Detail
- Payables to Supplier Balance Reconciliation and Exception Summary
- Retention Payables to Supplier Balance Reconciliation
- Supplier Activity Details and Summary

## Integrations

Web Service	Considerations
<ul style="list-style-type: none"> <li>• <i>Get Invoice Eligibility Rules for Netting Transaction</i></li> <li>• <i>Put Invoice Eligibility Rule for Netting Transaction</i></li> </ul>	Use to create, update, or retrieve invoice eligibility rules for netting transactions.
<ul style="list-style-type: none"> <li>• <i>Get Netting Rules</i></li> <li>• <i>Put Netting Rule</i></li> </ul>	Use to create new netting rules, update or delete existing rules, and retrieve rules.
<ul style="list-style-type: none"> <li>• <i>Cancel Netting Transaction</i></li> <li>• <i>Get Netting Transactions</i></li> <li>• <i>Submit Netting Transaction</i></li> </ul>	<p>Use to cancel, retrieve, or mass load netting transactions in Workday.</p> <p>When you submit the web service, we create an in progress netting transaction.</p>

The **SAF-T Core** and **SAF-T Norway** integration templates support invoice netting and account for netting in arrears.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Other Impacts

- The netting transaction period close activity group enables you to categorize operational transactions and accounting activity. You can close the group independently from procurement or customer accounts groups.
- When the netting transaction currency is different from the invoice currency, the difference between the 2 exchange rate creates a realized exchange gain or loss journal entry.

## Related Information

### Concepts

[The Next Level: An Introduction to the Netting of Invoices between Suppliers and Customers](#)

## Steps: Set Up Netting

### Prerequisites

- Enable generation of unique IDs for netting transactions:
  - At the tenant level with the **Edit Tenant Setup - Financials** task.
  - At the company level with the **Edit Company ID Definitions** task.
- Configure the *Netting Transaction Event* business process and security policy in the Customer Accounts and Supplier Accounts functional areas.
- Review setup considerations for invoice netting.

## Context

You can configure invoice netting to calculate a single net balance payable or receivable for third-party companies that are both a customer and a supplier. This process eliminates the workaround of calculating the differences between supplier invoice and customer invoice amounts, simplifies settlement, reduces operation costs, and improves collections risk.

To set up invoice netting, you need to:

- Configure netting rules to establish relationships between customers, sponsors, and suppliers for a company or company hierarchy.
- Define invoice eligibility rules to identify which customer invoices can net against which supplier invoices.

When you create a netting transaction, Workday:

- Automatically calculates Value Added Tax (VAT) on a payment when applicable.
- Excludes on hold or in dispute invoices.
- Doesn't net invoices across different companies or direct intercompany invoices.

## Steps

**1. Access the Create Invoice Eligibility Rule for Netting Transaction task.**

- Specify a value for **# of Days Invoices are Open before Netting** to determine the period from when to retrieve the open invoices. When you schedule a netting transaction, calculate the days open from the scheduled date.
- When you have an uneven amount of customer and supplier invoices, Workday uses the **Invoice Netting Priority** to determine which invoices will net first.

Security: *Setup: Netting Rules* domain in the Common Financial Management functional area.

**2. Access the Maintain Netting Rules task.**

Define which customers or sponsors can net against which suppliers for a given company and select an invoice eligibility rule. Select a company hierarchy to be able to net across all companies in that hierarchy.

Once a netting rule is **In Use**, you can deactivate the rule but can't delete it.

Security: *Setup: Netting Rules* domain in the Common Financial Management functional area.

**3. Create Netting Transactions** on page 823.

**4. (Optional) Access the Schedule Netting Transaction task.**

Select a schedule based on your netting recurrence requirements. Workday populates the **Transaction Date** and the **Invoice Date on or Before** fields on the netting transaction based on the option you select:

- Daily Recurrence*
- Weekly Recurrence*
- Monthly Recurrence*

Security: *Process: Netting Transaction* domain in the Customer Accounts and Supplier Accounts functional areas.

**5. Access the Create Netting Statement Print Layout task.**

Security: *Setup: Netting Rules* domain in the Common Financial Management functional area.

**6. Access the Print Netting Statement task** from the related actions menu of a netting transaction to print the netting statement.

- You can print only 1 *Final* statement for each netting transaction. The print run type becomes final after you approve the netting transaction.

Security: *Process: Netting Transaction* and *Process: Netting Transaction – Reporting* domains in the Customer Accounts and Supplier Accounts functional area.

**7. (Optional) Set Up Remittance Release Event for Suppliers** on page 1713

To attach netting statements to your supplier emails, add the **Netting Statements** report field to the **Attachment(s)** section of the *Remittance Release Event* business process.

#### Related Information

##### Concepts

[Concept: Accounting and Netting Transactions](#) on page 826

## Create Netting Transactions

#### Prerequisites

- Configure the *Netting Transaction Event* business process and security policy in the Supplier Accounts and Customer Accounts functional areas.
- Create Invoice Eligibility Rules for netting transactions.
- Configure Netting Rules.
- Configure these domain security policies on 1 or both functional areas according to your business needs:
  - Security: *Process: Netting Transaction* domain in the Supplier Accounts and Customer Accounts functional areas.
  - Security: *Set Up: Netting Rules* domain in the Common Financial Management functional area.

#### Context

You can't use this feature to net direct intercompany transactions, instead see [Create Direct Intercompany Netting Transactions](#) on page 824.

You can use netting transactions to net the amount payable and amount receivable on these documents:

- Customer invoice
- Customer invoice adjustment
- Supplier invoice
- Supplier invoice adjustment

Invoices and adjustments are eligible to net based on the netting rules and invoice eligibility rules configured. Both rules apply to customers and suppliers on a company or company hierarchy. Workday displays invoices:

- With negative and positive balances.
- Based on the days you configure on the **# of Days Invoices are Open Before Netting** field on the invoice eligibility rule. From the field, we populate and lock down the **Invoice Date On or Before** field on the transaction.

We don't display invoices:

- With a balance of zero.
- From suppliers marked for 1099 MISC reporting.

#### Steps

1. Access the **Create Netting Transaction** task.
2. Select the **Currency**. We populate the field from the **Company**, but you can change it to view and net invoices in a different currency.  
We support multicurrency on netting transactions, where the currency on the invoices is different from the ledger currency. For a valid netting transaction, both supplier invoices and customer invoices selected must be on the same currency.
3. Select the **Netting Rule** that you want to apply to the transaction.

**4. Enter a Transaction Date.**

Enter a date on or after the invoice date.

**5. (Optional) For tenants with Balancing Worktag configured:**

- Select the **Balancing Worktag** on the netting rule to calculate interworktag balancing entries when you net customer and supplier invoices that have different balancing worktags.
- Select the **Optional Balancing Worktag** on the netting rule to calculate interworktag balancing entries.

**6. From the Supplier Invoices and Customer Invoices tabs, select the invoices or adjustments that you want to net. Consider that selecting an invoice doesn't guarantee netting.**

You're able to net invoices based on:

- The available total supplier invoice amount and customer invoice amount.
- The invoice eligibility rules. The oldest invoice nets first, based on invoice date.

### Result

After you approve a netting transaction, we generate accounting that reverses the accounts payable and accounts receivable balances of the individual supplier invoices and customer invoices.

### Next Steps

- Settle any balance due left on the invoices after you netted.
- Print a netting statement.
- Send a netting statement along with the payment remittance information to the supplier.

## Create Direct Intercompany Netting Transactions

### Prerequisites

- Access the **Maintain Companies as Customers or Suppliers** task and select **Enable Netting** for all companies that you want to include. You can't net direct intercompany transactions for a company unless you select **Enable Netting**.
- Create intercompany transactions.

### Context

When you have companies that issue direct intercompany customer and supplier invoices, you can net the total amount and settle all their transactions at once.

Workday can't net negative amounts, so you must settle as the company that has a net payable amount. You can check which company owes more using the Intercompany Work Area report.

If you're using Auto Record Intercompany receipt, Workday automatically generates a receipt for the intercompany payment. Otherwise, you can create one manually.

### Steps

1. Access the **Create Settlement Run Task**.
2. Select the company you want to net for that owes a net payable amount.
3. Leave the **Intercompany Payable/Receivable Transactions** field blank, to include all transactions needed for netting.
4. Set the **Intercompany Invoice Type** to *Direct*.
5. Select the transactions you want to net.

Workday displays amounts due to the company you're settling for as positive amounts, and amounts due from the company as negative amounts.

**6.** Process the settlement run.

From the **Background Process in Progress View**, you can use the **Payment Groups** and **Intercompany Items** tabs to review the transactions included in the settlement run.

**7.** (Optional) To record an intercompany receipt for the settlement run: access the **Record Intercompany Receipt** task, and:

- a) In the **Company Receiving Payment** field, enter the company that was owed a net receivable amount in the settlement run.
- b) In the **Companies making Payments** field, enter the company that owed a net payable amount in the settlement run.
- c) Set the **Intercompany Invoice Type** to *Direct*.
- d) Select the intercompany payment from the settlement run.

## Create Custom Business Form Layout for Netting Statements

### Prerequisites

- Security: *Custom Report Creation* in the System functional area.
- Security: *Setup: Netting Rules* domain in the Common Financial Management functional area.

### Context

Workday delivers a standard business form layout for netting called *Netting Transaction Printing Form*.

If the delivered business form layout doesn't meet your needs, you can create your own custom business form layouts. You can associate them with netting statement print layouts and in some cases, replace a delivered layout using *Report Designer in Workday Studio*.

### Steps

**1.** Create your own XSL stylesheet or design a business form layout using *Report Designer in Workday Studio*.

**2.** Create a custom business form layout.

- a) Access the **Create Business Form Layout** task.
- b) Check the **Active** box.
- c) Enter the number of days for retaining netting statements before they expire in **Resulting Document Expiration Offset (in days)**. The maximum value allowed is 25,000.

**Note:** Ensure that the expiration offset you specify here complies with your organization's document retention policy. Workday automatically deletes documents after the offset number of days. You can't recover these documents.

- d) Select a business form layout from one of these prompts:

- *XSL Attachment*
- *Report Design*

Use Workday Community to download the netting statement *rptdesign* file at <https://community.workday.com/node/721452>.

- e) Select a **Custom Report**.

- f) Add the **Token Name** for the company logo and signature as follows:

*company\_logo*

*po\_signature*

These tokens are in your XSL stylesheet or Report Designer business form layout.

3. Access the **Configure Business Form Layout** task to upload images for the company logo and signature tokens.
4. Associate your custom layout with the netting statement print layout.
  - a) Access the **Create Netting Statement Print Layout** task.
  - b) Select the custom form you created for the **Custom Business Form Layout for Netting Statement**.
  - c) Check the applicable **Include Company Logo** and **Include Signature** options.
5. (Optional) Include financial messages for *Netting Statement* business documents.

### Result

When you print netting statements, Workday uses the custom business form layout.

## Concept: Accounting and Netting Transactions

Netting transactions enable you to net the amount payable and amount receivable on supplier and customer invoices and adjustments. Workday generates accounting for the transaction amount and creates reversals of accounts payables and accounts receivables.

We display a simultaneous summary at the header while you create the transaction:

Field	Description
<b>Net Payable and Net Receivable</b>	The difference between the Total Payable and Total Receivable amounts.
<b>Total Payable</b>	The total amount to net from supplier invoices.
<b>Total Receivable</b>	The total amount to net on customer invoices.
<b>Transaction Amount</b>	The netting transaction amount, that displays as total debits/credits in the journal entry.

When a netting transaction is in progress or in draft status:

- We record the netting rule and invoice eligibility rule applicable when you submit or save for later.
- You can't select the invoices on a settlement run. You can settle the remaining balance on the invoices after approving the netting transaction.

When you submit or save for later a netting transaction, we lock down the selected invoices to prevent them from being available:

- For another netting transaction.
- For a settlement run.
- To cancel or change.

When you approve a netting transaction:

- We mark the supplier or customer invoice or invoice adjustment as paid or partially paid accordingly.
- We generate accounting for the transaction amount and create reversals of accounts payables and receivables ledgers of the supplier and customer invoices respectively.
- Where the exchange rate differs from the exchange rate for the invoice (at creation), the difference creates a realized exchange gain or loss journal entry.
- We populate and display the **Accounting Date** on the **View Accounting for Netting Transaction** report.
- In tenants with balancing worktags configured, we generate the corresponding accounting entries. You can specify the balancing worktag in the netting rule. Workday creates due to and due from entries for the balancing worktags in the netting transaction journal.

- We don't display the Adjust Accounting related action on supplier invoice documents included in a netting transaction that is fully or partially paid.

When you cancel a netting transaction, we:

- Revert the payment status on the supplier and customer invoice documents.
- Reverse the accounting entries on the same ledger period as long as the period is open. If the ledger period closed, we reverse the accounting entries in the next open period.
- Populate and display the **Cancel Accounting Date** on the **View Netting Transaction** report.
- Release the supplier or customer invoices and invoice adjustments selected. You can then include the invoices in another netting transaction or settlement run.

We hide suppliers with Segmented Security configured. However, you can select the netting rule related to the supplier or search for the invoices, and create a netting transaction.

#### Related Information Concepts

[Setup Considerations: Invoice Netting](#) on page 816

### Reference: Netting Rules

You can configure Netting Rules to define which customer invoices and supplier invoices can net against each other. You can maintain rules between customers and suppliers for 1 or more companies or company hierarchy. Workday identifies the invoices to net using the criteria in the Netting Rule and Invoice Eligibility Rule.

Option	Description
<b>Rule Name</b>	Enter a unique name for each netting rule.
<b>Company</b>	Any company or company within the hierarchy that you specify on the netting rule can initiate a netting transaction using that rule.
<b>Customer</b>	You can't select companies that operate as customers or suppliers on netting rules. You can select customers and sponsors.
<b>Supplier</b>	You can't select supplier invoices from suppliers with 1099 MISC reporting.
<b>Balancing Fund</b>	This field displays for tenants with worktag balancing enabled. Select the worktag used to calculate interworktag balancing entries when netting customer invoices and supplier invoices that have different balancing worktags.
<b>Optional Balancing Worktags</b>	This field displays for tenants with optional worktag balancing enabled. Select the <i>Optional Balancing Worktag</i> to generate due to and due from entries to balance the netting transaction.
<b>In Use</b>	Once a netting rule is <b>In Use</b> , you can mark it inactive, but can't delete it.
<b>Inactive</b>	Select to block the netting rule for future netting transaction.

[Steps: Set Up Netting](#) on page 821

## Supplier Remittance Integration

---

### Steps: Set Up Supplier Remittance Integration

**Prerequisites**

If the supplier uses different email addresses to remit invoices and payments, configure supplier connections.

**Context**

You can create a supplier remittance integration to reduce reconciliation errors by emailing suppliers a .txt file with a list of invoices that composes an electronic payment.

**Steps**

1. [Create Integration System](#).

As you complete the task, consider:

Option	Description
New using Template	Select <i>WPN-Generic Remittance</i> .
Enable All Services	Select the check box.

2. [Create Integration System User for Supplier Remittance](#) on page 1712.

3. [Set Up Integration Sequence Generators](#).

You can use the *RemitAdvice\_[yyyy][MM][dd]\_[seq].csv* format to set up and test your integration quickly. You can change the format later to meet your business needs.

4. From the related actions menu of your integration system, select **Integration System > Configure Integration Attachment Service**.

From the **Attachment** prompt, select an XSLT file or *Create Integration Service Attachment*.

5. To assign your integration system to suppliers that require remittance advice, select **Supplier > Create Supplier Change** from the related actions menu of each supplier.

In the **Payment Details**, select your integration system from the **Remittance Integration System** prompt.

On the **Contact Information** tab, specify the email address to send the remittance to:

- For suppliers that use 1 email address for all remittances, select the **Primary** check box.
- For suppliers that use more than 1 email address, create supplier connections.

Workday doesn't consider the supplier email usage when emailing the remittance advice. When a supplier receives both remittance advices and purchase orders, the same email address will receive both documents.

See [Change Supplier Information](#).

6. [Set Up Remittance Release Event for Suppliers](#) on page 1713.

7. From the related actions menu of the *Payment Release Event* business process, select **Business Process > Edit Definition**.

To execute remittance on electronic payments only, add the *Remittance* service step to the business process.

## Result

Suppliers receive a supplier remittance email with an attachment that contains details about an electronic payment.

## Next Steps

Test the integration.

### Related Information

#### Tasks

[Set Up Remittance Release Event for Suppliers on page 1713](#)

[Create Supplier Remit-To Connections](#)

#### Reference

[Workday Community: Configuring the Supplier Remittance Advice for Electronic Payments](#)

## Create Integration System User for Supplier Remittance

### Prerequisites

Create and configure the remittance integration system.

### Context

You can create an integration system user for the supplier remittance integration. Assign the integration system user to a security group with permission to access all tasks and reports the integration requires.

### Steps

- Access the **Create Integration System User** task.

Workday automatically populates the value in the **Session Timeout Minutes** with zero to prevent the integration system user session from expiring. Expired sessions can cause the integration to stop before it successfully completes.

- From the related actions menu of the system user you created, select **Security Profile > Assign Integration System Security Groups**.
- From the **Integration System Security Group to Assign** prompt, select *Settlement System*.
- From the related actions menu of your integration system, select **Workday Account > Edit**.
- From the **Workday Account** prompt, select your integration system user.

If you don't make any changes to the **Global Preferences**, **Search Preferences**, and **Account Preferences** sections, then Workday automatically populates the locale and display language for integration data. An outbound integration sends data in the preferred language and an inbound integration saves data in the preferred language.

- (Optional) If the integration system user authenticates with a username and password:
  - Access the **Maintain Password Rules** task.
  - In the **System Users Exempt from password expiration** field, add your integration system user.

### Result

Workday assigns the integration system user as part of the Settlement System security group and the remittance integration system.

## Set Up Remittance Release Event for Suppliers

### Prerequisites

Configure the *Remittance Release Event* business process and security policy in the Banking and Settlement functional area.

### Context

You can configure the *Remittance Release Event* business process to enable the supplier remittance integration for electronic payments to:

- Include attachments.
- Set up notifications.

### Steps

1. Access the **Remittance Release Event** business process definition.
2. On the integration step, click **Configure Integration System**.

Select these values:

Option	Description
Integration	<i>Integration Processing Remittance File</i>
Value	<i>Remittance File Reference</i>

3. From the related actions menu of the **Remittance Release Event** business process, select **Business Process Policy > Edit**.
4. Select the **Allow Attachments within Emails** check box.
5. From the related actions menu of the **Remittance Release Event** business process, select **Business Process > Add Notification**.

Select these values:

Option	Description
Override Email Template	<i>Notification Template (no link)</i> , or develop a new template based on your business requirements.
Recipients	<i>Payee</i>
Attachments	<i>Deliverable Attachments for Remittance File Business Process Notification</i>

### Next Steps

Set up the *Payment Release Event* business process for remittance.

### Related Information

[Steps: Set Up Supplier Remittance Integration](#) on page 1711

# Expenses

---

## Setup Considerations: Expenses

You can use this topic to help make decisions when planning your configuration and use of Workday Expenses. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to:

- Other setup considerations for details on specific features.
- Task instructions for specific configuration details.

### What It Is

Workday Expenses enables you to manage and control expenses for your company and its payees.

With Workday Expenses, you can configure and manage:

- Payment elections.
- Expense rate tables.
- Expense items.
- Expense reports.
- Spend authorizations.
- Cash advances.
- Credit cards.
- Travel booking records.

You can process expenses for:

- Candidates.
- Contingent workers.
- External committee members.
- Pre-hires.
- Students.
- Workers.

Workday Expenses provides an **Expenses Hub** that centralizes expenses for payees so they can manage their expenses quickly and easily.

### Business Benefits

- Centralize tasks and reports for self-service users so they can manage their expenses efficiently.
- Complete on-the-go expenses quickly to speed up reimbursement.
- Eliminate manual paper processes.
- Enable machine learning to assess expense reports for anomalies, duplications, and inaccuracies.
- Increase accuracy and reduce manual entry by calculating expense transaction data automatically.
- Manage workloads by delegating tasks.
- Meet international and regional tax rules and reimbursement requirements.

- Set spending limits to control travel and entertainment costs.

You can quickly exchange and report on data:

- When you use Workday Expenses along with other Workday products, such as Human Capital Management (HCM). Example: You can create expense items and associate them with allowance plans.
- With analytics and reporting that provide insights into budget versus actual spend.

## Use Cases

- Apply maximum daily amounts to limit spending.
- Audit expense reports for compliance.
- Define rates that help calculate reimbursement.
- Import and process data from credit card and travel booking providers.
- Process company, intercompany, mobile, and multicurrency expense reports.
- Track, analyze, and report on spend across your company and its organizations.

You can also manage and control spend using:

- Allowance plans, budget checks, and commitment accounting.
- Custom validations, tax rules, and worktags.
- Spend authorizations.

You can settle and reimburse expenses for:

- Cash advance requests.
- Corporate credit card transactions.
- Out-of-pocket transactions.

## Questions to Consider

Question	Considerations
How do you want to reimburse expense payees?	<p>You can set up payment elections to:</p> <ul style="list-style-type: none"> <li>• Determine reimbursement methods, such as by check or direct deposit.</li> <li>• Enable workers to set their preferred country and currency for payments or split payment between multiple countries and currencies.</li> </ul> <p>You can also apply rules to payment election options to determine payment methods or payment distributions.</p>
How do you use rates to calculate expense reimbursement?	<p>You can configure rate tables and rules that assess expense items to:</p> <ul style="list-style-type: none"> <li>• Calculate reimbursement amounts.</li> <li>• Determine reimbursement eligibility.</li> <li>• Validate maximum reimbursable amounts.</li> </ul> <p>You can calculate reimbursement using rate tables based on amounts and percentages.</p> <p>You can also use expense accumulators to track incremental increases on expense items over time, such as distance-based expenses.</p>

Question	Considerations
What details do you need from expense payees to reimburse them?	<p>You can configure expense reports to gather information at header level. Examples: Business purposes and memos.</p> <p>You can also request and require more specific detail at line level on:</p> <ul style="list-style-type: none"> <li>Expense reports.</li> <li>Spend authorizations.</li> </ul> <p>You can use:</p> <ul style="list-style-type: none"> <li>Distance-based expense items to calculate mileage.</li> <li>Itemization to require a cost breakdown of incurred expenses.</li> <li>Per diem expense items to meet requirements in your country.</li> <li>Travel journals to itemize expenses from business trips.</li> <li>Workday-delivered attributes and configurable attributes.</li> </ul>
Do you want to enable specific workers to create expense reports on behalf of others?	<p>You can enable workers to create expense reports on behalf of:</p> <ul style="list-style-type: none"> <li>Candidates.</li> <li>Delegates.</li> <li>External committee members.</li> <li>Other workers.</li> <li>Pre-hires.</li> <li>Students.</li> </ul>
What expense reporting methods do you need to configure?	<p>You can set up different methods of expense reporting according to business needs, including:</p> <ul style="list-style-type: none"> <li>Expense reports with negative reimbursable amounts for workers that incur personal expenses on corporate liability credit cards.</li> <li>Intercompany expense reporting when your company has an agreement to split costs with other companies.</li> <li>Receipt scanning to expedite expense claims that payees submit on mobile devices.</li> </ul>
How do you want to format print layouts on expense reports?	<p>You can use Workday-delivered options to print expense reports.</p> <p>You can also use Report Designer in Workday Studio to customize print layouts for:</p> <ul style="list-style-type: none"> <li>Alerts.</li> <li>Attachments.</li> <li>Instructions.</li> <li>Layouts.</li> <li>Logos.</li> </ul>

Question	Considerations
	<ul style="list-style-type: none"> <li>Messages.</li> </ul>
How do you want to manage preauthorization of spend?	<p>You can enable or require workers to request spend authorizations before they incur expenses.</p> <p>You can also:</p> <ul style="list-style-type: none"> <li>Approve cash advance requests.</li> <li>Enable specific workers to create spend authorizations on behalf of nonworkers.</li> <li>Freeze spend authorizations.</li> <li>Mass close spend authorizations that you no longer need.</li> <li>Perform budget checks on spend authorizations.</li> <li>Use commitment accounting to account for future expenses.</li> </ul>
How do you want to set up expense credit cards?	<p>You can set up:</p> <ul style="list-style-type: none"> <li>Central travel cards to consolidate organization-wide air travel on a single credit card.</li> <li>Individual credit cards for expense payees.</li> </ul> <p>You can specify payment responsibility for worker credit cards using different corporate billing account types.</p> <p>You can also enable workers to:</p> <ul style="list-style-type: none"> <li>Manually enter credit card transaction data.</li> <li>Reassign corporate credit card transactions between workers.</li> <li>Submit credit card transactions with negative reimbursable amounts.</li> </ul>
How can workers add travel data on expense reports?	<p>You can download travel booking records from your travel provider and import them into Workday.</p> <p>When you import travel booking records, workers can add these items on expense reports:</p> <ul style="list-style-type: none"> <li>Air travel.</li> <li>Car rental.</li> <li>Hotel reservations.</li> </ul>
What tax information do you want to capture from worker expenses?	<p>You can configure tax rules and enable tax on expense reports. Workday then calculates tax on expense items, enabling you to recover partial or full amounts for:</p> <ul style="list-style-type: none"> <li>Goods and Services Tax (GST).</li> <li>Value Added Tax (VAT).</li> </ul>

## Recommendations

- Configure instructional text for your expense reports to help workers comply with expense policies.
- Contact Workday Professional Services or your consultant to integrate with credit card or travel providers.

- Enable commitment accounting for spend authorization transactions to help prevent overspending.
- Review and standardize expense policies for your company before setting up Workday Expenses, to help ensure compliance.
- Use configuration that streamlines the reimbursement process to reimburse payees quickly. Example: You can enable workers to claim quick expenses on mobile devices.

## Requirements

To enable workers to submit expense reports, set up at least 1 expense item and reimbursement type.

## Limitations

You can only:

- Enable mobile receipt scanning for workers based in specific countries.
- Set 1 payment preference rule for expense payments.

We don't support certified documentation storage for expense report receipts and attachments.

## Tenant Setup

You can use the **Edit Tenant Setup - Financials** task to configure tenant-wide options for Workday Expenses.

You can configure the **Expenses Options** section to:

- Bill customers for expense report lines in *Approved* status.
- Control tax defaulting for international expenses.
- Disable tax on expense reports.
- Enable workers to request cash advances.
- Ensure that your organization doesn't bill customers for worker expenses.
- Expense booked travel booking records before the travel end date.
- Restrict workers from selecting specific project worktags.
- Specify the number of years that you want to retain financial data for purged workers.

You can also use the task to specify:

- If you want to charge amounts against dates at expense report level or expense line level, for budgeting. Example: To avoid expense lines spanning across multiple fiscal periods, you can charge amounts against the overall expense report date.
- Sequence IDs for expense reports and spend authorizations.

## Security

You can access the **Domain Security Policies for Functional Area** report to view all security domains for Expenses.

The security domains that you can configure include:

Domains	Considerations
<i>Set Up: Payment Election</i> in the Expenses functional area.	Use to set up processing details for payment elections.
<i>Set Up: Expense Item</i> in the Expenses functional area.	Use to set up expense items for workers to use on their expense transactions.
<i>Access Expense Item (Segmented)</i> in the Expenses functional area.	Use to configure segment-based security to control access to expense items.

Domains	Considerations
	Example: You want to display a set of expense items only to employees in the Sales department.
<i>Self-Service: Expense Report</i> in the Expenses functional area.	Use to complete and submit expense reports.
<i>Self-Service: Spend Authorization</i> in the Expenses functional area.	Use to submit spend authorization requests before they incur expenses.
<i>Process: Expense Report Work Area</i> in the Expenses functional area.	Use to maintain expense reports awaiting action in the <b>Expense Report Work Area</b> report.
<i>Set Up: Tenant Setup - Financials</i> in the System functional area.	Use to access the <i>Set Up: Tenant Setup - Financials</i> subdomain, which you can use to configure tenant-wide options for Workday Expenses.

## Business Processes

Business Process	Considerations
<i>Expense Report Event</i>	<p>Use to:</p> <ul style="list-style-type: none"> <li>Audit expense reports to ensure compliance with travel and expense policies.</li> <li>Capture feedback by including questionnaires on expense reports.</li> <li>Check budgets.</li> <li>Confirm accurate taxes on expense reports.</li> <li>Retrieve expense report data for reporting.</li> <li>Send back expense lines for correction.</li> <li>Track projects.</li> </ul>
<i>Expense Report Intercompany Event</i>	<p>Use to:</p> <ul style="list-style-type: none"> <li>Initiate the approval process for companies on expense report lines and itemizations.</li> <li>Hold the affiliate company on expense lines and itemizations accountable for worker spend.</li> </ul>
<i>Spend Authorization</i>	<p>Use to:</p> <ul style="list-style-type: none"> <li>Add allowance plans for employees requesting spend authorizations.</li> <li>Check budgets.</li> <li>Enable cash advance requests.</li> <li>Include questionnaires on spend authorizations.</li> </ul>
<i>Spend Authorization Mass Close Event</i>	Use to close multiple unused spend authorizations when your organization no longer needs to process expense reports against them.

## Reporting

Reports and Dashboards	Considerations
<b>Expense Audit Work Area</b> report.	View expenses by their reporting and payment categories and use reports and graphs to analyze spending.
<b>Expense Report Work Area</b> report.	View expense reports with actions outstanding. You can use this report to review, send back, and approve expense reports.
Expense Management dashboard.	<p>Use to view information such as:</p> <ul style="list-style-type: none"> <li>Expense item trends.</li> <li>Expense report totals.</li> <li>Top expense items.</li> </ul> <p>You can also:</p> <ul style="list-style-type: none"> <li>Access frequently used expense tasks and reports.</li> <li>View and analyze expense information.</li> </ul>
<b>Expenses Exceeding Maximum Amount</b> report.	View expense report lines and itemizations that exceed the maximum defined amount for the expense item, excluding lines and itemizations identified as personal expenses.
<b>Expenses Hub</b> worklet.	View and access expense tasks and reports from a single location.
<b>No Expense Report Submitted</b> report.	<p>View workers who haven't submitted expense reports:</p> <ul style="list-style-type: none"> <li>In a specified timeframe.</li> <li>Using dates that fall within the required reporting period.</li> </ul>

You can access the **Workday Standard Reports** report to view all reports for Workday Expenses.

You can also create custom reports using report data sources, such as:

- **Expense Reports for Company**, which enables you to view expense reports for a company or company hierarchy.
- **Tax Rate Application**, which enables you to view expense reports marked for tax.

## Integrations

You can use web services to import data for use with Workday Expenses. Examples:

- *Import Credit Cards*
- *Import Credit Card Transactions*
- *Import Expense Rate Tables*
- *Put Expense Item*
- *Put Expense Rate Table Rule*
- *Put Payment Election Option*

Refer to the web service directory on Workday Community for more web services.

You can use integrations to import credit card data from these providers, enabling workers to include credit card data on their expense reports:

- American Express (AMEX).
- Mastercard.
- Visa.

You can import travel booking record data into Workday for workers to include in their expense reports, using the:

- *Import Travel Booking Records* web service to build custom integrations.
- Travel Booking Inbound Connector.

## Connections and Touchpoints

Features	Considerations
Budgets	<p>You can use budget checks to:</p> <ul style="list-style-type: none"> <li>• Automatically check expense transactions against budgets.</li> <li>• Prevent overspending to maintain budgets throughout the fiscal year.</li> </ul>
Committees	<p>When you set up committees in Workday, you can create expense reports and spend authorizations on behalf of nonworkers to reimburse expenses.</p>
Compensation	<p>You can create reimbursable allowance plans and associate them with expense items so that employees can claim expenses, such as gym membership and tuition reimbursement.</p>
Financial Accounting	<p>You can track:</p> <ul style="list-style-type: none"> <li>• Capital projects and budgets.</li> <li>• Expense reports with negative reimbursable amounts.</li> <li>• Liquidations for spend authorizations.</li> <li>• Spend commitments.</li> </ul>
Mobile	<p>You can enable Workday Expenses on mobile so that workers can:</p> <ul style="list-style-type: none"> <li>• Capture quick expenses.</li> <li>• Complete and submit expense reports.</li> <li>• Scan receipts to populate dates and amounts on expense reports.</li> </ul>
HCM	<p>Workday Expenses uses company and employee data from Workday HCM, including data from:</p> <ul style="list-style-type: none"> <li>• Job profiles.</li> <li>• Management levels.</li> <li>• Staffing models.</li> <li>• Workers.</li> </ul> <p>You can also create expense reports on behalf of candidates to reimburse them for expenses incurred during the interview process.</p>

Features	Considerations
Payroll	You can use company or worker payment elections to determine how to reimburse expenses.
Projects	<p>You can use project tracking with expenses to enable workers to:</p> <ul style="list-style-type: none"> <li>Access and log time and expenses against specific projects.</li> <li>Claim project expenses within specified date ranges.</li> </ul>
Settlement	<p>You can settle payee expenses manually or schedule Workday to create and run settlements automatically for:</p> <ul style="list-style-type: none"> <li>Cash advances.</li> <li>Credit card transactions.</li> <li>Expense reports.</li> <li>Intercompany expenses.</li> <li>Spend authorizations.</li> </ul>
Student	<p>You can grant workers access to student data to enable them to:</p> <ul style="list-style-type: none"> <li>Create and submit expense reports on behalf of students.</li> <li>Use this data for custom and standard reports.</li> </ul> <p>You can also configure segmented security to enable workers to access only student expense data.</p>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

# Payment Elections

---

## Setup Considerations: Payment Elections

You can use this topic to help make decisions when planning your configuration and use of payment elections. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday payment elections enable you to set preferences for how users get paid. You can determine how they can set up their payment elections through self-service and edit their payment elections.

### Business Benefits

Workday payment elections make it easier for you to:

- Audit payment elections changes.
- Control reviews and approvals for payment election changes.
- Customize the methods in which a person can receive their payment.
- Enable international users to select their preferred currency.

### Use Cases

You can manage payment elections for:

- International users who want to receive different types of currency.
- Pre-hires to set up bank accounts during the Onboarding process.
- Terminated workers.
- Users who want to split their payment across multiple accounts.

Payment election configurations also apply to supplier invoices, expenses, student payments, and student refunds.

### Questions to Consider

Question	Considerations
How do you prevent bank returns?	You can use the <b>Create Prenote Run</b> task to validate electronic banking information for U.S. banks only.
What payment types do you want to use?	You can give employees the option to receive a check or direct deposit. If employees select check, Workday prints their home address on the check.  When you don't want to print out checks, you can limit a person to direct deposit only.  Example: When a worker receives a bonus, you can configure payment types such as check or

Question	Considerations
	deposit. Workers can then select their preferred method.
Do you want to give specific rules on setting up payment elections?	You can set up rules on the <b>Maintain Payment Election Rules</b> task to give users the options on how they want to receive their payment.
Do you want to set criteria to control who is eligible to view a specific payment type?	You can set criteria to control who is eligible to view specific payment types on the <b>Maintain Payment Election Rules</b> task.  Example: You can exclude temporary workers from seeing the Bonus payment election types because they aren't eligible for bonus payments.
What bank account attributes and validations do you want to put in place when a person enters their bank information?	You can use the <b>Create Payee Bank Account Validation Override</b> task to: <ul style="list-style-type: none"><li>• Control which bank account attributes are mandatory or optional.</li><li>• Customize the display labels and format validations for different countries.</li></ul>
What instructions do you want to give users for entering payment election information?	You can use the <b>Maintain Payment Elections Help Text</b> task to configure custom help text for administrator and employee self-service payment elections tasks and reports. See <a href="#">Set Up Custom Help Text for Payment Elections</a> .
Do you have a worker transferring to another country?	You can add a rule to the <b>Maintain Payment Election Options</b> task to give workers options to change their country and currency.  You can add the <i>Add Payment Elections</i> to do step on the <i>Start International Assignment</i> business process to ensure workers set up their payment preferences upon relocation.
How does Workday validate International Bank Account Number (IBAN)?	Workday follows the international standard. While the length of the IBAN might vary for each country, Workday provides a default setting, enabling you to override the length using the Payee Bank Account Validation Override task. When you enable and supply IBAN during bank account creation, we automatically verify the IBAN.
Do you want to prevent users from creating new payment elections or modifying existing elections?	You can create a payment elections access restriction to prevent users from modifying their self-service payment elections or creating a new payment election if one already exists. See: <a href="#">.../authentication-and-security/authentication/authentication-policies/ala1377540590379.dita</a> .

## Recommendations

Workday recommends that you:

- Add *Manage Payment Election* as a process step on the Onboarding business process. It ensures that users finish setting up their bank information.
- Set up your bank account attributes and validations on the **Create Payee Bank Account Validation Override** task. It ensures all manually entered bank IDs meet country requirements.

## Requirements

To add payment elections or process payroll for a worker, you must add them to a pay group.

## Limitations

When setting up rules for payment election options:

- You can only set up 1 rule for payment preferences for expense, supplier invoice, student refunds, and student payments.
- You can only set up 1 payment election rule per unique combination of pay group and run category.
- You can split a payment into a maximum of 8 elections when you use ADP Check Print integration.

You can't limit the number of bank accounts users can enter in Workday.

## Tenant Setup

You can use the **Edit Tenant Setup - Global** task to enable the option to select different countries and currencies for payment elections.

You can use the **Edit Tenant Setup - Financials** task to mask the bank account number and IBAN to secure sensitive information.

## Security

Domains	Considerations
<ul style="list-style-type: none"> <li>• <i>Set Up: Payment Election</i> in the Expenses functional area.</li> <li>• <i>Set Up: Payroll (Payment Election Rules)</i> in the Core Payroll functional area.</li> <li>• <i>Set Up: Payroll Interface</i> in the Payroll Interface functional area.</li> </ul>	Users with access on these domains can set up payment preferences.
<ul style="list-style-type: none"> <li>• <i>Manage: Payment Election</i> in the Expenses functional area.</li> <li>• <i>Worker Data: Payroll (Payment Elections)</i> in the Core Payroll functional area.</li> <li>• <i>Worker Data: Payroll Interface (Payment Elections)</i> in the Payroll Interface functional area.</li> </ul>	Enables you to set up new countries and currencies options for payment elections.
<i>Person Data: Bank Account Masking</i> in the Banking and Settlement functional area.	Enables you to view full unmasked bank information.
<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i> in the Expenses functional area.</li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i> in the Core Payroll functional area.</li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i> in the Payroll Interface functional area.</li> </ul>	Users with access on these domains can access their employee self-service (ESS) payment election tasks.

Domains	Considerations
• <i>Self-Service: Student Financials</i> in the Student Financials functional area.	
<i>Manage: Student Payment Elections</i> in the Student Financials functional area.	Enables you to access student bank accounts and student payment elections.
• <i>Worker Data: Payment Elections by Organization</i> in the Core Payroll, Expenses, and Payroll Interface functional areas.	Enables you to set up payment election processing details and view these related report fields: <ul style="list-style-type: none"><li>• Account Number</li><li>• IBAN</li><li>• Roll Number</li></ul>

## Business Processes

Business Process	Considerations
<i>Hire</i>	You can add <i>Manage Payment Elections</i> as an action step when you configure <i>Payment Election Enrollment Event</i> as a subprocess of: <ul style="list-style-type: none"><li>• The <i>Hire</i> business process.</li><li>• A consolidated template for <i>Hire</i>.</li></ul>
<i>Onboarding</i>	To gather bank information from new users, you can add <i>Manage Payment Elections</i> as an action step.
<i>Payment Election Enrollment Event</i>	Workday recommends that you add an approval step to review bank information for possible inaccuracies and phishing attempts. You can add the <i>Prenote of Worker Bank Accounts if New or Changed</i> service step to alleviate the possibility of bank returns, for U.S. banks only.
<i>Start International Assignment</i>	You can add the <i>Add Payment Elections</i> to-do step to ensure workers set up their payment preferences when they relocate.

## Reporting

Reports or Dashboards	Consideration
<b>Audit Missing Payment Elections</b>	Identifies a person missing any type of eligible payment elections.
<b>Payment Elections</b>	Lists a person's pay group and current payment elections including payment type and payment method.
<b>In Progress Payment Elections Requiring Submit</b>	Lists all payment elections that require administrative approval.

You can use the *Payment Elections Current* business object to create filtered reports to:

- Find changes made to payment elections.
- Sort through preferred bank details.

You can use the **Payment Election History** report data source to view the history and track changes on all payment elections for a specific pay group.

## Integrations

If you outsource your check printing or your payments, you can use these check print integrations:

- *ADP Check Print (Enhanced Performance)*
- *Core Connector: Payroll Check Printing (Enhanced Performance)*
- *WPN - Cerdian Check Printing*

## Connections and Touchpoints

Features	Considerations
Expenses	Payment elections determine the options that a person can select regarding receiving their expenses.
Mobile	Workers can use Workday for Android or iOS to add, delete, or edit their payment elections as well as set them up as part of the <i>Onboarding</i> business process.
Payroll	Payment elections determine the options that a person can select regarding receiving their payments.
Student Financial	Payment elections determine the options that students can select regarding receiving their refunds and make payments.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Reference

[Reference: Edit Tenant Setup - Global](#)

[Reference: Edit Tenant Setup - Financials](#)

### Examples

[2023R2 What's New Post: Mobile Payment Elections](#)

## Steps: Set Up Payment Elections

### Prerequisites

- [Setup Considerations: Payment Elections](#) on page 1723
- Set up settlement, including payment types. See [Steps: Set Up Settlement](#) on page 2120
- Set up currencies. See [../../manage-workday/tenant-configuration/globalization/currencies/dan1370796985702.dita](#)
- Assign pay groups to users for Payroll or Payroll Interface.

## Context

You can define rules and set options for your payroll payment elections. Based on your defined payment elections and rules, you and people who are eligible for self-service payment elections can select from the enabled payment types, countries, and currencies.

## Steps

**1. Maintain Payment Election Rules** on page 1729.

Define choices for employees receiving payments.

**2. (Optional) Access the Edit Tenant Setup - Global task.**

To pay workers in more than 1 country and currency, enable countries for self-service payment elections.

In the **Other** section, select the countries you want to enable from the **Self Service Payment Election Countries** prompt.

See: [../../../../manage-workday/tenant-configuration/tenant-setup/dan1370796747763.dita](#)

Security: *Set Up: Tenant Setup - Global* domain in the System functional area.

**3. (Optional) Define Payment Election Options** on page 1731.

**4. Define Payee Bank Account Validations** on page 2128.

**5. Set up the *Payment Election Enrollment Event* business process.**

(Optional) To include prenote verification for bank accounts, you can:

- Add a service step before the completion step, and
- Specify **Pernote of Worker Bank Accounts if New or Changed**.

See [Steps: Configure Business Process Definitions](#).

**6. See [../../../../authentication-and-security/configurable-security/security-policies/dan1370796362110.dita](#)**

Configure security on the *Manage Payment Elections* initiating action step.

Add these security groups:

- *Employee as Self*
- *Pre-Employee as Self*

**7. [../../../../authentication-and-security/configurable-security/security-change-control/dan1370796405018.dita](#)**

**8. (Optional) On the *Onboarding* business process, add *Manage Payment Elections* as an action step.**

See [../../../../human-capital-management/staffing/onboarding/onboarding-dashboard/dan1370797174813.dita](#).

**9. (Optional) On the *Hire* business process, add *Manage Payment Elections* as an action step.**

To add a payment elections subprocess to *Hire*, you must opt in to the redesign of the **Hire Details** page of the **Hire Employee** task:

- Access the **Maintain Feature Opt-Ins** report.
- Opt in to the **Hire Employee Redesign & Consolidated Experience**. You must opt in to this feature to add the *Manage Payment Elections* step, even when you don't plan to configure a consolidated template for *Hire*.

To ensure you can add payment elections that you can use in payroll, add the *Manage Payment Elections* step after the *Assign Pay Group* and *Completion* steps on the business process definition.

See [Steps: Set Up Hire](#).

**10.(Optional) Set Up Custom Help Text for Payment Elections.**

### Related Information

#### Concepts

## Tasks

[Steps: Set Up Currencies](#)

## Reference

[Reference: Edit Tenant Setup - Global](#)

# Maintain Payment Election Rules

## Prerequisites

- [Steps: Set Up Payment Elections](#) on page 1727
- Set up payment types.
- Security:
  - *Set Up: Payment Election* domain in the Expenses functional area.
  - *Set Up: Payroll (Payment Election Rules)* domain in the Core Payroll functional area.
  - *Set Up: Payroll Interface* domain in the Payroll Interface functional area.
- Assign pay groups to users for Payroll or Payroll Interface. See [Assign Workers to Pay Groups](#).

## Context

You can use payment election rules to define choices for receiving and making payments, such as:

- Methods of payment.
- Number of allowed payment methods.
- Number of allowed payment split distributions.

**Note:** For the United Kingdom, only direct deposit is valid.

You can define payment election rules for these types of payments:

- Payroll. You can define multiple rules for payroll payments.
- Payroll Interface. You can define multiple rules for payroll interface payments.
- Expense reimbursement payments. You can define only 1 rule for expense payments, which applies to all users.
- Supplier invoice payments.
- Student payments.
- Student refunds.

You can use these web services to set or retrieve payment election rules:

- *Get Payment Election Rules*
- *Put Payment Election Rule*

## Steps

1. Access the **Maintain Payment Election Rules** task.
2. Add a row for each payment election rule and select the rule type.
3. As you complete the task, consider:

Option	Description
<b>Inactive</b>	When you set a rule to <i>Inactive</i> , it remains active where it's already in use, but is no longer available when you add or update payment elections.
<b>Run Category</b>	You can assign each run category to 1 rule only. Administrators can see all run categories for a

Option	Description
	person's elections, including run categories that are no longer valid.
<b>Default / Pay Group Specific Rule</b>	<p>When you select <i>Payroll Interface Rule</i> from the <b>Election Rule Type</b> prompt, you can select either:</p> <ul style="list-style-type: none"> <li>• Specific payroll interface pay groups.</li> <li>• The default rule that Workday applies to users in pay groups without rules.</li> </ul> <p>You can assign only 1 payroll interface rule as the default rule.</p>
<b>Criteria for Employee Visibility</b>	<p>Set criteria to control who is eligible to view the pay type using the Payroll Rule on the <b>Maintain Payment Election Rules</b> task.</p> <p>Example: If temporary workers aren't eligible for bonus payments, you can define criteria to exclude temporary workers from seeing the Bonus Payment election type.</p>
<b>Allowed Payment Types for Payment Elections</b>	<p>You can select one or more of these payment methods:</p> <ul style="list-style-type: none"> <li>• <i>Check</i>.</li> <li>• <i>Direct Deposit</i>.</li> <li>• <i>Manual</i>.</li> </ul>
<b>Default Payment Type for Add Initial Election</b>	<p>Select the default payment type to apply when Workday displays initial payment elections for this pay type. Example: <i>Direct Deposit</i> for <i>Regular</i> pay.</p>
<b>Allowed Payment Types for Transaction Overrides</b>	<p>Payment methods you can use to override payment elections when creating on-demand payments and auditing expense reports. Configure this value to make payment methods visible.</p>
<b>Override Payment Types for Pending Prenotes</b>	<p>Workday uses the override payment type when prenotes for bank accounts return <i>Pending</i> or <i>In Progress</i> statuses. Prenoting occurs when users add or change bank accounts for direct deposits. Workday only uses this override when the payment currency is USD and the payment type is selected in the <b>Maintain Payment Election Options</b> task.</p>
<b>Override Payment Types for Error Prenotes</b>	<p>Workday uses the override payment type when prenotes for bank accounts return the <i>Error</i> status. Workday only uses this override when the payment currency is USD and the payment type is selected in the <b>Maintain Payment Election Options</b> task.</p>

Option	Description
<b>Max Number of Elections</b>	Workday limits the expense rules to 1 election. If you use ADP Check Print Connector, set this value to no more than 8.
<b>Default Payment Type Election</b>	<p>Select either:</p> <ul style="list-style-type: none"> <li>• <b>Default Payment Type</b> - To apply when no payment election exists for the pay type. For expense reimbursement payments, include the default payment type in the <b>Allowed Payment Types for Payment Elections</b> prompt.</li> <li>• <b>Same Default As</b> - To use the <b>Default Payment Type</b> from another pay type as the default payment type for this election.</li> </ul>

## Result

- A person can use the **Payment Elections** report to add bank information, edit allocation of payments, and remove bank accounts.
- Administrators can edit payment elections using the **Maintain Payment Elections** task.

## Related Information

### Tasks

[Steps: Use Prenotes](#) on page 2156

[Steps: Set Up Settlement](#) on page 2120

## Define Payment Election Options

### Prerequisites

- Set up payment elections.
- Security:
  - *Manage: Payment Election* domain in the Expenses functional area.
  - *Worker Data: Payroll (Payment Elections)* domain in the Core Payroll functional area.
  - *Worker Data: Payroll Interface (Payment Elections)* domain in the Payroll Interface functional area.

### Context

You can define payment election options for a person to:

- Set the default country.
- Set the default currency.
- Split up payment among multiple countries and currencies.

For default country and currency, Workday uses the first available values from this list:

1. Payment election options currently defined for the person. Example: The payroll administrator sets up the worker's payment election options with Canada as their country and CAD as their currency.
2. Existing payment elections. Example: The worker has payment elections set by default with Canada as their country and CAD as their currency. When the worker relocates to another country, Workday continues to use these previously completed elections. You can select a new default country and currency for this worker.
3. Defaults defined for the primary location of the company.
4. Defaults defined for the location of the person's processing position.
5. Defaults defined for the location of the person's primary position.

## 6. Tenant defaults.

### Steps

- Access the **Maintain Payment Election Options** task.
- As you complete the task, consider:

Option	Description
<b>Allowed Country</b>	Set up 1 or more allowed countries for the selected pay type. Example: The worker routinely splits time between company headquarters in Canada and a branch office in USA. Canada is the default country for the worker. You can set up the <b>Regular Pay Type</b> and enable both <i>Canada</i> and <i>USA</i> as allowed countries.
<b>Allowed Currency</b>	Set up another currency for the selected pay type. Example: The worker is on temporary assignment in Japan, and wants expenses reimbursed by check with Japanese Yen. You can set up the: <ul style="list-style-type: none"> <li><b>Expenses Pay Type</b> with the <b>Allowed Country</b> set to <i>Japan</i>.</li> <li><b>Allowed Currency</b> set to <i>JPY</i>.</li> <li><b>Allowed Payment Types for Country / Currency</b> set to <i>Check</i>.</li> </ul>
<b>Allowed Payment Types for Country/Currency</b>	Select the payment type for which you want to allow a country or currency other than the default that would otherwise apply to this person.
<b>Country</b>	(Optional) Set a different default country for this person than the currently assigned default. Example: The worker's company is in Canada, but the worker's primary workplace is in France, so you can set the country to <i>France</i> .
<b>Currency</b>	(Optional) Set a different default currency for the person than the currently assigned default. Example: The worker's company is in Canada, but the worker's home and bank accounts are in the United States, so you can set the currency to <i>USD</i> .
<b>Pay Type</b>	Select the pay type that you want to split, or requires an additional country or currency override.

### Result

You can set up payment elections based on the options you configured.

### Example

The payroll administrator can set up a new default country and currency for a worker who transferred to another country. To cover the transition period when the worker's payments split between 2 countries, you can:

- Set up 1 or more pay types in the grid.

- Enable the old countries and currencies.
- Enable the new countries and currencies.

## Maintain Payment Elections

### Prerequisites

- Set up payment election rules.
- Security:
  - *Manage: Student Payment Elections* domain in the Student Financials functional area.
  - *Manage: Payment Election* domain in the Expenses functional area.
  - *Worker Data: Payroll (Payment Elections)* domain in the Core Payroll functional area.
  - *Worker Data: Payroll Interface (Payment Elections)* domain in the Payroll Interface functional area.

### Context

Payment elections are maintained by:

- The person through self-service, if you enable self-service for this type of person.
- The payroll administrator or payroll partner, who can:
  - Add or upload initial payment elections.
  - Update existing payment elections for the person.
- The payroll administrator or privacy specialist, who can purge payment elections for terminated workers or others who no longer require payment elections.

For each payment election, you can specify:

- Bank account details to route direct deposits.
- A preferred payment method for each payment type for which the person is eligible.
- Distribution amounts for multiple elections, if you enable split distributions.
- Country or currency, if you enable multiple countries or currencies.

**Note:** You can't delete any payment elections for which the person is eligible. You can use the **Purge Person Data** task to manage the purging of personal information, including payment elections, as part of a business process.

### Steps

1. (Optional) You can use the **Audit Missing Payment Elections** report to identify users with incomplete payment elections.
2. Access the **Maintain Payment Elections** report. To set up a person's initial payment elections, click **Add**.

Option	Description
<b>Default Country</b>	Workday displays a person's default country in which to make payments for the pay type.
<b>Default Currency</b>	Workday displays a person's default currency in which to make payments for the pay type.  Changing the default currency, doesn't change the currency for existing payment elections. If you want to change currency, you can edit your worker's payment elections.

Option	Description
<b>Preferred Payment Method</b>	Workday displays each payment type for which the person is eligible. If you select <i>Direct Deposit</i> , the person must have at least 1 bank account.
<b>Balance / Amount / Percent</b>	<p>You can select <i>Balance</i> for the distribution type if payments for this pay type aren't split.</p> <ul style="list-style-type: none"> <li>For a flat rate distribution, you can enter 1 or more <i>Amount</i> distributions in the order in which you want them to be processed. Then select <i>Balance</i> in the bottom row to distribute any remainder.</li> <li>For distribution by percentage, you can enter a <i>Percent</i> distribution. The combined percentages must equal 100 percent. You can select <i>Balance</i> in the bottom row to distribute any remainder.</li> <li>You can also combine <i>Amount</i> and <i>Percent</i> distributions and set the order in which you want them to be processed. Then select <i>Balance</i> in the bottom row to distribute any remainder.</li> </ul>

3. After you set up the person's initial payment elections, you can:

Option	Description
<b>Add</b>	You can set up an additional bank account to split payments, or you can move a <i>Direct Deposit</i> payment election from 1 bank account to another. Example: The worker needs to close the bank account currently set up for direct deposit and replace it with a new bank account. You add the new bank account and change the direct deposit payment election, then delete the old bank account.
<b>Edit</b>	<p>In the <b>Accounts</b> grid, you can change the existing bank account details: <i>Name</i>, <i>Account Nickname</i>, <i>Account Number</i>, or <i>Routing Number</i>. When you change bank account information, Workday automatically updates all payment elections with the new account information.</p> <p>In the <b>Payment Elections</b> grid, you can change payment election from 1 payment type to another. When the payment election rules enable more than 1 election for a pay type, you can add rows and specify how to distribute the payments.</p>
<b>Remove</b>	You can delete a bank account if it isn't in use by a payment election.
<b>View</b>	You can quickly access and review a worker's bank account information.

4. If additional pay types display under **Payment Elections Requiring Setup**, click **Add** to set them up.

## Deactivate Worker Payment Elections

**Prerequisites**

Security: *Manage: Business Process Definitions* domain in the System functional area.

**Context**

You can add a step to the *Termination* business process that deactivates payment elections for terminated workers.

Deactivating payment elections on termination can prevent payment errors if you rehire the employee.

**Note:** You can't delete any payment elections for which the person is eligible. You can use the **Purge Person Data** task to manage the purging of personal information, including payment elections, as part of the *Termination* business process.

**Steps**

1. Find the *Termination* business process, and select **Business Process > Edit Definition** from the related actions menu.
2. Add a row and order the step.
3. For **Type**, select **Service**.
4. For **Specify**, select *Deactivate Worker Payment Elections*.
5. (Optional) Add a step delay by opening the related actions menu from the *Deactivate Worker Payment Elections* step and selecting **Business Process > Maintain Step Delay**.

**Result**

When you deactivate payment elections as part of the *Termination* business process:

- Workday uses the **Default Payment Type** configured in the **Maintain Payment Election Rules** task to pay the terminated worker. Example: If you terminate a worker midperiod with **Default Payment Type** as Check, Workday uses Check on their last pay.
- You can no longer view the payment elections on a worker's profile.

**Note:** If you configure a step delay into the *Termination* business process and rehire the employee before the step completes, Workday won't deactivate their payment elections.

**Next Steps**

You can access the **Terminate Employee** task, to end a worker's job or position.

**Related Information****Tasks**

[Terminate Employees](#)

[Discontinue Benefits on Termination](#)

[Maintain Step Delay](#)

## Set Up Custom Help Text for Payment Elections

### Prerequisites

Security:

- *Set Up: Payment Election* domain in the Expenses functional area.
- *Set Up: Payroll (Payment Election Rules)* domain in the Core Payroll functional area.
- *Set Up: Payroll Interface* domain in the Payroll Interface functional area.

### Context

You can configure help text for payment elections tasks, reports, and groups of tasks and reports to enable employees to provide accurate information.

Groups contain tasks and reports that provide the same functionality, but which may differ in who can use them, what they're called, and how you access them. When you configure help text for a group, it applies to all tasks and reports in the group. A group may contain both administrator and employee self-service tasks and reports. See [Reference: Payment Elections Tasks, Reports, and Groups for Help Text Configuration](#).

You can replace the Workday default help text for all countries or for specific countries. You can also customize your help text using:

- Rich text formatting, such as bold and hyperlinks.
- Translations that are configured in your production tenant.

### Steps

1. Access the **Maintain Payment Elections Help Text** task.
2. Complete the **Country-Specific Help Text** tab:

Option	Description
<b>Country</b>	<p>You can only select a country once, but you can add multiple help text configurations for each country.</p> <p>Workday displays country-specific help text based on the worker's default country for payment elections, not the bank account country. Example: You configure different help text for France and the UK for the <b>Add My Elections</b> employee self-service task. When a worker has a default country of France but their bank account is in the UK, the help text for France displays.</p>
<b>Tasks, Reports, and Groups</b>	<p>Select any tasks, reports, or groups for which you want to replace any Workday default text or any general help text you have configured for these tasks, reports, or groups.</p>
<b>Text</b>	<p>Workday recommends that you review your text for any sensitive or confidential information.</p> <p>You can edit and delete custom help text. You can also change the tasks or reports displaying a configured help text.</p>

Option	Description
	When you delete custom help text for a task, report, or group, the Workday default text displays.

3. Complete the **General Help Text** tab:

Option	Description
<b>Tasks, Reports, and Groups</b>	When you configure general help text for tasks, reports, or groups, it replaces the Workday default help text. When you have configured country-specific help text for the same tasks, reports, or groups, the country-specific help text replaces the general help text for the specified countries only.  Example: You configure general help text for <b>Add Account (Group)</b> and country-specific help text for <b>Add Account (Group)</b> for Germany. The country-specific help text displays for workers whose default country for payment elections is Germany; otherwise, the general help text displays.
<b>Text</b>	Ensure the instructions you provide are relevant to all the countries in your tenant, excluding any countries for which you've configured country-specific help text for the same tasks, reports, and groups.

### Next Steps

Access the **View Payment Elections Help Text** report to view your custom help text. Workday recommends that you review your custom help text periodically to ensure accuracy and security.

## Reference: Payment Elections Tasks, Reports, and Groups for Help Text Configuration

You can configure payment elections help text for:

- Individual tasks and reports.
- Groups of tasks and reports.

### Individual Reports

The **View Payment Elections** report secured to these domains:

- *Manage: Payment Election*
- *Worker Data: Payroll (Payment Elections)*
- *Worker Data: Payroll Interface (Payment Elections)*

This report enables you to view and review a worker's payment elections.

### Groups of Tasks and Reports

- [Add Account \(Group\)](#)
- [Add Elections \(Group\)](#)
- [Change Account \(Group\)](#)
- [Change Election \(Group\)](#)

- [Delete Account \(Group\)](#)
- [Maintain Payment Elections \(Group\)](#)

**Add Account (Group)** includes these tasks:

Task	Security	Description
<b>Add Account</b>	<ul style="list-style-type: none"> <li>• <i>Manage: Payment Election</i></li> <li>• <i>Worker Data: Payroll (Payment Elections)</i></li> <li>• <i>Worker Data: Payroll Interface (Payment Elections)</i></li> </ul>	Add bank account information for a worker.
<b>Add My Account</b>	<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i></li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i></li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i></li> </ul>	Enables workers to add bank account information that they can use when specifying payment elections.

**Add Elections (Group)** includes these tasks:

Task	Security	Description
<b>Add Elections</b>	<ul style="list-style-type: none"> <li>• <i>Manage: Payment Election</i></li> <li>• <i>Worker Data: Payroll (Payment Elections)</i></li> <li>• <i>Worker Data: Payroll Interface (Payment Elections)</i></li> </ul>	Enables you to add initial payment elections for a worker.
<b>Add My Elections</b>	<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i></li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i></li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i></li> </ul>	Enables workers to add initial payment elections.
<b>Add Payment Elections</b>	<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i></li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i></li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i></li> </ul>	Enables workers to add payment elections as part of the onboarding workflow.

**Change Account (Group)** includes these tasks:

Task	Security	Description
<b>Change Account</b>	<ul style="list-style-type: none"> <li>• <i>Manage: Payment Election</i></li> <li>• <i>Worker Data: Payroll (Payment Elections)</i></li> <li>• <i>Worker Data: Payroll Interface (Payment Elections)</i></li> </ul>	Change a worker's bank account information, updating all payment elections using the account.

Task	Security	Description
<b>Change My Account</b>	<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i></li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i></li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i></li> </ul>	Enables workers to change the bank account information used for payment elections.

**Change Election (Group)** includes these tasks:

Task	Security	Description
<b>Change Election</b>	<ul style="list-style-type: none"> <li>• <i>Manage: Payment Election</i></li> <li>• <i>Worker Data: Payroll (Payment Elections)</i></li> <li>• <i>Worker Data: Payroll Interface (Payment Elections)</i></li> </ul>	Change a worker's payment election.
<b>Change My Election</b>	<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i></li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i></li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i></li> </ul>	Enables workers to change a payment election.

**Delete Account (Group)** includes these tasks:

Task	Security	Description
<b>Delete Bank Account</b>	<ul style="list-style-type: none"> <li>• <i>Manage: Payment Election</i></li> <li>• <i>Worker Data: Payroll (Payment Elections)</i></li> <li>• <i>Worker Data: Payroll Interface (Payment Elections)</i></li> </ul>	Delete a bank account for a worker.
<b>Delete My Account</b>	<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i></li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i></li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i></li> </ul>	Enables workers to delete a bank account.

**Maintain Payment Elections (Group)** includes these tasks and reports:

Task or Report	Security	Description
<b>Maintain Payment Elections</b>	<ul style="list-style-type: none"> <li>• <i>Manage: Payment Election</i></li> <li>• <i>Worker Data: Payroll (Payment Elections)</i></li> <li>• <i>Worker Data: Payroll Interface (Payment Elections)</i></li> </ul>	Create or review payment elections for a worker.

Task or Report	Security	Description
<b>Payment Elections</b>	<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i></li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i></li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i></li> </ul>	Enables workers to view their payment elections using search on desktop and related actions on mobile.
<b>Payment Elections for Self Service</b>	<ul style="list-style-type: none"> <li>• <i>Self-Service: Payment Election</i></li> <li>• <i>Self-Service: Payroll (My Payment Elections)</i></li> <li>• <i>Self-Service: Payroll Interface (Payment Elections)</i></li> </ul>	Enables workers to access their payment elections from the worker profile by navigating to <b>Personal Data &gt; Maintain My Payment Elections</b> .

## Expense Rate Tables

---

### Setup Considerations: Expense Rate Tables

You can use this topic to help make decisions when planning your configuration and use of expense rate tables. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What They Are

Expense rate tables use rules, criteria, and ranges to calculate expense item amounts automatically on:

- Expense reports.
- Spend authorizations.

#### Business Benefits

- Calculate reimbursement amounts automatically to reduce manual effort.
- Centralize reimbursement rules to minimize review time and maintain historical data for auditing.
- Prevent payees from entering erroneous expense data that delays approval.
- Remain compliant with per diem requirements and your travel and expense policy.

#### Use Cases

- Apply maximum amounts to prevent payees from claiming excessive expenses.
- Calculate per diem allowances for payees on business trips.
- Control compensation for distance-based expenses, such as fuel allowance.
- Use travel destinations to determine expense reimbursement rates.

## Questions to Consider

Questions	Considerations
How do you want to calculate rates for different expenses?	<p>You can configure rate tables to calculate expense rates that are based on percentages, or:</p> <ul style="list-style-type: none"> <li>• Fixed amounts.</li> <li>• Graduated amounts.</li> <li>• Maximum amounts.</li> </ul> <p>Depending on the number of rate tables you configure and the rate table types that you use, they can be:</p> <ul style="list-style-type: none"> <li>• Base rate tables: Primary rate tables for expense items, containing standard reimbursement rates.</li> <li>• Adjustment rate tables: Additional tables you associate with base tables to adjust base rates in certain scenarios.</li> </ul> <p>When you configure rate tables for different expenses, consider which existing expense items need rate tables and whether to configure any new expense items.</p> <p>When you don't configure rate tables for your expense items, Workday doesn't calculate expense item amounts automatically.</p>
Which of your expense items use the same rates?	<p>You can use 1 base rate table with multiple expense items when these items have the same reimbursement rates.</p> <p>When you don't use the same base table with expense items using the same rates, you might have to maintain and create more rate tables.</p>
In which scenarios do you want to adjust base rates?	<p>You can configure adjustment rate tables to increase and decrease base reimbursement rates for payees.</p> <p>Examples:</p> <ul style="list-style-type: none"> <li>• Decrease base per diem amounts when customers provide employees with a meal.</li> <li>• Increase base per diem amounts when employees travel to cities with higher living costs.</li> </ul>
What spend thresholds does your company use?	<p>You can set spend thresholds using the <i>Maximum</i> rate table type. You can also enable payees to exceed these thresholds so they can submit unexpected expenses, such as last-minute flight bookings.</p>
How do you manage changing rates?	<p>You can change effective dates on your rate tables and calculate rates using revised rules and criteria.</p>

Questions	Considerations
	<p>When you change effective dates, Workday takes snapshots of your rate tables so you can:</p> <ul style="list-style-type: none"> <li>• Audit rates.</li> <li>• Remain compliant with legislation and your travel and expense policy.</li> </ul>

## Recommendations

- Organize lines on each rate table from most-to-least preferred. When Workday evaluates rate table lines, we apply rates using the first line that matches.
- To reduce configuration effort, set up your configurable expense item attributes and rate table rules before you create rate tables.

To prevent configuration errors, review your rate tables to avoid:

- Omitting values from a set of ranges.
- Splitting related ranges across different rate table lines.

When you import expense data into Workday, use the relevant web services in this sequence to reduce configuration effort:

- Rate table rules.
- Rate tables.
- Expense items.

## Requirements

- Set up expense items for your rate tables.
- Enable rate tables for spend authorizations manually.
- Set ranges on graduated rate tables using either decimal or integer values entirely.

## Limitations

You can only use Workday to edit rate tables with 1,000 lines or fewer. Use the *Import Expense Rate Table* web service to edit rate tables with more than 1,000 lines.

You can't:

- Assign adjustment rate tables to multiple expense items.
- Inactivate expense rate tables. You can group unrequired rate tables by adding prefixes to their names, such as z - *do not use*.
- Use multicurrency rate tables with expense items that have travel journals.

## Tenant Setup

No impact.

## Security

Domains	Considerations
<i>Set Up: Expense Item</i>	<p>Enables you to set up:</p> <ul style="list-style-type: none"> <li>• Expense items.</li> <li>• Expense rate tables.</li> <li>• Rules for expense rate tables.</li> </ul>

Domains	Considerations
<i>View: Expense Item</i>	Enables you to view expense items, including their associated rate tables.

## Business Processes

No impact.

## Reporting

Reports	Considerations
<b>View Expense Rate Table</b>	Use to: <ul style="list-style-type: none"> <li>Track rate table information for auditing purposes, such as effective dates and rules.</li> <li>View, edit, and copy expense rate tables.</li> </ul>
<b>View Expense Rate Table Rule</b>	Use to view, edit, and create condition rules on expense rate tables.

## Integrations

Web Services	Considerations
<i>Get Expense Rate Tables</i> <i>Get Expense Rate Table Rules</i>	Use to retrieve data for expense rate tables and rules.
<i>Import Expense Rate Table</i> <i>Put Expense Rate Table Rule</i>	Use to upload data for expense rate tables and rules.

## Connections and Touchpoints

You can use rate tables to calculate expense item amounts automatically on the travel journals you use on expense reports.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Concepts

[Concept: Effective Dating for Expense Rate Tables](#) on page 1748

#### Tasks

[Create Expense Rate Table Rules](#) on page 1744

[Set Up Expense Rate Tables](#) on page 1745

## Steps: Set Up Expense Rate Tables

### Prerequisites

Security: *Set Up: Expense Item* domain in the Expenses functional area.

## Context

You can set up expense rate tables and associate them with the expense items that payees include on expense transactions. On expense rate tables, you can:

- Define the rules that evaluate expense items.
- Determine eligibility and reimbursement amounts for expense items.

## Steps

1. [Create Expense Rate Table Rules](#) on page 1744.
2. [Set Up Expense Rate Tables](#) on page 1745.
3. (Optional) [Set Up Expense Accumulators](#) on page 1766.

## Result

You can add rate tables on your expense items.

### Related Information

#### Concepts

[Concept: Effective Dating for Expense Rate Tables](#) on page 1748

#### Tasks

[Steps: Set Up Expense Items](#) on page 1754

## Create Expense Rate Table Rules

### Prerequisites

Security: *Set Up: Expense Item* domain in the Expenses functional area.

## Context

Expense rate table rules define how to look up an applicable rate in an expense rate table to:

- Calculate a reimbursement amount.
- Validate a maximum allowed amount.

## Steps

1. Access the **Create Expense Rate Table Rules** task.
2. Define each condition for the rule:

Option	Description
<b>Source External Field or Condition Rule</b>	You can select from delivered Workday sources or from condition rules that you've already defined.
<b>Relational Operator</b>	Options depend on the data type of the source.
<b>Comparison Type</b>	Specify whether to compare the source to another field or to a value that you enter in the <b>Comparison Value</b> column.
<b>Comparison Value</b>	Either select a comparison field or enter the value to compare to the source.

## Next Steps

Set up expense rate tables.

## Set Up Expense Rate Tables

### Prerequisites

- Define the rate table rules that you want to use to evaluate expense items.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

### Context

You can use expense rate tables to determine eligibility and reimbursement amounts for expense items on expense reports.

#### Examples:

- Calculate maximum allowable amounts for expense items based on location-specific criteria.
- Define requirements for mileage and fuel reimbursement amounts.
- Set up per diem eligibility and specify deductions.

### Steps

- Access the **Create Expense Rate Table** task.
- Select from these options on the **Expense Rate Table Type** prompt:

Option	Description
<b>Amount</b>	Use with expense items that can have varying reimbursement amounts. Example: For <i>Meal</i> reimbursements, specify a different amount for each country you include in the expense rate table rules or criteria.
<b>Graduated Amount</b>	Use for reimbursement rates that are based on ranges that apply different amounts.  Example: For year-to-date mileage reimbursements, specify an amount for mileage accumulated within ranges: <ul style="list-style-type: none"> <li>Between 1 - 50,000 miles, payees receive 0.43c for each mile traveled.</li> <li>From 50,001 - 75,000 miles, payees receive 25c for each mile traveled.</li> </ul>
<b>Graduated Percent</b>	Use for reimbursement rates that are based on different percentages of an eligible amount for the ranges you define.  Example: For per diem reimbursements based on hours, specify: <ul style="list-style-type: none"> <li>25% of the full per diem amount for 1 - 4 hours.</li> <li>50% for 5 - 6 hours.</li> <li>100% of the per diem amount for 7 - 24 hours.</li> </ul>
<b>Maximum</b>	Use to specify the maximum amount workers can spend based on the criteria you define in the expense rate table rules or criteria.  Example: For location-based lodging reimbursements, specify a different maximum

Option	Description
	amount allowed for each lodging location you define.

3. Specify an **Effective Date** when you can apply the rate table on an expense report or a spend authorization.

Workday returns a blank **Effective Date** value if these dates aren't within the effective date range used by an expense rate table:

- Transaction date on the expense line.
- Start date on the spend authorization.

4. Select a value from the **Attribute to Evaluate** prompt.

Workday multiplies the value from an expense report to calculate and verify against the maximum amount.

Example: Specify the maximum amount of \$125 for a *Hotel* expense item and select *Number of Days* as the attribute to evaluate.

5. In the **Expense Rate Table** grid, consider:

Option	Description
<b>Condition Rule or Criteria</b>	Select a <b>Condition Rule or Criteria</b> to evaluate the expense item.  The condition rule or criteria that you specify determines the value that Workday returns.
<b>Ranges</b>	( <i>Graduated Amount</i> and <i>Graduated Percent</i> only) For this <b>Expense Rate Table Line</b> , define the valid ranges for the expense item attribute.
<b>Maximum Amount</b>	Specify a maximum amount to evaluate an expense item.  <b>Note:</b> Use a rate table if there are condition rules or criteria for the maximum amount. If there are no other attributes to evaluate, add the maximum amount on the <b>Create Expense Item</b> task.

## Result

When you configure a rate table, it's available for creating or updating expense items. You can use the base rate table and any adjustment rate table to:

- Calculate reimbursement rates.
- Verify the maximum allowable amounts for expenses.

## Example

Your company needs multiple per diem reimbursement rates for meals in different countries and currencies. Set up an expense item and rate table for *Meals - International Per Diem* using the *Amount* rate table type:

Condition Rule/Criteria	Country	Amount	Currency
Criteria	United Kingdom	50	GBP
Criteria	Germany	60	EUR
Criteria	Czechia	1,360	CZK

Condition Rule/Criteria	Country	Amount	Currency
Criteria	United States	75	USD
Condition	Other Countries	70	USD

### Next Steps

- To create adjustments for a base rate table, define adjustment rate tables in the **Create or Edit Expense Item** task.
  - To create a new rate table for a different expense item that requires similar rules, select **Copy** from the related actions menu of an expense rate table.
- Example: You have a complex rate table for location-based lodging and your company opens a new international office. Copy the *Lodging* rate table, specify a name such as *International Location Lodging*, and select *Eur* as the **Default Currency**. You then can modify the rule conditions to calculate this expense item.
- You can use each rate table for only 1 expense item. This rule applies to both adjustment and base rate tables.

### Related Information

#### Concepts

[Concept: Effective Dating for Expense Rate Tables](#) on page 1748

#### Tasks

[Steps: Set Up Expense Items](#) on page 1754

### Concept: Base and Adjustment Rate Tables

To control spend, you can set up a base rate table and specify standard reimbursement rates for an expense item. You can associate adjustment rate tables with base rate tables to change reimbursement rates for expense payees as required.

You can use different rate table types as base rate tables, adjustment rate tables, or both:

Rate Table Type	Use As
Amount	
Graduated Amount	<ul style="list-style-type: none"> <li>• Base rate tables</li> <li>• Adjustment rate tables</li> </ul>
Graduated Percent	Adjustment rate tables
Maximum	Base rate tables

#### Example: Deduct Meal Expenses

You use a base rate table with your *Domestic Travel* expense item, allocating a 70 USD per diem allowance to employees who travel to New York. You also use an adjustment rate table to deduct 15 USD each time employees receive a free meal during the business trip.

#### Example: Increase Travel Expenses

You use a base rate table with your *International Travel* expense item, allocating a 50 EUR per diem allowance to employees who travel to French cities. You also use an adjustment rate table to add 20 EUR to the base amount when employees travel to European capital cities. This gives workers who travel to Paris a daily allowance of 70 EUR.

### Related Information

#### Concepts

[Setup Considerations: Expense Rate Tables](#) on page 1740

## Tasks

- [Steps: Set Up Expense Rate Tables](#) on page 1743
- [Create Expense Rate Table Rules](#) on page 1744
- [Set Up Expense Rate Tables](#) on page 1745

## Concept: Effective Dating for Expense Rate Tables

The effective date for an expense rate table is the date that you configure on the rate table for an expense item. You can create effective-dated rate changes without creating new expense items and expense rate tables. Workday sets all expense rate tables created before the effective dating feature release with the effective date of 1900-01-01.

Workday uses the expense rate table based on either:

- The transaction date of the expense report line.
- The start date of the spend authorization.

You can use an expense item such as mileage from year to year when you create an expense rate table with a new effective date. Each version of an expense rate table must always have the same criteria such as a list of travel cities for per diem rates.

You don't have to maintain multiple versions of expense items when you add an effective date on an expense rate table. When workers create or edit an expense report, they can specify an expense item and Workday determines the correct reimbursement rate based on the transaction date. If you copy an expense rate table, you must link the rate table to its own expense item because you can only use an expense rate table once for each expense item.

Workday displays a history of your updates on the **Effective Date History** tab of the **View Expense Rate Table** report.

### Example: Hotel Rates

Global Modern Services uses the GSA hotel rates and in some cities the GSA rate changes during the year. The hotel rate for Paris is 250 EUR from 2014-10-01 to 2015-05-31. As of 2015-06-01, the rate goes up to 300 EUR and then the rate goes back to 250 EUR beginning 2015-09-01.

The administrator accesses the **Edit Expense Rate Table** task and selects the *International Hotel Rates by City* expense rate table and specifies a new **Effective Date** to create a new version of the rate table with the effective date 2015-09-01.

## Expense Items

---

### Setup Considerations: Expense Items

You can use this topic to help make decisions when planning your configuration and use of expense items. The topic explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Expense items enable you to define the transactions that payees make on:

- Spend authorizations, when requesting preapproval of spend.
- Expense reports, when submitting incurred expenses.

You can associate rate tables with expense items so that Workday can calculate amounts automatically on expense transactions. You can also link expense items together and organize them into a hierarchy. Payees can then use multiple expense items on expense lines to capture detailed cost breakdowns.

You can also make configurations on expense items for specific business needs, such as configurations for distance-based expenses and per diem requirements.

### **Business Benefits**

- Capture specific information for tax requirements.
- Categorize expenses by policy, type, and spend category for reporting purposes.
- Comply with legislation and company policies that relate to per diem expenses.
- Limit spending to reduce project costs and remain within budget.
- Map travel data to expense items to prevent expense transaction errors.
- Speed up reimbursement by calculating expense transaction data automatically.
- Track expense item trends and plan for future costs by using analytics, auditing, and reporting.

### **Use Cases**

- Calculate expense reimbursements for distances traveled.
- Capture detailed cost breakdowns on expense lines and travel journals.
- Link expense items with allowance plans to allocate reimbursements, such as monthly gym membership.
- Recover everyday expenses, such as office supplies, taxis, and team lunches.
- Reimburse expenses using rates that are based on travel destinations.
- Set maximum daily amounts to prevent overspending.
- Split hotel bills into multiple components to collect tax information.
- Track costs for individual tasks within projects.

### **Questions to Consider**

Questions	Considerations
Which methods do you use to calculate expense amounts?	<p>You can prevent overspending by limiting the amount that payees can enter on expense items by using:</p> <ul style="list-style-type: none"> <li>• Allowance plans.</li> <li>• Different amount types, such as fixed or maximum amounts.</li> </ul> <p>You can also enable payees to exceed:</p> <ul style="list-style-type: none"> <li>• Specified maximum amounts.</li> <li>• Spend limits on allowance plans.</li> </ul> <p>For variable expenses such as taxi fares, you can enable users to specify amounts on expense items manually.</p> <p>You can configure rate tables and associate them with expense items to enable Workday to calculate expense item amounts automatically. You can base your rate table calculations on:</p> <ul style="list-style-type: none"> <li>• Amounts, such as maximum allowable amounts.</li> </ul>

Questions	Considerations
	<ul style="list-style-type: none"> <li>Percentages, which enable you to calculate amounts that change in increments over time for variable expenses, such as mileage.</li> </ul> <p>You can also set rules on your rate tables to validate reimbursement amounts based on additional criteria, such as travel destinations.</p>
What expense data do you require from workers?	<p>You can add attributes on expense items to capture additional data from workers. You can use:</p> <ul style="list-style-type: none"> <li>Configurable attributes, which enable you to gather company-specific expense information.</li> <li>Workday-delivered attributes, which enable you to capture more standard types of expense information.</li> </ul> <p>You can also set expense item attributes as optional or mandatory on expense transactions.</p> <p>You can link multiple expense items together to form a parent-child relationship between them, which enables you to capture detailed cost breakdowns on:</p> <ul style="list-style-type: none"> <li>Expense itemization level.</li> <li>Travel journals.</li> </ul> <p>When workers don't itemize expense items or use travel journals, you might have less expense data for reporting.</p>
Who do you want to access expense items?	<p>You can use segmented security to enable only some workers to use particular expense items, which prevents inaccurate and unauthorized expense claims.</p>
Which expenses require additional approval?	<p>To route transactions with specific expense items to additional reviewers and approvers, you can configure additional approval on these business processes:</p> <ul style="list-style-type: none"> <li><i>Expense Report Event</i></li> <li><i>Spend Authorization</i></li> </ul> <p>Example: You want additional approval from senior management when payees claim expenses for international conferences.</p>
What per diem requirements do you have?	<p>You can meet per diem requirements by:</p> <ul style="list-style-type: none"> <li>Configuring specific criteria on your rate tables and rate table rules.</li> <li>Enabling travel journal functionality on expense reports.</li> </ul> <p>You can also configure per diem amounts that exceed the legally required minimum. Example:</p>

Questions	Considerations
	You can reimburse a higher per diem amount when employees travel to cities with higher living costs.
When do you make partial per diem reimbursements?	<p>When you use base rate tables with per diem expense items, you can add adjustment rate tables to adjust reimbursement amounts. You can make these adjustments as fixed amounts or percentages.</p> <p>Example: When employees receive free meals on business trips, you can deduct 20% from the standard per diem reimbursement amount.</p>
What data inconsistencies does your company see on expense transactions?	<p>You can configure specific attributes to enable payees to enter values only once on expense reports. Workday then calculates and populates related data on travel journal lines to reduce inconsistency.</p> <p>Example: You include the <i>Number of Hours</i> attribute on a rate table and workers enter departure and arrival times on the expense report line. Workday then calculates and populates the <i>Number of Hours</i> field on each travel journal line. You can also prevent workers from editing the values that Workday calculates on the <i>Number of Hours</i> field.</p>

## Recommendations

- Add instructional text on expense items to provide additional context to workers.
- Limit the number of attributes that you add on expense items, for reduced manual entry.
- Use transaction tax rules instead of default tax applicability on multicountry expense items. You can use different tax rules for rates for different travel destinations.
- To avoid validation conflicts, don't use the same expense item at line and itemization level. Ensure that you define your expense items for line or itemization level, but not both.
- To reduce configuration effort, configure transaction tax rules and related worktags before you create expense items to capture information for auditing, accounting, and reporting.
- Workday doesn't calculate estimated distances for round trips and multidestination trips. Instead, capture each leg of your trip on separate expense lines.

For child expense items, use a naming convention that includes *z - do not select* in the expense item name. Example: *z - do not select - per diem - meals*. This naming convention:

- Groups child expense items together at the bottom of the list on the **Expense Item** prompt.
- Helps workers to avoid selecting child per diem expense items inadvertently.

## Requirements

For all expense items:

- Create spend categories before you create expense items.
- Unrestrict the expense items that you configure.

For distance-based expense items:

- **Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.
- Set up *Amount* or *Graduated Amount* rate tables that include your distance-based rates.

## Limitations

You can't:

- Associate more than 1 expense item with each allowance plan.
- Set up prompts as configurable expense item attributes.
- Use more than 5 of each of the configurable expense attribute types that Workday provides.

For distance-based expense items, Workday doesn't:

- Consider current traffic data when determining routes.
- Display map images that include your routes and origin and destination points.
- Exclude toll roads when determining routes.
- Provide alternate routes, but workers can enter trips distance values manually.

With per diem expense items, you can't:

- Configure multicurrency rate tables.
- Split taxable and nontaxable amounts.
- Submit expense report lines with zero amounts.

## Tenant Setup

In the **Expenses Option** section on the **Edit Tenant Setup - Financials** task, you can set default tax to populate tax code and tax applicability on expense items.

When you set this functionality, you don't have the ability to deactivate it.

## Security

Domains	Considerations
Access <i>Expense Item (Segmented)</i> in the Expenses functional area.	Enables you to control who can access specific expense items.  You can use the All Users security group to grant all workers access to the expense items that you don't secure to security segments. Example: Expense items for fitness reimbursement that all workers use.
in the System functional area.	Enables you to restrict and unrestrict expense items.
Set Up: <i>Expense Item Security Segments</i> in the Expenses functional area.	Enables you to configure: <ul style="list-style-type: none"> <li>• Expense items.</li> <li>• Expense item policies and groups.</li> <li>• Expense rate tables.</li> <li>• Rules for expense rate tables.</li> </ul>
View <i>Expense Item</i> in the Expenses functional area	Enables you to view a summary of expense items.

## Business Processes

No impact.

## Reporting

Reports and Dashboards	Considerations
<b>Expense Item Group</b> report	<p>Displays existing expense item groups so you can identify:</p> <ul style="list-style-type: none"> <li>• Which groups are currently in use.</li> <li>• The expense items that make up each group.</li> </ul>
Expense Management dashboard	<p>Displays:</p> <ul style="list-style-type: none"> <li>• Expense item trends by fiscal period.</li> <li>• The most commonly used expense items.</li> </ul> <p>This information can help you budget and plan for future spend.</p>
<b>View Expense Item</b> report	Displays expense item configurations so you can quickly identify the updates you want to make.
<b>View Expense Item Security Segment</b> report	Displays security segments for expense items and expense policy groups.
<b>View Expense Policy Groups</b> report	Displays expense policy groups so you can determine which policies are currently in use.

You can use the **Expense Items** report data source to verify your expense item configurations, such as:

- Security segments.
- Spend categories.
- Reimbursement types.

## Integrations

You can use these web services to upload and retrieve expense item data:

- *Get Expense Items*
- *Put Expense Item*

You can use these web services to upload and retrieve expense report and spend authorization data, including expense item data:

- *Get Expense Rate Tables*
- *Get Expense Reports*
- *Get Spend Authorizations*
- *Import Expense Rate Table*
- *Put Expense Rate Table*
- *Submit Expense Report*
- *Submit Spend Authorization*

You can also use an integration that enables Workday to call the Google Maps API to populate estimated distances on expense lines to calculate reimbursement amounts.

## Connections and Touchpoints

Features	Considerations
Allowance Plans	You can associate specific expense items with allowance plans to prevent overspending. Example:

Features	Considerations
	A quarterly allowance for employees to cover their office commute.
Projects	<p>You can associate expense items with specific projects to track:</p> <ul style="list-style-type: none"> <li>• Overall project costs.</li> <li>• Specific costs within projects.</li> </ul> <p>You can also use expense item data on projects to help reduce spending.</p>
Rate Tables	<p>You can configure rate tables to evaluate expense items and determine reimbursement amounts and eligibility.</p> <p>You can also apply rules to rate tables to validate reimbursement amounts using specific criteria, such as the countries that payees travel to.</p>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Create Expense Items](#) on page 1758

### Reference

[The Next Level: Per Diems and Travel Journal](#)

[Workday Community: Expenses - Segment Security](#)

## Steps: Set Up Expense Items

### Prerequisites

- Review setup considerations for expense items.  
[Create Spend Categories](#) and [Create Spend Category Hierarchies](#).
- Set up the expense rate tables that you plan to use with expense items.
- Set up worktags at expense report and spend authorization transaction level.

### Context

You can create expense items to define the transactions that payees make on expense reports and spend authorizations. You can link rate tables to expense items so that Workday calculates reimbursement amounts automatically. Example: You can calculate reimbursement amounts based on the rates that you set for different travel destinations.

## Steps

1. (Optional) Access the **Maintain Expense Policy Groups** task.

Create expense policy groups so that you can associate them with expense items. You can then assign policy groups to security segments to restrict expense item availability.

Security: *Set Up: Expense Item* domain in the Expenses functional area.

2. (Optional) Access the **Maintain Expense Item Group** task.

Create expense item groups to organize expense items into subcategories on expense transactions.

Security: *Set Up: Expense Item* domain in the Expenses functional area.

3. (Optional) [Configure Related Worktags](#).

Select *Expense Item* as your worktag type and add related worktags on the **Allowed Worktag Types** grid. You can then capture additional data at expense line level for more detailed accounting and reporting.

Security: *Set Up: Enable Worktags* domain in these functional areas:

- Common Financial Management
- Worktags

4. (Optional) Access the **Enable Configurable Expense Item Attributes** task.

To capture company-specific information, you can customize up to 5 of some types of expense item attributes.

Security: *Set Up: Expense Item* domain in the Expenses functional area.

See [Concept: Expense Item Attributes](#) on page 1773.

5. (Optional) Create values for the Workday-delivered attributes that you want to add on expense items.

Example: Create a list of airlines that payees can select from on the *Airline* attribute.

See [Reference: Expense Item Attribute Values](#) on page 1775.

[6. Create Expense Items](#) on page 1758.

7. Configure security for expense items.

See [Steps: Set Up Security for Expense Items](#) on page 1755.

## Next Steps

From the related actions menu of expense items, select **Expense Item > Copy** to create new expense items with similar details. Example: You can create multiple versions of expense items for different years.

### Related Information

#### Concepts

[Concept: Parent and Child Expense Items](#) on page 1774

#### Tasks

[Steps: Set Up Expense Rate Tables](#) on page 1743

[Create Spend Categories](#)

[Create Basic Worktags](#)

## Steps: Set Up Security for Expense Items

### Prerequisites

Create expense items.

### Context

You can use security segments to make expense items available to all payees or restrict the items to subsets of payees, such as executives and managers. You can include expense items on 1 or more security segments, and can include:

- A combination of individual and grouped expense items.
- All expense items in an expense policy group.
- Individual expense items.

Examples: You want to restrict expense items for:

- First-class airfare to C-level executives.
- Mobile phone charges for sales team members.
- Payees in specific regions.

## Steps

1. Access the **Create Expense Item Security Segment** task.

Create security segments for each of your access requirements. For efficiency, we recommend that you create segments from the least to the most restrictive.

*Security: Set Up: Expense Item Security Segments domain in the System functional area.*

2. [Create Segment-Based Security Groups](#).

3. [Edit Domain Security Policies](#).

To activate your segment security policy for expense item transactions and reporting:

- Select *Expenses* on the **Functional Area** prompt.
- Select the *Access Expense Item (Segmented)* category.
- Remove the *All Users* default security group.
- Add your segment-based security groups.

4. [Activate Pending Security Policy Changes](#).

## Next Steps

To delete security segments from security groups, access the **Delete Expense Item Security Segment** task.

### Related Information

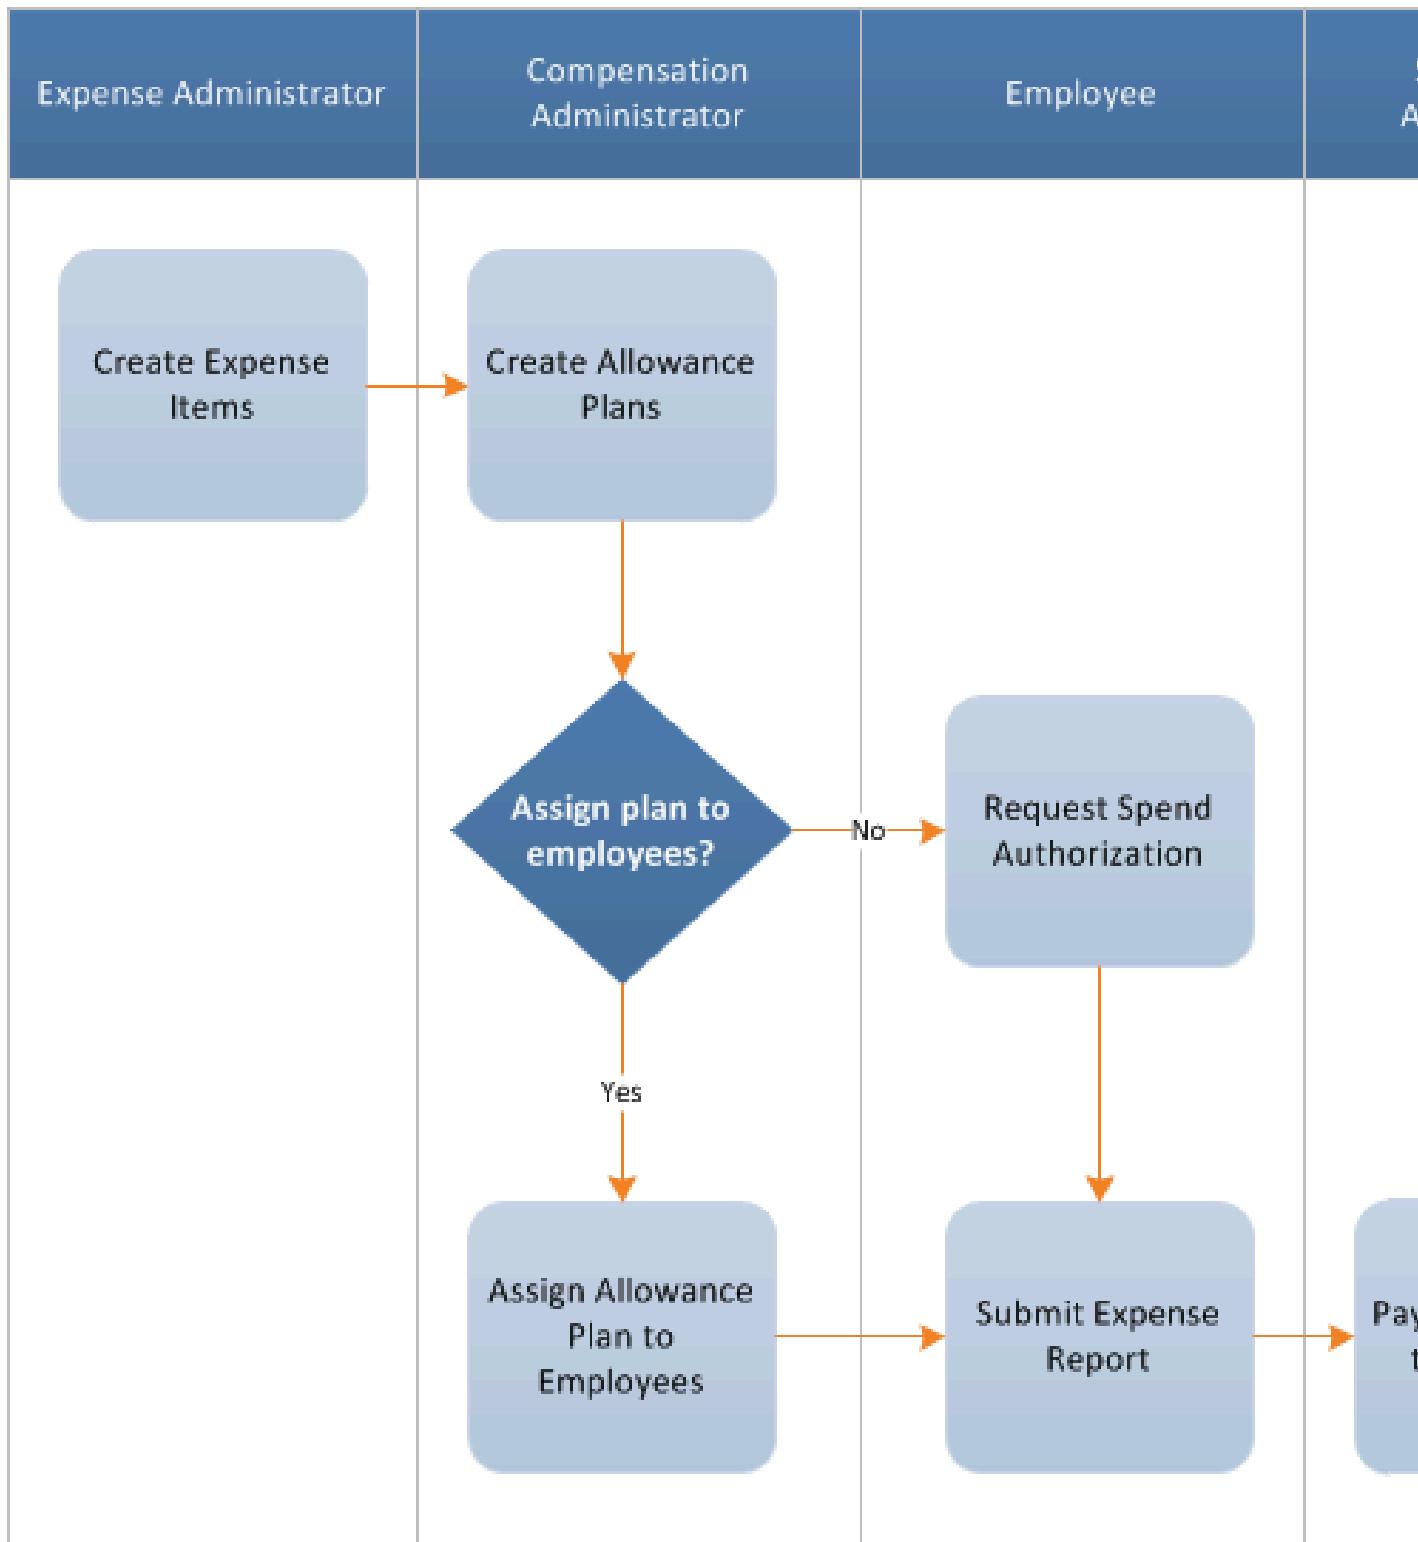

#### Concepts

[Concept: Security Groups](#)

## Steps: Manage Reimbursable Accounts

### Context

You can link allowance plans to expense items and pay them out after you approve the expense report. This diagram illustrates the process flow for managing reimbursable allowance plans:

### Steps

1. Create an expense item for reimbursement accounts with an **Expense Item Amount Type** of **Based on Allowance Plan**.

See [Steps: Set Up Expense Items](#) on page 1754.

**2. Create Allowance Plans.**

Select **Reimbursable**.

**3. Roll Out Compensation Plans to Employees.**

**4. (Optional) Create Spend Authorizations** on page 1844.

Employees without an assigned reimbursable allowance plan must create a spend authorization and select the **Expense Item** associated with an **Allowance Plan**. Employees must then submit their expenses for approval and allowance plan assignment.

**5. Create Expense Reports** on page 1811.

**6. Create Manual Settlement Runs** on page 2160.

After you approve expense reports with reimbursement account expense items, include them in a settlement run to reimburse employees.

**7. (Optional) Access the View Reimbursable Allowance Plan Activity report.**

Review an employee's activity for an assigned reimbursable allowance plan. You can configure this report to display on **View Worker**, **Worker Profile**, and **Talent Profile**.

Security (in the Core Compensation functional area):

- *Self-Service: Compensation*
- *Worker Data: Compensation by Organization*

#### Related Information

##### Tasks

[Terminate Employees](#)

[Discontinue Benefits on Termination](#)

## Create Expense Items

#### Prerequisites

- Review setup considerations for expense items.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

#### Context

Expense items enable payees to provide specific information on expense reports and spend authorizations, such as meals, office supplies, and team events.

You can configure attributes to add to your expense items, which enables you to gather additional information from payees.

You can create and link rate tables to expense items, enabling Workday to calculate reimbursement amounts automatically for greater spend control.

To meet specific business needs, you can configure expense items such as:

- Distance-based expense items, which calculate reimbursement amounts automatically for the distances that payees travel.
- Per diem expense items, which enable payees to provide detailed daily cost breakdowns for business trips.

#### Steps

**1. Access the Create Expense Item or Edit Expense Item task.**

2. As you complete the **Summary** section, consider:

<b>Option</b>	<b>Description</b>
<b>Search Keywords</b>	Enter alternate words that payees can use to search for expense items. Ensure that you separate each word with a comma.
<b>Expense Policy Group</b>	Select from the expense policy groups that you create on the <b>Maintain Expense Policy Groups</b> task to associate expense items with specific travel and expense policies. You can then assign policy groups and their items to security segments to restrict expense item availability to specific payees.
<b>Expense Item Group</b>	<p>Select from the expense item groups that you create on the <b>Maintain Expense Item Group</b> task to display subcategories on the <b>Expense Item</b> prompt on:</p> <ul style="list-style-type: none"> <li>• Expense reports.</li> <li>• Spend authorizations.</li> </ul> <p>You can also use expense item groups to:</p> <ul style="list-style-type: none"> <li>• Post expense lines to specific ledger accounts.</li> <li>• Report on groups of similar expense items.</li> </ul>
<b>Default Tax Applicability</b>	Select which default tax applicability to associate with the expense item when Workday can't find matching tax rules for it. See <a href="#">Steps: Set Up Taxes for Expense Reports</a> on page 1797.
<b>Hide Itemization</b>	<p>Select to exclude itemization for an expense item. This selection hides the itemization section in the expense report line for the associated expense item. Workday recommends not selecting <b>Hide Itemization</b> on:</p> <ul style="list-style-type: none"> <li>• Expense items that have itemizations mapped or configured</li> <li>• <b>Hotel Expense Item</b></li> <li>• <b>Travel Journals</b></li> </ul>
<b>Inactive</b>	Select to prevent payees from selecting the expense item on future expense reports and spend authorizations. When you deactivate expense items, Workday doesn't remove them from existing expense reports and spend authorizations. Example: Inactivate your <i>Mileage</i> expense item from last year so that payees don't use it on future expense transactions.

If you configure per diem expense items, consider:

<b>Option</b>	<b>Description</b>
<b>Per Diem</b>	Select to identify expense items as per diem expense items in your custom reports. When you select this check box, you can use custom

Option	Description
	<p>validations to notify payees that they're using the same date multiple times on a per diem item.</p> <p>Workday selects this check box automatically when you enable travel journal functionality, and you can't clear it.</p>
<b>Enable Travel Journal</b>	<p>Select to enable travel journal functionality when payees select the expense item on expense reports.</p> <p>When you enable this functionality, the expense item that you're creating becomes a parent expense item. See <a href="#">Concept: Parent and Child Expense Items</a> on page 1774.</p> <p>When payees select the parent item and enter departure and arrival dates, Workday displays a travel journal on the expense line. Payees can enter per diem expenses on their travel journal, which Workday uses to calculate daily reimbursement amounts.</p>
<b>Travel Journal Item</b>	<p>Select which child expense item to associate with the parent expense item. Workday then displays all attributes from the child expense item on the travel journal, but doesn't display the child item itself.</p>
<b>Travel Journal Configured as</b>	<p><i>24-Hour Periods:</i> Calculates per diem reimbursements over a 24-hour period, beginning from the trip start time. Example: A trip beginning at 11:00 populates the first travel journal line, and ends at 10:59 the next day.</p> <p><i>Calendar Days:</i> Calculates per diem reimbursements from midnight of the calendar date that you select, until midnight of the next calendar date.</p>
<b>Rounding Option for Hours</b>	<p>Specify whether to round minutes up or down to the closest hour or half hour so that Workday can calculate per diem reimbursement amounts.</p>
<b>Non Editable Number of Hours</b>	<p>Select to prevent payees from editing the <b>Number of Hours</b> field on travel journal lines.</p> <p>Don't select this check box when you want to enable payees to edit the number of hours for their trip. Example: Payees who take half a day off in the middle of their trip.</p>

3. As you complete the **Processing** section, consider:

Option	Description
<b>Expense Item Amount Type</b>	<p><b>Actual Amount:</b> Enables payees to enter amounts on expense lines manually.</p>

Option	Description
	<p><b>Based on Allowance Plan:</b> Enables you to associate expense items with an employee allowance plan. See <a href="#">Steps: Manage Reimbursable Accounts</a>.</p> <p><b>Maximum Line Amount and Maximum Daily Amount:</b> Set a maximum allowable amount against the expense item on each expense line, or set a maximum allowable amount for an entire calendar date. When you select these options with the:</p> <ul style="list-style-type: none"> <li>• <b>Use Fixed/Max Expense Amount</b> option, the maximum line, or daily amount applies to all payees in all scenarios.</li> <li>• <b>Use Expense Rate Table</b> option, Workday uses rules and criteria from the associated rate table to calculate amounts. Example: You enter 100 EUR on a travel-related expense item and select Italy as your travel destination. However, the associated rate table permits a maximum of 80 EUR for payees who travel to Italy.</li> </ul> <p><b>Fixed Amount:</b> Sets a fixed and noneditable amount against the expense item when payees select the item on expense lines. When you use this option with the:</p> <ul style="list-style-type: none"> <li>• <b>Use Fixed/Max Expense Amount</b> option, the fixed line amount always remains the same.</li> <li>• <b>Use Expense Rate Table</b> option, Workday uses rules from the associated rate table to calculate the noneditable amount.</li> </ul>
<b>Expense Item Calculation</b>	<p>Select a method by which to calculate the amount types that you select in the <b>Expense Item Amount Type</b> section.</p> <p>You can use the <b>Use Expense Rate Table</b> and <b>Use Fixed/Max Expense Amount</b> options only with these options:</p> <ul style="list-style-type: none"> <li>• <b>Fixed Amount</b></li> <li>• <b>Maximum Daily Amount</b></li> <li>• <b>Maximum Line Amount</b></li> </ul> <p>You can use the <b>None of the above</b> option only with these options:</p> <ul style="list-style-type: none"> <li>• <b>Actual Amount</b></li> <li>• <b>Based on Allowance Plan</b></li> </ul>
<b>Enable Rate Tables for Spend Authorizations</b>	<p>Select to enable the rate table associated with the expense item when payees select the item on spend authorizations.</p>

Option	Description
	<p>When you select this check box, you might restrict the amount that payees can submit on their spend authorizations. Example: You set a maximum of 800 USD on your rate table, but the payee estimates an expense of 1000 USD on their spend authorization.</p> <p>Select the <b>Allow Overage</b> check box to enable payees to submit spend authorization amounts exceeding the maximum amounts you define.</p>
<b>Multiply Per Diem by Number of Days on Spend Authorization</b>	<p><b>Note:</b> Select this check box only when instructed to do so by Professional Services.</p>
<b>Quantity and Per Unit Amount Not Enterable</b>	<p>Select to deactivate the <b>Quantity</b> and <b>Per Unit Amount</b> fields on the expense item, which can help ensure accurate expense data.</p> <p>Example: Select this check box on your Conference expense item to prevent payees from entering costs for multiple conferences on 1 expense line.</p>
<b>Allow Overage</b>	<p>Select to enable payees to submit amounts exceeding the maximum amount that you set on the expense item.</p>

4. As you complete the **Expense Item Attributes** section, see [Concept: Expense Item Attributes](#) on page 1773, and also consider:

Option	Description
<b>Display Arrival Date before Departure Date</b>	<p>Select to ensure that payees enter their trip start date in the <b>Arrival Date</b> field, and their trip end date in the <b>Departure Date</b> field.</p>
<b>Non Editable Number of Days</b>	<p>Select to prevent payees from editing the <b>Number of Days</b> field on travel journal lines.</p> <p>Don't select this check box when you want to enable payees to edit the number of days for their trip. Example: Payees who travel on multiday business trips and take time off in the middle of their trip.</p>
<b>Expense Report: Required</b> <b>Spend Authorization: Required</b>	<p>Select these check boxes to ensure that payees provide information on your expense item attributes.</p> <p>Don't select these check boxes for configurable boolean attributes.</p>

5. On the **Related Worktags** tab, you can add worktags on expense items to capture additional data at expense line level.
6. On the **Rate Tables** tab, you can add rate tables and accumulators on expense items to calculate reimbursement amounts using rates.

**Note:** We reset the accumulated amount on an expense item when you change the attribute to evaluate on its associated rate table. When you want to change the attribute to evaluate,

we recommend creating a new expense item instead of editing an existing item that's using an accumulator.

7. On the **Itemization Mapping** tab, you can configure itemization for expense items for more detailed cost breakdowns.
8. As you complete the **Distance Calculation** tab, consider:

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

Option	Description
<b>Origin Address</b> <b>Destination Address</b> <b>Estimated Distance of Driving Route</b>	<p>Select to enable payees to enter origin and destination addresses for their driving routes on expense reports and spend authorizations. To help ensure that distance-based expense data is complete and accurate, you can only enable these attributes as a set.</p> <p>When payees enter addresses, Workday uses Google Maps to provide an estimated distance on the expense line. Workday then uses the estimated distance and rates from the associated rate table to calculate reimbursement amounts.</p> <p>You can use only <i>Amount</i> and <i>Graduated Amount</i> rate table types with distance-based expense items.</p>
<b>Trip Distance Including Diversions</b>	<p>Select to enable payees to enter distances different from the estimated distances that Google Maps provides. Examples: When payees take alternate routes because of traffic diversions, or to avoid toll roads.</p> <p>When you enable this attribute alongside other distance-based attributes, Workday automatically populates this attribute with the estimated distance on expense lines, but payees can edit the field.</p> <p>If you don't opt in to distance-based expense items, you can still enable <b>Trip Distance Including Diversions</b> as a standalone attribute so that payees can enter trip distances manually.</p>
<b>One-Way Daily Commute Distance</b>	<p>Select to subtract commute distances from trip distances or estimated distances.</p> <p>You can use this attribute only when you enable 1 or both of these attributes:</p> <ul style="list-style-type: none"> <li>• <b>Estimated Distance of Driving Route</b></li> <li>• <b>Trip Distance Including Diversions</b></li> </ul>
<b>Round Trip</b>	<p>Select to designate trips as round trips on a single expense line, which doubles the distance to expense.</p> <p>You can use this attribute only when you enable 1 or both of these attributes:</p>

Option	Description
	<ul style="list-style-type: none"> <li>• Estimated Distance of Driving Route</li> <li>• Trip Distance Including Diversions</li> </ul>
<b>Distance to Expense</b>	<p>Calculates the distance to expense after subtracting the daily commute distance. When you designate a trip as a round trip, Workday doubles the distance to expense automatically.</p> <p>You can't enable this attribute manually. Workdays adds the attribute on your expense item when you select 1 or both of these attributes:</p> <ul style="list-style-type: none"> <li>• One-Way Daily Commute Distance</li> <li>• Round Trip</li> </ul>

## Next Steps

Configure security permissions for your expense items.

[2024R2 Feature Release Note: Hide Itemization For Expense Item](#)

## Create Per Diem Expense Items for Travel Journals

### Prerequisites

- Review setup considerations for expense items.
- Review [Concept: Parent and Child Expense Items](#) on page 1774.
- Set up base and adjustment rate tables for your child expense item.
- Security: [Set Up: Expense Item](#) domain in the Expenses functional area.

### Context

You can make specific configurations on expense items to designate them as per diem expense items and meet local per diem requirements.

To use per diem items on expense reports, you create 2 expense items and link them together. One expense item acts as the parent item, which you select at expense line level. The other expense item acts as the child item, whose attributes display within a travel journal section on the expense line.

Payees can use travel journals to enter cost breakdowns for their daily travel expenses. Workday then uses the expense data that payees enter, and any associated rate tables, to calculate per diem reimbursements automatically.

## Steps

1. Access the **Create Expense Item** task.
    - a) On the **Item Name** prompt, enter a name that discourages payees from selecting the child expense item at expense line level. Example: z - do not select - Travel Journal Item - France.
    - b) In the **Processing** section, select these options:
      - **Fixed Amount**
      - **Use Expense Rate Table**
    - c) Don't select these check boxes:
      - **Per Diem**
      - **Enable Travel Journal**
    - d) In the **Expense Item Attributes** grid, add the attributes that you want to display in the **Travel Journal** section on expense reports.

**Note:** Child expense items must include any attributes that you set on associated rate tables. Ensure that you also set these attributes as required.

**Note:** To ensure that Workday can calculate per diem amounts automatically, add these attributes on parent expense items as required, but not on child items:

    - *Arrival Date*
    - *Arrival Time*
    - *Departure Date*
    - *Departure Time*
  - e) On the **Rate Tables** tab, select the base rate table that you want to associate with your child expense item. You can also associate adjustment rate tables with your base table.
2. Access the **Create Expense Item** task again.
    - a) As you configure your parent expense item, ensure that you select:
      - The **Enable Travel Journal** check box.
      - Your child expense item on the **Travel Journal Item** prompt.
      - A travel journal type on the **Travel Journal Configured as** prompt.
      - A rounding option on the **Rounding Option for Hours** prompt.
    - b) In the **Processing** section, select the **Quantity and Per Unit Amount Not Enterable** check box to inactivate these fields on expense reports. These options don't apply on parent expense items.
    - c) On the **Expense Item Attributes** grid, add the *Arrival Date* and *Departure Date* attributes.

## Result

Workday generates a **Travel Journal** section on the expense report line when payees:

- Select the parent expense item.
- Enter departure and arrival dates.

On the travel journal, we display the attributes that you configure on the child expense item, but not the child item itself. When payees populate these attributes, Workday calculates reimbursement amounts automatically.

## Next Steps

Configure segmented security so that only specific payees can access per diem expense items.

### Related Information

#### Concepts

[Setup Considerations: Expense Items](#) on page 1748

## Tasks

[Create Expense Items](#) on page 1758

## Reference

[The Next Level: Per Diems and Travel Journal](#)

## Examples

Example: Create Per Diem Expense Items for Calendar Day Travel Journals on page 1903

Example: Create Per Diem Expense Items for 24-Hour Period Travel Journals on page 1906

# Set Up Expense Accumulators

## Prerequisites

- Set up the *Graduated Amount* or *Graduated Percent* rate tables that you plan to add on your expense items. See: [Set Up Expense Rate Tables](#) on page 1745.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

## Context

You can add an accumulator on an expense item to track reimbursement amounts as they accumulate over a specified time frame. When payees use an expense item with an accumulator, Workday checks the accumulated amount and calculates reimbursement using rates from the associated rate table.

You can use accumulators for whole calendar months or years. You can also set custom start dates to align accumulators with company-specific schedules, such as a fiscal year that begins on February 1 instead of January 1.

Example: You add an accumulator on your *Distance Traveled* expense item. Workday checks the accumulator each time the payee uses the expense item, and calculates reimbursement using your defined rate table ranges:

- 0.70 USD for each of the first 5,000 miles.
- 0.50 USD for each mile between 5,001-10,000 miles.
- 0.35 USD for each mile that exceeds 10,000 miles.

## Steps

1. Access the [Create Expense Item](#) or [Edit Expense Item](#) task.
2. In the **Processing** section, select:
  - **Fixed Amount**
  - **Use Expense Rate Table**
3. On the **Rate Tables** tab, select an accumulator type from the **Expense Accumulator** prompt.
 

**Note:** We reset the accumulated amount on an expense item when you change the attribute to evaluate on its associated rate table. When you want to change the attribute to evaluate, we recommend creating a new expense item instead of editing an existing item that's using an accumulator.
4. If you select an accumulator with a custom start date, enter a start date on the **Accumulator Start Date** field.

## Result

The expense item amount starts accumulating from the date that you specify. The accumulated amount resets to zero from the beginning of the next period, such as the first date of the next calendar month or year.

## Related Information

### Tasks

[Create Expense Items](#) on page 1758

## Itemize Hotel Expenses

### Prerequisites

- Create the expense items that you plan to use for your hotel itemization mapping.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

(For Mastercard only): If you want to use [level 3 credit card transaction data](#):

- Contact your financial institution to request level 3 credit card transaction data for hotel stays.
- [Map Merchant Category Codes to Expense Items](#).

(Optional but recommended): Set up expense item defaulting. See: [Steps: Set Up Recommendations and Defaulting for Expense Items on Credit Card Transactions](#).

### Context

You can make specific configurations on expense items so that Workday automatically itemizes hotel charges on expense report lines. Examples: Internet fees, room rates, and room tax.

### Steps

1. Access the [Create Expense Item](#) or [Edit Expense Item](#) task.
2. On the **Expense Item Attributes** grid, add the *Arrival Date* and *Departure Date* attributes. When level 3 credit card transaction data isn't available, Workday uses these attributes to calculate the number of nights for hotel stays.
3. Select these check boxes:
  - **Expense Report: Display to User**
  - **Expense Report: Required**
4. Map your expense items using the **Itemization Mapping** tab:

Option	Description
<b>Hotel Expense</b>	Select to designate the expense item as a hotel expense item. Selecting this check box also enables Workday to itemize credit card transaction data automatically on expense report lines.  <b>Note:</b> If you don't select this check box, Workday doesn't automatically itemize expense report lines with credit card transaction data for hotel stays. You'll also be unable to select these check boxes: <ul style="list-style-type: none"> <li>• <b>Automatically Populate Itemization for Level 3 Credit Card Transaction Data</b></li> <li>• <b>Is Room Rate</b></li> </ul>
<b>Automatically Populate Itemization for Level 3 Credit Card Transaction Data</b>	Select to populate level 3 credit card transaction data automatically on itemized lines for hotel expenses.

Option	Description
	<b>Note:</b> If you don't select this check box, you'll be unable to map product codes to your expense items.
<b>Expense Item</b>	Select the expense items that you want to map for hotel itemization.
<b>Itemize Expense by</b>	<p><b>Charge Breakdown:</b> Select to populate the exact charge amount on the itemization line. Example: You want expense payees to provide a charge breakdown for their nonrecurring charges, such as laundry and meals.</p> <p><b>Recurring Daily Charge:</b> Select to populate the average charge amount on the itemization line. Example: An expense payee stays at a hotel for 2 nights. The charge for the first night is USD 200. The charge for the second night is USD 100. Workday displays a daily average of USD 150 on each of the 2 itemization lines.</p>
<b>Is Room Rate</b>	<p>Select to enable Workday to generate itemization that includes the daily rate from level 2 credit card transaction data.</p> <p>If you enable the use of enhanced level 3 credit card transaction data, Workday uses this data instead, when the data exists.</p>
<b>Always Generate Itemization Line</b>	<p>Workday selects this check box automatically if you:</p> <ul style="list-style-type: none"> <li>• Select the <b>Automatically Populate Itemization for Level 3 Credit Card Transaction Data</b> check box, and</li> <li>• Set the expense item as required.</li> </ul> <p>When selected, Workday generates an itemization line, regardless of whether there's data coming from a credit card transaction.</p> <p>If you don't select this check box and there's no corresponding level 3 credit card transaction data, Workday doesn't generate an itemization line.</p>
<b>Product Code</b>	<p>Select the product codes that you want to map to the expense item, which enables Workday to populate expense items on itemization lines automatically.</p> <p>If you don't map product codes and credit card transactions exist, Workday generates itemization lines but doesn't automatically populate them with expense items.</p>

## Result

If you enable the use of level 3 credit card transaction data, Workday automatically populates itemization lines with data from hotel stays. If you don't enable the use of level 3 credit card transaction data, Workday automatically generates itemization lines but doesn't populate the lines with any data.

When payees select your hotel expense items on expense reports, Workday displays an **Itemization** section that includes a **Daily Expenses** subsection for recurring daily charges. We also display charge breakdowns in a separate subsection beneath the **Itemization** section.

## Related Information

### Concepts

[Concept: Expense Item Attributes](#) on page 1773

### Tasks

[Create Expense Items](#) on page 1758

## Itemize Nonhotel Expenses

### Prerequisites

- Create the expense items that you plan to use in your itemization mapping.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

### Context

**Note:** Use this topic to itemize expense items for nonhotel expenses. To itemize expense items for hotel expenses, see [Itemize Hotel Expenses](#).

You can make specific configurations on expense items so that Workday automatically itemizes nonhotel charges on expense report lines. Examples: Airfare, car rental, and meals.

### Steps

1. Access the **Create Expense Item** or **Edit Expense Item** task.
2. Map your expense item using the **Itemization Mapping** tab.

**Note:** Don't select these check boxes as they apply only to hotel expenses:

- **Hotel Expense**
- **Automatically Populate Itemization for Level 3 Credit Card Transaction Data**

Option	Description
<b>Expense Item</b>	Select the expense items that you want to map for itemization.
<b>Itemize Expense by</b>	<p><b>Note:</b> We don't recommend selecting the <b>Recurring Daily Charge</b> option for nonhotel expenses. This option provides daily averages that are relevant mostly for hotel expenses, such as room rate and room tax.</p> <p>Select <b>Charge Breakdown</b> to capture nonrecurring charges on itemization lines. Example: You can itemize a meal charge to capture specific costs for food, beverages, and tips.</p>

## Result

When payees select your nonhotel expense items on expense reports, Workday displays an **Itemization** section that includes a subsection with charge breakdowns for nonrecurring charges.

## Related Information

### Tasks

[Itemize Hotel Expenses](#) on page 1767

## Set Up Travel Cities

### Prerequisites

- Configure the *Travel City* expense item attribute on relevant expense items.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

### Context

Set up travel cities for reporting purposes and to help manage the travel spend for your organization. Use travel cities in:

- Expense reimbursement rate tables.
- Custom validations.
- Expense item attributes.
- Reports.

### Steps

- Access the **Maintain Travel Cities** task and add a new city name in the **Name** field.
  - (Optional) Select the **Country** for this city.
  - (Optional) Select the **Travel Region** such as state or province for this country.
  - (Optional) Enter 1 or more alternate names your workers use for this city to help them find it in Workday.
- Alternate city names match downloaded credit card transaction file and travel booking record data in Workday.

### Result

- When workers select credit card transactions or travel booking records in expense report lines, Workday populates travel cities from the integration file.
- Workers can use country attribute groups you define to find *Destination Location* and *Origination Location* attributes.

## Set Up Airlines, Hotels, and Car Rental Agencies

### Prerequisites

- Configure expense items with the corresponding expense item attributes.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

### Context

You can configure airlines, hotels, and car rental agencies to help manage travel spend for your organization.

If you download expense integration files, you can configure the codes and alternate names to match the names you define for:

- Airlines.
- Hotels.
- Car rentals.

### Steps

1. Access these tasks:
  - **Maintain Airlines**
  - **Maintain Hotels**
  - **Maintain Car Rental Agencies**
2. Enter each new airline, hotel, or car rental agency in the **Name** field.
3. (Optional) If you use credit card transaction integration files, select the unique corresponding 4-digit Merchant Category Code (MCC) from the **Merchant Code** prompt to ensure the most accurate match.
4. (Optional) Enter 1 or more alternate names your workers use to find this expense item. Use a comma to separate multiple alternate names for an expense item.  
Alternate names enable Workday to use smart matching to find and match names from integration files to the names you define.  
If you download travel booking record files, Workday recommends that you set up the global 2-letter travel merchant code as an alternate name for each merchant. Your travel booking inbound data automatically will map to the merchants you define.

### Result

When workers select credit card transactions and travel booking records in expense reports, Workday populates matched expense item details for:

- Airlines.
- Hotels.
- Car rental agencies.

## Set Up Service Classes

### Prerequisites

- To implement the travel booking integration feature, ask your corporate travel provider for the specific class of service identifiers it uses in travel integration downloads.
- Use the **Create Expense Item** task to add the *Class of Service* or *Classes of Service* expense item attribute to expense items.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

### Context

You can create 1 or more service classes for each travel type for reporting purposes and to help manage travel spend, including:

- Airfare
- Car rental
- Hotel accommodations
- Rail
- Other travel types

### Steps

1. Access the **Maintain Class of Service** task.

- As you complete the task, consider:

Column	Description
Value	<p>Specify the value for this class of service.</p> <p>Example:</p> <ul style="list-style-type: none"> <li>Select <i>Economy</i> for the <i>Air</i> travel type.</li> <li>Select <i>Conference Lodging</i> for the <i>Hotel</i> travel type.</li> </ul>
Travel Type	Associate a class of service with this travel type when workers use them on expense reports.
Description	Displays to workers on expense report lines with the <i>Class of Service</i> attribute.

## Result

If you mapped the class of service identifiers from:

- Travel provider inbound data, inbound travel booking records populate the class of service in expense report lines.
- Credit card integrations, inbound credit card transactions with trip leg data populate both class of service and classes of service in expense report lines with unique identifiers.

## Next Steps

Workers select a class of service on applicable expense report lines and credit card transactions.

## Set Accumulator Balances in Travel Profiles

### Prerequisites

- Set up expense items with accumulators.
- Configure worker travel profiles.
- Security: *Process: Expense Report – Other* domain in the Expenses functional area.

### Context

You can manually define starting balances for expense item accumulators when you implement Workday after the accumulated period starts.

### Steps

- Access the **View Travel Profile** report.
- As a related action on a worker travel profile, select **Travel Profile > Maintain Expense Item Accumulator Balances**.
- Select each **Expense Item** that requires a **Beginning Balance** and enter the **Balance Application Date**.

### Related Information

#### Tasks

[Create Travel Profiles](#) on page 1796

## Concept: Expense Item Attributes

You can add attributes on expense items so that payees provide additional information on expense reports and spend authorizations.

You can use configurable attributes to collect company-specific information. You can also use Workday-delivered attributes, some of which you create specific values for. Example: You create a list of airline companies for the *Airline* attribute. See [Reference: Expense Item Attribute Values](#) on page 1775.

You can also add attributes on rate tables and make these attributes available to payees. Workday uses the attribute information that payees provide to calculate reimbursement. Example: You add the *Destination Location* attribute on your *Hotel* expense item. When payees select a destination, Workday calculates reimbursement using location-based rates on the associated rate table.

### Configurable Attributes

You can use the **Enable Configurable Expense Item Attributes** task to customize up to 5 each of certain expense item attribute types, such as:

Attribute Type	Example
Boolean	You rename <i>Configurable Boolean 1</i> to <i>Missing Receipt</i> so that payees can specify when expense reports don't include receipts.  Don't set configurable boolean attributes as required on expense transactions.
Date	You rename <i>Configurable Date 1</i> to <i>Payment Date</i> so that payees can specify the date on which they pay in advance for team events.  <b>Note:</b> Date-type configurable attributes don't activate travel journal functionality on per diem expense items. To generate travel journals, use the Workday-delivered <i>Arrival Date</i> and <i>Departure Date</i> attributes.
Numeric	You rename <i>Configurable Numeric 1</i> to <i>Number of Guests</i> so that payees can specify how many nonworkers attend a team event.
Text	You rename <i>Configurable Text 1</i> to <i>Tax ID</i> so that payees can provide additional tax information.

### Map Attributes

To populate data on expense transactions automatically, you can map some attributes to merchant code names and travel cities that originate from:

- Credit card transactions.
- Travel booking records.

### Group Attributes

You can use the **Maintain Expense Item Attribute Groups** task to group values for some expense item attributes. Workday then displays the grouped values on attribute prompts on expense transactions.

Examples:

- You create a *French Travel* attribute group for the attributes that you want payees to select from when they travel to France.
- Your company negotiates room rates with multiple hotel chains. You create a *Preferred Company Hotels* attribute group that payees can select from on their expense reports.

### Delete Attributes

You can use the **Edit Expense Item** task to delete attributes from existing expense items. On the task, clear the **Expense Report: Display to User** and **Spend Authorization: Display to User** check boxes, which remove attributes from future expense transactions. When you delete attributes, Workday doesn't remove attribute values from existing expense transactions.

## Concept: Parent and Child Expense Items

You can link multiple expense items and organize them into a hierarchy, enabling payees to use 2 or more expense items on an expense line. In this hierarchy, you select the parent item at expense line level and its child items in:

- An **Itemization** section, to capture detailed cost breakdowns for accounting and reporting.
- A travel journal, to calculate per diem reimbursements for accuracy and compliance.

### Example: Itemization

Brian travels on a business trip that includes a hotel stay totaling 300 USD. You create a parent *Hotel* expense item and these associated child items:

- *Daily Room Rate*
- *Daily Room Tax*
- *Internet Fees*

When Brian selects the parent item, he can enter costs for each child item on the **Itemization** section of the expense report.

### Example: Travel Journals

Nicola travels on a multiday business trip and her per diem allowance is 80 EUR. You create a parent *Per Diem - European Travel* expense item and associated child item with attributes for breakfast, lunch, and dinner.

When Nicola selects the parent item and populates required attributes, Workday generates a travel journal. Nicola can enter her meal expenses and Workday calculates her per diem allowance.

## Concept: Expense Item Currencies

The expense items that you create require currencies to define their monetary value. You can use the **Create Expense Item** and **Edit Expense Item** tasks to set currencies on your expense items.

When expense item and transaction currencies differ, Workday converts the expense item currency to the transaction currency. Between the time of expense transaction submission and payment, expense item currencies can change in value, which might lead to realized gains and losses.

Example: You expense an item for 5 USD to your UK company, which uses GBP. When you create an expense report, Workday converts the 5 USD to the transaction's current 2.5 GBP value. As exchange rates fluctuate, when your company pays the 2.5 GBP the amount converts to either:

- 4.5 USD, resulting in a foreign currency exchange loss.
- 5.15 USD, resulting in a foreign currency exchange gain.

#### **Related Information Concepts**

[Concept: Multicurrency](#) on page 26

#### **Tasks**

[Create Expense Items](#) on page 1758

## **Reference: Expense Item Attribute Values**

You can create values for certain expense item attributes, which then display as options that payees can select from on attribute prompts on:

- Expense reports.
- Spend authorizations.

You can also map data from credit card transactions and travel booking records to certain attributes. Workday then populates values on expense attributes automatically when the values originate from these transactions.

Attributes	Tasks and Reports	Details
<i>Airline</i> <i>Car Rental Agency</i> <i>Hotel</i>	<b>Maintain Airlines</b> <b>Maintain Car Rental Agencies</b> <b>Maintain Hotels</b>  Security: <i>Set Up: Expense Item</i> domain in the Expenses functional area.	You can map the airlines, car rental agencies, and hotels that you create to merchant codes from: <ul style="list-style-type: none"> <li>• Credit card transactions.</li> <li>• Travel booking records.</li> </ul> When payees add 1 of these transactions on their expense reports, Workday uses the merchant code to populate values on the corresponding expense item attributes.  If you download travel booking record files, Workday recommends setting up the global 2-letter travel merchant code as an alternate name for each merchant. Your travel booking inbound data automatically maps to the merchants that you define.
<i>Class of Service</i> <i>Classes of Service</i>	<b>Maintain Class of Service</b>	See <a href="#">Set Up Service Classes</a> on page 1771.
<i>Destination Location</i>	<b>Maintain Airports</b>	

Attributes	Tasks and Reports	Details
<i>Origination Location</i>	<b>Maintain Travel Cities</b>  Security: <i>Set Up: Expense Item</i> domain in the Expenses functional area.	
<i>Engine Capacity</i> <i>Fuel Type</i> <i>Vehicle Plan</i> <i>Vehicle Type</i>	<b>Maintain Engine Capacities</b> <b>Maintain Fuel Types</b> <b>Maintain Vehicle Plans</b> <b>Maintain Vehicle Types</b>  Security: <i>Set Up: Expense Item</i> domain in the Expenses functional area.	
<i>Invoice Types</i>	<b>Maintain Invoice Types by Country</b>  Security: <i>Set Up: Tax</i> domain in the Common Financial Management functional area.	To comply with government requirements, you can create invoice types that payees can use on: <ul style="list-style-type: none"><li>• Expense reports.</li><li>• Spend authorizations.</li><li>• Supplier invoices.</li></ul> See <a href="#">Steps: Set Up Supplier Invoices</a> on page 1606.

### Tasks

[Create Expense Items](#) on page 1758

## FAQ: Expense Items

### When might I use the Maximum Amount expense rate table on an expense item?

- To define multiple maximum amounts.
- To share an expense item across multiple locations, or when there are different maximum amounts for different organizations and locations.
- When you have condition rules or criteria that determine the maximum amount.

### When might I set Maximum Line Amount or Fixed Amount on an expense item?

- When the maximum or fixed amount and currency don't change, and is the same for all payees who can access the expense item.
- When there are no other attributes to evaluate to determine the maximum or fixed amount.

### What's the difference between the Maximum Line Amount and Maximum Daily Amount options?

*Maximum Line Amount* enables you to limit the amount that workers enter against an expense item on each expense line.

## Can I add rate-based expense items on quick expenses?

*Maximum Daily Amount* enables you to set a daily limit on expense items used on 1 or more:

- Expense reports.
- Expense report lines.

Workday doesn't support the ability to add rate-based expense items, such as mileage, on quick expenses.

## Setting Up Expense Reports

---

### Setup Considerations: Intercompany Expense Report Processing

You can use this topic to help make decisions when planning your configuration and use of intercompany processing on expense reports. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

With support for intercompany processing on expense reports, in Workday you can:

- Expense or itemize individual lines to different companies from the header company on expense reports.
- Settle expense reports across multiple companies.

### Business Benefits

- Streamlines how you create, submit, and settle expense reports.
- Eliminates the need to create individual expense reports for each company.

### Use Cases

When you configure intercompany processing for expense reports:

- Employees can include expenses charged to multiple different companies on a single expense report.
- Sales executives can split their expenses across multiple companies that they visit on 1 trip on a single expense report.
- Hospital and university physicians can bill their expenses across both their companies on 1 expense report.
- Employees in a multicampus university, where each campus is an individual company, can expense transactions to each company.

## Questions to Consider

Questions	Considerations
<p>Do you want to generate accounting between companies at the transaction or contract level?</p> <p>Does your company have direct intercompany contracts configured?</p>	<p>If your company has set up direct intercompany contracts, you can continue to use your configuration to generate accounting against contracts. However, if you want to generate accounting between companies at the transaction level with expenses, you can configure intercompany processing for expense reports.</p>
<p>Is there a need to report on value added tax (VAT) expenses between companies within the same VAT group?</p>	<p>You can configure your tax groups based on your tax reporting requirements so that companies within a group can have an intercompany relationship with each other. Workday then enables workers to select between companies within the same VAT group.</p> <p>If the companies don't require VAT reporting on expenses, workers can select from companies that have an intercompany agreement.</p>

## Recommendations

- To prevent accounting errors, don't remove or edit intercompany profiles when the expense report is in the approval or settlement process.
- To enable workers to select from companies within the same VAT group, configure VAT groups and effective dates.

## Requirements

No impact.

## Limitations

If your company uses:

- Spend authorizations, Workday doesn't support intercompany processing on expense reports when you link spend authorizations on expense lines and itemizations.
- Credit cards, Workday only enables you to select between the expense report header company and the credit card company on expense lines and itemizations.

## Tenant Setup

No impact.

## Security

Configure the *Set Up: Company General* domain in the Common Financial Management functional area for workers that need to:

- Configure expense options for individual companies.
- View individual company reporting.

Domains	Considerations
<i>Business Process Administration and Manage: Business Process Definition</i> in the System functional area	Users can configure the <i>Expense Report Event</i> business process definition to include the intercompany review process.
<i>Set Up: Company General</i> in the Common Financial Management functional area	Users can: <ul style="list-style-type: none"> <li>Configure expense options for individual companies.</li> <li>View individual company reporting.</li> </ul>

## Business Processes

Add the *Initiate Expense Report Intercompany Event* action step on the *Expense Report Event* business process to:

- Hold the affiliate company on the expense lines and itemizations accountable for the workers spend.
- Initiate the approval process for the company on the expense report lines or itemizations to notify them of the expenditure.

If the intercompany approver denies the intercompany lines, they deny the entire expense report.

## Reporting

No impact.

## Integrations

Integrations	Considerations
<i>Put Company</i>	Use to enable or disable intercompany expense report processing in your expense company options.
<i>Submit Expense Report</i>	Use to submit expense reports for intercompany expense reports.

## Connections and Touchpoints

Feature	Considerations
Financial Accounting	Workday processes and generates the accounting for the intercompany expense report, including companies with balancing worktags configured. Workday uses your balancing worktag configuration to ensure the generated accounting balances by worktag for the applicable expense transactions.
Financial Transaction Tax	You can bill expenses between companies belonging to the same VAT group on intercompany expense reports.
Projects	You can: <ul style="list-style-type: none"> <li>Use capital project worktags on intercompany expense reports to expense or capitalize costs as assets.</li> </ul>

Feature	Considerations
	<ul style="list-style-type: none"> <li>Settle and generate intercompany accounting for capital project transactions on expense reports.</li> </ul>
Settlement	You can settle and process intercompany expense reports.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Steps: Set Up Expense Report Intercompany Processing](#) on page 1799

## Setup Considerations: Candidate Expense Reports

You can use this topic to help make decisions when planning your configuration and use of candidate expense reports. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

You can enable workers to create expense reports on behalf of candidates to reimburse them for incurred expenses.

### Business Benefits

- Analyze candidate expense data to make more informed decisions for HR initiatives.
- Eliminate manual workarounds, such as ad hoc payments and use of noncandidate payee types.
- Expedite reimbursement by routing candidate expense reports to specific reviewers and approvers.
- Reduce data duplication by centralizing candidate expense data in Workday.
- Track and report on recruiting costs for greater spend control.

### Use Cases

- Reimburse candidates who incur recruitment costs, such as flights to interview sites and hotel stays.
- Report on job requisition totals, such as total costs for supplier invoices and candidate expenses.
- Submit expense reports that include multiple payee types, such as candidates and employees who attend the same team lunch.

### Questions to Consider

Questions	Considerations
What expense data do workers manage?	You can configure segmented security to enable workers to access only candidate expense data.

Questions	Considerations
	<p>When you enable segmented security, workers with:</p> <ul style="list-style-type: none"> <li>Constrained security can work only with candidate expense data and job applications for the companies they can access.</li> <li>Unconstrained security can access expense data and job applications for candidates associated with all companies in their tenant.</li> </ul> <p>When you don't enable segmented security, constrained and unconstrained workers can select all nonworker payee types, including candidates, on the <b>Create Expense Report for Non-Worker</b> task. However, without the adequate security permissions, workers won't have the ability to select specific nonworkers on the <b>Pay To</b> prompt.</p>
How do you manage credit card transactions for candidates?	<p>Although candidates don't use corporate expense credit cards, you can reassign credit card transactions to them to expense costs incurred on their behalf.</p> <p>When you reassign credit card transactions to candidates, Workday displays the transactions on their expense reports so you can select them for inclusion.</p> <p>When you don't reassign credit card transactions to candidates, your custom and standard reports might contain limited expense data, which can affect your ability to analyze total spend.</p>
What expense report data can you purge for candidates?	<p>When you select the <i>Financials – Expense Reports</i> purgeable data type on the <b>Purge Person Data</b> task, Workday purges:</p> <ul style="list-style-type: none"> <li>Any memos on the expense report header and line items.</li> <li>The file, filename, and comments on any attachments.</li> </ul>

## Recommendations

- For accurate reporting, enable the Job Requisition worktag type on expense reports to track cost totals for job requisitions.
- When evergreen job requisitions don't have an associated manager or supervisory organization, configure calculated fields to route expense reports to other reviewers and approvers.

## Requirements

- Assign workers with constrained security access to the required companies so that they can access candidate data and associated job applications.
- To submit expense reports on behalf of candidates, add expense payments as an option on their payment elections.

## Limitations

Candidates don't have the ability to create their own expense reports in Workday.

We don't provide a *Candidate* worktag for use on expense reports. Instead, you can use these report fields to report on candidate expenses:

- **Expense Payee Type**
- **Expense Report Payee**

Workday doesn't support:

- Confidential job requisitions on candidate expense reports.
- Spend authorizations and cash advances for candidates.

## Tenant Setup

No impact.

## Security

Domains	Considerations
<i>Candidate Data: Candidate Expenses</i> in the Recruiting functional area.	Enables you to create expense reports for candidates and associate job applications with candidate expenses.
<i>Process: Credit Card</i> in the Common Financial Management functional area.	Enables you to reassign credit card transactions to candidates.
<i>Process: Expense Reports</i> in the Expenses functional area.	Enables you to manage expense reports and related reporting.  You can configure segmented security on this domain to enable workers to access only candidate data on expense tasks and reports.
<i>Manage: Payment Election</i> in the Expenses functional area.	Enables you to manage payment elections on behalf of candidates.

## Business Processes

You can configure the *Expense Report Event* business process to route candidate expense reports for review and approval. You can also route candidate expense reports to specific reviewers and approvers.

## Reporting

Reports	Considerations
<b>Find Credit Card Transactions</b>	Use to view credit card transactions you reassign to candidates.
<b>Find Expense Report Lines for Organization</b>	Use to view expense report lines for candidates by organization.
<b>Find Expense Reports</b>	Use to view expense reports you create for candidates.
<b>Find Payments</b>	Use to view candidate expense payments: <ul style="list-style-type: none"> <li>• For auditing purposes.</li> <li>• To review payment statuses.</li> </ul>

Reports	Considerations
<b>Maintain Worktag Usage</b>	<p>Use to enable the Job Requisition worktag type on expense reports and supplier invoices.</p> <p>To make manual corrections on journal entries related to expense reports and supplier invoices, you can also enable the Job Requisition worktag type on:</p> <ul style="list-style-type: none"> <li>• Accounting journals.</li> <li>• Ad hoc bank transactions.</li> </ul>

When you enable segmented security, you can use these report data sources and their filters to create custom reports with candidate expense data only:

- **Expense Report Lines and Itemizations**
- **Expense Report Lines for Company**
- **Expense Reports for Company**

You can configure multiple security segments to enable workers to access expense data for multiple payee types on custom reports. Example: Create a custom report that includes candidate and student expense data, but not expense data for external committee members.

## Integrations

Web Services	Considerations
<i>Get Expense Reports</i>	<p>Use to retrieve data for candidate expense reports.</p> <p>When you enable segmented security, you can use this web service to retrieve expense data only for candidates.</p>
<i>Get Payments</i>	<p>Use to retrieve data for candidate expense payments.</p>
<i>Get Settlement Run Custom Filters</i> <i>Put Settlement Run Custom Filter</i>	<p>Use to upload and retrieve data for the custom filters you create for candidate settlement runs.</p>
<i>Get Payment Election Options</i> <i>Put Payment Election Option</i>	<p>Use to upload and retrieve payment election options for candidate expenses.</p>
<i>Submit Expense Report for Non-Worker</i>	<p>Use to upload data to submit expense reports for candidates.</p> <p>When you enable segmented security, you can use this web service to upload expense data only for candidates.</p>
<i>Submit Settlement Run</i>	<p>Use to upload data to settle and reimburse candidate expenses.</p>

## Connections and Touchpoints

Features	Considerations
Accounting	<p>Workday automatically generates a <i>Job Requisition</i> worktag on accounting journal lines associated</p>

Features	Considerations
	<p>with candidate expense reports and their job applications. We generate this worktag only on spend journals, not on journals related to:</p> <ul style="list-style-type: none"> <li>• Liabilities.</li> <li>• Payables.</li> <li>• Payments.</li> </ul>
Settlement	<p>You can create:</p> <ul style="list-style-type: none"> <li>• Custom filters for settlement runs for candidates.</li> <li>• Settlement runs to settle and reimburse candidate expenses.</li> </ul>
Supplier Accounts	<p>You can enable the Job Requisition worktag type on supplier invoices to capture more detailed cost totals for job requisitions.</p>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Setup Considerations: Student Expense Reports

You can use this topic to help make decisions when planning your configuration and use of expense reporting for students. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

You can use Workday to create and submit expense reports on behalf of students to reimburse them for the expenses they incur.

### Business Benefits

- Analyze and report on student expenses for greater spend control.
- Eliminate manual workarounds, such as ad hoc payments and the need to use nonstudent payee types.
- Expedite reimbursement by routing only student expense reports to specific reviewers and approvers.

- Reduce data duplication by centralizing student expenses in a single location.

### Use Cases

- Process expense reports on behalf of external and matriculated students.
- Reassign transactions from corporate credit cards to include the transactions on student expense reports.
- Restrict access to student data so that workers can process and report on student expenses only.

### Questions to Consider

Questions	Considerations
What security access do workers need?	<p>You can configure segmented security to enable workers to access only student expense data. When you enable segmented security, workers with:</p> <ul style="list-style-type: none"> <li>• Constrained security can access only expense data for students affiliated with the academic units for which the workers have permissions.</li> <li>• Unconstrained security can access only student expense data, for all companies in their tenant.</li> </ul> <p>When you don't enable segmented security, constrained and unconstrained workers can access expense data for all payee types.</p>
Which payment elections do students have?	<p>You can only submit expense reports on behalf of students who have expense payments as an option on their payment elections.</p> <p>You can:</p> <ul style="list-style-type: none"> <li>• Add expense payments to payment elections on behalf of external and matriculated students.</li> <li>• Enable matriculated students to add expense payments to their own payment elections.</li> </ul> <p>When students have multiple Workday profiles and you update payment elections on 1 profile, Workday updates the other profiles automatically.</p>
How do you manage the expenses students incur on corporate cards?	<p>You can reassign credit card transactions manually to students when they incur expenses on corporate credit cards.</p> <p>Workday then displays the reassigned transactions on student expense reports so you can select them for inclusion.</p>

### Recommendations

- Add worktags on student expense reports manually, to ensure accurate financial transactions.
- Reassign credit card transactions to students to ensure that expenses incurred on corporate credit cards display on student expense reports.
- When multiple students have the same name, enter unique student IDs on expense reports to ensure you claim expenses for the correct student.

- When students also have an employee profile in Workday, ensure that you use their student profile for student-based expenses to avoid accounting and approval issues.

## Requirements

To enable workers with constrained security to access student data, assign the workers to the relevant student academic units.

You can submit expense reports on behalf of students only when you set expense payments on their payment elections.

## Limitations

Students don't have the ability to create their own expense reports in Workday.

We don't support spend authorizations and cash advances for students.

## Tenant Setup

No impact.

## Security

Domains	Considerations
<i>External Student Data: Student ID</i> in the Personal Data functional area.	Enables you to access IDs for external students.
<i>External Student Data: Student Public Reports</i> in the Staffing functional area.	Enables you to access public information for external students.  To manage payment elections for external students, use this domain and the <i>Manage: Payment Election</i> domain.
<i>Manage: Payment Election</i> in the Expenses functional area.	Enables you to manage payment elections on behalf of external students.  To manage payment elections for external students, use this domain and the <i>External Student Data: Student Public Reports</i> domain.  Use this domain when you don't use Workday Student Financials.
<i>Manage: Student Payment Elections</i> in the Student Financials functional area.	Enables you to manage payment elections on behalf of matriculated students.  Use this domain when you use Workday Student Financials.
<i>Process: Expense Reports</i> in the Expenses functional area.	Enables you to manage expense reports and related reporting.  You can configure segmented security on this domain to enable workers to access only student data on expense tasks and reports.
<i>Self-Service: Student Financials</i> in the Student Financials functional area.	Enables students to manage their payment elections.

Domains	Considerations
<i>Student Data: Student ID</i> in the Student Core functional area.	Enables you to access student IDs in Workday.
<i>Student Data: Student Profile</i> in the Student Core functional area.	Enables you to access student information in Workday.

### Business Processes

You can configure the *Expense Report Event* business process to route student expense reports for review and approval.

You can use the **Expense Report Pay To is Student** report field to route only student expense reports to specific reviewers and approvers.

### Reporting

Reports	Considerations
<b>Find Credit Card Transactions</b>	Use to view the credit card transactions you reassign to students.
<b>Find Expense Reports</b>	Use to view the expense reports you create on behalf of students.
<b>Find Expense Report Lines for Organization</b>	Use to view expense report lines for students by organization.
<b>Find Negative Reimbursable Expense Reports</b>	Use to view expense reports that include negative reimbursable amounts for students who incur personal expenses on corporate cards.
<b>Find Payments</b>	Use to view student expense payments: <ul style="list-style-type: none"> <li>For auditing purposes.</li> <li>To review payment statuses.</li> </ul>

When you enable segmented security, you can use these report data sources to create custom reports that include only student expense data:

- **Expense Reports for Company**
- **Expense Report Lines and Itemizations**
- **Expense Report Lines for Company**

### Integrations

Web Services	Considerations
<i>Get Expense Reports</i>	Use to retrieve data for student expense reports. When you enable segmented security, you can use this web service to retrieve expense data only for students.
<i>Get Payments</i>	Use to retrieve data for student expense payments.
<i>Get Settlement Run Custom Filters</i> <i>Put Settlement Run Custom Filter</i>	Use to upload and retrieve data for the custom filters you create for student settlement runs.

Web Services	Considerations
<i>Submit Expense Report for Non-Worker</i>	<p>Use to upload data to submit expense reports for students.</p> <p>When you enable segmented security, you can use this web service to upload expense data only for students.</p>
<i>Submit Settlement Run</i>	Use to upload data to settle and reimburse student expenses.

## Connections and Touchpoints

Features	Considerations
Accounting	Workday automatically generates a <i>Student</i> worktag on the accounting journals associated with approved expense reports.
Payment elections	To submit expense reports on behalf of students, add expense payments as an option on student payment elections.
Settlement	<p>You can create:</p> <ul style="list-style-type: none"> <li>• Settlement runs to settle and reimburse student expenses.</li> <li>• Custom filters for student settlement runs.</li> </ul>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Expense Reports

### Context

You can enable workers to create and submit expense reports to detail the expenses that they incur. You can also enable workers to create and submit expense reports on behalf of others.

## Steps

1. Create the expense items that workers need for their expense reports.  
See [Steps: Set Up Expense Items](#) on page 1754.
2. Configure segment-based security to restrict the availability of expense items to specific workers.  
See [Steps: Set Up Security for Expense Items](#) on page 1755.
3. [Define Business Purposes](#) on page 1794.
4. (Optional) [Create Travel Profiles](#) on page 1796.
5. (Optional) Enable workers to create and submit expense reports on behalf of other workers.  
See [Enable Business Process Task Delegations](#).
6. [Create Organization Membership Security Groups](#).  
Assign workers to the appropriate Organization Types and Security Group Types so they can create expense reports for other workers.
7. Configure the *Expense Report Event* business process and security policy in the Expenses functional area.  
See [Steps: Configure Business Process Definitions](#).
8. (Optional) Hide or require optional fields on the *Expense Report Event* business process.  
See [Hide or Require Optional Fields](#).
9. Set up tax code and tax applicability defaults for items on expense reports.  
See [Steps: Set Up Taxes for Expense Reports](#) on page 1797.
- 10.(Optional) Set up budget checking for expense reports.  
See [Steps: Configure Budget Checking for Spend Transactions](#).
- 11.(Optional) Set up accounting for expense reports that have negative reimbursable amounts.  
See [Steps: Set Up Accounting for Negative Reimbursable Expense Reports](#) on page 1800.
- 12.(Optional) Configure expense reports to process intercompany expenses.  
See [Steps: Set Up Expense Report Intercompany Processing](#) on page 1799.
- 13.(Optional) Set up expense reports for workers who hold multiple positions.
  - a) Access the **Maintain Feature Opt-Ins** report.  
Opt in to the **Expense Report Routing for Workers with Multiple Positions** feature.
  - b) Access the **Edit Tenant Setup - Financials** task.  
To populate the location worktag based on the position you select in the expense report header, select **Default Worker Location on Spend Transactions** in the **Procurement Options** section.
  - c) [Steps: Set Up Security Permissions](#).  
Add workers who create expense reports on behalf of other workers to the *Process: Expense Reports* domain in the Expenses functional area.
- 14.(Optional) Access the **Edit Spend Transaction Instruction** task.  
Create instructions for expense reports.  
Security:
  - *Set Up: Expenses Processing* in the Expenses functional area.
  - *Set Up: Procurement* in the Procurement functional area.

## Result

Workers can:

- Create expense reports for themselves, including expense reports for specific positions if they hold multiple positions.
- Create expense reports on behalf of other workers, including workers who hold multiple positions.
- Expense lines and itemizations to different companies on a single expense report.

## Next Steps

Enable workers to create expense reports on behalf of nonworkers.

[2022R2 What's New Post: Expense Report Routing for Workers with Multiple Positions](#)

## Steps: Enable Workers to Create Expense Reports for Nonworkers

### Prerequisites

- Set up expense reporting.
- Review setup considerations for nonworker expense reports.

### Context

You can enable workers to create and submit expense reports on behalf of these nonworker types as they don't typically have access to Workday:

- Candidates.
- External committee members (ECMs).
- Students.

### Steps

#### 1. [Steps: Set Up Security Permissions](#).

Add workers to the *Process: Expense Reports* domain in the Expenses functional area and 1 or more of these domains so they can create expense reports for nonworkers:

Nonworker	Domains
Candidate	<i>Candidate Data: Candidate Expenses</i> in the Recruiting functional area.
ECM	<i>Committees: View</i> in the Organizations and Roles functional area.
Student	<p>For matriculated students, these domains in the Student Core functional area:</p> <ul style="list-style-type: none"> <li>• <i>Student Data: Student ID</i></li> <li>• <i>Student Data: Student Profile</i></li> </ul> <p>For external students:</p> <ul style="list-style-type: none"> <li>• <i>External Student Data: Student ID</i> in the Personal Data functional area.</li> <li>• <i>External Student Data: Student Public Reports</i> in the Staffing functional area.</li> </ul>

**2. (Optional) Create Segment-Based Security Groups.**

Configure which nonworker types display on the **Create Expense Report for Non-Worker** task by enabling access to the *Expense Payee Type* security group segment.

**3. (Optional) [../../../../financial-management/expenses/setting-up-expense-reports/dan1370797729300.dita](#).**

Use these report fields to route nonworker expense reports to specific reviewers and approvers:

- **Expense Report Pay To is Candidate**
- **Expense Report Pay To is External Committee Member**
- **Expense Report Pay To is Student**

**4. (Optional) Access the **Maintain Worktag Usage** report.**

In the **Expense Report** section, enable the Job Requisition worktag type to select *Job Requisition* worktags manually on these tasks:

- **Create Expense Report**
- **Create Expense Report for Non-Worker:** ECMs and students only
- **Create Expense Report for Worker**

When you add nonworkers on the **Attendees** prompt on these tasks, you can use the *Job Requisition* worktag to associate attendee expenses with job requisitions. Example: You create an expense report for an employee lunch that a candidate also attends.

**Note:** Workday always automatically includes *Job Requisition* worktags on journal lines for candidate expense reports that you create on the **Create Expense Report for Non-Worker** task. You can't remove these worktags as they help ensure accurate accounting and reporting.

Security: *Set Up: Enable Worktags* domain in these functional areas:

- Common Financial Management
- Worktags

**5. (Optional) [../../../../financial-management/settlement/settlement-configuration/dan1370797014754.dita](#).**

Create custom filters for the settlement runs that you make for nonworkers.

**6. (Optional) Access the **Reassign Expense Credit Card Transactions** task.**

Reassign credit card transactions to nonworkers to include the transactions on their expense reports.

Security: *Process: Credit Card* domain in the Common Financial Management functional area.

## Next Steps

- Add expense payments on payment elections for nonworkers.
- Create nonworker expense reports and itemize expense lines.

## Customize the Expense Report Event Business Process

### Prerequisites

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

### Context

Customize the *Expense Report Event* business process and add actions as workflow steps to help you:

- Audit and approve expense reports.
- Ensure that expense reports comply with the travel and expense policies for your organization.

### Steps

1. From the related actions menu of the *Expense Report Event* business process, select **Business Process > Edit Definition**.
2. Consider including 1 or more of these report steps on the business process:

Option	Description
<b>Credit Card Personal Charges</b>	Identifies expense report lines or line itemizations that are personal charges on a corporate credit card.
<b>Credit Card Transactions Not Expensed</b>	Finds loaded credit card transactions not included on an expense report.
<b>Expense Audit Work Area</b>	Use to: <ul style="list-style-type: none"> <li>• Gain visibility into expenses by reporting category and payment category.</li> <li>• Analyze spend by drilling down to multidimensional details from reports and graphs.</li> </ul>
<b>Expenses Exceeding Maximum Amount</b>	Lists expense report lines or line itemizations that exceed the maximum allowed amount defined for the expense item. This report excludes expense report lines or itemizations marked as personal.
<b>Expense Report Lifecycle</b>	Use to identify milestone dates for expense reports such as expense report date, submitted date, and approved date.
<b>Expense Report Pay To is Candidate</b> <b>Expense Report Pay To is External Committee Member</b> <b>Expense Report Pay To is Student</b>	Use to route expense reports for each of these nonworker types to specific reviewers and approvers.
<b>Expenses With Attendees</b>	Use to retrieve expense report lines or expense itemizations where workers include attendees as an expense item attribute.
<b>Expenses Without Receipt</b>	Use to find expense report lines:

Option	Description
	<ul style="list-style-type: none"> <li>Without the <b>Receipt Included</b> check box selected, fixed amount items, and electronically loaded credit card items.</li> <li>With the <b>Receipt Included</b> check box selected, but the corresponding expense report doesn't include attachments.</li> </ul>
<b>Find Cardholder Listing Files</b>	<p>Use to:</p> <ul style="list-style-type: none"> <li>Review all cardholders listed.</li> <li>Identify and correct individual credit cards that don't have an employee mapped.</li> </ul>
<b>Find Credit Card Transaction Files</b>	<p>Use to:</p> <ul style="list-style-type: none"> <li>View expense credit card transactions for 1 or more employees.</li> <li>Audit and identify transactions not submitted through an expense report or procurement card verification.</li> </ul>
<b>Find Expense Reports</b>	Finds expense reports matching the criteria that you specify.
<b>Find My Team's Expense Reports</b>	Finds expense reports for members of your team matching the criteria that you specify.
<b>Find Spend Authorizations</b>	Finds spend authorizations matching the criteria that you specify.
<b>Find Worker Credit Cards</b>	Finds worker credit cards matching the criteria that you specify.
<b>Find Worker Credit Card Purges</b>	Finds credit card purge runs matching the criteria that you specify.
<b>Maintain Payment Elections</b>	Use to create or review payment elections for payroll, expense, and payroll interface pay types. From this report, you can modify bank account information and payment elections.
<b>My Expense Reports</b>	Use to view your expense reports and their details.
<b>My Expense Transactions</b>	Use to view your credit card transactions and their details such as date, description, status, and amount.
<b>No Expense Report Submitted</b>	<p>Use to find workers who:</p> <ul style="list-style-type: none"> <li>Haven't submitted expense reports within a specified time period.</li> <li>Don't have any expense reports with a submitted date in the reporting period range you specify.</li> </ul>
<b>Out of Pocket Expenses</b>	Displays expense report lines where employees paid out-of-pocket and have reimbursable amounts owed.

Option	Description
<b>Top Expense Items</b>	Use to view expense amount and corresponding percentage of total for top expense items for a company. Amounts are displayed in the reporting currency configured for your company. Access multiple dimensions for viewing details such as <i>Expense Item for Billable Transactions</i> and <i>Cost Centers</i> .
<b>View Business Purposes</b>	Use to view the usage count and title for all defined business purposes. You can edit a business purpose from its related actions menu.
<b>View My Guests</b>	<p>Use to view:</p> <ul style="list-style-type: none"> <li>The guests listed as attendees on expense reports.</li> <li>The number of expense line items that include this guest as an attribute.</li> </ul> <p>You can also edit your guest names, titles, and companies.</p>
<b>View Payment Elections</b>	Use to create or review worker payment elections for payroll, expense, and payroll interface pay types. From this report, you can modify bank account information and payment elections.
<b>View Spend Transaction Instruction</b>	Use to view instructions for spend transactions for the specified company. You can edit the instructions from the related actions menu.
<b>View Travel Profile</b>	Use to view worker travel preferences, vehicle information, and attached documents.
<b>Wait for Expense Protect Inference</b>	<p>Use this Expense Protect service step to route expense reports based on risk score. You can configure this service step to skip approvals or require additional approvals.</p> <p>See <a href="#">Route Expense Reports Based on Risk</a> on page 1833.</p>

3. (Optional) Select **Business Process > Maintain Advanced Routing** from the related actions menu of a step on the *Expense Report Event* business process.  
Configure advanced routing options for the step.
4. (Optional) Select **Business Process > Maintain Related Links by Definition** from the related actions menu of the *Expense Report Event* business process.  
Configure related links. Include http:// or https:// in the URL.

##### Tasks

[Edit Business Processes](#)

## Define Business Purposes

#### Prerequisites

Security: Set Up: *Expense Item* domain in the Expenses functional area.

## Context

You can define business purposes for:

- Accounting.
- Expense reporting.
- Spend analysis.

You can also remove the **Business Purpose** field from expense reports when:

- Your organization doesn't use business purposes for expense reporting.
- You don't define any business purposes.

## Steps

1. Access the **Maintain Business Purposes** task.
2. Add a row for each business purpose and include:

Column	Description
<b>Value</b>	Enter a value for workers to characterize the business purpose for this expense report. You can associate business purposes with ledger accounts to help automate accounting.
<b>Inactive</b>	Select to deactivate a business purpose from future use on expense reports.
<b>In Use</b>	Workday selects this option after a worker selects the business purpose on an expense report, when the worker: <ul style="list-style-type: none"> <li>• Saves the expense report.</li> <li>• Submits the expense report.</li> </ul> Once a worker uses a business purpose, you can't delete it but you can deactivate it.

## Result

Workers can select business purposes in expense reports to categorize their expenses. To enable the **Business Purpose** field in expense reports, define at least 1 business purpose.

When you define the *Business Purpose* dimension on the *Spend* account posting rule, the accounting posts to the corresponding ledger account for expense report transactions with business purposes.

When you deactivate a business purpose:

- Workers won't be able to select the business purpose in new expense reports.
- Inactive business purposes are still available for:
  - Account posting rules.
  - Conditional rules.
  - Custom validations.
  - Exit validations.
  - Reporting.

## Next Steps

- Workers can select business purposes on their expense reports.

- You can post expense reports with business purposes to specific ledger accounts. Use the *Business Purpose* dimension on condition rules in the *Spend* account posting rule set.

## Create Travel Profiles

### Prerequisites

- Create expense item attributes.
- These security domains in the expenses functional area:
  - *Process: Expense Report*.
  - *Self Service: Expense Report*.

### Context

You can specify travel preferences and vehicle information for workers, which Workday then populates in expense item attributes on:

- Expense reports.
- Spend authorizations.

### Steps

1. Access the **Create Travel Profile** task and select a worker.

Self service users can create and edit travel profiles using the **Create Travel Profile** task in the **Expenses Hub**, or from the related actions on their worker profiles.

Self service users can create travel profiles if they have access to both:

- The *Self Service: Expense Report* domain in the expenses functional area.
- The **Travel Profile** in the Expenses Hub.

2. Specify the **Vehicle Information** value, which Workday then populates in applicable expense item attributes on the expense report.

3. If known, include:

- **Airline**
- **Car Rental Agency**
- **Hotel**
- **Travel Preferences**

4. From the **Travel Country** prompt, select the countries that the worker travels to for business.

When workers select an expense item that requires a *Travel Country* attribute, Workday uses these countries in **Travel Country** fields.

- If 1 country is in the travel profile, Workday populates this value on the line.
- If there are multiple countries defined for the worker, Workday provides a list.

5. Access the **Attachments** tab to include supporting documents for the travel profile, such as evidence of insurance.

Workday supports the file types listed in the **Edit Tenant Setup - System** task for business document attachments.

### Result

If you specified a single **Airline**, **Hotel**, and **Car Rental** attribute for the worker, Workday displays their associated values in related attribute fields, which workers can overwrite.

When you specify multiple travel preferences, Workday groups them in prompts for the worker to select.

[Concept: Expense Item Attributes](#) on page 1773

### Tasks

[Create Expense Reports](#) on page 1811

## Steps: Set Up Taxes for Expense Reports

### Prerequisites

- Review the setup considerations for transaction tax rules.
- Configure taxes for transactions. If using a value added tax configuration, define tax categories, tax rates, tax applicabilities, and tax recoverability percentages.

### Context

You can set up the tax code and tax applicability to populate on items in expense reports. You can also set up a default tax recoverability for tax rates within a tax code. Workday uses these values to calculate tax amount for expense lines. Accountants can then review submitted expense reports to ensure correct capture and accounting of taxes, especially when taxes are subject to various levels of recoverability. You can also enable expense reports to specify tax.

### Steps

#### 1. Access the **Edit Tenant Setup - Financials** task.

Select the **Hide Tax Checkbox on Expense Report** check box to withhold the option to specify tax; clear to allow the capability.

Security: The *Set Up: Tenant Setup - Financials* domain in the System functional area.

#### 2. [Create Spend Categories](#).

For each *spend category*, specify a default tax applicability and whether to allocate charges back to the lines.

#### 3. Set up expense items for taxes.

On the **Create Expense Item** task:

Option	Description
<b>Default Tax Applicability</b>	Workday uses this default when it finds no matching tax rule for the expense item.
<b>Expense Item Attributes</b>	<p>For items with recoverable or partially recoverable tax, include <i>Travel Country</i> when creating expense report lines with this item. Select the <b>Expense Report: Display to User</b> and <b>Expense Report: Required</b> check boxes when defining attributes on expense items. Workday uses travel country and tax rules to determine the default tax code and tax applicability.</p> <p>To populate the tax code into an expense report, the expense item must have the <i>Travel Country</i> attribute.</p>

Security: The *Setup: Expense Item* domain in the Expenses functional area.

- Specify a travel country in the travel profile of workers when they have expense reports with items that are subject to recoverability.

On the **Create Travel Profile** task:

Option	Description
<b>Travel Country</b>	<p>Select the most common country in which the worker incurs expenses to have that country always populate on expense report lines. This set up is for expense items that are configured to include the <i>Travel Country</i> attribute.</p> <p>Select multiple countries to give the worker a limited list while still permitting the ability to select any country.</p>

Security: The *Process: Expense Report - Other* domain in the Expenses functional area.

- Add the **Review Tax** action step to the *Expense Report Event* business process.

This action step enables reviewers to confirm that the tax information on all expense report lines and itemized lines is correct. By comparing to the receipt, reviewers can update:

- Tax code.
- Tax amount.
- Tax applicability.
- Tax recoverability.

- Create rules for how to populate tax codes with recoverability and applicability for expense items.

These rules apply when you:

- Select the **Enable Tax Defaulting for International Expenses** check box on the **Edit Tenant Setup - Financials** task.
- Set up a transaction tax rule for a country.

Workday populates the tax code and tax applicability into the expense report line based on the travel country the worker selects.

Workday automatically populates the recoverable percentage on the transaction line based on the specified tax applicability and tax code. You can override this selection. When you specify the tax recoverability, Workday applies the recoverable percentage and the allocation method to the tax amount for tax rates within a tax code.

Expense report reviewers can only update tax applicability, tax codes, and tax recoverability on the *Review Expense Report* business process step.

See [Steps: Configure Transaction Tax Rules](#) on page 663.

- (Optional) [Configure Transaction Tax Rules for Worktags](#) on page 669.

Create rules for how to populate tax codes with recoverability and applicability using worktags on expense lines and itemizations.

## Result

- Workers can create expense reports with tax and select an expense item that's configured to capture travel country. Workday displays the travel country with a value on the expense line or itemization, if applicable.

Based on the item and selected travel country, Workday uses the tax rules to determine the default tax code and tax applicability and to calculate the tax amount. Workers can change the tax code to get the tax amount to match the receipt. If the tax amount still doesn't match, workers can't change the tax amount and only reviewers can update it during expense report review.

- Once workers submit expense reports, the *Expense Report Event* business process initiates the *Review Tax* step. Reviewers can then ensure accurate tax information before approval.
- Upon event completion, you can see recoverable and nonrecoverable taxes from expense transactions in the **Transaction Tax Liability** report.

## Steps: Set Up Expense Report Intercompany Processing

### Prerequisites

- Identify companies with which you want to enable intercompany processing for expense reports.
- Set up expense reports.
- Configure VAT groups with effective dating on your transaction tax rules to include VAT reporting on intercompany expense reports.

### Context

You can configure expense reports and intercompany profiles so workers can expense transactions between companies that have an agreement.

### Steps

- Access the **Edit Company Expense Options** task.

Select the **Enable Intercompany Processing on Expense Report Lines** check box for your company and the affiliate companies.

Security: The *Set Up: Company General* domain in the Common Financial Management functional area.

- Access the **Edit Company Intercompany Profile** task and configure any affiliate companies with which you want to enable intercompany processing on expense reports.

Select the **Initiate Allowed** check box to enable the company on the **To** column to initiate intercompany transactions with your company.

You can use the **View Company Intercompany Profile** report to verify that your affiliate companies have the **Initiate Allowed** check box configured.

Security:

- The *Set Up: Company Accounting* domain in the Common Financial Management functional area.
- The *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

### Result

On a single expense report, workers can select a different company than the company on the expense report header for individual:

- Expense lines.
- Itemization lines.

## Related Information Concepts

[Setup Considerations: Intercompany Expense Report Processing](#) on page 1777  
[Concept: Intercompany Transactions](#) on page 51

## Steps: Set Up Accounting for Negative Reimbursable Expense Reports

### Prerequisites

- Set up corporate credit card accounts.
- Set up expense reports.

### Context

You can set up expense report accounting to:

- Enable workers to submit expense reports with negative reimbursable amounts when they incur personal expenses on a corporate liability credit card.
- Generate accounting for expense reports with negative reimbursable amounts.

Workday generates the accounting but you must manually enter the generated accounting journal entries.

### Steps

1. Access the **Create Corporate Credit Card Billing Account** task

Select **Allow Negative Reimbursable Total**

2. (Optional) [Configure Worktag Balancing Rule Sets for Transaction Journals](#) on page 370.

If your company has worktag balancing enabled, you must enter a value in the required **Default Worktag for Expense Payee Receivable** prompt.

3. (Optional) [Configure Optional Worktag Balancing for the Tenant](#) on page 374.

Enter a value in the **Default Optional Worktags for Expense Payee Receivable** prompt.

4. Access the **Edit Company Expenses Options** task.

Select the **Enable Accounting for Negative Reimbursable Expense Reports** check box for your company.

Security: *Set Up: Company General* domain in the Expenses functional area.

5. [Set Up Account Sets](#) on page 82.

6. [Set Up Account Posting Rules](#) on page 84.

Configure the **Expense Payee Receivable** account posting rule so that Workday sends the receivables to the account receivables account set.

### Result

When workers submit expense reports with negative reimbursable amounts, Workday applies the negative reimbursable amounts to future expense reports to recover the balance.

### Next Steps

To recover worker reimbursable payments, access the **Create Expense Receivable Repayment** task. When you recover a payment, Workday generates the accounting, but you must manually enter the generated accounting journal entries.

[Steps: Manage Expense Reports](#) on page 1810

## Steps: Set Up Receipt Scanning for Expenses

### Prerequisites

Set up expense items and expense reports.

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- *UMSA*, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- *MSA*, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

### Context

You can enable workers to scan receipts through the Workday mobile app and automatically create quick expenses to include on their expense reports.

### Steps

#### 1. [Enable Innovation Services Features and Machine Learning Data Contributions](#)

Select **Receipt Scanning for Expenses** from the **Available Services** tab.

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

#### 2. Access the [Edit Tenant Setup - Machine Learning](#) task.

Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

#### 3. [Edit Domain Security Policies](#)

Grant security groups permissions to the *Self-Service: Receipt Scanning* domain in the Expenses functional area.

### Result

In the Workday mobile app, you can scan receipts in:

- PDF, JPG, TIFF, and PNG file formats.
- Several languages without restrictions for countries or locales. Example: French in France and Canada.

Workday scans the receipt and creates a quick expense with details such as:

- Amount
- Currency
- Date
- Merchant

## Steps: Set Up Expenses Email Receipts

### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

### Context

You can enable expense payees and their delegates to email expense receipts to Workday as an attachment or in the body of the email. Workday then creates quick expenses that they can include in their expense reports.

### Steps

1. (Optional) [Steps: Set Up Receipt Scanning for Expenses](#).
2. [Enable Innovation Services Features and Machine Learning Data Contributions](#).

Select **Email Ingestion** from the **Available Services** tab.

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

3. [Edit Domain Security Policies](#).

Grant security groups permissions to the *Set Up: Inbound Email* security domain in the System functional area.

4. [Activate Pending Security Policy Changes](#)

5. Access the [Edit Tenant Setup - System](#) task.

In the **System Setup** section, select the **Allow Attachments within Emails** check box.

Security: *Set Up: Tenant Setup - System* domain in the System functional area.

6. To configure a:

a) Workday-provided receiving domain, see [Configure Email Ingestion Settings](#).

b) Customer-provided receiving domain, see [Steps: Set Up Customer-Provided Receiving Domains](#).

**Note:** Workday recommends configuring a Workday-provided receiving domain.

7. (Optional) If you configured a customer-provided receiving domain, access the **Configure Email Ingestion Settings** task.
  - a) Select the **Expense Receipt** notification type and associate it with your receiving domain. Example: Enter receipts@expenses.company.com as the domain for the **Expense Receipt** notification type.
  - b) To enable expense submitters to send expenses receipts, leave the **Allowed Senders** list empty. Expense submitters must add an email address to their contact information in their Workday profile.

## Result

Expense payees and their delegates can email expense receipts.

If an email contains a receipt in the body of the email and as an attachment, Workday only creates a quick expense for the attached receipt. If there's an error creating a quick expense, the expense payee receives a notification.

Workday recommends sending these attachments file types supported by OCR: JPEG, JPG, PNG, WEBP, BMP, PDF, TIFF, TIF, GIF

A card displays in the **Expenses Hub** letting your users know how they can submit expense receipts. You can specify the email address and enable your users to send the information on the card to their phones with a text message. See [Customize Expenses Hub Card](#).

## Next Steps

You can access the **Expense Receipts Email Ingestion By Date Range** report to troubleshoot issues related with email ingestion.

Expense payees can access the **Edit My Expense Transactions** task to delete quick expenses.

## Related Information

### Reference

[2023R2 What's New Post: Email Receipts to Workday Expenses](#)

[2023R1 What's New Post: Email Ingestion as an Innovation Service](#)

[2024R1 What's New Post: Workday-Provided Receiving Domain for Email Ingestion](#)

## Concept: Email Receipts for Expenses

Expense submitters and their delegates can email expense receipts to Workday, streamlining the process to create and submit expense reports. Instead of downloading receipts and manually uploading them, expense submitters and their delegates can email receipts and Workday will:

- Create quick expenses with receipts added as attachments.
- Convert HTML receipts to PDF and attach it to the quick expense.

Workday supports:

- Attached receipts.
- Receipts in the email body (HTML).

If you attach multiple receipts to an email, Workday creates separate quick expenses for each receipt.

**Note:** If an email contains a receipt in the body of the email and an attachment, Workday only creates a quick expense for the attached receipt.

If you opt in to receipt scanning for expenses, Workday populates values in these fields in a quick expense:

- **Amount**
- **Currency**
- **Date**
- **Merchant**

## Expense Payee Email Address

To send email receipts, expense payees must:

- Configure their email address in their Workday Contact Information.
- An expense payee can have more than 1 email address in their Contact Information.
- Use the email address in their Workday Contact Information to send receipts to the specific domain.

Workday uses the email address to match the receipt to the expense payee, and then creates the quick expense.

Delegates must enter the expense payees email address in the CC field of an email to create a quick expense on their behalf. Workday uses the expense payee's email and the delegate's email to evaluate the delegate relationship, and create a quick expense for the expense payee. If a delegate relationship doesn't exist, Workday creates a quick expense using the delegate's email address.

## Emailing Expense Receipts

Workday recommends:

- Avoiding multiple forwards in the email body (example: FWD: FWD:) for better OCR accuracy.
- Sending receipts either as attachments or in the email body.
- Sending these attachment file types supported by OCR: JPEG, JPG, PNG, WEBP, BMP, PDF, TIFF, TIF, GIF.

Images such as logos, ads, or maps referenced in the email body can't be included in the generated PDF file if they reside outside the Workday tenant firewall.

To create a quick expense, file types must meet these size requirements:

File Type	Size
PDF	Any size
PNG or TIFF	Greater than 40 KB
Other files	Greater than 20 KB

Workday doesn't support these file types: CSS, CSV, ICS, PGP, PROPERTIES, RPTDESIGN, SVG, TXT, WSDL, WXF, XML, XLS, XLSM, XLSX, XPD, XSL, XSLT, ZIP.

## Notifications

For expense payees, If there are errors creating a quick expense, Workday sends a task to the expense payee's My Task.

For delegates, if Workday doesn't establish a delegate relationship, Workday creates a quick expense for the delegate. The delegate will then receive a task in their My Tasks.

## Steps: Create Expense Report Print Layouts in Workday Studio

### Prerequisites

- Become familiar with Workday Studio, review Workday Studio documentation, and complete Report Designer tutorials from the Workday Community.
- Download and install Workday Studio and Report Designer.
- Include the *.rptdesign* file type in **Edit Tenant Setup - System** task.

### Context

You can customize expense report business form print layouts using Workday tasks and *Report Designer in Workday Studio*.

### Steps

1. Access the **Copy Standard Report to Custom Report** task.

Copy the *Expense Report for Print - Report Design* Workday-delivered report. Remove the **Attached Receipt Images** field and modify the other fields as necessary.

Security: The *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.

2. From the **Web Service > View URLs** related actions menu of the report, select an expense report print run to construct sample data for the custom report design.

- a) Select **Workday XML > REST > Workday XML**.

If prompted, enter your sign-in credentials.

Use the **Save Page As** browser option to save the file with an *.XML* extension to your local drive.

- b) Select **Workday XML > XSD > XSD**.

Use the **Save Page As** browser option to save the file with an *.XSD* extension to your local drive.

This option saves the schema for expense reports you'll generate from your custom report.

Security: The *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.

3. Sign into Workday Studio and create a report design project and data source with your XML and XSD files.
4. [Create Custom Business Form Layouts for Expense Reports](#) on page 1806.
5. (Optional) [Include a Logo and Attachment Page on Expense Report Printouts](#) on page 1806.
6. (Optional) [Include Messages in Expense Report Print Layouts](#) on page 1807.

### Result

Your custom Workday Studio layout is available for printing expense reports.

### Next Steps

From the related actions menu of the expense report, select **Expense Report > Print** to print expense reports.

### Related Information

## Create Custom Business Form Layouts for Expense Reports

### Context

Workday delivers a standard business form layout for expense reports called *Printable Expense Report*. If the Workday-delivered business form layout doesn't meet your needs, you can customize your own layout.

### Steps

1. Create your own XSL stylesheet or design a business form layout using Report Designer. Report Designer is available from Workday Studio and is a layout tool that enables you to define the placement of lines and boxes on the expense report.
2. Customize your business form layout.
  - a) Access the **Create Business Form Layout** task.
  - b) Select the **Active** check box.
  - c) In the **Resulting Document Expiration Offset (in days)** field, enter the number of days to retain expense reports before they expire. The maximum value allowed is 25,000 days.
  - Note:** Ensure that the expiration offset you specify here complies with your organization's document retention policy. Workday automatically deletes documents after the offset number of days. You can't recover these documents.
  - d) Select a business form layout from one of these prompts:
    - *XSL Attachment*
    - *Report Design*
  - e) Select or create a **Custom Report**.
  - f) Add *company\_logo* for the **Token Name**. You can find this token in your XSL stylesheet or Report Designer business form layout.
3. Select the **Configure** related action and upload the *company\_logo* image token.
4. Associate your custom layout with the print layout of the expense report.
  - a) Access either of the **Create Expense Report Print Layout** or **Edit Expense Report Print Layout** tasks.
  - b) Select an option from the **Business Form Layout** prompt.
  - c) Select the **Include Company Logo** and **Include Receipt Attachment Page** check boxes.
5. (Optional) Include financial messages for *Expense Report* business documents.

### Result

When workers print expense reports, we use the business form layout you've customized instead of the Workday-delivered layout.

Use the **View Business Form Layout** report to view the tokens used in a specific customized business form layout.

### Related Information

#### Tasks

[Create a Business Form Layout in Workday Studio](#)

[Upload a Business Form Layout and Attach It to a Custom Report](#)

## Include a Logo and Attachment Page on Expense Report Printouts

### Context

You can add your company logo to an expense report layout to:

- Display on expense reports that you print in PDF format.

- Include attachment pages for expense transaction receipts.

If you have multiple companies that use different logos, you can customize multiple business form layouts.

## Steps

1. Access the **View Delivered Business Form Layout** report.
2. Select the *Expense Report Printing Form* business form layout or a custom layout.
3. Select **Business Form Layout > Configure** from the related actions menu on a delivered business form layout.
4. Upload an image for the company logo.
5. Access the **Create Expense Report Print Layout** task.
6. Select or create a **Business Form Layout**.
7. Select the **Include Company Logo** and **Include Receipt Attachment Page** check boxes.
8. (Optional) Select or create expense report messages to include in PDF expense report files.

## Result

When workers print expense reports as PDF files, Workday includes the company logo and attachment page.

## Next Steps

Approvers can select **Review Expense Report > View Printable Version** from the related actions menu of an expense report to print it.

## Include Messages in Expense Report Print Layouts

### Prerequisites

Security: Set Up: *Financial Messages* domain in the Common Financial Management functional area.

### Context

You can create, edit, or delete messages, alerts, and instructions to include them in the expense reports you print in PDF format.

## Steps

1. Access the **Maintain Financial Message** task.

You can also create expense report messages on these tasks, when you're creating print layouts for expense reports:

- **Create Expense Report Print Layout**
- **Edit Expense Report Print Layout**

2. In the **Restrict Type to** field, select *Expense Reports*.

If you don't select an option from the **Restrict Type to** list, the message can be selected for all documents that support messages. Examples:

- Customer statements.
- Purchase orders.
- Supplier contracts.

3. Specify the **Financial Message Name**.

4. Enter the **Financial Message**.

Example: *Please submit receipts to the expenses processing department.*

## Result

You can use messages on the print layouts you create for expense reports.

## Next Steps

To save a PDF version of your expense report, select **Expense Report > Print** from the related actions menu on the expense report.

# Create Expense Report Print Layouts

## Prerequisites

- To include images for a company logo, customize the Workday-delivered business form layout.
- Security: *Set Up: Expenses Processing* domain in the Expenses functional area.

## Context

You can define layouts for printed PDF expense reports.

## Steps

1. Access the **Create Expense Report Print Layout** task.
2. Select 1 or more companies.  
Each company can only have 1 expense report print layout.
3. If you require more flexibility than the delivered expense report print layout, use a **Custom Business Form Layout**.
4. (Optional) Select **Include Company Logo** and **Include Receipt Attachment Page**.  
The company logo generates from the Workday-delivered expense report layout or custom layout you optionally used.  
Workday automatically includes quick expense receipts to the expense reports attachment page, and workers can import scanned receipt images for .PNG, .JPEG, .GIF, and .BMP file types.
5. (Optional) Select or create financial messages.  
Financial messages display on each expense report you generate with this layout. You can include up to 3 financial messages.

## Result

Workday automatically uses the print layout when workers:

- Select the **Print** related actions menu item of the expense report.
- Print when viewing an expense report.

Workday doesn't use the custom print layout when workers print expense reports from the preview window of an expense report.

## Next Steps

Create expense reports.

## Related Information

## Managing Expense Reports

---

### Steps: Manage Expense Reports

#### Prerequisites

- Create expense items.
- Set up expense reports.
- Set up payment election rules for expense reimbursement payments.
- Set up intercompany processing for expense reports to change the company on the line or itemization.

#### Context

To capture and report on spend for all incurred expenses, you can create expense reports on behalf of:

- Candidates.
- Guests.
- Pre-hires.
- Students.
- Visitors.
- Workers.

#### Steps

1. Create expense reports.
  - [Create Expense Reports](#) on page 1811
  - [Steps: Create Expense Reports for Nonworkers](#)
  - [Create Expense Reports for Pre-Hires](#) on page 1813
2. [Create Expense Lines](#) on page 1816.
3. (Optional) [Itemize Expense Lines](#) on page 1821.

#### Result

For multicurrency expense reports, the total is the sum of all **Converted Amount** values.

Workday automatically creates operational journals in the company currency for approved transactions.

When transaction and company currencies differ, Workday converts the amounts to the company currency.

#### Next Steps

- Review budget dates on expense report lines when you configure budget checking for expense reports and spend authorizations.

- Settle the approved expense reports.

The settlement process creates and settles the expense transactions. When the process completes, Workday updates the accounting entries for each transaction.

- Print expense report PDFs by selecting **Print** from the related actions menu of the expense report.
- (Optional) To recover worker reimbursable payments, access the **Create Expense Receivable Repayment** task. When you recover a repayment, Workday generates the accounting but you must manually enter the generated accounting journal entries.
- (Optional) Attach business documents to the approved expense report.

## Create Expense Reports

### Prerequisites

Configure the *Expense Report Event* business process and security policy in the Expenses functional area.

### Context

You can enable workers to create expense reports:

- For themselves, including expense reports for specific positions if they hold more than 1 position.
- On behalf of other workers, including workers who hold more than 1 position.

### Steps

- Access 1 of these tasks:

- Create Expense Report.**
- Create Expense Report for Worker.**

- As you complete the task, consider:

Option	Description
<b>Expense Report For</b>	In the <b>Create Expense Report</b> task, you can only modify this field when you have permission to create expense reports for another worker.
<b>Creation Options</b>	Workday doesn't copy: <ul style="list-style-type: none"> <li>Attachments</li> <li>Expense itemizations</li> <li>Quick expenses</li> <li>Travel booking records</li> </ul>
<b>Position</b>	Displays when you: <ul style="list-style-type: none"> <li>Enable expense reporting for workers with multiple positions.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Select a worker with multiple positions from the:           <ul style="list-style-type: none"> <li><b>Pay To</b> prompt in the <b>Create Expense Report</b> task.</li> <li><b>Expense Report For</b> prompt in the <b>Create Expense Report for Worker</b> task.</li> </ul> </li> </ul>
<b>Company on Expense Line</b>	<p>Available only if your company enables intercompany processing for expense reports.</p> <p>Workday populates with the name of the company that you specify for the worker on the expense report header.</p> <p>Select a different company to expense individual expense lines and itemizations.</p> <p>You can select only from companies that have an intercompany profile with the header company. You can't select a different company if the expense report has:</p> <ul style="list-style-type: none"> <li>A linked spend authorization.</li> <li>Commitment accounting.</li> </ul>
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p>
<b>Reimbursement Payment Type</b>	<p>Workday bases the reimbursement payment type on the expense payment elections for an expense payee.</p> <p>If an expense payee doesn't configure payment elections, Workday populates the reimbursement payment type based on the payment elections defined by your company.</p>
<b>Final Expense Report for Spend Authorization</b>	<p>Select to close the spend authorization after you settle all linked expense reports.</p> <p>Workday doesn't close the spend authorization when there's an outstanding cash advance associated with it.</p> <p>You can only link spend authorization lines when the expense report isn't the final expense report for the spend authorization.</p> <p>When you enable commitment accounting, Workday liquidates the remaining commitment balance on the spend authorization.</p>

- (Optional) On the **Header** tab, edit the expense report header details.

## Next Steps

- Create and itemize expense report lines.
- Set up your custom reports to display worker positions by configuring the **Worker Position on Expense Report** field on the Expense Report business object (secured to the *Public Reporting Items* domain).

## Create Expense Reports for Pre-Hires

### Prerequisites

Configure:

- Payment elections for pre-hires.
- The *Expense Report Event* business process and security policy in the Expenses functional area.

### Context

You can create expense reports on behalf of pre-hires to detail the expenses that they incur.

### Steps

1. Access the **Create Expense Report for Pre-Hire** task.
2. As you complete the task, consider:

Option	Description
<b>Considered for</b>	If the position that the pre-hire is under consideration for is on their Workday profile, we populate this prompt. You can use the <b>Edit Pre-Hire Profile</b> task to add positions.
<b>Worktags</b>	Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.
<b>Copy Previous Expense Report</b>	Workday doesn't copy expense itemizations or attachments.
<b>Reimbursement Payment Type</b>	Workday populates the reimbursement payment type based on the expense payment elections that you configure for the expense payee.

Option	Description
	<p>If you don't configure payment elections for an expense payee, Workday uses the payment elections defined for your company.</p> <p>Select payment types with a payment method of <b>Check</b> or <b>Manual</b>.</p>

3. (Optional) On the **Header** tab, edit the header details for the expense report.

### Next Steps

Create and itemize expense report lines.

#### Related Information

##### Tasks

[Steps: Set Up Expense Items](#) on page 1754

[Itemize Hotel Expenses](#) on page 1767

## Steps: Create Expense Reports for Nonworkers

### Prerequisites

- Configure the *Expense Report Event* business process and security policy in the Expenses functional area.
- Enable workers to create expense reports on behalf of nonworkers.

### Context

You can create expense reports on behalf of these nonworker types to reimburse them for incurred expenses:

- Candidates
- External committee members (ECMs)
- Students

### Steps

- [../../../../financial-management/expenses/payment-elections/dan1370797015134.dita](#).

Add the *Expense Payments* option on payment elections for nonworkers.

- Access the **Create Expense Report for Non-Worker** task.

As you complete the task, consider:

Option	Description
<b>Payee Type</b>	<p>Workday displays these options when you don't enable segmented security:</p> <ul style="list-style-type: none"> <li><i>Candidate</i></li> <li><i>External Committee Member</i></li> <li><i>Student</i></li> </ul> <p>When you enable segmented security, you can select only the nonworker types for which you have access.</p>
<b>Pay To</b>	<p>You need the adequate security permissions to select specific nonworkers from this prompt.</p>

Option	Description
	You can enter unique student IDs to ensure that you select the correct student.
<b>Committee</b>	<p>Workday displays this prompt when you select <i>External Committee Member</i> as the payee type.</p> <p>When ECMS have:</p> <ul style="list-style-type: none"> <li>• One associated committee, Workday populates this prompt automatically.</li> <li>• Multiple committees, you can select a committee manually.</li> </ul>
<b>Job Application</b>	<p>Workday displays this prompt when you select <i>Candidate</i> as the payee type.</p> <p>When candidates have:</p> <ul style="list-style-type: none"> <li>• One associated job application, Workday populates this prompt and any related worktags automatically. This functionality doesn't apply to evergreen job requisitions.</li> <li>• Multiple job applications, you can select a job application manually.</li> </ul>
<b>Creation Options</b>	<p>Workday doesn't copy:</p> <ul style="list-style-type: none"> <li>• Attachments.</li> <li>• Expense itemizations.</li> <li>• Quick expenses.</li> </ul>
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p>
<b>Credit Card Transactions</b>	<p>Select the reassigned expense credit card transactions that you want to include on the expense report.</p>

## Next Steps

Create a manual settlement run or schedule an automatic settlement run to settle expense reimbursements.

## Create Expense Lines

### Prerequisites

- Create expense items.
- Create expense reports for worker, nonworker, or pre-hire.
- Configure the *Expense Report Event* business process and security policy in the Expenses functional area.

### Context

When you create expense lines, you can specify details and attach files and mobile images to support expense transactions.

### Steps

1. Access the expense report to which you want to add lines.
2. From the **Expense Lines** tab, click **Add** to select the type of expense to include on the expense line.
3. (Optional) Add attachments to expense lines.
4. As you complete the task, consider:

Option	Description
<b>Currency Rate</b>	<p>Available only when you change the currency. Workday uses the most recent currency exchange rate for the currency rate type. You can manually override the populated currency rate.</p> <p>If you download the line details from an electronic credit card transaction, Workday uses the exchange rate from the transaction for the expense line.</p>
<b>Converted Amount</b>	<p>Available only when you change the currency. The <b>Converted Amount</b> is the reimbursable amount in the converted currency. Workday multiplies the <b>Total Amount</b> by the <b>Currency Rate</b>.</p> <p>Workday uses the configured <b>Default Currency</b> from the tenant instead of <b>Currency Rate</b> to calculate the reimbursable amount if you:</p> <ul style="list-style-type: none"> <li>• Overwrite the currency rate.</li> <li>• Configure a <i>Maximum Amount</i> value on an expense rate table.</li> </ul>
<b>Company</b>	<p>Available only if your company enables intercompany processing for expense reports. Select a different company than the company on the header to expense the line to.</p> <p>You can't change the <b>Company</b> if:</p> <ul style="list-style-type: none"> <li>• The expense line is a personal expense.</li> <li>• The expense report has a linked spend authorization or commitment accounting.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>The <b>Company</b> has an associated Capital Project worktag.</li> </ul>
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p> <p>If enabled for the expense item, you can manually override the related worktags and select from a list of configured values.</p> <p>For billable expenses, you can select worktags to associate it with, such as a project or customer.</p>
<b>Item Details</b>	<p>When entering multiple lines on an expense item rate table with accumulators, Workday accumulates amounts from the rate table lines and adds them to the expense item total.</p>
<b>Tax Code</b>	<p>Available only when you select the <b>Enable Tax</b> check box.</p> <p>Workday uses the tax rules you define for a country to populate the tax code based on either the <b>Travel Region</b> or <b>Country</b>. Change the tax code when necessary to ensure the right tax amount for the line and match the receipt.</p> <p>If the selected item doesn't include the travel region or country attribute, manually select the tax code.</p>
<b>Tax Amount</b>	<p>Available only when you select the <b>Enable Tax</b> check box.</p> <p>Workday uses the <b>Total Amount</b> to calculate tax based on the tax code and tax applicability associated with the expense item.</p> <p>The <b>Total Amount</b> and the <b>Tax Code</b> determine the <b>Tax Amount</b> on the expense line.</p> <p>If the <b>Tax Amount</b> doesn't match the receipt, the reviewer can correct it.</p>
<b>Billable</b>	<p>Select if the expense line is billable to a project or customer.</p>

## Result

When you create a new expense line or click out of the current line, Workday:

- Saves the current expense line details.
- Updates the expense report header totals and saves it.

## Next Steps

Itemize expense report lines.

## Steps: Set Up Recommendations and Defaulting for Expense Items on Scanned Receipts

### Prerequisites

- [Create Expense Lines](#).
- **Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:
  1. Select your profile avatar on [Workday Community](#).
  2. Select **Profile**.
  3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
  4. View your **Subscription Service Agreement** value.

If the value is:

- UMSA, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- MSA, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

### Context

You can enable machine learning defaulting and recommendations for expense items on scanned receipts.

The machine learning model recommends expense items based on frequently and recently used expense items. It also recommends expense items based on these values from scanned receipts:

- Amount
- Currency
- Expense Date
- Merchant

Recommendations and defaulting for expense items is available for these users:

- Self-service
- On-behalf of users
- Delegates

Defaulting and recommendations streamline the expense report submission process and reduce the number of miscategorized expense items.

### Steps

#### 1. [Enable Innovation Service Features and Machine Learning Data Contributions](#).

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

**2. Access the **Edit Tenant Setup - Machine Learning** task.**

Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

**3. [Set Up Receipt Scanning for Expenses](#).**

**4. Access the **Maintain Machine Learning Prompt Recommendations** task.**

a) On the initiation page, select the *Expenses* product area.

b) In the Expenses grid, select the **Expense Item for Scanned Receipts** check box.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

## Result

When machine learning has a high confidence level, Workday automatically defaults expense items on scanned receipts. Expense submitters can view the defaulted expense item in the:

- Expense Item prompt from scanned receipts.
- Expense line linked to a quick expense.

Workday displays recommendations for the **Expense Item** prompt to expense submitters. They can view recommendations in the:

- Recommended folder.
- Pills under the **Expense Item** prompt.

## Next Steps

Expense administrators can use the **ML Defaulted Expense Item** report field to view machine learning defaulted expense items associated with expense lines.

#### Reference

[2023R2 What's New Post: Intelligent Recommendations and Defaulting for Expense Items](#)

## Steps: Set Up Recommendations and Defaulting for Expense Items on Credit Card Transactions

### Prerequisites

- [Create Expense Items](#)
- **Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:
  1. Select your profile avatar on [Workday Community](#).
  2. Select **Profile**.
  3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
  4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

## Context

You can enable machine learning defaulting and recommendations for expense items on credit card transactions. The machine learning inference only happens at credit card transaction load time. If you're testing based on loaded transactions before the model implemented, you won't see any recommendations.

The machine learning model defaults expense items or displays recommendations on expense lines built out of these fields from credit card transactions:

- Amount
- Currency
- Merchant
- Merchant Category Code
- Payee
- Transaction Date

Recommendations and defaulting for expense items is available for these users:

- Self-service
- On-behalf of users
- Delegates

Defaulting and recommendations streamline the expense report submission process and reduce the number of miscategorized expense items.

## Steps

### 1. Enable Innovation Services Features and Machine Learning Data Contributions

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

### 2. Access the **Edit Tenant Setup - Machine Learning** task.

Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

### 3. Access the **Maintain Machine Learning Prompt Recommendations** task.

a) On the initiation page, select the *Expenses* product area.

b) In the *Expenses* grid, select the **Expense Item for Credit Card Transactions** check box.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

## Result

When machine learning has a high confidence level, Workday automatically defaults expense items on credit card transactions. Expense submitters can view the defaulted expense item in the expense lines. They can view recommendations in the pills under the **Expense Item** prompt.

Workday now prioritizes this order when determining expense items on expense reports:

- Manually entered or updated expense item on expense line
- Defaulted expense item by machine learning on credit card transaction
- Defaulted expense item by mappings from merchant category codes
- Manually entered expense item on quick expense by expense submitter
- Defaulted expense item by machine learning on quick expense

## Next Steps

Expense administrators can use the **ML Defaulted Expense Item** report field to view machine learning defaulted expense items associated with expense lines.

## Related Information

### Reference

[2023R2 What's New Post: Intelligent Recommendations and Defaulting for Expense Items](#)

## Itemize Expense Lines

### Prerequisites

- Create expense report lines.
- Configure the *Expense Report Event* business process and security policy in the Expenses functional area.

### Context

You can itemize expense lines to include and track more detailed costs.

### Steps

1. Access the expense report to which you want to add lines.
2. As you complete the **Itemization** section, consider:

Option	Description
<b>Per Unit Amount</b>	Enter the amount for 1 unit in this itemization if this field is enterable. You can enter different amounts in each itemization.
<b>Tax Amount</b>	For expense reports with VAT, Workday calculates the tax amount from the tax code and tax applicability for the expense item.
<b>Personal</b>	Workday deducts personal expenses from the reimbursement total on the expense report header.
<b>Company</b>	Available only if your company enables intercompany processing for expense reports. Select a different company than the company on the header to expense the itemization to. You can't change the <b>Company</b> if: <ul style="list-style-type: none"> <li>• The itemization is a personal expense.</li> <li>• The expense report has a linked spend authorization or commitment accounting.</li> <li>• The <b>Company</b> has an associated Capital Project worktag.</li> </ul>
<b>Worktags</b>	Select worktags to account for this itemization separately from the other line itemizations, such as business units, customers, and cost centers. For billable expenses, you can select worktags to associate it with, such as a project or customer.
<b>Tax Code</b>	For expense reports with VAT, Workday populates the tax code from the <b>Travel Country</b> . If the expense item doesn't include the travel

Option	Description
	country attribute, select the tax code for each itemization.
<b>Total Amount</b>	Workday multiplies the quantity by the per unit amount to calculate the total amount.
<b>Billable</b>	Select if the itemization line is billable to a project or customer.

Click **Add** to include additional itemizations.

The itemization fields use the required attributes for the expense item. Example: The *Meals w/Guests* expense item requires entries for the **Attendees** and **Number of Persons** fields.

## Result

Workday displays certain expense line details, such as **Worktags**, on the itemization line to track the granular details at the itemization level. To view all itemization details of the expense line, click **Edit** or **View Details** in the **Itemization** section.

Workday drives the accounting from the expense line itemizations instead of the expense lines to provide greater visibility when:

- Generating reports.
- Reviewing spend analytics.

## Example

A hotel bill contains nonreimbursable items, such as a gift shop purchase. You can itemize the gift shop transaction on the hotel bill and separate personal amounts from reimbursable expenses.

Your airfare expense for business travel includes a conference site visit and a sales presentation. Your organization has 2 separate cost centers for these expense types, so you:

- Use 2 itemizations for the line.
- Select the appropriate worktags for each itemization line.

## Correct Approved Expense Reports

### Prerequisites

- Configure the *Expense Report Event* business process and security policy in the Expenses functional area. Add **Security Groups** to the **Correct** action.
- Security: Process: *Expense Report - Reporting* domain in the Expenses functional area.

### Context

You can correct expense reports after you approve them. When you correct expense reports, you can change worktags, item categorizations, or other details that don't alter the total amount of the expense report or line. If you need to reallocate an expense line amount, you can itemize the line.

### Steps

1. Access the **Find Expense Reports** report.
2. Open the expense report you want to correct.

3. On the **Business Process** tab, select **Business Process > Correct** from the related actions menu of the *Expense Report Event* business process.

You can't correct an expense report if:

- It's paid and you've enabled worktag balancing.
- There's a negative reimbursable balance recovered from an approved expense report.
- The expense tax details are on a tax declaration. To correct the expense report, cancel the tax declaration and then delete the tax declaration.
- It's used in project billing transactions that have a billing status of *Ready to Bill*.

4. Select the expense report line and make the necessary corrections.

## Result

The report saves the changes but doesn't repeat the approval process.

## Related Information

### Tasks

[Create Expense Reports](#) on page 1811

## Concept: Currencies on Expense Reports

The currency that Workday uses on expense reports depends on the:

- Company currency.
- Preferred currency of the worker.
- Entry currency.
- Billing currency.

### Company Currency

Workday uses the company currency that's set up for expense reports to reimburse the worker.

### Preferred Currency of Worker

When the company currency differs from the payment election currency for a worker, Workday reimburses the worker using their preferred currency.

You can set the preferred reimbursement currency for a worker, while workers can also change their payment election currency through self-service transactions.

Examples:

- A US company with an office in Ireland wants to reimburse expenses to Irish employees in EUR, not USD.
- A European company sends workers to Japan on temporary assignment. For the duration of their assignment, the workers can change their payment election currency to JPY.

### Entry Currency

The entry currency is the currency that the expense occurs in and Workday converts it to the default reimbursement currency of the expense report. On multicurrency expense reports, you can override this currency on each expense report line.

When the entry currency differs from the reimbursement currency, Workday converts the amount to the reimbursement currency using the default rate. You can override the rate and reimbursement amount for each expense report line.

Example: Suzanne is a US-based worker and you typically reimburse her in USD. She takes a business trip to Sydney, Australia, and exchanges USD for AUD at Sydney Airport. She then charges her hotel to her personal credit card. For accurate reimbursement in USD, Suzanne can:

- Enter an AUD expense line amount that Workday converts to USD.
- Manually enter the USD amount.

Suzanne might want to use the:

- Currency exchange rate that was in effect at the time of the exchange.
- The USD amount that displays on her credit card statement.

### Billing Currency

The billing currency is the currency that the credit card company uses to bill your company. For credit card transactions that you add to an expense report, Workday converts the billing currency to the reimbursement currency when the currencies differ.

If the billing currency is the same as the reimbursement currency, Workday uses the billing amount as the reimbursement amount and you can't change it. If the billing currency and the reimbursement currency differ, you can override the reimbursement amount.

[Steps: Set Up Currencies](#)

## Concept: Expense Report Workflow

### Submit Expense Reports

Workers can create, edit, and submit expense reports. With proper security, Managers can also create and submit expense reports on behalf of pre-hires, other workers, and nonworkers. Workday enables you to change expense reports until they're paid or pending payment. These roles perform different actions on expense reports:

Role	Action	Description
Workers	Creates or edits expense reports.	Workers can create or edit expense reports.
Expense Data Entry Specialists	Creates expense reports for workers.	This role can create expense reports on behalf of other workers.  Expense Data Entry Specialists can override a worker's payment election for expenses.
Expense Data Entry Specialists HR Partners Managers Recruiters	Creates expense reports for candidates or pre-hires.	These roles can create expense reports for candidates or pre-hires, depending on the: <ul style="list-style-type: none"> <li>• Security access that you configure.</li> <li>• Supervisory organizations that candidates or pre-hires are in consideration for.</li> </ul>
Expense Data Entry Specialists HR Partners Managers	Creates expense reports for nonworkers.	These roles can create expense reports for nonworkers depending on whether they have view and update access to data for: <ul style="list-style-type: none"> <li>• Candidates.</li> </ul>

Role	Action	Description
		<ul style="list-style-type: none"> <li>External committee members.</li> <li>Students.</li> </ul>

### Review, Approve, or Deny Expense Reports

Once you submit expense reports, Workday routes the expense report to managers for review and approval. When you configure your *Expense Report Event* business process with:

- Send back lines steps, managers can approve or deny individual lines on expense reports.
- Review or approve steps, managers can approve or deny entire expense reports.

When you:

- Send back individual lines, Workday creates and routes the child expense report with the sent back lines to the initiator for correction and resubmission. The parent expense report, with the approved lines, moves on in the business process until final approval.
- Send back expense reports, Workday routes the expense reports back to the initiator for correction and resubmission.
- Deny expense reports, the business process ends, and workers must create new expense reports for submission.

### Pay Expense Report

Expense settlement specialists can pay approved expense reports using Workday settlements.

Workday determines how workers receive payment for an expense report based on their payment elections. Workday displays the type of payment that you specify as **Payment Type** in all the Pay Expense Report pages. The default payment method for paying expense reports is **Check**.

## Concept: Expense Management Dashboard

The Expense Management Dashboard (secured to the *Management Dashboard: Expenses* domain in the System functional area) enables you to view and drill into information on expenses for your organization. The dashboard also gives you direct access to frequently used expense tasks and reports.

Workday delivers these reports in the Expense Management Dashboard:

- Average Expense Cycle Times
- Average Expense Report Total
- Expenses by Cost Center
- Expenses for My Organizations
- Expense Item Trend
- Top Expense Items

You can add the Expense Management Dashboard as a worklet to your Home page for quick access. From the dashboard, you can also select and organize the reports to display.

### Reference: Expense Report Statuses

This table describes the different statuses for an expense report.

Status	Description
<i>Draft</i>	<p>The worker creates an expense report but hasn't submitted it yet.</p> <p>You can use the <b>Edit Expense Report</b> task to update expense reports in this status.</p>
<i>In Progress</i>	<p>The worker creates and submits an expense report but the final approver has yet to approve or deny it.</p>
<i>Approved</i>	<p>The final approver approves the submitted expense report but the expense report is awaiting settlement.</p>
<i>Canceled</i>	<p>The reviewer or approver cancels or denies the expense report, or the worker cancels it. The worker can cancel the expense report until it reaches <i>Approved</i> status.</p>

## FAQ: Expense Reports

- How do I cancel an expense report?
- How do I change an expense report?
- I can't submit my expense report because another worker imported the same credit card transaction on their expense report. How can I correct this issue?
- I receive errors when completing an expense report in 2 different browsers simultaneously. How can I resolve these errors?
- I received an expense report error describing an issue with currency conversion rates. How can I resolve this error?

### How do I cancel an expense report?

To cancel an expense report, select **Expense Report > Cancel** from the related actions menu of the expense report. Canceling an expense report is irreversible.

You can't cancel an expense report if it:

- Has a payment applied to it.
- Has a tax declaration associated with it.
- Is associated with an in-progress or unapproved *Project Transaction Adjustment Event* business process.

### How do I change an expense report?

To change an expense report, select **Expense Report > Change** from the related actions menu of the expense report. The *Expense Report Event* business process restarts and the expense report returns to the initiator. When the initiator resubmits the expense report, it goes through the business process again.

You can't change an expense report if it:

- Has a payment or pending payment applied to it.
- Has a tax declaration associated with it.
- Is associated with an in-progress or unapproved *Project Transaction Adjustment Event* business process.

**I can't submit my expense report because another worker imported the same credit card transaction on their expense report. How can I correct this issue?**

When the other worker saves their expense report, Workday recognizes the downloaded transaction on your report as a duplicate when you try to submit it. To resolve this issue:

- Remove the credit card transaction from your expense report before submitting it, or
- The other worker must remove the credit card transaction and save their expense report again.

**I receive errors when completing an expense report in 2 different browsers simultaneously. How can I resolve these errors?**

We recommend using only 1 browser while creating and editing expense reports. Working in multiple browsers simultaneously can cause conflicts when saving expense reports.

**I received an expense report error describing an issue with currency conversion rates. How can I resolve this error?**

Workday uses the allowance plan currency as the source currency for conversion rates. Access the **Maintain Currency Conversion Rates** task and set conversion rates against the relevant currencies to enable you to submit the expense report.

#### Related Information Tasks

[Steps: Set Up Expense Reports](#) on page 1788

[Steps: Manage Expense Reports](#) on page 1810

## Troubleshooting: Calculated Field Errors on Expense Reports

When Workday can't populate a calculated field on an expense report, we display an error message that prevents the worker from completing it. When the worker exits the expense report, they can't access it again until you correct the error.

**Cause:** The expense report contains expense lines that have calculated fields with incorrect configurations.

The error messages that Workday displays might describe issues such as:

- A currency type that doesn't currently exist in Workday.
- An unavailable currency conversion rate.
- Prompts returning with no values.

#### Solution:

**Note:** We recommend that you test and verify calculated field changes in your Sandbox tenant.

#### Steps

1. Access the **Find Expense Reports** report.

Identify the expense report you want to fix.

Security: *Process: Expense Reports - Reporting* domain in the Expenses functional area.

2. Access the **Maintain Custom Validations** report.

Select the *Expense Report* transaction type, and click **Test Validations**.

From the **Expense Report** prompt, select the expense report you want to fix.

From the error message that displays, note the calculated field that's in error.

Security: *Set Up: Custom Validations* domain in 1 of these functional areas:

- Common Financial Management
- System

### 3. Access the **View Calculated Field** report.

Select the calculated field that you identified from the error message.

From the related actions menu, select **Calculated Field > Edit** and use the configuration options that display to update the calculated field to resolve its error.

Examples:

- Add a currency conversion.
- Select the **Return Zero on Error** check box so Workday can automatically populate a zero value on blank calculated fields.

Security: One of these domains in the System functional area:

- *Custom Field Management*
- *Custom Report Creation*

---

## Expense Protect

### Concept: Expense Protect

Expense Protect uses machine learning to assess expense report lines and provide risk levels and insights, enabling you to identify problematic expenses. Expense Protect uses historical data patterns to identify trends, develop expense insights, and continuously refine the machine learning model for further improvements.

Expense Protect only evaluates expense items with 50 or more lines in their record.

Expense Protect can help reduce the number of expense reports you need to review manually to expedite:

- Approvals.
- Reimbursements.
- Settlements.

**Note:** You need at least 10,000 submitted expense report lines in your tenant to enable Expense Protect. When you select a country to exclude from data collection, Expense Protect isn't available for expense reports of payees in that country. This can also result in an insufficient number of required expense reports.

### Risk Scores

Expense Protect uses risk scores as the basis for a risk evaluation. These values lie between 0-100. These scores help identify anomalous expense report lines in expense reports that aren't in *Draft* status. When you submit an expense report, Expense Protect assigns a risk score to each expense report line. After evaluating all scores, it assigns the highest risk score to the expense report level.

The risk score indicates how anomalous the expense report is relative to all other expense reports in your organization. Example: The predicted amount for air travel to India is 2,420 USD. An employee submits an expense report for 9,782 USD. Expense Protect detects a deviation in the expense report compared to 95% of similar expense reports in your organization. Expense Protect then assigns a risk score of 95 to the expense report.

To identify anomalous expense reports, you can build custom reports using these report fields on the Expense Report Line business object:

- **Duplicate Expense from Expense Protect**
- **Risk Score**
- **Risk Score for Amount Anomaly**
- **Risk Score for Duplicate Expense**
- **Risk Score for Incorrect Expense Item**

- **Suggested Expense Item**

Expense Protect uses these models:

- Amount Anomaly: Predicts an expected amount for a given expense item, compares the expected amount with the data on the expense report, and returns a risk score that reflects the difference between the input amount and the predicted amount.
- Duplicate Expense: Detects duplicate nonitemized expenses against paid and in progress expenses. The machine learning looks back at 6 months worth of expenses (from the Expense Report Date) in your tenant to detect duplicate expenses. It can take 2-3 days for Workday to consider a paid expense report as a duplicate one. Expense Protect evaluates paid expenses with these matching values:
  - Amount
  - Currency
  - Expense Item
  - Expense Date
  - Payee

Expense Protect considers an expense a duplicate if either:

- 1 of the expenses is an out of pocket expense and the other expense has a matching credit card transaction.
- Both expenses are out of pocket expenses.
- Incorrect Expense Items: Compares the probability of the expense item that you select with the probability of alternatives based on the data in the report. Expense Protect returns a risk score that reflects the likelihood that the expense item should change.

## Risk Levels

Risk levels and insights help you identify discrepancies, such as expenses that:

- Aren't compliant with your expense policy based on your tenant's historical data.
- Exceed defined spend thresholds based on your tenant's historical data.

You can configure a display setting for risk levels to help guide your experience based on risk score and the risk threshold for your organization. You can define expense risk levels using risk scores on the **Maintain Expense Risk Level Configuration** task. Workday provides default risk levels and ranges for each model.

Approvers and reviewers can view the expense data that Expense Protect evaluates in these columns on the **Expense Report Work Area** report:

- **Risk Insights**
- **Risk Level**

This information also displays in the expense line details received in My Tasks.

In the **Risk Insights** column, Workday displays 1 or more of these categories for expenses with medium and high risk levels:

- *Amount Anomaly*
- *Duplicate Expense*
- *Incorrect Expense Item*

For incorrect expense items, a recommended expense item displays on the expense line detail in the **Suggested Expense Item** field.

Workday displays a *Pending* risk level when an error occurs while generating a risk score. You can manually regenerate a risk score using the **Generate Risk Score for Expenses** task.

## Related Information

### Reference

- [2022R1 What's New Post: Expense Protect](#)
- [The Next Level: Expense Protect](#)

## Steps: Set Up Expense Protect

### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

### Context

You can use Expense Protect to quickly and more efficiently surface unusual expense reports that need further review. Expense Protect enables you to leverage machine learning and streamline the expense report review process to speed up reimbursement times.

Expense Protect requires a minimum of 2 to 4 weeks to build and train the machine learning service for your tenant before availability. To check Expense Protect availability, values populate in the **Risk Insights** and **Risk Level** columns of the **Expense Report Work Area**

**Note:** Workday recommends testing only in a preview or production tenant.

### Steps

1. [Enable Innovation Services Features and Machine Learning Data](#).

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

When you select a country to exclude from data collection, Expense Protect isn't available for expense reports of payees in that country. This can also result in an insufficient number of required expense reports.

Workday displays a status of *Available* when you can use Expense Protect.

Security: *Manage: Innovation Services* domain in the Innovation Services functional area.

**2. Access the **Edit Tenant Setup - Financials** task.**

Under **Expenses Options**, select the **Enable Expense Protect for Expense Reports** check box.

You can also select the region in which Workday hosts data contributed to the Machine Learning Development Environment (MLDE). The default region for data processing is the U.S.

Security: *Set Up: Tenant Setup - Machine Learning* in the System functional area.

**Note:** Workday requires a minimum of 10,000 submitted expense report lines in your tenant to enable Expense Protect.

**3. [Edit Domain Security Policies](#) .**

Grant security groups permissions to the *Set Up: Expense Protect* domain in the Expenses functional area.

**4. (Optional) [Hide or Require Optional Fields](#).**

Hide or require the **Risk Level** and **Risk Insights** columns in the:

- Grid View.
- Line Details.
- **Expense Report Work Area**.

**Note:** Once you opt in to Expense Protect and machine learning is ready in your tenant, Workday displays the **Risk Insights** and **Risk Level** columns in the **Expense Report Work Area** even if you haven't enabled the *Set Up: Expense Protect* domain.

**5. Access the **Maintain Expense Risk Level Configuration** task.**

Select risk score values for these risk levels:

- Low
- Medium
- High

See [Set Up Expense Risk Levels](#) on page 1832.

**6. (Optional) Access the **Generate Risk Scores for Expenses** task.**

You can queue up in-progress expense reports for assessment, risk scoring, and a data refresh after opting into Expense Protect. Example: You opt in to Expense Protect and want to view **Risk Level** and **Risk Insight** on historical expense reports. You access this task so that Expense Protect can assess historical expense report lines.

Security: *Set Up: Expense Protect* domain in the Expenses functional area.

**7. (Optional) Add the *Wait for Expense Protect Inference* service step to the Expense Report Event business process.**

You can route expense reports based on risk score.

See [Route Expense Reports Based on Risk](#) on page 1833.

## Result

When Expense Protect identifies the risk level on an expense report, you can review, and approve or send back the anomalous expenses.

## Next Steps

Access the **Expense Report Work Area** report to view risk insights and risk levels for expense reports. You need to have access to the *Process: Expense Report Work Area* domain to access the **Expense Report Work Area**. Workday provides 1 of these Workday configured insights:

- *Amount Anomaly*
- *Duplicate Expense*
- *Incorrect Expense Item*

You can also use these report fields based on the Expense Report Line business object to create custom reports:

- **Duplicate Expense from Expense Protect**
- **Risk Score**
- **Risk Score for Amount Anomaly**
- **Risk Score for Duplicate Expense**
- **Risk Score for Incorrect Expense Item**
- **Suggested Expense Item**

#### **Related Information Examples**

[2022R1 What's New Post: Expense Protect](#)

## **Set Up Expense Risk Levels**

### **Prerequisites**

Security: *Set Up: Expense Protect* domain in Expenses functional area.

### **Context**

You can customize Expense Protect risk levels configuration based on your business needs to surface unusual expense reports. You can configure risk levels by:

- **Company**
- **Company Hierarchy**
- **Risk Insight**

Expense Protect identifies expense reports with medium and high risk levels based on your threshold and provides insights, enabling you to identify problematic expenses.

**Note:** Once you opt in to Expense Protect and machine learning is ready in your tenant, Workday displays the **Risk Insights** and **Risk Level** columns in the **Expense Report Work Area** even if you haven't enabled the *Set Up: Expense Protect* domain.

### **Steps**

1. Access the **Maintain Expense Risk Level Configuration** task.
2. In the **Customizable Risk Level Configuration** table, select or enter the:
  - Risk Insight Type
  - Company/Company Hierarchy
  - Risk score values

### **Result**

Expense Protect bases risk insights and risk levels on newly configured risk scores for each **Risk Insight**.

### **Next Steps**

Access the **Expense Report Work Area** to view risk insights and risk levels for expense reports. You can also use these report fields on the Expense Report line business object in custom reports:

- **Duplicate Expense from Expense Protect**
- **Duplicate Expense Risk Score**
- **Risk Score**
- **Risk Score for Amount Anomaly**
- **Risk Score for Incorrect Expense Item**

- Suggested Expense Item

## Route Expense Reports Based on Risk

### Prerequisites

- Set Up Expense Protect.
- Security:
  - Manage: Innovation Services domain in the Innovation Services functional area.
  - These domains in the System functional area:
    - Business Process Administration
    - Manage: Business Process Definitions

### Context

To route expense reports for approval based on their risk score, you can add the *Wait for Expense Protect Inference* service step on the *Expense Report Event* business process.

You can configure condition rules so that the *Expense Report Event* business process:

- Skips approval for low-risk expenses.
- Requires additional approval for high-risk expenses.

**Note:** Configure this functionality only if you plan to route expense reports based on their risk score.

### Steps

1. From the related actions menu of the *Expense Report Event* business process, select **Business Process > Edit Definition**.
2. Add *Wait for Expense Protect Inference* as a service step.

#### Note:

Add this step:

- Immediately after the initiation step and before all review steps.
- Only if you want to route expense reports using condition rules that are based on risk score.

If you also add the *Configure Questionnaire* or *Review Tax* steps, add them after the *Wait for Expense Protect Inference* service step.

3. From the related actions menu of the *Review Expense Report* step, select **Business Process > Create Condition Rule**.
4. Configure a condition rule that's based on risk score.  
Example: You configure a condition rule to skip approval for expense reports that have risk scores between zero and 60, which you determine to be low risk.  
See [Create Business Process Condition Rules](#).
5. From the related actions menu of the *Review Expense Report* step, select **Business Process > Maintain Step Conditions**.  
Add your new condition rule.  
See [Create Business Process Condition Rules](#).

## Troubleshooting: Wait for Expense Protect Inference Service Step

Cause	Solution
<p>There was an issue with scoring and the Expense Report Event business process didn't advance.</p> <p>You notice an expense report didn't advance in the business process.</p>	<p>Security: <i>Business Process Administration</i> domain in the System functional area. Access the Manually advance expense reports:</p> <ol style="list-style-type: none"> <li>Access the <b>Mass Advance Business Process</b> task.</li> <li>Select <b>Expense Report Event</b> for Business Process Type.</li> <li>You can select 1 or more expense reports to advance.</li> </ol>
<p>You added the Configure Questionnaire or Review Tax steps before the Wait for Expense Protect Inference service step.</p>	<p>Security: <i>Business Process Administration</i> domain in the System functional area.</p> <ol style="list-style-type: none"> <li>Edit the business process and add the Configure Questionnaire or Review Tax steps after the Wait for Expense Protect Inference service step.</li> <li>Access the <b>Mass Advance Business Process</b> task to manually advance the <b>Expense Report Event</b> business process.</li> <li>Select <b>Expense Report Event</b> for Business Process Type</li> <li>Select 1 or more expense reports to advance.</li> </ol>

**Cause:**

## Reference: Expense Protect Risk Scores and Risk Levels

### Negative Risk Scores

Expense Protect returns a negative risk score when there's an error.

Risk Score	Risk Level	Description
-1	Pending	The machine learning service might be down.
-2	Pending	There's an error with risk score evaluation.
-3	Not Available	There's a negative amount on the expense report line.
-4	Not Available	Expense Protect doesn't support the currency used on the expense report line.
-5	Not Available	The expense report line needs a credit card transaction to make a risk evaluation.
-6	Not Available	The expense report line is missing data.
-7	Pending	There's an error with risk score evaluation.

-8	<i>Not Available</i>	The machine learning model doesn't have enough training data for the expense item in your tenant.
-9	<i>Not Available</i>	The machine learning model doesn't evaluate personal expenses.

### Risk Levels

You can't configure *Pending* and *Not Available* risk levels. Access the **Generate Risk Scores for Expenses** task to reevaluate only expense reports with -1 or -7 risk scores.

## Spend Authorizations

---

### Setup Considerations: Spend Authorizations

You can use this topic to help make decisions when planning your configuration and use of spend authorizations. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Spend authorizations are expense transactions that payees can use to request preapproval of estimated expenses. Based on the expense items that payees select, they can enter:

- Anticipated spend dates.
- Descriptions.
- Estimated amounts.
- Spend authorization lines.

### Business Benefits

- Eliminate the need to collect expense information outside of Workday by adding questionnaires on spend authorizations.
- Forecast future expenses by using commitment accounting for approved spend authorizations.
- Increase spend control and improve expense policy compliance using preapproval.
- Provide payees with greater flexibility to manage their travel expenses.
- View accurate budget balances by tracking commitment amounts and outstanding cash advance amounts.

### Use Cases

- Create spend authorizations on behalf of other workers and external committee members, such as guest speakers.
- Create cash advance repayments from payments that workers submit to repay outstanding balances.
- Create new expense reports from approved spend authorizations to deduct from approved amounts and cash advances.

- Link spend authorizations with cash advances to expense reports.
- Request approval for estimated travel expenses before trips occur.
- Use 1 spend authorization on multiple expense reports until the spend authorization balance equals zero.

### Questions to Consider

Questions	
What expense information do you want to track?	<p>You can require workers to add lines on their spend authorizations to gather additional expense details for auditing purposes. Unless configured, Workday doesn't require spend authorization lines.</p> <p>You can also configure:</p> <ul style="list-style-type: none"> <li>• Expense item attributes to ensure that payees provide additional information on their spend authorizations.</li> <li>• Rate table-based expense items to ensure that payees provide information that Workday uses to calculate totals for committed spend.</li> <li>• Questionnaires to collect custom survey data from payees.</li> </ul>
How do you want to control and track spend authorization amounts?	<p>To prevent overspending and control liquidation of spend authorization amounts, you can configure:</p> <ul style="list-style-type: none"> <li>• Budget checks to control spend authorization transaction budgetary options and view budget results. Example: You can prevent overbudget transactions.</li> <li>• Commitment accounting to track spend authorization commitment amounts. You can control spend from the originating transaction to the spend authorization. You can also create commitments in their respective ledgers.</li> </ul>

### Recommendations

- Add instructional text on expense items to provide additional information to expense payees to help them complete their spend authorizations.
- To calculate deductions or maximum amounts automatically, configure rate tables for the expense items you want to use on spend authorizations.
- Configure commitment accounting to enable workers to request cash advances on spend authorizations.
- Configure commitment accounting and budget dates to display on your actuals ledger to enable workers to select a budget date on spend authorization lines.
- Display or require expense item attributes on spend authorizations to encourage workers to include additional details at line level.

### Requirements

- Configure payment election rules for companies and payees to determine how to pay workers for their cash advances.
- Configure commitment accounting to generate accounting when workers link spend authorizations to expense lines and liquidate specific spend authorization lines.

- Settle cash advances to enable workers to select spend authorizations on expense reports.

### Limitations

- Payees can't request cash advances and spend authorizations in currencies that differ from their reimbursement currency.
- To prevent accounting inaccuracies, you can cancel and close spend authorizations only under certain conditions. Example: You can't cancel a spend authorization if it's associated with a settlement run that's *In Progress* or *Completed*.
- Workday doesn't generate accounting when you receive cash advance repayments from workers. You need to create separate journal entries using bank deposits or payroll deduction.
- Workday doesn't support travel journals on spend authorizations. When you use per diem expense items on spend authorizations, Workday can't calculate the amounts accurately.
- You can link spend authorization lines to expense report lines only when you enable commitment accounting.
- You can't copy spend authorizations to generate new spend authorizations. Workday only copies spend authorization header details.

### Tenant Setup

You can use the **Edit Tenant Setup - Financials** task to:

- Configure sequence numbers for spend authorizations.
- Enable workers to submit cash advance requests in their spend authorization requests.
- Hide the **Billable** check box on spend authorizations when your organization doesn't bill customers for worker expenses.
- Hide spend authorization options on expense reports when payees don't have spend authorizations.

### Security

These domains in the Expenses functional area:

Domain	Considerations
<i>Manage: Expense Advance Repayment</i>	Enables you to: <ul style="list-style-type: none"> <li>Create cash advance repayments.</li> <li>Access receipt records of an expense advance repayment.</li> </ul>
<i>Process: Expense Report Payment/Settlement</i>	Enables you to: <ul style="list-style-type: none"> <li>Access and settle expense payments.</li> <li>View related settlement reporting.</li> </ul>
<i>Process: Spend Authorization</i>	Enables users with company-based or unconstrained roles to manage spend authorizations and related reporting.  You can also configure subdomains to give users more control over spend authorization actions.
<i>Process: Spend Authorization Mass Close</i>	Enables you to: <ul style="list-style-type: none"> <li>Close multiple spend authorizations at once.</li> <li>Close spend authorizations to prevent further action against them, such as linking to expense report lines, and liquidating remaining balances.</li> </ul>

Domain	Considerations
	<ul style="list-style-type: none"> <li>View related reports for mass close requests.</li> </ul>
<i>Reports: Organization Spend Authorization Reporting</i>	Enables users with organization-based roles to view spend authorizations and spend authorization line reporting.
<i>Self-Service: Spend Authorization</i>	<p>Enables you to:</p> <ul style="list-style-type: none"> <li>Access, edit, and close spend authorization requests.</li> <li>View related reporting for spend authorizations.</li> </ul>

## Business Processes

Business Process	Considerations
<i>Check Budget (Financial)</i>	Configure to review and approve budget check results for spend authorization transactions, such as budget check overages or failures.
<i>Expense Report Event</i>	<p>Configure to include rules for spend authorizations when you want to require additional approval for spend amounts.</p> <p>Example: When the estimated spend authorization is greater than the total amount on the expense report, you can require additional manager approval.</p>
<i>Spend Authorization</i>	<p>Configure to enable employees, data entry specialists, and expense partners to make spend authorization requests.</p> <p>You can configure these additional action steps:</p> <ul style="list-style-type: none"> <li><i>Budget Check</i> to check spend authorization requests against your budget.</li> <li><i>Complete Questionnaire</i> to gather additional information from employees before approval.</li> <li><i>Propose Reimbursable Allowance Plan Assignment</i> to propose an allowance plan for employees who request spend authorizations.</li> </ul>
<i>Spend Authorization Mass Close Event</i>	<p>Configure to:</p> <ul style="list-style-type: none"> <li>Enable expense partners to mass close spend authorizations.</li> <li>Require reviews before approving the mass close spend authorization request.</li> <li>Send custom notifications and alert expense payees about closed spend authorizations.</li> </ul>

## Reporting

Reports	Considerations
<b>Budgetary Balance Report</b>	View spend authorization commitments and actuals for expense reports on your accounting journals.
<b>Find Cash Advances</b>	View cash advance details, including: <ul style="list-style-type: none"> <li>Outstanding and available balances.</li> <li>Related expense reports.</li> <li>Repayment amounts and dates.</li> </ul>
<b>Find Spend Authorizations</b>	Based on spend start and end dates, view spend authorization: <ul style="list-style-type: none"> <li>Remaining balances.</li> <li>Accounting, liquidations, and commitments on linked expense reports.</li> </ul>
<b>Find Spend Authorization Mass Close Requests</b>	View all spend authorizations and their details in each mass close request.

You can use these report data sources to aggregate and filter large volumes of data:

- Cash Advance Payments**
- Cash Advance Repayments**
- Spend Authorizations**
- Spend Authorization Lines**
- Spend Authorization Mass Close Requests**

## Integrations

Web Services	Considerations
<i>Cancel Spend Authorization</i>	Use to cancel spend authorizations when you provide a spend authorization ID.
<i>Get Cash Advance Repayments</i> <i>Put Cash Advance Repayment</i>	Use to: <ul style="list-style-type: none"> <li>Add, update, or submit cash advance repayments.</li> <li>Gather submitted cash advance repayments.</li> </ul>
<i>Get Expense Items</i> <i>Put Expense Item</i>	Use to configure and gather expense items for use on spend authorizations.
<i>Get Spend Authorizations</i>	Use to gather submitted spend authorizations.
<i>Submit Spend Authorization</i>	Use to add, update, and submit spend authorizations.

## Connections and Touchpoints

Features	Considerations
Budgets	You can configure:

Features	Considerations
	<ul style="list-style-type: none"> <li>Budget checks to control spend authorization amounts.</li> <li>Commitments for spend authorizations.</li> </ul> <p>When you use budgets on spend authorizations, you can view generated accounting and journal details such as:</p> <ul style="list-style-type: none"> <li>Budget dates.</li> <li>Commitments and actuals.</li> <li>Reserved budget amounts.</li> </ul>
Financial Accounting	<p>You can configure:</p> <ul style="list-style-type: none"> <li>Accounting posting rules to determine default accounts for cash advance transactions.</li> <li>Balancing worktag rules to keep track of spend across multiple cost centers or funds.</li> <li>Spend authorization journal sources and map them to spend authorization operational transactions.</li> <li>Commitment accounting on ledgers for spend authorization transactions.</li> </ul>
Banking and Settlement	<p>You can:</p> <ul style="list-style-type: none"> <li>Configure the payment category to identify which account to use for cash advance payments.</li> <li>Generate payments for cash advances.</li> </ul>
Travel Profiles	<p>When users configure a hotel or travel country on their travel profiles, Workday:</p> <ul style="list-style-type: none"> <li>Populates the spend authorization lines for expense items that require a hotel or travel country.</li> <li>Provides a <b>Preferred</b> folder for the expense item when you select the expense item for the hotel or travel country.</li> </ul>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Spend Authorizations

### Context

You can enable workers to create and submit spend authorizations to request approval for expenses before they incur them. You can also enable designated workers to create spend authorizations on behalf of nonworkers and other workers.

When you enable commitment accounting, you can link 1 spend authorization to multiple expense reports until the spend authorization balance equals zero.

### Steps

- Configure the *Spend Authorization* business process and security policy in the Expenses functional area.

Add the *Propose Reimbursable Allowance Plan Assignment* action step to propose an allowance plan for employees requesting spend authorization.

See [Steps: Configure Business Process Definitions](#).

- (Optional) Set up budget checking for spend authorizations.

See [Steps: Configure Budget Checking for Spend Transactions](#).

- (Optional) Enable workers to create and submit spend authorizations on behalf of nonworkers and other workers.

See [Enable Business Process Task Delegations](#).

- (Optional) Set up spend authorization routing for workers with multiple positions.

- Access the **Maintain Feature Opt-Ins** report.

Opt in to the **Spend Authorization Routing for Workers with Multiple Positions** feature.

**Note:** To opt in to this feature, you must first opt in to the **Expense Report Routing for Workers with Multiple Positions** feature. If you opt out of the **Expense Report Routing for Workers with Multiple Positions** feature, you also opt out of this feature.

- Access the **Edit Tenant Setup - Financials** task.

To populate the location worktag based on the position you select on the spend authorization header, select **Default Worker Location on Spend Transactions** in the **Procurement Options** section.

- Add workers who create spend authorizations on behalf of other workers to the *Process: Spend Authorizations* domain in the Expenses functional area.

See [Steps: Set Up Security Permissions](#).

- (Optional) Access the **Edit Spend Transaction Instruction** task.

Create instructions to include on spend authorizations for workers.

Security:

- *Set Up: Expenses Processing* in the Expenses functional area.
- *Set Up: Procurement* in the Procurement functional area.

### Next Steps

Configure questionnaires to include them on spend authorizations so you can gather additional data from expense payees.

[The Next Level: Controlling Your Spend with Budget Check on Financial Plans](#)

## Steps: Set Up Cash Advance Requests

### Prerequisites

Configure a *Review* step on the *Spend Authorization* business process.

### Context

You can enable workers to create cash advance requests using a spend authorization. This gives you more options when managing expenses for workers traveling to locations that don't generally accept credit cards.

### Steps

1. Access the **Edit Tenant Setup - Financials** task.

In the **Expenses Options** section, select the **Enable Cash Advances** check box to enable workers to request a cash advance using spend authorizations.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

2. Configure the *Expenses Advance* account posting rule for your company.

The expenses advance account posting rule identifies the ledger account in which to record cash advance transactions.

See [Set Up Account Posting Rules](#) on page 84.

3. Set up a journal source and map it to an operational journal.

- Enter **Cash Advance Payment** as the journal source name and select **Workday Source**.
- Select *Cash Advance Payment* to map it to the **Cash Advance Payment Journal Entry Source**.

See [Steps: Set Up and Update Journal Sources](#) on page 63.

4. [Define Bank Accounts](#) on page 1925.

On the **Edit Bank Account** task, select *Cash Advance Payment* from the **Primary Account Usage** prompt to specify the bank account to use for cash advance payments.

5. (Optional) [Define Settlement Run Custom Filters](#) on page 2135.

On the **Create Settlement Run Custom Filter** task, select *Cash Advance* from the **Payment Source** prompt, and specify additional **Attributes** for this payment source.

6. (Optional) [Define Worktag Balancing Rules for Financial Transactions](#) on page 361.

Create a worktag balancing rule for cash advance transactions. You can either create a new rule or add an existing rule for cash advance transactions.

7. (Optional) [Configure Worktag Balancing Rule Sets for Transaction Journals](#) on page 370.

On the **Edit Worktag Balancing Rule Set** task, specify a financial balancing rule for the **Cash Advance** financial transaction type.

### Result

Workers can create spend authorizations with a cash advance request. After you settle cash advance payments, workers can link spend authorizations with cash advance requests to an expense report.

### Next Steps

Process requests for cash advances.

**Related Information****Tasks**

[Create Spend Authorizations](#) on page 1844

**Steps: Process Cash Advance Requests****Context**

Workers can use a spend authorization to request a cash advance for anticipated expenses. After you settle cash advances and process worker payments, workers can link the spend authorization with the cash advance request to an expense report.

**Steps**

1. [Create Spend Authorizations](#) on page 1844.

Workers select **Cash Advance Requested** on the spend authorization line.

2. [Create Manual Settlement Runs](#) on page 2160.

After reviewers approve spend authorizations with cash advance requests, you can include them in a settlement run to process each cash advance payment. To include the spend authorizations in a settlement run, complete the *Spend Authorization* business process.

Select **Cash Advances** to find the cash advance requests you want to settle.

3. [Create Expense Reports](#) on page 1811.

Workers select the spend authorization with a cash advance request from the **Spend Authorization** prompt to link it to the expense report. You can link a spend authorization only if there's a cash advance available balance.

When you link a cash advance to multiple expense reports and change any expense line amount after submitting the expense reports, Workday doesn't dynamically update:

- The cash advance applied to an expense report.
- The cash advance available amount.

**Next Steps**

Create a cash advance repayment to collect outstanding balances from workers.

**Related Information****Tasks**

[Steps: Create Cash Advance Repayments](#) on page 1843

**Steps: Create Cash Advance Repayments****Prerequisites**

Approve and settle spend authorizations.

**Context**

You can create a cash advance repayment to receive payments from workers who have outstanding cash advance balances.

**Steps**

1. Access the **Find Cash Advances** report.

Alternatively, you can access the **Find Spend Authorizations** report.

Security: *Process: Spend Authorization - Reporting* domain in the Expenses functional area.

2. Select **Cash Advance Repayment > Create** from the related actions menu of a spend authorization.  
Security: *Manage: Expense Advance Repayment* domain in the Expenses functional area.
3. Enter a **Repayment Amount** that's equal to or less than the cash advance available balance.  
If the cash advance outstanding balance differs from the cash advance available balance, an expense report, with a cash advance applied amount, requires approval.

## Next Steps

Report on cash advance repayments for audit purposes.

Create an ad hoc bank transaction using the template for cash advance repayments. Workday recommends that you create an ad hoc bank transaction template for deposits on cash advance repayments.

## Related Information

### Tasks

[Steps: Set Up Cash Advance Requests](#) on page 1842

[Steps: Process Cash Advance Requests](#) on page 1843

[Create Ad Hoc Bank Transactions](#) on page 2021

## Create Spend Authorizations

### Prerequisites

- Set up payment elections for all payee types.
- Set up Workday accounts for nonworkers.
- Configure the *Spend Authorization* business process and security policy in the Expenses functional area. See [Steps: Set Up Spend Authorizations](#) on page 1841.

### Context

Spend authorizations are expense transactions that payees can create to request preapproval for estimated expenses, such as upcoming business trips.

You can create and submit spend authorizations for yourself, or on behalf of nonworkers and other workers.

### Steps

1. Access 1 of these tasks:

- [Create Spend Authorization](#)
- [Create Spend Authorization for Non-Worker](#)
- [Create Spend Authorization for Worker](#)

**Note:** On the [Create Spend Authorization for Non-Worker](#) task, you can create spend authorizations only for workers in External Committee Member (ECM) roles.

2. As you complete the task, consider:

Option	Description
<b>Position</b>	Displays when you: <ul style="list-style-type: none"> <li>• Enable spend authorization routing for workers with multiple positions.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Select a worker who has multiple positions from the <b>For</b> prompt on 1 of these tasks:           <ul style="list-style-type: none"> <li><b>Create Spend Authorization</b></li> <li><b>Create Spend Authorization for Worker</b></li> </ul> </li> </ul>
<b>Company</b>	<p>When you use the:</p> <ul style="list-style-type: none"> <li><b>Create Spend Authorization</b> task, Workday displays your company automatically, but you can select any company to which you have access.</li> <li><b>Create Spend Authorization for Non-Worker</b> task, select the company that expects to report the expense.</li> <li><b>Create Spend Authorization for Worker</b> task, select a company that you and the worker can both access.</li> </ul> <p>When you submit spend authorizations or save them for later, you can't change the company.</p>
<b>Start Date</b>	Select the date that you expect the expense to occur.
<b>Spend Authorization Total</b>	<p>Enter the estimated amount.</p> <p>Workday corrects estimated amounts to match the total of the spend authorization lines that you create later.</p> <p>Example: When you set a spend authorization estimate at 100 USD and the subsequent spend authorization lines total 80 USD, Workday updates the estimate.</p>
<b>Reimbursement Payment Type</b>	Select a reimbursement payment type, which is based on your defined payment elections.

3. (Optional) On the **Spend Authorization Lines** tab, add expense transactions for the spend authorization. As you complete the tab, consider:

Option	Description
<b>Budget Date</b>	<p>Select a date to determine which budget Workday applies the total spend authorization line amount to.</p> <p>Workday only displays this field if you configure:</p> <ul style="list-style-type: none"> <li>Commitment accounting for your tenant.</li> <li>Budget dates to display on your actuals ledger.</li> </ul>
<b>Cash Advance Requested</b>	<p>Select to request a cash advance for the specified expense item.</p> <p>Create a separate spend authorization line for each cash advance request.</p> <p>See <a href="#">Steps: Set Up Cash Advance Requests</a> on page 1842.</p>

Option	Description
<b>Worktags</b>	<p>Use worktags as keywords to more easily classify and find transactions. Configure the allowed worktag types on the <b>Maintain Worktag Usage</b> task. When you select a worktag type that has related worktags, Workday automatically populates transactions with the related worktag values.</p> <p>If you enable manual overrides for an expense item, you can change worktags manually by selecting from a list of configured values.</p>

## Result

- The spend authorization routes for approval and when approved, you can include it on expense reports.
- If you enable commitment accounting, you can link an approved spend authorization to multiple expense reports until its balance equals zero. For accounting purposes, spend authorizations don't generate accounting entries or issue payments against them.

## Next Steps

You can access the **My Spend Authorizations** report to view your spend authorizations.

### Related Information

#### Reference

[2021R2 What's New Post: Budget Date on Spend Authorization Lines](#)

## Freeze Company Spend

### Context

To provide greater spend control, Workday enables you to freeze spend for expenses and procurement for:

- Companies.
- Supervisory organizations.
- Supervisory organizations and their superiors.

Example: Due to reductions in your budget for the fiscal year, you want to freeze spend for all international travel as a cost-cutting measure.

### Steps

#### 1. [Create Business Process Condition Rules](#).

Configure an *Approval* step on 1 or more of these business processes and create condition rules:

- Purchase Order Event*
- Requisition Event*
- Spend Authorization*

#### 2. From the related actions menu of the company or supervisory organization, select **Worker Spend > Manage Spend Freeze**.

Security:

- Process: Spend Control and Analysis* in the Procurement functional area.
- Process: Spend Control and Analysis (Expenses)* in the Expenses functional area.

3. To freeze spend on procurement and expense business documents, select 1 or more of these check boxes:
  - **Freeze Purchase Orders**
  - **Freeze Requisitions**
  - **Freeze Spend Authorizations**

### **Result**

When workers submit business documents, the business process identifies whether a spend freeze is in effect. The approver then approves or denies the purchase order, requisition, or spend authorization.

## **Close Spend Authorizations**

### **Prerequisites**

- Submit and approve spend authorizations.
- Security: These domains in the Expenses functional area:
  - *Process: Spend Authorization – Close*
  - *Process: Spend Authorization – Core*

### **Context**

You can close a spend authorization to:

- Prevent further action against it.
- Liquidate the remaining balance of it (when you enable commitment accounting).
- Update its status to *Closed*.

You can also close a spend authorization:

- When it doesn't have an outstanding cash balance and is in *Approved* status.
- Whether or not you're using commitment accounting.

### **Steps**

1. Select **Spend Authorization > Close** from the related actions menu of an approved spend authorization.
2. Review transaction information to verify that you want to complete the close.

### **Result**

Workday liquidates the remaining balance on the spend authorization when business process activity is complete. After you settle the expense report, the status of the spend authorization changes to *Closed*.

## **Mass Close Spend Authorizations**

### **Prerequisites**

- Configure:
  - The *Spend Authorization Mass Close Event* business process and security policy.
  - A *Review* step on the *Spend Authorization Mass Close Event* business process.
- Security: *Process: Spend Authorization Mass Close* domain in the Expenses functional area.

## Context

You can close unused spend authorizations when you no longer need to process downstream activities against them, such as expense reports.

## Steps

1. Access the **Mass Close Spend Authorizations** task.

2. As you complete the task, consider:

Option	Description
<b>Request Name</b>	Enter a unique name that enables you to identify the spend authorization mass close request.
<b>For</b>	Select a specific expense payee to close only their spend authorizations.
<b>Payee Type</b>	When you select a payee type, Workday inactivates the <b>For</b> prompt.
<b>Terminated</b>	Select this check box to close spend authorizations for 1 or more terminated workers.  When you select this check box, Workday inactivates the <b>For</b> prompt.

Workday returns the spend authorizations that meet the criteria you specify, provided the spend authorizations aren't:

- Already closed.
- Associated with another existing mass close request.
- In *Draft* or *In Progress* status.
- Linked to open and nonsettled expense reports.

## Next Steps

Reviewers can access the **Revise Mass Close Spend Authorizations** task and evaluate whether to exclude any documents from the request. They can:

- Approve or send back the request.
- Add approvers.
- Exclude specific spend authorizations.

Access the **Find Spend Authorization Mass Close Requests** report to review and access mass close requests.

## Reference: Spend Authorization Statuses

This table describes the different statuses for a spend authorization.

Status	Description
<i>Draft</i>	The worker creates a spend authorization hasn't submitted it yet.  You can use the <b>Edit Spend Authorization</b> task to update spend authorizations in this status.

Status	Description
<i>In Progress</i>	The worker creates and submits a spend authorization but the final approver has yet to approve or deny it.
<i>Approved</i>	The final approver approves the submitted spend authorization. The worker can now incur the authorized expense and select the spend authorization on an expense report.
<i>Canceled</i>	The reviewer or approver cancels or denies the spend authorization, or the worker cancels it. The worker can cancel the spend authorization until it reaches <i>Approved</i> status.

## FAQ: Spend Authorizations

[How do I cancel a spend authorization?](#)

[How do I change a spend authorization?](#)

[How do I revise a spend authorization?](#)

During the creation of an expense report, what is the status of and the accounting impact on a spend authorization when I select the Final Expense Report for Spend Authorization option?

### How do I cancel a spend authorization?

To cancel a spend authorization, select **Spend Authorization > Cancel** from the related actions menu of a spend authorization.

The action is available if the spend authorization is in *Draft* status or is *In Progress*. Alternatively, use the *Cancel Spend Authorization* web service.

You can't cancel a spend authorization if it:

- Is *Closed*, *Canceled*, or marked as *Worker Paid*, or associated with an uncanceled expense report.
- Has an allowance plan that's associated with an *Approved* expense report.
- Is associated with an *In Progress* or *Completed* settlement run.
- Is associated with an expense report that has an unapproved or in progress *Project Transaction Adjustment Event* business process.
- Is associated with a Spend Authorization Year End Request Line or a Mass Close Spend Authorization request.

### How do I change a spend authorization?

To modify a submitted spend authorization while it's *In Progress*, select **Spend Authorization > Change** from the related actions menu of a spend authorization. The *Spend Authorization* business process restarts.

### How do I revise a spend authorization?

During an approval step, the approver can send the spend authorization back to the person who

**During the creation of an expense report, what's the status of and the accounting impact on a spend authorization when I select the Final Expense Report for Spend Authorization option?**

submitted it. Select **Revise** instead of approving or denying the spend authorization.

**When does Workday close spend authorizations automatically?**

Workday changes the status of your spend authorization to **Closed** after the linked expense report is approved. When the spend authorization is linked to multiple expense reports, Workday closes the spend authorization if you select this option:

- On a noncanceled expense report.
- After you settle all linked expense reports.

Workday closes spend authorizations automatically when an authorization meets all of these criteria:

- Expense reports associated with the spend authorization are cancelled, approved, or settled.
- The associated cash advance balance equals zero.
- The expense payee selects the **Final Expense Report for Spend Authorization** check box on an associated expense report.
- The last action taken isn't a cash advance repayment.
- The remaining spend authorization balance is zero.
- The spend authorization is in *Approved* status.

#### Related Information Tasks

[Create Spend Authorizations](#) on page 1844

## Credit Card Setup

---

### Steps: Set Up Expense Credit Cards

#### Context

You can:

- Create billing accounts for corporate credit cards.
- Implement integration systems to load transaction files for the credit card formats that Workday supports.

#### Steps

1. [Create Corporate Expense Credit Card Billing Accounts](#) on page 1860.

Create or update worker corporate credit card information.

2. (Optional) [Map Merchant Category Codes to Expense Items](#) on page 1865.

Map card issuer MIS or MCC codes to expense items, so Workday can populate their values on the expense item when workers create expense reports.

### **3. Maintain Currency Conversion Rates.**

Configure the currency exchange rates and define cross-rates for 1 or more currency pairs. The dates of the currency exchange rates must include historical rates with dates before the earliest transaction date you want to load.

### **4. (Optional) Associate a liability account with the *Credit Card Payable* account posting type.**

Perform this step if you:

- Select corporate or shared payment responsibility for corporate card billing accounts.
- Use Workday Financial Management to generate journals.

Select the **Default Ledger Account** for the *Credit Card Payable Account Posting Type*.

See: [Set Up Account Posting Rules](#) on page 84.

### **5. Load credit card transactions and cardholder listing files from your card issuer into Workday.**

See: [Steps: Set Up Integration for Credit Cards and Transactions](#).

### **6. Request that the card issuer or bank provide transaction files in a format that Workday supports.**

See: [Reference: Credit Card Formats Supported for Expense Integrations](#).

Workday matches credit card transactions to expense payees based on cardholder IDs in transaction files.

### **7. (Optional) Configure your inbound Visa or Mastercard integrations to generate remittance data.**

See: [Steps: Configure Visa Scrubbed or Mastercard Masked Remittance Files for Credit Card Transactions](#) on page 1854.

### **8. Launch the integration and view its status.**

## **Result**

Workers can create expense reports and include credit card transactions. If workers create their own expense reports, Workday displays all available credit card transactions. You can configure the corporate card billing definition to enable workers to enter credit card transactions on their expense reports manually.

For personal-responsibility credit cards, transactions are reimbursable. The company isn't liable for transactions incurred on the corporate card billing account.

For corporate-responsibility credit cards, transactions aren't reimbursable because the company is liable. You pay transactions directly to your card issuer.

[2021R2 What's New Post: Outbound Remittance for Visa Scrubbed Integrations](#)

[2025R1 Release Note: Enhanced Security for Credit Card Accounts, Files, and Transactions](#)

## Steps: Set Up AMEX Global Credit Card Processing

### Prerequisites

- To secure the integrations, create an integration system user for:
  - *Global Remittance for AMEX*
  - *Import Credit Cardholder File (AMEX GL1205 - MASKED)*
  - *Import Credit Card Transaction File (AMEX GL1025 - MASKED)*
  - *Import AMEX Central Travel Data File (Masked)*
- For authorized users, set up access to the *Manage: Credit Card Data* security domain.

### Context

You can configure AMEX global credit card processing to:

- Load cardholder and transaction files.
- Send remittance files with payments to credit card issuers or banks.
- Purge obsolete credit cards from Workday.

### Steps

1. [Create Corporate Expense Credit Card Billing Accounts](#) on page 1860.

Create a corporate credit card billing account for your AMEX card issuer or bank.

2. [Create Worker Expense Credit Cards](#) on page 1862.

Create worker and central travel credit cards. Workday:

- Creates a worker credit card automatically when you import AMEX cardholder listing files.
- Requires you to create central travel cards manually before you load central travel card transactions.

3. [Map Merchant Category Codes to Expense Items](#) on page 1865.

Map card issuer MCC codes to expense items, so Workday can populate their values on the expense item when workers create expense reports.

4. Configure the integrations that fit your business needs:

- *Import Credit Cardholder File (AMEX GL1205 - MASKED)*, to load credit cards.
- *Import Credit Card Transaction File (AMEX GL1025 - MASKED)*, to load credit card transactions.
- *Global Remittance for AMEX*, to generate remittance files in a global format from Workday to AMEX.
- *Import AMEX Central Travel Data File (Masked)*, to load central travel card transactions.

See: [Steps: Set Up Integration for Credit Cards and Transactions](#).

5. Schedule or launch integrations to load AMEX credit card transactions and cardholder listing files into Workday.

See: [Steps: Set Up Integration for Credit Cards and Transactions](#).

6. (Optional) [Configure AMEX Remittance Files for Credit Card Transactions](#) on page 1853.

If you settle payments directly to AMEX from Workday, AMEX requires remittance files with the payments.

7. (Optional) Configure the integration system for *Purge Credit Cards* integration.

See: [Steps: Set Up Integration for Credit Cards and Transactions](#).

### Result

Workers can now link AMEX credit card transactions on expense reports.

## Next Steps

- Resolve any credit card transaction errors or issues.
- Create a settlement run and settle payment to credit card issuers or banks. To send remittance files to the card issuer or bank, approve the payment release and approve any additional *Payment Release Event* business process steps.

### Examples

[Example: Create Custodian Role to Manage Central Travel Cards](#) on page 1919

## Configure AMEX Remittance Files for Credit Card Transactions

### Prerequisites

Configure the *Remittance Release Event* business process security policy.

### Context

If your company settles payments directly to AMEX from Workday, AMEX requires you to produce the remittance files that accompany your payments.

### Steps

1. Define the *Remittance Release Event* business process.
2. Add the *Remittance* service step in the *Settlement Run Event* business process.
3. Add the *Remittance* service step in the *Payment Release Event* business process.
4. Configure these business process events:
  - To produce remittance files for any type of payment, configure the *Settlement Run Event* business process with the *Remittance* service step.
  - To produce remittance files for electronic payments, configure the *Payment Release Event* business process with the *Remittance* service step.
  - To produce remittance files for payments by check, configure the *Print Check Event* business process with the *Remittance* service step.

## Next Steps

- Configure the *Global Remittance for AMEX* integration system.
- Include remittance information and the remittance integration system on the applicable corporate credit card billing account.

## Related Information

### Tasks

## 2021R2 What's New Post: Outbound Remittance for AMEX Masked Integrations

### Steps: Configure Visa Scrubbed or Mastercard Masked Remittance Files for Credit Card Transactions

#### Prerequisites

- Set up an integration system using the **Import MasterCard CDF3File Masked** or **Import Visa VCF4 Scrubbed** integration template.
- For Mastercard integrations, contact your financial institution to get the MasterCard CDF3 input file field name that contains the alternate account identifier for the credit card account.
- Configure the **Expense Credit Card Number Output** integration attribute in your Workday payment connectors to include alternate account identifiers in outbound payment files.

#### Context

You can configure your inbound Visa or Mastercard integrations to generate scrubbed or masked remittance data with alternate identifiers to the credit card accounts.

#### Steps

1. Access the **View Integration System** report.

Security: The *Integration Build* domain in the Integration functional area.

2. Select 1 of these integration systems:

- **Import MasterCard CDF3File Masked**
- **Import Visa VCF4 Scrubbed**

3. Access the **Configure Integrations Attributes** task from the **Integration System** related action menu of the integration you select.

Security: *Integration Configure* domain in the Integration functional area.

4. Select a value for the **Alternate Account Identifier** integration attribute.

This value determines where your financial institution includes the alternate account identifier on your credit card file.

#### Result

Workday includes the value in:

- The *Get Payments* web service response, ensuring that it's available to include in the custom remittance file you send to financial institutions.
- Workday outbound payment connectors, when you configure the **Expense Credit Card Number Output** integration attribute.

#### Related Information

### Enable Paid with Corporate Card on Expense Reports

#### Prerequisites

Security: *Set Up: System* domain in the System functional area.

## Context

Corporate card holders can reduce duplicate and inaccurately reimbursed expenses by indicating the expenses paid with corporate cards on expense reports.

## Steps

1. Access the **Maintain Feature Opt-ins** report.
2. Select **Enable Paid with Corporate Card on Expense Reports**.

## Result

Workday automatically selects the **Paid with Corporate Card** check box on all expense lines. Corporate card holders must link a corporate card to pending credit card transactions. For out-of-pocket expenses, corporate card holders can clear the check box on each expense line.

## Related Information

### Reference

[2022R2 What's New Post: Expenses Paid with Corporate Cards](#)

## Setup Considerations: Central Travel Cards

You can use this topic to help make decisions when planning your configuration and use of a central travel card program. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

The central travel card program consolidates air travel spend on a single central travel card, also known as a ghost card, for individual organizations instead of individual workers. When you import central travel card transactions for air travel expenditure into Workday, Workday automatically assigns transactions to workers for them to include on expense reports.

## Business Benefits

Central travel cards enable you to:

- Consolidate air travel and expense spend for your company.
- Have an accurate view of the air travel spend for your company.
- Track and analyze air travel spend for your company effectively.
- Improve travel policy decisions and negotiate better travel rates, optimizing your cash flow.
- Reduce financial risk by hiding the central card number from employees.
- Reduce expense creation and manual entry effort when you import central travel card transactions through a credit card integration.
- Prevent employees from charging large business expenses on personal credit cards.

## Use Cases

When you configure central travel card functionality:

- Expense payees can submit expenses from corporate cards and central travel cards in a single expense report.

- Cost-center managers and travel managers can view all air travel spend in 1 place, improving spend analysis.
- Organizations can assign a dedicated Custodian to manage unassigned transactions and assign them to the correct expense payee.

### **Question to Consider**

How do you create central travel cards?

To minimize data errors, you can create central travel cards manually before transaction file load for:

- AMEX.
- Mastercard.
- Visa.

### **Recommendations**

- Create central travel cards before loading transactions files to prevent data load errors and eliminate manual workarounds.
- Create a secured token for the unmasked central travel card number to ensure cards that you create manually have a secured credit card number.
- Configure custom alerts for the Custodians to help identify and assign unassigned central travel card transactions so workers can include them on expense reports.

### **Requirements**

To import Visa and Mastercard central travel cards transactions, work with your:

- Credit card network and financial institution to include central travel card transactions on your VCF4 or CDF3 integration file.
- Travel agency to ensure that a unique identifier for expense payees is included on the integration files, such as *Employee ID*. Workday uses the unique identifier to assign central travel card transactions to the expense payee.

To import AMEX central travel card transactions:

- Identify which integration file input to use for the central travel card based on the region. For US and Canada, request a *Workday AMEX Central Travel Data File* in a tab delimited format text file. For EMEA region, request an *AMEX Global TMKD File* in a fixed length format text file for Option D.
- Work with your AMEX Account Manager to request a Technology Enablement Engagement ticket in order to request the central travel data file.
- Work with your travel agencies to include a unique identifier in the integration file. Example: The *REF\_5* field on *Global TMKD File* and the *Workday Employee ID* field on *Workday AMEX Central Travel Data File*.
- Create the AMEX central travel cards manually in Workday.

### **Limitations**

Workday only automatically assigns airfare central travel card transactions to employees. For central travel card purchases such as hotel and booking fees, you must assign the transactions manually. Currently, Workday doesn't support receiving the unique identifiers for transactions other than airfare.

### **Tenant Setup**

No impact.

## Security

Domain	Considerations
<i>Organization: Manage Central Travel Card Transactions</i> in the Expenses functional area.	Users, such as Custodians, can manage central travel card transactions for the organizations configured on the corporate credit card billing account.
<i>Set Up: Credit Card</i> in the Common Financial Management functional area.	Users can create and manage credit cards for their company.

## Business Processes

No impact.

## Reporting

Reports or Dashboards	Considerations
<b>Find Credit Card Transaction Files</b>	Use this report to identify errors that occur during the file load.
<b>Find Credit Card Transactions</b>	View a list of credit card transactions, including central travel card transactions to analyze worker spend.
<b>Find Credit Cards</b>	Find credit cards you create manually or through the integration. View details on employee credit card accounts, including central travel cards.
<b>Find Unassigned Central Travel Card Transactions</b>	View all unassigned central travel card transactions for your organization and assign them to the correct expense payee to include on an expense report.

## Integrations

You can configure your integrations to import and automatically assign central travel cards to workers for expense inclusion.

Web Services	Considerations
<i>Get Expense Credit Card Transactions</i> <i>Import Credit Card Transactions</i>	Use to load and retrieve credit card or central travel card transactions.
<i>Assign Expense Central Travel Card Transaction</i>	Use to assign central travel card transactions to expense payees.

Integration Templates	Considerations
<i>Import AMEX Central Travel Data File (Masked)</i>	Use these templates to import masked central travel card transactions from AMEX.
<i>Import MasterCard CDF3File Masked</i>	For Mastercard, use these templates to import masked: <ul style="list-style-type: none"><li>• Credit cards and transactions.</li><li>• Central travel cards and transactions.</li></ul>

Integration Templates	Considerations
<i>Import Visa VCF4 Scrubbed</i>	For Visa, use these templates to import scrubbed: <ul style="list-style-type: none"> <li>• Credit cards and transactions.</li> <li>• Central travel cards and transactions.</li> </ul>

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Tasks

[Steps: Configure Alerts for Central Travel Card Transactions](#) on page 1859

#### Reference

[The Next Level: Central Travel Cards](#)

#### Examples

[Example: Create Custodian Role to Manage Central Travel Cards](#) on page 1919

## Steps: Create Central Travel Cards

### Prerequisites

- Configure the integration file templates that you want to import central travel card data with. Ensure that the file includes the unique identifier for the expense payee.
- For AMEX integration templates, ensure that the file uses the *Workday AMEX Central Travel Data* specification for U.S. and Canada central travel cards. For EMEA region central travel cards, ensure that the file uses the *Global TMKD File Option D* specification.

### Context

You can:

- Set up and manage central travel cards.
- Enable roles to manage central travel card transactions for specific organizations.

Workday imports central card transactions through the credit card integrations and automatically assigns them to expense payees for expense inclusion.

Create a central travel card for your company to:

- Import central travel card transactions to expedite expense report creation.
- Track and analyze company spend.

### Steps

1. [Create Corporate Expense Credit Card Billing Accounts](#) on page 1860.

As you create a corporate credit card billing account for central travel, select:

- **Expense** usage.
- **Corporate** payment responsibility.
- **Electronic Load Only**.

## 2. Create Worker Expense Credit Cards on page 1862.

As you create a central travel card, select:

- The **Corporate Credit Card Billing Account** configured for the central travel card.
- The **Central Travel Card** credit card category.
- The **Organization** to use the central travel card. Central travel cards can be associated with 1 or more organizations.

Alternatively, create the central credit card through the integration if you plan to import central travel data through a dedicated external file for Visa and MasterCard. If using a dedicated central travel card file, you must append the credit card name with *CTC*. This configuration enables Workday to distinguish between worker credit cards and central travel cards and prevent the creation of worker credit cards.

For MasterCard integrations, ensure the *EmployeeId* field in the MasterCard CDF3 **AccountInformation\_4300Type** record is empty or not present.

### Next Steps

- Load central credit card transactions into Workday through an external file downloaded from the card issuer.
- If the transaction is missing the expense payee or incorrectly assigned, access the **Assign Central Travel Card Transactions** task.

### Related Information

#### Tasks

#### Examples

[Example: Create Custodian Role to Manage Central Travel Cards](#) on page 1919

## Steps: Configure Alerts for Central Travel Card Transactions

### Prerequisites

- Set up central travel cards and import central travel card transactions.
- Configure the Custodian role and security policy group.

### Context

You can configure alerts to notify Custodians of unassigned central travel card transactions, enabling them to assign transactions to the correct expense payee for expense inclusion.

### Steps

#### 1. Create Custom Reports.

Create a custom report to find central travel card transactions using the **Count of Unassigned Central Card Transactions** report field.

#### 2. Configure and View Alerts.

Using the custom report, create alerts for Custodians to notify them of new central travel card transactions not associated with an expense payee.

As you complete the task, select:

- **Assign Central Travel Card Transactions** as the **Included task**.
- **Custodian** as the recipient **Group**.

## Result

Custodians can directly access all unassigned transactions in their organization in My Tasks.

## Related Information

### Examples

[Example: Create Custodian Role to Manage Central Travel Cards](#) on page 1919

## Create Corporate Expense Credit Card Billing Accounts

### Prerequisites

- Security: Set Up: Credit Card domain in the Common Financial Management functional area.
- To send remittance files when settling payments for corporate credit card accounts, configure a remittance integration.
- Include the *Remittance* service step on the *Payment Release Event* business process. This configuration produces remittance files for corporate credit card accounts.

### Context

You can determine how to process:

- Expense corporate credit card accounts.
- Credit card transactions for expense payees.
- Transactions for central travel credit cards.

### Steps

#### 1. Steps: Set Up Security for Credit Card Accounts, Files, and Transactions.

You can configure security that:

- Ensures only users with a role in the company on the billing account or unconstrained roles can access the billing account. If a billing account is empty, only unconstrained users can access the account.
- Enables you to add a company to a billing account, even if the account already has transactions, provided the account didn't previously have an associated company.
- Enables constrained users to add spend categories when creating or updating billing accounts.

#### 2. Access the **Create Corporate Credit Card Billing Account** task.

#### 3. As you complete the task, consider:

Option	Description
<b>Account Number</b>	Enter exactly as it displays in the external file sent from the card issuer.  If the account number is masked in the file, mask the number in the <b>Account Number</b> field. Valid characters include X and numerals only.
<b>Usage</b>	Select <i>Expenses</i> to use the credit card transactions for expense reports.
<b>Payment Responsibility</b>	Determine the responsible party that pays the card issuer for credit card transactions for expense payees: <ul style="list-style-type: none"> <li>• <i>Corporate</i>: The company pays all transactions. If the transactions are personal expenses, the expense payee owes your company money</li> </ul>

Option	Description
	<p>because there's no reimbursement amount to the expense payee.</p> <ul style="list-style-type: none"> <li>• <i>Individual</i>: The expense payee pays all transactions. If a transaction is for business expenses, the company reimburses the expense payee. The reimbursement amount excludes personal expense transactions.</li> <li>• <i>Shared</i>: The expense payee pays credit card personal expense transactions and the company pays business-related transactions.</li> </ul>
<b>Company</b>	<p>You can't change the selected company when there are credit card transactions against the credit card.</p> <p>You can add a company to a billing account, even if the account already has transactions, provided the account didn't previously have an associated company. Workday only allows you to make this change once.</p>
<b>Electronic Load Only</b>	<p>Workday recommends that you select this check box to restrict workers from entering credit card transactions manually. If your organization uses both manual entry and electronic file loads to input credit card transactions, reconciliation issues can occur.</p> <p>Consider how to manage manual credit card entries before selecting this check box.</p>
<b>Allow Negative Reimbursable Total</b>	<p>Select to enable credit card transactions marked as personal to result in a negative reimbursable total for the expense report.</p>
<b>Pay Worker prior to Expense Credit Card Issuer</b>	<p>Select to pay workers for expenses they incurred before paying the credit card issuer.</p>
<b>Pay Unapproved Expense Card Transactions</b>	<p>Select to:</p> <ul style="list-style-type: none"> <li>• Record the liability at the time of load.</li> <li>• Enable your company to pay credit card transactions before they're expensed on an expense report.</li> </ul> <p>Only available for corporate credit cards with a payment responsibility of <i>Corporate</i>.</p>
<b>Use Company on Credit Card Account for Expense Accounting</b>	<p>Select to make the company on the credit card account liable to pay the credit card transactions instead of the company on the expense report.</p> <p>Only available for corporate credit cards with a payment responsibility of:</p> <ul style="list-style-type: none"> <li>• <i>Corporate</i></li> <li>• <i>Shared</i></li> </ul>

Option	Description
<b>Self-service Users Can't Close Transactions</b>	Select to prevent workers from closing their assigned credit card transactions using the <b>Edit My Expense Transactions</b> task.
<b>Enable Editing on the Date Field on Expense Report Lines with Credit Card Transactions</b>	Select to help prevent merchant processing delays from causing date discrepancies on expense reports.
<b>Produce Remittance File</b>	<p>Select to enable remittances for the billing account. Work with your financial institution to configure the:</p> <ul style="list-style-type: none"> <li>• Country</li> <li>• Currency</li> <li>• Load Number</li> <li>• Market Code</li> <li>• Payment Identifier</li> </ul> <p>The remittance file generated from the integration system provided in the Remittance Integration System includes these configured values.</p>
<b>Load Number</b>	Enter the load number that AMEX provides.
<b>Settlement Bank Account</b>	If you remit payments directly to the card issuer or bank, provide payment details and bank account information for settlement.
<b>Remittance Integration System</b>	Select the integration system to generate remittance files for this billing account.
<b>Payment Identifier</b>	Provide the Deposit ID, CID, Load Number, or any other string that is specific to your financial institution and required in your Workday payment connectors.

## Next Steps

- Create credit card accounts for expense payees.
- Create central credit cards for centrally billed corporate card programs.
- Set up accounting for negative reimbursable expense reports.
- Create intercompany profiles.

## Related Information

[Steps: Set Up Accounting for Negative Reimbursable Expense Reports](#) on page 1800

[Create Expense Reports](#) on page 1811

### Reference

[2025R1 Release Note: Enhanced Security for Credit Card Accounts, Files, and Transactions](#)

## Create Worker Expense Credit Cards

### Prerequisites

- See: [Steps: Set Up Security for Credit Card Accounts, Files, and Transactions](#)
- Security: *Set Up: Credit Card* domain in the Common Financial Management functional area.

- Configure a corporate credit card billing account with a credit card issuer or bank.

## Context

You can create worker expense credit cards for your corporate credit card billing account program.

## Steps

- Access the **Create Credit Card** task.
- Select the **Corporate Credit Card Billing Account** for this card.  
The account you select determines the **Credit Card Type** and who's responsible for settling the account with the card issuer: your company, the payee, or if it's shared responsibility.
- Select **Worker Credit Card** as the **Credit Card Category**.
- Enter or update the **Masked, Scrubbed, or Tokenized Credit Card Number**, if they weren't included from an Expense Corporate Card Integration.  
Note: Workday doesn't support unmasked/unscrubbed credit card formats. Loading actual credit card numbers into Workday is a violation of Workday security policies.
- As you complete the task, consider:

Option	Description
<b>Alternate Account Identifier</b>	Enter the identifier your financial institution provides to include on the remittance files you send them. Your financial institution uses this identifier to look up the right credit card number to make payments.
<b>Reassignment Enabled</b>	Available when the configured corporate card usage is <b>Expenses</b> . Select to enable the worker and credit card administrators to reassign credit card transactions to other expense payees so that they can expense them.
<b>Account Status</b>	To change the account status, select either: <ul style="list-style-type: none"> <li><i>Active</i></li> <li><i>Canceled</i></li> <li><i>Deleted</i></li> <li><i>Error</i></li> <li><i>Suspended</i></li> </ul> The default is <i>Active</i> . For AMEX credit card billing accounts, the account status is generated from the <i>Cardholder Listing File</i> . If you receive errors because the <i>Cardholder Listing File</i> import doesn't load all required data, search on account statuses to correct credit card profile information.
<b>Monthly Limit</b>	Use to report on monthly accumulated limits from point of sale transactions for this credit card account.
<b>Transaction Limit</b>	Use to report on transactions over the limit you specify. Workday enforces transaction limits during point of sale transactions.

Option	Description
<b>Cash Access Allowed</b>	Select to enable the worker to use this card to obtain cash for transactions where they can't use credit cards, such as bridge tolls.

## Next Steps

Load credit card transactions into Workday through an external file downloaded from the card issuer.

- For expense credit cards, workers can include downloaded transactions on expense reports.
- For procurement cards, workers can verify downloaded transactions using the **Verify Procurement Card Transactions** task.

To reassign the loaded credit card expense transactions to an expense payee other than the configured payee, access the **Reassign Expense Credit Card Transactions** task.

When you enable manual credit card transaction entry on the corporate credit card billing account, workers can also enter credit card transactions on expense reports.

If the associated cardholder is incorrect and there are no transactions against the card, access the **Change Cardholder** related action to select the correct cardholder.

[Workday 32 What's New Post: Reassign Expense Credit Card Transactions](#)

[2025R1 Release Note: Enhanced Security for Credit Card Accounts, Files, and Transactions](#)

## Steps: Notify Workers About Expense Credit Card Transactions

### Prerequisites

The worker must have a corporate credit card with a provider that you've set up a Workday integration with.

### Context

You can create alerts to notify users when they've new credit card transactions that aren't associated with an expense report.

### Steps

- [Copy Reports.](#)  
Select the **Credit Card Transactions Not Expensed** report.
- [Configure and View Alerts.](#)  
Create an alert to notify users of new credit card transactions that aren't associated with an expense report.

## Map Merchant Category Codes to Expense Items

### Prerequisites

- [Create Expense Items](#) .  
Set expense item attributes.
- Security: *Set Up: Credit Card* domain in the Common Financial Management functional area.

### Context

Workday delivers the standard merchant category codes (MCC) used to process files containing credit card transactions. When you map merchant codes to expense items, Workday automatically populates the codes on expense report lines.

### Steps

1. Access the **Maintain Credit Card Expense Code Mapping** task.
2. On each **Expense Item** row, select 1 or more codes from the **Merchant Code** prompt.

### Result

When workers select credit card transactions in expense reports, Workday displays the mapped value in the **Item Details** for each expense report line. The worker can change the value when necessary.

## Concept: Process Flow of Expense Credit Card Transactions

Your company loads the file containing credit card transactions into Workday from the credit card issuer. The administrator reviews the credit card transactions from the file and corrects errors. If you use American Express GL1205 file formats, administrators also review and correct expense payee data from Cardholder Listing File transactions.

When creating expense reports, workers review the transactions loaded from their company credit cards and select transactions to include in their report. Workers can also associate worktags with expense report lines, including credit card lines. When you create the corporate card account, you can permit workers to add credit card expenses manually to expense reports. For accurate accounting when workers manually add credit card expenses, Workday requires the billing currency to match the:

- Transaction currency.
- Reimbursement currency of the expense report.

When expense reports are complete, workers submit them for approval. If a reviewer sends an expense report back to the creator for revision, the worker needs to edit the expense report and resubmit it for approval.

When approved, the settlement specialist settles the expense report even if the reimbursement amount is zero. Then, the expense payable pays the expense payee for reimbursable transactions, based on the payment responsibility that's set on the billing account for the corporate credit card.

Workday enables you to opt in to an Enhance Expense Credit Card-Related Security feature. This feature provides improved security and more granular control over your credit card related data, ensuring only authorized users can access data related to:

- Corporate credit card billing accounts.
- Credit cards.
- Credit card transactions.
- Files.

Once you opt in, you can access credit card transactions through either:

- Unconstrained security.

- A role in a company associated with the credit card billing account.
- A role in a company associated with the expense report containing the transaction.
- A role in a company associated with the expense payee who owns the transaction.
- A role in an organization associated with central travel card transactions.

However, you won't be able to view details of credit card transactions in the **Create Expense Report for Worker** task if you don't have the appropriate permissions. You can still add the credit card transactions and view details in an expense report.

## Reference: Alternate Account Identifiers for Expense Remittance Processing

Workday supports these alternate identifiers for credit card accounts to create masked, scrubbed, and tokenized remittance files for expense credit card integrations:

Integration Template	Financial Institution	Alternate Account Identifier	Value
<i>Global Remittance for AMEX</i>	AMEX	Employee ID Tokenized Credit Card Number	<i>Employee ID or Cardmember Number</i>
<i>Import Credit Cardholder File (AMEX GL1205 - Masked)</i>	AMEX	Employee ID Tokenized Credit Card Number	<i>Employee ID or Cardmember Number</i>
<i>Import MasterCard CDF3 File (Masked)</i>	Bank of America	TSYS Processor ID	<i>AccountEntity/ AccountInformation_4300/ AccountIdentifier</i>
<i>Import MasterCard CDF3 File (Masked)</i>	Chase	Employee ID	<i>AccountEntity/ AccountInformation_4300/ EmployeeId or AccountEntity/ CustomData[Label='StaffNbr']/Data</i>
<i>Import MasterCard CDF3 File (Masked)</i>	Citi	Tokenized Credit Card Number	<i>AccountEntity/ @AccountNumber</i>
<i>Import MasterCard CDF3 File (Masked)</i>	US Bank	Employee ID	<i>AccountEntity/ AccountInformation_4300/ EmployeeId or AccountEntity/ CustomData[Label='StaffNbr']/Data</i>
<i>Import Visa VCF4 Scrubbed</i>	Bank of America	TSYS Processor ID	<i>T3, Optional Field 2 (Field No. 45)</i>

Integration Template	Financial Institution	Alternate Account Identifier	Value
Import Visa VCF4 Scrubbed	Chase	Employee ID	T4, Employee ID (Field No. 23)
Import Visa VCF4 Scrubbed	Citi	Tokenized Credit Card Number	T3, Account Number (Field No. 3)
Import Visa VCF4 Scrubbed	US Bank	Tokenized Credit Card Number	T3, Account Number (Field No. 3)

## FAQ: Why can't I import credit card data for ECMs and contingent workers?

Workday only supports external committee members (ECMs) or contingent workers on v35.0 or recent versions of these webservices:

- *Import Credit Cards*
- *Put Expense Credit Card*

## Credit Card Processing

---

### Steps: Review and Correct Credit Card Transactions

#### Prerequisites

- Set up the integration for the transaction files used for credit card processing, and load transactions into Workday.
- Security: *Process: Credit Card* domain in the Common Financial Management area.

#### Context

You can find credit card transaction files, view details for each transaction, and correct transactions in error. Depending on the transaction file credit card usage type, you can:

- Map merchants.
- Map airports.
- Map cities.
- Map suppliers.

#### Steps

1. Access the **Find Credit Card Transaction Files** report.

Find the transaction files for expense credit cards and procurement cards.

2. Drill down on transaction files to perform actions:
  - In expense and procurement transactions, **Fix Errors**.
  - In expense transactions, **Map Merchants**, **Map Cities**, and **Map Airports**.  
You can only map airports for transactions with trip leg data.
  - In procurement transactions, **Map Suppliers**.
3. Access the **Find Credit Card Transactions** report to find specific credit card transactions and modify them as needed.  
Select **Edit** from the **Credit Card Transactions** file related actions menu to update information such as the **Extended Transaction Amount** and **Worker Credit Card**.
4. Access the **Find Credit Card Transactions** report to find specific credit card transactions and modify them as necessary.

#### Related Information

##### Concepts

[Concept: Expense Credit Card Transaction Data Mapping](#) on page 1872

##### Tasks

[Map Data from Expense Integration Files](#) on page 1869

## Fix Credit Card Transaction Errors

#### Prerequisites

- Download files from your corporate card or travel booking integration.
- Security:
  - *Process: Travel Booking* domain in the Expenses functional area.
  - *Process: Credit Card* domain in the Common Financial Management functional area.

#### Context

You can correct transactions or records in error to process them in Workday.

#### Steps

1. Access 1 of these reports:
  - **Find Credit Card Transaction Files**, for expense credit cards and procurement card transactions.
  - **Find Travel Booking Record Files**, for travel booking records.

The reports display the files from your search criteria and identify files in error.
2. Select a file with transactions or records in error.
3. Click **Fix Errors**.

Option	Description
<b>Credit card transactions from expense credit card or procurement card transaction files</b>	You can only fix errors in the transaction such as the <b>Worker Credit Card</b> and <b>Transaction Currency</b> . You can't change other values transmitted in the download.
<b>Travel booking records from travel booking transactions files</b>	From the prompt, select the <b>Worker</b> to assign to the travel booking record.  If a travel booking record doesn't successfully map to a worker from the integration file, Workday uses the company defined in the integration.

Option	Description
	Once you assign a worker, Workday updates the company to the worker's company if it's different.

## Result

Workers can include the fixed transactions and records on expense reports and procurement card transaction verifications.

## Map Data from Expense Integration Files

### Prerequisites

- Create an integration for each corporate credit card to download credit card transaction files.
- Create a travel booking inbound connector integration to download travel booking data from a corporate travel provider.
- Workday recommends you set up merchant codes, names, and alternate names on these tasks to ensure accurate matches from integration files:
  - **Maintain Airlines**
  - **Maintain Hotels**
  - **Maintain Car Rental Agencies**
  - **Maintain Travel City**
- Security:
  - *Process: Credit Card* domain in the Common Financial Management functional area.
  - *Process: Travel Booking* domain in the Expenses functional area.

**Note:** Contact Workday Professional Services or your consultant to implement expense integrations. To integrate travel booking data, you must also coordinate with your travel provider.

### Context

You can map travel cities, airports, and merchants from integration files to Workday, and then update transactions and records as needed. Workday populates expense item attributes with the cities, airports, and merchants you map when workers import these files into expense reports:

- Credit card transactions.
- Travel booking records.

### Steps

1. Access 1 of these reports:

Option	Description
<b>Find Credit Card Transaction Files</b>	To map: <ul style="list-style-type: none"> <li>• Airports</li> <li>• Cities</li> <li>• Merchants</li> </ul>
<b>Find Travel Booking Record Files</b>	To map: <ul style="list-style-type: none"> <li>• Cities</li> <li>• Merchants</li> </ul>

2. As you complete the report, consider:

Option	Description
<b>Merchants</b>	Map <b>Merchant Name in File</b> to <b>Merchant in Workday</b> for the transaction level or trip leg level of the integration file.
<b>Airports</b>	Map: <ul style="list-style-type: none"> <li>• <b>Origination Airport Name on Leg</b> to <b>Origination Airport Name in Workday</b>.</li> <li>• <b>Destination Airport Name on Leg</b> to <b>Destination Airport Name in Workday</b>.</li> </ul>
<b>Cities</b>	Map: <ul style="list-style-type: none"> <li>• <b>Origination City Name In File</b> to <b>Origination City Name In Workday</b>.</li> <li>• <b>Destination City Name In File</b> to <b>Destination City Name In Workday</b>.</li> </ul>

3. (Optional) Select **Save Alternate Name** to map the merchant or city and store a permanent name for matching merchants and cities in future integrations.
4. Apply mapping.

## Change Cardholders on Expense Credit Cards

#### Prerequisites

Create:

- Worker credit cards with a corporate account card issuer.
- Transactions to upload on expense reports.

Security: *Set Up: Credit Card* domain in the Common Financial Management functional area.

#### Context

You can change the cardholder on the account if the cardholder on a credit card is incorrect. You can also move credit card transactions to another credit card associated with the same or a different cardholder.

## Steps

- **Change cardholder on a credit card account:**
  - a) Access the **Find Credit Cards** report.
  - b) Select **Credit Card > Change Cardholder** from the **Credit Card** related actions menu.

The related actions menu displays when:

  - Worker credit card has no credit card transactions. Once the credit card has 1 expensed transaction, Workday will no longer change the worker on the credit card.
  - All credit card transactions on the credit card are in *New*, *Closed*, or *Do Not Show* status.
  - Assigned credit card belongs to an inactive cardholder and the same cardholder has another active profile in Workday. Example: cardholder changes from Contingent Worker or External Committee Member to an Employee (or the other way around).
  - c) In the **New Cardholder** field, select the cardholder to associate with this credit card account. For nontokenized American Express (AMEX) and Mastercard cards, Workday automatically updates the integration reference ID with the new cardholder ID.
  - d) In the **Update Expense Payee** section, determine whether to assign all or only unassigned nonexpensed transactions to the configured cardholder.
- **Update information on a credit card account:**
  - a) Access the **Edit Credit Card** task.
  - b) Update information, such as the **Cardholder Embossed Name**, **Monthly Limit**, and **Cash Access Allowed**.
- **Move credit card transactions to a different credit card:**
  - a) Access the **Find Credit Cards** report.
  - b) Select **Credit Card > Move Credit Card Transactions** from the **Credit Card** related actions menu.
  - c) In the **New Expense Credit Card** field, select the credit card for the transactions to move or create a new worker credit card.

The related action displays only when:

  - The credit card has transactions.
  - There are other credit cards with the same corporate credit card billing account.
  - The cardholders match.
- **Change credit card for credit card transaction:**
  - a) Access the **Find Credit Card Transactions** report.
  - b) Select **Credit Card Transaction > Change Credit Card** from the **Credit Card Transaction** related actions menu.

You can change the cardholder to the same or a different cardholder.

The related action only displays if the transactions are *New* and the credit cards belong to the same corporate billing account.

  - c) In the **Credit Card Transaction Assignee** section, consider updating the assignee of the transaction to the newly assigned cardholder.

## Result

You can find credit card transactions in *New* status in the configured credit card transaction assignee.

## Next Steps

Contact your corporate card account issuer to request changes in cardholder information associated with this worker credit card.

## Concept: Expense Credit Card Transaction Data Mapping

You can use *Dynamic Map Integration Services* in the credit card integration template to create integrations that load expense credit card transaction files from corporate credit card companies. The integrations enable you to use credit card transaction data to populate expense report transaction details and attributes. You can:

- Populate expense item details for airlines, hotels, car rental agencies, and travel cities.
- Create enhanced reporting on total spend by merchant for more visibility.
- Regulate the maximum amounts workers can spend by individual travel city such as maximum hotel rates and meals.

### Load Credit Card Transaction Data

When you load credit card transaction files, the Workday integration matches:

- Names or alternate names from transaction files to merchant and travel city names in Workday.
- Airport codes from trip leg data to airport codes in Workday.
- Merchant category codes (MCCs) from transaction files to MCCs in Workday.

**Note:** Not all credit card companies download MCCs with the level of detail needed for matching merchants and cities in Workday.

When Workday matches data from downloaded transactions, we populate expense item attributes on expense reports with data from imported transactions.

### Map Merchant Codes and Cities to Expense Item Attributes

Mapping Type	Description
Integration: Exact Match	The integration maps exact matches between: <ul style="list-style-type: none"> <li>• MCCs in the transaction file and airlines, hotels, and car rental agencies in Workday.</li> <li>• Airport codes in the transaction file and airport codes in Workday.</li> </ul>
Integration: Name Match Based on Intelligence Instance Lookup	If the integration identifies a name in the transaction file that closely matches a name or alternate name, Workday populates the corresponding expense item attribute on expense reports. This action applies to: <ul style="list-style-type: none"> <li>• Airline</li> <li>• Hotel</li> <li>• Car rental agency</li> <li>• City</li> </ul>
Manual: Mapping	If the integration doesn't identify a match, you can manually map the values on the <b>Find Credit Card Transaction Files</b> report: <ul style="list-style-type: none"> <li>• <b>Map Merchants</b> enables you to map merchants at both the transaction and trip leg levels.</li> <li>• <b>Map Cities</b> enables you to map cities at the transaction level.</li> <li>• <b>Map Airports</b> enables you to map airports at the trip leg level.</li> </ul>

Mapping Type	Description
	When you manually map values, the integration matches them to transactions on future credit card transaction files.

## Reference: Credit Card Reports

Use these reports to view information about credit card accounts and transactions. For each report, this table describes why you would use it and what to do next. For a complete list of reports by area, run the **Workday Standard Reports** report.

Report Name	Purpose	Next Step
<b>Find Credit Cards for Corporate Credit Card Billing Account</b>	<p>Review all expense payee credit cards associated with a corporate credit card billing account.</p> <p>This report is also available from the related actions menu of the corporate credit card billing account.</p>	<p>From the related actions menu of the <b>Employee</b>, you can view <b>My Expense Transactions</b>.</p> <p>From the related actions menu of the <b>Credit Card</b>, you can edit the credit card account or change the expense payee.</p>
<b>Find Credit Card Transaction Files</b>	<p>Use this report to identify errors that might have occurred during the file load.</p> <p>Review a summary of credit card transaction files that you've loaded into Workday.</p> <p>The report includes the number of new transactions in error. You can review individual transactions and edit the erroneous transaction from the report.</p>	<p>From the related actions menu of the <b>Credit Card Transaction File</b>, you can:</p> <ul style="list-style-type: none"> <li>Access all transactions in individual transaction files.</li> <li>View and edit the transactions in the file that are in error.</li> <li>Maintain merchant, airport, or city mapping for corporate cards with <i>Expenses Usage</i>.</li> <li>Map suppliers for corporate cards with <i>Procurement Usage</i>.</li> </ul>
<b>Find Credit Card Transactions</b>	<p>View this report to display a list of credit card transactions.</p>	<p>You can:</p> <ul style="list-style-type: none"> <li>Create an expense report from the related actions menu of the <b>Expense Payee</b>.</li> <li>Reassign transactions or change the assigned credit card from the related actions menu of the <b>Credit Card Transaction</b>.</li> </ul> <p>From the related actions menu of the <b>Expense Report</b>, you can:</p> <ul style="list-style-type: none"> <li>Copy an expense report.</li> <li>View accounting details.</li> </ul>

### Reference: Procurement Card and Expense Credit Card Transaction Statuses

These transaction statuses display on the **Find Credit Card Transactions** report.

Status	Description	Usage
<b>Do Not Show</b>	Specified in an expense credit card integration not to display transactions to workers.	Expense Credit Card
<b>Closed</b>	<p>A worker manually closed the transaction.</p> <p>You can't perform actions on closed transactions. To make changes, open the transactions.</p> <p>Note: Admins can use the <b>Maintain Credit Card Transactions</b> task (secured to the <i>Process: Credit Card security</i> domain), to close transactions in New status. Self service users can use the <b>Edit My Expense Transactions</b> task from the Expenses Hub to close their own transactions.</p>	Expense Credit Card
<b>Loading</b>	<p>The <i>Credit Card Transaction Load Event</i> is in progress. The transaction is either:</p> <ul style="list-style-type: none"> <li>• An expense or procurement card transaction.</li> <li>• From a corporate credit card configured for <b>Pay Unapproved Procurement Transactions</b> or <b>Pay Unapproved Expense Transactions</b>.</li> </ul>	Expense Credit Card Procurement Card

Status	Description	Usage
	<ul style="list-style-type: none"> <li>Missing an <b>Amount or Credit Card</b>.</li> <li>Included in an incomplete <i>Credit Card Transaction Load</i> business process.</li> </ul>	
<b>New</b>	An unpaid credit card transaction is available to include in an expense report or a procurement card transaction verification.	Expense Credit Card Procurement Card
<b>Pending</b>	The credit card transaction is on an expense report or a procurement card transaction verification that's in <i>Draft</i> or <i>In Progress</i> status.	Expense Credit Card Procurement Card
<b>Expensed</b>	The transaction is on approved expense reports and not yet paid.	Expense Credit Card
<b>Verified</b>	The transaction is on an approved procurement card verification and not paid.	Procurement Card
<b>Prepaid</b>	A transaction paid before included on an approved: <ul style="list-style-type: none"> <li>Expense report.</li> <li>Procurement card verification.</li> </ul>	Expense Credit Card Procurement Card
<b>Paid</b>	The credit card transaction is on a paid and approved expense report or a paid procurement card verification.	Expense Credit Card Procurement Card

## Troubleshooting: Expense Credit Cards

This topic helps you diagnose and resolve errors for expense credit cards:

- Can't switch usage from Expenses to Procurement on a corporate credit card billing account.
- Expense payees can't add credit card transactions on their expense reports.
- Workday doesn't assign a cardholder at credit card file load.
- Workday generates credit card data for an erroneous file.
- Workday creates duplicate credit cards with transactions.
- Can't change the payment responsibility for a corporate credit card billing account with expense usage.

### Can't switch usage from Expenses to Procurement on a corporate credit card billing account.

**Cause:** On the corporate credit card billing account, you assigned 1 or more credit cards to external committee members (ECMs) or contingent workers.

**Solution:** Reassign the credit cards to a different corporate credit card billing account.

#### Steps

Security: Set Up: Credit Card in the Common Financial Management functional area.

- Access the **Find Credit Cards for Corporate Credit Card Billing Account** report.
- On the **Corporate Credit Card Billing Account** prompt, select the account that's in error.

3. From the related actions menu of the credit card that's assigned to the ECM or contingent worker, select **Credit Card > Edit**.  
To switch the usage to procurement, the cardholder must be an employee.
4. In the **Corporate Credit Card Billing Account** prompt, select a different account.
5. Access the **Edit Corporate Credit Card Billing Account** task.
6. In the **Usage** prompt, select *Procurement*.

**Expense payees can't add credit card transactions on their expense reports.**

**Cause:**

- The cardholder has an inactive payee ID.
- The credit card is missing a cardholder.
- Two or more people have duplicate cardholder IDs.

**Solution:**

**Steps**

Security: *Process: Credit Card* domain in the Common Financial Management functional area.

1. Access the **Find Cardholder Listing Files** report.
2. In the **Corporate Credit Card Billing Accounts** prompt, select the affected billing accounts.
3. On the **View Cardholder Listing File** page, click **Fix Errors**.
4. In the **Cardholder** prompt in the grid, for:
  - Cardholders with inactive IDs, select a different cardholder.
  - Credit cards with missing or duplicate IDs, select a cardholder.

**Workday doesn't assign a cardholder at credit card file load.**

**Cause:** Your financial institution didn't include the correct employee ID on the credit card file.

**Solution:** Contact your financial institution and verify that they include the correct employee ID on the file you import.

**Workday generates credit card data for an erroneous file.**

**Cause:** You imported a credit card transaction file by accident or imported an incorrect file.

**Solution:**

**Steps**

Security: *Process: Credit Card* domain in the Common Financial Management functional area.

1. Access the **Maintain Credit Card Transactions** task.
2. In the **Credit Card Transaction File** prompt, select the erroneous file.
3. Select the credit card transactions to close and update the status from *New* to *Closed*.

**Workday creates duplicate credit cards with transactions.**

**Cause:** When you load credit card transactions and there's inconsistent credit card information in Workday and in the credit card input file.

**Solution:**

**Steps**

Security: *Set Up: Credit Card* domain in the Common Financial Management functional area.

1. Access the **Find Credit Cards** report to find the duplicate credit card.

2. From the related actions menu of the duplicate credit card, select **Credit Card > Edit**. Select the **Reassignment Enabled** check box.
3. From the related actions menu of the duplicate credit card, select **Credit Card > Move Credit Card Transactions**. Select the credit card to move the credit card transaction to.
4. From the related actions menu of the duplicate credit card, select **Credit Card > Edit**.
5. Enter these values:

Option	Value
<b>Credit Card Description</b>	<i>DO_NOT_USE</i>
<b>Account Status</b>	<i>Canceled</i>
<b>Cancel Date</b>	The current date.

**Can't change the payment responsibility for a corporate credit card billing account with expense usage.**

**Cause:** The AMEX or Mastercard credit card has existing credit card transactions that are expensed or not yet expensed.

**Solution:**

**Steps**

1. [Create Corporate Expense Credit Card Billing Accounts](#) on page 1860.  
Create a new corporate credit card billing account with the correct payment responsibility.
2. [Create Worker Expense Credit Cards](#) on page 1862.  
Create a new credit card with both the:
  - New corporate credit card billing account.
  - Same masked credit card number as the old credit card.
3. When you have expensed transactions, access the **Find Expense Reports** report.
  - a. In the **Corporate Credit Card Accounts for Expense Report** prompt, select the old credit card billing account.
  - b. Cancel the expense report.

Security: *Process: Expense Report - Reporting* domain in the Expenses functional area.
4. Access the **Maintain Credit Card Transactions** task.
  - a. In the **Corporate Credit Card Accounts** prompt, select the old credit card billing account.
  - b. Select the credit card transactions to close and update the status from *New* to *Closed*.

Security: *Process: Credit Card* domain in the Common Financial Management functional area.

## Travel Booking Records Setup

---

### Steps: Set Up Travel Booking Records

#### Prerequisites

- To implement travel booking integration processing, contact Workday Professional Services or your consultant, and coordinate with your travel provider. The professional services group can determine scope, level of effort, and potential cost for assistance to create your travel booking inbound connector integration.

- Security: *Set Up: Expense Item* domain in the Expenses functional area.

## Context

You can download and map corporate travel booking records from your travel management provider into Workday Expenses.

## Steps

1. [Set Up Classes of Service](#) on page 1879.
2. [Map Travel Types to Expense Items](#) on page 1880.  
Map expense items to align with the travel record types your provider sends in inbound data.
3. [Set Up Airlines, Hotels, and Car Rental Agencies](#) on page 1770.  
Set up airlines, hotels, and car rental agencies with global 2-letter travel merchant codes as alternate names. This configuration enables inbound integration to map travel booking records to merchants you defined in Workday.
4. [Set Up Travel Cities](#) on page 1770.

## Result

Inbound travel booking records map to data in Workday and are available for workers to include in expense reports.

## Next Steps

Test the travel booking record integration.

### Related Information

#### Tasks

[Steps: Set Up Travel Booking Inbound Connector](#)

## Set Up Classes of Service

### Prerequisites

- To implement the travel booking integration feature, ask your corporate travel provider for the specific class of service identifiers it uses in travel integration downloads.
- Use the **Create Expense Item** task to add the *Class of Service* or *Classes of Service* expense item attribute to expense items.
- Security: *Set Up: Expense Item* domain in the Expenses functional area.

## Context

You can create 1 or more service classes for each travel type for reporting purposes and to help manage travel spend, including:

- Airfare
- Car rental
- Hotel accommodations
- Rail
- Other travel types

## Steps

1. Access the **Maintain Class of Service** task.

**2.** As you complete the task, consider:

Column	Description
Value	Specify the value for this class of service.  Example: <ul style="list-style-type: none"> <li>• Select <i>Economy</i> for the <i>Air</i> travel type.</li> <li>• Select <i>Conference Lodging</i> for the <i>Hotel</i> travel type.</li> </ul>
Travel Type	Associate a class of service with this travel type when workers use them on expense reports.
Description	Displays to workers on expense report lines with the <i>Class of Service</i> attribute.

## Result

If you mapped the class of service identifiers from:

- Travel provider inbound data, inbound travel booking records populate the class of service in expense report lines.
- Credit card integrations, inbound credit card transactions with trip leg data populate both class of service and classes of service in expense report lines with unique identifiers.

## Next Steps

Workers select a class of service on applicable expense report lines and credit card transactions.

[Steps: Set Up Expense Items](#) on page 1754

[Steps: Set Up Travel Booking Records](#) on page 1878

[Map Data from Expense Integration Files](#) on page 1869

## Map Travel Types to Expense Items

### Prerequisites

Security: *Set Up: Expense Item* domain in the Expenses functional area.

### Context

You can map travel types to expense items to populate default expense items in expense report lines from downloaded travel booking data.

### Steps

1. Access the **Maintain Travel Type Mapping** task.
2. Specify the **Default Expense Item** for each travel type:
  - Air
  - Hotel
  - Car Rental
  - Rail
  - Fees
  - Other

3. Configure additional **Available Expense Items** for the travel type.

Configure **Available Expense Items** to enrich your reports for air and hotel expenses.

#### Related Information

##### Tasks

[Steps: Set Up Expense Items](#) on page 1754

## Travel Booking Records Processing

---

### Steps: Process Travel Booking Records

#### Prerequisites

- Create and configure an integration system to import travel booking records.
- Complete required setup for mapping travel booking data from inbound integration files to Workday.
- Security:
  - *Process: Credit Card* domain in the Common Financial Management functional area.
  - *Process: Travel Booking* domain in the Financial Management functional area.
  - *Self Service: Travel Booking* domain in the Financial Management functional area.

#### Context

You can download travel booking records from your travel provider, review booking records, fix records in error, and map travel merchants and travel cities.

#### Steps

1. Launch or schedule an integration to load travel booking records into Workday from the external file or server of your travel provider.
2. [Review Travel Booking Records](#) on page 1881.
3. [Fix Travel Booking Record Errors](#) on page 1883.
4. [Map Data from Expense Integration Files](#) on page 1869.
5. Access the **Maintain Travel Booking Records** task to correct, close, or reopen travel booking records.

#### Result

Travel booking records are available for workers to use in expense reports.

#### Next Steps

Workers link travel booking records to expense report lines in expense reports.

#### Related Information

##### Tasks

[Steps: Set Up Travel Booking Records](#) on page 1878

[Steps: Set Up Travel Booking Inbound Connector](#)

## Review Travel Booking Records

#### Prerequisites

- Set up the integration for travel booking record files.
- Security: *Process: Travel Booking* domain in the Expenses functional area.

## Context

You can find travel booking record files, view details for each travel booking record, and correct records that aren't associated with a worker. You can also map merchants and cities using travel record data.

## Steps

### 1. (Optional) Access the **Find Travel Booking Record Files** report.

Review travel booking record files and access individual files to determine:

- Total records in each file.
- Records in *New* status.
- Records in error.
- Records missing merchants.
- Records missing cities.

You can access these options if you view a travel booking record file that has errors, unmapped merchants, or unmapped cities:

- **Fix Errors**
- **Map Merchants**
- **Map Cities**

### 2. (Optional) Access the **Find Travel Booking Records** report.

Select criteria to find individual travel booking records and review the results for each record. Details on the report depend on the travel type and can include:

- The associated worker who will expense this travel booking record.
- Travel record date.
- Travel start date.
- Travel type.
- Booking status (*Active* or *Canceled*).
- Purchase status (Yes or No).
- Merchant information, including details of mapped merchants in Workday, if available.
- Currency and conversion information.
- Record status

Workday changes the status of travel booking records that weren't purchased and later canceled to *Closed*.

- The related expense report if available.

## Next Steps

- Fix travel booking files in error.
- Map travel booking data to merchants and cities.
- Review policy violations as reported from your travel provider.  
Workday doesn't evaluate travel policy violations.
- Access the **Maintain Travel Booking Records** report to close travel booking records that workers won't expense, or reopen closed records.

## Related Information

### Tasks

[Map Data from Expense Integration Files](#) on page 1869

## Fix Travel Booking Record Errors

### Prerequisites

- Download files from your corporate card or travel booking integration.
- Security:
  - Process: Travel Booking* domain in the Expenses functional area.
  - Process: Credit Card* domain in the Common Financial Management functional area.

### Context

You can correct transactions or records in error to process them in Workday.

### Steps

- Access 1 of these reports:
  - Find Credit Card Transaction Files**, for expense credit cards and procurement card transactions.
  - Find Travel Booking Record Files**, for travel booking records.
- The reports display the files from your search criteria and identify files in error.
- Select a file with transactions or records in error.
- Click **Fix Errors**.

Option	Description
<b>Credit card transactions from expense credit card or procurement card transaction files</b>	You can only fix errors in the transaction such as the <b>Worker Credit Card</b> and <b>Transaction Currency</b> . You can't change other values transmitted in the download.
<b>Travel booking records from travel booking transactions files</b>	From the prompt, select the <b>Worker</b> to assign to the travel booking record.  If a travel booking record doesn't successfully map to a worker from the integration file, Workday uses the company defined in the integration. Once you assign a worker, Workday updates the company to the worker's company if it's different.

### Result

Workers can include the fixed transactions and records on expense reports and procurement card transaction verifications.

## Expense Analytics

---

### Track Expense for a Cost Center or Region

#### Context

You can analyze all spend and expenses in a cost center or region for a specified date range.

## Steps

1. From the related actions menu of a cost center or region, select **Worker Spend > View**.
2. (Optional) Select **Include Subordinate Organizations**.
3. Enter the date range to view spend.
4. Review the **Worker Spend by Workers Assigned to Organization** box to analyze the total spend from transactions originating from workers:

Field	Description	Calculation
<b>Total Spend</b>	The total spend for: <ul style="list-style-type: none"> <li>• Approved expense reports</li> <li>• Purchase orders</li> <li>• Supplier invoices</li> <li>• Procurement card transaction verifications</li> </ul>	Sums the <b>Extended Amount</b> value on <i>Approved</i> : <ul style="list-style-type: none"> <li>• Expense report lines that are for workers and contingent workers managed by workers in the organization.</li> <li>• Purchase order lines and <i>Issued</i> but noninvoiced purchase order lines sourced from requisitions in which workers in the organization or contingent workers managed by workers in the organization are the requester.</li> <li>• Supplier invoice lines sourced from a purchase order line that sourced from requisitions in which workers in the organization or contingent workers managed by workers in the organization are the requester.</li> <li>• Procurement card transaction verification totals.</li> </ul>
<b>Contingent Worker Timesheet Total</b>	The total spend for approved timesheets logged by or on behalf of contingent workers.	Sums the total amount on <i>Approved</i> timesheet (receipt) lines that are for a contingent worker.
<b>Total Worker Burden</b>	The total spend burden of workers and contingent workers. Spend data for workers includes payroll, compensation, taxes, and benefits. Spend data for contingent workers includes timesheets only.	Sums the: <ul style="list-style-type: none"> <li>• Gross amount, employer paid taxes, and employer paid benefits on completed payroll results for a worker who is in the organization.</li> <li>• Total amount on <i>Approved</i> timesheet (receipt) lines for a contingent worker.</li> </ul>
<b>Total Business Assets</b>	The total spend on business assets for workers.	Sums the unit cost (purchase amount) of business assets assigned to workers.

5. Review the **Worker Spend Tagged with Organization** box to analyze the total spend from transactions that have the specified organization as a worktag:

Field	Description	Calculation
<b>Total Spend</b>	The total spend for: <ul style="list-style-type: none"><li>• Approved expense reports.</li><li>• Purchase orders.</li><li>• Supplier invoices.</li><li>• Procurement card transaction verifications.</li></ul> Includes transactions entered for the company regardless of the creator. Includes both purchase order and nonpurchase order lines.	Sums the <b>Extended Amount</b> value on: <ul style="list-style-type: none"><li>• <i>Approved</i> expense report lines.</li><li>• <i>Approved</i> purchase order lines.</li><li>• <i>Issued</i> but noninvoiced purchase order lines.</li><li>• <i>Approved</i> supplier invoice lines.</li><li>• <i>Approved</i> procurement card transaction verifications.</li></ul>
<b>Contingent Worker Timesheet Total</b>	The total spend for approved timesheets.	Sums the total amount on <i>Approved</i> timesheet (receipt) lines.
<b>Total Business Assets</b>	The total spend on business assets.	Sums the unit cost (purchase amount) of business assets.

6. Review this chart:

Field	Description	Calculation
<b>Spend by Category Tagged with Organization</b>	The spend totals by spend category for transactions that have the specified organization as a worktag.  As a related action off any spend category, you can also view year-to-date and 12-month spend totals for that specific category. This includes: <ul style="list-style-type: none"><li>• Expense reports</li><li>• Purchase orders</li><li>• Invoices</li></ul>	Aggregates spend by spend category for the: <ul style="list-style-type: none"><li>• <b>Extended Amount</b> on the <i>Approved</i> expense report lines, <i>Approved</i> purchase order lines, <i>Issued</i> but noninvoiced purchase order lines, and <i>Approved</i> supplier invoice lines.</li><li>• <i>Approved</i> and <i>Issued</i> but noninvoiced purchase order lines.</li><li>• <i>Approved</i> supplier invoice lines.</li></ul>

7. Review this chart:

Field	Description	Calculation
<b>Spend by Type Tagged with Organization</b>	The spend totals by spend type for transactions that have the specified organization as a worktag. Spend types include: <ul style="list-style-type: none"><li>• Expense reports</li><li>• Purchase orders not yet invoiced</li><li>• Supplier invoices</li></ul>	Aggregates spend by spend type for these amounts: <ul style="list-style-type: none"><li>• <b>Extended Amount</b> on the <i>Approved</i> expense report lines, <i>Approved</i> purchase order lines, <i>Issued</i> but noninvoiced purchase order</li></ul>

Field	Description	Calculation
	<ul style="list-style-type: none"> <li>Procurement card transaction verifications</li> </ul>	<ul style="list-style-type: none"> <li>lines, and <i>Approved</i> supplier invoice lines.</li> <li><i>Approved</i> and <i>Issued</i> but noninvoiced purchase order lines.</li> <li><i>Approved</i> supplier invoice lines.</li> <li><i>Approved</i> procurement card transaction verification totals.</li> </ul>

#### 8. Drill into the spend data as needed.

You can drill by any perspective defined in your organizational structure. Drill-downs can be for one or multiple dimensions.

Multidimensional drill-downs enable you to view any worktag you've assigned to spend elements. Different elements might have different security, so the data that displays depends on what security groups you are in.

#### Result

When you run these spend analytics, the results include all spend committed up to the start time.

## Track Expense for a Supervisory Organization or Team

#### Context

You can analyze all spend in your business across a supervisory organization or team for a specified date range.

#### Steps

- From the related actions menu on a supervisory organization or region, select **Worker Spend > View**.
- (Optional) Select the **Include Subordinate Organizations** check box.
- Enter the date range to view spend.
- Review the **Worker Spend by Workers Assigned to Organization** box to analyze the total spend from transactions originating from workers:

Field	Description	Calculation
<b>Total Spend</b>	<p>The total spend for:</p> <ul style="list-style-type: none"> <li>Approved expense reports.</li> <li>Purchase orders.</li> <li>Supplier invoices.</li> <li>Procurement card transaction verifications.</li> </ul>	<p>Sums the <b>Extended Amount</b> value on Approved:</p> <ul style="list-style-type: none"> <li>Expense report lines that are for workers and contingent workers managed by workers in the organization.</li> <li>Purchase order lines and <i>Issued</i> but noninvoiced purchase order lines sourced from requisitions in which workers or contingent workers managed by workers in the organization are the requester.</li> </ul>

Field	Description	Calculation
		<ul style="list-style-type: none"> <li>Supplier invoice lines sourced from a purchase order line sourced from requisitions in which workers or contingent workers managed by workers in the organization are the requester.</li> <li>Procurement card transaction verification totals.</li> </ul>
<b>Contingent Worker Timesheet Total</b>	The total spend for approved timesheets logged by or on behalf of contingent workers.	Sums the total amount on <i>Approved</i> timesheet (receipt) lines for a contingent worker.
<b>Total Worker Burden</b>	<p>The total spend burden of workers and contingent workers. Spend data for workers includes:</p> <ul style="list-style-type: none"> <li>Payroll</li> <li>Compensation</li> <li>Taxes</li> <li>Benefits</li> </ul> <p>Spend data for contingent workers includes timesheets only.</p>	Sums the: <ul style="list-style-type: none"> <li>Gross amount, employer paid taxes, and employer paid benefits on completed payroll results for a worker.</li> <li>Total amount on <i>Approved</i> timesheet (receipt) lines for a contingent worker.</li> </ul>
<b>Total Business Assets</b>	The total spend on business assets for workers.	Sums the unit cost (purchase amount) of business assets assigned to workers.

5. Review this chart:

Field	Description	Calculation
<b>Spend by Category for Workers Assigned to Organization</b>	<p>The spend totals by spend category for transactions entered by or on behalf of workers.</p> <p>From the related action menu from any spend category, you can also view year-to-date and 12-month spend totals of:</p> <ul style="list-style-type: none"> <li>Expense reports</li> <li>Purchase orders</li> <li>Invoices</li> </ul>	Aggregates spend by spend category for <i>Approved</i> : <ul style="list-style-type: none"> <li>Expense report lines that are for workers and contingent workers managed by workers in the organization.</li> <li>Purchase order lines and <i>Issued</i> but noninvoiced purchase order lines sourced from requisitions in which workers or contingent workers managed by workers in the organization are the requester.</li> <li>Supplier invoice lines sourced from a purchase order line sourced from requisitions in which workers or contingent workers managed by workers in</li> </ul>

Field	Description	Calculation
		the organization are the requester.

6. Review this chart:

Field	Description	Calculation
<b>Spend by Type for Workers Assigned to Organization</b>	The spend totals by spend type for transactions entered by or on behalf of workers. Spend types include: <ul style="list-style-type: none"> <li>• Expense reports</li> <li>• Purchase orders not yet invoiced</li> <li>• Supplier invoices</li> </ul>	Aggregates spend by business document type for <i>Approved</i> : <ul style="list-style-type: none"> <li>• Expense report lines that are for workers and contingent workers managed by workers in the organization.</li> <li>• Purchase order lines and <i>Issued</i> but noninvoiced purchase order lines sourced from requisitions in which workers or contingent workers managed by workers in the organization are the requester.</li> <li>• Supplier invoice lines sourced from a purchase order line sourced from requisitions in which workers or contingent workers managed by workers in the organization are the requester.</li> </ul>

7. Drill into the spend data as needed.

You can drill by any perspective defined in your organizational structure. Drill-downs can be for one or multiple dimensions.

Multidimensional drill-downs enable you to view any worktag you've assigned to spend elements. Different elements might have different security, so the data that displays depends on what security groups you are in.

## Result

Whenever you run these spend analytics, the results include all spend committed up to the start time.

## Track Expense for a Company

### Context

You can analyze all spend in your business across a company for a specified date range.

### Steps

1. From the related actions menu of a company, supervisory organization, or region select **Worker Spend > View**.
2. (Optional) Select **Include Subordinate Organizations**.
3. Enter the date range to view spend.

4. Review the **Worker Spend by Workers Assigned to Organization** box to analyze the total spend from transactions originating from workers:

Field	Description	Calculation
<b>Total Spend</b>	<p>Total spend entered by or on behalf of workers for:</p> <ul style="list-style-type: none"> <li>Approved expense reports.</li> <li>Purchase orders.</li> <li>Supplier invoices.</li> <li>Procurement card transaction verification.</li> </ul>	<p>Sums the <b>Extended Amount</b> value on <i>Approved</i>:</p> <ul style="list-style-type: none"> <li>Expense report lines from workers and contingent workers.</li> <li>Purchase order lines and <i>Issued</i> but noninvoiced purchase order lines sourced from requisitions in which workers or contingent workers are the requester.</li> <li>Supplier invoice lines sourced from a purchase order line that was sourced from requisitions in which workers or contingent workers are the requester.</li> <li>Procurement card transaction verification totals.</li> </ul>

<b>Total Worker Burden</b>	<p>The total spend burden of workers and contingent workers. Spend data for workers includes:</p> <ul style="list-style-type: none"> <li>Payroll</li> <li>Compensation</li> <li>Taxes</li> <li>Benefits</li> </ul> <p>Spend data for contingent workers includes timesheets only.</p>	<p>Sums the:</p> <ul style="list-style-type: none"> <li>Gross amount, employer paid taxes, and employer paid benefits on completed payroll results for a worker.</li> <li>Total amount on <i>Approved</i> timesheet (receipt) for a contingent worker.</li> </ul>
<b>Total Business Assets</b>	The total spend on business assets for workers.	Sums the unit cost (purchase amount) of business assets assigned to workers.

5. Review the **Worker Spend Tagged with Organization** box to analyze the total spend from transactions that are for the company:

Field	Description	Calculation
<b>Total Spend</b>	<p>The total spend for:</p> <ul style="list-style-type: none"> <li>Approved expense reports.</li> <li>Purchase orders.</li> <li>Supplier invoices.</li> <li>Procurement card transaction verifications.</li> </ul>	<p>Sums the <b>Extended Amount</b> values:</p> <ul style="list-style-type: none"> <li><i>Approved</i> expense report lines.</li> <li><i>Approved</i> purchase order lines.</li> </ul>

Field	Description	Calculation
	This includes transactions entered for the company regardless of the creator. It also includes both purchase order and nonpurchase order lines.	<ul style="list-style-type: none"> <li><i>Issued</i> but noninvoiced purchase order lines.</li> <li><i>Approved</i> supplier invoice lines.</li> <li><i>Approved</i> procurement card transaction verifications.</li> </ul>
<b>Contingent Worker Timesheet Total</b>	The total spend for approved timesheets.	Sums the total amount on <i>Approved</i> timesheet (receipt) lines for contingent worker purchase order lines.
<b>Total Business Assets</b>	The total spend on business assets.	Sums the unit cost (purchase amount) of business assets.

6. Review this chart:

Field	Description	Calculation
<b>Spend by Category Tagged with Organization</b>	<p>The spend totals by spend category for transactions.</p> <p>From the related action menu from any spend category, you can also view year-to-date and 12-month spend totals of:</p> <ul style="list-style-type: none"> <li>Expense reports</li> <li>Purchase orders</li> <li>Invoices</li> </ul>	<p>Aggregates spend by spend category for the <b>Extended Amount</b> on:</p> <ul style="list-style-type: none"> <li><i>Approved</i> expense report lines</li> <li><i>Approved</i> purchase order lines.</li> <li><i>Issued</i> but noninvoiced purchase order lines</li> <li><i>Approved</i> supplier invoice lines.</li> </ul>

7. Review this chart:

Field	Description	Calculation
<b>Spend by Type Tagged with Organization</b>	<p>The spend totals by spend type for transactions. Spend types include:</p> <ul style="list-style-type: none"> <li>Expense reports.</li> <li>Purchase orders not yet invoiced.</li> <li>Supplier invoices.</li> </ul>	<p>Aggregates spend by spend type for the <b>Extended Amount</b> on:</p> <ul style="list-style-type: none"> <li><i>Approved</i> expense report lines.</li> <li><i>Approved</i> purchase order lines.</li> <li><i>Issued</i> but noninvoiced purchase order lines.</li> <li><i>Approved</i> supplier invoice lines.</li> </ul>

8. Drill into the spend data as needed.

You can drill by any perspective defined in your organizational structure. Drill-downs can be for 1 or multiple dimensions.

Multidimensional drill-downs enable you to view by any worktag you've assigned to spend elements. Different elements might have different security, so the data that displays depends on what security groups you are in.

## Result

Whenever you run these spend analytics, the results include all spend committed up to the start time.

# Expenses Hub

---

## Steps: Set Up Expenses Hub

### Context

The **Expenses Hub** provides a single location from which payees can access tasks and reports to manage expenses. When payees access tasks and reports from within the hub, we return them to the hub when they finish with the task or report.

With the relevant expense data and security permissions, payees can use the hub (see [Reference: Expenses Hub Sections](#)) to manage:

- Expense reports, including expense reports with negative balances.
- Spend authorizations, including cash advances and their remaining balances.
- Allowance plan entitlements and their remaining balances.
- Credit card transactions and quick expenses.
- Payment elections.
- Travel booking records and travel profiles.

The hub is automatically available for Expenses self-service users and they can manually add it to their Workday menu. However, you can also configure the **Expenses Hub** worklet so that it displays on the Workday Home page.

### Steps

#### 1. Access the **Maintain Dashboards** report.

- a) On the Home row, click **Edit**.
- b) On the **Content** tab, in the **Worklets** grid:
  - Remove the **Expenses** worklet if it's in use.
  - Add a row and select:
    - *Expenses Hub* from the **Worklet** prompt.
    - *Contingent Worker As Self* and *Employee As Self* from the **Required for Groups** prompt.

Security: *Set Up: Tenant Setup - Worklets* in the System functional area.

#### 2. (Optional) [Set Up Hubs](#).

Use the Expenses Hub row to customize these content types for the hub:

- Announcement headers.
- Suggested links.
- Text on Expenses cards.

You can use the **Navigation Item Override** tab to prevent specific sections from displaying on the hub, even when users have the relevant expense data and security permissions.

Security: *Set Up: Tenant Setup - Hubs* in the System functional area.

#### 3. (Optional) Access the **Home Cards Workspace** report.

Select and publish the Expenses cards you want to display to expense payees on the Home page.

Security: *Set up: People Experience Configuration* domain in the People Experience functional area.

See [Reference: Home Page Cards](#).

## Result

If you publish Expenses cards and payees have pending expenses, Workday displays the cards on the Home page. When payees click the cards on:

- A web browser, we redirect them to the **Expenses Hub**.
- The Workday mobile application, we redirect them to the Expenses page.

Depending on which expenses need attention, we dynamically display and hide Expenses cards on the **Overview** section of the hub.

If you set up Expenses Email Receipts, a card displays to inform users how they can send expense receipts. You can specify the email address and enable your users to send the information on the card to their phones with a text message. See [Customize Expenses Hub Card](#).

[2022R2 What's New Post: The Expenses Hub](#)

## Customize Expenses Hub Card

### Prerequisites

- [Set Up Expenses Email Receipts](#)
- [Set Up Workday Messaging](#)
- [Set Up Expenses Hub](#)

### Context

You can display an email address on the **Did You Know?** Expenses Hub card to specify where users can send email receipts. You can also enable them to send the information on the card to their phones with a text message.

### Steps

1. To display an email address on the card:

- Access the **Configure Email Ingestion Settings** task.
- Select **Expense Receipt** for **Notification Type**.
- Enter an email address in the **Expense Receipt Email Forwarding Address** field.

You must enter a valid email address associated with your tenant's expense receipt submission.

Example: [Receipts@workday.com](mailto:Receipts@workday.com).

2. To ensure your users can send the information to their phones with a text message:

- Access the **Edit Tenant Setup - Notifications** task.
- Select **Expenses** tab in the **Notification Delivery Settings**.
- Select the **Override Parent Notification Type Settings** check box.
- For **Rule**, create a **Notification Routing Rule** and name it.
- For **Channel Frequencies**:
  - Select **Add**.
  - For **Channel**, select **SMS**.
  - For **Default Frequency**, select **Immediately**.

### Result

Your users now know what email address they can send expense receipts too. They can also text the information to the phones in their Workday profile so this information can be accessible easily.

To hide the card, access the **Maintain Hubs** report.

## Configuration Examples

---

### Example: Set Up Payment Elections for Split Distributions

This example illustrates 1 way to set up a worker's initial payment elections for split payment distributions. It includes a flat amount and percentage deposited to different bank accounts, and the balance paid by check.

#### Context

The payroll administrator at Global Modern Services sets up payment elections for Adam Carlton, a US worker who wants to split his regular pay as follows:

- 1,000 USD deposited to his checking account.
- 75% of the total payment deposited in his savings account. Workday calculates payment election percentages on the total payment amount.
- The balance paid in a check.

#### Prerequisites

- Set up settlement, including payment types. See [Setup Considerations: Settlement](#)
- Set up currencies. See [Steps: Set Up Currencies](#)
- Security:
  - *Manage: Payment Election* domain in the Expenses functional area.
  - *Set Up: Payment Election* domain in the Expenses functional area.
  - *Set Up: Payroll (Payment Election Rules)* domain in the Core Payroll functional area.
  - *Set Up: Payroll Interface* domain in the Payroll Interface functional area.
  - *Worker Data: Payroll (Payment Elections)* domain in the Core Payroll functional area.
  - *Worker Data: Payroll Interface (Payment Elections)* domain in the Payroll Interface functional area.

#### Steps

1. Access the **Maintain Payment Election Rules** task.
2. Select these values:

Option	Description
<b>Election Rule Type</b>	<i>Payroll Rule</i>
<b>Election Rule Name</b>	<i>Regular Payments</i>
<b>Run Category</b>	<i>Regular</i>
<b>Allowed Payment Types for Payment Elections</b>	<i>Check, Direct Deposit</i>
<b>Default Payment Type for Add Initial Election</b>	<i>Direct Deposit</i>
<b>Allowed Payment Types for Transaction Overrides</b>	<i>Check, Direct Deposit</i>
<b>Override Payment Type for Error Prenotes</b>	<i>Check</i>
<b>Max Number of Elections</b>	3
<b>Allow Mix of Payment Types</b>	Select check box.
<b>Allow Distributions By</b>	<i>Amount, Percent</i>
<b>Default Payment Type</b>	<i>Check</i>

3. Click **OK** then click **Done**.
4. Access the **Maintain Payment Elections** report.
5. For **Person**, find the worker, Adam Carlton, and click **OK**.
6. Click the **Add** button.
7. Set up the checking account. Set **Account Type** to **Checking** and enter **Routing Transit Number**, **Account Number**, and **Bank Name**. To make it easy to distinguish his checking account from his savings account, enter the **Account Nickname** *Adam's Checking Account*. Click **OK**.
8. Set up the savings account. Set **Account Type** to **Savings** and enter **Routing Transit Number**, **Account Number**, and **Bank Name**. To make it easy to distinguish his savings account from his checking account, enter the **Account Nickname** *Adam's Savings Account*. Click **OK**.
9. Under **Payment Elections**, find the **Regular Payments** row and click the **Edit** button under **Action**.
10. Set up a row for the payment election of 1,000 USD direct deposit to his checking account.

Option	Description
<b>Country</b>	<i>United States of America</i>
<b>Currency</b>	<i>USD</i>
<b>Payment Type</b>	<i>Direct Deposit</i>
<b>Account</b>	<i>Adam's Checking Account</i>
<b>Balance / Amount / Percentage</b>	For <b>Amount</b> , enter <i>1000.00</i> .

11. Click the add icon and set up a second row for the 75% direct deposit to his savings account.

Option	Description
<b>Country</b>	<i>United States of America</i>
<b>Currency</b>	<i>USD</i>
<b>Payment Type</b>	<i>Direct Deposit</i>
<b>Account</b>	<i>Adam's Savings Account</i>
<b>Balance / Amount / Percentage</b>	For <b>Percent</b> , enter <i>75</i> .

12. Click the add icon and set up another row to have the balance paid by check. For the last row in the grid, always either select **Balance** or a percentage amount that brings the total to 100.

Option	Description
<b>Country</b>	<i>United States of America</i>
<b>Currency</b>	<i>USD</i>
<b>Payment Type</b>	<i>Check</i>
<b>Balance / Amount / Percentage</b>	Select <b>Balance</b> .

13. Click **OK** to save your changes.

## Result

The payment elections status is *Successfully Completed*.

To resolve split distributions, Workday uses the same order in which you set up your payment elections.

When his regular pay is 4,500 USD, his pay distributions are:

Calculation	Distribution
1,000 USD	1,000 USD direct deposit to his checking account.

Calculation	Distribution
75% of 4,500 USD = 3375 USD	3,375 USD direct deposit to his savings account.
125 USD remaining	125 USD balance paid by check.

When his regular pay is 1,500 USD, the pay distributions are:

Calculation	Distribution
1,000 USD	1,000 USD direct deposit to his checking account.
75% of 1,500 USD = 1,125 USD	Remaining 500 USD direct deposit to his savings account.
0 USD remaining	0 USD is paid by check.

## Example: Maintain Access to Payment Elections

### Context

In order to minimize the risk to personal data, you want to restrict access to payment elections employee self-service tasks that contain personal information for all users from outside your company network.

### Prerequisites

Security:

- *Security Administration* domain in the System functional area.
- *Set Up: Tenant Setup - Security* domain in the System functional area.

### Steps

1. Access the **Manage Authentication Policies** task.
2. Select **Add Authentication Policy**.
3. Select *Production* from the **Restricted to Environment** prompt.
4. Select the **Authentication Policy Enabled** check box.
5. To create a rule that identifies whether users are inside your network, enter these settings on the first row of the **Authentication Ruleset**:

Option	Description
<b>Authentication Rule Name</b>	Restrict Access to Payment Elections
<b>Security Group</b>	All Users
<b>Authentication Condition Name</b>	Inside Corporate Network
<b>Authentication Condition</b>	Select <i>Corporate IP Range</i> , or select <i>Create IP Range</i> to enter the IP range for your company.
<b>Allowed Authentication Types</b>	Any
<b>Access Restriction for Authentication Condition</b>	Leave empty.

6. To create a rule that restricts users outside the network, enter these settings on the second row:

Option	Description
<b>Authentication Condition Name</b>	Outside Corporate Network

Option	Description
<b>Authentication Condition</b>	<i>Any</i>
<b>Allowed Authentication Types</b>	<i>Any</i>
<b>Access Restriction for Authentication Condition</b>	Select <i>Create Access Restriction</i> . <ul style="list-style-type: none"> <li>• Name the new access restriction: <b>No Payment Election Access</b>.</li> <li>• Select <b>Payment Elections</b> on the <b>Excludes Functionality</b> prompt.</li> <li>• Click <b>OK</b>.</li> </ul>

7. Click **OK** and **Done**.
8. Access the **Activate Pending Security Policy Changes** task.
9. Enter a comment: Set up restrictions for payment elections.
10. Select the **Authentication Policy Enabled** check box. Click **OK**, select **Confirm**, and click **OK**.
11. Access the **Activate All Pending Authentication Policy Changes** task.
12. Enter a comment: Set up restrictions for payment elections.
13. Select the **Authentication Policy Enabled** check box. Click **OK**, select **Confirm**, and click **OK**.

### Result

All users, including administrators, outside of the company network won't have access to these payment election tasks:

- *Add Account*
- *Add Elections*
- *Add My Account*
- *Add My Elections*
- *Add Payment Elections*
- *Change My Account*
- *Change My Election*
- *Delete Account*
- *Delete My Account*

Administrators can still access these tasks:

- **Maintain Payment Election** (View only.)
- **Maintain Payment Elections Rules**
- **Maintain Payment Election Options**

[Steps: Set Up Authentication Policies](#)

### Example: Itemize Hotel Expenses Automatically

This example illustrates 1 way to configure an expense item so that Workday automatically itemizes hotel charges on expense report lines.

## Context

Your expense payees regularly use expense credit cards to pay for hotel charges. During a 2-night hotel stay, your employee uses their credit card for:

- These nonrecurring charges:
  - Parking for 1 night.
  - 3 meals.
- These recurring daily charges:
  - Room rate.
  - Room tax.

You want to configure a Hotel expense item that payees can use to itemize the payments on expense report lines.

## Prerequisites

- Contact your financial institution to request level 3 credit card transaction data for hotel stays.
- [Create Spend Categories](#).
- Create these expense items so you can map them to the Hotel expense item that you'll create: Meals, Parking, and Room Rate and Tax. See: [Create Expense Items](#).
- [Map Merchant Category Codes to Expense Items](#).
- Security: Set Up: *Expense Item* domain in the Expenses functional area.

## Steps

1. Access the **Create Expense Item** task.
2. In the **Summary** section, specify these values:

Option	Description
Item Name	<i>Hotel</i>
Spend Category	Select.

3. In the **Processing** section, select these options:

*Actual Amount* from the **Expense Item Amount Type** subsection.

*None of the above* from the **Expense Item Calculation** subsection.

4. In the **Expense Item Attributes** grid, add these values:

Attributes	Expense Report: Display to User	Expense Report: Required
<i>Arrival Date</i>	Select.	Select.
<i>Departure Date</i>	Select.	Select.

**5. On the Itemization Mapping tab:**

a) Select these check boxes:

- **Hotel Expense**
- **Automatically Populate Itemization for Level 3 Credit Card Transaction Data**

b) Specify these values on the itemization grid:

Expense Item	Itemize Expense by	Required	Is Room Rate	Always Generate Itemization Line	Product Code
<b>Meals</b>	<i>Charge Breakdown</i>	Leave blank.	Leave blank.	Leave blank.	<i>MasterCard - Restaurant Charges (L-1101)</i>
<b>Parking</b>	<i>Charge Breakdown</i>	Leave blank.	Leave blank.	Leave blank.	<i>MasterCard - Valet Charges (L-1110)</i>
<b>Room Rate and Tax</b>	<i>Recurring Daily Charge</i>	Select.	Select.	We automatically select this check box when you select the <b>Required</b> check box.	<i>MasterCard - Room Rate (L-1000)</i> <i>MasterCard - Room Tax (L-1020)</i>

**6. Click OK.**

**7. Configure security for your expense item.**

See [Steps: Set Up Security for Expense Items](#).

### Result

Workday automatically itemizes hotel charges when expense payees:

- Create an expense report.
- Have credit card transactions that include level 3 data that you've mapped to the Hotel expense item.

On the expense report, we display an **Itemization** section that includes a **Daily Expenses** subsection that details recurring daily charges. We also display charge breakdowns in a separate subsection beneath the **Itemization** section.

### Next Steps

To review data for automatically itemized hotel expense items, create custom reports and include these report fields from the Expense Report Lines and Itemizations business object:

- **Itemization Includes Lines Created Automatically from Level 3 Transaction Data**
- **Itemization Line Created Automatically from Level 3 Transaction Data**

### Example: Create Distance-Based Expense Items

This example illustrates 1 way to configure distance-based expense items so you can calculate reimbursement amounts automatically on expense reports.

## Context

Members of your sales team drive to different office locations frequently. To control spend and ensure compliance, you want to configure distance-based expense items to calculate reimbursements automatically for distances traveled.

You also want to:

- Capture when estimated and actual distances differ, such as when payees take alternate routes because of traffic diversions.
- Deduct daily commute distances from distances traveled.

## Prerequisites

- [Create Spend Categories](#).
- Security: *Set Up: Expense Item* in the Expenses functional area.

## Steps

### 1. Access the **Innovation Services Opt-In** task.

- a) On the **Available Services** tab, select the Financials category.
- b) In the **Financials** grid, select the check box for the *Distance Calculation for Expenses* service.
- c) Click **OK** and **Done**.

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

### 2. Access the **Create Expense Rate Table** task.

- a) Specify these values:

Option	Description
<b>Expense Rate Table Type</b>	<i>Amount</i>
<b>Effective Date</b>	The current date.

- b) Click **OK**.

- c) Specify these values:

Option	Description
<b>Expense Rate Table Name</b>	<i>Distance-Based Expenses for Sales Team</i>
<b>Default Currency</b>	<i>USD</i>
<b>Attribute to Evaluate</b>	<i>Distance to Expense</i>

- d) In the **Amounts** grid, enter *0.625* in the **Amounts** field.

- e) Click **OK**.

### 3. Access the **Create Expense Item** task.

- a) In the **Processing** and **Summary** sections, specify these values:

Option	Description
<b>Item Name</b>	<i>Driving Expenses</i>
<b>Spend Category</b>	Select.
<b>Expense Item Amount Type</b>	<i>Fixed Amount</i>

Option	Description
<b>Expense Item Calculation</b>	<i>Use Expense Rate Table</i>

- b) On the **Rate Tables** tab, select *Distance-Based Expenses for Sales Team* from the **Base Expense Rate Table** prompt.
- c) On the **Distance Calculation** tab, specify these values:

Option	Description
<b>Require Distance Calculation Attributes on Expense Reports</b>	Select.
<b>Unit of Measure for Distance</b>	<i>Miles</i>
<b>Trip Distance Including Diversions</b>	Select the <b>Enable for Expense Reports</b> check box for each of these attributes.
<b>One-Way Daily Commute Distance</b>	
<b>Round Trip</b>	

- d) Click **OK**.

## Result

On expense report lines, Workday uses Google Maps to determine estimated distances when payees:

- Select the *Driving Expenses* expense item.
- Enter origin and destination addresses on the expense item.

To calculate reimbursement amounts, Workday uses the calculated distance to expense and multiplies it by rates from the associated rate table. Payees can also enter trip distances different from the estimated distances that Google Maps provides.

## Next Steps

- Configure segmented security to restrict the availability of distance-based expense items.
- To review data for distance-based expenses, create custom reports and include report fields from these business objects:
  - Expense Attributes Entered
  - Expense Report Line

## Related Information

[Workday Innovation Services](#)

## Example: Create Per Diem Expense Items for Calendar Day Travel Journals

This example illustrates how to configure travel journals that are based on calendar days, enabling you to calculate per diem reimbursements for expense payees.

## Context

Matt is traveling on a business trip from Paris to Berlin on July 1 at 6:00 and will arrive back on July 3 at 9:40. You want to configure a per diem expense item for European travel to calculate his reimbursement values automatically, allocating:

- 60 EUR for whole days of travel that include an overnight stay.
- 40 EUR for days of travel that range from 10 hours up to, but less than, 24 hours.
- 0 EUR for days that include fewer than 10 hours of travel.

## Prerequisites

Security: Set Up: *Expense Item* domain in the Expenses functional area.

## Steps

1. Access the **Create Expense Rate Table** task.

2. Specify these values:

Option	Description
<b>Expense Rate Table Type</b>	<i>Amount</i>
<b>Effective Date</b>	Select the current date.

3. Click **OK**.

4. Specify these values:

Option	Description
<b>Expense Rate Table Name</b>	<i>European Travel - Fixed Amount</i>
<b>Default Currency</b>	<i>EUR</i>
<b>Attribute to Evaluate</b>	<i>Number of Hours</i>

5. In the **Amounts** grid, enter:

Condition Rule or Criteria	Amount	Currency
Leave blank.	60	<i>EUR</i>

6. Click **OK**.

7. Access the **Create Expense Rate Table** task again.

8. Specify these values:

Option	Description
<b>Expense Rate Table Type</b>	<i>Graduated Amount</i>
<b>Effective Date</b>	Select the same date set in the <b>Amount</b> rate table.

9. Click **OK**.

10. Specify these values:

Option	Description
<b>Expense Rate Table Name</b>	<i>European Travel - Deduction for Partial Day</i>
<b>Default Currency</b>	<i>EUR</i>
<b>Attribute to Evaluate</b>	<i>Number of Hours</i>

11.In the **Graduated Amounts** grid, enter these values within the same condition rule:

Condition Rule or Criteria	Start of Range	End of Range	Amount	Currency
Leave blank.	0	9	60	EUR
	10	23	20	EUR

12.Click **OK**.

13.Access the **Create Expense Item** task.

14.Specify these values to create a child expense item that contains the expense item attributes that Matt needs:

Option	Description
<b>Item Name</b>	<i>z - do not select - Travel Journal Item - European Travel</i>
<b>Spend Category</b>	<i>Business Travel</i>
<b>Expense Item Amount Type</b>	<i>Fixed Amount</i>
<b>Expense Item Calculation</b>	<i>Use Expense Rate Table</i>

15.In the **Expense Item Attributes** grid, add a row with these values:

Option	Description
<b>Attributes</b>	<i>Number of Hours</i>
<b>Expense Report: Display to User</b>	Select.
<b>Expense Report: Required</b>	Select.

16.In the **Rate Tables** tab, select *European Travel - Fixed Amount* from the **Base Expense Rate Table** prompt.

17.Add this row in the **Adjustment Rate Tables** grid:

Option	Description
<b>Add/Subtract</b>	<i>Subtract</i>
<b>Adjustment Expense Rate Table</b>	<i>European Travel - Deduction for Partial Day</i>

18.Click **OK**.

19.Access the **Create Expense Item** task again.

20.In the **Summary** section, specify these values to create a parent expense item that Matt can select on the **Travel Journal** section of his expense report:

Option	Description
<b>Item Name</b>	<i>European Travel</i>
<b>Spend Category</b>	<i>Business Travel</i>
<b>Per Diem</b>	Select.
<b>Enable Travel Journal</b>	Select.
<b>Travel Journal Item</b>	<i>z - do not select - Travel Journal Item - European Travel</i>
<b>Travel Journal Configured as</b>	<i>Calendar Days</i>
<b>Rounding Option for Hours</b>	<i>Round down</i>

**21.**Add these rows in the **Expense Item Attributes** grid:

Attributes	Expense Report: Display to User	Expense Report: Required
<i>Arrival Date</i>	Select.	Select.
<i>Departure Date</i>	Select.	Select.
<i>Arrival Time</i>	Select.	Select.
<i>Departure Time</i>	Select.	Select.

**22.**Click **OK**.

## Result

Workday generates a calendar-day travel journal when Matt:

- Selects the *European Travel* expense item on his expense report.
- Populates dates and times for his departure and arrival.

Workday evaluates these dates and hours, and allocates these per diem amounts:

Departure Date	Number of Hours	Per Diem Amount
July 1	18	40 EUR
July 2	24	60 EUR
July 3	9	0 EUR

## Next Steps

Configure segment-based security to unrestrict the *European Travel* and *z - do not select - Travel Journal Item - European Travel* expense items for expense payees.

## Example: Create Per Diem Expense Items for 24-Hour Period Travel Journals

This example illustrates how to configure travel journals that are based on 24-hour periods, enabling you to calculate per diem reimbursements for expense payees.

### Context

Rachel is traveling on a business trip from Helsinki to Dublin on February 1 at 13:00 and will arrive back on February 3 at 19:40. You want to configure a per diem expense item for European travel to calculate her reimbursement values automatically, allocating:

- 50 EUR for each complete 24-hour travel period.
- 35 EUR for travel periods that range from 10 and up to 24 hours.
- 0 EUR for days including fewer than 10 hours of travel.

## Prerequisites

Security: Set Up: Expense Item domain in the Expenses functional area.

## Steps

1. Access the **Create Expense Rate Table** task.

2. Specify these values:

Option	Description
Expense Rate Table Type	Amount
Effective Date	Select the current date.

3. Click **OK**.

4. Specify these values:

Option	Description
Expense Rate Table Name	European Travel - Fixed Amount
Default Currency	EUR
Attribute to Evaluate	Number of Hours

5. In the **Amounts** grid, enter:

Condition Rule or Criteria	Amount	Currency
Leave blank.	50	EUR

6. Click **OK**.

7. Access the **Create Expense Rate Table** task again.

8. Specify these values:

Option	Description
Expense Rate Table Type	Graduated Percent
Effective Date	Select the same date set on the <b>Amount</b> rate table.

9. Click **OK**.

10. Specify these values:

Option	Description
Expense Rate Table Name	European Travel - Graduated Amount
Attribute to Evaluate	Number of Hours

11. In the **Graduated Percentages** grid, enter these values within the same condition rule:

Condition Rule or Criteria	Start of Range	End of Range	Percent
Leave blank.	0	9	100
	10	23	30

12. Click **OK**.

13. Access the **Create Expense Item** task.

Create a child expense item that contains the expense item attributes that Rachel needs.

14.Specify these values:

Option	Description
Item Name	<i>z - do not select - Travel Journal Item - European Travel</i>
Spend Category	<i>Business Travel</i>
Expense Item Amount Type	<i>Fixed Amount</i>
Expense Item Calculation	<i>Use Expense Rate Table</i>

15.In the **Expense Item Attributes** grid, add a row with these values:

Option	Description
Attributes	<i>Number of Hours</i>
Expense Report: Display to User	Select.
Expense Report: Required	Select.

16.In the **Rate Tables** tab, select *European Travel - Fixed Amount* from the **Base Expense Rate Table** prompt.

17.Add this row in the **Adjustment Rate Tables** grid:

Option	Description
Add/Subtract	<i>Subtract</i>
Adjustment Expense Rate Table	<i>European Travel - Graduated Amount</i>

18.Click **OK**.

19.Access the **Create Expense Item** task again.

Create a parent expense item that Rachel can select to enable the **Travel Journal** section on her expense report.

20.In the **Summary** section, specify these values:

Option	Description
Item Name	<i>European Travel</i>
Spend Category	<i>Business Travel</i>
Per Diem	Select.
Enable Travel Journal	Select.
Travel Journal Item	<i>z - do not select - Travel Journal Item - European Travel</i>
Travel Journal Configured as	<i>24-Hour Periods</i>
Rounding Option for Hours	<i>Round up</i>

21.Add these rows in the **Expense Item Attributes** grid:

Attributes	Expense Report: Display to User	Expense Report: Required
Arrival Date	Select.	Select.
Departure Date	Select.	Select.
Arrival Time	Select.	Select.
Departure Time	Select.	Select.

## 22.Click OK.

### Result

Workday generates a 24-hour period travel journal when Rachel:

- Selects the *European Travel* expense item on her expense report.
- Populates dates and times for her departure and arrival.

Workday evaluates these dates, times, and hours, and allocates these per diem amounts:

Start Date	Start Time	End Date	End Time	Number of Hours	Per Diem Amount
February 1	13:00	February 2	13:00	24	50 EUR
February 2	13:00	February 3	13:00	24	50 EUR
February 3	13:00	February 3	19:40	7	0 EUR

### Next Steps

Configure segment-based security to unrestrict the *European Travel* and *z - do not select - Travel Journal Item - European Travel* expense items for expense payees.

## Example Steps: Process and Report on Job Requisition Costs

This example illustrates how to process and report on costs associated with a job requisition.

### Context

You fill a Marketing Director role and want to process all costs associated with its job requisition. You also want to use custom reporting to analyze job requisition costs so that you can adjust forecasted spend as needed.

### Steps

1. Create expense reports and supplier invoices for costs associated with the job requisition.  
See [Example: Process Candidate Expenses and Recruiter Fees for a Job Requisition](#) on page 1909.
2. Create a custom report that enables you to report on cost-of-hire totals for the job requisition.  
See [Example: Create a Custom Report for Cost-of-Hire Totals](#) on page 1913.

## Example: Process Candidate Expenses and Recruiter Fees for a Job Requisition

This example illustrates how to process the candidate expenses and recruiter fees associated with a job requisition.

## Context

You use an external recruiter to identify Alex Collins and Charlie Kennedy as candidates for a Marketing Director role. Both candidates attend on-site interviews and lunches with prospective teammates.

When you hire 1 of these candidates, you want to:

- Enable reporting for cost-of-hire totals.
- Create a supplier invoice to process external recruiter fees.
- Reclaim candidate expenses that you incur on your corporate card.
- Reimburse candidates for out-of-pocket expenses that they incur during recruitment.

## Prerequisites

- Set up a job requisition for the role.
- Configure Workday profiles for candidates.
- Add expense payments on candidate payment elections.
- Set up your external recruiter as a supplier.
- Create spend categories.
- Configure *Team Lunch* and *Transport* expense items, and add the *Attendees* attribute on the *Team Lunch* item.
- Reassign expense credit card transactions to candidates.

Security:

- *Candidate Data: Candidate Expenses* domain in the Recruiting functional area.
- *Set Up: Enable Worktags* domain in the Common Financial Management and Worktags functional areas.

Configure the:

- *Expense Report Event* business process and security policy in the Expenses functional area.
- *Supplier Invoice Event* business process and security policy in the Supplier Accounts functional area.

## Steps

1. Access the **Maintain Worktag Usage** report.
  - a) In the Expense Report category, click **Edit Worktag Usage** and add *Job Requisition* as a worktag type.
  - b) Click **OK**.
  - c) In the Supplier Invoice category, click **Edit Worktag Usage** again and add *Job Requisition* as a worktag type.
  - d) Click **OK and Done**.
2. Access the **Create Supplier Invoice** task.
  - a) Enter these values:

Option	Description
<b>Company</b>	Select.
<b>Supplier</b>	Select your external recruiter.

Option	Description
<b>Invoice Date</b>	The current date.

In the **Invoice Lines** grid, enter these values:

Spend Category	Quantity	Unit Cost	Worktags
Select.	1	500	Select the job requisition for the Marketing Director role.

b) Click **Submit**.

3. Access the **Create Expense Report** task.

a) Select *Create New Expense Report*.

b) Click **OK**.

c) Add an expense line and enter these values:

Option	Description
<b>Date</b>	The current date.
<b>Expense Item</b>	<i>Team Lunch</i>
<b>Total Amount</b>	45
<b>Memo</b>	<i>Alex attended our team lunch to meet prospective teammates.</i>
<b>Worktags</b>	Select the job requisition for the Marketing Director role.
<b>Attendees</b>	<i>Alex Collins</i>

d) Add another expense line and enter these values:

Option	Description
<b>Date</b>	The current date.
<b>Expense Item</b>	<i>Team Lunch</i>
<b>Total Amount</b>	50
<b>Memo</b>	<i>Charlie attended our team lunch to meet prospective teammates.</i>
<b>Worktags</b>	Select the job requisition for the Marketing Director role.
<b>Attendees</b>	<i>Charlie Kennedy</i>

e) Click **Submit**.

4. Access the **Create Expense Report for Non-Worker** task.

a) Enter these values:

Option	Description
<b>Payee Type</b>	<i>Candidate</i>
<b>Pay To</b>	<i>Alex Collins</i>
<b>Creation Options</b>	<i>Create New Expense Report</i>

Option	Description
Job Application	Select.
Company	Select.
Expense Report Date	The current date.

- b) Click **OK**.
- c) Add an expense line and enter these values:

Option	Description
Date	The current date.
Expense Item	<i>Transport</i>
Total Amount	55

- d) Click **Submit**.
- e) Access the **Create Expense Report for Non-Worker** task again.
- f) On the initiation page, enter these values:

Option	Description
Payee Type	<i>Candidate</i>
Pay To	<i>Charlie Kennedy</i>
Creation Options	<i>Create New Expense Report</i>
Job Application	Select.
Company	Select.
Expense Report Date	The current date.

- g) Click **OK**.
- h) Add an expense line and enter these values:

Option	Description
Date	The current date.
Expense Item	<i>Transport</i>
Total Amount	190

- i) Click **Submit**.

## Example: Create a Custom Report for Cost-of-Hire Totals

This example illustrates how to configure a custom report that provides cost-of-hire totals for a job requisition.

### Context

You approve the supplier invoice and expense reports associated with your job requisition for a Marketing Director role. You then want to create a custom report to:

- Compare actual and forecasted spend to adjust totals as needed.
- Estimate cost averages for the job profile so that you can plan for headcount.

### Prerequisites

- Approve supplier invoices and expense reports.
- Add the relevant security groups on the **Journal Lines** report data source.
- Security: *Custom Report Creation* domain in the System functional area.

### Steps

1. Access the **Create Custom Report** task.

2. Enter these values:

Option	Description
<b>Report Name</b>	<i>Spend Totals for Marketing Director Role</i>
<b>Report Type</b>	<i>Advanced</i>
<b>Data Source</b>	<i>Journal Lines</i>

3. Click **OK**.

4. On the **Columns** tab, select *Company* from the **Field** prompt.

5. Add rows with these **Field** values:

- *Accounting Date*
- *Expense Report*
- *Job Requisition*
- *Ledger/Budget Debit minus Credit*
- *Supplier Invoice Document*

6. On the **Filter** tab, add a row in the **Filter on Instances** grid and enter these values:

Option	Description
<b>And/Or</b>	<i>And</i>
<b>Field</b>	<i>Job Requisition</i>
<b>Operator</b>	<i>in the selection list</i>
<b>Comparison Type</b>	<i>Value specified in this filter</i>
<b>Comparison Value</b>	Select the job requisition for the Marketing Director role.

7. Click **OK** and **Run**.

8. Specify these values:

Option	Description
<b>Company</b>	Select the company for which you submitted candidate expenses and recruiter fees.
<b>Year</b>	Select the year in which you submitted the candidate expenses and recruiter fees.

9. Click **OK**.

## Example: Enable Segment-Based Security for Student Expenses

This example illustrates how to enable workers to manage only student expense data by configuring segment-based security.

### Context

Your university manages expenses on behalf of nonworkers, including matriculated students. You want to enable a subset of workers to:

- Create and submit expense reports on behalf of only matriculated students.
- View expense data only for matriculated students to run custom and standard reports.

### Prerequisites

- Assign the workers that you want to access student expense data to:
  - A *Student Expense Administrator (Constrained)* security group.
  - The relevant roles and academic units.
- Configure the *Expense Report Event* business process and security policy in the Expenses functional area. See: [Steps: Configure Business Process Definitions](#).
- Security: These domains in the Student Core functional area:
  - *Student Data: Student ID*
  - *Student Data: Student Profile*

### Steps

1. Access the **Create Security Group** task.
2. On the **Type of Tenanted Security Group** prompt, select *Segment-Based Security Group*.
3. In the **Name** field, enter *Student Expenses Only*.
4. Click **OK**.
5. On the **Security Groups** prompt, select *Student Expense Administrator (Constrained)*.
6. On the **Access to Segments** prompt, select *Student Expense Payee Type Segment*.
7. Click **OK**.
8. From the related actions menu of the segment-based security group, select **Security Group > Maintain Domain Permissions for Security Group**.
9. On the **Domain Security Policies permitting View access** prompt, select *Process: Expense Reports*.
10. Click **OK and Done**.
11. From the related actions menu of the *Expense Report Event* business process, select **Business Process Policy > Edit**.
12. On the **Security Groups** prompt in the **Create Expense Report for Non-Worker** section, select *Student Expenses Only*.
13. Click **OK and Done**.

14. Access the **Activate Pending Security Policy Changes** task.
15. In the **Comment** field, enter *Restricting workers to only student expense data.*
16. Click **OK**.
17. Select the **Confirm** check box.
18. Click **OK**.

### Next Steps

Add expense payments on payment elections for matriculated students, or enable these students to manage their own payment elections.

Reassign credit card transactions to matriculated students manually to include these transactions on student expense reports.

## Example: Configure Automatic Approval for Send Back Lines Business Processes

This example illustrates 1 way to configure automatic approvals for these action steps on the *Expense Report Event* business process definition:

- *Approve - Send Back Lines*
- *Review - Send Back Lines*

### Context

Your company wants to configure the *Expense Report Event* business process to enable Expense Partners and Managers to simultaneously approve and send back lines for correction. You also want to streamline the approval process by configuring auto-approvals to bypass additional approvals from Managers who previously approved expense reports.

### Prerequisites

Configure the *Expense Report Event* business process and security policy in the Expenses functional area.

### Steps

1. Access the *Expense Report Event* business process definition for your company.
2. From the related actions menu of the *Expense Report Event* business process definition, select **Business Process > Edit Definition**.
3. Click **OK**.
4. On the **Business Process Steps** tab, add these steps:

Order	Type	Specify	Group
b	Action	Review Expense Report - Send Back Lines	Expense Partner

Order	Type	Specify	Group
c	Action	Approve Expense Report - Send Back Lines	Manager
d	Approval		Manager

5. Click **OK**.
6. From the related actions menu of business process step c, select **Business Process > Maintain Advance Routing**.
7. Click **OK**.
8. Select the **Exclude Prior Approvers** check box.
9. Click **OK**.
10. Click **Done**.

### Result

Jake Lee submits an expense report for his recent work travel expenses and Workday routes it to the expense partner for review. Once they approve, Workday routes the expense report to Jake's manager, Steve Morgan. Steve marks a line for exclusion and approves the expense report. Workday then routes the expense report to the next manager on the approval chain and bypasses Steve Morgan. When Steve is the next manager on the approval chain, Workday automatically approves the expense report and completes the business process event.

### Related Information

#### Tasks

[Maintain Advanced Routing](#)

## Example: Freeze Spend Authorizations

This example illustrates how to configure a freeze and a mandatory questionnaire on spend authorizations, for greater spend control.

### Context

Your employees submit spend authorizations to seek preapproval for international travel expenses. However, recent global travel restrictions result in budget cuts at your company.

To meet these budget cuts, you need to:

- Apply a company-wide spend authorization freeze.
- Include a questionnaire on spend authorizations so employees can provide reasons for requests during the freeze period.

### Prerequisites

- Configure the *Spend Authorization* business process and security policy in the Expenses functional area.
- Ensure that there's an additional approver available on the Expense Partner security group. You'll add them to the approval process during your configuration.

Security:

- The *Process: Spend Control and Analysis (Expenses)* domain in the Expenses functional area.

- These domains in the System functional area:
  - *Business Process Administration*
  - *Questionnaire Creation and Distribution*
  - *Question Library*

## Steps

1. Add an approval step on the *Spend Authorization* business process.
  - a) From the related actions menu of the *Spend Authorization* business process, select **Business Process > Edit Definition**.
  - b) Enter the current date and click **OK**.
  - c) Add a step with these values:

Option	Description
<b>Order</b>	Enter a value that places the new approval step as the last step in the approval process. Example: If your last approval step is <i>f</i> , enter <i>fa</i> for the new approval step.
<b>Type</b>	<i>Approval</i>
<b>Group</b>	<i>Expense Partner</i>

- d) Click **OK**.
2. Create a condition rule for the new approval step.
  - a) From the related actions menu of the new approval step, select **Business Process > Maintain Step Conditions**.
  - b) Enter the current date and click **OK**.
  - c) Add a row and select *Create Condition Rule* on the **Rule** prompt.
  - d) Click **OK**.
  - e) On the **Create Condition Rule** page, specify these values:

Option	Description
<b>Description</b>	<i>Freeze spend authorizations company-wide</i>
<b>And/Or</b>	<i>And</i>
<b>Source External Field or Condition Rule</b>	<i>Spend Authorization Spend Freeze for Company</i>
<b>Relational Operator</b>	<i>is not blank</i>

- f) Click **OK** twice, then **Done**.
3. Enable the spend freeze.
  - a) From the related actions menu of your company, select **Worker Spend > Manage Spend Freeze**.
  - b) Select the **Freeze Spend Authorization** check box.
  - c) Click **OK** and **Done**.

**4.** Create a questionnaire.

- a) Access the **Create Questionnaire** task.
- b) Select **Create New Questionnaire** and enter *Purpose for Spend Authorization Request* in the **New Questionnaire Name** field.
- c) Click **OK**.
- d) Click **Edit Questionnaire Details** and enter these values:

Option	Description
<b>Allowed on Business Processes</b>	<i>Spend Authorization</i>
<b>Questionnaire Instructions</b>	<i>Specify the reason for this transaction as it occurs during a company-wide spend authorization freeze.</i>

- e) Click **OK**.
- f) Click **Maintain Questions**.
- g) Select *Create Question* on the **Question** prompt and enter these values:

Option	Description
<b>Question Name</b>	<i>Travel Purpose</i>
<b>Question Body</b>	<i>What is the purpose of this trip?</i>
<b>Question Type</b>	<i>Text</i>

- h) Click **OK**.
- i) Select the **Required** check box and click **OK**.
- 5.** Add a questionnaire step on the *Spend Authorization* business process.
- a) From the related actions menu of the *Spend Authorization* business process, select **Business Process > Edit Definition**.
- b) Enter the current date and click **OK**.
- c) Add a step with these values:

Option	Description
<b>Order</b>	<i>aa</i>
<b>Type</b>	<i>Complete Questionnaire</i>
<b>Group</b>	<i>Contingent Worker As Self</i> <i>Employee As Self</i>
<b>All</b>	Select.

- d) Click **OK**.
- e) Click **Configure Questionnaire**.
- f) Enter the current date and click **OK**.
- g) On the **Questionnaire** prompt, select *Purpose for Spend Authorization Request*.
- h) Click **OK**.
- 6.** Apply the spend freeze condition rule on the new questionnaire step.
- a) From the related actions menu of the new questionnaire step, select **Business Process > Maintain Step Conditions**.
- b) Enter the current date and click **OK**.
- c) Add a row and select *Freeze spend authorizations company-wide* on the **Rule** prompt.
- d) Click **OK** and **Done**.

## Result

When employees:

- Create spend authorizations, they have to complete a questionnaire that details the reason for their request.
- Submit spend authorizations, the transactions route to an additional approver.

## Next Steps

Add additional spend authorization controls by configuring budget checks during the freeze period.

## Example: Create Custodian Role to Manage Central Travel Cards

This example illustrates how to create the custodian role that manages central travel card transactions.

### Context

Your company requires credit card administrator, Katty Holmes, to manage central travel card transactions for different organizations within your company.

### Steps

1. Access the **Maintain Assignable Roles** task.
2. Add a row and enter these values:

Option	Description
<b>Role Name</b>	<i>Custodian</i>
<b>Enabled For</b>	<ul style="list-style-type: none"> <li>• <i>Company</i></li> <li>• <i>Company Hierarchy</i></li> </ul>
<b>Is Leader / Is Supporting</b>	<i>Is Supporting</i>

3. Click **OK**.
4. From the related actions menu of the *Custodian* role, select **Assignable Role > Edit Assignment Permissions**.
5. In the **Administered by Security Groups** prompt, select **Security Admin**.
6. Click **OK**, then **Done**.
7. From the related actions menu of your company *500.1 Global Modern Services, Inc. (USA)*, select **Roles > Assign Roles**.
8. Select the current date as the **Effective Date**.
9. Click **OK**.
10. Add a row and enter these values:

Option	Description
<b>Role</b>	<i>Custodian</i>
<b>Assigned To</b>	<i>P-05681 Credit Card Administrator - Katty Holmes</i>

11. Click **OK**, then **Done**.

**12.**Access the **Create Security Group** task.

**13.**Enter these values:

Option	Description
Type of Tenanted Security Group	Role-Based Security Group (Constrained)
Name	Custodian Security Group

**14.**Click **OK**.

**15.**As you complete the task, select these values:

Option	Description
Assignable Role	Custodian
Access Rights to Organizations	Applies To Current Organization And All Subordinates
Access Rights to Multiple Job Workers	Role has access to the positions they support.

**16.**Click **OK**, then **Done**.

**17.**Access the **Domain Security Policies for Functional Area** report.

**18.**Select the **Expenses** functional area.

**19.**Click **OK**.

**20.**Select the **Organization: Manage Central Travel Card Transactions** domain.

**21.**Click **Edit Permissions**.

**22.**In the **Reports/Task Permissions** section, add a row.

**23.**Enter *Custodian Security Group* as the **Security Group**.

**24.**Select these check boxes:

- View
- Modify

**25.**Click **OK**, then **Done**.

**26.**Access the **Activate Pending Security Policy Changes** task.

**27.**Enter *Activating Custodian Security Group domain permissions.* as the comment.

**28.**Click **OK**.

**29.**Select the **Confirm** check box.

**30.**Click **OK**.

## Result

As the Custodian, Katty can now access the **Assign Central Travel Card Transactions** task and manage central travel card transactions for her company.

## Example Steps: Configure an Expense Item and Allowance Plan with Automatic Approval

This example illustrates how to configure an expense item and allowance plan with automatic approval.

## Context

You want to create an expense item and allowance plan to enable employees to claim monthly reimbursement. You also want to configure automatic approval for expense reports that only include this expense item and its allowance plan.

## Steps

1. Create an expense item and allowance plan.

See [Example: Set Up Allowance Plan for Health and Fitness Expenses](#) on page 1921.

2. Configure automatic approval for expense reports that only include this expense item and its allowance plan.

See [Example: Configure Automatic Approval for Expense Reports with an Allowance Plan](#) on page 1923.

## Next Steps

Create a settlement run.

## Example: Set Up Allowance Plan for Health and Fitness Expenses

This example illustrates how to configure an allowance plan to enable employees to claim monthly reimbursement for health and fitness expenses.

## Context

Your company is planning a health and fitness initiative for employees, starting on the first day of the next calendar month. You want to set up an allowance plan that enables U.S. employees to claim 50 USD monthly for health and fitness expenses, such as gym membership.

## Prerequisites

Set up:

- Compensation components, grades, and rollout reasons.
- Compensation eligibility rules for U.S. employees.
- Segmented security groups for unrestricted expense items.
- Spend categories.

Security:

- *Set Up: Expense Item Security Segments* domain in the System functional area.
- *Set Up: Base and Plan* domain in the Core Compensation functional area.
- *Set Up: Expense Item* domain in the Expenses functional area.

## Steps

1. Access the **Create Expense Item** task.

a) In the **Summary** section, enter these values:

Option	Description
<b>Item Name</b>	<i>Health and Fitness (U.S.)</i>
<b>Spend Category</b>	Select.

b) In the **Processing** section, select **Based on Allowance Plan**.

c) Click **OK**.

2. Access the **Edit Expense Item Security Segment** task.
  - a) On the **Expense Item Security Segment** prompt, select an unrestricted security segment.
  - b) Click **OK**.
  - c) On the **Expense Item** prompt, select *Health and Fitness (U.S.)*.
  - d) Click **OK and Done**.
3. Access the **Create Allowance Plan** task.
  - a) On the **Effective Date** prompt, select the current date.
  - b) Select the **Reimbursable** check box.
  - c) Select **Amount Based Plan**.
  - d) Click **OK**.
  - e) In the **Details** section, enter these values:

Option	Description
<b>Plan Name</b>	<i>Monthly Health and Fitness Expense (U.S.)</i>
<b>Expense Item</b>	<i>Health and Fitness (U.S.)</i>
<b>Expense Accumulator</b>	<i>Month with Custom Start Date</i>

- f) In the **Allowance Defaults** section, enter these values:

Option	Description
<b>Amount</b>	<i>50</i>
<b>Currency</b>	<i>USD</i>
<b>Frequency</b>	<i>Monthly</i>
<b>No Override</b>	Select the check box.

- g) Click **OK and Done**.

4. Access the **Rollout Compensation Plans to Employees** task.

- a) Enter these values:

Option	Description
<b>Process Name</b>	<i>Monthly Health and Fitness Expense (U.S.)</i>
<b>Effective Date</b>	Enter the current date.
<b>Reason</b>	Select.
<b>Compensation Plans</b>	<i>Monthly Health and Fitness Expense (U.S.)</i>
<b>Reimbursement Start Date</b>	Select the first date on the next calendar month.
<b>By Compensation Eligibility Rule</b>	Select a rule for all U.S. employees.

- b) Click **OK and Done**.

## Result

U.S. employees can submit expense reports that include the *Health and Fitness (U.S.)* expense item.

## Next Steps

- Configure automatic approval for expense reports that include the *Health and Fitness (U.S.)* expense item.
- Schedule an end date for the allowance plan.

## Related Information

This example illustrates how to configure automatic approval for expense reports that include an expense item with an allowance plan.

### Context

Employees in the U.S. are eligible to claim 50 USD monthly for health and fitness expenses. As your U.S. workforce exceeds 5,000, you want to configure automatic approval for health and fitness expense reports to reduce manual effort.

### Prerequisites

- Create a *Health and Fitness (U.S.)* expense item and link it to an allowance plan.
- Configure the *Expense Report Event* business process and security policy in the Expenses functional area.

### Steps

1. From the related actions menu of the *Expense Report Event* business process, select **Business Process > Copy or Link Business Process Definition**.
2. On the **Effective Date** prompt, verify that you're using the current date.
3. In the **Rule Based Workflow Definition Name** field, enter *Auto Approval for Monthly Health and Fitness Expenses (U.S.)*.
4. Click **OK**.
5. Delete all steps from the **Business Process Steps** grid.
6. Click **OK and Done**.
7. From the related actions menu of the *Expense Report Event* business process, select **Business Process Type > Rule Based Business Process Configuration**.
8. On the **Effective Date** prompt, verify that you're using the current date.
9. Click **OK**.
10. Add a row on the **Business Process Type** grid.
11. On the **Rule** prompt, select *Create Condition Rule*.
12. Click **OK**.
13. In the **Description** field on the **Create Condition Rule** page, enter *Auto approve the Health and Fitness (U.S.) expense item*.
14. In the **Rule Conditions** grid, enter these values:

Option	Description
<b>And/Or</b>	<i>And</i>
<b>Source External Field or Condition Rule</b>	<i>Expense Items on Expense Report</i>
<b>Relational Operator</b>	<i>exact match with the selection list</i>

Option	Description
Comparison Type	Value specified in this filter
Comparison Value	Health and Fitness (U.S.)

15. Click **OK**.

16. On the **Rule Based Workflow Definition** prompt, select *Expense Report Event (Auto Approval for Monthly Health and Fitness Expenses (U.S.))*.

17. Click **OK** and **Done**.

## Result

Workday:

- Approves expense reports automatically when U.S. employees include only the *Health and Fitness (U.S.)* expense item.
- Routes expense reports for manual approval when U.S. employees include the *Health and Fitness (U.S.)* expense item and other expense items.

## Next Steps

Create a settlement run.

# Cash

---

## Banking Setup

---

### Steps: Set Up Banking

#### Prerequisites

Define:

- Companies and company hierarchies. See [Create Organization Hierarchies](#).
- Payment types using the **Maintain Payment Types** task.

#### Context

Enter and maintain information for banks and financial institutions. The banking information enables you to make and receive payments, and manage your cash.

#### Steps

- Access the **Create Financial Institution** task or the **Edit Financial Institution** task.

Define the business entities that provide company financial and banking services and hold physical bank accounts. Select the customer, supplier, or tax authority acting as the financial institution.

Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

**2. (Optional) Access the **Update Financial Institution Logo** task.**

When you associate an official logo with a financial institution, the logo automatically appears when Workday displays information about the bank or other business entity.

You can either select an existing logo or create a new image. Acceptable image formats, such as *.jpg* or *.png*, are controlled by the attachment options specified in the **Edit Tenant Setup** task.

**3. Access the **Create Bank Branch** task or the **Edit Bank Branch** task.**

Define and maintain information about bank or business entity branches.

Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

**4. (Optional) Access the **Create Bank Statement Custom Code Set** task.**

Configure bank statement code sets with your own custom account balance, summary, and transaction type codes for BAI2, BTRS, ISO20022, or other bank statement formats.

When you assign the bank statement code set to a bank account, Workday includes the tenant-based type codes with the bank-reported type codes on all type code category prompts.

Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

**5. (Optional) Access the **Create Outsourced Bank Provider** task.**

Define an outsourced bank provider that handles your outsourced business functions, such as payroll processing. When you create an outsourced bank account, you select a provider.

Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

**6. [Define Bank Accounts](#) on page 1925.**

**7. [Create Petty Cash Accounts](#) on page 1932.**

## Result

You can use Workday-delivered reports and queries to view and manage information about banks and other financial institutions.

## Next Steps

Set up settlements and bank reconciliation to complete the cash management setup process.

## Define Bank Accounts

### Prerequisites

- Define financial institutions.
- Define the default currency for a company.
- Configure the *Bank Account Event* business process and security policy in the Banking and Settlement functional area.
- Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

## Context

Create bank accounts in Workday for all external operational accounts that you perform transactions against. For nonoperational accounts, create an account only if you need to reconcile. These accounts enable you to:

- Create, make, and receive payments.
- Reconcile the books.
- Manage cash.

## Steps

1. Access the **Create Bank Account** or **Edit Bank Account** task.
2. As you complete the general **Account Information** section, consider:

Option	Description
<b>Phonetic Name</b>	<p>You can use phonetic names for these bank account fields to include their correct pronunciations in payment files:</p> <ul style="list-style-type: none"> <li>• <b>Organization</b></li> <li>• <b>Name on Account</b></li> <li>• <b>Financial Institution</b></li> <li>• <b>Branch Name</b></li> </ul> <p>Displays when:</p> <ul style="list-style-type: none"> <li>• You enable phonetic names on the <b>Edit Tenant Setup - Global</b> task.</li> <li>• Users select the relevant locale and display language in their preferences.</li> </ul> <p>For <b>Name on Account</b> and <b>Branch Name</b>, the preferred language of the bank account country must match the language enabled on the tenant setup.</p>
<b>Organization</b>	<p>Selecting a company hierarchy enables you to share the account across its companies. You can change this value if there isn't any account activity.</p>
<b>Legal Owning Company</b>	<p>Workday displays this field when you select a company hierarchy as the <b>Organization</b>.</p> <p>You can select a company in the hierarchy as the legal owner of the bank account. Workday uses this company as referential data for the Workday Bank Connectivity product to integrate company hierarchy owned accounts.</p>
<b>Account Currency</b>	<p>The currency in which you store funds in the account, and convert funds that you transfer into the account.</p> <p>For companies, Workday automatically populates the company currency. For company hierarchies, Workday automatically populates the currency from the consolidation details, if applicable.</p>

Option	Description
	<p>Otherwise, Workday uses the default currency of the tenant. You can change this value to any currency if there isn't any account activity.</p> <p>To use this account for payroll, the account currency must match the company currency.</p>
<b>Accept All Currencies/Accept These Currencies</b>	<p>The currencies on the funds that this account can receive.</p> <p>Example: You specify the accepted currencies for incoming payments in this field. When you run settlement, Workday processes the incoming payments only in the specific currencies for this account.</p> <p>To restrict the currencies allowed on disbursed funds, you can also set up a bank routing rule. See <a href="#">Define Bank Routing Rules</a>.</p>
<b>Allowed Payment Types</b>	<p>The payment types used for payroll, supplier, and other payments must match the payment types for the bank accounts.</p> <p>Example: If your employees can select <i>direct deposit</i> as their preferred payment type for payroll payments, the bank account used to make these payments must include the <i>direct deposit</i> payment type.</p> <p>Select <i>Manual</i> to make off-cycle manual payments from this account.</p> <p>You define payment types using the <b>Maintain Payment Types</b> task.</p>
<b>Bank Account Security Segment</b>	<p>A bank account security segment enables a particular security group of workers to use this bank account for creating, editing, and canceling ad hoc payments.</p>

3. Enter specific **Account Details** for the selected **Country**:

Option	Description
<b>Bank Sort Code</b>	Enter the 6-digit sort code either with or without hyphens. Example: 000000 or 00-00-00. (UK only).
<b>Account Number</b>	For the UK, the account number must be 8 digits.
<b>Roll Number</b>	(Optional) Required for certain building society or former building society accounts. Most accounts no longer use roll numbers. (UK only)
<b>Name on Account</b>	For the UK, a name on account is optional, as bank transfers rely on sort codes and account numbers.
<b>IBAN</b>	(Optional) Enter an IBAN number to enable funds to transfer to or from this account across

Option	Description
	<p>national borders. This field only displays for some countries.</p> <p>If the bank statement for the account uses the ISO20022 format, you must specify the IBAN number that's identified in the bank statement file.</p>
<b>Fraction</b>	<p>Enter the fraction form of the bank transit number as a backup for the MICR on the check.</p> <p>Not used in the UK.</p>
<b>Formatted MICR</b>	<p>If you use blank check stock, and your bank requires a different magnetic ink character recognition format (MICR) than the Workday-delivered print layout, enter the appropriate values.</p> <p>Workday uses the MICR that you specify in the position that you select on the check print layout.</p> <p>Not used in the UK.</p>
<b>Target Balance</b>	<p>Record the balance that you want to maintain for this account so that you can store and report on this information.</p> <p>Example: The bank moves money to or from the account to meet the target amount. Alternatively, you can target to have a certain balance at the end of each day and move the money yourself.</p>
<b>Bank Statement Format</b>	<p>Workday assigns balance, summary, and transaction type codes to bank statement records based on the statement format.</p> <p>For bank statements previously imported, recorded, and submitted for reconciliation, you can only select or update the statement format when they're fully reconciled.</p>
<b>Bank Statement Custom Code Set</b>	<p>(Optional) Assign a predefined bank statement code set with your own custom account balance, summary, and transaction type codes to the bank account. These codes are for BAI2, BTRS, ISO20022, or nonstandard bank statement formats.</p> <p>The tenant-based and bank-reported type codes are available for selection on:</p> <ul style="list-style-type: none"> <li>• Bank statement worktag mappings.</li> <li>• Manually entered bank statements.</li> <li>• Manual bank statement reconciliations.</li> <li>• Bank reconciliation matching rules and first-notice condition rules for automatic and first-notice reconciliations.</li> </ul>

- Reconcile the balance of the account in Workday against the balance at the financial institution. To reconcile nonoperational accounts, you can use ad hoc bank transactions and templates to record key transaction information.

As you complete the **Reconciliation Configuration** section, consider:

Option	Description
<b>Advanced Mode</b>	<p>Select this check box to reconcile bank statement lines to operational transactions based on reconciliation rule sets. Workday automatically creates ad hoc bank transactions for reconciling first-notice items using first-notice rule sets.</p> <p>Clear the check box if you're reconciling bank statement lines to operational transactions based on matching amounts and reference numbers only.</p>
<b>Perform Automatic Bank Reconciliation</b>	<ul style="list-style-type: none"> <li>Selecting <b>Manually</b> initiates bank statement reconciliation manually for all statements from this account.</li> <li>Selecting <b>On Load</b> initiates automatic bank statement reconciliation when you load statements from this account into Workday.</li> </ul>
<b>Matching Rule Set</b>	<p>Select a matching rule set to reconcile bank statement lines to operational transactions. Workday uses the rules for matching:</p> <ul style="list-style-type: none"> <li>One bank statement line to 1 reconcilable item</li> <li>One bank statement line to many reconcilable items</li> <li>Many bank statement lines to 1 reconcilable item</li> <li>Many bank statement lines to many reconcilable items</li> <li>One or more bank statement lines to 1 or more suggested items</li> </ul>
<b>Bank Reconciliation Rule Set</b>	<p>Select a rule set to reconcile bank statement lines to operational transactions. Workday uses the rules for matching:</p> <ul style="list-style-type: none"> <li>One bank statement line to 1 reconcilable item</li> <li>One bank statement line to 1 or more suggested items</li> </ul> <p><b>Note:</b> During a bank statement reconciliation, Workday runs the matching rule sets <i>before</i> the bank reconciliation rule sets. Any duplicate bank reconciliation rules are ignored.</p>
<b>Perform First Notice Item Reconciliation</b>	<p>Valid values are:</p> <ul style="list-style-type: none"> <li><b>After Auto-Reconciliation Completes:</b> Automatically initiates first-notice reconciliation for the bank account after all other automatic reconciliation is complete.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li><b>Manually:</b> Select to initiate first-notice reconciliation manually.</li> </ul>
<b>First Notice Item Rule Set</b>	Select the rule set to use for creating ad hoc transactions to reconcile with first-notice items, such as service or transaction fees generated from this account.
<b>Customer Payment Rule Set</b>	Select an active rule set to copy the unreconciled bank statement lines to the remittance advice of the customer payment.  When the AR Specialist processes the customer payment rule sets, Workday records a customer payment and a deposit and automatically reconciles the deposit.
<b>Group Customer Payments into a Deposit</b> <b>Group Student Electronic Payment into a Deposit</b>	Select to collect electronic payments initiated by Workday as credit card or direct debit payments into a single deposit, and reconcile these deposits as a single item.
<b>Group Electronic Payments for Reconciliation</b>	Select to collect outgoing electronic payments made by EFT or direct deposit into a single reconciliation group. Workday generates the electronic payment reconciliation group (EPRG) at time of settlement and reconciles this group as a single item.
<b>Submit Reconciled Statements Automatically</b>	Select to submit automatically reconciled bank statements. Workday sends the statements for approval as soon as all lines and first-notice items are reconciled.
<b>Default Bank Statement Beginning Balance</b>	Select to automatically populate the beginning balances on imported bank statements when they don't provide this value. Workday calculates the beginning balance using the ending balance from the last noncancelled bank statement for the account.  Beginning balances are required on all bank statements for reconciliation.

5. (Optional) In the **Worktag Mapping Configuration** section, select a **Bank Statement Worktag Rule Set** to associate with the bank account. Workday uses the bank statement worktag override rule set to assign specific worktags on bank statement lines for the account.

**6. In the Bank Account Usage section, define the purpose for using the account.**

You can set up a bank account to make both supplier and expense payments, and receive customer payments. You can also create a bank account for unique functions, such as an account that covers only payroll expenses.

**Note:** Define 1 bank account that includes all uses to serve as the default account for your bank routing rule.

As you complete the section, consider:

Option	Description
<b>Primary Account Usage</b>	Select the primary types of payment to use for this bank account. Example: Select <i>Ad Hoc Payment</i> to use this account to pay bank fees using ad hoc payments.
<b>Allow Additional Usage</b>	Select to make the bank account available for any additional types of payment that you might need to process.

**7. As you complete the Check Options section (not used for the UK), consider:**

Option	Description
<b>Enable Positive Pay</b>	Select to send an electronic file to the financial institution containing details for checks issued from this account. Workday compares a check presented for payment to the list of checks in the electronic file. If 1 or more elements of the check don't match the electronic file, the bank can withhold payment.  Before you can activate positive pay, you must build an integration to the financial institution using the Workday Enterprise Interface Builder (EIB). You can then trigger the integration from the <i>Payment Printing Event</i> business process definition.
<b>Last Check Number Used</b>	The first check in the sequence begins with the last check number +1.  Unless there's a break or gap in the sequence of checks, you only need to define the starting sequence when you first create the account. If there's a break in the check sequence, restart the sequence by entering the new sequence starting number - 1.
<b>Check Print Layout</b>	Override the default check printing layout for your production tenant with a layout specific to this account.  If you haven't set up a default print layout and assigned a check print layout to the bank account, Workday defaults to the delivered business form layout.

## Result

Workday routes the new bank account to the next business process participant for review and approval.

You can use the bank accounts that you create to:

- Set up routing rules.
- Record and deposit customer payments.
- Create ad hoc bank transactions.
- Make manual payments.
- Record cash sales.
- Outsource check printing and banking.

## Example

### Creating Rules Based On Payment Types

Create these integration rules to manage EFT and direct deposit payments:

- Rule 1: Specifies the integration system to use for routing *Direct Deposit* payments.
- Rule 2: Specifies the integration system to use for routing *EFT* payments.

The condition rule for direct deposit payments has highest priority in the **Settlement Setup** grid, followed by the condition rule for EFT payments. The first payment processed by the settlement engine is an EFT payment. Workday tries to match the payment with the first rule in the grid. When this rule doesn't return a match, Workday evaluates the payment against the second rule. In this case, Workday:

- Recognizes that the rule applies to EFT payment types.
- Records a match.
- Uses the integration system associated with the second rule.

When defining an integration system, consider:

- Unspecified criteria means that you're including everything.
- A payment must meet all of the conditions defined in a row of the **Settlement Setup** grid to produce a positive match.
- Define the most granular rule first and work down to the broadest rules.

## Create Petty Cash Accounts

### Prerequisites

- Create financial institutions.
- Define a default currency for a company.

- Configure the *Bank Account Event* business process and security policy in the Banking and Settlement functional area.
- Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

## Context

Define or update an account for tracking petty cash transactions.

**Note:** In Workday, you can use both bank and petty cash accounts to make supplier and expense payments, receive customer payments, or for cash management. However, you must use standard bank accounts in routing rule definitions to automatically make payroll, expense, or supplier payments from the correct accounts. You can only use petty cash accounts when you've manually specified a source or receiving account.

## Steps

- Access the **Create Bank Account** or **Edit Bank Account** task.
- As you complete the task, consider:

Option	Description
<b>Phonetic Name</b>	<p>You can use a phonetic name for the <b>Organization</b> field to include its correct pronunciation.</p> <p>Displays when:</p> <ul style="list-style-type: none"> <li>You enable phonetic names on the <b>Edit Tenant Setup - Global</b> task.</li> <li>Users select the relevant locale and display language in their preferences.</li> </ul>
<b>Organization</b>	<p>Select the company or company hierarchy for which you're defining the petty cash account. You can change this value if there's no account activity.</p>
<b>Account Currency</b>	<p>For companies, Workday automatically populates the company currency. For company hierarchies, Workday automatically populates the currency from the consolidation details, if applicable. Otherwise, Workday uses the default currency of the tenant. You can change this value to any currency if there isn't any account activity.</p>
<b>Accept All Currencies/Accept These Currencies</b>	<p>Add the <b>Account Currency</b> as an accepted currency.</p>
<b>Allowed Payment Types</b>	<p>The payment types used for supplier and other payments must match the allowed payment types for the petty cash accounts that the payments are drawn from.</p> <p>Example: If the supplier accepts cash as a payment type, the petty cash account used to make these payments must include <i>Cash</i> as an allowed payment type.</p> <p>You define payment types using the <b>Maintain Payment Types</b> task.</p>

## Result

You can use the petty cash accounts you created for making customer, supplier, and other types of payments. You can also use petty cash accounts for cash transactions such as ad hoc bank transactions and bank account transfers.

## Concept: Bank Account Currency

Each bank account that you define in Workday has its own currency, called the account currency. You store funds in the bank account and convert funds that you transfer into the bank account using the account currency. You can also specify which currencies a bank account accepts. You use the **Create/Edit Bank Account** task to set the account currency.

Example: Your U.S. company has a local bank account in USD, and a bank account based in Ireland in EUR. You perform a wire transfer of 100K USD from the U.S. account to the Irish account, which accepts USD. The bank gives you a currency exchange rate of 85K EUR equal to 100K USD. Workday transfers 100K USD out of the US bank account and deposits 85K EUR into the Irish bank account.

## Reference: Magnetic Ink Character Formats

If your bank requires a magnetic ink character recognition (MICR) business format that isn't delivered in the Workday standard check layout, you can define a custom MICR in the **Formatted MICR** field when setting up banks.

To define a custom magnetic ink character recognition (MICR), use these formatted values:

Valid Values	Description
Numbers 0 - 9	Use numeric characters to define routing numbers and account numbers.
Spaces	Use spaces for variable length fields such as check numbers.
A	Transit Symbol.
B	Amount Symbol.
C	On-Us Symbol.
D	Dash Symbol.
#	Represents a check number digit. Repeat as many times as necessary to represent the largest acceptable check number.
F	This symbol indicates that the on-us symbol floats to the start of the check number instead of printing in a fixed location.

**Related Information****Tasks**[Define Bank Accounts](#) on page 1925[Create Check and Advice Print Layouts Using XSLT](#) on page 2199**Reference: Banking Information Reports**

You can view and manage information about banks and other financial institutions in these reports:

Report	Description
<b>View Financial Institution</b>	<p>Provides financial institution information at a glance.</p> <ul style="list-style-type: none"> <li>From the related actions menu of a financial institution, you can edit, update the logo, or view an audit trail.</li> <li>From the related actions menu of a branch, you can edit the branch.</li> </ul>
<b>View Financial Institution Contacts</b>	<p>Provides an editable list of contacts for a specific financial institution, enabling you to manage contacts quickly.</p>
<b>Bank Account</b>	<p>Use this report to view and manage bank account details, including:</p> <ul style="list-style-type: none"> <li>Reconciliation configuration details.</li> <li>Account usage across Workday financial management and payroll.</li> </ul> <p>From the related actions menu of the bank account you can:</p> <ul style="list-style-type: none"> <li>Edit the check sorting setup.</li> <li>Modify the payment integration setup.</li> <li>Record voided checks and audit changes.</li> </ul>

Details include the:</p> <ul style="list-style-type: none"> <li>Company that owns the lockbox.</li> <li>Associated bank account.</li> <li>Physical address.</li> <li>List of customers remitting payment to it.</li> </ul>

**Bank Account Signatories****Setup Considerations: Bank Account Signatories**

You can use this topic to help make decisions when planning your configuration and use of bank account signatories. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.

- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

In Workday, you can set up bank account signatories to designate workers and external committee members as signers for individual bank accounts. You can maintain a record of signers who can access and operate an account on behalf of the account owner.

## Business Benefits

Bank account signatories enable you to:

- Create signers from your existing list of employees and external committee members.
- Identify inactive signers on company bank accounts to decrease fraud and enhance controls.
- Streamline the foreign bank account reporting process by identifying key signatory data points in custom reports.
- Report on signatory changes to meet external and internal audit reporting requirements.

## Use Cases

You can:

- Easily and accurately identify signers for each company bank account.
- Configure business processes to notify you when your signers change job positions or are no longer active.
- Modify signatory information based on job changes to a signer that alter their authorities.
- Use reports to track and identify inactive or terminated signers for your bank accounts over a defined period of time.

## Questions to Consider

Question	Considerations
How do you select bank account signers in Workday?	Signers and their associated information are available in Workday as workers and external committee members. When you create signers, you select from your workers or external committee members already defined for your organization.
What levels of approval do you need for your signatories?	When you define signatories, you can assign the appropriate approval authorities and limits for each bank account.  Example: You can assign a single approver authority type to a CFO who never requires secondary approval to issue a payment from a bank account. Similarly, you can authorize a cash analyst to always require a joint signer for secondary approval.  You can also combine authority types with minimum and maximum approval limits.  Example: A signer has single authority when making a payment under 100,000 USD, but requires joint approval for payment amounts more than 100,000 USD.

Question	Considerations
Do you need to track signatory approval limits in a bank account currency or user-defined currency?	<p>Workday supports both types of currencies. When you create a bank account signatory, you can define signatory limits using the bank account currency. You can also override the bank account currency with a different currency.</p> <p>Example: You created a signatory using the bank account currency in EUR, but your organization now standardizes all signatory limits in USD.</p>
Can you use bank account signatories for transaction and settlement processing in Workday?	<p>Bank account signatory functionality is independent of settlement and other transaction workflows. To define which users can initiate, review, and approve Workday transactions, configure the business processes with the respective user for each transaction type.</p>

### Recommendations

- For signatories requiring supporting documents, add them as attachments when you create or edit bank account signatories. Examples include passports or other forms of identification required from the financial institutions.
- If you need to modify a signatory, use the **Change Bank Account Signatories** task to change any of the details. Workday applies the changes once they're approved.

Example: You replace an inactive or terminated signer with an active signer for a specific bank account. You can also remove all signatory lines with the terminated signers.

### Requirements

- Define all company bank accounts in Workday that require signatories.
- Define payment types for signers such as check, credit card, or EFT.
- Define workers or external committee members to designate as signers.
- Secure access to Workday Human Capital Management (HCM) to configure business process notifications for job position or external committee membership changes to signers.

### Limitations

To mass assign signatories to multiple accounts at once, you must use the bank account signatory web services. You can only manually create signatories for individual bank accounts.

### Tenant Setup

- Create signers using employees or external committee members.
- Create signature approval methods for signers such as digital, physical, or scan.

Example: You authorize some signers to verify transactions using a digital signature. You require other signers to use physical signatures to approve payments from certain bank accounts.

- Define authority types for signers such as single or joint approvers.

### Security

Configure these security domains in the Cash Management functional area:

Domain	Considerations
<i>Set Up: Signer</i>	Users can set up workers and external committee members as signers for bank account signatories.
<i>Set Up: Secured Attachment for Signer</i>	Users can view secured attachments for signers.
<i>Set Up: Bank Account Signatory Information</i>	<p>Users can:</p> <ul style="list-style-type: none"> <li>Define authority types to track the number of signers needed to approve transactions. You can define an authority type as single or joint.</li> <li>Create signature methods for signers.</li> </ul>
<i>Set Up: Bank Account Signatory</i>	<p>Provides access to these subdomains:</p> <ul style="list-style-type: none"> <li><i>Set Up: Bank Account Signatory Information</i></li> <li><i>Set Up: Secured Attachment for Signer</i></li> <li><i>Set Up: Signer</i></li> </ul>
<i>Process: Bank Account Signatory</i>	<p>Users can:</p> <ul style="list-style-type: none"> <li>Access bank account signatory reports and web services.</li> <li>Edit or cancel pending changes to signatory information as part of the <i>Bank Account Signatories Event</i> business process.</li> <li>Remove signers from specific bank accounts, or from all assigned bank accounts at once using the <b>Mass Update Signatories</b> task.</li> </ul>

## Business Processes

Business Process	Considerations
<i>Bank Account Signatories Event</i>	Configure to create or edit bank account signatories routed for reviews and approvals.
<i>Change Job</i> <i>Submit Resignation</i> <i>Termination</i>	<p>Configure these Workday HCM business processes to receive notifications when workers change job status such as a transfer, promotion, resignation, or termination. Based on the changes, you can make the necessary updates to the corresponding signatory.</p> <p>Edit the business process definitions to add the <b>Step Configuration Placeholder Service</b> step after business process completion. Then, add notifications to this step with their recipients.</p> <p>The <b>Step Configuration Placeholder Service</b> step enables you to configure notifications before or after another step that doesn't include the configurations.</p>
<i>Manage Committee Membership</i>	Configure this Workday HCM business process to receive notifications when external committee members become inactive or end their committee membership. Based on the changes, you can

Business Process	Considerations
	<p>make the necessary updates to the corresponding signatory.</p> <p>Edit the business process definition to add the <b>Step Configuration Placeholder Service</b> step after business process completion. Then, add notifications to this step with their recipients.</p> <p>The <b>Step Configuration Placeholder Service</b> step enables you to configure notifications before or after another step that doesn't include the configurations.</p>

## Reporting

Report or Dashboard	Considerations
<b>Bank Account Signatories Exceptions</b>	View the inactive signers still assigned to bank accounts.
<b>Find Bank Account Signatories</b>	<p>View your bank account signatories filtered by signatory details.</p> <p>The report displays all bank account signatories in <i>Approved</i> status.</p>
<b>Find Historical Changes in Bank Account Signatories</b>	<p>View all the changes to bank account signatories between the dates you specify. You can also filter the changes by the relevant signatory attributes.</p> <p>Example: You use the report for auditing purposes to verify that all changes to signatories were authorized.</p>
<b>View Signers</b>	<p>View all of the signers that you've created to add as signatories.</p> <p>The report displays signer details, and whether a signer has any attached documents.</p>

We suggest using these report data sources to build custom reports:

- **Bank Account Signatory Snapshots:** Displays the historical changes made to bank account signatories.  
Example: To determine when bank account signatories were added or updated, you can create a custom report that incorporates signatory details as of a specific date.
- **Bank Account Signatories:** Displays all bank account signatories.  
Example: If you use foreign bank accounts, you can create a custom report to supplement Foreign Bank and Financial Accounts (FBAR) reports. You can use the custom report to identify all signers with cumulative bank balances of 10,000 USD or more within a specified date range.
- **Signers:** Displays all signers that you can track and manage for audit reporting requirements.

## Integrations

Web Service	Considerations
<i>Get Bank Account Signatories</i>	Retrieves bank account signatories from Workday using your specified criteria. You can then export the signatory information to third-party systems.
<i>Get Signers</i>	Retrieves signers from Workday using your specified criteria. You can then export the signers to third-party systems.
<i>Put Bank Account Signatory</i>	Imports and creates bank account signatories for bank accounts.
<i>Put Signer</i>	Imports and creates signers for bank accounts.
<i>Submit Bank Account Signatory</i>	Creates an event for signatory additions, updates, or removals. Then, submits it through the <i>Bank Account Signatories Event</i> business process for review and approval.

## Connections and Touchpoints

You use Workday HCM business processes to configure notifications for changes to signers.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Manage Bank Account Signatories

### Prerequisites

- Define bank accounts.
- Configure the *Bank Account Signatories Event* business process and security policy in the Cash Management functional area.

### Context

You can create and maintain records of employees or external committee members who are authorized to sign for a bank account on behalf of the account owner. You can also report on signatory changes and notify users when a signer is no longer valid.

## Steps

**1. Access the **Create Signer** task.**

Configure an employee or external committee member as a signer.

Security: These domains in the Cash Management functional area:

- *Set Up: Signer*
- *Set Up: Secured Attachment for Signer*

**2. Access the **Maintain Authority Types** task.**

Define authority types to track the number of signers needed to approve transactions. You can define an authority type as single or joint.

Security: *Set Up: Bank Account Signatory Information* domain in the Cash Management functional area.

**3. Access the **Maintain Signature Methods** task.**

Create signature approval types for signers such as on call, online, or wet signature.

Security: *Set Up: Bank Account Signatory Information* domain in the Cash Management functional area.

**4. Access the **Create Bank Account Signatories** task.**

You can select people to act as signers for a bank account and apply authority limits to the actions they can take. You can define the authority limits using the bank account currency, or override it with a different currency for particular signers.

**5. (Optional) Access the **Mass Update Signatories** task.**

You can remove a signer from a specific bank account or from all assigned bank accounts.

Security: *Process: Bank Account Signatory* domain in the Cash Management functional area.

**6. (Optional) Configure business processes to receive notifications when signers change job positions, external committee membership, or leave the company.**

Add the **Step Configuration Placeholder Service** step with notifications to these Workday HCM business processes:

- *Change Job*
- *Manage Committee Membership*
- *Submit Resignation*
- *Termination*

Based on the notification type, you can remove the signers from bank account signatories or modify their authority limits.

## Next Steps

Use these reports to track and maintain signers:

- **Bank Account Signatories Exceptions:** Displays the inactive signers for your company or bank account.
- **Find Bank Account Signatories:** Displays all approved bank account signatories and the signatory details.
- **Find Historical Changes in Bank Account Signatories:** Displays all the changes to bank account signatories between the dates you specify.

## Bank Fee Analysis

### Setup Considerations: Bank Fee Analysis

You can use this topic to help make decisions when planning your configuration and use of bank fee analysis. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can perform a bank fee analysis to review your global bank service fees and control bank fee spend across your organization. You can use Workday reports to analyze pricing variances and optimize service pricing based on bank fee statements and bank service contracts.

### Business Benefits

With bank fee analysis, you can easily identify:

- Total bank fees for a defined period.
- Bank fees that are avoidable, such as payment repairs and overdrafts.
- Bank services no longer needed or in use.
- Pricing inaccuracies between bank fee statements and service contracts.

### Use Cases

You can use bank fee analysis to:

- Receive and record global bank fee statements.
- Maintain bank fee service codes for global financial institutions.
- Create and maintain contractual service agreements for each financial institution.
- Compare bank service costs across multiple financial institutions.
- Report on total bank fees by bank account, company, and financial institution.

### Questions to Consider

Question	Considerations
How can you import bank fees from your banks instead of manually recording them in Workday?	<p>You can request a bank fee statement from your banking partners in 1 of these formats:</p> <ul style="list-style-type: none"> <li>• EDI 822</li> <li>• ISO 20022 <i>camt.86 V1</i></li> <li>• ISO 20022 <i>camt.86 V2</i></li> </ul> <p>Workday supports these formats automatically in the bank fee statement connector.</p>

Question	Considerations
How can you validate that your bank service pricing is correct?	<p>Upload or record a bank service contract in Workday for each bank. The service contract lists what you've contractually agreed to pay for each individual service and the pricing type, such as fixed price or tiered.</p> <p>You can then run the <b>Bank Fee Variance Analysis</b> standard report to find pricing inaccuracies.</p>
How can you track pricing for volume-based service agreements?	<p>On a service contract, select 1 of these pricing types:</p> <ul style="list-style-type: none"> <li>• <b>Tiered:</b> The cost for the services decreases when the service volume reaches the next pricing tier.</li> <li>• <b>Threshold:</b> The cost for individual services decreases for all instances of the service when the service volume reaches thresholds.</li> </ul>
What types of service codes can you use on a service contract?	<p>You can enter 1 of these types of service codes:</p> <ul style="list-style-type: none"> <li>• Bank specific</li> <li>• AFP</li> </ul> <p>Workday compares the service code price on the contract against the bank or AFP service code delivered on the bank fee statement.</p>
How can you create multiple bank service contracts for a financial institution?	<p>When you create your service contracts, assign each contract to specific bank accounts held at the financial institution.</p>

## Recommendations

- Receive bank fee statements automatically from your bank to reduce errors.
- Upload your bank fee service contracts using web services to increase efficiency.
- Perform bank fee analysis on a regular basis to maintain control over your bank fee costs.
- If you don't have a bank service contract, you can use bank fee analysis reports to determine:
  - Service costs across financial institutions.
  - Unusual increases or decreases in service fee activity.
  - Bank services that make up your bank fees.

You need a bank service contract to compare differences between the expected charges defined in your service contract against your actual bank fee charges.

## Requirements

Upload or manually record bank fee statements in Workday. Bank fee statements track service charges, fee rates, and compensation information for each billing period.

## Limitations

You can't track free bank services in Workday. Example: A tiered price of \$0.00 on the first level of a bank service contract.

## Tenant Setup

No impact.

## Security

Domain	Considerations
<i>Set Up: Bank Fee Analysis</i> in the Cash Management functional area	Users secured to this domain can maintain bank fee service codes.
<i>Process: Bank Fee Service Contract</i> in the Cash Management functional area	Users secured to this domain can create bank service contracts.
<i>Process: Bank Fee Statements</i> in the Cash Management functional area	Users secured to this domain can create bank fee statements and use standard reports.
<i>Report: Bank Fee Analysis</i> in the Cash Management functional area	Users secured to this domain can view bank fee variances in the <b>Bank Fee Variance Analysis</b> standard report.

## Business Processes

No impact.

## Reporting

Report or Dashboard	Considerations
<b>Bank Fee Variance Analysis</b> report	Displays the discrepancies between bank service fees on your bank fee statements and the contractual fee rates. The report includes all bank service fees for the selected financial institutions.  You can also filter results by: <ul style="list-style-type: none"><li>• Bank account.</li><li>• Bank fee statement dates.</li><li>• Variances between actual and contractual service fees that are unequal to \$0.00.</li></ul>
<b>Find Bank Fee Statements</b> report <b>Find Bank Fee Statement Lines</b> report	Displays bank fee statement and statement line details.
<b>Total Bank Fees by Financial Institution</b> report	Displays total bank fees for 1 or more financial institutions within a specified date range.
<b>Total Bank Fees by Company</b> report	Displays total bank fees for 1 or more companies. Workday automatically populates the last 3 months of bank fees, which you can modify.  If you've fewer than 3 months of fees, Workday displays 0.00 for the other months.

We provide these report data sources that you can use in custom reports:

- **Bank Fee Statements**
- **Bank Fee Statement Line**
- **Bank Fee Statement Line Variance**

## Integrations

You can import your bank fee statements into Workday using a bank fee statement integration template.

Integration Template	Considerations
<b>Import EDI 822 Bank Fee Statements</b>	Imports files in the ASC X12 EDI 822 format.
<b>Import ISO 20022 V1 Bank Fee Statements</b>	Imports files in the ISO 20022 <i>camt.86</i> V1 format.
<b>Import ISO 20022 V2 Bank Fee Statements</b>	Imports files in the ISO 20022 <i>camt.86</i> V2 format.
<b>Core Connector: Bank Fee Statements Inbound</b>	Imports files in a Workday-defined format. The custom integration enables you to load formats other than EDI 822 and ISO 20022.

We provide these web services:

- *Get Bank Fee Service Contracts*: Retrieves bank service contracts from Workday to distribute externally, or to apply updates. You can use the *Put Bank Fee Service Contract* web service to reload the updates into Workday.
- *Put Bank Fee Service Contract*: Mass imports bank service contracts from your financial institutions to Workday.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Tasks

[Steps: Set Up Bank Fee Statement Connectors](#)

#### Reference

[The Next Level: Bank Fee Analysis](#)

[Workday 28 What's New Post: Bank Fee Analysis](#)

## Steps: Perform Bank Fee Analysis

### Context

Bank fee analysis enables you to validate your banking service fees across multiple financial institutions. You can compare fees charged on your bank fee statements against the contractual service rates, and assess pricing discrepancies on variance reports.

### Steps

1. Access the **Maintain Bank Fee Service Codes** task.

Enter the bank fee service codes and their descriptions for each financial institution. You can select these service codes when you create bank fee service contracts and record bank fee statements.

*Security: Set Up: Bank Fee Analysis* domain in the Cash Management functional area.

2. [Create Bank Fee Service Contracts](#) on page 1946.
3. [Enter Bank Fee Statements](#) on page 1947.

### Result

You can now analyze your bank fee service charges.

## Next Steps

Use the **Bank Fee Variance Analysis** report to determine if the service charges from your financial institutions are correct. Workday calculates any variances between:

- The actual bank fees on your bank fee statements.
- The bank fee charges you're expecting based on the contractual amounts for each service code.

## Related Information

### Concepts

[Concept: Cash Management](#) on page 2111

### Reference

[The Next Level: Bank Fee Analysis](#)

[Workday 28 What's New Post: Bank Fee Analysis](#)

## Create Bank Fee Service Contracts

### Prerequisites

Security: *Process: Bank Fee Service Contract* domain in the Cash Management functional area.

### Context

Create a service contract that contains bank-specific service codes and contractual pricing for the financial institution. You can attach supporting documents for the banking service fees such as your contract agreement.

### Steps

1. Access the **Create Bank Fee Service Contract** task.
2. As you complete the **Service Contract Lines** tab, consider:

Option	Description
<b>Bank Service Code</b>	Select a bank service code to add to the service contract. If the bank service code isn't available, you can create the service code directly from the service contract. Bank service codes identify specific charges and associated charges on analysis statements.
<b>Pricing Type</b>	Select a pricing structure that the bank uses for calculating service fees: <ul style="list-style-type: none"> <li>• <b>Fixed:</b> A fixed cost for each occurrence of the service.</li> <li>• <b>Flat:</b> A one time, flat fee that doesn't change on volume.</li> <li>• <b>Tiered:</b> A volume driven pricing structure where the cost of the individual services decreases as the next pricing tier is reached.</li> <li>• <b>Threshold:</b> A volume driven pricing structure where the cost of the service decreases for all instances of the service as thresholds are reached.</li> </ul>
<b>Base Fee</b>	(Optional) The fee charged in addition to the unit price of the banking service.

Option	Description
<b>Minimum Fee</b>	(Optional) The minimum and maximum service fee amounts the bank charges per billing period irrespective of usage.
<b>Maximum Fee</b>	Example: For the 123 bank service code, your bank charges a maximum fee of 50.00 and has a unit cost of 5.00. Your service volume for this period is 30. You're only charged the maximum fee of 50.00 instead of the actual 150.00.

## Result

Workday compares the expected charges defined in your service contract against your actual bank fee charges on the bank fee statement. You can use the **Bank Fee Variance Analysis** report to view the results.

## Example

Your negotiated service fees for stopped payments use tiered and threshold pricing types. These examples show the cost breakdown by number of requests in a given billing period for the pricing types.

With tiered pricing, the first 3 stopped payment requests cost \$60.00, the next tier of requests costs \$600.00, and the last tier reached costs an additional price. The stopped payment costs accumulate as the service volume increases:

Minimum and Maximum Number of Stopped Payments	Tier Price	Actual Requests
1 to 50	\$20.00	3
51 to 100	\$10.00	60
101 or more	\$5.00	300
		Total Cost: \$2160.00

With threshold pricing, as soon as the service volume reaches a threshold of 101, all existing and future stop payment requests have the same \$5.00 unit price:

Number of Stopped Payments	Threshold Price	Actual Requests
50	\$20.00	
100	\$10.00	
101 or more	\$5.00	300
		Total Cost: \$1500.00

## Next Steps

Manually enter or upload your bank fee statements.

## Enter Bank Fee Statements

### Prerequisites

Security: Process: *Bank Fee Statements* domain in the Cash Management functional area.

## Context

Record your bank fee statements to track service charges, fee rates, and compensation information for a billing period.

You can also import your bank fee statements into Workday using one of these bank fee statement integration templates:

- Import EDI 822 Bank Fee Statements - Imports files in the ASC X12 EDI 822 format.
- Import ISO 20022 V1 Bank Fee Statements - Imports files in the ISO 20022 *camt.86* V1 format.
- Import ISO 20022 V2 Bank Fee Statements - Imports files in the ISO 20022 *camt.86* V2 format.
- Core Connector: Bank Fee Statements Inbound - Imports files in a Workday-defined format. The custom integration enables you to load formats other than EDI 822 and ISO 20022.

## Steps

1. Access the **Record Bank Fee Statement** task.
2. Specify the **Statement Beginning Date** and the **Statement End Date** from the bank fee statement. Workday selects lines from your account that fall within these dates.
3. (Optional) Specify the **Tax Currency** that you use for paying taxes on bank service fees. Workday calculates the tax for the service fee using this currency.
4. (Optional) Specify the **Settlement Currency** that you use to pay bank service fees.
5. As you complete the **Balance, Rate, & Compensation** tab, consider:

Option	Description
<b>Bank Fee Compensation Code</b>	Select the standard compensation code for applicable balance, rate, and compensation information for the specific billing period.  Example: Compensation includes earnings allowances and average available balances.
<b>Compensation Amount</b>	Enter the compensation and balance amount information. For rate information, enter the rate calculation method for the specified billing period.

6. As you complete the **Bank Fee Statement Lines** tab, consider:

Option	Description
<b>AFP Code</b> <b>Bank Fee Service Code</b>	Select an Association of Financial Professionals (AFP) code for each bank service code. Financial institutions map individual service codes to these AFP codes to standardize service codes and descriptions.  Enter a new line with balance amounts for each service from the bank fee statement.

7. As you complete the **Conversion Rates** tab, consider:

Option	Description
<b>Source Currency</b>	(Optional) Specify the currency used for the service charge and its target currency for conversion.
<b>Target Currency</b>	Source and target currencies show the conversion rate that Workday applies when converting from a billing currency to a settlement currency. You can track the currencies and exchange rates that

Option	Description
	the financial institutions use when billing you for services.
<b>Quotation Date</b>	(Optional) Enter the exchange rate date used for the currency conversion. The quotation date on the bank fee statement outlines the exact exchange rate date for the service charge.

## Result

Workday uses the bank fee statement information for calculating price exceptions and variance amounts from the contractual bank fees.

Use these reports to review bank fee statement and line details:

- **Find Bank Fee Statements**
- **Find Bank Fee Statement Lines**

You can also use these reports to view the total bank fees incurred from each financial institution and company by billing period:

- **Total Bank Fees by Financial Institution**
- **Total Bank Fees by Company**

---

## Steps: Set Up Intelligent Prompt Recommendations for Cash Management Transactions

### Prerequisites

**Note:** You might need to take additional steps to enable this feature based on your organization's subscription service agreement. To determine your subscription service agreement:

1. Select your profile avatar on [Workday Community](#).
2. Select **Profile**.
3. On your profile page, select your organization's name, which is beneath your name and next to your job title.
4. View your **Subscription Service Agreement** value.

If the value is:

- **UMSA**, you can skip the **Enable Innovation Services Features and Machine Learning Data Contributions** step. For more information on Machine Learning data contributions, see [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).
- **MSA**, you must enable this feature through Innovation Services using the **Enable Innovation Services Features and Machine Learning Data Contributions** step.

To train the intelligent recommendation models, you need at least 500 historical records of:

- Ad hoc bank transactions with associated bank accounts, revenue/spend categories, and ledger accounts.
- Ad hoc payments with associated spend categories.
- Miscellaneous payments with associated spend categories.

## Context

You can enable recommended prompt values that your organization frequently uses to simplify data entry on:

- Ad hoc bank transactions.
- Ad hoc payments.
- Miscellaneous payment requests.

On ad hoc bank transaction tasks, Workday displays up to 5 recommended values by confidence level in these prompts:

- **Bank Account**
- **Ledger Account**
- **Revenue/Spend Category**

On ad hoc payment and miscellaneous payment request tasks, Workday displays up to 5 recommended values in the **Spend Category** prompt.

## Steps

### 1. (Optional) [Enable Innovation Services Feature and Machine Learning Data Contributions](#).

**Note:** You might need to take additional steps to enable this feature depending on your organization's subscription service agreement. For more information, see this [Community](#) article.

- a) On the **Innovation Service Opt-In** tab, select the **Financial Management Machine Learning GA Features** service check box in the **Financials** category.
- b) On the **Innovation Services Data Selection Opt-In** tab, select the **Cash Management Data** category check box.

### 2. Access the **Edit Tenant Setup - Machine Learning** task.

Select the region in which Workday hosts data used for improvement and personalization of machine learning and analytics functionality.

Security: *Set Up: Tenant Setup - Machine Learning* domain in the System functional area.

### 3. Access the **Maintain Machine Learning Prompt Recommendations** task.

- a) On the initiation page, select the *Cash Management* product area.
- b) In the **Cash Management** section, select the **Enable Machine Learning Recommendations** check box for each prompt that you want to receive recommended values for.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

## Result

When you complete the configurations, Workday requires up to 2 weeks to train the intelligent models with your historical data and display the prompt recommendations. Workday automatically refines the models weekly to enhance the prompt values.

## Related Information

### Steps: Define Cash Activity Categories

[Steps: Set Up Miscellaneous Payment Requests](#) on page 1985

# Ad Hoc Payments

---

## Setup Considerations: Ad Hoc Payments

You can use this topic to help make decisions when planning your configuration and use of ad hoc payments. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

In Workday, you can use ad hoc payments to make one-time payments or infrequent payments outside of the standard invoicing and payables processes. Examples include:

- Equity investments.
- Interest payments.
- Internal or foreign exchange transfers.
- Merger and acquisition (M&A) payments.
- Payroll vendor payments.
- Tax payments.
- Wage garnishment payments.

### Business Benefits

Ad hoc payments enable you to:

- Make one-time payments without the need for invoice creation and approvals.
- Process time-sensitive payments using ad hoc payment business processes, streamlining the payment approval process.
- Meet your off-cycle payroll requirements for late or adjusted timesheets or missed payments.

### Use Cases

You can:

- Create single-use ad hoc payees that automatically deactivate after settlement.
- Set up ad hoc payment templates to create ad hoc payments with common attributes, enabling you to minimize manual errors and streamline ad hoc payment creation.
- Include applicable ad hoc payments in payroll year-end tax reports, such as 1099 MISC and 1099 NEC reports (USA). This enables you to issue complete and accurate tax payment data to 1099 payees and the IRS.

### Questions to Consider

Question	Considerations
How do you secure user access to bank accounts so that users can only create ad hoc payments for certain bank accounts?	You can configure segmented security groups to restrict access to the bank accounts. Only members of the security groups can select the bank accounts allowed for their security level when creating ad hoc payments.

Question	Considerations
	Example: You define security segments with your bank accounts for managers and analysts. The managers can access all bank accounts to initiate ad hoc payments, but the analysts can only select the bank accounts listed in their security segment.
How do you secure user access to spend categories so that users can only create ad hoc payments for designated spend categories?	<p>You can configure segmented security groups to restrict access to ad hoc payment spend categories and spend category hierarchies. Only members of the security groups can select the spend categories allowed for their security level when creating ad hoc payments.</p> <p>Example: You restrict the Accounts Payable specialist from creating ad hoc payments for spend categories that you've designated for supplier invoices. The specialist can only use specific spend categories to process spend through ad hoc payment transactions.</p>
How do you configure an ad hoc payee for single-use?	<p>When you create an ad hoc payee, select the <b>Single Use Payee</b> check box to deactivate the payee after its first use.</p> <p>Workday automatically deactivates single-use ad hoc payees when the ad hoc payments settle.</p>
How does Workday prevent ad hoc payee settlement information from changing during the ad hoc payment process?	<p>When you submit an ad hoc payment, Workday retains the address and settlement bank account information for an ad hoc payee. Workday locks this information to prevent any updates done to the ad hoc payee from affecting the submitted and approved ad hoc payment.</p> <p>This helps you to:</p> <ul style="list-style-type: none"> <li>• Ensure that your ad hoc payees receive your ad hoc payments.</li> <li>• Prevent fraudulent activities on your ad hoc payments.</li> <li>• Report on the correct transactions.</li> </ul>

## Recommendations

Functionality	Recommendations
Custom Validations	If you're configuring custom validations for ad hoc payments, consider enforcing the same worktag validations that you use on a supplier invoice. The creation of an ad hoc payment is similar to the entry of a supplier invoice.
Add or Remove Attachments	To add or remove attachments to ad hoc payments in any status, configure domain access to 1 of these related actions:

Functionality	Recommendations
	<ul style="list-style-type: none"> <li><b>Add Attachment:</b> Upload attachments using the <b>Add Attachments for Ad Hoc Payment</b> task.</li> <li><b>Add/Change Attachment:</b> Upload or remove attachments using the <b>Add/Change Attachments for Ad Hoc Payment</b> task.</li> </ul> <p>Example: Add supporting documents on a completed or reconciled ad hoc payment without having to first cancel, unreconcile, and resubmit it for business process approvals.</p>
Ad Hoc Payment Templates	<p>We recommend that you use an ad hoc payment template to make recurring ad hoc payments with common attributes. Workday automatically populates the values from a predefined template onto new ad hoc payments created using the template. You can make a payment directly from the template using the <b>Create Ad Hoc Payment From Template</b> task.</p> <p>To create additional templates, you can copy your ad hoc payment template and make adjustments.</p>
Intercompany Ad Hoc Payments	<p>You can create an ad hoc payment on behalf of intercompanies. You first configure the parent company and its affiliated companies using an intercompany profile.</p> <p>When you create the ad hoc payment, you enter the paying company in the header section. Workday defaults this company onto the line level, which you can change to its intercompany affiliate defined in the profile.</p> <p>Example: The header company, Global Modern Services Inc., USA, pays an ad hoc payment on behalf of the line level company, Global Modern Services Ltd., Canada. When you settle the ad hoc payment, Workday generates these accounting results:</p> <ul style="list-style-type: none"> <li>Global Modern Services Inc., USA has a cash outflow and an <i>Intercompany Receivable</i> from the Canadian company.</li> <li>Global Modern Services Ltd., Canada has an <i>Intercompany Payable</i> to the USA company.</li> </ul>

## Requirement

Workday requires the settlement bank account information for a payee when you use electronic payment methods for ad hoc payments.

When you don't provide settlement bank account details on a payee profile, you must provide this information when you create an ad hoc payment.

## Limitation

Workday doesn't support multiple ad hoc payment lines on an ad hoc payment template. To split payments for different spend categories across multiple lines, you can add the additional lines when you create an ad hoc payment from the template.

## Tenant Setup

You can configure security groups of workers to restrict the bank accounts and spend categories they can use to make ad hoc payments. The workers can only select the bank accounts or spend categories allowed for their security level.

## Security

These domains in the Banking and Settlement functional area:

Domain	Considerations
<i>Process: Ad Hoc Payee</i>	Enables you to create, edit, and view ad hoc payees for ad hoc payments. You can use ad hoc payees for making one-time, ad hoc payments.
<i>Process: Ad Hoc Payee - Activate/Inactivate</i>	Enables you to activate or deactivate an ad hoc payee using related actions on the payee.
<i>Process: Ad Hoc Payment – Add Attachment</i> <i>Process: Ad Hoc Payment – Add/Change Attachment</i>	Enables you to add or remove attachments for ad hoc payments in any status. Users can access 1 of these related actions on an ad hoc payment: <ul style="list-style-type: none"> <li><b>Add Attachment</b></li> <li><b>Add/Change Attachment</b></li> </ul>
<i>Process: Ad Hoc Payment – Access Worker</i> <i>Process: Ad Hoc Payment – CORE</i> <i>Process: Ad Hoc Payment (NEW)</i> <i>Process: Ad Hoc Payment – View</i>	Enables you to view, create, and edit ad hoc payments. Access to the <i>Process: Ad Hoc Payment – Access Worker</i> domain enables you to select employees as payees when you create or edit an ad hoc payment. In the <b>Payee</b> drop-down list, you can enter the name of the employee in the <b>Search</b> field. This domain also enables you to use employees as payees in ad hoc payment web services.
<i>Process: Ad Hoc Payment Settlement</i>	Enables you to settle ad hoc payments and view related reporting. You can also print checks directly using the <b>Print Check</b> related action on an ad hoc payment.
<i>Process: Ad Hoc Payment Reporting</i>	Enables you to use these reports: <ul style="list-style-type: none"> <li><b>Find Ad Hoc Payment Templates</b></li> <li><b>Find Payments</b></li> </ul> The domain also provides access to report data sources and filters to use for custom ad hoc payment reports.
<i>Set Up: Ad Hoc Payment Template</i>	Enables you to create templates to simplify the process of creating multiple ad hoc payments with common attributes.

## Business Processes

You can configure these business processes to review and approve ad hoc payments and templates:

- *Ad Hoc Payment Event*
- *Ad Hoc Payment Template*

## Reporting

Report	Considerations
<b>Find Ad Hoc Payment Templates</b>	<p>Use this report to search for and review your ad hoc payment templates. You can use related actions to:</p> <ul style="list-style-type: none"> <li>• Copy your template to create additional templates.</li> <li>• Change a template submitted for approval or already approved.</li> <li>• Edit a template in <i>Draft</i> status.</li> <li>• Create ad hoc payments from an approved template.</li> </ul>
<b>Find Payments</b>	<p>Filter by the <i>Ad Hoc Payment</i> payment category to search for all ad hoc payments applicable to your organization.</p>
<b>View Ad Hoc Payee</b>	<p>Displays details for all ad hoc payees created for your organization. You can also activate or inactivate ad hoc payees using related actions on an ad hoc payee.</p>
<b>View Ad Hoc Payment Spend Category Security Segment</b>	<p>Displays security segments with the spend categories and spend category hierarchies available for workers to use when creating ad hoc payments.</p>
<b>1099 Data Audit - Ad Hoc Payments with 1099 Payees and non-1099 Spend Categories</b>	<p>Displays ad hoc payment lines for 1099 payees with non-1099 spend categories (USA). To include the payees and their applicable payments in year-end tax reports, map 1099 form categories to the spend categories and hierarchies.</p> <p>Workday tracks and classifies all other 1099 payee payments as uncategorized.</p>
<b>1099 Data Audit – Ad Hoc Payments with 1099 Spend Categories and non-1099 Payees</b>	<p>Displays ad hoc payment lines with 1099 spend categories for non-1099 payees. To include the ad hoc payments and their applicable payees in year-end tax reports, assign the 1099 MISC or 1099 NEC tax authority form type to the payees.</p>

We suggest using these report data sources and filters to build custom reports:

Report Data Source or Filter	Considerations
<b>Ad Hoc Payees</b> data source	Displays the ad hoc payees for your organization.
<b>Ad Hoc Payments</b> data source	Displays the ad hoc payments for your organization. It prompts you for the companies or company hierarchies to filter the results.

Report Data Source or Filter	Considerations
<b>Ad Hoc Payment Lines</b> data source	Displays the ad hoc payment lines for your organization. It prompts you for the companies or company hierarchies to filter the results.
<b>Ad Hoc Payment Template</b> data source	Displays the ad hoc payment templates for your organization. It prompts you for the company, financial accounts, and reporting currency to filter the results.
<b>Bank Account for Ad Hoc Payment Template</b> data source filter	The list of financial accounts used to filter ad hoc payment templates.
<b>Company for Ad Hoc Payment Template</b> data source filter	The list of companies used to filter ad hoc payment templates.
<b>Currency for Ad Hoc Payment Template</b> data source filter	The list of currencies used to filter ad hoc payment templates.

## Integrations

You can use these web services to mass import, create, or update ad hoc payments, templates, and ad hoc payees:

Web Service	Considerations
<i>Get Ad Hoc Payees</i>	Retrieves ad hoc payees from Workday using your specified criteria. You can then export the payees to third-party systems.
<i>Put Ad Hoc Payee</i>	Imports and creates ad hoc payees to use for ad hoc payments.
<i>Get Ad Hoc Payments</i>	Retrieves ad hoc payments from Workday using your specified criteria. You can then export the payments to third-party systems.
<i>Submit Ad Hoc Payment</i>	Adds or updates an ad hoc payment. Then, submits the change event through the <i>Ad Hoc Payment Event</i> business process for review and approval.
<i>Cancel Ad Hoc Payment</i>	Mass cancel ad hoc payments from Workday or non-Workday systems.
<i>Correct Ad Hoc Payment</i>	Mass correct ad hoc payments.
<i>Get Ad Hoc Payment Templates</i>	Retrieves ad hoc payment templates from Workday using your specified criteria. You can then export the templates to third-party systems.
<i>Put Ad Hoc Payment Template</i>	Imports and creates ad hoc payment templates.
<i>Submit Ad Hoc Payment Template</i>	Adds or updates an ad hoc payment template. Then, submit the change event through the <i>Ad Hoc Payment Template</i> business process for review and approval.
<i>Submit Ad Hoc Payment from Template</i>	Creates an ad hoc payment using an ad hoc payment template. Then, submits it to the <i>Ad Hoc Payment Event</i> business process.

## Connections and Touchpoints

You can create ad hoc payments to pay:

- Contingent workers
- Customers
- Employees
- Suppliers
- Tax authorities

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Create Ad Hoc Payment Templates](#) on page 1962

[Create Ad Hoc Payments](#) on page 1964

[Steps: Set Up 1099 Reporting](#) on page 711

## Steps: Manage Ad Hoc Payments

### Context

You can create ad hoc payments to use as one-time payments. You can also create ad hoc payments to make payments that aren't included in:

- Supplier invoices
- Refunds
- Expense reports
- Pay groups

### Steps

#### 1. (Optional) Configure segmented security for ad hoc payments.

Control access to the bank accounts and spend categories used for creating and editing ad hoc payments.

See:

- [Steps: Maintain Access to Bank Accounts for Ad Hoc Payments](#) on page 1958.
- [Steps: Maintain Access to Ad Hoc Payment Spend Categories](#) on page 1959.

#### 2. (Optional) [Create Ad Hoc Payees](#) on page 1960.

Create an ad hoc payee with a given payee address and settlement bank account.

When you create ad hoc payments, you can select the ad hoc payee or any other type of payee that already exists in Workday.

#### 3. (Optional) Configure payment purpose codes for your ad hoc payments.

You can select payment purpose codes for the originating and receiving countries when you create and maintain:

- Ad hoc payments.
- Ad hoc payment templates.
- Ad hoc payments from templates.

See [Steps: Set Up Payment Purpose Codes](#) on page 2141.

**4. (Optional) Configure intelligent prompt recommendations.**

When you create ad hoc payment lines, you can select intelligently recommended values on the **Spend Category** prompt.

See [Steps: Set Up Intelligent Prompt Recommendations for Cash Management Transactions](#).

**5. (Optional) Edit Domain Security Policies.**

Grant user access to these related actions on ad hoc payments:

- **Add Attachment**
- **Add/Change Attachment**

Add security groups to these domains in the Banking and Settlement functional area:

- *Process: Ad Hoc Payment – Add Attachment*
- *Process: Ad Hoc Payment – Add/Change Attachment*

Members of these security groups can use the related action to add or remove attachments for ad hoc payments in any status without additional actions or business process approvals.

**6. Create Ad Hoc Payments** on page 1964.

**7. (Optional) Set up and use templates to create multiple ad hoc payments with similar attributes.**

- a) [Create Ad Hoc Payment Templates](#) on page 1962.
- b) Access the **Create Ad Hoc Payment From Template** task.

Select the template to use for creating the ad hoc payment. Workday applies the header information, payment details, and lines from the template to create the payment. You can modify some of the automatically populated values, such as the payment details and line details. You can also create additional payment lines. Once completed, you can route the ad hoc payment for approval using the *Ad Hoc Payment Event* business process.

Configure the *Ad Hoc Payment Event* business process and security policy in the Banking and Settlement functional area.

## Result

When you submit an ad hoc payment, Workday retains the address and settlement bank account information for an ad hoc payee. Workday locks this information to prevent any updates done to the ad hoc payee from affecting the submitted ad hoc payment. This process helps ensure that your ad hoc payees receive your ad hoc payments, and that you report them accurately. You can edit, change, or revise an existing ad hoc payment to modify its ad hoc payee information.

## Next Steps

Settle the approved ad hoc payments. When the process completes, Workday updates the accounting entries for each payment.

## Steps: Maintain Access to Bank Accounts for Ad Hoc Payments

### Prerequisites

Understand segment-based security groups and segmented security.

## Context

Configure segmented security to restrict the bank accounts that workers can use to create, edit, and cancel ad hoc payments. You can control which security groups of workers can access particular bank accounts for managing ad hoc payments.

## Steps

- [Edit Domain Security Policies.](#)

Enable members of selected security groups to define security segments.

Once you access the **Domain Security Policies for Functional Area** report, select:

- The **System** functional area.
- The **Segmented Setup** folder from the hierarchy.

- [Access the Create Bank Account Security Segment task.](#)

Define security segments with the bank accounts for specific workers. Create enough segments to cover each unique security access requirement. Example: Create different segments for executives, managers, and employees. Workday recommends that you build from least to most restrictive.

Security:

- *Access Ad Hoc Payment Bank Account (Segmented)* domain in the Banking and Settlement functional area.
- *Cash Management Segment Setup* domain in the System functional area.

- [Create Segment-Based Security Groups.](#)

Security groups tie workers to the values in security segments. Each segment-based security group defines a combination of security groups and the security segments to which their members have access. When you create a security group, select **Segment-Based Security Group** on the **Type of Tenanted Security Group** prompt.

- [Edit Domain Security Policies.](#)

Edit permissions on the applicable domain security policy. This policy enables members of new segment-based security groups to access the values in their segments for relevant tasks and reports.

Once you access the **Domain Security Policies for Functional Area** report, select:

- The **Banking and Settlement Functional Area**.
- The *Access Ad Hoc Payment Bank Account (Segmented)* security policy from the hierarchy.

- [Activate Pending Security Policy Changes.](#)

- [Edit a bank account to associate it with a bank account security segment.](#)

- [Test the security policy changes.](#)

Sign in as a user for each segment and verify that you can only access the bank accounts associated with that segment-based security group.

[Concept: Security Groups](#)

## Steps: Maintain Access to Ad Hoc Payment Spend Categories

### Prerequisites

- Understand segment-based security groups and segmented security.
- Determine how you want to restrict segments of ad hoc payment spend categories to groups of workers.

## Context

Configure segmented security to restrict access to ad hoc payment spend categories and *spend category* hierarchies to members of designated security groups. Workers can only select the spend categories allowed for their security level when they create or edit ad hoc payments.

## Steps

- 1. Edit Domain Security Policies.**

Enable members of selected security groups to define security segments.

Once you access the **Domain Security Policies for Functional Area** report, select:

- The *System* functional area.
- The **Segmented Setup** folder from the hierarchy.

- 2. Access the Create Ad Hoc Payment Spend Category Security Segment task.**

Define security segments with the spend categories and spend category hierarchies for specific workers. Create enough segments to cover each unique security access requirement. Example: Create different segments for executives, managers, and employees. Workday recommends that you build from least to most restrictive.

- 3. Create Segment-Based Security Groups.**

Security groups tie workers to the values in security segments. Each segment-based security group defines a combination of security groups and the security segments to which their members have access. When you create a security group, select *Segment-Based Security Group* on the **Type of Tenanted Security Group** prompt.

- 4. Edit Domain Security Policies.**

Edit permissions on the applicable domain security policy. This policy enables members of new segment-based security groups to access values included in their segments within relevant tasks and reports.

Once you access the **Domain Security Policies for Functional Area** report, select:

- The *Banking and Settlement* functional area.
- The *Access Ad Hoc Payment Spend Category (Segmented)* security policy from the hierarchy.

- 5. Activate Pending Security Policy Changes.**

- 6. Test the security policy changes.**

Sign in as a user for each segment and verify that you can only access the spend categories associated with that segment-based security group.

## Result

The security segment for ad hoc payment spend categories enables workers to:

- View ad hoc payments when they have segment security access to 1 or more ad hoc payment lines.
- Edit, cancel, copy, or submit an ad hoc payment when they have segment security access to all lines.

## Related Information

### Concepts

[Concept: Security Groups](#)

## Create Ad Hoc Payees

### Prerequisites

- Identify ad hoc payee and contact information.
- Security: *Process: Ad Hoc Payee* domain in the Banking and Settlement functional area.

## Context

You can create ad hoc payees for individuals or companies that don't already exist in Workday, such as workers, customers, or suppliers. You can use ad hoc payees for making one-time payments.

## Steps

1. Access the **Create Ad Hoc Payee** task.

2. As you complete this step, consider:

Option	Description
<b>Phonetic Name</b>	<p>Records the correct pronunciation of the <b>Ad Hoc Payee</b> name and these details on the <b>Settlement Bank Account</b> tab:</p> <ul style="list-style-type: none"> <li>• <b>Bank Phonetic Name</b></li> <li>• <b>Branch Phonetic Name</b></li> <li>• <b>Phonetic Name on Account</b></li> </ul> <p>Displays when:</p> <ul style="list-style-type: none"> <li>• You enable phonetic names on the <b>Edit Tenant Setup - Global</b> task.</li> <li>• Users select the relevant locale and display language in their preferences.</li> </ul> <p>The preferred language of the bank account country must match the language enabled on the tenant setup.</p>
<b>Single Use Payee</b>	<p>(Optional) If you intend to use the ad hoc payee only once, select this check box to deactivate the payee after its first use.</p> <p>Workday automatically inactivates single use ad hoc payees after the settlement run completes.</p>

3. Enter **Settlement Bank Account** details for the ad hoc payee.

4. (Optional) Use an alternate name in documents and files.

Enter a different name to use for the ad hoc payee in the **Name** field. Then, select the type of usage for that alternate name from the **Alternate Name Usage** prompt.

## Next Steps

- To display ad hoc payees you might want to deactivate, run the **Proposed Inactive Ad Hoc Payees** task. Example: Ad hoc payees not used within the last year.
- To activate or deactivate an ad hoc payee, run the **View Ad Hoc Payee** report. From the related actions menu of a payee, select **Ad Hoc Payee > Activate** or **Ad Hoc Payee > Inactivate**.

Security: Process: *Ad Hoc Payee - Activate/Inactivate* domain in the Banking and Settlement functional area.

## Create Ad Hoc Payment Templates

### Prerequisites

- Configure the *Ad Hoc Payment Template* business process and security policy in the Banking and Settlement functional area.
- Security: *Set Up: Ad Hoc Payment Template* domain in the Banking and Settlement functional area.

### Context

You can create templates to simplify the process of creating repetitive ad hoc payments with common attributes. Workday automatically populates the values from a predefined template onto new ad hoc payments created using the template. Using these templates enables you to minimize manual errors and streamline ad hoc payment creation.

### Steps

- Access the **Create Ad Hoc Payment Template** task.
- As you complete this step, consider:

Option	Description
<b>Currency</b>	The default is the payee currency. If there isn't a default currency assigned to the payee, Workday uses the bank account currency.  If the payee is a supplier, the currency must be one the supplier accepts. If the selected transaction currency and the bank account currency differ, define the currency conversion rate.
<b>Eliminate Foreign Exchange Gain or Loss</b>	Select to exclude realized foreign exchange gain or loss from ad hoc payments.  Example: You override the currency conversion rate with a bank rate. The difference between the 2 values creates a realized exchange gain or loss journal entry.  With this option, Workday eliminates this additional journal entry line and applies the difference to the expense or revenue journal entry.
<b>Payment Type</b>	Specify the payment type, such as check or direct deposit. You can specify this value only after you select a bank account. If you select a supplier from the <b>Payee</b> list, Workday automatically populates the supplier-preferred payment type.

- As you complete the **Payment Details** section, consider:

Option	Description
<b>Originating Country Payment Purpose</b>	Select payment purpose codes that identify the purpose of the payment, as required by banks or local regulatory requirements in the originating country.
<b>Receiving Country Payment Purpose</b>	Select payment purpose codes that identify the purpose of the payment, as required by banks or local regulatory requirements in the receiving country.

Option	Description
	Workday displays these fields when you enable payment purpose codes using the <b>Edit Tenant Setup - Financials</b> task.
<b>Tax Payment</b>	<p>Select this check box when you're making a payment to a tax authority so that Workday prepares the ACH file properly for the bank integration.</p> <p>For United Kingdom, select this check box to prepare a file for BACS in Standard 18 format.</p>

4. On the **Ad Hoc Payment Line Defaults** tab, enter payment details:

Option	Description
<b>Company</b>	On intercompany transaction lines, you can select from the allowable companies.
<b>Spend Category</b>	<p>The spend category links items to corresponding account posting rules and provides additional details for reporting. If you select an item, Workday automatically populates the one assigned to the item, which you can't modify.</p> <p>The spend category for ad hoc payment lines requires the <i>Ad Hoc Payment</i> spend category usage type.</p>
<b>Tax Applicability</b>	Indicates whether the line is taxable and, if taxable, its recoverability. You can use tax applicability to filter transactions in reporting. It automatically populates from the item-specific tax rule based on ship-to address, first by purchase item and then by spend category. If there's no match, it automatically populates from the purchase item. Otherwise, it automatically populates from the spend category.
<b>Worktags</b>	You can assign a worktag to use as a keyword to more easily classify and track the ad hoc payment in Workday.

5. To enter bank account information for an ad hoc payee when the payment type is direct deposit, use the **Settlement Bank Account** tab.

## Result

Workday routes the completed ad hoc payment template to the next business process participant for review and approval.

## Next Steps

Use the **Find Ad Hoc Payment Templates** report to search for and review your ad hoc payment templates. From the related actions menu of a template, you can:

- Copy your ad hoc payment template to create additional templates.
- Amend an ad hoc payment template that's submitted for approval or already approved.
- Edit an ad hoc payment template that's in *Draft* status.

- Create ad hoc payments from an approved template.

## Create Ad Hoc Payments

### Prerequisites

- Configure the bank account to enable ad hoc payments.
- Configure the *Ad Hoc Payment Event* business process and security policy in the Banking and Settlement functional area.
- Security: These domains in the Banking and Settlement functional area:
  - *Process: Ad Hoc Payment (NEW)*
  - *Process: Ad Hoc Payment – Access Worker*
  - *Process: Ad Hoc Payment – Add Attachment*
  - *Process: Ad Hoc Payment – Add/Change Attachment*
  - *Process: Ad Hoc Payment – CORE*
  - *Process: Ad Hoc Payment – View*
  - *Process: Ad Hoc Payee*

### Context

You can create ad hoc payments to make one-time payments, such as tax payments and payroll payments to workers. You can create these payments for multiple types of payees including ad hoc payees.

### Steps

1. Access 1 of these tasks:
  - [Create Ad Hoc Payment](#)
  - [Create Ad Hoc Payment from Template](#)
2. As you complete the **Ad Hoc Payment Information** section, consider:

Option	Description
<b>Currency</b>	The default is the payee currency. If there isn't a default currency assigned to the payee, Workday uses the bank account currency.  If the payee is a supplier, the currency must be one the supplier accepts.
<b>Eliminate Foreign Exchange Gain or Loss</b>	Select to exclude realized foreign exchange gain or loss from ad hoc payments.  Example: You override the currency conversion rate with a bank rate. The difference between the 2 values creates a realized exchange gain or loss journal entry.

Option	Description
	With this option, Workday eliminates this additional journal entry line and applies the difference to the expense or revenue journal entry.
<b>Default Tax Option</b>	<p>Automatically populates from the company accounting details.</p> <p>Workday automatically populates the tax option at the line from the header, but you can override it at the line level.</p>
<b>Ship-To Address</b>	Workday uses this address when evaluating tax rules to determine tax code and tax applicability overrides for the transaction lines.
<b>Default Tax Code</b>	<p>Automatically populates from the supplier. If you don't define the default tax code or to override it, select a tax code.</p> <p>The header tax code automatically populates to procurement document lines, which you can override.</p>
<b>Payment Date</b>	<p>The date that determines when the financial institution processes the payment.</p> <p>Example: If you need the bank to process a payment for the supplier on Friday, then enter Friday as the payment date. Start a settlement run on Wednesday to send the payment file to the bank a few days ahead of time. In Workday, the settlement run date is Wednesday and the payment date is Friday.</p>
<b>Handling Code</b>	<p>Select how you want to handle the ad hoc payment.</p> <p>You can use this attribute to:</p> <ul style="list-style-type: none"> <li>• Group payments in settlement runs.</li> <li>• Organize check and advice payments in batch files for printing.</li> <li>• Report on ad hoc payments in custom reports.</li> </ul>

3. As you complete the **Payment Details** section, consider:

Option	Description
<b>Tax Amount</b>	<p>If you selected to calculate tax, Workday displays the sum of the calculated tax amounts from the taxable lines, based on tax code you specify for each line. To override this calculated amount, you can change calculated tax by tax rate on the <b>Tax</b> tab.</p> <p>If you select to enter tax due to the supplier, enter the tax amount for the transaction. You must</p>

Option	Description
	<p>have at least 1 line with a tax applicability that is taxable and enabled for allocation.</p> <p>The tax allocated to the lines is only the nonrecoverable amount for the transaction and doesn't always add up to this header amount.</p> <p>If you enter a negative value, Workday allocates the tax amount to a negative or zero-cost line.</p>
<b>Freight Amount</b> <b>Other Charges</b>	<p>Allocate these landing costs from the transaction header back to the lines. Add a <i>spend category</i> that's eligible for allocation of freight and other charges to at least 1 line, as set up on the <b>Maintain Spend Categories</b> task.</p> <p>Example: You purchase a large piece of equipment and have 1 line for the equipment itself and another for installation.</p>
<b>Document Link</b>	<p>Workday displays this field when you select <b>Ad Hoc Payment Document Link</b> on the <b>Maintain External Link Validation</b> task.</p> <p>If you store supporting documents or images in an external repository, then enter the URL to that location. Once you save the transaction, Workday displays the URL as a live hyperlink to the image. Approvers can reference this document before approving the transaction.</p> <p>Workday validates the link to ensure that it has a valid Uniform Resource Identifier (URI) pattern, as defined on the <b>Maintain External Link Validation</b> task. This process provides additional security to help avoid malicious content in external links.</p> <p>If the location of the external content changes, update the URL in Workday.</p>
<b>Originating Country Payment Purpose</b> <b>Receiving Country Payment Purpose</b>	<p>Select payment purpose codes that identify the purpose of the payment, as required by banks or local regulatory requirements in the originating or receiving country.</p> <p>Workday displays these fields when you enable payment purpose codes using the <b>Edit Tenant Setup - Financials</b> task.</p>
<b>Tax Payment</b>	<p>Select this check box when you're making a payment to a tax authority so that Workday prepares the ACH file properly for the bank integration.</p> <p>For United Kingdom, select this check box to prepare a file for BACS in Standard 18 format.</p>

4. As you complete the **Lines** tab, enter payment details:

Option	Description
<b>Spend Category</b>	The spend category links items to corresponding account posting rules and provides additional details for reporting. If you select an item, Workday automatically populates the one assigned to the item, which you can't modify.
<b>Tax Applicability</b>	Indicates whether the line is taxable and, if taxable, its recoverability. You can use tax applicability to filter transactions in reporting. It automatically populates from the item-specific tax rule based on ship-to address, first by purchase item and then by spend category. If there's no match, it automatically populates from the purchase item. Otherwise, it automatically populates from the spend category.
<b>Tax Code</b>	If taxable, the code automatically populates from the <b>Default Tax Code</b> on the header, which you can override.
<b>Tax Recoverability</b>	Workday automatically populates the recoverable percentage on the transaction line based on the specified tax applicability and tax code. When you change the tax recoverability, Workday applies the recoverable percentage and allocation method to the tax amount for tax rates within the tax code. Use the <b>Maintain Tax Recoverabilities</b> task to specify the tax recoverability of multiple tax rates for each tax code.
<b>Tax Option</b>	Select <i>Calculate Self-Assessed Tax</i> when suppliers or payees don't charge tax. This option enables you to post your tax liability to a separate ledger account. Otherwise, select <i>Calculate Tax Due to Supplier</i> to post the tax payment made to the supplier or payee.
<b>Extended Amount</b>	<b>Quantity</b> multiplied by the <b>Unit Cost</b> for a selected item. If you change the calculated value, Workday recalculates the unit cost.

5. (Optional) If you update tax on an ad hoc payment line, click **Update Tax** to recalculate the tax amount displayed in the header. Workday automatically recalculates the header tax when you submit or save for later.
6. (Optional) On the **Settlement Bank Account** tab, enter bank account information for an ad hoc payee when you use these payment methods:
- Direct Debit
  - Direct Deposit
  - EFT
  - Wire

### Result

When you view the transaction:

- The **Line Details** tab displays the accounting distribution of any landed cost amounts allocated from the header to the lines and the total gross amount. The total gross amount is the net extended amount plus allocated tax, freight, and other charges. Workday uses the total gross amount for:
  - Debit entry of spend accounting.
  - Receipt accruals.
  - Default acquisition cost during asset registration.
- The **Tax** tab displays the recoverable percent and distribution of recoverable and nonrecoverable tax amounts based on the:
  - Tax applicability.
  - Tax code.
  - Taxable amount.

## Next Steps

Run the **Find Payments** report and filter by the *Ad Hoc Payment* payment category to review all ad hoc payments applicable to your organization. The report filters ad hoc payments by:

- Company.
- Ad hoc payment payee or payer.
- Ad hoc payment status.
- Ad hoc payment transaction date.

## Bank Account Transfers

### Steps: Perform Bank Account Transfers

#### Prerequisites

Configure these business processes to define review and approval workflow for bank account transfers:

- Bank Account Transfer Event (main process): Controls review and approval routing for bank account transfers within the same company.
- Bank Account Transfer Intercompany Event (subprocess): Controls review and approval routing when a bank account transfer spans companies; enables the company receiving the transfer to review and approve the transaction.

#### Context

Use Workday bank transfer functionality to record and maintain information about bank account transfers.

**Note:** The actual movement of cash is performed outside of Workday. These tasks simply record and account for the movement of cash between different accounts.

## Steps

1. [Record Bank Account Transfers](#) on page 1971.
2. (Optional) Set up and use templates to record multiple bank account transfers with similar attributes.

- a) [Define Bank Account Transfer Templates](#) on page 1969.
- b) Access the **Create Bank Account Transfer from Template** task.

Select the template to use for creating the bank account transfer. You can specify the amount to transfer, and modify the defaulted transfer details as necessary. Once completed, you can route the bank account transfer for approval using the *Bank Account Transfer Event* business process.

Security: Process: *Bank Account Transfer* domain in the Banking and Settlement functional area.

3. (Optional) [Complete Details of a Bank Account Transfer](#) on page 1973.

Complete a bank account transfer that you saved for later.

## Result

When the transactions transfer between the bank accounts in Workday, Workday converts:

- The transaction currency to the bank account currency if they differ.  
You can override the rate type and rate for this conversion.
- The bank account currency to the company currency if they differ.

Workday automatically converts the transaction amount into the ledger company currency using the conversion rate between the 2 currencies for the default rate type.

## Next Steps

Use the **Find Bank Account Transfers** report to view and update the transfer information. As a related action on a bank account transfer, you can:

- Change, copy, or cancel the transfer.
- View the accounting details.

## Related Information

### Concepts

[Concept: Rates, Rate Types, and Conversion](#) on page 28

### Tasks

[Change Bank Account Transfer Details](#) on page 1974

[Cancel Bank Account Transfers](#) on page 1975

## Define Bank Account Transfer Templates

### Prerequisites

Configure the *Bank Account Transfer Template Event* business process and security policy in the Banking and Settlement functional area.

### Context

Create bank account transfer templates to simplify the process of recording multiple bank account transfers between bank accounts. Workday applies the prepopulated values to all bank account transfers that you create using the template.

## Steps

1. Access the **Create Bank Account Transfer Template** task.
2. As you complete the task, consider:

Option	Description
<b>Transaction Currency</b>	<p>Select the currency of the funds transferred from the source account to the receiving account.</p> <p><i>Both</i> the source and receiving accounts must accept the selected transaction currency. In addition, either one or both of the <b>Account Currency</b> values for the sending and receiving accounts must match this transaction currency.</p>
<b>Eliminate Foreign Exchange Gain or Loss</b>	<p>Select to exclude realized foreign exchange gain or loss from bank account transfers.</p> <p>Example: If you override the currency conversion rate with a bank rate from your statement, the difference between the 2 values creates a realized exchange gain or loss journal entry.</p> <p>With this option, Workday eliminates this additional journal entry line and balances the ledger amounts using the entry entered:</p> <ul style="list-style-type: none"> <li>• In the ledger currency, if 2 different currencies are used.</li> <li>• In the transaction currency, if 3 different currencies are used.</li> </ul> <p>For an intercompany bank account transfer between 2 companies sharing the same base currency, Workday balances the intercompany receivable and payable.</p>
<b>Currency Rate Type</b>	<p>If the <b>From Currency</b> or <b>To Currency</b> differs from the transaction <b>Currency</b>, Workday uses the <i>default</i> currency rate type to convert the funds. You can override this rate type.</p> <p>To set the default rate type, use the <b>Maintain Currency Rate Types</b> task.</p>
<b>Optional Balancing Worktags</b>	<p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul>

## Result

Workday routes the completed bank account transfer template to the next business process participant for review and approval.

## Next Steps

You can use the **Find Bank Account Transfer Templates** report to search for and review your bank account transfer templates. From the related actions menu of a template, you can:

- Copy your bank account transfer template and make adjustments to quickly and efficiently create additional templates.
- Make changes to a bank account transfer template that you've submitted for approval or that's already approved.
- Edit a bank account transfer template that's in *Draft* status.
- Create bank account transfers from the template.
- Inactivate the template when it's no longer relevant. You can also reactivate it if necessary.

## Record Bank Account Transfers

### Prerequisites

- Configure the *Bank Account Transfer Event* business process and security policy in the Banking and Settlement functional area.
- Security: *Process: Bank Account Transfer* domain in the Banking and Settlement functional area.

### Context

Record the details of a bank account transfer.

### Steps

1. Access the **Create Bank Account Transfer** task.
2. As you complete the task, consider:

Option	Description
<b>Date</b>	Record the date of the transfer.
<b>Currency</b>	Select the currency of the funds transferred from the source account to the receiving account.  <i>Both</i> the source and receiving accounts must accept the selected transaction currency. In addition, either one or both of the <b>Account Currency</b> values for the sending and receiving accounts must match this transaction currency.
<b>Eliminate Foreign Exchange Gain or Loss</b>	Select to exclude realized foreign exchange gain or loss from bank account transfers.  Example: If you override the currency conversion rate with a bank rate from your statement, the difference between the two values creates a realized exchange gain or loss journal entry.  With this option, Workday eliminates this additional journal entry line and balances the ledger amounts using the entry entered: <ul style="list-style-type: none"> <li>• In the ledger currency, if 2 different currencies are used.</li> <li>• In the transaction currency, if 3 different currencies are used.</li> </ul>

Option	Description
	For an intercompany bank account transfer between 2 companies sharing the same base currency, Workday balances the intercompany receivable and payable.
<b>Currency Rate Type</b>	<p>If the <b>From Currency</b> or <b>To Currency</b> differs from the transaction <b>Currency</b>, Workday uses the <i>default</i> currency rate type to convert the funds. You can override this rate type.</p> <p>To set the default rate type, use the <b>Maintain Currency Rate Types</b> task.</p>
<b>Currency Conversion Rate</b>	<p>If the <b>From Currency</b> or <b>To Currency</b> differs from the transaction <b>Currency</b>, Workday uses the conversion rate type between the 2 currencies for the selected rate type to convert the funds. You can override this rate.</p> <p>To define conversion rates for a rate type, use the <b>Maintain Currency Conversion Rates</b> task.</p>
<b>Optional Balancing Worktags</b>	<p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul>

## Result

Workday routes the completed bank transfer record to the next business process participant for review and approval.

## Transfer Details

- If the **From Account** company is *the same* as the **To Account** company, Workday treats the transfer as an *intracompany* transfer and applies the logic defined in the *Bank Account Transfer Event business process definition*.
- If the **From Account** company is *different from* the **To Account** company, Workday treats the transfer as an *intercompany* transfer and applies the logic defined in the *Bank Account Transfer Intercompany Event business process definition*.

## Complete Details of a Bank Account Transfer

### Prerequisites

- Record the details of a bank account transfer or bank account transfer for settlement using one of these tasks:
  - Create Bank Account Transfer**
  - Create Bank Account Transfer for Settlement**
  - Change Bank Account Transfer**

Then, click **Save for Later** to complete your work at a future date.

**Note:** Workday automatically sets the status of a bank transfer record to *Draft* when you click **Save for Later**.

- Security: These domains in the Banking and Settlement functional area:
  - Process: Bank Account Transfer*
  - Process: Bank Account Transfer for Settlement - Reporting*

### Context

Finish the work of recording or updating a bank account transfer or bank account transfer for settlement that you saved for later.

### Steps

- Run the **Find Bank Account Transfers** report.
- Select the **Company** associated with the bank account transfer that you started recording or updating at an earlier date.
- Complete these fields to narrow down the list of transfers:

Option	Description
<b>Bank Account</b>	Select the <b>Bank Account</b> for which you started recording transfer details.
<b>Transfer Date On or After</b>	Select the date on which you started recording transfer details; the report returns only transfers recorded on or after this date.
<b>Transfer Date On or Before</b>	Select the date on which you started recording transfer details; the report returns only transfers recorded on or before this date.
<b>Intercompany Transfer</b>	Select to retrieve only intercompany transfers in the report.

- Click **OK** to run the report.
- In the **Bank Account Transfer** column, select one of these related actions on the transfers you want to complete:
  - Bank Account Transfer > Edit.**
  - Bank Account Transfer for Settlement > Edit.**
 The **Edit** action is available only on bank transfer records that are in *Draft* status.
- Complete the transfer details that you started recording or changing.

## Result

When you click **Submit**, Workday routes the completed transfer record to the next business process participant for review and approval.

## Related Information

### Tasks

[Record Bank Account Transfers](#) on page 1971

[Create Bank Account Transfers for Settlement](#) on page 1979

## Change Bank Account Transfer Details

### Prerequisites

Security: These domains in the Banking and Settlement functional area:

- *Process: Bank Account Transfer*
- *Process: Bank Account Transfer for Settlement - Reporting*

### Context

Change the details of a bank account transfer or bank account transfer for settlement after approval.

### Steps

1. Run the **Find Bank Account Transfers** report.
2. Select the **Company** associated with the bank accounts for which you previously recorded transfer details.
3. Complete these fields to narrow down the list of transfers:
 

Option	Description
<b>Bank Account</b>	Select the <b>Bank Account</b> for which you previously recorded transfer details.
<b>Transfer Date On or After</b>	Select the date on which you recorded the transfer details; the report returns only transfers recorded on or after this date.
<b>Transfer Date On or Before</b>	Select the date on which you recorded the transfer details; the report returns only transfers recorded on or before this date.
<b>Intercompany Transfer</b>	Select to retrieve only intercompany transfers in the report.
4. Click **OK** to run the report.
5. In the **Bank Account Transfer** column, select one of these related actions on the transfers you want to change:
  - **Bank Account Transfer > Change.**  
The **Change** action is available only on bank transfer records that have a status of *Approved*.
  - **Bank Account Transfer for Settlement > Change.**  
The **Change** action is available only on bank transfer for settlement records that have a status of *Approved* or *Awaiting Settlement*.

If you've enabled the option in the **Edit Company Accounting Details** task for enhanced financial controls, you cannot change bank account transfer records that were processed in a closed period.
6. Change or update the transfer details that you recorded earlier.

## Result

When you submit the bank account transfer or bank account transfer for settlement, Workday routes your changes to the next business process participant for review and approval.

## Related Information

### Tasks

[Complete Details of a Bank Account Transfer](#) on page 1973

[Create Bank Account Transfers for Settlement](#) on page 1979

[Assign Company Accounting Details](#) on page 64

## Cancel Bank Account Transfers

### Prerequisites

Security: These domains in the Banking and Settlement functional area:

- Process: *Bank Account Transfer*
- Process: *Bank Account Transfer for Settlement - Reporting*

### Context

Cancel an existing bank account transfer or bank account transfer for settlement.

### Steps

1. Run the **Find Bank Account Transfers** report.
2. Select the **Company** associated with the bank accounts for which you previously recorded transfer details.
3. Complete these fields to narrow down the list of transfers:

Option	Description
<b>Bank Account</b>	Select the <b>Bank Account</b> for which you previously recorded transfer details.
<b>Transfer Date On or After</b>	Select the date on which you recorded the transfer details; the report returns only transfers recorded on or after this date.
<b>Transfer Date On or Before</b>	Select the date on which you recorded the transfer details; the report returns only transfers recorded on or before this date.
<b>Intercompany Transfer</b>	Select to retrieve only intercompany transfers in the report.

4. Click **OK** to run the report.
5. In the **Bank Account Transfer** column, select **Bank Account Transfer > Cancel** as a related action on the transfers you want to cancel.  
You can only cancel bank account transfers that are unreconciled, and bank account transfers for settlement that are unsettled.
6. Click **OK** to cancel the transfer details you recorded earlier.

### Result

The transfer record is deleted from Workday.

### Tasks

[Record Bank Account Transfers](#) on page 1971

[Create Bank Account Transfers for Settlement](#) on page 1979

## Bank Account Transfers for Settlement

---

### Steps: Perform Bank Account Transfers for Settlement

#### Prerequisites

- Set up bank integrations for settlement processing for each combination of bank and payment type.
- Configure these business processes to define review and approval workflow for bank account transfers for settlement:
  - *Bank Account Transfer for Settlement Event* (main process): Controls review and approval routing for bank account transfers for settlement within the same company.
  - *Bank Account Transfer for Settlement Intercompany Event* (subprocess): Controls review and approval routing when a bank account transfer for settlement spans companies. The company receiving the transfer can review and approve the transaction.

#### Context

You can initiate bank account transfers for settlement directly from Workday. Once the bank account transfer payments settle, Workday transfers the funds between accounts.

#### Steps

1. [Create Bank Account Transfers for Settlement](#) on page 1979.
2. (Optional) Set up and use templates to record multiple bank account transfers for settlement with similar attributes.
  - a) [Define Bank Account Transfer for Settlement Templates](#) on page 1977.
  - b) Access the **Create Bank Account Transfer for Settlement from Template** task.  
Select the template to use for creating the bank account transfer for settlement. You can specify the amount to transfer, and modify the defaulted transfer details as necessary. Once completed, you can route the transfer for approvals using the *Bank Account Transfer for Settlement Event* business process.  
Security: Process: *Bank Account Transfer for Settlement – Create/Edit* domain in the Banking and Settlement functional area.
3. (Optional) [Complete Details of a Bank Account Transfer](#) on page 1973.  
Complete a bank account transfer for settlement that you saved for later.

#### Result

When the transactions transfer between the bank accounts, Workday converts:

- The transaction currency to the bank account currency if they differ.  
You can override the rate type and rate for this conversion.
- The bank account currency to the company currency if they differ.

Workday automatically converts the transaction amount into the ledger company currency using the conversion rate between the 2 currencies for the default rate type.

## Next Steps

Use the **Find Bank Account Transfers** report to view and update the transfer information. As a related action on a bank account transfer for settlement, you can:

- Change, copy, or cancel the transfer.
- View the accounting details.

## Related Information

## Define Bank Account Transfer for Settlement Templates

### Prerequisites

- Configure the *Bank Account Transfer for Settlement Template Event* business process and security policy in the Banking and Settlement functional area.
- Security: *Set Up: Bank Account Transfer for Settlement - Template* domain in the Banking and Settlement functional area.

### Context

Define a template to use for creating recurring bank account transfers for settlement. Workday automatically populates the values from a predefined template onto new bank account transfers for settlement created using the template.

### Steps

1. Access the **Create Bank Account Transfer for Settlement Template** task.
2. As you complete the task, consider:

Option	Description
<b>Transaction Currency</b>	Select the currency of the funds transferred from the source account to the receiving account.  <i>Both</i> the source and receiving accounts must accept the selected transaction currency. In addition, either 1 or both of the <b>Account Currency</b> values for the sending and receiving accounts must match this transaction currency.
<b>Initiating Company</b> <b>Initiating Account</b>	Select a bank account and company to use for initiating a transfer request to withdraw funds. For direct debits, this account is the same as the beneficiary bank account that receives the funds.  Workday dynamically updates the <b>From Account</b> and <b>To Account</b> fields based on the payment type and initiating account and company.  To draw down funds from a bank account, edit the initiating bank account to enable integration for the <b>Direct Debit</b> payment type and the <b>Bank</b>

Option	Description
	<b>Account Transfer for Settlement</b> payment category.
<b>Eliminate Foreign Exchange Gain or Loss</b>	<p>Select to exclude realized foreign exchange gain or loss from bank account transfers.</p> <p>Example: If you override the currency conversion rate with a bank rate, the difference between the 2 values creates a realized exchange gain or loss journal entry.</p> <p>With this option, Workday eliminates this additional journal entry line and balances the ledger amounts using the entry entered:</p> <ul style="list-style-type: none"> <li>• In the ledger currency, if there are 2 different currencies.</li> <li>• In the transaction currency, if there are 3 different currencies.</li> </ul> <p>For an intercompany bank account transfer between 2 companies sharing the same base currency, Workday balances the intercompany receivable and payable.</p>
<b>Currency Rate Type</b>	<p>If the <b>From Currency</b> or <b>To Currency</b> differs from the transaction <b>Currency</b>, Workday uses the <i>default</i> currency rate type to convert the funds. You can override this rate type.</p> <p>To set the default rate type, use the <b>Maintain Currency Rate Types</b> task.</p>
<b>Optional Balancing Worktags</b>	<p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul>

## Result

Workday routes the completed bank account transfer for settlement template to the next business process participant for review and approval.

## Next Steps

You can use the **Find Bank Account Transfer for Settlement Templates** report to search for and review your bank account transfer for settlement templates. From the related actions menu of a template, you can:

- Copy your bank account transfer for settlement template and make adjustments to quickly and efficiently create additional templates.
- Make changes to a bank account transfer for settlement template that you've submitted for approval or that's already approved.

- Edit a bank account transfer for settlement template that's in *Draft* status.
- Create bank account transfers for settlement from the template.
- Inactivate the template when it's no longer relevant. You can also reactivate it if necessary.

## Create Bank Account Transfers for Settlement

### Prerequisites

- Select **Bank Account Transfer for Settlement** as a primary account usage for the source account from which you're transferring payments.
- For bank account transfers between 2 different companies, set up an intercompany profile using the **Edit Company Intercompany Profile** task.
- Configure the *Bank Account Transfer for Settlement Event* business process and security policy in the Banking and Settlement functional area.
- Security: *Process: Bank Account Transfer for Settlement – Create/Edit* domain in the Banking and Settlement functional area.

### Context

Create bank account transfer payments for settlement in Workday. You can transfer and settle these payment types:

- Direct debit
- Direct deposit
- EFT
- Wire

### Steps

1. Access the **Create Bank Account Transfer for Settlement** task.
2. As you complete the task, consider:

Option	Description
<b>Date</b>	Record the date of the transfer.
<b>Currency</b>	Select the currency of the funds transferred from the source account to the receiving account.  <i>Both</i> the source and receiving accounts must accept the selected transaction currency. In addition, either 1 or both of the <b>Account Currency</b> values for the sending and receiving accounts must match this transaction currency.
<b>Initiating Company</b> <b>Initiating Account</b>	Select a bank account and company to use for initiating a transfer request to withdraw funds. For direct debits, this account is the same as the beneficiary bank account that receives the funds.  Workday dynamically updates the <b>From Account</b> and <b>To Account</b> fields based on the payment type and initiating account and company.  To draw down funds from a bank account, edit the initiating bank account to enable integration for the <b>Direct Debit</b> payment type and the <b>Bank Account Transfer for Settlement</b> payment category.

Option	Description
<b>Phonetic Payee Name</b>	<p>Records the correct pronunciation of the <b>Payee Name</b>.</p> <p>Displays when:</p> <ul style="list-style-type: none"> <li>• You enable phonetic names on the <b>Edit Tenant Setup - Global</b> task.</li> <li>• Users select the relevant locale and display language in their preferences.</li> </ul>
<b>Eliminate Foreign Exchange Gain or Loss</b>	<p>Select to exclude realized foreign exchange gain or loss from bank account transfers.</p> <p>Example: If you override the currency conversion rate with a bank rate, the difference between the 2 values creates a realized exchange gain or loss journal entry.</p> <p>With this option, Workday eliminates this additional journal entry line and balances the ledger amounts using the entry entered:</p> <ul style="list-style-type: none"> <li>• In the ledger currency, if there are 2 different currencies.</li> <li>• In the transaction currency, if there are 3 different currencies.</li> </ul> <p>For an intercompany bank account transfer between 2 companies sharing the same base currency, Workday balances the intercompany receivable and payable.</p>
<b>Currency Rate Type</b>	<p>If the <b>From Currency</b> or <b>To Currency</b> differs from the transaction <b>Currency</b>, Workday uses the default currency rate type to convert the funds. You can override this rate type.</p> <p>To set the default rate type, use the <b>Maintain Currency Rate Types</b> task.</p>
<b>Currency Conversion Rate</b>	<p>If the <b>From Currency</b> or <b>To Currency</b> differs from the transaction <b>Currency</b>, Workday uses the conversion rate type between the 2 currencies to convert the funds. You can override this rate.</p> <p>To define conversion rates for a rate type, use the <b>Maintain Currency Conversion Rates</b> task.</p>
<b>Optional Balancing Worktags</b>	<p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> <li>• Generate due to and due from entries to balance transactions.</li> </ul>

## Result

Workday routes the completed bank transfer payment record to the next business process participant for review and approval.

## Transfer Details

- If the **From Account** company is *the same as the To Account* company, Workday treats the transfer as an intracompany transfer and applies the logic defined in the *Bank Account Transfer for Settlement Event* business process definition.
- If the **From Account** company is *different from the To Account* company, Workday treats the transfer as an intercompany transfer and applies the logic defined in the *Bank Account Transfer for Settlement Intercompany Event* business process definition.

## Next Steps

Add the approved bank account transfer payments to a new or existing manual settlement run. You can select inbound direct debit payments and outbound payments in the same settlement run. For scheduled settlement runs, Workday includes all inbound and outbound pending payments when you select the **All Available Bank Account Transfers for Settlement** filter.

When the bank transfer payments settle, Workday moves the funds between the accounts and generates the associated accounting entries.

## Miscellaneous Payment Requests

### Setup Considerations: Miscellaneous Payment Requests

You can use this topic to help make decisions when planning your configuration and use of miscellaneous payment requests. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Miscellaneous payment requests are operational transactions that enable you to request payments with less up-front information compared to other payment categories, such as ad hoc payments.

### Business Benefits

Miscellaneous payment requests enable you to:

- Create single-use miscellaneous payees that automatically deactivate after settlement, streamlining supplier and payee management.
- Request payments without information such as company bank account details and payment date, improving efficiency.
- Resettle miscellaneous payments with a *Canceled* or *Returned* status without having to create a new settlement run, saving you time and effort.
- Set up self-service users who can create and manage the payees and payment requests they set up, decentralizing these tasks.

## Use Cases

You can set up self-service users who can create and manage miscellaneous payment requests with:

- Minimal knowledge of payments.
- No direct authority to issue payments.

## Questions to Consider

Questions	Considerations
What accounting options can you use for miscellaneous payment requests?	<p>You can select between accrual basis and cash basis accounting.</p> <p>Accrual basis accounting includes liability accounting and payment accounting. It also enables you to configure budget check for miscellaneous payment requests. Cash basis accounting includes payment accounting only.</p> <p><b>Note:</b> You can only change the selected accounting option if all miscellaneous payment requests are either in <i>Canceled</i> or <i>Denied</i> status.</p>
How are miscellaneous payment requests settled?	Miscellaneous payment requests are unpaid open items, so Workday creates and settles the payment. The payment date is the settlement date.
How does Workday process miscellaneous payment requests for the same payee?	Workday only supports individual miscellaneous payments to the same payee during settlement. Example: When you create 2 miscellaneous payment requests with a payment type of check for the same payee, Workday generates 2 distinct check payments rather than consolidating them into a single payment.

## Recommendations

Use custom validations to ensure accuracy and consistency when you configure miscellaneous fields for miscellaneous payment requests.

## Requirements

Define bank routing rules so that Workday automatically assigns a company bank account when you submit a request.

## Limitations

You can set up 1099 MISC reporting, but you can't enter transaction tax information for your miscellaneous payment requests.

## Tenant Setup

Configure ID definitions and sequence generators for miscellaneous payees and miscellaneous payment requests.

Select either accrual basis or cash basis accounting for miscellaneous payment requests.

## Security

Set up all domains for the Miscellaneous Payments functional area. You can use the **Domain Security Policies for Functional Area** report to view these security domains.

You can also configure the domains described in this table.

Domains	Considerations
These domains in the System functional area: <ul style="list-style-type: none"> <li>• <i>Business Process Administration</i></li> <li>• <i>Manage: Business Process Definitions</i></li> </ul>	Enables you to create default definitions for these business processes: <ul style="list-style-type: none"> <li>• <i>Express Settlement Run Event</i></li> <li>• <i>Miscellaneous Payment Request Event</i></li> </ul>
<i>Set Up: Enable Worktags</i> in these functional areas: <ul style="list-style-type: none"> <li>• Common Financial Management</li> <li>• Worktags</li> </ul>	Enables you to configure <i>Miscellaneous Payment Request</i> worktags.

## Business Processes

Business Processes	Considerations
<i>Miscellaneous Payment Request Event</i>	Configure to review and approve miscellaneous payment requests. When you select accrual basis accounting, you can configure the <i>Check Budget</i> allowed action on the business process.
<i>Express Settlement Run Event</i>	Configure to route miscellaneous payment requests through an express settlement run.

## Reporting

When you set up accrual basis accounting, you can use these reports to view the accounting results of miscellaneous payment requests:

- **Payables to Supplier Balances Reconciliation**
- **Payables to Supplier Balances Reconciliation Exception Summary**

## Integrations

Web Services	Considerations
<i>Get Miscellaneous Payment Requests</i> <i>Submit Miscellaneous Payment Request</i>	Mass retrieve or upload miscellaneous payment requests.
<i>Get Miscellaneous Payees</i> <i>Put Miscellaneous Payee</i>	Mass retrieve or upload miscellaneous payees.
<i>Get Miscellaneous Payee Categories</i> <i>Get Miscellaneous Payment Request Category</i>	Mass retrieve or upload categories for payees or payment requests.

Web Services	Considerations
<i>Put Miscellaneous Payee Category</i>	
<i>Put Miscellaneous Payment Request Category</i>	
<i>Cancel Miscellaneous Payment</i>	Mass cancel miscellaneous payments from Workday or non-Workday systems.

### Connections and Touchpoints

Features	Considerations
1099 MISC Reporting	You can issue 1099 MISC reports to miscellaneous payees and file with the IRS.
Awards Cost Processing	<p>You can view accounting for these journals on a miscellaneous payment request:</p> <ul style="list-style-type: none"> <li>• Award Revenue Recognition</li> <li>• Facilities and Administration</li> </ul> <p>Workday only generates award costs processing for a miscellaneous payment request when you have a grant worktag on an active award contract line.</p>
Bank Reconciliation	<p>You can use these methods to reconcile bank statements against miscellaneous payments:</p> <ul style="list-style-type: none"> <li>• Quick entry and reconciliation.</li> <li>• Manual bank statement entry and manual or automatic reconciliation.</li> <li>• Bank statement upload and manual or automatic reconciliation.</li> </ul>
Escheatment	You can escheat manual or check payments that are uncashed or unclaimed, except intercompany items and inbound customer payments.
Express Settlement Runs	You can route individual miscellaneous payment requests through an express settlement run so that Workday creates a settlement run for them automatically.
Payments on Behalf of Other Companies	You can settle miscellaneous payment requests on behalf of another company.
Payment Acknowledgment	You can load payment acknowledgment files from electronic-payment recipients into Workday. Workday matches payment acknowledgments with corresponding payments and sets the applicable payment status.
Payment Returns	You can record miscellaneous payments that the bank has rejected or returned. You can manually record individual payments or create payment return statements to record multiple electronic payments.

Features	Considerations
Record Stopped Payments	<p>You can record stopped payments and supporting documents for stop payment orders before you issue replacement payments.</p> <p>Example: You want to log a check with an incorrect payment amount that you've requested the bank not to cash.</p>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Tasks

[Define Bank Routing Rules](#) on page 2129

[Steps: Set Up Custom Validations](#) on page 52

### Reference

[Reference: Edit Tenant Setup - Financials](#)

## Steps: Set Up Miscellaneous Payment Requests

### Prerequisites

Review setup considerations for miscellaneous payment requests.

### Context

Self-service users can create miscellaneous payment requests when they've minimal knowledge of the company bank account information, or no direct authority to issue payments. You can preconfigure bank routing rules to determine the originating bank account for making the payments, enabling users to efficiently process and settle these one-time payments.

Example: An insurance claims agent needs to pay a client for a claim. The agent creates a miscellaneous payment request with the payee and payment details, and then submits it for approval. Once approved, the agent can settle the payment automatically through an express settlement run.

### Steps

1. [Edit Domain Security Policies](#).

Configure the security policies for all domains in the Miscellaneous Payments functional area.

2. Access the **Create Business Process Definition (Default Definition)** task.

Create the default definition for the *Miscellaneous Payment Request Event* business process. You can add business process steps for:

- Approvers in your organization to review and approve submitted miscellaneous payment requests.
- Budget checks on miscellaneous payment requests to ensure the availability of funds prior to settlement. You can apply budget checks when you use the accrual basis accounting method to process payments.

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

3. Configure business document sequence IDs for miscellaneous payees and payment requests, and select a miscellaneous payment request accounting option.  
You can use either the accrual basis or cash basis accounting method for the miscellaneous payment. See [Reference: Edit Tenant Setup - Financials](#).
4. Access the **Maintain Miscellaneous Payee Categories** task.  
Create categories to identify miscellaneous payees for tracking and reporting purposes.  
Security: *Set Up: Miscellaneous Payee Categories* domain in the Miscellaneous Payments functional area.
5. Access the **Maintain Miscellaneous Payment Request Categories** task.  
Create categories to identify miscellaneous payment requests for tracking and reporting purposes.  
Security: *Set Up: Miscellaneous Payment Request Categories* domain in the Miscellaneous Payments functional area.
6. [Define Bank Accounts](#) on page 1925.  
Select *Miscellaneous Payment* from the **Primary Account Usage** prompt.
7. [Define Bank Routing Rules](#) on page 2129.  
Configure bank routing rules for the *Miscellaneous Payment* payment category.
8. (Optional) [Set Up Account Posting Rules](#) on page 84.  
Configure these account posting rule dimensions on the Payables and Spend posting rules:
  - *Miscellaneous Payee Category*
  - *Miscellaneous Payment Request Category*
 You can only configure these account posting rule dimensions on the Spend posting rule when you select accrual basis accounting as your accounting option.
9. (Optional) Access the **Maintain Worktag Usage** report.  
Configure *Miscellaneous Payment Request* worktags.  
Security: *Set Up: Enable Worktags* domain in the Common Financial Management and Worktags functional areas.
- 10.(Optional) Configure intelligent prompt recommendations.  
When you create miscellaneous payment request lines, you can select intelligently recommended values on the **Spend Category** prompt.  
See [Steps: Set Up Intelligent Prompt Recommendations for Cash Management Transactions](#).
- 11.(Optional) [Edit Domain Security Policies](#).  
Grant user access to these related actions on miscellaneous payment requests:
  - **Add Attachment**
  - **Add/Change Attachment**
 Add security groups to these domains in the Miscellaneous Payments functional area:
  - *Process: Miscellaneous Payment Request – Add Attachment*
  - *Process: Miscellaneous Payment Request – Add/Change Attachment*
 Members of these security groups can use the related action to add or remove attachments for miscellaneous payment requests in any status without additional actions or business process approvals.

## 12. Set up a settlement run.

You can use either:

- Express settlement to quickly settle your individual miscellaneous payment requests.  
See [Steps: Set Up Express Settlement](#) on page 1987.
- A manual or scheduled automatic settlement run along with other pending payments.  
See [Steps: Set Up Settlement](#) on page 2120.

### Next Steps

Create miscellaneous payment requests.

### Related Information

#### Tasks

[Create Miscellaneous Payment Requests](#) on page 1988

## Steps: Set Up Express Settlement

### Prerequisites

Set up miscellaneous payment requests.

### Context

You can route individual miscellaneous payment requests through an express settlement run so that Workday creates a settlement run for them automatically.

Workday creates the settlement run when the *Miscellaneous Payment Request Event* business process is complete. When you process the settlement run, Workday launches the *Express Settlement Run Event* business process and settles the payment.

### Steps

#### 1. [Edit Domain Security Policies](#).

Configure the security policy for the *Request Express Pay for Miscellaneous Payment Requests* domain in the Miscellaneous Payments functional area.

#### 2. Access the **Create Business Process Definition (Default Definition)** task.

Create the default definition for the *Express Settlement Run Event* business process.

If you're delivering payment files to external parties such as an outsourced check printing service, we recommend that you configure the integration step on the *Payment Release Event* or *Outsourced Payment Release Event* business process.

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

### Next Steps

Create a miscellaneous payment request and route it through an express settlement run. You can view the **Settlement Run ID** and **Payment Status** on the [View Miscellaneous Payment Request](#) report.

### Related Information

#### Reference

[Reference: Settlement Business Processes](#) on page 2150

## Create Miscellaneous Payment Requests

### Prerequisites

- Set up a miscellaneous payment request accounting option.
- Configure the *Miscellaneous Payment Request Event* business process and security policy in the Miscellaneous Payments functional area.

### Context

You can create a miscellaneous payment request to make one-time payments to miscellaneous payees. To settle these payments, you can select express settlement directly from the payment request, or use a manual or scheduled settlement run. Workday determines the payment date at the time of settlement, enabling you to align the due date with the date the payment actually settles to meet your business requirements.

### Steps

- Access the **Create Miscellaneous Payment Request** task.
- As you complete the **Primary Information** section, consider:

Option	Description
<b>Payee</b>	When you create a new miscellaneous payee, you can designate it as a one-time payee that inactivates after Workday settles the payment.
<b>Handling Code</b>	Select how you want to handle the miscellaneous payment request. You can use this attribute to: <ul style="list-style-type: none"> <li>Group miscellaneous payments in settlement runs.</li> <li>Organize check and advice payments in batch files for printing.</li> <li>Report on miscellaneous payments in custom reports.</li> </ul>

- As you complete the **Payment Details** section, consider:

Option	Description
<b>Control Total Amount</b>	Enter a control total amount to validate against the calculated <b>Total Payment Amount</b> before you can save or submit the payment request.
<b>Request Express Pay</b>	Select to route the payment request through an express settlement run so that Workday creates a settlement run for it automatically. Workday creates the settlement run when the <i>Miscellaneous Payment Request Event</i> business process is complete.

- As you complete the **Lines** tab, enter payment details:

Option	Description
<b>Spend Category</b>	The spend category links items to corresponding account posting rules and provides additional details for reporting. If you select an item, Workday automatically populates the one assigned to the item, which you can't modify.

Option	Description
<b>Extended Amount</b>	<b>Quantity</b> multiplied by the <b>Unit Cost</b> for a selected item. If you change the calculated value, Workday recalculates the unit cost.

5. (Optional) In the **Miscellaneous Fields** tab, enter additional information you need to capture on the payment request.

Example: An insurance claims specialist can use these fields to enter the accident date and policy number of the client for a claim.

### Result

- Workday routes the *Miscellaneous Payment Request Event* business process for reviews and approvals.
- If you selected express settlement, Workday also uses the *Express Settlement Run Event* business process to route the document for settlement approvals.
- Workday automatically creates operational journals in the specified currency for approved payments.

### Next Steps

To view information on miscellaneous payment requests, use these reports:

- Find Miscellaneous Payment Requests:** Find and manage the payment requests in your organization. You can also view the accounting details for the settled miscellaneous payments.
- Find Payments:** To search for all miscellaneous payments applicable to your organization, filter by the *Miscellaneous Payment* payment category.
- My Miscellaneous Payment Requests:** Find and manage only the payment requests you create. You can also view the accounting details for the settled miscellaneous payments.

[Steps: Use Settlement](#) on page 2155

## Bank Statement Mappings

---

### Steps: Define Bank Statement Worktag Mappings

#### Context

You can create worktag mappings to associate specific values that identify transactions on bank statement lines with worktags. When you enter or upload new bank statements, Workday assigns the worktags to the bank statement lines to use for:

- Automatic bank statement and first-notice item reconciliations.
- Cash position reports.
- Custom reports.

#### Steps

1. [Configure Worktags for Transactions](#).

Configure the available worktag types for the **Bank Statement and Worktag Mapping** transaction type.

2. [Create Bank Statement Worktag Mappings](#) on page 1990.

Create bank statement line worktag mappings for all of your accounts at the tenant level.

**3. (Optional) [Override Bank Statement Worktag Mappings](#) on page 1991.**

Override your tenant level definitions with new bank statement line worktag mappings at the account level.

**4. (Optional) Run a worktag mapping job to apply new or modified worktags on bank statement lines.**

For historical bank statements that are already in Workday, you can use:

- The **Run Bank Statement Worktag Mapping** task to update the worktags on an ad hoc basis.
- The **Schedule Bank Statement Worktag Mapping** task to apply the latest worktags on bank statement lines at regular intervals.

Security: *Set Up: Map Worktags* domain in the Common Financial Management and Worktags functional areas.

## Related Information

### Concepts

[Concept: Bank Account Reconciliation](#) on page 2015

[Concept: Worktags](#)

### Tasks

[Steps: Define Cash Activity Categories](#) on page 1992

## Create Bank Statement Worktag Mappings

### Prerequisites

Security: *Set Up: Map Worktags* domain in the Common Financial Management and Worktags functional areas.

### Context

You can create worktag mappings based on type codes that identify transactions on bank statements. The bank statement worktag mappings are applied to all of your bank accounts. Workday uses the worktag mappings to process cash position reports and automatic bank statement reconciliations by:

- Grouping cash activities by worktag on cash position reports.
- Matching bank statement lines with your operational transactions based on worktags specified in reconciliation condition rules.
- Assigning worktags to new ad hoc bank transactions created for first-notice items.

You can create a set of worktag mappings for each of these bank statement file formats:

- BAI2
- BTRS
- ISO 20022
- MT940/942
- Other

### Steps

**1. Access the **View Bank Statement Worktag Mapping** report.**

**2. (Optional) Click **Edit Default Worktags** to select default worktags to use when there are no matches for the specified mappings.**

You can select multiple worktags, but only 1 of each category.

**3. Select the bank statement file format for which to define your worktag mappings.**

You create a unique set of worktag mappings for each bank statement file format that you use.

4. Click **Maintain Bank Statement Worktag Mapping** to map the type codes for the selected bank statement file format to worktags.
- You can assign the same worktag to more than 1 type code.

### Result

For each bank statement that you manually enter or upload, Workday assigns the worktags to bank statement lines based on the worktag mappings.

### Next Steps

You can override the bank statement worktag mappings using specific attributes on bank statement lines. This enables you to apply the worktag mappings at a more granular level. You can apply the same override mappings to multiple bank accounts of your choice.

#### Related Information

##### Tasks

- [Create Bank Reconciliation and First Notice Item Condition Rules](#) on page 2010
- [Steps: Define Cash Activity Categories](#) on page 1992

## Override Bank Statement Worktag Mappings

### Prerequisites

Security: Set Up: Map Worktags domain in the Common Financial Management and Worktags functional areas.

### Context

You can override your bank statement worktag mappings for specific bank accounts. You create condition rules to map your worktags using attributes on bank statement lines.

### Steps

1. Access the **Create Bank Statement Worktag Mapping Override** task.
2. Enter a unique name that enables you to identify the bank statement worktag mapping override rule set among others in a bank account prompt.
3. Select **Create Condition Rule** from the **Condition Rule** prompt to create your condition rules.  
You can configure the condition rules using fields on bank statement lines in addition to the type codes.  
You specify the bank statement line fields as the source data for the rule condition.
4. Assign worktags to the condition rules.

### Result

You can associate the bank statement worktag mapping override rule set to a bank account. When you enter or upload bank statements, Workday overrides the tenant-level mappings for all bank accounts using these condition rules.

When resolving the rules, Workday applies the bank account-level mappings first, and then applies the tenant-level and default worktag mappings on the remaining bank statement lines.

### Example

You create these bank statement worktag mappings for all of your bank accounts at the tenant level:

Type Code	Worktag
116	<i>Revenue Category: Other Income</i>
276	<i>Spend Category: Supplies</i>

At the bank account level, you create condition rules to assign new worktags to the type codes based on specified values on the **Addenda** bank statement field. These new worktag mappings override the tenant-level default mappings:

Type Code	Addenda	Worktag
116	Contains CA State	<i>Revenue Category: Endowment Income</i>
276	Contains Office Depot	<i>Spend Category: Office Supplies</i>

When you enter or upload a bank statement for this bank account, Workday assigns the worktag overrides to bank statement lines with the matching type codes and addenda values. For all other bank accounts, Workday applies the worktags you defined at the tenant level to the type codes.

## Next Steps

- Edit a bank account to link your new bank statement worktag mapping override rule set to the account.
- You can use the **Run Bank Statement Worktag Mapping** task or the **Schedule Bank Statement Worktag Mapping** task to automatically assign worktags to bank statement lines after you modify your mappings. These jobs update bank statements already in Workday.

## Related Information

### Tasks

[Create Business Process Condition Rules](#)

[Define Bank Accounts](#) on page 1925

## Steps: Define Cash Activity Categories

### Prerequisites

Set up currencies and currency conversion rates for multicurrency bank accounts.

### Context

Cash activity worktags group your cash activities into logical categories for more granular level reporting on cash position and cash forecast reports. If you don't use the worktags:

- The cash position reports display high-level summaries of the cash activities.
- The **Cash Forecast to Actuals in Reporting Currency** report doesn't display any actuals.

### Steps

1. Access the **Maintain Cash Activity Categories** task.

Bank statement lines contain type codes that identify your cash activities. You can define cash activity worktags to map to these type codes for categorizing your revenue and payment transactions.

Use the **Find Cash Activity Categories** report to view all of your cash activity categories.

Security: These domains in the Cash Management functional area:

- *Process: Cash Forecast Reporting*
- *Set Up: Cash Forecasting*

**2. Create Bank Statement Worktag Mappings** on page 1990.

Map your cash activity worktags to bank statement type codes.

## Result

Workday uses the worktags to group cash inflow and outflow amounts on cash position reports and the cash forecast to actuals report.

## Steps: Define Normalized Bank Balances

### Context

Workday enables you to create normalized groupings of opening, closing, float, and other balances across all of your bank statement file formats. You can standardize the bank balances by type code to simplify cash position and cash forecast reporting.

### Steps

**1. Access the Maintain Normalized Balances task.**

Workday automatically populates normalized balance names and assigns them to normalized balance types. You can modify the default names or create new ones for reporting purposes.

Workday provides these normalized balances and their corresponding types:

- *Opening Ledger: Opening*
- *Opening Available: Opening*
- *Closing Ledger: Closing*
- *Closing Available: Closing*
- *Float: Float*

You can deactivate any normalized balances that you don't use, and that aren't mapped in a normalized balance set.

[Security: Set Up: Cash Forecasting](#) domain in the Cash Management functional area.

**2. Map Bank Statement Balance Types to Normalized Balances** on page 1994.

## Result

When you upload bank statements, Workday derives the normalized balances based on the mapping set.

### Next Steps

To include the normalized balances in cash position and cash forecast reports, either:

- Add the **Normalized Balance** report field available on the *Bank Statement Balance (All)* business object to a custom cash position report.
- Select normalized balances when defining a cash forecast outline. Workday displays the normalized balances as actuals in the **Cash Forecast to Actuals in Reporting Currency** report.

## Related Information

### Tasks

[Steps: Manage Cash Positioning](#) on page 2060

[Create a Cash Forecast Outline](#) on page 2080

[Steps: Set Up Cash Forecasting with Worksheets](#) on page 2079

## Map Bank Statement Balance Types to Normalized Balances

### Prerequisites

Security: *Set Up: Cash Forecasting* domain in the Cash Management functional area.

### Context

You can map bank statement balance type codes to normalized balances for each bank statement format that you use. Workday summarizes the balance type amounts using the normalized balances.

### Steps

1. Access the **Maintain Normalized Balance Mapping Set** task.
2. Select a bank statement file format.  
Workday automatically populates the balance type code related to each normalized balance.
3. (Optional) Select a different balance type code to update an existing normalized balance mapping.

### Result

Workday groups the bank statement balance type codes by the mappings defined in the normalized balance set. You can display the normalized balances as actuals in cash position and cash forecast reports.

### Example

Workday provides these mappings for each bank statement format in the mapping set, which you can modify:

Normalized Balance	BAI2	BTRS	ISO 20022	MT940/942
Opening Ledger	010 Opening Ledger	010 Opening Ledger - BTRS	OPBD Opening Ledger Balance	60F Final Opening Ledger Balance
Opening Available	040 Opening Available	040 Opening Available Next Business Day - BTRS	OPAV Opening Available Current Day	62M Current Ledger Balance
Closing Ledger	015 Closing Ledger	015 Closing Ledger - BTRS	CLBD Closing Ledger Balance	62F Final Closing Ledger Balance
Closing Available	045 Closing Available	045 Closing Available - BTRS	CLAV Closing Available (Collected)	64 Closing Available Balance
Float	072 1-Day Float	072 1 Day Available - BTRS	FWAV Opening Available Next Business Day	65 Forward Available Balance

You can also select **Other** to define mappings for a nonstandard bank statement file format.

### Reference

[Reference: Cash Forecast Reports](#) on page 2090

[Reference: Cash Position Reports](#) on page 2066

## Bank Statement Parsing

---

### Parse Bank Statements

#### Prerequisites

Security: These domains in the Banking and Settlement functional area:

- *Process: Bank Statement Parsing*
- *Set Up: Bank Statement Parsing*

#### Context

You can parse data from bank statement line fields to streamline automatic bank statement reconciliations and enhance reporting. Bank statement line fields such as the addenda often contain key values in an unstructured format. Create a parsing rule set to identify, extract, and copy these values to the same or other statement line fields to use in reconciliation condition rules and highlight in reports.

#### Steps

1. Access the **Create Parsing Rule Set** task.
2. As you complete the task, consider:

Option	Description
<b>Order</b>	Place the most specific rules before broader rules that require less precision for the parsing.  You can create up to 50 rules for a parsing rule set. If you've more than 50 parsing rules, consider creating multiple rule sets that are particular to the different bank accounts.
<b>Source Field</b> <b>Target Field</b>	Workday extracts and copies the string of data from the source field to the target field, overriding any existing data.  You can select a field as both the source and target to change the field value to the parsed data string. Example: Select <i>Addenda</i> as the source and target field to replace its string of concatenated values with only the parsed supplier name.
<b>Parsing Type</b>	To determine how to parse content from the source field, select: <ul style="list-style-type: none"> <li>• <b>Parse by Delimiter</b> to extract data between starting and ending delimiters. You can enter either a text string or a character, such as an asterisk (*) or pipe ( ), as a delimiter. Select the <b>Use Space as Starting Delimiter</b> and <b>Use Space as Ending Delimiter</b> check boxes to</li> </ul>

Option	Description
	<p>use spaces as starting and ending delimiters. Example: ValueA space ValueB.</p> <p>If there's another delimiter of the same type in the field, specify its occurrence.</p> <p>Example: To parse a store number that displays between the second and third pipe symbol, enter   as the <b>Starting Delimiter</b> and 2 as the <b>Starting Delimiter Occurrence</b>. Then, enter   as the <b>Ending Delimiter</b> and 3 as the <b>Ending Delimiter Occurrence</b>.</p> <ul style="list-style-type: none"> <li>• <b>Parse by Exact Match</b> to extract a specific phrase or text string.</li> </ul> <p>Example: You enter <i>Dell</i> for the supplier name as <b>Matching Text</b>. Workday parses the source field content <i>17-inch Dell XPS laptop computer</i> and matches the supplier name you entered. Workday then copies <i>Dell</i> to the target field.</p> <ul style="list-style-type: none"> <li>• <b>Parse by Position</b> to extract data from a start position to an end position.</li> </ul> <p>Example: To extract the first 6 digits of a payment reference number, enter 1 as the <b>Start Position</b> and 6 as the <b>End Position</b>.</p>

3. (Optional) Configure parsing rule conditions to filter the particular bank statement lines, such as by type code or addenda value, to apply the parsing rules. You can also leverage the condition rule framework to define advanced filter criteria.
4. (Optional) To test the parsing rule before running bank statement parsing, click **Test**. Copy the complete source field value from a bank statement line to the **Parsing String**.  
This test returns the parsing results based on each rule defined in the set.
5. Assign the parsing rule set to a company bank account.

## Result

When you import a bank statement, Workday automatically parses the information from and to the bank statement line fields based on the parsing rule set associated with the bank account. This process occurs before automatic bank statement reconciliations and reporting.

Note that if you create a parsing rule with a starting and ending delimiter and then import a bank statement with only 1 of the delimiters, Workday doesn't parse the bank statement. To return partial matches based on only 1 of the delimiters, create an additional rule with either a starting or ending delimiter.

To manually run a parsing job, select **Run Parsing** from the related actions menu of an unreconciled bank statement.

## Example

You define a parsing rule that extracts the payment reference number from the **Addenda** field and adds it to the **Reference Number** field on the bank statement lines. This enables you to identify payments by their reference number on bank reconciliation reports.

## Next Steps

- To clear any incorrectly parsed data, select **Clear Parsing** from the related actions menu of a bank statement. Workday restores the original field values on all affected bank statement lines. You can edit your parsing rule, and then manually rerun the parsing job on the bank statement.
- To clear parsing for values that you used for reconciliation, you must unreconcile the bank statement lines first.
- Configure condition rules to reconcile bank statement lines or first-notice items based on the new target field values.
- To report on your payments by a parsed value, build custom reports using the target report field containing the parsed data.

## Related Information

[Create Rules for First-Notice Items](#) on page 2014

---

## Bank Account Reconciliation Setup

### Steps: Set Up Ad Hoc Bank Transactions

#### Context

During reconciliation, you often need to add ad hoc bank transactions to your account records for miscellaneous credits or debits that you find on bank statements. Examples: Wire transfer, online banking, or other bank fees. You can also create an ad hoc transaction to record an amount difference between a bank statement line and a matched operational transaction.

You can define templates to use when creating multiple ad hoc bank transactions with similar attributes. Workday uses the templates to create ad hoc transactions for the amount difference in matched lines and for first-notice items.

#### Steps

1. (Optional) Configure intelligent prompt recommendations.

When you create ad hoc bank transactions, you can select intelligently recommended values on these prompts:

- **Bank Account**
- **Ledger Account**
- **Revenue/Spend Category**

See [Steps: Set Up Intelligent Prompt Recommendations for Cash Management Transactions](#).

2. (Optional) Access the **Maintain Ad Hoc Bank Transaction Purposes** task.

Define purposes to help identify why you created the ad hoc transaction.

Security: *Set Up: Bank Reconciliation* domain in the Banking and Settlement functional area.

3. (Optional) Access the **Edit Tenant Setup - Financials** task.

Select the **Exclude Bank Account Worktag on Ad Hoc Bank Transaction Accounting Lines** check box in the **Banking Options** section to automatically exclude the bank account worktag from the offset accounting lines generated for ad hoc bank transactions.

Security: *Set Up: Tenant Setup - Financials* domain in the System functional area.

4. (Optional) [Create Ad Hoc Bank Transaction Templates](#) on page 1998.

5. (Optional) Set up cash balance checking for ad hoc bank transactions.

You can configure Workday to evaluate the cash ledger balance by primary balancing worktag prior to posting an ad hoc bank transaction withdrawal to your cash ledger account. When the ledger balance is positive, Workday automatically posts the ad hoc bank transaction entry to the ledger account. When negative, reviewers can approve or deny the cash balance check exceptions.

See [Steps: Configure Cash Balance Checking](#) on page 2125.

## Next Steps

Create ad hoc bank transactions for manual or automatic bank and first-notice item reconciliations.

#### Reference

[2023R2 What's New Post: Cash Balance Check for Ad Hoc Bank Transactions](#)

## Create Ad Hoc Bank Transaction Templates

### Prerequisites

- Configure the *Ad Hoc Bank Transaction Template Event* business process and security policy in the Banking and Settlement functional area.
- Security: *Set Up: Ad Hoc Bank Transaction Template* domain in the Banking and Settlement functional area.

### Context

You can set up templates to simplify the process of creating recurring ad hoc bank transactions with common attributes. Workday automatically populates the values from a predefined template onto new ad hoc bank transactions created from the template.

Example: Your bank statements include interest earned on your account balances each month. You set up a template to create ad hoc bank transactions for this recurring first-notice item during first-notice reconciliations.

### Steps

1. Access the [Create Ad Hoc Bank Transaction Template](#) task.

2. As you complete the [Ad Hoc Bank Transaction Line Defaults](#) section, consider:

Option	Description
<b>Company</b>	Select a line-level company other than the header company to create and reconcile intercompany ad hoc bank transactions.
<b>Revenue/Spend Category</b>	Select a revenue or spend category to use for posting the ad hoc bank transactions to ledger accounts.

Option	Description
<b>Assign Worktags from Bank Statement Line</b>	<p>Select to assign revenue or spend category worktags from the bank statement lines reconciled to the ad hoc transactions. Workday also assigns the worktags to ad hoc transactions created for first-notice items. When you assign the worktags from the individual statement lines, you can reuse the template across different business areas.</p> <p>If you select both the check box and a default revenue or spend category, Workday only uses the worktags from the bank statement lines.</p>
<b>Worktags</b>	<p>You can assign worktags to use for account posting rule condition dimensions. You can also use worktags to classify and track ad hoc transactions for financial reporting.</p>

3. As you complete the **Accounting Options** section, consider:

Option	Description
<b>Exclude Bank Account Worktag on Lines</b>	<p>Select to exclude the bank account worktag from noncash accounting lines and add it to only cash lines for ad hoc bank transactions.</p> <p>Example: You can exclude the worktag on line company expense journal entries for intercompanies that don't have access to the bank account.</p>
<b>Eliminate Foreign Exchange Gain or Loss</b>	<p>Select to exclude realized foreign exchange gain or loss from ad hoc bank transactions.</p> <p>Example: If you override the currency conversion rate with a bank rate from your statement, the difference between the 2 values creates a realized exchange gain or loss journal entry.</p> <p>When you select the check box, Workday eliminates this additional journal entry line and applies the difference to the expense or revenue journal entry.</p>

4. In the **Transaction Date Options** section, select a date type for ad hoc bank transactions and the associated accounting:

- **Statement Line Date:** The date when the financial institution posts the transaction to the bank account.
- **Value Date:** The date when the financial institution recognizes the full transaction value on the bank statement line.

## Result

Workday routes the completed ad hoc bank transaction template for review and approval.

## Next Steps

- Use the **Find Ad Hoc Bank Transaction Template** report to review your ad hoc bank transaction templates. From the related actions menu of a template, you can:
  - Copy your ad hoc bank transaction template to create additional templates.
  - Amend an ad hoc bank transaction template submitted for approval or that's already approved.
  - Edit an ad hoc bank transaction template that's in *Draft* status.
  - Create manual ad hoc bank transactions from an approved template.
- Specify an ad hoc bank transaction template in bank reconciliation, matching, and first-notice item rules or rule sets to use in automatic reconciliations.

## Setup Considerations: Automatic Bank Statement Reconciliation

You can use this topic to help make decisions when planning your configuration and use of automatic bank statement reconciliation. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday offers 2 types of automatic bank statement reconciliation, basic and advanced. Basic matches bank statement lines to operational transactions based on only amount and date. Advanced uses matching rules with additional matching attributes. This topic includes considerations for configuring advanced automatic bank reconciliation.

### Business Benefits

With advanced automatic bank reconciliation, you can:

- Reduce errors and manual effort.
- Manage exceptions of unreconciled transactions as they occur.
- Define suggestion rules that automatically identify potential matches.
- Create first-notice item rules to reconcile bank statement items that you don't record in Workday, such as bank fees.

### Use Cases

You can set up Workday to automatically reconcile:

- Multiple supplier payments that are grouped into 1 payment on the bank statement.
- Multiple electronic payments that are paid on different dates and settled on multiple bank statements.
- Bank statement lines and reconcilable items that occur after the initial bank statement upload.
- Ad hoc bank transactions from a predefined template matching with miscellaneous first-notice items.

### Questions to Consider

Question	Considerations
How can you match bank statement lines with reconcilable items using parsed data?	You can identify, extract, and modify specific data values from bank statement fields using bank statement parsing. You can then use the parsed data in condition rules for matching.

Question	Considerations
	Example: You parse a value from the <b>Addenda</b> field and move it to the <b>Reference</b> field of your bank statement. You can create a matching rule to match on this value during reconciliation.
How can you use worktags to match bank statement lines with reconcilable items?	<p>You can map bank statement line types to worktags, and then set up condition rules to use the worktags to match specific bank statement lines to operational transactions.</p> <p>When you specify the worktags in first-notice item condition rules, Workday assigns the worktags to corresponding ad hoc bank transactions to reconcile with the first-notice items on bank statements. Use an ad hoc bank transaction template and select <b>Assign Worktags from Bank Statement Line</b>.</p>
How can you reuse matching rules across companies?	You can assign matching rule sets containing the same rule to 1 or more bank accounts.

## Recommendations

- To increase reconciliation accuracy:
  - Define amount tolerances as match-on criteria in matching rules. Workday uses the amount tolerances to filter the reconcilable items.
  - Schedule automatic reconciliation only when necessary, and avoid running multiple reconciliations simultaneously.
- Create rules to suggest matches for bank statement lines that don't exactly match operational transactions.
 

Example: The **Reference** and **Date** fields match, but the amounts don't match. Define rules to suggest matches based only on the reference and date.
- To reconcile bank statement lines and operational transactions with different amounts, select the **Create Ad Hoc Bank Transaction** check box on 1-to-1 matching rules with an amount tolerance. Workday automatically creates an ad hoc bank transaction for the difference between the bank statement line and transaction amount.
- To reconcile a bank statement line to an operational transaction with different dates, you can configure a date tolerance for these matching rules:
  - 1-to-1 rule: On the **Match On** grid, specify a **Within Number of Days** value for the statement line date.
  - 1-to-many rule: Define a condition rule that includes a date tolerance for the statement line date.
- When you create matching rule sets, place the most specific rules before the more general rules. Workday considers bank statement lines using specific criteria before reconciling more general statement lines. Example: Workday reconciles a bank statement line for 500.00, with type code 495 and an addenda value of supplier payment before reconciling a different statement line on only amount.
- When you create first-notice condition rules, verify that:
  - The delivered or calculated report field results are accurate for your conditions.
  - You format all attributes in condition rules correctly. Example: All open parentheses are followed by closed parentheses.
  - You've configured all required parameters correctly for your account posting rule values used in your conditions.

## Requirements

- Upload or manually record prior day bank statements.
- Create or upload operational transactions.

## Limitations

- You can only automatically reconcile bank statement lines and operational transactions with different amounts using a 1-to-1 matching method. For the other matching methods, you must manually reconcile by creating an ad hoc bank transaction for the difference.
- You can't reconcile many bank statement lines to many reconcilable items within a specified date range. To reconcile across an unspecified date range, create a many-to-many matching rule without match-by-date criteria. When you exclude dates in the rule, Workday considers all outstanding bank statement lines and operational transactions. Example: Your bank settles a group of electronic supplier payments across multiple days.

## Tenant Setup

Update the reconciliation configuration for a bank account with these settings:

- Select the **Advanced Mode** check box to assign a matching rule set and first-notice item rule set to the bank account. By default, Workday uses a basic reconciliation based on transaction amounts and dates.
- Assign a parsing rule set to the bank account, if you're using parsed data in your matching condition rules.
- Select the conditions for initiating an automatic bank reconciliation.
- Select the conditions for initiating a first-notice item reconciliation.

## Security

Domain	Considerations
<i>Set Up: Bank Reconciliation</i> in the Banking and Settlement functional area	Provides access to set up the bank reconciliation infrastructure and view related reporting.
<i>Process: Ad Hoc Bank Transaction (New)</i> in the Banking and Settlement functional area	Provides access to process ad hoc bank transactions and view related reporting.
<i>Set Up: Ad Hoc Bank Transaction Template</i> in the Banking and Settlement functional area	Provides access to process ad hoc bank transaction templates and view related reporting.
<i>Access Matching Rule Set (Segmented)</i> in the Banking and Settlement functional area	Provides access to restrict which users can create and maintain matching rule sets for bank statement and not journal line reconciliations.
<i>Process: Matching Rule Set</i> in the Banking and Settlement functional area	Provides access to run automatic bank reconciliations using matching rule sets.
<i>Set Up: Matching Rule Set</i> in the Banking and Settlement functional area	Provides access to create matching rules and rule sets.
<i>Process: Bank Reconciliation</i> in the Banking and Settlement functional area	Provides access to run automatic bank reconciliations using bank reconciliation or matching rule sets.
<i>Set Up: Tenant Setup - Worklets</i> in the System functional area	Provides access to view and configure the Bank Statement Reconciliation dashboard.

## Business Processes

Business Process	Considerations
<i>Ad Hoc Bank Transaction Event</i>	Sends new or edited ad hoc bank transactions for approval.
<i>Bank Statement Event</i>	Sends your bank statement reconciliations for approval. Example: You require approval of bank statement reconciliations for specific bank accounts.

## Reporting

You can use these key reports for your reconciliations.

Report or Dashboard	Considerations
<b>Book to Bank</b> report	After running bank statement reconciliations, you can use this report to evaluate discrepancies between your bank statement balances and ledger balances.
<b>Book to Bank by Bank Account Currency</b> report	Displays the transactions posted to the ledger in a single bank account currency. Workday converts multicurrency transactions using the specified translation rule set and bank account currency.
<b>Uncleared Items</b> report	You can use this report to identify operational transactions that are outstanding as of a particular date.
Bank Statement Reconciliation dashboard	Provides graphical report worklets for tracking the bank statement reconciliations in your organization. From the dashboard, you can adjust rule definitions or remove rules that aren't performing well.

## Integrations

You can upload your bank statements in these formats using the bank statements connector:

- BAI2.
- BTRS.
- ISO 20022.
- MT940/942.
- Custom formats such as comma-separated value (CSV).

## Connections and Touchpoints

You can automatically reconcile these Workday transactions from outside of cash management:

- Customer deposits, payments, and refunds
- Expense payments
- Miscellaneous payments
- Payroll payments
- Student payments
- Supplier payments

You can also automatically reconcile transactions created from Accounting Center that you've enabled for reconciliation. See [Edit Accounting Source](#) on page 575.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Bank Reconciliation Product Flow](#)

## Steps: Set Up Automatic Bank Account Reconciliation

### Context

Set up Workday to perform an automatic reconciliation for your bank accounts.

### Steps

1. [Define Bank Accounts](#) on page 1925.

Configure reconciliation options for the bank account. You can indicate either a basic automatic reconciliation, or an advanced automatic reconciliation that uses definitions, rules, and rule sets.

2. (Optional) Set up bank statement worktag mappings.

Bank statement lines contain type codes, addenda, or customer reference numbers that identify the transaction. You can associate these known values to specific worktags to use in reconciliation, matching, and first-notice rules.

See [Steps: Define Bank Statement Worktag Mappings](#) on page 1989.

3. Set up ad hoc bank transactions and templates.

During reconciliation, you can create ad hoc bank transactions for miscellaneous bank statement items or amount differences between statement line and transaction amounts. You can also define templates to use for automatic or manual reconciliations.

See [Steps: Set Up Ad Hoc Bank Transactions](#) on page 1997.

4. (Optional) Access the **Maintain Bank Reconciliation Reasons** task.

Enter purposes for bank reconciliation, matching, and first-notice reconciliation rules. When you create a rule, you can assign the reason to use the rule.

Security: *Set Up: Bank Reconciliation* domain in the Banking and Settlement functional area.

5. (Optional) Create matching rule sets to use for bank reconciliations.

You can set up and create rule sets to match 1 or more bank reconciliation lines to 1 or more operational transactions using various matching methods.

See [Steps: Define Matching Rule Sets for Bank Reconciliation](#) on page 2005.

**6. (Optional) Create rule sets to use for first-notice item reconciliations.**

Once you define your matching conditions, you can define the condition rules in first-notice item rule sets.

See [Steps: Define Bank Reconciliation and First-Notice Item Rule Sets](#) on page 2010.

## Next Steps

Reconcile your bank accounts.

### Related Information

#### Concepts

[The Next Level: Optimizing Bank Reconciliation](#)

[Bank Reconciliation Product Flow](#)

## Steps: Define Matching Rule Sets for Bank Reconciliation

### Context

You can create matching rule sets to match 1 or more bank statement lines with 1 or more operational transactions. If you're currently using bank reconciliation rules, you can copy any existing bank reconciliation rule sets to matching rule sets to use for automatic bank reconciliations.

### Steps

**1. (Optional) [Copy Bank Reconciliation Rule Sets to Matching Rule Sets](#) on page 2006.**

**2. [Create Segment-Based Security Groups](#).**

Configure segment-based security groups to restrict which security groups can view and modify matching rule sets.

In the **Access to Segments** prompt, select the **Matching Type Security Segment for Bank Statement** segment from the *Reconciliation Type Security Segment* category and map this segment to the security groups.

**3. [Edit Domain Security Policies](#).**

Edit permissions to assign the segment-based security groups to these domains in the *Banking and Settlement* functional area:

- **Access Matching Rule Set (Segmented):** Enables you to segment the types of matching rules a user can view or edit. Example: Bank statement line matching versus journal line matching. Configure this security domain to use bank statement line matching.
- **Process: Matching Rule Set:** Enables you to run automatic bank reconciliation using matching rule sets.
- **Set Up: Matching Rule Set:** Enables you to create and edit matching rules and matching rule sets. Verify that you've assigned the roles that you require to view and modify matching rules.

**4. [Create Matching Rule Sets for Bank Reconciliation](#) on page 2007.**

## Copy Bank Reconciliation Rule Sets to Matching Rule Sets

### Prerequisites

Security: These domains in the Banking and Settlement functional area:

- *Set Up: Bank Reconciliation*
- *Set Up: Matching Rule Set*

### Context

You can copy your existing bank reconciliation rule sets to new matching rule sets. This enables you to create and maintain matching rule sets to use for automatic bank statement reconciliations.

### Steps

1. Access the **View Bank Reconciliation and First Notice Item Rule Sets** report.
2. Select the **Copy Bank Reconciliation Rule Sets to Matching Rule Sets** related action on a bank reconciliation rule set.

You can also click the **Copy Bank Reconciliation Rule Sets to Matching Rule Sets** button to copy multiple rule sets at once.

If a bank reconciliation rule set contains a suggestion rule with the **Reconcile Suggested Items if Equal** check box selected, Workday:

- Copies this suggestion rule to a 1-to-many matching rule.
- Creates an additional 1-to-1 suggestion rule for suggesting potential matches when the cumulative amount of the reconcilable items doesn't match the bank statement line amount.

You can drill down to view the bank reconciliation rule copied as both a reconciliation rule and suggestion rule in the **Rules Providing Reconciliation and Suggestion** column.

3. (Optional) View matching rule sets to confirm that they copied from bank reconciliation rule sets correctly.

As you review the rule sets, consider:

- The order of the matching rules should match the order of the bank reconciliation rules.
- The **Stop Match if Found** option on bank statement reconciliation rules is embedded in matching rules. Matching rules don't attempt to find an alternative line for matching once Workday finds an initial match.
- Workday evaluates bank reconciliation condition rules to determine if matching rule filter criteria and match on criteria can replace the condition rule. If so, the newly created matching rules won't have any condition rules.
- For bank reconciliation suggestion rules that you copy to 1-to-many matching rules, Workday automatically groups the reconcilable items by the match on criteria defined in the suggestion rule conditions. You can change the **Group By** value by editing the matching rule set.

4. Click the **Update Reconciliation Configuration for Bank Accounts** button to assign the created matching rule sets to bank accounts.

Workday assigns the matching rule sets to the same bank accounts assigned to the bank reconciliation rules. Once assigned, Workday inactivates the bank reconciliation rule sets on the bank accounts.

You can also edit a bank account to manually assign a newly created matching rule set, and deactivate the bank reconciliation rule set for automatic bank reconciliations.

5. (Optional) Test new matching rule sets to ensure that they're reconciling and suggesting the same bank statement lines and reconcilable items as the corresponding bank reconciliation rule sets.

## Result

Workday applies your newly created matching rules during automatic reconciliations. This includes all previously scheduled automatic reconciliations.

## Related Information

### Tasks

[Steps: Set Up Automatic Bank Account Reconciliation](#) on page 2004

## Create Matching Rule Sets for Bank Reconciliation

### Prerequisites

Security: These domains in the Banking and Settlement functional area:

- *Access Matching Rule Set (Segmented)*
- *Process: Matching Rule Set*
- *Set Up: Matching Rule Set*

### Context

Workday enables you to match bank statement lines to your operational transactions for automatic bank statement reconciliations. You can create a rule set consisting of different matching rules, condition rules, and matching methods to associate with a bank account. Matching rules compare:

- One bank statement line to 1 reconcilable item.
- One bank statement line to many reconcilable items.
- Many bank statement lines to 1 reconcilable item.
- Many bank statement lines to many reconcilable items.

### Steps

1. Access the **Create Matching Rule Set** task.
2. As you complete the task, consider:

Option	Description
<b>Order</b>	<p>Order the most specific rules numerically before rules that require less precision in the match. That way, when Workday finds a match, it's safe to stop matching the bank statement line.</p> <p>Example: You want to match 1-to-1 by <b>Transaction Date</b> and <b>Amount</b> <i>only</i> if there are no alternative exact matches. You configure a rule for an exact match as the first rule in the rule set. Then, you add the rule with the <b>Transaction Date</b> and <b>Amount</b> criteria as the second rule in the sequence. Workday applies the first rule for exact matches and then the second rule to reconcile any remaining items.</p> <p>Place suggestion rules after the reconciliation rules in the ordered list.</p>
<b>Matching Reason</b>	Identifies the business reason used to reconcile or create an ad hoc bank transaction.

Option	Description
<b>Advanced Mode</b>	Select to create matching rules that use the condition rule framework to match bank statement lines to reconcilable items.
<b>Group By</b>	<p>Select <b>Group By</b> to group many bank statement lines or many reconcilable items together using a common attribute. Workday matches the groups of lines or reconcilable items during automatic reconciliation.</p> <p>For the 1-to-many matching method, select <b>Match On</b> if the other available attributes don't apply. This attribute groups all reconcilable items together by the criteria used for <b>Match On</b>, <b>Match On Condition</b>, or both when applicable.</p>
<b>Source 1</b> <b>Source 2</b>	<p><b>Source 1</b> and <b>Source 2</b> are the bank statement line and reconcilable item respectively. Define criteria for matching bank statement lines with reconcilable items. For additional matching criteria, define condition rules.</p> <p>When you're using the 1-to-1 matching method, you can define tolerances between debit amounts or credit amounts. You set a percentage (or whole amount) from the bank statement line amount. You must select to create ad hoc bank transactions for the differences between the bank statement line and reconcilable item.</p> <p>For other matching types, the bank statement line amount must match the reconcilable item amount. When matching many lines or many reconcilable items, the group amounts must match.</p> <p>To match bank statement lines to reconcilable items by value date, you can select either:</p> <ul style="list-style-type: none"> <li>• <b>Value Date</b>: Workday matches statement lines using their value date as additional criteria.</li> <li>• <b>Value Date if Available</b>: If the value date isn't available on a statement line, Workday uses the bank statement line date instead.</li> </ul>
<b>Match on Condition</b>	<p>In advanced mode, you can use condition rules to filter bank statement lines and reconcilable items using additional attributes. You then match bank statement lines to reconcilable items.</p> <p>A condition rule consists of 1 or more logical statements comparing data source attributes using logical comparison operators, such as AND or OR.</p> <p>Example: <b>Bank Statement Line</b> contains <b>Transaction Reference</b>.</p>

Option	Description
<b>Create Ad Hoc Bank Transaction</b>	<p>Select to automatically create matching entries when matching bank statement lines to reconcilable items using amount tolerances. Workday creates ad hoc bank transactions when the statement line amount and transaction amount are within the defined amount tolerance. Workday reconciles the bank statement line amount to the transaction amount, along with the ad hoc bank transaction for their difference. The ad hoc bank transactions are based on the associated ad hoc bank transaction template.</p> <p>You can only create ad hoc bank transactions for a 1-to-1 reconciliation.</p>
<b>Action</b>	<p>Select the action to perform when matches on criteria are met:</p> <ul style="list-style-type: none"> <li>• <i>Reconcile</i> bank statement lines or groups to reconcilable items or groups.</li> <li>• <i>Suggest</i> 1 or more reconcilable items as potential matches for a bank statement line or group. You can review and manually reconcile the suggested matches when you manage bank reconciliation exceptions.</li> </ul>

**3.** (Optional) To test your rules and view a set of results, click **Test**.

The results also include the unmatched transactions and bank statement lines.

Workday displays an error message when more than 1,000,000 cumulative bank statement line and reconcilable item combinations are available for matching. You can refine your search results using the date filters.

**4.** Assign the matching rule set to a company bank account.

You can assign the same matching rule set to multiple bank accounts. Note that matching rule sets only reconcile bank statement lines to reconcilable items for the same bank account. They don't reconcile with items across multiple bank accounts.

### Result

When you run automatic reconciliation, Workday uses the matching rule set you configure to match bank statement lines to reconcilable items for the assigned bank account. Workday considers all bank lines and all reconcilable items that aren't reconciled, and also fall within defined tolerances. The reconcilable items include ad hoc bank transactions created for amount differences. Once the matching completes, Workday applies any existing bank reconciliation rules, suggestion rules, and first-notice item rules.

### Example

To reconcile these payments, you create a matching rule set using the many-to-1 matching method:

- The bank processes files for an electronic payment over 2 days, and creates the bank statement lines across multiple bank statements.

The reconciliation matches the multiple bank statement lines to the settled electronic payment.

- The credit card company deducts fees from a settled credit card payment, resulting in bank statement lines for both the fee and settlement amount.
- Workday applies the matching rules to reconcile the 2 bank statement lines against the original credit card amount.

## Next Steps

- Access the **Maintain Matching Rule Sets** task to:
  - View details on the rules within a rule set such as matching method, rule order, and whether a rule is currently active.
  - Edit a rule set from its related action menu to add, remove, or deactivate particular rules from future reconciliations. You can also set the entire rule set as inactive.
  - Define condition rules, rules, and rule sets for first-notice items.

[Steps: Set Up Automatic Bank Account Reconciliation](#) on page 2004

## Steps: Define Bank Reconciliation and First-Notice Item Rule Sets

### Context

**Note:** We plan to retire the bank reconciliation rule functionality in a future update. Workday recommends that you use the new matching rules for a more streamlined bank reconciliation.

Workday can automatically compare bank statement entries to your operational transactions and search for matches based on rules. You can configure condition rules to check for matching entries based on source values in logical statements. You can then specify the condition rules in reconciliation rules, which include the reconciliation reason and the action to take.

### Steps

- [Create Bank Reconciliation and First Notice Item Condition Rules](#) on page 2010.
- [Create Rules for Bank Reconciliation](#) on page 2012 and [Create Rule Sets for Bank Reconciliation](#) on page 2013.  
Configure bank reconciliation rules and rule sets to use for automatic bank reconciliations.
- [Create Rules for First-Notice Items](#) on page 2014 and [Create Rule Sets for First-Notice Items](#) on page 2014.  
Configure first-notice item rules and rule sets to use for automatic bank reconciliations and first-notice reconciliations.

## Related Information

### Tasks

[Steps: Set Up Automatic Bank Account Reconciliation](#) on page 2004

## Create Bank Reconciliation and First Notice Item Condition Rules

### Prerequisites

Security: *Set Up: Bank Reconciliation* domain in the Banking and Settlement functional area.

## Context

You can create condition rules for finding first-notice items and separate condition rules for matching bank statement lines to your account transactions.

## Steps

1. Access the **Create Bank Reconciliation and First Notice Item Condition Rules** task. Select either:
  - **Bank Reconciliation Condition Rule.**
  - **First Notice Item Condition Rule.**
2. Assign a meaningful **Description** for this condition rule.  
This description displays in prompts when you select from available rules.
3. Define each condition for the rule:

Option	Description
<b>Source External Field or Condition Rule</b>	The source data for which you are defining a rule condition. You can select from delivered Workday sources, or condition rules and custom worktags that you've already defined.
<b>Relational Operator</b>	Select how you want to compare the source data to the next value in your condition. The options depend on the data type of the source.
<b>Comparison Type</b>	Specify whether the source is to be compared to another field or to a value that you enter in the <b>Comparison Value</b> column.
<b>Comparison Value</b>	Either select a comparison field or enter the value to be compared to the source.
<b>Order</b>	Workday evaluates conditions in the order you specify.
( )	Use parentheses to group one or more conditions together. For example, to say <b>(a and b) or c</b> use the opening parenthesis at the beginning of statement <b>a</b> , an <b>And</b> before statement <b>b</b> , a closing parenthesis at the end of statement <b>b</b> , and an <b>Or</b> at the beginning of statement <b>c</b> .

## Example

You can use calculated fields within condition rules to calculate the number of days between the operational transaction date and the bank statement date to see if the result is within an expected number of days. You can also calculate the difference between the operational transaction amount and the bank statement line amount to see if the value falls within a certain tolerance range.

## Next Steps

You are now ready to create reconciliation rules with these condition rules. To find relevant rules, you can run the **All Condition Rules** report, and specify *Bank Statements* for the **View Condition Rules used as** field.

## Related Information

[Concept: Calculated Fields](#)

### Tasks

[Create Rule Sets for Bank Reconciliation](#) on page 2013

[Create Rules for First-Notice Items](#) on page 2014

[Create Rule Sets for First-Notice Items](#) on page 2014

## Create Rules for Bank Reconciliation

### Prerequisites

- Define bank reconciliation condition rules.
- Security: *Set Up: Bank Reconciliation* domain in the Banking and Settlement functional area.

### Context

Bank reconciliation rules tell Workday what action to take when the specified condition rule has successfully matched a bank statement line to an account register line. These rules either reconcile matches, or suggest possible reconciliations. Once you have created the rules, you can add them to reconciliation rule sets to use for automatic bank reconciliation.

### Steps

- Access the **Create Bank Reconciliation Rule** task.
- Enter a **Rule Name** that enables you to select this rule from among others when you create a reconciliation rule set.
- Select a **Bank Reconciliation Reason**. This reason identifies when the rule is used to reconcile, suggest, or create an ad hoc transaction.
- Select a **Reconciliation Action**. If the condition rule you specify matches a line in your account register, Workday performs this action.
  - Reconciliation rules with the *Reconcile* action use condition rules to check for very specific matches.
  - Reconciliation rules with the *Suggest Items* action use condition rules to check for close matches. If some rules check for closer matches than others, place the stricter rules first.
- Check **Stop if Match Found** if you select the *Reconcile* action. It is optional for the *Suggest Items* action.
- Check **Reconcile Suggested Items if Equal** to reconcile 1 or more suggested items if their sum equals the bank statement line.
- Check **Create Ad Hoc Bank Transaction for Difference** for close matches where you are sure that the statement line and register line correspond. Use this field when the action is *Reconcile*.
- Specify an **Ad Hoc Bank Transaction Template**, if you have a special template for this rule. If this field is blank, Workday uses the template specified for the rule set.  
Workday ignores this option when **Create Ad hoc Bank Transaction for Difference** is not checked.
- Specify the **Condition Rule** for this reconciliation rule to use for comparing bank statement lines.
- To improve performance, you can specify tolerances in **Date Tolerance Settings** and **Amount Tolerance Settings** to minimize the number of reconcilable items for which to execute condition rules. You set a number of days from the bank statement line date and a percentage (or whole amount) from the bank statement line amount.

### Result

Once you have created all the reconciliation rules you need, you can create a reconciliation rule set.

## Next Steps

To test this rule, select **Bank Reconciliation Rule > Test** from the related actions menu. This task prompts for an unreconciled bank statement, and returns a result set with all the operational transaction and bank statement line matches for the rule you are testing. When you test the rule, Workday does not create any ad hoc bank transactions for the difference, as the purpose is to test the matching logic using existing data.

### Related Information

#### Tasks

[Create Ad Hoc Bank Transactions](#) on page 2021

[Create Rule Sets for First-Notice Items](#) on page 2014

[Parse Bank Statements](#) on page 1995

## Create Rule Sets for Bank Reconciliation

### Prerequisites

- Define bank reconciliation rules.
- Security: *Set Up: Bank Reconciliation* domain in the Banking and Settlement functional area.

### Context

Automatic bank reconciliation requires you to specify a bank reconciliation rule set. You can create as many rule sets as you need. Example: You can create several rule sets containing different reconciliation rules designed for different bank accounts.

### Steps

1. Access the **Create Bank Reconciliation and First Notice Item Rule Sets** task.
2. Select **Bank Reconciliation Rule Set** for the **Bank Reconciliation Rule Set Type**.
3. Specify an **Ad Hoc Bank Transaction Template**.

Ad hoc transaction templates provide greater flexibility so rules can be reused across bank accounts.

4. Select a reconciliation rule.

The prompt only displays reconciliation rules that match the selected reconciliation rule set type.

Workday uses all the reconcile-action rules first, then the suggest-action rules. Place the most specific and easiest to match rules before rules that require less precision in the match. That way, when it finds a match, it is safe to stop checking the next rules in the sequence.

5. Assign the bank reconciliation rule set to a company bank account.

### Result

When you run an automatic bank reconciliation, Workday uses the rules to compare each bank statement line to every operational transaction. As soon as it finds a match, it marks both lines as reconciled and stops. If there isn't a match, it moves to the next rule with a reconcile action and goes back through the register. After it has checked all the rules with a reconcile action, it starts using the rules with a suggest action. All reconciled operational transactions are ignored on subsequent searches.

With suggest-action rules, if the rule says stop, it goes to the next bank statement line and starts over with the first suggest-action rule. If the choice is not to stop, it will look at the rest of the lines in the register before moving on to the next bank statement line and suggest-action rule.

#### Tasks

[Create Ad Hoc Bank Transactions](#) on page 2021

[Define Bank Accounts](#) on page 1925

## Create Rules for First-Notice Items

### Prerequisites

- Define first-notice item condition rules.
- Security: *Set Up: Bank Reconciliation* domain in the Banking and Settlement functional area.

### Context

First-notice item rules tell Workday whether to create an ad hoc transaction when the specified condition rule determines that a bank statement line is a first-notice item. Once you have created the rules, you can add them to reconciliation rule sets to use for automatic bank reconciliation.

### Steps

1. Access the **Create First Notice Item Rule** task.
2. Enter a **Rule Name** that enables you to select this rule from among others when you create a first notice items rule set.
3. Select a **Reconciliation Reason**.  
This reason displays when the rule finds a first-notice item in the bank statement.
4. Select **Create Ad Hoc Bank Transaction**.  
Workday creates an ad hoc transaction for each bank statement line considered as a first-notice item.
5. (Optional) Specify an **Ad Hoc Bank Transaction Template**.  
When you leave this field blank, Workday uses the template specified for the rule set.
6. Specify the **Condition Rule** that this reconciliation rule uses to identify first-notice items.

### Result

Once you have created all the first-notice item rules you need, you can create a reconciliation rule set.

### Next Steps

To test this rule, select **Bank Reconciliation Rule > Test** from the related actions menu. This task prompts for an unreconciled bank statement and returns a result set with all the first-notice items for the rule you are testing. When you test the rule, Workday does not create any ad hoc bank transactions. The intention of this task is to test only the matching logic using existing data.

### Related Information

#### Tasks

[Create Ad Hoc Bank Transactions](#) on page 2021

[Create Bank Reconciliation and First Notice Item Condition Rules](#) on page 2010

[Parse Bank Statements](#) on page 1995

## Create Rule Sets for First-Notice Items

### Prerequisites

- Define rules for first-notice items.
- Security: *Set Up: Bank Reconciliation* domain in the Banking and Settlement functional area.

## Context

You can use first-notice item rule sets to find bank statement items that don't have matching account transactions. Workday creates ad hoc transactions for these first-notice items based on the rules within each rule set. First-notice item rule sets are optional for automatic bank reconciliations.

## Steps

1. Access the **Create Bank Reconciliation and First Notice Item Rule Set**.
2. For the **Bank Reconciliation Rule Set Type**, select **First Notice Rule Set**.
3. Specify an **Ad Hoc Bank Transaction Template**.  
Workday uses this template for any rules in the set that don't specify a template. Ad hoc transaction templates provide greater flexibility so that you can reuse rules across bank accounts.
4. Click the prompt at the right to select a first-notice items rule. The prompt only displays rules that match the **Reconciliation Rule Set Type**.
5. Assign the first-notice item rule set to a company bank account.

## Result

When you run an automatic bank reconciliation, Workday applies the reconciliation rules prior to the first-notice items rules.

## Related Information

### Tasks

[Create Ad Hoc Bank Transactions](#) on page 2021

[Define Bank Accounts](#) on page 1925

## Concept: Bank Account Reconciliation

Use bank reconciliation processing to reconcile bank statements against your cash transactions. Workday provides several ways to reconcile your accounts:

- Quick entry and reconciliation.
- Manual bank statement entry, and manual or automatic reconciliation.
- Upload bank statement, and manual or automatic reconciliation.

### Quick Entry and Reconciliation

If you have a paper bank statement, this method enables you to create a version of your bank statement in Workday from your own account records. As you match this generated bank statement against the bank's statement, you manually reconcile matching entries or add new entries, and reconcile as you go. When you're done, reconciliation is complete. This method of bank reconciliation requires no setup except creating your bank accounts and is reasonably fast for a small number of transactions.

### Bank Statement Entry

Recording the bank statement in Workday enables Workday to compare your cash transactions to the bank statement during reconciliation. You can record the bank statement data in Workday either by:

- Manually entering the bank statement data item by item.
- Uploading the statement using a public web service integration that you set up with your bank.

### Bank Reconciliation

Once you have the bank statement data in Workday, you can either manually or automatically reconcile it. The bank reconciliation process enables you to:

- Reconcile each bank statement item to a matching item in your account record.

- Add items to your account record when the bank statement provides first notice of the item. Example: Wire transfers or service charges.
- Reconcile register items against bank statement lines that Workday suggests as close matches.

### **Manual Reconciliation**

Manual reconciliation enables you to manually search for matching account transactions and bank statement lines based on attribute and check off items that match. You can reconcile different relationships of bank statement lines and account transactions:

- Several bank statement items to a single item in your account records.
- Two or more bank statement lines, or two or more reconcilable items, that offset each other.
- A single bank statement item to several items in your account records.
- Several bank statement items to several items in your account records.

### **Automatic Reconciliation**

When you create or edit a bank account, you indicate either a basic or advanced automatic reconciliation. You can also set it to run when you load a statement, or you can start automatic reconciliation manually. You can reconcile 1 bank statement at a time, or multiple bank statements within a specified date range.

- **Basic Automatic Reconciliation** - A basic automatic reconciliation looks at the transaction amounts and dates as it compares bank statement entries to your operational transactions. When both match, it reconciles the item. If 1 matches, it suggests a match, but doesn't reconcile.
- **Advanced Automatic Reconciliation** - An advanced automatic reconciliation requires that you create definitions for transaction templates, purposes, reconciliation reasons, and rules. You use the rules to match bank statement items with items from your account records.

Workday uses rules with a reconcile action to reconcile lines that are an exact match, or that meet a user-defined tolerance. If lines are a close match, Workday uses rules with a suggest action to make a suggestion. Example: If it finds a line in your accounts for which the reference number and the date match and the amount is close, Workday suggests an adjustment.

For first-notice lines, Workday can create ad hoc bank transactions automatically.

After running an automatic reconciliation, you can use a manual reconciliation to search for any remaining unreconciled bank statement lines to match with transactions.

---

## **Bank Account Reconciliation Processing**

### **Steps: Use Bank Account Reconciliation**

#### **Context**

Use the bank reconciliation process to reconcile your bank statements with your account transactions.

## Steps

**1.** Record bank statement information in Workday.

You can either:

- [Enter Bank Statements Manually](#) on page 2018.
- Configure a bank statement integration to upload bank statement files in bulk.  
See [..../integrations/financials-connectors/bank-statement-import-integrations/dan1370796826463.dita](#).

**2.** [dan1370796809622.dita](#).

Create ad hoc bank transactions to reconcile with miscellaneous entries on bank statements.

**3.** (Optional) Access the **Exclude Transactions from Reconciliation Process** task.

To streamline reconciliations for a bank account, you can exclude historically unreconciled items by date from the reconciliation process. The unreconciled items also don't display in any bank reconciliation and book-to-bank reports.

Workday changes the status of these items to *Reconciled*. If you find transactions marked in error, you can revert them back to *Unreconciled*.

Security: *Process: Bank Reconciliation* domain in the Banking and Settlement functional area.

**4.** Reconcile a Bank Statement Automatically or Reconcile Multiple Bank Statements Automatically.

**5.** (Optional) Access the **Schedule Auto Reconciliation** task.

Set up Workday to automatically reconcile 1 or more bank statements on a predefined schedule. When the scheduler runs, it includes all bank statements created in the **Last x Day(s)** before the current date.

Security: These domains in the Banking and Settlement functional area:

- *Process: Bank Reconciliation*
- *Process: Matching Rule Set*

**6.** [Reconcile First-Notice Items on a Bank Statement](#) on page 2028 or [Reconcile First-Notice Items on Multiple Bank Statements](#) on page 2029.

**7.** (Optional) Access the **Schedule First Notice Reconciliation** task.

Set up Workday to automatically reconcile first-notice items for 1 or more bank statements on a predefined schedule. When the scheduler runs, it includes all bank statements created in the **Last x Day(s)** before the current date.

Security: *Process: Bank Reconciliation* domain in the Banking and Settlement functional area.

**8.** (Optional) Reconcile any remaining bank statements.

You can:

- Reconcile a Bank Statement Manually.
- [Use Quick Entry and Reconciliation](#) on page 2019.

**9.** Find and edit unreconciled lines and exceptions on your bank statements to complete the reconciliation process.

See [Concept: Management of Unreconciled Items](#) on page 2034.

## Next Steps

Access the **View Reconciliation Metrics** report from the related action on an automatically reconciled bank statement to see how the rules are performing. For each rule, you can compare the number of bank statement lines and reconcilable items accessed with the actual reconciliation matches found with that rule. This information can help you to optimize the rules for improving automatic reconciliation performance.

#### Concepts

[Concept: Bank Statement Reconciliation Dashboard](#) on page 2036

[Setup Considerations: Automatic Bank Statement Reconciliation](#) on page 2000

### Tasks

[Steps: Set Up Automatic Bank Account Reconciliation](#) on page 2004

## Enter Bank Statements Manually

### Prerequisites

- Your prior day bank statement for the account you want to reconcile.
- Configure the *Bank Statement Event* business process and security policy in the Banking and Settlement functional area.

### Context

With manual entry, you can enter your prior day bank statement lines into Workday. You can use separate tasks to reconcile the statement lines with account transactions.

### Steps

1. Access the **Record Bank Statement** task.
2. Select **Manual Entry Bank Statement**.
3. Specify the **Statement Beginning Date**, and the **Statement Date** from the bank statement.  
Workday automatically populates the beginning date that follows the previous statement date for the bank account.
4. Specify the **Beginning Balance** and **Ending Balance** from the bank statement.  
Workday automatically populates the ending balance as the beginning balance from the previous statement for the bank account.
5. Enter the balances and transactions from the bank statement by type code.
6. As you complete the task, consider:

Option	Description
Type Code	Select the type code that identifies the type of activity on the bank statement line. Example: Type code 475 that identifies a paid check amount.  You can select predefined custom type codes or standard type codes. The type codes are based on the bank statement format associated with the bank account.
Value Date	(Optional) Enter the date when the financial institution recognizes the full transaction value on the bank statement line. When you specify a value date, you can: <ul style="list-style-type: none"> <li>• Group multiple bank statement lines or match individual lines by their value date using matching rules for automatic bank reconciliations.</li> <li>• Generate ad hoc bank transactions and the associated accounting based on the value date for manual or automatic bank reconciliations. Workday posts the journal lines to the accounting period containing the value</li> </ul>

Option	Description
	<p>date. If this period is closed, Workday posts the journal lines to the next open period.</p> <p>If you don't specify a value date, the ad hoc transactions reflect the bank statement line date by default.</p>

7. If you click **Save for Later**, you can use the **Find Bank Statements** report later to locate this statement by bank account and statement date. The related actions menu enables you to edit or reconcile it.
8. After you've entered all the statement data from the bank statement, verify that:
  - The calculated ending balance matches the ending balance.
  - The **Difference** field displays a zero.
 If not, check your entries for typographical errors in the amount fields.
9. Click **Submit for Reconciliation**.
 The **Ending Balance** must match the **Calculated Ending Balance** to submit this statement for approval.

## Result

You can now reconcile this bank statement manually or automatically.

[Reference: Bank Statement and Reconciliation Statuses](#) on page 2039

## Use Quick Entry and Reconciliation

### Prerequisites

- You must have your statement from the bank for the account you want to reconcile, so you can compare lines for reconciliation.
- Configure the *Bank Statement Event* business process and security policy in the Banking and Settlement functional area.
- Security: These domains in the Banking and Settlement functional area:
  - *Process: Bank Reconciliation*
  - *Process: Bank Statement - Edit*
  - *Process: Bank Statement - Reporting*
- Security: *Reports: Cash Forecast Reporting* domain in the Cash Management functional area.

### Context

With quick entry and reconciliation, you generate bank statement lines and reconcile them with your account transactions as part of a single task. You retrieve a list of all your account transactions that fall within the bank statement dates, and then select the matching transactions in your bank statement. Workday immediately reconciles the lines that you select, and you don't need to enter bank details manually.

If you can't find a matching account transaction for a bank statement line, create an ad hoc transaction and then reconcile the bank statement line with this new transaction.

## Steps

1. Navigate to the **Record Bank Statement** task. Select *Quick Entry Bank Statement*, and enter the bank statement dates. Workday automatically builds a bank statement by retrieving all account transactions that fall within these dates for the company and bank account that you specify.
2. Specify the bank account to reconcile. You can select an account by bank, by company, or by company hierarchy.
3. The **Currency** sets to the bank account currency.
4. Select **Quick Entry Bank Statement**.
5. Specify the **Statement Beginning Date**, and the **Statement Date** from the bank statement. Workday selects lines from your account that fall within these dates.
6. Specify the **Beginning Balance** and **Ending Balance** from the bank statement.
7. On the **Cleared Activity** tab, check transactions that have matching detail lines in your bank statement. Workday automatically reconciles the transactions that you select.
8. For bank statement lines without corresponding account transactions, such as bank fees, interest payments, or discounts, you must create an ad hoc transaction to add that line to your account. Select **Save as Draft** and close this statement entry.
9. To return to a quick entry bank statement, access the **Find Bank Statements** report. Select the organization and optional search criteria to help you find this unreconciled statement. If you have more than one unreconciled bank statement, make sure to select the one for the correct bank account and statement period.
10. Select **Bank Statement > Edit** from the related action menu to the left of the bank statement.
11. On the **Edit Bank Statement** page, the ad hoc transaction now displays. Check the box to select this line for reconciliation. If necessary, continue adding ad hoc transactions until the **Difference** field is zero.
12. When you've reconciled all lines in the quick entry bank statement, submit it for approval and complete the reconciliation process.  
If you select **Save for later**, the statement remains in *Draft* status even if all of the transaction lines are reconciled.

## Next Steps

To make changes after reconciling and approving a bank statement, select **Bank Statement > Change** from its related action menu.

You might want to:

- Clear the check boxes to unreconcile and remove account transactions from the bank statement.
- Remap bank statement lines to account transactions.

**Note:** The cancel, change, and reconcile tasks are available as related actions on *Approved* bank statements.

## Create Ad Hoc Bank Transactions

### Prerequisites

- Configure the *Ad Hoc Bank Transaction Event* business process and security policy in the Banking and Settlement functional area.
- Security: These domains in the Banking and Settlement functional area:
  - Process: Ad Hoc Bank Transaction (New)*
  - Process: Ad Hoc Bank Transaction – Add Attachment*
  - Process: Ad Hoc Bank Transaction – Add/Change Attachment*
  - Process: Ad Hoc Bank Transaction – Cancel*
  - Process: Ad Hoc Bank Transaction – Change*
  - Process: Ad Hoc Bank Transaction – Copy*
  - Process: Ad Hoc Bank Transaction – Core*
  - Process: Ad Hoc Bank Transaction – Reporting*
  - Process: Ad Hoc Bank Transaction – View*

### Context

You can create matching Workday entries for bank statement entries such as bank fees, interest payments, or discounts.

### Steps

- Access 1 of these tasks:
  - Create Ad Hoc Bank Transaction**
  - Create Ad Hoc Bank Transaction from Template**
- As you complete the **Ad Hoc Bank Transaction Information** section, consider:

Option	Description
<b>Date</b>	The date to use for the ad hoc transaction. When you create an ad hoc transaction for bank reconciliation, you can change the default date to match the corresponding bank statement line date.
<b>Currency</b>	Workday uses the currency of the transaction bank account by default. When you change the transaction currency, the currency must be on the acceptable list for the bank account. Also, set up exchange rates: <ul style="list-style-type: none"> <li>From the transaction currency to the bank currency for the transaction rate type.</li> <li>From the bank currency to the company currency for the default rate type.</li> </ul>

- As you complete the **Ad Hoc Bank Transaction Details** section, consider:

Option	Description
<b>Difference</b>	Verify that the difference is zero to ensure that the <b>Transaction Amount</b> you entered and the <b>Ad Hoc Bank Transaction Lines</b> total are balanced.

Option	Description
<b>Tax Amount</b>	<p>Indicates the sum of the calculated tax amounts from taxable ad hoc bank transaction lines, based on the tax code you specify for each line. You can use the figure for tax reporting.</p> <p>To override this tax amount, change the <b>Tax by Tax Rate</b> on the <b>Tax</b> tab.</p> <p>Tax amounts are inclusive and don't change gross transaction amounts.</p>

4. As you complete the **Accounting Options** section, consider:

Option	Description
<b>Exclude Bank Account Worktag on Lines</b>	<p>Select to exclude the bank account worktag from noncash accounting lines and add it to only cash lines for ad hoc bank transactions.</p> <p>Example: You can exclude the worktag on line company expense journal entries for intercompanies that don't have access to the bank account.</p>
<b>Eliminate Foreign Exchange Gain or Loss</b>	<p>Select to exclude realized foreign exchange gain or loss from ad hoc bank transactions.</p> <p>Example: If you override the currency conversion rate with a bank rate from your statement, the difference between the 2 values creates a realized exchange gain or loss journal entry.</p> <p>When you select the check box, Workday eliminates this additional journal entry line and applies the difference to the expense or revenue journal entry.</p>

5. As you complete the **Ad Hoc Bank Transaction Lines** tab, consider:

Option	Description
<b>Revenue/Spend Category</b>	<p>The revenue or spend category links transaction line amounts to corresponding account posting rules to post to ledger accounts.</p>
<b>Tax Applicability</b>	<p>Select a tax applicability option to calculate recoverable and nonrecoverable tax amounts for each tax rate in the tax code. You can use tax applicability to filter transactions in reporting.</p>
<b>Tax Recoverability</b>	<p>Workday automatically populates the recoverable percentage on the transaction line based on the specified tax applicability and tax code. When you change the tax recoverability, Workday applies the recoverable percentage and allocation method to the tax amount for tax rates within the tax code.</p> <p>Use the <b>Maintain Tax Recoverabilities</b> task to specify the tax recoverability of multiple tax rates for each tax code.</p>

6. Use the **Tax** tab to review a summary of all the tax codes and their applicability, as specified on the ad hoc bank transaction lines. When several lines share the same tax applicability, Workday consolidates them and calculates the amount total with this tax.
7. (Optional) When you update tax on an ad hoc bank transaction line, click **Update Tax** for Workday to recalculate the tax displayed in the header and **Tax** tab.

## Result

Workday routes the completed ad hoc bank transaction for approval. The ad hoc bank transaction displays in the specified ledger account.

If you configured cash balance check for ad hoc bank transactions, Workday evaluates the cash ledger balance prior to posting an ad hoc bank transaction withdrawal to your cash ledger account.

## Next Steps

Review ad hoc bank transactions for the specified company using the **Find Ad Hoc Bank Transactions** report. From the related actions menu of an ad hoc bank transaction, you can:

- Add or remove attachments for ad hoc bank transactions in any status without additional actions or business process approvals.
- Cancel the ad hoc bank transaction.  
You can only cancel unreconciled ad hoc bank transactions.
- Change the ad hoc bank transaction.

If you created the ad hoc bank transaction from a template, Workday disassociates the template from a changed transaction. The ad hoc bank transaction retains the information applied from the template.

- If you enabled the option to prevent changes to operational transactions in closed periods on the **Edit Company Accounting Details** task, you can't change ad hoc bank transactions processed in a closed period.
- Copy the ad hoc bank transaction to create other ad hoc transactions that you can modify.
  - View the accounting.

## Reconcile a Bank Statement Automatically

### Prerequisites

- Create a bank account with basic or automatic reconciliation.
- Enter or upload a bank statement.
- Create rule sets with matching rules, bank reconciliation rules, and first-notice item rules.
- Security: *Process: Bank Reconciliation* domain in the Banking and Settlement functional area.

## Context

The automatic reconciliation process enables you to match your operational transactions to your bank statement by:

- Reconciling each bank statement item to a matching item in your account record. You can configure Workday to treat electronic reconciliation groups, such as a lump ACH debit, as single transactions.
- Adding ad hoc bank transactions to your account record when the bank statement provides first notice of the item. Example: Foreign exchange gains/losses or service charges.
- Using rules to reconcile items against bank statement lines that match exactly, or that Workday suggests as close matches.

## Steps

### 1. Access the Run Bank Statement Auto Reconciliation task.

You can also access:

- The **Create Bank Account** or **Edit Bank Account** task.

You can configure Workday to initiate automatic reconciliation when you load a bank statement for the specified bank account.

- The **Find Bank Statements** report.

Select **Bank Statement > Run Auto-Reconciliation** from the related actions menu of an unreconciled bank statement.

2. Select a single bank statement, or automatically reconcile all bank statement lines within a date range.
3. Click **OK** to start the reconciliation, or schedule it to run on a specified date and time.
4. When the reconciliation process is complete, select the **Reconciliation Criteria** tab to compare the reconciled lines with the total number of lines, and see if there are any lines with suggestions.
5. If the reconciled lines don't match the total number of lines, or if any lines have suggestions, select **Bank Statement > Manage Exceptions** from the bank statement's related actions menu to handle the unreconciled lines.

## Result

Use the bank reconciliation reports to confirm the details.

On the **View Bank Statement** report, the **Auto Recon By** field displays the matching rule or first-notice item rule used to reconcile a bank statement line to an operational or ad hoc bank transaction.

## Reconcile Multiple Bank Statements Automatically

### Prerequisites

- Create a bank account. Indicate either a basic or advanced automatic reconciliation for the bank account.
- Enter or upload bank statements.
- Security: *Process: Bank Reconciliation* domain in the Banking and Settlement functional area.

### Context

**Note:** We plan to retire the bank reconciliation rule functionality in a future update. Workday recommends that you use the new matching rules and the **Run Bank Statement Auto Reconciliation** task to reconcile multiple bank statements.

You can run an automatic reconciliation across multiple bank statements using bank reconciliation rules and first-notice item rules. This enables you to:

- Streamline the reconciliation of multiple unreconciled bank statements.
- Reconcile a large number of items for a specified bank account at once.
- Reconcile transactions that are completed or transferred from other systems after you've imported the corresponding bank statements into Workday.

### Steps

1. Access the **Run Multiple Bank Statement Auto Reconciliation** task.
2. Enter the **Start Date** of the unreconciled bank statements. You can optionally enter an **End Date** for a specific time range of statements.
3. Click **OK** to start the reconciliation, or schedule it to run on a specified date and time.
4. When the reconciliation process is complete, select the **Reconciliation Criteria** tab to see if the bank statements are fully reconciled. You can drill-down on the statements that are either still in progress or reconciled to view the transaction details.
5. (Optional) Select **Bank Statement > Manage Exceptions** from the bank statement related actions menu to handle any unreconciled lines.

### Result

Use the bank reconciliation reports to confirm the details.

The **Auto Reconciled By Rule** field on these reports displays the bank reconciliation or first-notice item rule used to reconcile a statement line to an operational or ad hoc bank transaction:

- [Find Bank Statement Lines](#)
- [View Bank Statement](#)

## Reconcile a Bank Statement Manually

### Prerequisites

- Create a bank account.
- Enter or upload a bank statement.
- Security: These domains in the Banking and Settlement functional area:
  - *Process: Bank Reconciliation*
  - *Process: Matching Rule Set*

### Context

Workday enables you to search for matching account transactions and bank statement lines based on shared attributes, such as transaction reference numbers, amounts, and dates. This manual reconciliation method makes it easy to reconcile lines where 1 line matches many transactions (or many match many).

### Steps

1. Access the **Manual Bank Reconciliation** task.

You can also access this task from:

- The **Bank Statement Reconciliation** dashboard.
- The **Find Bank Statements** report. Select **Bank Statement > Manual Reconciliation** from the related actions menu of an unreconciled bank statement.

2. In the **Bank Statement Lines** fields, specify any necessary details to filter the displayed bank statement lines.

3. Similarly, in the **Reconcilable Items** fields, specify limits for the number of displayed lines.

When you click **OK**, the page displays the applicable bank statement lines and account register lines at the bottom.

4. Scroll through both lists and check off items that match.

When you check off matching lines, the status section at the top changes to reflect reconciliation progress:

- The **Selected Lines Total** displays the sum of the amounts on the selected bank statement lines.
- The **Selected Items Total** displays the total number of unreconciled items selected for reconciling to bank statement lines.

5. (Optional) You can check off 2 or more bank statement lines, or 2 or more reconcilable items that offset each other.

Example: Your bank charges you a fee in error, and later agrees to revert the charge. The bank reflects these 2 offsetting activities on the bank statement. You can check off the matching debit and credit transactions for a one-sided reconciliation.

6. (Optional) If a bank statement line has suggestions, you can select the **Show Suggestions** check box in the **Reconcilable Item Selection** section. When you refresh the reconcilable items, Workday displays only the suggested reconcilable items for the selected bank statement lines.

The suggestions narrow down the selection of reconcilable items to match with the bank statement lines.

7. Each time you check off items that match, click **Reconcile**. The checked lines move from the lower lists to the status section. You can cancel reconciliation of this line until the next time you click **Reconcile**.

When you click **Reconcile** again, the page is refreshed. Items are marked reconciled and removed.

**8.** For long-running reconciliations, select an option from the pop-up window that displays to either:

- Send the reconciliation process to the background.

You can perform other reconciliation activities on the same bank account. Workday displays a notification on your notifications page indicating if the process has completed or failed.

- Wait for the reconciliation to complete before you continue working.

**9.** (Optional) If there isn't a matching account transaction for a bank statement line, click **Create Ad Hoc Bank Transaction** to create an ad hoc transaction for the bank line. Workday displays the newly created ad hoc bank transaction when you refresh the reconcilable items.

You can also create an ad hoc transaction to account for the difference between a bank statement line amount and a matching account transaction amount:

- If the amounts are equal, Workday reconciles the bank statement line to the ad hoc bank transaction.
- If you create an ad hoc bank transaction for a difference, Workday reconciles the bank statement line to both transactions.

If your bank statement line includes the value date, you can select the **Use Value Date as Transaction Date** check box to create an ad hoc transaction and the associated accounting based on the value date. Otherwise, Workday uses the bank statement line date for the transaction date.

After submitting the ad hoc bank transaction, you can view the reconciled items under **Last Reconciled Item(s)**.

**10.** When you're done reconciling and ready to exit this page, click **Cancel**.

**Note:** This action doesn't cancel any of the reconciliations you've made, even if you then click **Discard Changes**.

## Result

The bank statement reconciliation enables you to verify that your accounting records and bank statements are matching and accurate. Use the book-to-bank and other bank reconciliation reports to confirm the details.

If you've configured your ad hoc bank transaction workflow to require approvals, Workday includes the reconciled transactions in the ledger account balances once approved. You can identify any ad hoc bank transactions pending approval in a separate column on these reports:

- **Book to Bank**
- **Book to Bank by Bank Account Currency**
- **Bank Reconciliation Detail**
- **Bank Statement Reconciliation**

This column is available when you drill down on the reconciled bank statement lines in the reports. If the ad hoc bank transaction is denied, Workday then:

- Unreconciles the transaction from the bank statement line.
- Cancels the ad hoc bank transaction.

## Next Steps

If you aren't finished reconciling, you can find the statements again using the **Find Bank Statements** report, and continue where you left off.

## Reconcile First-Notice Items on a Bank Statement

### Prerequisites

- Define first-notice item rules and rule sets.
- Automatically reconcile a bank statement.
- Security: *Process: Bank Reconciliation* domain in the Banking and Settlement functional area.

### Context

First-notice reconciliation finds entries on bank statements that do not have any corresponding operational transactions, such as bank fees or interest earned. Based on the first-notice item rules, Workday either:

- Creates ad hoc transactions to reconcile with the bank statement entries.
- Reports these lines for your review.

### Steps

1. Access the **Run Bank Statement First Notice Reconciliation** task.

You can also access one of these tasks:

- The **Create Bank Account** or **Edit Bank Account** task.

You can configure Workday to initiate first-notice item reconciliation right after a bank reconciliation.

- The **Find Bank Statements** report.

Select **Bank Statement > Run First Notice Reconciliation** from the related actions menu of a bank statement. The bank statement must have some unreconciled transactions.

2. Click **OK** to start the reconciliation, or schedule it to run on a specified date and time.
3. When the reconciliation process is complete, select the **First Notice Reconciliation Criteria** tab to see if the reconciled lines and reconciled first-notice lines add up to the total number of lines.
4. If the reconciled lines do not match the total number of lines, or if any lines have suggestions, select **Bank Statement > Manage Exceptions** from the bank statement's related actions menu to handle the unreconciled lines.

### Result

You can review bank reconciliation reports to confirm that the first-notice items on the bank statements are cleared.

The **Auto Reconciled By Rule** field on these reports displays the bank reconciliation or first-notice item rule used to reconcile a bank statement line to an operational or ad hoc bank transaction:

- [Find Bank Statement Lines](#)
- [View Bank Statement](#)

# Reconcile First-Notice Items on Multiple Bank Statements

## Prerequisites

- Define first-notice item rules and rule sets.
- Automatically reconcile bank statements.
- Security: *Process: Bank Reconciliation* domain in the Banking and Settlement functional area.

## Context

You can run a first-notice reconciliation across multiple bank statements, enabling you to:

- Identify entries without any corresponding operational transactions, such as bank fees or interest earned.
- Automatically create ad hoc transactions to match with the first-notice items after importing the corresponding bank statements into Workday.

Schedule the first-notice reconciliation process to run on a recurring basis, if your bank consistently delivers statements before you create the associated reconcilable items.

- Report specific types of first-notice items for your review, based on first-notice item rules.

## Steps

1. Access the **Run Multiple Bank Statement First Notice Reconciliation** task.

You can also access the **Create Bank Account** or **Edit Bank Account** task to initiate first-notice item reconciliation after a bank reconciliation.

2. Enter the **Start Date** of the bank statements. You can optionally enter an **End Date** for a specific time range of statements.
3. Click **OK** to start the reconciliation, or schedule it to run on a specified date and time.
4. When the reconciliation process is complete, select the **First Notice Reconciliation Criteria** tab to see if the bank statements are fully reconciled. You can drill down on the statements that are either still in progress or reconciled to view the transaction details.
5. (Optional) Select **Bank Statement > Manage Exceptions** from the related actions menu on the bank statement to manually reconcile any unreconciled lines.

## Result

You can review bank reconciliation reports to confirm that the first-notice items on the bank statements are cleared.

The **Auto Reconciled By Rule** field on these reports displays the bank reconciliation or first-notice item rule used to reconcile a bank statement line to an operational or ad hoc bank transaction:

- [Find Bank Statement Lines](#)
- [View Bank Statement](#)

## Steps: Create and Reconcile Electronic Payment Reconciliation Groups

### Prerequisites

Configure the *Bank Account Event* business process and security policy in the Banking and Settlement functional area.

### Context

You can consolidate your outgoing electronic payments into electronic payment reconciliation groups (EPRG) for a more streamlined reconciliation. When you settle the EFT and direct deposit payments, Workday generates EPRGs with the payments for each bank account.

EPRGs enable you to:

- Group payroll payments together to avoid displaying confidential information for individual payments.
- Manually reconcile a large number of electronic payments as a single group.
- Match a group of electronic payments to a single bank statement line in automatic reconciliations.
- Reduce bank fees by grouping all of your electronic payments onto a single bank statement line, per your bank service agreement.

### Steps

1. Access the **Create Bank Account** or **Edit Bank Account** task.

Select the **Group Electronic Payments for Reconciliation** check box.

Security: Set Up: *Bank Entity* domain in the Banking and Settlement functional area.

2. (Optional) Configure Workday to receive and upload payment acknowledgment files.

The files acknowledge whether the bank received, processed, or rejected your payments.

See:

- [Steps: Acknowledge Payments on page 2137](#).
- [Concept: Electronic Payment Acknowledgement on page 2139](#).

3. Settle the electronic payments.

You can either:

- [Create Manual Settlement Runs on page 2160](#).
- [Schedule Automatic Settlement Runs on page 2164](#).

Workday groups the payments that have all of these same payment attributes into an EPRG:

- Payment category. Example: Ad hoc payment or miscellaneous payment.
- Payment date.
- Payment type. Example: EFT or direct deposit.
- Transaction currency.

Workday includes both the group reference ID and individual payment IDs in the payment file delivered to the bank. When the bank accepts and completes at least 1 payment in the group, Workday enables

the EPRG for bank reconciliation. Workday considers both received payments and returned payments as complete.

When any payment in the group is still awaiting acknowledgment, Workday prevents you from reconciling the EPRG.

#### 4. Identify the EPRG reference ID in the payment file.

To locate the group reference ID that your bank uses in the payment file, select the business process payment message in the **Payment Groups** tab when viewing the settlement run. Example: In an ISO20022 XML document, the *Payment Information ID* element contains the group ID and *Payment ID* the individual payment ID.

#### 5. Notify your bank to generate a single bank statement line per EPRG.

You can instruct your bank to incorporate the group reference ID from the payment file on the resulting bank statement line to simplify bank reconciliation.

Example: You process multiple ACH payroll payments from Workday to your employees. To enable a 1-to-1 matching method for reconciliation, you request your bank to return a single statement line that represents the sum of all individual ACH payments in the group.

#### 6. Record bank statement information in Workday.

You can either:

- [Enter Bank Statements Manually](#) on page 2018.
- [Use Quick Entry and Reconciliation](#) on page 2019.
- Configure a bank statement integration to upload bank statement files in bulk.

See [Steps: Set Up Bank Statement Load Integration](#).

#### 7. Reconcile your bank statement lines with the EPRGs.

You can either:

- [Reconcile a Bank Statement Automatically](#) on page 2023.
- [Reconcile Multiple Bank Statements Automatically](#) on page 2025.
- [Reconcile a Bank Statement Manually](#) on page 2026.

To reconcile, either:

- Create a 1-to-1 matching rule using a condition rule based on the **Transaction Reference** field for automatic reconciliation.
- Match the group reference ID on the statement line and EPRG during manual reconciliation.

To view the reference number for an EPRG and the payment statuses of its constituent payments, you can access the **View Electronic Payment Reconciliation Group** report from either this task or report:

- **Manual Bank Reconciliation.** In the **Reconcilable Items** grid, click the magnifying glass icon for the EPRG.
- **View Settlement Run.** Select the payment group, and then the EPRG payment message.

### Result

The bank reconciliation enables you to verify that your grouped payments are accurately reflected on your bank statement lines. You can use the **Book to Bank Summary Report** and other bank reconciliation reports to confirm the details.

### Example

You enable the EPRG feature for bank reconciliation and configure Workday to receive payment acknowledgments. Workday groups your 4 EFT payments in an EPRG with a total value of \$1000.00.

This table illustrates how Workday determines the EPRG total amount and availability for reconciliation based on different payment and acknowledgment statuses within the group. An EPRG that includes a payment in status:

- *Awaiting Payment Acknowledgment* isn't yet reconcilable, though the payment counts towards the original EPRG amount.
- *Canceled* or *Rejected* is reconcilable, but Workday deducts this payment from the original EPRG amount. If all underlying payments in the group are canceled or rejected, the EPRG isn't reconcilable.

	<b>Payments in EPRG</b>	<b>Scenario 1</b>	<b>Scenario 2</b>	<b>Scenario 3</b>	<b>Scenario 4</b>	<b>Scenario 5</b>	<b>Scenario 6</b>	<b>Scenario 7</b>
Payment 1	\$100.00	Awaiting Acknowledgment	Awaiting Acknowledgment	Complete	Rejected	Rejected	Rejected	Rejected
Payment 2	\$200.00	Awaiting Acknowledgment	Complete	Complete	Complete	Rejected	Awaiting Acknowledgment	Awaiting Acknowledgment
Payment 3	\$300.00	Awaiting Acknowledgment	Complete	Complete	Complete	Rejected	Complete	Canceled
Payment 4	\$400.00	Awaiting Acknowledgment	Complete	Complete	Complete	Rejected	Complete	Complete
<b>EPRG Total Amount</b>	<b>\$1000.00</b>	<b>\$1000.00</b>	<b>\$1000.00</b>	<b>\$1000.00</b>	<b>\$900.00</b>	<b>\$0.00</b>	<b>\$900.00</b>	<b>\$600.00</b>
<b>Is EPRG Reconcilable</b>		<b>No</b>	<b>No</b>	<b>Yes</b>	<b>Yes</b>	<b>No</b>	<b>No</b>	<b>No</b>

## Unreconcile Bank Statement Lines

### Prerequisites

- Reconcile account transactions with your bank statements.
- Security: These domains in the Banking and Settlement functional area:
  - *Process: Bank Reconciliation*
  - *Process: Bank Statement - Reporting*
- Security: *Reports: Cash Forecast Reporting* domain in the Cash Management functional area.

### Context

You can unreconcile bank statement lines that you've reconciled with account transactions or other bank statement lines.

Reasons for unreconciling include:

- You reconciled a bank statement line with a payment or offsetting bank statement line incorrectly.
- You want to cancel or void a check after reconciliation, so you need to unreconcile this payment from its bank statement line first.

### Steps

1. Access the **Find Bank Statements** report.

2. View a bank statement.
3. Select a transaction to view.
4. From the related actions menu of the bank statement line you want to unreconcile, select **Bank Statement Line > Unreconcile**.

### Result

Workday unreconciles the bank statement line from the corresponding item, or offsetting bank statement line, and changes the status to *Unreconciled*. The bank statement lines and reconcilable items become available for any reconciliations you might run in the future.

### Next Steps

You can now cancel or return an unreconciled payment, and void the check used to make the payment if necessary.

##### Tasks

[Cancel Payments](#) on page 2169

## Edit Bank Statements

### Prerequisites

- Security: These domains in the Banking and Settlement functional area:
  - *Process: Bank Reconciliation*
  - *Process: Bank Statement - Change*
  - *Process: Bank Statement - Reporting*
  - *Process: Bank Statement - View*
- Security: *Reports: Cash Forecast Reporting* domain in the Cash Management functional area.

### Steps

1. Access the **Find Bank Statement** report.
2. For the desired bank statement, select **Bank Statement > Change** from the related actions menu.
3. You can change any of the transaction details or add or remove transactions.
4. Click **Submit for Reconciliation** to go to the **View Bank Statement** task. From here, you can click **Manage Exceptions** to reconcile unreconciled lines.

### Result

After editing, you can perform manual or automatic reconciliation.

##### Tasks

[Reconcile a Bank Statement Manually](#) on page 2026

[Reconcile a Bank Statement Automatically](#) on page 2023

## Cancel Bank Statements

### Prerequisites

- Security: These domains in the Banking and Settlement functional area:
  - Process: *Bank Reconciliation*
  - Process: *Bank Statement - Cancel*
  - Process: *Bank Statement - Reporting*
- Security: Reports: *Cash Forecast Reporting* domain in the Cash Management functional area.

### Context

You can cancel unreconciled bank statements that you entered or received in error. Once canceled, you can't change the bank statement to a previous status.

### Steps

1. Access the **Find Bank Statement** report.  
Alternatively, you can select **Cancel Bank Statement** from the related actions menu of a bank statement or petty cash reconciliation.
2. From the related actions menu of the desired bank statement, select **Bank Statement > Cancel**.

### Result

The canceled bank statement is no longer available for bank statement reconciliations and book-to-bank reports that reference bank statement lines and balances.

## Concept: Management of Unreconciled Items

**Note:** We plan to retire the Reconciliation Work Area functionality in a future update. Workday recommends that you use these new book-to-bank reports to help you identify unreconciled bank statement lines and operational transactions:

- **Book to Bank Summary**
- **Book to Bank Summary - Uncleared Bank Statement Lines**
- **Book to Bank Summary - Uncleared Operational Transactions**

From the report details, you can access the **Manage Exception Detail** page described below to reconcile uncleared bank statement lines.

Bank statements remain unreconciled until all the items in the statement are matched to operational transactions.

There are 2 different places that you can go to start working on as-yet unreconciled items: the Reconciliation Work Area for a summary of all unreconciled items, and the **Manage Exceptions** page, for an individual bank statement.

### Reconciliation Work Area

This work area provides a quick starting point for managing your bank statements. It lists the most recent 15 unreconciled bank statements, and if a bank statement isn't listed, you can use **Find Bank Statements** at the top of the page. This work area also lists the oldest unreconciled bank statement lines from the listed bank statements.

To start manual reconciliation, click **Manual Bank Reconciliation**. See [Reconcile a Bank Statement Manually](#) on page 2026.

The Reconciliation Work Area has 3 parts:

### Last 15 Unreconciled Bank Statements

Each line is for an unreconciled bank statement. The related actions menu for the bank statement enables you to edit the statement, manage exceptions, and automatically or manually reconcile the statement. You can also access the bank account or drill down on the number of unreconciled lines.

When you drill down on the number of unreconciled statement lines, you get a list of all unreconciled lines. You can click any line to get additional detail. From the related actions menu for the **Bank Statement Line** field, select **Bank Statement Line > Manage Exception Detail** to look at possible transactions with which to reconcile.

If you select **Manage Bank Reconciliation Exceptions**, at the right, you get a list of all the unreconciled bank statement lines.

### Oldest Unreconciled Statement Lines

This section lists the oldest lines and includes suggested matches and the reasons why they're suggested. Click the **Manage Exception Detail** button at the right to look at possible transactions with which to reconcile.

### Suggestions Chart

This donut chart lists, for the unreconciled items with suggestions, the percentage of suggestions by the type of match reason listed.

See [Manage Exception Detail](#) on page 2035.

### Manage Bank Reconciliation Exceptions

The **Manage Exceptions** page enables you to see all the unreconciled lines in a specific bank statement. From here, you manually reconcile the statement by handling each line individually.

Access the **Manage Exceptions** task by selecting **Bank Statement > Manage Exceptions** from the related action menu on any unreconciled bank statement. Or, from the Reconciliation Work area, by clicking **Manage Bank Reconciliation Exceptions** at the left of a statement line.

To manually reconcile an individual line, click **Manage Exception Detail**, at the right of the line.

If the line has suggestions, the number of them displays in the **Suggested Item Count** column. When you click the related actions menu icon at the left end of a line with suggestions, the preview window displays these suggestions. If a suggestion is valid, you can click the **Reconcile** button to reconcile to that suggestion.

### Manage Exception Detail

When you click the **Manage Exception Detail** button, it lists each unreconciled line, so you can look at possible transactions with which to reconcile.

- Under Reconciliation Information, use the prompt for the **Reconciled To** field to find an operational transaction to which to match this bank statement.
- The prompt lists suggestions for each of the rules whose action was Suggest Items, if there are any. It also displays a category for all unreconciled items. You can select one or more unreconciled items to reconcile with this bank statement line.

If this item has suggestions, they display at the bottom of the page. You can click the magnifying glass icon at the right of the **Reconcilable Item** field to see details for this suggested transaction.

- If the bank statement line needs an ad hoc transaction, click the **Create** option on the Reconcile To prompt. See [Create Ad Hoc Bank Transaction](#). When you create a matching ad hoc transaction,

it reconciles automatically. After creating the ad hoc transaction, you can return to the **Manage Exception Detail** page.

4. (Optional) Specify a **Reviewer** and enter some notes. Someone else can review comments, or advise on a line before you can reconcile it.

When you enter a user name in the **Reviewer** field and click **OK**, the user receives a Workday task in My Tasks with a link to the bank statement line.

5. (Optional) Check **Select** next to 1 or more of the suggested reconcilable items, and then click **OK**.

If you select items with amounts that don't match, Workday guides you through creating an ad hoc bank transaction for the difference.

6. When you finish with the **Manage Exception Detail** page, click **OK**.

[Concept: Book-to-Bank Reconciliation](#) on page 2043

### Concept: Bank Statement Reconciliation Dashboard

The **Bank Statement Reconciliation** dashboard is a configurable workspace that provides up-to-date, graphical reports on the bank statement reconciliations in your organization. You can view and track information important to making operational decisions or taking action on bank reconciliations.

Workday delivers these report worklets available for use on the dashboard:

Worklet	Description
<b>Auto Reconciliation Trending</b>	Displays the percentage of bank statement lines automatically reconciled over time by bank account.
<b>Bank Statement Integrations</b>	Displays the status of your latest bank statement integrations.  This report worklet is secured to these domains in the Integration functional area: <ul style="list-style-type: none"> <li>• <i>Integration Build</i>.</li> <li>• <i>Integration Debug</i>.</li> <li>• <i>Integration Event</i>.</li> <li>• <i>Integration Reports</i>.</li> </ul>
<b>Latest Bank Statements</b>	Displays the 10 most recently uploaded bank statements and their statuses by company, bank account, and date.
<b>Reconciliation Status by Month</b>	A bar chart that displays the number of bank statement lines and reconciliation status by month.
<b>Unreconciled Bank Statement Lines by Age</b>	Displays the number of unreconciled bank statement lines by age.
<b>Unreconciled Items by Payment Category</b>	Displays the number of unreconciled items by payment category.
<b>Unreconciled Items by Payment Type</b>	Displays the number of unreconciled items by payment type.

Configure the **Bank Statement Reconciliation** dashboard content using the **Maintain Dashboards** report (secured to the *Set Up: Tenant Setup - Worklets* domain in the System functional area). You can also add bank reconciliation related tasks or reports that you frequently use to the dashboard. For quick access, you can add the dashboard as a worklet to the **Home** page.

**Related Information****Tasks**[Save Custom Prompt Values for Worklets](#)[Steps: Set Up Dashboards and Landing Pages](#)**Reference: Bank Account Reconciliation Reports**

This table lists reports that are useful in managing your bank statements and reconciliations.

For a complete list of bank reconciliation reports, access Workday Standard Reports and select these report categories:

- Banking
- Financial Reconciliation and Close
- Set Up Bank Reconciliation

Report	Description
<b>All Condition Rules</b>	View condition rules, their descriptions, and the rule definitions for condition rules used throughout Workday. Select <b>View Condition Rules used as Bank Statement Rules</b> to see condition rules used for reconciliation and other bank-statement-related activities. You can also edit or delete rules.
<b>Bank Reconciliation</b>	<p>Displays summary information about a reconciled bank statement such as the beginning and ending dates, beginning and ending balances, cleared items, and uncleared items up to the statement date.</p> <p>Drill down on the total reconcilable items amount to view all transactions cleared on the bank statement by debit or credit.</p>
<b>Bank Reconciliation Detail</b>	<p>Displays details about a reconciled bank statement such as the beginning and ending balances, cleared items, and uncleared items up to the statement date. Also includes a calculated account register balance that reconciles with the account register report, and a ledger balance as of the statement end date.</p> <p>Drill down on the total reconcilable items amount to view all transactions cleared on the bank statement by debit or credit.</p>
<b>Book to Bank</b>	<p>Compare bank statement balances against the ledger bank balances for a specified period. After running bank statement reconciliations, you can use this report at month end to review the discrepancies between the bank and ledger balances. Example: Identify transactions that posted to the ledger but are still unreconciled.</p> <p>The report information includes:</p> <ul style="list-style-type: none"> <li>• A projected bank account balance based on the reconciled and unreconciled bank statement</li> </ul>

Report	Description
	<p>lines, and beginning balance of the first bank statement.</p> <ul style="list-style-type: none"> <li>The last bank statement ending balance.</li> <li>A projected ledger ending balance based on the unreconciled items, items fully reconciled in a future period, items canceled or escheated in a future period, and reconciled items accounted for in a future period.</li> <li>The actual ledger ending balance.</li> </ul>
<b>Book to Bank by Bank Account Currency</b>	<p>View the book-to-bank report in a single bank account currency. Workday translates multicurrency transactions posted to the ledger using the specified translation rule set and bank account currency.</p>
<b>Cross Statement Reconciliation</b>	<p>Displays groups of reconciled items and bank statement lines from multiple bank statements. Workday creates a reconciled group when multiple bank statement lines are reconciled to 1 or more items.</p>
<b>Find Ad Hoc Bank Transactions</b>	<p>Lists ad hoc bank transactions by company or by company bank account.</p>
<b>Find Bank Statements</b>	<p>View a list of bank statements for a company or specific bank account. Each bank statement includes the status, date, balances, reconciliation status, and transaction count. You can also edit a bank statement from its related actions menu.</p>
<b>Find Bank Statement Lines</b>	<p>Displays all bank statement lines and the reconciliation status for a specified set of bank accounts and bank statements.</p>
<b>Maintain One Sided Reconciliation</b>	<p>View and maintain all reconcilable items that are reconciled with other reconcilable items for a specified bank account.</p> <p>To unreconcile items, click <b>Unreconcile</b> for the set of reconciled items.</p>

### Reference: Bank Statement and Reconciliation Statuses

These tables describe the status values for bank statement and reconciliation tasks.

#### Bank Statement Statuses

Status	Description
<b>Draft</b>	<p>When you first create a bank statement, whether using the quick entry or manual method, the statement has a status of <i>Draft</i>. If you can't complete a bank statement and its associated reconciliation tasks, you can save the statement without submitting it, and the statement retains its draft status.</p> <p>If you use the <b>Change</b> related action to modify an approved bank statement, the status of the statement returns to <i>Draft</i>. You must reselect the</p>

Status	Description
	<b>Submit</b> check box on the statement to send it out for review and approval.
<b>Approved</b>	Once a bank statement is approved, the status changes to <i>Approved</i> . <b>Note:</b> A statement can have a status of <i>Approved</i> even when there are bank statement lines that aren't reconciled. The bank statement has its own status separate from the status of the reconciliation activities.
<b>Canceled</b>	When a bank statement is canceled, Workday will exclude all bank statement lines from reporting and bank reconciliation processes. Bank statement cancellations are permanent.

### Reconciliation Statuses

Status	Description
<b>Reconciled</b>	Before any bank statement bank lines are matched with system transactions, the reconciliation status is <i>Unreconciled</i> . Once all bank statement lines are matched with system transactions, the status changes to <i>Reconciled</i> .
<b>In Process</b>	If some bank statement lines are reconciled and others aren't, the overall bank reconciliation status is <i>In Process</i> .

## Troubleshooting: Automatic Bank Statement Reconciliation Processes

This topic provides strategies for diagnosing and resolving these automatic bank reconciliation issues:

- [First-notice item reconciliation doesn't run after automatic bank reconciliation.](#) on page 2040
- [Matching rule doesn't match check numbers with leading zeros on the bank statement lines.](#) on page 2041

### First-notice item reconciliation doesn't run after automatic bank reconciliation.

Automatic bank reconciliation completes using matching rules but not the first-notice rules. Workday displays first-notice items as unreconciled on these tasks and reports:

- **Manage Bank Reconciliation Exceptions**
- **Manual Bank Reconciliation**
- **View Bank Statement**
- **View Bank Statement Line**

**Cause:** You've more than 50 first-notice rules in the first-notice item rule set.

**Solution:** For a single bank account, you can remove any rules in the first-notice item rule set that aren't applicable for the bank account.

### Steps

1. Access the **View Bank Reconciliation and First Notice Item Rule Sets** report.

Select the first-notice item rule set to edit.

Security: *Set Up: Bank Reconciliation* domain in the Banking and Settlement functional area.

See [Reference: Bank Account Reconciliation Reports](#) on page 2037.

2. Delete any rules that you don't need from the complete list of rules. You can also reorder the remaining rules in the rule set as needed. Workday reconciles items using the rules in specified order.
3. Run first-notice reconciliation either automatically or manually.

See [Steps: Use Bank Account Reconciliation](#) on page 2016.

**Solution:** For multiple bank accounts, you can create additional first-notice item rule sets to customize for each bank account. This enables you to reassign the same rules to different rule sets, or add new rules.

### Steps

1. [Create Rules for First-Notice Items](#) on page 2014.
2. [Create Rule Sets for First-Notice Items](#) on page 2014.
3. Run first-notice reconciliation either automatically or manually.

See [Steps: Use Bank Account Reconciliation](#) on page 2016.

## Matching rule doesn't match check numbers with leading zeros on the bank statement lines.

**Cause:** Workday only matches bank statement line fields with leading zeros to corresponding reconcilable items with leading zeros.

**Solution:** Create a parsing rule set to parse the leading zeros from the check number field on your bank statements.

You can assign the same parsing rule set to multiple bank accounts. If the criteria to parse leading zeros varies across accounts, you can create a different parsing rule set for each account. Example: The string of leading zeros displays in different start positions across your bank statements. For each bank account, you create a customized rule set that parses the string of zeros from its distinct start position.

You can use this solution when you don't need the leading zeros for reporting purposes or to sync with third-party systems.

### Steps

1. [Parse Bank Statements](#) on page 1995.

When you create the parsing rule, select the bank statement line field that contains the check number as your source. To configure the target field, select either:

- A different bank statement line field. When you parse the leading zeros from **Source Field**, Workday moves them to **Target Field** while overriding any existing data.
- The source bank statement line field. When you parse the leading zeros from **Source Field**, Workday replaces both **Source Field** and **Target Field** values with the resulting parsed check number.

2. Access the **Edit Matching Rule Set** task.

Edit your existing matching rule set for each bank account to add a new matching rule.

Security: *Set Up: Matching Rule Set* domain in the Banking and Settlement functional area.

**3. Create Matching Rule Sets for Bank Reconciliation** on page 2007.

Create a new matching rule to match bank statement lines based on the parsed source field. You can select this field in either the **Match On** grid or in condition rules.

**4. Run parsing.**

You can parse either:

- Automatically when you import bank statements.

Workday automatically parses the information from and to the bank statement line fields based on the parsing rule set that you assign to the bank account.

- Manually when you select **Run Parsing** from the related actions menu of an unreconciled bank statement.

**5. Rerun bank reconciliation either automatically or manually.**

See [Steps: Use Bank Account Reconciliation](#) on page 2016.

**Solution:** Create a new matching rule that ignores the leading zeros on check numbers when matching bank statement lines to reconcilable items.

You can use this solution when you need to retain the leading zeros in the reference number field on your bank statement.

## Steps

**1. Access the Edit Matching Rule Set task.**

Edit your existing matching rule set for each bank account to add a new matching rule.

Security: *Set Up: Matching Rule Set* domain in the Banking and Settlement functional area.

**2. Create Matching Rule Sets for Bank Reconciliation** on page 2007.

In the **Match On** grid, select:

- **Statement Line Reference Number with Leading Zeros Stripped** from the **Bank Statement Line** prompt.
- **Transaction Reference with Leading Zeros Stripped** from the **Reconcilable Item** prompt.

**3. Run parsing.**

You can parse either:

- Automatically when you import bank statements.

Workday automatically parses the information from and to the bank statement line fields based on the parsing rule set that you assign to the bank account.

- Manually when you select **Run Parsing** from the related actions menu of an unreconciled bank statement.

Security: *Process: Bank Statement Parsing* domain in the Banking and Settlement functional area.

**4. Rerun bank reconciliation either automatically or manually.**

See [Steps: Use Bank Account Reconciliation](#) on page 2016.

[The Next Level: Optimizing Bank Reconciliation](#)

## Book-to-Bank Reconciliation

---

### Concept: Book-to-Bank Reconciliation

Book-to-bank reconciliation enables you to compare bank account balances and bank activities against cash ledger balances and operational activities. You can use the **Book to Bank Summary** report and subreports to analyze your balances and reconcile any variances.

Discrepancies between the bank and ledger balances can occur when:

- You've recorded transactions in the ledger that the bank hasn't yet processed. Example: Outstanding deposits or checks.
- Your bank statements include first-notice items that you haven't recorded in the ledger. Example: Bank service fees or interest earned on bank accounts.
- You've recorded transactions in the ledger manually that the bank hasn't acknowledged.
- You've canceled or escheated payments for a future period.

### Book to Bank Summary Report

The **Book to Bank Summary** composite report groups the columns into sections that provide detailed information from aggregated subreport data. For each bank account, you should see:

- Bank balances equal to the cash balances.
- Uncleared bank statement lines equal to zero.
- Uncleared operational transactions equal to the sum of all unreconciled items.
- Journals from nonoperational transactions.

Section	Description	Example
Bank Account Information	<p>Displays these columns:</p> <ul style="list-style-type: none"> <li>• <b>Company and Financial Institution:</b> The company and financial institution from your bank account configuration.</li> <li>• <b>Bank Account Currency:</b> The currency from your bank account configuration.</li> <li>• <b>Transaction Currency:</b> The currency from the transactions.</li> </ul> <p>For manual journals, the report displays:</p> <ul style="list-style-type: none"> <li>• Entries with different transaction currencies in multiple rows for the bank account.</li> <li>• Entries without the <b>Bank Account</b> worktag in a row with blank <b>Bank Account</b> and <b>Company</b> fields.</li> </ul> <p>If you've mapped the bank account to a company hierarchy, the report displays aggregated</p>	

Section	Description	Example
	results for all companies in the company hierarchy.	
Bank and Cash Ledger Balances	<p>Displays these columns:</p> <ul style="list-style-type: none"> <li><b>Bank Balance:</b> The ending balance on the last noncanceled bank statement before the end of the period. If there isn't a bank statement available in the current month, Workday uses the last available statement from the prior month.</li> <li><b>Cash Ledger Balance:</b> The cash ledger amount associated with the bank worktag.</li> <li><b>(A-B) Gross Difference:</b> The difference between the balance amounts for reconciliation.</li> </ul>	<p>Workday calculates the bank balances based on the latest bank statement upload as described in these scenarios:</p> <ul style="list-style-type: none"> <li>You uploaded the last statement on March 29, 2022. Workday uses the ending balance on the March 29 statement as the bank balance for the month of March.</li> <li>When you upload the March 31 statement, Workday uses this bank balance for the month of March.</li> <li>If you don't upload a statement for the month of April, Workday uses the ending balance from the March 31 statement.</li> </ul> <p>Workday derives the period-end cash balances by bank using the ledger accounts specified in the cash account posting rule. Workday summarizes the total cash balance for all ledger accounts in the rule using the trial balance for each month.</p>
Unreconciled Transactions	<p>Displays the outstanding bank statement lines and operational transactions that aren't reconciled. Each column corresponds to a subreport where you can view the statement line or transaction details:</p> <ul style="list-style-type: none"> <li><b>Uncleared Bank Statement Lines:</b> The unreconciled bank statement lines in a prior or current period.</li> <li><b>Uncleared Operational Transactions:</b> The unreconciled operational transactions in a prior or current period.</li> </ul> <p>Workday recommends starting book-to-book reconciliation after you've resolved all uncleared bank statement lines. See <a href="#">Concept: Management of</a></p>	Workday displays the bank statement lines and operational transactions that were either never reconciled, or previously reconciled and then later unreconciled.

Section	Description	Example
	<a href="#">Unreconciled Items</a> on page 2034.	
Transaction Variances	<p>Displays the activities that could cause the discrepancies between the bank statement and ledger balances for the period. Each column corresponds to a subreport where you can view the statement line or transaction details:</p> <ul style="list-style-type: none"> <li><b>Cross Period Reconciled Bank Statement Lines :</b> The statement lines in a future period reconciled to operational transactions with an accounting date that's in either the selected or earlier period.</li> <li><b>Cross Period Reconciled Operational Transactions:</b> The future-period operational transactions reconciled to statement lines with a line date that falls in either the selected or earlier period.</li> <li><b>Reconcilable Items Stopped, Canceled or Escheated in Future Period:</b> The payments marked as stopped for a specified date range and company. It also includes reconcilable items marked as canceled or escheated for a future period.</li> <li><b>Non-Operational Transactions:</b> The nonoperational cash journal lines posted to the ledger account in a prior or current period.</li> <li><b>Payments in Settlement:</b> All settled payments in a prior or current period that are awaiting payment acknowledgment or rejected by the bank. The payments are for bank accounts configured with required payment acknowledgments.</li> </ul>	<ul style="list-style-type: none"> <li><b>Cross Period Reconciled Bank Statement Lines:</b> You reconcile an operational transaction posted in March with a bank statement line reported in April. When you run this report in March, it displays the April reconciled bank statement lines.</li> <li><b>Cross Period Reconciled Operational Transactions:</b> You reconcile an operational transaction posted in April with a bank statement line reported in March. When you run this report in March, it displays the April reconciled operational transactions.</li> <li><b>Reconcilable Items Stopped, Canceled or Escheated in Future Period:</b> You issued and posted a check in March. You then cancel the check in April. When you run the report for March, it displays the canceled (or escheated) check payments in April or a future period.</li> <li><b>Non-Operational Transactions:</b> You can view the manual journals created with cash ledger accounts and bank account worktags.</li> <li><b>Payments in Settlement:</b> When the bank confirms they've received payments, Workday removes the payments from this report. For rejected payments, you can either cancel or reprocess the payments.</li> </ul>
Summary	An analytic indicator highlights the bank accounts in red that have unexplained differences.	When you run the summary report and see unexplained differences for the current period,

Section	Description	Example
	Review the detailed <b>Book to Bank Summary</b> subreports to help you determine the root causes.	<p>you can run the report for each previous period until there aren't any differences.</p> <p>If you see unexplained differences in the first period that you started using Workday, we recommend that you review your converted bank and trial balances. You can use accounting journals to correct the differences.</p>

## Process: Book-to-Bank Reconciliation

### Context

You can use this checklist of tasks to help guide you through a book-to-bank reconciliation.

### Steps

**1. Access the Find Bank Statements report.**

Verify that you've entered or uploaded all of your prior day bank statements for the period.

Security: These domains in the Banking and Settlement functional area:

- *Process: Bank Reconciliation*
- *Process: Bank Statement - Reporting*

**2. Access the Book to Bank Summary - Uncleared Bank Statement Lines and Book to Bank Summary - Uncleared Operational Transactions reports.**

Check for unreconciled statement lines and operational transactions.

Security: These domains in the Banking and Settlement functional area:

- *Process: Bank Reconciliation*
- *Process: Bank Statement - Reporting*

See [Concept: Management of Unreconciled Items](#) on page 2034.

**3. Access the Book to Bank Summary report.**

Review the status of your bank accounts. You can use the color-coded health indicator to identify the balances that require the most attention.

Security: *Report Execution* domain in the Tenant Non-Configurable functional area.

**4. Review the transaction variances and additional information in the book-to-bank subreports.**

See [Reference: Book-to-Bank Reports](#) on page 2047.

5. (Optional) Run these tasks to fix any cash journals in error:

- **Fix Operational Journals With Errors**
- **Fix Data Errors for Journal Entries**

Security:

- *Process: Audits and Corrections* domain in the Financial Accounting functional area.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

See [Troubleshooting: Financial Journals](#) on page 132.

##### Tasks

[Steps: Use Bank Account Reconciliation](#) on page 2016

## Reference: Book-to-Bank Reports

You can use the book-to-bank reports to perform a thorough book-to-bank analysis that meets audit and management reporting requirements. After you run bank reconciliations, you can use the summary and subreports to review variances between the bank account and cash ledger balances and determine the corrective actions to take.

This table describes the reports in more detail:

Report	Description	Security
<b>Book to Bank Summary</b>	<p>Compares bank statement balances against the ledger bank balances in a summarized, high-level format. Using key metrics, you can identify the root causes of discrepancies between the balances for a specified company or company hierarchy, period, and bank accounts. You can drill down into the report column details, or access the associated subreports for more logical subgroupings of the details.</p> <p>Graphical indicators on the right side of the report represent the status of your bank account balances:</p> <ul style="list-style-type: none"> <li>• Green circle: All differences between the bank balance and cash ledger balance are accounted for and explained in the report.</li> <li>• Red diamond: Unexplained differences between the bank balance and cash ledger balance require further analysis.</li> </ul>	<i>Report Execution</i> domain in the Tenant Non-Configurable functional area.
<b>Book to Bank Summary - Bank Account Balance</b>	Displays the prior-day ending bank balance in bank account currency using the latest	These domains in the Banking and Settlement functional area: <ul style="list-style-type: none"> <li>• <i>Process: Bank Reconciliation</i></li> </ul>

Report	Description	Security
	<p>noncanceled bank statements for the period. You can use this subreport to assess your ending bank balance for the selected company or company hierarchies, period, and bank accounts. You can also drill down on a prior-day ending bank balance for a bank account to:</p> <ul style="list-style-type: none"> <li>• Compare the beginning and ending ledger balances.</li> <li>• View the bank statement summary of the opening and closing ledger amounts and transaction details.</li> <li>• View the number of unreconciled bank statement lines.</li> </ul>	<ul style="list-style-type: none"> <li>• <i>Process: Bank Statement – Reporting</i></li> <li>• <i>Set Up: Bank Entity</i></li> </ul> <p><i>Reports: Cash Forecast Reporting</i> domain in the Cash Management functional area.</p>
<b>Book to Bank Summary - Ledger Balance</b>	<p>Displays month-end cash ledger balances in bank account currency for a specified period and company. You can use this subreport to:</p> <ul style="list-style-type: none"> <li>• View the ledger balances for each of your bank accounts. Workday calculates the balances as the sum of the transaction debit minus the credit.</li> <li>• Drill down on the balance for each journal source to view all transaction details.</li> <li>• Identify unreconciled cash journal lines to reconcile with bank statement lines.</li> </ul>	<p><i>Reports: Financial Accounting</i> domain in the Financial Accounting functional area.</p>
<b>Book to Bank Summary - Uncleared Bank Statement Lines</b>	<p>Displays unreconciled bank statement lines in a prior or current period. You can use this subreport to:</p> <ul style="list-style-type: none"> <li>• Compare all reconciled statement lines with unreconciled statement lines for a root-cause analysis on bank balance differences.</li> <li>• Drill down on bank statement lines to view the details.</li> </ul> <p>You can then decide whether to:</p> <ul style="list-style-type: none"> <li>• Create an ad hoc bank transaction for either the bank statement line amount</li> </ul>	<ul style="list-style-type: none"> <li>• <i>Process: Bank Statement - Reporting</i> domain in the Banking and Settlement functional area.</li> <li>• <i>Reports: Cash Forecast Reporting</i> domain in the Cash Management functional area.</li> </ul>

Report	Description	Security
	<p>or the difference between the statement line and a transaction.</p> <ul style="list-style-type: none"> <li>Reconcile a bank statement line with the reconcilable item to clear the bank statement line.</li> </ul>	
<b>Book to Bank Summary - Uncleared Operational Transactions</b>	<p>Displays all unreconciled operational transactions in a prior or current period. You can use this subreport to:</p> <ul style="list-style-type: none"> <li>View all reconciled items with the unreconciled items for a root-cause analysis on ledger balance differences.</li> <li>Drill down on operational transaction totals to view individual item details.</li> </ul> <p>You can then decide whether to:</p> <ul style="list-style-type: none"> <li>Create an ad hoc bank transaction for either the reconcilable item amount or the difference between the statement line and a reconcilable item.</li> <li>Reconcile a reconcilable item with the corresponding bank statement line to clear the transaction.</li> </ul> <p>Note that this report excludes unreconciled electronic payment reconciliation groups (EPRG).</p>	<i>Process: Bank Reconciliation</i> domain in the Banking and Settlement functional area.
<b>Book to Bank Summary - Cross Period Reconciled Bank Statement Lines</b>	<p>Displays the future-period bank statement lines reconciled to operational transactions with an accounting date that falls in either the selected or earlier period.</p> <p>Example: You reconcile a transaction posted to the ledger in the selected period to its corresponding bank statement line that's recorded for the next period. You can use this subreport to determine if the transaction amount is the variance between the bank and ledger balances displayed on the <b>Book to Bank Summary</b> report for the selected period.</p>	<ul style="list-style-type: none"> <li><i>Process: Bank Statement - Reporting</i> domain in the Banking and Settlement functional area.</li> <li><i>Reports: Cash Forecast Reporting</i> domain in the Cash Management functional area.</li> </ul>

Report	Description	Security
<b>Book to Bank Summary - Cross Period Reconciled Operational Transactions</b>	<p>Displays the future-period operational transactions reconciled to bank statement lines with a line date that falls in either the selected or earlier period.</p> <p>Example: You reconcile a bank statement line in the selected period to a reconcilable item that's posted to the ledger in the future period. You can use this subreport to determine if this transaction amount is the variance between the bank and ledger balances displayed on the <b>Book to Bank Summary</b> report for the selected period.</p>	<i>Process:</i> <i>Bank Reconciliation</i> domain in the Banking and Settlement functional area.
<b>Book to Bank Summary - Reconcilable Items Stopped, Canceled or Escheated in Future Period</b>	<p>Displays:</p> <ul style="list-style-type: none"> <li>Payments marked as stopped for a specified date range and company.</li> <li>Reconcilable items marked as canceled or escheated for a future period.</li> </ul> <p>You can use this subreport to:</p> <ul style="list-style-type: none"> <li>Take corrective actions on the payments marked as stopped.</li> <li>View the reversal entries for canceled or escheated payments posted in a future period.</li> </ul>	<i>Process:</i> <i>Bank Reconciliation</i> domain in the Banking and Settlement functional area.
<b>Book to Bank Summary - Non-Operational Transactions</b>	<p>Displays the nonoperational cash journal lines posted to the ledger account in a prior or current period. You can use this subreport to:</p> <ul style="list-style-type: none"> <li>View cash journal amounts for nonoperational transactions, such as manual or Accounting Center journals.</li> <li>Assess the differences between ledger balances and bank balances.</li> </ul>	<i>Reports:</i> <i>Financial Accounting</i> domain in the Financial Accounting functional area.
<b>Book to Bank Summary - Payments in Settlement</b>	<p>Displays all settled payments in a prior or current period that are awaiting payment acknowledgment or rejected by the bank. The payments are for bank accounts configured</p>	<i>Process:</i> <i>Bank Reconciliation</i> domain in the Banking and Settlement functional area.

Report	Description	Security
	<p>with required payment acknowledgments.</p> <p>You can use this subreport to:</p> <ul style="list-style-type: none"> <li>• View payments that aren't reconcilable based on a payment acknowledgment status. These also include non-canceled payments from electronic payment reconciliation groups (EPRG).</li> <li>• Determine the corrective action to take, such as canceling or reprocessing the payments. You can then reconcile the cash ledger balances to your bank balances.</li> </ul>	
<b>Book to Bank Summary - Cash Journals in Error</b>	<p>Displays operational and nonoperational cash journal lines posted to the ledger account with errors. Example: Missing ledger accounts due to incorrect cash account posting rules. The report includes all journal lines in a prior, current, or future period.</p> <p>You can use this subreport to determine the root causes of differences between bank balances and ledger bank balances due to errors in the posted journal lines.</p>	<i>Reports: Financial Accounting domain in the Financial Accounting functional area.</i>

##### Concepts

[Concept: Book-to-Bank Reconciliation](#) on page 2043

## Banking Cash Pools

---

### Setup Considerations: Banking Cash Pools

You can use this topic to help make decisions when planning your configuration and use of banking cash pools. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

You can create a cash pool to consolidate bank balances on different accounts in a single structure. This enables you to analyze the balances and optimize the interest paid and received on a pooled account to improve global liquidity management.

## Business Benefits

Cash pools enable you to:

- Maintain master and subaccount relationships within Workday instead of external spreadsheets.
- Track bank account balances and activity in cash position and balance reports by cash pool.
- Evaluate when to transfer funds across bank accounts in a banking network based on the collective cash pool balance.
- Maintain optimal balances in master and subaccounts to maximize interest income and reduce bank fees.

## Use Cases

You can use cash pools to:

- Group multiple subaccounts across companies, financial institutions, and currencies into a master account to simplify your reporting.
- Translate subaccount currencies into a single master bank account currency to display on cash position reports.
- View your daily cash position, bank account target balances, and surplus and deficit amounts within a cash position report filtered by cash pool.
- Initiate fund transfers across subaccounts based on current day and prior day cash pool balances.

## Questions to Consider

Question	Considerations
How does Workday report multicurrency subaccount balances with the master bank account currency?	Workday uses the currency rate type you select in the cash pool balance summary reports to translate all account currencies to the reporting currency. You can view the cash pool net balance and subaccount balances in a single currency.
How do you move funds across subaccounts in a cash pool?	<p>You can create bank account transfers for settlement to move funds across subaccounts within the same or different cash pools. You can transfer and settle the funds using the EFT or wire payment type.</p> <p>Once Workday settles the transferred amounts, the <b>Intraday Cash Pool Balance Summary</b> report reflects the new account balances using the updated intraday bank statement.</p>

## Recommendations

- If you manage a large number of bank accounts, consider grouping them into cash pools by payment category or type. Example: A cash pool for payroll payments, and separate pools for supplier invoice payments and check payments. You can then track the account balances and transactions by their pooled accounts.

- To maintain a hierarchical structure across multiple cash pools, you can define a selected bank account as a master account in 1 cash pool and a subaccount in another cash pool. Example: A subaccount in a global pool as a master account in a regional pool.
- You can use cash pool report fields in custom reports to track bank account balances, bank account transfers, and cash forecasting.

## Requirements

To transfer funds across bank accounts for multiple companies, set up an intercompany profile for multicompany cash pools using the **Edit Company Intercompany Profile** task.

## Limitations

A cash sweep solution for cash pools isn't currently available. You can use cash pool and cash position reports to determine where to manually transfer funds using a bank account transfer for settlement.

## Tenant Setup

No impact.

## Security

Domain	Considerations
<i>Set Up: Cash Pool</i> in the Cash Management functional area	Enables users to create, view, and edit cash pools and custom cash pool reports. Users can also use the <b>Find Cash Pools</b> report and access all of its related actions.
<i>Reports: Cash Forecast Reporting</i> in the Cash Management functional area	Enables users to view the cash pool standard and custom reports.
<i>Set Up: Company Accounting</i> in the Common Financial Management functional area	Users secured to this domain can create an intercompany profile to transfer funds across bank accounts for different companies.

## Business Processes

No impact.

## Reporting

Report or Dashboard	Considerations
<b>Find Cash Pool</b> report	Enables you to search for and view the cash pools for your organization.  You can select these related actions on a cash pool: <ul style="list-style-type: none"> <li>• <b>Edit</b> to change any of the attributes. You can also add or remove subaccounts.</li> <li>• <b>Copy</b> to change the master account or subaccounts and save it as a new cash pool.</li> <li>• <b>Inactivate</b> to mark it as inactive so that it's unavailable for cash pool reporting.</li> </ul>
<b>Intraday Cash Pool Balance Summary</b> report	Displays the current day balances in reporting currency by cash pool using your intraday bank

Report or Dashboard	Considerations
	statements. The report displays the balances for the master account and each subaccount.
<b>Prior Day Cash Pool Balance Summary</b> report	Displays the prior day balances in reporting currency by cash pool using your prior day bank statements. The report displays the balances for the master account and each subaccount.
<b>Intraday and Prior Day Cash Position</b> reports	<p>You can use cash position reports to view your cash receipts and payments using intraday or prior day bank statements and external cash activities. You can filter the bank accounts by cash pool.</p> <p>The reports help identify where you need to transfer cash based on surplus or deficit amounts and the target balance and closing balance of the accounts.</p>

We provide these business objects that you can use to build custom reports:

- **Cash Pool**
- **Cash Pool Type**

We provide the **Cash Pool** report data source that you can use in custom reports. This data source returns 1 row per cash pool. It prompts you for the bank account, subaccount, cash pool, and account currency to filter the report results.

## Integrations

- Workday provides these web services that you can use to import and export cash pool data:
  - *Get Cash Pools*
  - *Put Cash Pool*
- To make bank account transfer payments, set up bank integrations to generate the payment files for settlement processing and delivery to your banks. You can assign an integration system to each electronic payment type for the bank accounts you plan to use for settlement processing.

## Connections and Touchpoints

You add bank account transfer payments to manual or automatic settlement runs. When the transfer payments settle, Workday moves the funds between the bank accounts and generates the associated accounting entries.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Concepts

### Tasks

[Steps: Perform Bank Account Transfers for Settlement](#) on page 1976

### Reference

[Reference: Cash Position Reports](#) on page 2066

## Create Banking Cash Pools

### Prerequisites

- Set up an intercompany profile for multicurrency cash pools.
- Security: *Set Up: Cash Pool* domain in the Cash Management functional area.

### Context

Create a cash pool to combine your balances on a number of separate bank accounts into a single account. You can consolidate multiple subaccounts across companies, financial institutions, and currencies into a master account to:

- Report on bank account balances and activity by cash pool.
- Evaluate when to transfer funds across bank accounts based on the collective cash pool balance.

### Steps

1. Access the **Create Cash Pool** task.

2. Select a company bank account to use as the master account.

Workday aggregates the bank balances from the subaccounts to this master bank account in your structure.

3. Select 1 or more subaccounts to link to the master bank account in the cash pool.

You can add subaccounts either in the same currency or multiple currencies to the master bank account.

### Result

You can now manage your total cash balances in a centralized account. The cash pool enables you to optimize the interest paid and received on a pooled balance to improve liquidity management.

### Next Steps

- Use the **Find Cash Pool** report to find and view the cash pools for your organization. You can select these options from the related actions menu of a cash pool:
  - **Edit** to change any of the attributes. You can also add or remove subaccounts.
  - **Copy** to change the master account or subaccounts and save it as a new cash pool.
  - **Inactivate** to mark it as inactive so that it's unavailable for cash pool reporting.
- Use these reports to view the cash pool balances and evaluate the need for transferring funds across your financial institutions:
  - **Intraday Cash Pool Balance Summary**: Displays the current day balances in reporting currency by cash pool using your intraday bank statements.
  - **Prior Day Cash Pool Balance Summary**: Displays the prior day balances in reporting currency by cash pool using your prior day bank statements.

Workday uses the currency rate type that you select in the reports to translate the master and subaccount currencies to a single reporting currency.

You select balance type codes to view the cash pool balances for the master and subaccounts. Workday automatically includes the closing ledger balance type codes for these bank statement file formats:

- BAI2 – Type Code 015
- BTRS – Type Code 015
- ISO – Type Code CLBD
- MT940/942 – Type Code 62F

- Create bank account transfers for settlement to move funds across accounts within the same or different cash pools. You can transfer and settle the funds using the EFT or wire payment type.

[Steps: Perform Bank Account Transfers for Settlement](#) on page 1976

---

## **Cash Positioning**

### **Setup Considerations: Cash Positioning**

You can use this topic to help make decisions when planning your configuration and use of cash positioning. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### **What It Is**

In Workday, you can generate cash position reports to assess and manage your daily inflows, outflows, and bank account balances from bank statements and external cash flows.

#### **Business Benefits**

Cash positioning enables you to:

- Track your cash balances and bank account transactions on specific dates.
- Make informed decisions on moving funds across multiple bank accounts.
- Make more accurate cash projections for the near term.
- Analyze cash flow trends to understand how well your organization is managing cash.

#### **Use Cases**

You can use cash positioning to:

- Compare your current day cash position with pending liabilities to minimize overdrafts.
- Make efficient investment and borrowing decisions based on a surplus or shortfall of bank balances.
- Maximize interest income by concentrating funds into a specific account.
- Prepare for projecting the next opening available bank balances with float.

#### **Questions to Consider**

<b>Question</b>	<b>Considerations</b>
Do you need to create cash activity category worktags for cash position reporting?	You use cash activity category worktags to establish the cash position reporting structure. When you map cash activity category worktags to bank statement lines, you group your daily cash receipts and payments into logical categories for more granular level reporting.

Question	Considerations
	<p>Example: You can group all of your electronic payments associated to different bank statement type codes under the <i>EFT Payments</i> cash activity category.</p> <p>When you don't use the worktags, Workday displays all cash activities under the <b>Other Inflows and Other Outflows</b> column on the reports.</p>
How can you view your prior day and intraday cash positions?	<p>Workday provides these types of reports:</p> <ul style="list-style-type: none"> <li>Prior day reports for viewing the actual closing balance and cash activities as of the end of the previous day. These reports are based on your prior day bank statements.</li> <li>Intraday reports for viewing your daily cash positions with the opening balance and most recent cash activities, such as pending items that aren't yet cleared. These reports are based on your intraday bank statements.</li> </ul>
How can you view concentration bank accounts and zero balance accounts (ZBA) on a consolidated cash position report?	<p>You can define the relationship between the concentration and ZBA accounts using cash pools. Cash pools enable you to define the master and subaccount cash activities in a single logical grouping. You can filter by cash pool in cash position reports.</p>
How do you compare a cash position with a cash forecast?	<p>Create and generate a cash forecast to compare with your actual cash flows. When you define the cash forecast outline structure, you can map cash activity worktags to the outline rows. Then, you can run the <b>Cash Forecast to Actuals in Reporting Currency</b> report to view the cash position values compared with cash forecasts.</p>

## Recommendations

- Define cash activity worktags to the level of detail that you want in your cash position reports. You can choose how to organize your inflows and outflows into logical groups using the worktags. Then, assign the cash activity worktags to type codes on bank statement lines using bank statement worktag mappings. Workday groups your daily cash activities on the reports based on the bank statement worktag definitions.
- You can record external cash activities to include in your intraday cash positions. External cash activities originate outside of Workday and aren't included on your intraday bank statements. Examples include investment payments from third-party systems or recurring cash activities such as rent payments. When you generate cash position reports, they display your daily cash position based on the external cash activities and bank account balances.
- Consolidate related bank accounts into a cash pool. You can group multiple subaccounts across companies, financial institutions, and currencies into a single account to evaluate funding needs based on a collective bank account balance. You can filter the cash position reports by cash pool.
- Use the advanced reporting capabilities in Worksheets to create a cash position. You can link your custom cash position reports as live data in a worksheet. To create cash position reports with the most current information, you can use the automatic scheduling feature in Worksheets to schedule regular updates.

## Requirements

Upload or manually record prior day or intraday bank statements in these formats:

- BAI2.
- BTRS.
- ISO 20022.
- MT940/942.
- Custom formats such as comma separated value (CSV).

## Limitations

You can't use quick entry bank statements for cash position reporting since they don't contain type codes and cash activity category worktags. You can only use them for bank account reconciliations.

## Tenant Setup

No impact.

## Security

Domain	Considerations
<i>Process: Cash Forecast Reporting</i> in the Cash Management functional area	Users can: <ul style="list-style-type: none"> <li>Record external cash activities to include in intraday cash positions.</li> <li>Create cash activity groups for recurring external cash activities.</li> </ul>
<i>Report Execution</i>	Users can view the cash position standard and custom reports.
<i>Process: Bank Statement - Reporting</i> in the Banking and Settlement functional area	Users can create a custom report using the <b>Bank Statement Lines</b> report data source to view all bank statement lines by bank account.
<i>Reports: Cash Forecast Reporting</i> in the Cash Management functional area	Users can compare forecasted cash activities with actual cash positions in the <b>Cash Forecast to Actuals in Reporting Currency</b> report. Users can also build custom reports using report data sources and filters.

## Business Processes

Business Process	Considerations
<i>Bank Statement Event</i>	Configure to route prior day bank statements for approvals.
<i>Intraday Bank Statement Event</i>	Configure to route intraday bank statements for approvals.

## Reporting

Report or Dashboard	Considerations
Cash Management dashboard	<p>These worklets provide insights into your prior day and intraday cash positions:</p> <ul style="list-style-type: none"> <li>• <a href="#">Intraday Balance by Bank Account</a></li> <li>• <a href="#">Intraday Balance Summary</a></li> <li>• <a href="#">Prior Day Balance by Bank Account</a></li> <li>• <a href="#">Prior Day Balance Summary</a></li> <li>• <a href="#">Prior Day Ending Balance by Bank Account</a></li> <li>• <a href="#">Prior Day Ending Balance Summary</a></li> <li>• <a href="#">Prior Day Statements by Date</a></li> </ul>
<b>Intraday Cash Position in Bank Account Currency report</b>	View current day cash receipts and payments in the bank account currency using intraday bank statements and external cash activities.
<b>Intraday Cash Position in Reporting Currency report</b>	View current day cash receipts and payments in a single reporting currency using intraday bank statements and external cash activities.
<b>Prior Day Cash Position in Bank Account Currency report</b>	View prior day cash receipts and payments in bank account currency using prior day bank statements.
<b>Prior Day Cash Position in Bank Account Currency (Using Beginning Balance) report</b>	View prior day cash receipts and payments in bank account currency using prior day bank statements. The cash position is based on bank statement ending balances.
<b>Prior Day Cash Position in Reporting Currency report</b>	View prior day cash receipts and payments in a single reporting currency using prior day bank statements.
<b>Prior Day Cash Position in Reporting Currency (Using Beginning Balance) report</b>	View prior day cash receipts and payments in a single reporting currency using prior day bank statements. The cash position is based on bank statement ending balances.

We suggest using these report data sources and filter to build custom reports:

Report Data Source or Filter	Considerations
<b>Bank Statement Balance(All) data source</b>	Displays the cash balances at the bank account level. It prompts you for the financial institution, currency, bank account, company, and starting and ending bank statement dates to filter the results.
<b>Bank Statement Lines data source</b>	Displays the prior day cash inflows and outflows. It prompts you for the bank accounts, bank statements, and start and end dates to filter the results.
<b>Intraday Bank Statement Lines data source</b>	Displays the intraday cash inflows and outflows. It prompts you for the bank account, and starting and ending bank statement line dates to filter the results.

Report Data Source or Filter	Considerations
<b>Prior Day Carry Forward Bank Account Balances for Weekends and Holidays</b> data source filter	<p>Use this filter to carry forward ending balances from the last bank statements to opening balances for weekends or holidays. It enables your cash position report to reflect more accurate account balance totals for that period.</p> <p>Example: A cash position report displays opening balances as 0.00 on country-specific holidays for several of your bank accounts. This zero balance resulted from unavailable bank statements on the holidays.</p>

## Integrations

Web Service	Considerations
<i>Import Bank Statement</i>	Mass imports prior day bank statements with cash balances and cash inflows and outflows to use for prior day cash positions.
<i>Import Intraday Bank Statement</i>	Mass imports intraday bank statements with cash balances and cash inflows and outflows to use for intraday cash positions.
<i>Put Cash Activity Category</i>	Loads cash activity categories into Workday to use for categorizing cash inflows and outflows on prior day and intraday cash positions.

## Steps: Manage Cash Positioning

### Context

You can use cash position reports to determine your daily cash position based on bank account balances and external cash flows. You can compare current day cash position with pending liabilities to make more informed decisions on bank account transfers and bank account balances. Example: Based on your current cash position, you decide to:

- Invest surplus funds in short-term and long-term investments.
- Transfer funds between accounts to avoid potential overdrafts.

## Steps

### 1. Record prior day and intraday bank statement information in Workday.

You can:

- [Enter Bank Statements Manually](#) on page 2018.
- [Enter Intraday Bank Statements Manually](#) on page 2061.
- Configure a bank statement integration to upload bank statement files in bulk.

See [Steps: Set Up Bank Statement Load Integration](#).

### 2. (Optional) Configure cash activity categories.

Map cash activity worktags to bank statement type codes to group your cash receipts and payments by logical category on cash position reports.

See [Steps: Define Cash Activity Categories](#) on page 1992.

### 3. (Optional) [Record External Cash Activities](#) on page 2063 or [Record Recurring or Distributed External Cash Activities](#) on page 2064.

Record cash activities from external sources to include in your intraday cash positions.

### 4. (Optional) Configure normalized bank balances.

Map bank statement balance type codes to normalized balances to standardize the bank balances from different statement file formats on cash position reports.

See [Steps: Define Normalized Bank Balances](#) on page 1993.

### 5. Generate prior day or intraday cash position reports.

See [Reference: Cash Position Reports](#) on page 2066.

## Related Information

### Concepts

[Concept: Cash Management Dashboard](#) on page 2106

## Enter Intraday Bank Statements Manually

### Prerequisites

Configure the *Intraday Bank Statement Event* business process and security policy in the Cash Management functional area.

### Context

You can record your intraday bank statements in Workday to determine your daily cash position. Intraday statements can include a combination of booked and pending items. Workday enables you to enter or import any number of intraday bank statements per day without impacting prior day bank statement reconciliations.

## Steps

### 1. Access the **Record Intraday Bank Statement** task.

### 2. Specify the **Statement Date** from the bank statement.

Workday automatically populates the date that follows the previous statement date for the bank account.

### 3. Enter the balances and transactions from the bank statement by type code.

### 4. As you complete the task, consider:

Option	Description
Type Code	Select the type code that identifies the type of activity on the bank statement line. Example:

Option	Description
	<p>Type code 475 that identifies a paid check amount.</p> <p>You can select predefined custom type codes or standard type codes. The type codes are based on the bank statement format associated with the bank account.</p>
<b>Value Date</b>	<p>(Optional) Enter the date when the financial institution recognizes the full transaction value on the bank statement line. When you specify a value date, you can:</p> <ul style="list-style-type: none"> <li>• Group multiple bank statement lines or match individual lines by their value date using matching rules for automatic bank reconciliations.</li> <li>• Generate ad hoc bank transactions and the associated accounting based on the value date for manual or automatic bank reconciliations. Workday posts the journal lines to the accounting period containing the value date. If this period is closed, Workday posts the journal lines to the next open period.</li> </ul> <p>If you don't specify a value date, the ad hoc transactions reflect the bank statement line date by default.</p>

## Result

Workday routes the intraday bank statement for approvals.

## Next Steps

- Generate intraday reports to assess your cash position.
- Use the **Find Intraday Bank Statement** report to locate this statement and make changes, such as new or removed transactions, or edits to transaction details.

## Related Information

### Reference

Reference: [Cash Position Reports](#) on page 2066

## Steps: Enter External Cash Activities

### Context

You can record external cash activities that you're anticipating for a given period. External cash transactions originate outside of Workday and aren't reflected on your intraday bank statements. Example: Cash flows from third-party systems such as investment payments.

### Steps

1. [Record External Cash Activities](#) on page 2063 or [Record Recurring or Distributed External Cash Activities](#) on page 2064.

2. (Optional) Edit and mark the external cash activity or cash activity group as processed when it settles and appears on your bank statement.

You can edit the cash activities using these reports:

- **Find External Cash Activities**
- **Find Recurring or Distributed External Cash Activity Group**

Your calculated closing balance in intraday cash position reports will reflect your most current cash activities that are still pending.

## Result

Workday includes the operating activities in your intraday cash position for each bank account.

## Next Steps

Generate cash position reports to view your daily cash position.

## Record External Cash Activities

### Prerequisites

Security: *Process: Cash Forecast Reporting* domain in the Cash Management functional area.

### Context

Record external cash activities in Workday to include in your intraday cash positions.

### Steps

1. Access the **Create External Cash Activity** task.
2. As you complete the task, consider:

Option	Description
<b>Cash Activity Date</b>	On intraday cash position reports, Workday includes only the transactions that match the specified cash activity date.
<b>Currency</b>	Select the currency to use for the external cash activity transactions.  On intraday cash position reports, you can select to display multicurrency transactions using the reporting currency or bank account currency.
<b>Debit/Credit</b>	The debit and credit transactions display as inflows and outflows on the cash position reports.
<b>Counterparty</b>	(Optional) Select a predefined counterparty, or create an ad hoc counterparty to associate with the payment or receipt. These include suppliers, customers, investors, or any user-defined counterparties.  On the cash position reports, you can drill down on each cash activity to view the counterparty for the transaction.
<b>Processed</b>	(Optional) When Workday processes the pending external cash activity, select to remove it from

Option	Description
	the calculated closing balance and update the bank account balances on intraday cash position reports.
<b>Worktags</b>	(Optional) Select a cash activity category worktag to associate with the transaction. The cash position reports use the worktags to group bank statement lines by the type of cash activity.  If you don't select a worktag, Workday groups the transactions under <b>Other Inflows</b> or <b>Other Outflows</b> on the reports.

## Result

You can generate a current day cash position using bank statements and external cash activities for more accurate reporting.

## Next Steps

Use the **Find External Cash Activities** report to review and track all of your external cash activities.

You can also access the **Edit External Cash Activity** task from the related actions menu of an external cash activity to edit and change the details.

## Related Information

### Tasks

[Steps: Manage Cash Positioning](#) on page 2060

[Steps: Define Cash Activity Categories](#) on page 1992

## Record Recurring or Distributed External Cash Activities

### Prerequisites

Security: *Process: Cash Forecast Reporting* domain in the Cash Management functional area.

### Context

For recurring external cash activities, such as rent payments or controlled disbursements, you can create cash activity groups to:

- Configure cash activity amounts to reoccur on a regular basis.
- Distribute a specified cash activity sum amount across multiple days.

### Steps

- Access the **Create Recurring or Distributed External Cash Activity Group** task.
- As you complete the task, consider:

Option	Description
<b>Currency</b>	Select the currency to use for the external cash activity transactions.  On intraday cash position reports, you can select to display multicurrency transactions using the reporting currency or bank account currency.

Option	Description
<b>Debit/Credit</b>	The debit and credit transactions display as inflows and outflows on the cash position reports.
<b>Counterparty</b>	<p>(Optional) Select a predefined counterparty, or create an ad hoc counterparty to associate with the payment or receipt. These include suppliers, customers, investors, or any user-defined counterparties.</p> <p>On the cash position reports, you can drill down on each cash activity to view the counterparty for the transaction.</p>
<b>Processed</b>	(Optional) When Workday processes the pending external cash activity group, select to remove it from the calculated closing balance and update the bank account balances on intraday cash position reports.
<b>Worktags</b>	<p>(Optional) Select a cash activity category worktag to associate with the transaction. The cash position reports use the worktags to group bank statement lines by the type of cash activity.</p> <p>If you don't select a worktag, Workday groups the transactions under <b>Other Inflows</b> or <b>Other Outflows</b> on the reports.</p>
<b>Cash Activity Type</b>	<p>Defines how the external cash activity amount appears in your cash position reports:</p> <ul style="list-style-type: none"> <li>• <b>Distributed:</b> Workday distributes the specified cash activity amount across a number of days from the start date.</li> </ul> <p>Example: You distribute a cash activity amount of <i>100,000.00</i> over <i>5</i> days. Workday creates <i>5</i> entries of <i>20,000.00</i> to display on each intraday cash position report.</p> <ul style="list-style-type: none"> <li>• <b>Recurring:</b> Workday includes the specified cash activity amount in each period within the date range.</li> </ul>

## Result

Workday includes the external cash activities in your intraday cash position reports for the same company and bank account.

## Next Steps

Use the **Find Recurring or Distributed External Cash Activity Group** report to review and track your recurring or distributed external cash activities.

You can also access the **Edit Recurring or Distributed External Cash Activity** task from the related actions menu of an external cash activity group to change its details, such as the cash activity dates or cash activity amounts, for a specified period.

## Reference: Cash Position Reports

This table lists reports that provide visibility into your daily cash position based on bank account balances and external cash flows. Workday groups the daily cash activities into logical categories based on your bank statement worktag definitions. You can use the reports to assess your inflows and outflows for funding or investing activities.

Report	Description
<b>Intraday Cash Position in Bank Account Currency</b>	<p>Displays the current day cash receipts and payments in bank account currency using intraday bank statements and external cash activities. The report enables you to identify a shortage or surplus of funds based on the target balance and closing balance of the bank account. You can run the report by bank account or currency, and filter the bank accounts by cash pool.</p> <p>You select the opening and closing balances to display by their bank statement type code.</p>
<b>Intraday Cash Position in Reporting Currency</b>	<p>Displays the current day cash receipts and payments in reporting currency using intraday bank statements and external cash activities. The report enables you to identify a shortage or surplus of funds based on the target balance and closing balance of the bank account.</p> <p>You can run the report by bank account, company, or financial institution. You can also filter the bank accounts by cash pool.</p>
<b>Prior Day Cash Position in Bank Account Currency</b>	<p>Displays the prior day cash receipts and payments in bank account currency using prior day bank statements. You can run the report by bank account, and filter the bank accounts by cash pool.</p> <p>You select the opening and closing balances to display by their bank statement type code.</p>
<b>Prior Day Cash Position in Bank Account Currency (Using Beginning Balance)</b>	<p>Displays the prior day cash receipts and payments in bank account currency using prior day bank statements. You can run the report by bank account, and filter the bank accounts by cash pool.</p> <p>The cash position is based on bank statement ending balances.</p>
<b>Prior Day Cash Position in Reporting Currency</b>	<p>Displays the prior day cash receipts and payments in reporting currency using prior day bank statements. You can run the report by bank account, company, or financial institution. You can also filter the bank accounts by cash pool.</p>
<b>Prior Day Cash Position in Reporting Currency (Using Beginning Balance)</b>	<p>Displays the prior day cash receipts and payments in reporting currency using prior day bank statements. You can run the report by bank account, company, or financial institution. You can also filter the bank accounts by cash pool.</p>

Report	Description
	The cash position is based on bank statement ending balances.

**Related Information****Tasks**[Steps: Define Cash Activity Categories on page 1992](#)[Steps: Manage Cash Positioning on page 2060](#)

## Cash Forecasting

---

### Steps: Produce Cash Forecast Reports

**Prerequisites**

- Configure the *Cash Forecast Report Event* business process and security policy in the Cash Management functional area.
- Security: *Process: Cash Forecast Reporting* and *Reports: Cash Forecast Reporting* domains in the Cash Management functional area.

**Context**

**Note:** We plan to retire the cash forecasting 1.0 functionality in a future update. Workday recommends you use the new cash forecasting with Worksheets that provides advanced forecast modeling and reporting capabilities.

To produce cash forecast reports, you can define the report layout, identify system and manual inputs, generate the report, make adjustments, and publish for others to view. Your reports can utilize bank balances and transactions that are already captured in Workday. You can also define additional external inputs and record the adjustments against them, which is needed to complete the reports.

You can use this report beyond cash forecasting simply as a generic reporting tool where you can pull in specific transaction information.

**Steps**

- Lay out your cash forecast report on paper, thinking about your sources of data and what you want your columns and rows to be.
- (Optional) Access the **Maintain Cash Forecast Component Categories** task.  
Create categories in which to organize your cash forecast components for easier retrieval later on.
- [Define Cash Forecast Components on page 2069](#).  
These make up the rows of your report.
- [Maintain Cash Forecast Rules on page 2068](#).  
Use this task as needed to limit the scope of data that you pull from Workday sources in your cash forecast components.
- [Define a Time Span Profile on page 2072](#).  
This makes up the columns of your report.
- (Optional) Access the **Maintain Cash Forecast Report Categories** task.  
Create categories in which to organize your cash forecast report definitions for easier retrieval later on.
- [Set Up Cash Forecast Report Definitions on page 2073](#).

**8.** Set up cash forecast report profiles.

These profiles are the lenses through which you can view the cash forecast report. Use them to define the display options for a unique view of the cash forecast report.

- a) Access the **Create/Edit Cash Forecast Report Profile** task.
- b) Specify for the **Cash Forecast View Type** to override the default view from the cash forecast report definition.
- c) Select the **Currency** that you want to view the report in and the currency conversion **Rate Type**. Your selections override the currency and rate type for each of the components.
- d) Select **Worktags** to filter report results by a specific dimension, such as customer.

**9.** Access the **Create Cash Forecast Report** task.

Generate and view the report.

**10.(Optional) Make Adjustments to Cash Forecast Reports** on page 2074.

**11.(Optional)** From the cash forecast report, select **Refresh Data** to update a report to include:

- New or changed transaction data now available since the time you ran the report.
- Adjustments made to the report.
- Changes made in the report profile.

**Note:**

**Refresh Data** doesn't reflect any modifications made to the:

- Cash forecast component definition.
- Condition rules you use in the cash forecast component definition.
- Cash forecast report definition.

If you change these definitions, create a new report.

**12.**From the cash forecast report, click **Publish** to initiate the process that finalizes the report for publication.

Publishing launches the *Cash Forecast Report Event* business process that sends the completed report for notification and approval. Because the report is in the publication process, approvers must have security access to the *Process: Cash Forecast Reporting* domain. If you have included a review step in the business process, reviewers can update the report during review and approval.

Once a report is published, it cannot be modified or refreshed.

**13.**View the published cash forecast report.

Viewers must have security access to published cash forecast reports through the *Reports: Cash Forecast Reporting* domain.

**14.**If necessary, you can **Rescind** the report publishing event, which reverts the report back to draft status. At this point, you can edit, refresh, and republish the report.

### Example

A typical process flow starts when the cash manager creates a report. Individuals with security permission view it, and then the cash manager revises and submits the report for publication. The *Cash Forecast Report Event* business process routes the report for optional approval. When the business process completes, the cash forecast report is published and the controller can view it.

## Maintain Cash Forecast Rules

### Context

Create condition rules that you can apply to cash forecast components to limit the scope of data you pull from Workday sources.

## Steps

- Access the **Maintain Cash Forecast Rules** report, select the transaction, and click **Add Cash Forecast Rule**.

You can also add rules later when editing cash forecast components.

- Define each condition for the rule:

Option	Description
<b>Source External Field or Condition Rule</b>	You can select from delivered Workday sources or from condition rules that you've already defined.
<b>Relational Operator</b>	Options depend on the data type of the source.
<b>Comparison Type</b>	Specify whether to compare the source to another field or to a value that you enter in the <b>Comparison Value</b> column.
<b>Comparison Value</b>	Either select a comparison field or enter the value to compare to the source.

## Result

You can now use the cash forecast rule in cash forecast components.

## Next Steps

Define cash forecast components.

# Define Cash Forecast Components

## Context

Define the individual components that make up each row on your cash forecast report. You can share components across reports. It is best to layout the report on paper first, and then start building the components.

When defining components, the opening cash balance in the starting position and the ending cash balance in final position must reference each other. Because of this circular reference, Workday recommends that you define your components in this sequence:

- Define your starting position using a *Balance/Carry Over* component but leave the **Carry Forward From** field blank.
- Define *Amount* components for your inflows and outflows.
- Define your *Accumulation* components, the final accumulator being your ending balance.
- Update your starting position component to reference the ending balance component in the **Carry Forward From** field.

## Steps

- Access the **Create/Edit Cash Forecast Component** task.
- Select the component to edit, or create a new component:

Option	Description
<b>Amount</b>	The basic building blocks of your cash forecast reports. You can have them pull data from

Option	Description
	Workday sources and cash forecast adjustment entries.
<b>Accumulation</b>	Aggregate of one or more amount components and other accumulation components into a new component.
<b>Balance/Carry Over</b>	<p>This is the beginning balance for the first column of your cash forecast report. You can specify amount details just like an amount component.</p> <p>For subsequent columns, this is the carry over balance from one of the accumulator components, typically your ending balance component.</p> <p>You can specify amount details, a carry over accumulation component, or both.</p>

3. As you complete the task, consider:

Option	Description
<b>Name</b>	The name that displays in prompts when retrieving the component for inclusion in the report.
<b>Report Row Label</b>	The label that displays for the row on the actual report.
<b>Category</b>	To organize your components for easier retrieval, select a category. To create categories, use the <b>Maintain Cash Forecast Component Definition Categories</b> task.
<b>Inactive</b>	Not available for future use. Existing use of the component in report definitions and other component definitions remains functional.
<b>In Report Definition</b> <b>In Component Definition</b>	If in use, Workday displays these fields to indicate where.
<b>Days Prior to Report Date</b>	(Amount components only) Specify when you want to begin pulling source data into the amount component. Enter 0 to have Workday pull source data beginning on the <b>Report Date</b> specified when you create a cash forecast report. Or specify the number of days before this report date for which you want to pull additional data into the first column of the report. You can go back as many as 180 days before the report date. Example: A weekly report that pulls data 7 days prior and is run on March 8 will include data in the first column back to March 1.
<b>Carry Forward From</b>	(Balance/Carry Over components only) Specify the accumulation component that carries over from the previous column of the report. This is typically the ending balance accumulation component.

Option	Description
<b>Currency</b>	Assign a specific currency and <b>Currency Rate Type</b> to use for this component in the cash forecasting report. If the currency of any data that Workday pulls into the report differs when you run the report, Workday converts these amounts to this currency. You can display individual components in their own currencies on the same report.
<b>Reverse Sign for Accumulation</b>	(Amount and Balance/Carry Over components) Select to reverse the sign for this component amount. The sign reversal impacts the number that displays on the cash forecast report for this component. It also impacts the sum of any accumulation component that uses this component, such as the ending cash position. Example: Select to reverse the sign for your outflows so that they display on the report and in accumulation components as negative numbers.

4. For amount and balance/carry over components, specify the **Amount Details**:

Option	Description
<b>Source Definition</b>	From the Workday delivered source definitions, select the data that you want to pull into the report through the component. Unless you assign a condition rule to filter source transaction data, Workday pulls in the data for all statuses (approved, in progress, draft, canceled and so on).
<b>Amount and Date</b>	Sometime sources have multiple amount values. Select the one that you want to use.
<b>Condition Rule</b>	To limit the scope of data, apply a condition rule as defined using the <b>Maintain Cash Forecast Rules</b> task. Workday does not provide filters for any of the source transaction data. To filter, create a condition rule. Example: You can create a rule to pull in approved supplier invoices only.
<b>Multiplier</b>	Add a multiplier greater or less than one to the results.
<b>Add New Rule</b>	When editing, click to add a new cash forecast rule for the selected <b>Source Definition</b> . You can then select this new rule as a <b>Condition Rule</b> for the source.

**Note:** For components that only pull data from external sources, you can define an amount component without details. Then you can record adjustments against the component when you run the report.

5. For accumulation components, specify **Accumulation Details**:

Option	Description
<b>Order</b>	The order that you list the included components controls the structure and order of how amounts appear in the cash forecast report.
<b>Cash Forecast Component</b>	From the existing cash forecast components, select the ones that you want to accumulate and pull into the report through the component.

6. To launch the **Create/Edit Cash Forecast Component** task in a new window, click **Add Component** or **Edit Component**.

### Result

The cash forecast component is available for use in cash forecast reports definitions, and in other components.

You can use the **View Cash Forecast Component Definition** report to review details of a specific cash forecast component. Workday provides buttons that enable you to edit or add a component. You can also add a cash forecast rule to use as condition when pulling data from a source definition.

If you change the component definition or condition rules, create a new report. **Refresh Data** doesn't reflect these modifications.

### Next Steps

- Define another cash forecast component.
- Set up cash forecast report definitions.

### Related Information

#### Tasks

[Steps: Produce Cash Forecast Reports](#) on page 2067

## Define a Time Span Profile

### Prerequisites

Security: *Process: Cash Forecast Reporting* domain in the Cash Management functional area.

### Context

To define the columns of your cash forecast reports, create a time span profile. A time span profile can have any combination of time you would like to report on.

### Steps

1. Access the **Create/Edit Time Span Profile** task.
2. As you complete the task, consider:

Field	Description
<b>Name</b>	Assign a unique name for easy selection during prompting.
<b>Inactive</b>	Select to make the time span profile unavailable to use in any future cash forecast report definitions. It will no longer display as an option in prompts. You can still generate cash forecast

Field	Description
	reports where the time span profile is already in use.
<b>Order</b>	Place the time types in the order that you want Workday to display them. Workday sequentially strings together each time type without overlap. Example: If a daily time type ends on Tuesday, and the next time type is weekly, it will begin on Wednesday.
<b>Time Type</b>	Day, week, month, quarter, or year. You can add one or more types of time to a time span profile.
<b>Processing Duration</b>	A <i>Specific Quantity</i> of the selected <b>Time Type</b> , which you then enter in the <b>Quantity</b> field, or the logical end of the selected <b>Time Type</b> : end of week, end of month, end of quarter, end of year.

3. (Optional) Test the time span profile.

- a) As a related action on the time span profile, select **Time Span Profile > Test**.
- b) To edit, select **Time Span Profile > Edit**.

### Result

After you create time spans, you can use them to help define the scope (visually, the columns) of your cash forecasting report definitions.

### Example

To define a time span profile for a quarter, select a **Time Type** of *Quarter* and **Processing Duration** of either a *Specific Quantity* of quarters or *End of Year*. The cash forecast report in which you use this time span will have a column for each quarter.

### Next Steps

- Set up cash forecast report definitions.
- If you are using Cash Forecasting with Worksheets, select a time span profile when you generate a cash forecast.

### Related Information

#### Tasks

[Steps: Produce Cash Forecast Reports](#) on page 2067

## Set Up Cash Forecast Report Definitions

### Prerequisites

- Create a time span profile.
- Define cash forecast component definitions.

### Context

To specify the overall content of the report, use the **Create/Edit Cash Forecast Report Definition** tasks. Through the definition, you control the components for the rows, the time span for the columns, and the view and filtering of the report.

## Steps

- Access the **Create/Edit Cash Forecast Report Definition** task.
- Specify the **Category** to which the report belongs, such as cash forecasting or cash positioning.
- To define the columns of your report, select a **Time Span Profile**.
- Select how you initially want to view the report. There are 3 spreadsheet view options:

Option	Description
<b>Tree</b>	Displays the accumulation hierarchy as a tree on the left, while the right side displays the selected component and one level down.
<b>Navigation</b>	Enables you to drill down through the periods and accumulations.
<b>Spreadsheet</b>	Initially displays with the default report view and report profile. You change either from the related actions menu of the report instance. To edit, refresh, or publish the report, use action buttons.

- To associate the report with a default view, select a **Default Report Profile**.
- Specify the top-level **Report Components** and the **Order** in which they display as rows on the report. Workday automatically compiles the lower-level structure into the report based on your cash forecast component definitions. You do not have to select these lower-level components.
- Create a missing component by clicking the **Add Component** button.

## Result

Schedule cash forecast reports using your cash forecast report definition.

## Next Steps

- Run or schedule reports.
- If you've modified a report definition that is used in unpublished reports, create a new report. Refreshing a report does not reflect report definition changes.

## Make Adjustments to Cash Forecast Reports

### Context

To edit amounts in unpublished cash forecast reports, use the **Cash Forecast Report Adjustment** task. You select a forecast component definition for the adjustment, such as *customer* or *supplier invoices*. The adjustment is applied to all reports using this component, unless you filter specific reports to adjust.

## Steps

- Access the **Create/Edit Cash Forecast Report Adjustment** task.
- Select the **Report Component** to adjust.  
All reports that include this component are adjusted, unless you limit the adjustment to specific reports using the **Limit to Reports** filter.
- Specify an **Adjustment Date**.
- Enter an **Adjustment Amount**.
 

**Note:** If you checked **Reverse Sign for Accumulation** on the component definition, the sign on your adjustment is also reversed when you run the report.
- To apply the adjustment to a subset of reports, select specific reports from the **Limit to Reports** prompt.

6. Select **Worktags** when the report profile uses them to filter data so the adjustment is made to the same specific dimension, such as customer. To provide further insight when drilling down into report details, you also select **Worktags** to associate an adjustment with a specific component.
7. (Optional) To discontinue using this adjustment in reports, select **Adjustment Inactive**.
8. To view a report after the adjustment, select **Refresh Data** from the cash forecast report.

### Result

The component in new reports includes the adjustment, and you can **Refresh Data** for reports in progress to reflect the adjustment. Adjustments are made to the component until you deactivate the adjustment.

## Cash Forecasting with Worksheets

---

### Setup Considerations: Cash Forecasting with Worksheets

You can use this topic to help make decisions when planning your configuration and use of cash forecasting with Worksheets. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can set up cash forecasting with Worksheets to create cash forecasts for viewing in cash forecast reports and dashboards. You can use Worksheets to model what-if scenarios in a spreadsheet format using your operational transactions, bank statement transactions, and external cash activities. Cash forecast reports provide visibility into your future cash activities for making accurate projections and decisions on funding and investing needs.

### Business Benefits

Cash forecasting with Worksheets enables you to:

- Collaborate with other users to model cash forecasts more efficiently and streamline the process.
- Link supplier invoices, customer invoices, expenses, payroll, or other custom payment reports to automatically populate forecasted data and reduce manual data entry on model workbooks.
- Compare and analyze your forecasts versus actuals to increase accuracy for projecting future cash flows.
- Schedule and automate the cash forecast generation process on regular intervals to produce predictable and reliable cash forecasts.

### Use Cases

You can use cash forecasting with Worksheets to:

- Define a cash forecasting structure to prepare projected cash inflows, outflows, and balances for current and future cash positions.
- Schedule Workday to automatically generate a rolling, 12-month cash forecast every month to determine the liquidity requirements for supporting strategic company initiatives.
- Output your cash forecasts to reports or a Cash Management dashboard to track liquidity, identify future cash shortfalls, and make funding and investing decisions.

## Questions to Consider

Question	Considerations
Can you replicate an existing non-Workday cash forecast outline structure to use for cash forecasting with Worksheets?	<p>You can replicate your cash forecast structure that exists outside of Workday exactly as it appears in production.</p> <p>You can also use your existing spend categories or revenue categories to define forecasted cash activities such as rent, interest, or domestic and international payments.</p>
Why is it important to construct a hierarchical outline structure with multiple levels?	<p>A hierarchical cash forecast outline with multiple levels enables you to:</p> <ul style="list-style-type: none"> <li>• Drill down to the lowest levels on the reports.</li> <li>• Include summaries, or subtotal balances of lower-level inflow and outflow amounts.</li> <li>• Create granular cash forecast worklets on your Cash Management dashboard. Worklets display a graphical report for each lower-level detail on your structure.</li> </ul>
How can you use non-Workday data sources for modeling your cash forecast data?	<p>You can record external cash activities using the <b>Create External Cash Activity</b> task, or the <i>Import External Cash Activities</i> web service.</p> <p>You can also upload ad hoc data from local storage into Worksheets. Workday then converts the data into a model worksheet that you can merge with your cash forecast worksheet.</p>
How can you collaborate with other users to prepare forecasted data related to payroll, tax, and other secured cash activities?	The owner of the worksheet can assign view, edit, and comment permissions in Worksheets.
How can you keep your in-progress cash forecasts current with the latest updates in Workday?	You can link Workday source data as live data in Worksheets and schedule automatic refreshes to keep cash forecast changes up to date.

## Recommendations

- Because you can only assign 1 time span profile to an outline, we recommend that you define multiple cash forecast outlines for specific usages. Example: A monthly forecast at a high level and a daily forecast at a more detailed level.
- If you use a company hierarchy in the outline, the cash forecast displays amounts and balances separately for each company. It's a good practice to keep the companies that you want to compare in 1 workbook, since the cash forecast displays the companies side by side. You can generate other workbooks for the companies that you're not comparing.

## Requirements

To display your published cash forecast in the standard reports, map your outline to Workday aliases using the **Map Standard Aliases** task. Select *Cash Forecast Outline Row* on the **Business Object** prompt.

Example: Map these standard aliases to the associated rows in your outline structure:

Standard Alias	Mapped Tenanted Value
_FC_Outline_Top_Level	Daily Cash Forecast
_FC_Opening Balance	Opening Balance
_FC_Inflows	Cash Inflows
_FC_Outflows	Cash Outflows

## Limitations

You can only map the Workday standard aliases to a single cash forecast outline. If you're using more than 1 outline for cash forecasting, you can copy the standard reports as custom reports to link to the other outlines. We recommend that you contact Workday Professional Services or a Workday Consulting partner for assistance.

## Tenant Setup

No impact.

## Security

Domain	Considerations
Worksheets in the System functional area	Users secured to this domain can create, upload, edit, share, and collaborate on workbooks.
Drive in the System functional area	Provides access to Workday Drive for storing workbooks and other file types, such as CSV files, for use in Worksheets.
Set Up: Cash Forecasting in the Cash Management functional area	Provides access to all cash forecast outline functionality.
Process: Cash Forecast Reporting in the Cash Management functional area	Provides access to all cash forecast generation functionality. Users can also maintain cash activity categories and external cash activities.
Process: Cash Forecast Data Automation in the Cash Management functional area	Provides access to cash forecast data sources and reports to use for automated data accumulation in Worksheets.
Reports: Cash Forecast Reporting in the Cash Management functional area	Users secured to this domain can view published cash forecasts and standard reports.
Aliases in the System functional area	Users secured to this domain can use the <b>Map Standard Aliases</b> task to map cash forecast outline rows to Workday aliases for reporting purposes.

## Business Processes

Business Process	Considerations
Cash Forecast Event 2.0	Publishing the cash forecast launches this business process to send the completed cash forecast for notification and approval. When you add a review step in the business process definition, reviewers can update the report during review and approval.

Business Process	Considerations
	All reviewers must have security access to the <i>Process: Cash Forecast Reporting</i> domain.
<i>Cash Forecast Intercompany Event 2.0</i>	Configure this business process if you use intercompanies in your organization. Reviewers from each company must approve the cash forecast for the publishing process to complete.

## Reporting

Report or Dashboard	Considerations
<b>Cash Forecast by Reporting Currency</b> report	Displays your forecasted cash activities and published cash forecast workbook using the specified reporting currency.
<b>Cash Forecast by Transaction Currency</b> report	Displays your forecasted cash activities and published cash forecast workbook using the transaction currency.
<b>Cash Forecast to Actuals in Reporting Currency</b> report	Displays your forecasted cash activities, actual cash positions, and their variances based on the cash forecast outline. Variances in the forecasts and actuals can indicate shortfalls or surplus funds. Upload or manually enter prior day and intraday bank statements to display the actuals.
Cash Management dashboard	You can create custom worklets to display on this dashboard using the <b>Cash Forecast Cells 2.0</b> report data source.

We suggest using these report data sources to build custom reports with cash forecasts:

- **Cash Forecasts 2.0**
- **Cash Forecast Cells 2.0**
- **External Cash Activity Group**

## Integrations

You can use the *Import External Cash Activities* web service to import cash activities from third-party systems into Workday. You can then build a custom report using the **External Cash Activity Group** report data source and business object, and link the report to your model worksheet to prepopulate your cash forecasts with the cash activities.

## Connections and Touchpoints

You can link custom reports with these cash activities from outside cash management to your model worksheet:

- Customer invoices
- Expense reports
- External cash activities
- Payroll payments
- Supplier invoices

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[The Next Level: Cash Forecasting with Worksheets — Model Templates and Custom Report Definitions](#)

### Examples

[Example: Create a Cash Forecast with Worksheets](#) on page 2091

## Steps: Set Up Cash Forecasting with Worksheets

### Prerequisites

Security: These domains in the System functional area:

- *Drive*
- *Worksheets*

### Context

You can set up cash forecasting with Worksheets to create cash forecasts using operational transactions, bank statement transactions, and external cash activities. Workday enables you to define the structure of your cash forecasts, providing you with flexibility and control over the reporting content, layout, and design.

### Steps

1. [Create a Cash Forecast Outline](#) on page 2080.

This is used to define the structure of the rows in your cash forecast.

2. [Define a Time Span Profile](#) on page 2072.

This is used to define the columns and forecasts across the time periods in your cash forecast.

3. Access the **Map Standard Aliases** task.

Map standard delivered aliases to the associated rows in your outline structure to view the generated cash forecast data in cash forecast standard reports.

Select **Cash Forecast Outline Row** from the **Business Object** prompt. Then, map standard aliases to the associated rows in your outline structure as shown in this example:

Standard Alias	Mapped Tenanted Value
_FC_Outline_Top_Level	Daily Cash Forecast
_FC_Opening Balance	Opening Balance
_FC_Inflows	Cash Inflows
_FC_Outflows	Cash Outflows

Security: *Aliases* domain in the System functional area.

**4. (Optional) Access the **Maintain Cash Forecast Type** task.**

Define types such as *Conservative* or *Optimistic* to identify the versions of your cash forecast reports.

You can review your cash forecast types using the **View Cash Forecast Types 2.0** report.

Security: *Set Up: Cash Forecasting* domain in the Cash Management functional area.

## Result

You can generate your cash forecast into Worksheets where you populate your cash forecast data automatically, manually, or by importing live data from Workday custom reports. You can output the modeled cash forecast data into Workday cash forecast standard reports.

## Create a Cash Forecast Outline

### Prerequisites

Security: *Set Up: Cash Forecasting* domain in the Cash Management functional area.

### Context

Create an outline to establish the hierarchical order of the cash inflows, outflows, and their aggregations for display on your cash forecast reports.

### Steps

**1. Access the **Create Cash Forecast Outline 2.0** task.**

**2. Specify a name and description to identify the outline.**

You select an outline when you generate a cash forecast.

**3. Click **Maintain Sublevels** to define the next level of your cash forecast outline.**

**4. As you complete the task, consider:**

Option	Description
<b>Name</b>	The name identifies the level of cash forecast hierarchy, such as opening balances, inflow, or outflow, that displays on a row of the cash forecast report.
<b>Outline Row Type</b>	Select the type of hierarchy level: <ul style="list-style-type: none"> <li><b>Accumulation:</b> An aggregate of 1 or more sublevel amounts or balances into a parent amount in the report structure. Workday calculates the accumulation value when you run the cash forecast report. Example: <i>Cash Inflows</i> or <i>Cash Outflows</i>.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li><b>Amount:</b> The basic building block of your cash forecast reports. You enter your cash inflows and outflows in the worksheet. Example: <i>Customer Receipts, Supplier Payments, Borrowings, or Investment Income.</i></li> <li><b>Balance:</b> You enter your cash opening balance and carry forwards in the worksheet. Example: <i>Opening Balance or Carry Forward Balance.</i></li> </ul>
<b>Cash Activity Category</b>	<p>You can assign 1 or more cash activity category worktags to an amount. Workday uses the worktags to group cash inflow or outflow actual amounts by bank statement type code.</p> <p>These actuals display on the <b>Cash Forecast to Actuals in Reporting Currency</b> report.</p>
<b>Normalized Balance</b>	<p>You can assign a normalized balance to a balance type. A normalized balance is a grouping of balances by bank statement type codes from multiple bank statement formats.</p> <p>The balance displays as an actual on the <b>Cash Forecast to Actuals in Reporting Currency</b> report.</p>
<b>Flip Sign</b>	<p>Select to reverse the sign for an amount. The sign reversal impacts the number that displays on the cash forecast report for this amount. It also impacts the sum of any accumulation that uses the amount, such as the ending cash position.</p> <p>Example: Select to reverse the sign for your outflows so that they display as negative numbers on the report and in accumulations.</p>

5. On the **View Cash Forecast Outline 2.0** report, select an accumulation in the outline, and click **Maintain Sublevels**.

The accumulation value becomes a parent that you can link to the sublevels in the hierarchy.

6. On the **Maintain Sublevels for Forecast Outline Row** task, add accumulations and inflow or outflow amounts as sublevels in the hierarchy.

The order that you list the amounts or accumulations controls how they display on the cash forecast report. You can rearrange or add new sublevels within the hierarchy.

## Result

After you've created your outline, you can use it as the foundation for 1 or more cash forecast models and reports.

## Example

To create the outline of your cash forecast report, identify your cash inflows and outflows and add them to accumulations as shown in this example:

Name	Outline Row Type
1. Opening Balance	Accumulation
1.1 Carry Forward Balance	Balance
1.2 Manual Adjustments	Amount
1.3 Projected Float	Amount
2. Cash Inflows	Accumulation
2.1 Customer Receipts	Amount
2.2 Fund Transfers	Amount
3. Cash Outflows	Accumulation
3.1 Trade Payments	Amount
3.2 Operational Payments	Amount

## Next Steps

Use the **View Cash Forecast Outline 2.0** report to review your cash forecast outlines and make any changes. You can modify the outline structure if you haven't generated any cash forecasts, or first cancel any cash forecasts generated from the outline. You can edit the values defined within the structure at any time.

From the related actions of a cash forecast outline, you can:

- Copy the outline and modify its structure or values to create a new outline.
- Generate the cash forecast based on the outline to a worksheet where you populate your cash forecast data.
- Inactivate the outline if it's no longer in use. This prevents users from creating new cash forecasts while the outline is inactive. Inactivating an outline doesn't impact associated cash forecasts that are already created or published.

## Related Information

### Tasks

[Steps: Define Cash Activity Categories](#) on page 1992

## Steps: Use Cash Forecasting with Worksheets

### Prerequisites

Set up cash forecasting with Worksheets.

### Context

You can model and prepare your cash forecast data in Worksheets. After generating your cash forecast, you can view your results and evaluate the forecasted cash position of your company using cash forecast reports and the Cash Management dashboard.

## Steps

**1.** Create your cash forecast using Workday data.

You can:

- [Create Cash Forecast Data Source Sets](#) on page 2084.
- Create custom reports with live operational data to link to a model workbook in Worksheets. You can also configure the custom reports to capture data that's not provided by the data source sets.

See [Steps: Create and Use Model Workbooks](#) on page 2086.

**2.** [Generate a Cash Forecast](#) on page 2087.

**3.** (Optional) Access the **Schedule Cash Forecast** task.

You can schedule cash forecasts to automatically generate on regular intervals, or once in the future. Workday saves each generated cash forecast as a separate workbook in Drive.

Example: Use the scheduler to automatically generate a cash forecast workbook daily for a predefined number of days, instead of manually generating the cash forecast each day.

Security: *Process: Cash Forecast Reporting* domain in the Cash Management functional area.

**4.** Run cash forecast reports.

Use the cash forecast standard reports to view and analyze your projected income and expenses.

See [Reference: Cash Forecast Reports](#) on page 2090.

**5.** (Optional) Create a custom dashboard with cash forecast worklets.

You can create custom worklets using the **Cash Forecast Cells 2.0** data source to display on a custom dashboard. The worklets are up-to-date, graphical reports that display your cash forecast information such as:

- Cash forecasts for the next 5 days.
- Funding needs.
- Large supplier payments over a specified period.

See:

- [Steps: Set Up Custom Dashboards](#).
- [Concept: Custom Worklets](#).

## Result

Use the cash forecast results to:

- Estimate your cash inflows, outflows, and bank account balances over a specified period.
- Determine where you might have shortfalls or surplus funds so that you can make the necessary fund transfers.
- View insights into your overall financial performance.

## Create Cash Forecast Data Source Sets

### Prerequisites

- Create a cash forecast outline.
- Security: These domains in the Cash Management functional area:
  - *Set Up: Cash Forecasting*
  - *Process: Cash Forecast Data Automation*

### Context

Workday provides data sources to automate the data accumulation for your cash forecasts. You can leverage existing operational data in Workday to create projected cash inflows, outflows, and opening cash balances for your cash forecasts.

You can select a data source to use for each cash forecast outline row, such as supplier payments or customer payments. When you generate a cash forecast, Workday uses the data source sets to automatically populate the summarized forecasted amounts in the cash forecast entry area.

### Steps

1. Access the **Create Cash Forecast Outline Data Source Set** task.
2. As you complete the task, consider:

Option	Description
<b>Data Source</b>	<p>Select a predefined source to extract and accumulate Workday operational data on an outline row, which can include:</p> <ul style="list-style-type: none"> <li>• Customer invoices.</li> <li>• Expense reports.</li> <li>• Bank statement line amounts from prior day or intraday bank statements.</li> <li>• Opening bank account balances from prior day or intraday bank statements.</li> <li>• Supplier invoices.</li> </ul> <p>You can also run data sources as standard reports on an ad hoc basis to:</p> <ul style="list-style-type: none"> <li>• Analyze detailed operational data.</li> <li>• Copy as custom reports to link to your model workbook.</li> </ul>
<b>Source Date</b>	<p>Select a date field from the data source to use as a cash forecast date. Examples of source dates include the supplier invoice date and supplier invoice due date.</p> <p>Example: The supplier invoice for 100.00 has an invoice date of January 1 and an invoice due date of January 15. You use the invoice due date as the source date. The generated cash forecast of 100.00 displays on January 15.</p>
<b>Source Date Modifier</b>	<p>Adjusts the source date by the specified number of days for the cash forecast. Enter:</p>

Option	Description
	<ul style="list-style-type: none"> <li>• A positive number to indicate a number of days in the future.</li> <li>• A negative number to indicate a number of days in the past.</li> <li>• A zero to use the source date on the cash forecast. You can also leave the field blank.</li> </ul> <p>Example: If you enter a date modifier as 7, Workday adjusts the cash forecast date for the 100.00 supplier invoice from January 15 to January 22.</p>
<b>Source Amount</b>	<p>Select an amount field from the data source to use as the cash forecast amount. Examples of source amounts include the supplier invoice gross amount and supplier invoice net due amount.</p> <p>Example: You prepay 15.00 on the 100.00 supplier invoice, and select the supplier invoice net due amount as the source amount. Workday will now use the net value as the forecasted amount. The generated cash forecast displays 85.00 on January 22.</p>

3. (Optional) Select the data source field values to include in the forecasted calculation for the outline row.

To split the field values onto separate rows in your cash forecast, you can create a new cash forecast outline row for each field value. Then, assign the data source and specific field values to each new outline row.

Example: You edit your outline to create 2 separate outline rows for partially paid and unpaid supplier payments. In your cash forecast data source set, you select the **Supplier Invoices for Cash Forecasting** data source for each row. You also assign one of these **Cash Forecast Payment Status** data source field values to each row:

- *Partially Paid*
- *Unpaid*

The partially paid and unpaid invoice amounts display on separate lines in the cash forecast.

If you don't specify any data source field values, Workday consolidates all available values into the forecasted amount.

## Result

You can create a different data source set for each cash forecast outline. When you generate a cash forecast, the data sources prepopulate the summarized outline rows in the cash forecast workbook.

## Next Steps

- Generate the cash forecast with the data source set.
- Merge your model workbook with the cash forecast workbook to populate the values for other sources.
- Override the prepopulated values by adding any amounts you might have recently paid or other adjustments.
- Copy a data source set to create multiple sets to use for a cash forecast outline structure. From the related action on a cash forecast data source set, select **Copy** and modify the values in the fields.

**Related Information****Tasks**

[Steps: Set Up Cash Forecasting with Worksheets](#) on page 2079

**Reference**

[Workday 32 What's New Post: Cash Forecast Data Automation](#)

## Steps: Create and Use Model Workbooks

**Prerequisites**

Create a cash forecast outline.

**Context**

You can create a model workbook in Worksheets to add live operational data from custom reports to populate your cash forecasts. You can calculate projected cash activities on the data using standard spreadsheet functions. When you generate a cash forecast, you can merge it with a model workbook to automatically populate the cash activity values. A model workbook functions as a template that you can reuse for future cash forecasts.

**Steps**

1. Create an advanced report.

You can create a custom report that contains operational data to link to your model workbook.

Operational data can include:

- Ad hoc payments.
- Bank account transfers.
- External cash activities.
- Intercompany payments.
- Supplier invoices.
- Tax payments.

Enable the custom report for:

- Web services.
- Worksheets.

See [Concept: Creating Reports to Insert into Workbooks](#).

2. (Optional) In Drive, create a folder structure with multiple model workbooks for cash forecasts.

You can create separate model workbooks for intraday, weekly, and monthly forecasts. In each model workbook, you can add multiple worksheets as tabs to link the custom report data.

You can also upload external files to Worksheets to use as model workbooks. Example: Excel spreadsheets that you've populated with forecasted cash activities.

See [Concept: Managing Workbooks](#).

3. (Optional) Share a model workbook with other users.

You can collaborate with other users in your organization by sharing your model workbook. Example: You share the model workbook with a payroll analyst who has access to payroll data in summary reports useful for cash forecasting.

See [Concept: Editing Workbooks](#).

**4. Add live data from your advanced reports to the worksheet tabs.**

You can create pivot tables to manage, calculate, and analyze the extracted data more efficiently. You can include only the report values in the tables that are relevant for your cash forecast.

You can also create a separate sheet as part of the model workbook for tracking data ownership, notifications, and adding formulas.

See [Concept: Editing Workbooks](#).

**5. Generate a Cash Forecast on page 2087.**

**6. Merge your model workbook into the cash forecast worksheet.**

This enables you to use Workday operational data as a base and add calculations to project your future cash activities.

See [Concept: Editing Workbooks](#).

**7. Link and refresh live data in your cash forecast workbook.**

You can extract operational data from your model workbook to link to the cash activities in your cash forecast entry area. When you refresh Worksheets, your cash forecast and model workbook update based on changes to the operational data, such as new supplier invoices or modified bank statements.

See [Concept: Editing Workbooks](#).

**8. (Optional) Apply mathematical calculations on the cash activity values to derive projected amounts.**

Example: Add a 20% increase to the expense payment amounts every month.

You can also enter mathematical formulas directly in the cash forecast entry area to calculate values such as the *Balance Carry Forward*.

See [Concept: Data Analysis with Worksheets Functions](#).

## Result

You can use your completed model workbook as a template for different cash forecasting scenarios. This template helps to minimize the repetitive manual step of data extraction.

### Related Information

[The Next Level: Cash Forecasting with Worksheets — Model Templates and Custom Report Definitions](#)

## Generate a Cash Forecast

### Prerequisites

- Create a cash forecast outline and a time span profile.
- Configure these business processes and security policies in the Banking and Settlement functional area:
  - *Cash Forecast Event 2.0*
  - *Cash Forecast Intercompany Event 2.0*
- Security: Process: *Cash Forecast Reporting* domain in the Cash Management functional area.

### Context

You can generate your cash forecast based on a cash forecast outline and time span profile. Workday creates a worksheet based on the cash forecast outline and time span with a zero-dollar cash forecast. You use the spreadsheet functions provided in the worksheet to populate the monetary values for your cash forecast.

## Steps

1. Access the **Generate Cash Forecast 2.0** task.
2. As you complete the task, consider:

Option	Description
<b>Cash Forecast Type</b>	Select a cash forecast type that identifies the version of your cash forecast, such as <i>Week 1</i> or <i>Version 1</i> . This is useful if you're creating iterations of cash forecasts such as weekly reports.
<b>Cash Forecast Outline</b>	Select an outline to use as the structure of your cash forecast. The outline organizes your opening balances, cash inflows and outflows, and their subaccounts in a hierarchical format.  Workday generates the cash forecast rows based on this outline in the workbook. The lowest-level children of the outline are available for cash forecast entry in the worksheet.
<b>Time Span Profile</b>	Defines the time period for the cash forecast. The time period, such as days, weeks, months, or quarters, displays across the columns in the report. If the time span profile contains a combination, it displays all time types in the sequential order defined in the profile.
<b>Companies</b>	Select the companies to include in your cash forecast. You can select to use either the company currency or specify a default currency for all companies.

3. Generate your cash forecast.  
Workday creates your cash forecast in a single sheet in the workbook.
4. Click the **Refresh** button.
5. When the generate process completes, select the **Cash Forecast Workbook** link on the **View Cash Forecast Criteria** report.

You can also open the generated cash forecast from the **Find Cash Forecasts 2.0** report.

## Result

Once generated into Worksheets, you can prepare your cash forecast data. You can collaborate with other users, apply mathematical calculations on historical data to project cash flows, and manually enter values or link custom reports to source forecasted data.

The cash forecast entry area is contained within a green dashed outline in the worksheet. This area also represents the cash forecast data available for standard reports and Cash Management dashboard worklets.

## Next Steps

From the related actions of a cash forecast, select:

- **Copy Data** to create multiple versions of a generated cash forecast. If you change attributes such as the outline structure or time span, Workday regenerates the cash forecast using the original forecast data in the new format.

- **Publish** to finalize the draft for review and approval. If you've also configured the *Cash Forecast Intercompany Event 2.0* business process for intercompanies, reviewers from each company must approve the cash forecast for the publishing process to complete. Once a cash forecast is approved and published, you can distribute the forecast as a read-only report.

## Related Information

### Tasks

[Steps: Set Up Cash Forecasting with Worksheets](#) on page 2079

[Steps: Use Cash Forecasting with Worksheets](#) on page 2082

### Reference

[Reference: Cash Forecast Reports](#) on page 2090

## Copy a Cash Forecast

### Prerequisites

- Generate a cash forecast.
- Security: *Reports: Cash Forecast Reporting* domain in the Cash Management functional area.

### Context

You can copy a generated cash forecast to create new forecasts. This enables you to:

- Create multiple versions of your cash forecast with modified cash activity amounts.
- Create financial rolling forecasts using the most current forecast values and original time span profile.
- Expand your daily cash forecast to a longer term to more accurately predict cash activity balances over time.

### Steps

1. Access the **Find Cash Forecasts 2.0** report.

2. From the related actions of a cash forecast, select **Copy Data**.

You can change any of the original cash forecast attributes, such as the outline to change the structure or the time span profile to change the term of the cash forecast.

3. Review your **Target Outline Rows** and structure for the new cash forecast.

If you've selected a different outline to use for the new cash forecast, select the **Source Outline Rows** on the original outline to map to the **Target Outline Rows** on the new outline.

Example: Map *Domestic* and *International* supplier payment rows to the *All Payments* row to consolidate the amounts in the new cash forecast.

Source Outline Rows	Target Outline Row
<i>Domestic Payment: \$100.00</i>	<i>All Payments: \$150.00</i>
<i>International Payment: \$50.00</i>	

If you've used the same outline, Workday preserves the outline structure in the new cash forecast so you don't need to change the mapping.

### Result

Workday generates a new instance of the cash forecast worksheet in Workday where you can enrich your data and make any necessary adjustments.

## Example

- When you copy a daily forecast to a weekly forecast, Workday aggregates all the daily amounts by week. Workday splits 10 days of forecasted amounts into 2 aggregated weeks.
- When you copy a weekly forecast to a daily forecast, Workday displays an aggregated weekly total on the first day. You can then manually divide the weekly total by each day.

## Related Information

### Tasks

[Create a Cash Forecast Outline](#) on page 2080

[Steps: Use Cash Forecasting with Worksheets](#) on page 2082

## Reference: Cash Forecast Reports

This table lists reports that display your cash forecast workbook results. The cash forecast reports provide insights into your projected cash flows to enable you to:

- Evaluate the forecasted cash position for your company within a specified date range.
- Drill down on balances and amounts to view lower-level details and source transactions.
- Determine where you need to perform fund transfers or other actions for maintaining liquidity.

Report	Description
<b>Cash Forecast by Reporting Currency</b>	Displays your forecasted cash activities and published cash forecast workbook based on the cash forecast outline using the specified reporting currency.
<b>Cash Forecast by Transaction Currency</b>	Displays your forecasted cash activities and published cash forecast workbook based on the cash forecast outline using the transaction currency.  The report displays the balances and cash activities by each currency.
<b>Cash Forecast to Actuals in Reporting Currency</b>	Displays your forecasted cash activities, actual cash positions, and their variances based on the cash forecast outline. Workday uses the reporting currency to translate all underlying forecast and actual amounts into a single currency.  You can compare the forecasted amounts with actual amounts for all inflows and outflows at the line level. Workday sources the forecasts from the cash forecast workbook and the actual cash positions from prior day bank statement balances, floats, and bank statement lines. Variances in the forecasts and actuals can indicate shortfalls or surplus funds, and provide insights into your overall financial performance.  Select normalized balances used in the outline to compare the forecasted opening and float balances with the actual <b>Opening Bank Statement Balance</b> and <b>Opening Bank Statement Float</b> .

## Example: Create a Cash Forecast with Worksheets

This example illustrates how to create a cash forecast using Workday operational data, custom reports, and spreadsheet formulas to model the projections in Worksheets.

### Context

As the cash manager at Global Modern Services, Inc., you want to evaluate the forecasted cash position to ensure funding is available for supplier payments due in the next 5 days. You create a cash forecast and include all revenue, expenses, and opening bank account balances for this period. To populate the cash forecast data, you:

- Create a data source set to automatically accumulate operational data.
- Extract operational data from custom reports and apply mathematical formulas to create projections.
- Manually enter forecasted values in the cash forecast entry area.

### Prerequisites

- Security: These domains in the Cash Management functional area:
  - *Process: Cash Forecast Data Automation*
  - *Process: Cash Forecast Reporting*
  - *Reports: Cash Forecast Reporting*
  - *Set Up: Cash Forecasting*
- Security: These domains in the System functional area:
  - *Aliases*
  - *Drive*
  - *Worksheets*

### Steps

1. Access the **Create Cash Forecast Outline 2.0** task.
2. Create a cash forecast outline structure named *Daily Cash Forecasting* with these cash inflow, outflow, and balance outline rows:

Outline Row	Outline Row Type
1. Opening Cash Balance	<i>Accumulation</i>
1.1 Bank Statement Balance	<i>Balance</i>
1.2 Carry Forward Balance	<i>Balance</i>
1.3 Manual Adjustments	<i>Amount</i>
2. Cash Inflows	<i>Accumulation</i>

Outline Row	Outline Row Type
2.1 Customer Payments	Amount
2.2 External Cash Activities	Amount
2.3 Incoming Bank Account Transfers	Amount
2.4 Incoming Intercompany Payments	Amount
3. Cash Outflows	Accumulation
3.1 Supplier Payments	Amount
3.2 Expense Reports	Amount
3.3 Outgoing Bank Account Transfers	Amount

3. Click **Create Data Source Set**.
4. Create a data source set named *5 Day Daily* with these values to populate cash forecast outline rows:

Outline Row	Data Source	Source Date	Source Date Modifier	Source Amount
1.1 Bank Statement Balance	Prior Day Bank Account Balances for Cash Forecasting	Bank Statement Date for Cash Forecasting	1	Balance Amount for Cash Forecasting
2.1 Customer Payments	Customer Invoices for Cash Forecasting	Invoice Due Date For Cash Forecasting	0	Invoice Net Amount Due for Cash Forecasting
3.1 Supplier Payments	Supplier Invoices for Cash Forecasting	Invoice Due Date For Cash Forecasting	0	Invoice Net Amount Due for Cash Forecasting
3.2 Expense Reports	Expense Reports for Cash Forecasting	Expense Report Accounting Date for Cash Forecasting	10	Expense Report Total Amount for Cash Forecasting

5. In Drive, create a model workbook and add these worksheets to link your custom reports:

Worksheet Name	Description
External Cash Activities	Provides incoming and outgoing cash activities.
Budget Lines	Provides budgeted cash activities in the current period.
Intercompany Settlements	Provides open intercompany settlements in the next 5 days.
Incoming Bank Account Transfers	Provides incoming bank account transfers in the next 5 days.
Outgoing Bank Account Transfers	Provides outgoing bank account transfers in the next 5 days.

6. Create these custom reports using report data sources to link to each of your worksheets in the workbook:

**Note:** You can select the report data source filters that are applicable to your use case.

Report Name	Report Fields	Report Data Source
External Cash Activities	<ul style="list-style-type: none"> <li>• Company</li> <li>• Pay Group</li> <li>• Cash Activity Date</li> <li>• Cash Activity Amount</li> <li>• Currency</li> </ul>	External Cash Activity
Budget Lines	<ul style="list-style-type: none"> <li>• Company</li> <li>• Period</li> <li>• Ledger Account</li> <li>• Budget Balance Amount</li> </ul>	Plan Lines for Financial Reporting
Intercompany Settlements	<ul style="list-style-type: none"> <li>• Company</li> <li>• Open Item Transaction Date</li> <li>• Open Item Currency</li> <li>• Open Item Amount in Preferred Currency</li> </ul>	Open Items For Settlement
Incoming Bank Account Transfers	<ul style="list-style-type: none"> <li>• Company</li> <li>• Transaction Date</li> <li>• Currency</li> <li>• Transaction Amount</li> </ul>	All Bank Account Transfers
Outgoing Bank Account Transfers	<ul style="list-style-type: none"> <li>• Company</li> <li>• Transaction Date</li> <li>• Currency</li> <li>• Transaction Amount</li> </ul>	All Bank Account Transfers

Enable the custom reports for:

- Web services
- Worksheets

7. Add live data from the custom reports to the corresponding worksheets.

Worksheet Name	Report Name
External Cash Activities	External Cash Activities
Budget Lines	Budget Lines
Intercompany Settlements	Intercompany Settlements
Incoming Bank Account Transfers	Incoming Bank Account Transfers
Outgoing Bank Account Transfers	Outgoing Bank Account Transfers

8. Access the **Create Time Span Profile** task.

9. Create a time span profile with these values:

Name	Time Type	Processing Duration	Quantity
5 Day Daily	Day	Specific Quantity	5

10. Access the **Generate Cash Forecast 2.0** task.

11. Generate the cash forecast using these values:

Field	Value	Description
Name	5 Day Daily Cash Forecast	You can enter a name with a maximum of 31 characters.
Description	5 Day Daily Cash Forecast	
Cash Forecast Type	Version 1	Any values to describe your cash forecast. Example: <i>Version number, Passive, or Aggressive</i> .
Cash Forecast Outline	Daily Cash Forecasting	
Cash Forecast Outline Data Source Set	5 Day Daily	
Time Span Profile	5 Day Daily	
Start Date	Today's date	Select the first day of the cash forecast.
Companies	Your company name	Select 1 or more companies for your cash forecast.
Currency	Use Company Currency	Select the company currency or cash forecast currency.
Currency Rate Type	Current	Select the rate type for translating foreign currency into company currency.

Workday populates the cash forecast entry area with data generated from the data sources for each day.

12. Merge your model workbook with your cash forecast.

13. Manually add live data from your model workbook to your cash forecast workbook.

Extract operational data from the cells of your model workbook to link to these cash activities:

Outline Row	Cell Formula	Description
2.2 External Cash Activities	= <i>'External Cash Activities'!E2</i>	Link each amount field from the <b>External Cash Activities</b> worksheet to the entry area. The formula will contain your specific sheet name and source cell.
2.3 Incoming Bank Account Transfers	= <i>'Incoming Bank Account Transfers'!D9</i>	Link each amount field from the <b>Incoming Bank Account Transfers</b> worksheet to the entry area. The formula will contain your specific sheet name and source cell.

Outline Row	Cell Formula	Description
2.4 Incoming Intercompany Payments	=‘Intercompany Settlements’!F15	Link each amount field from the <b>Intercompany Settlements</b> worksheet to the entry area. The formula will contain your specific sheet name and source cell.
3.3 Outgoing Bank Account Transfers	=‘Outgoing Bank Account Transfers’!D5	Link each amount field from the <b>Outgoing Bank Account Transfers</b> worksheet to the entry area. The formula will contain your specific sheet name and source cell.

14. To calculate forecasted amounts, apply spreadsheet formulas to these cash activity values:

Cash Activity Value	Formula	Description
<b>Calculated Closing Balance</b>	ROUND(SUM(F2:F9)-SUM(F10:F13),2)	You can use this formula to calculate the closing balance on Day 1.
<b>Carry Forward Balance</b>	Calculated closing balance for the previous day	Copy the closing balance from Day 1 to Day 2, and then replicate the formula for the remaining days.

You can explore other spreadsheet formulas to create projected amounts for specific cash activities.

15. In the cash forecast entry area, enter any manual adjustments directly on the *1.3 Manual Adjustments* outline row.
16. Access the **Map Standard Aliases** task.
17. From the **Business Object** prompt, select *Cash Forecast Outline Row*.
18. Map these standard aliases to the associated rows in your outline structure:

Standard Alias	Cash Forecast Outline Row
_FC_Outline_Top_Level	Daily Cash Forecasting
_FC_Opening Balance	1. Opening Cash Balance
_FC_Inflows	2. Cash Inflows
_FC_Outflows	3. Cash Outflows

This enables you to view the generated cash forecast data in cash forecast standard reports.

19. Run the **Cash Forecast by Transaction Currency 2.0** report using these values to view and assess the results:

Field	Value
<b>View By</b>	Timespan
<b>Start Date</b>	Today's date
<b>Cash Forecast Types</b>	Version 1
<b>Cash Forecast Status</b>	Draft
<b>Cash Forecast</b>	5 Day Daily Cash Forecast

## Result

You view the cash forecast report results and determine that:

- The ending balance on Day 3 is out of balance.  
To fund the account for the supplier payment, you can initiate a bank account transfer payment for settlement equivalent to the out-of-balance amount.
- You have sufficient funds for making the other supplier payments.

## Treasury Discovery Board

### Concept: Treasury Discovery Board

The Treasury discovery board is a configurable workspace that you can use to perform an enriched data analysis on your cash positions and cash forecasts. You can select and customize visualizations on the dashboard to gain insights into your cash balances and treasury operations so you can take necessary actions. Each Workday-delivered visualization is a graphical or textual representation of selected fields on a report data source.

The discovery board displays the visualizations on these sheets by category:

- Bank Balances**
- Banking Cash Pools**
- Banking Relationship**
- Cash Forecasting**
- Cash Positioning**
- Regional Cash Pools**

To view and customize the visualizations, copy the Treasury discovery board from the **Delivered Discovery Boards** report to Workday Drive. Secure domain access to Drive and the report data source for each visualization.

Workday delivers these visualizations available for use on the discovery board:

Visualization	Description
<b>Average Cash Balances in last 10 days</b>	Displays all your daily average cash balances from prior day bank statements in the last 10 days. You can determine how your cash positions are trending by bank account, and by company or company hierarchy. You can also drill into the bank statement details for each account.

Visualization	Description
	The visualization uses the <b>Bank Statements</b> report data source.
<b>Bank Balances and Summaries by Bank Accounts</b>	<p>Displays all balance type codes from your prior day bank statements for each bank account. Example: The Opening Ledger, Closing Ledger, and Total ACH Debits type codes.</p> <p>You can track the progress of your bank balances over a specified period. You can also drill into the bank statement details for each account.</p> <p>The visualization uses the <b>Bank Statement Balance(All)</b> report data source.</p>
<b>Banking Cash Pools</b>	<p>Displays your total cash balance by cash pool translated into a single reporting currency. Visual indicators represent the status of your cash balance compared to a specified target balance on your bank account. Example: A red diamond indicates when a current balance is less than your target balance of \$1,000,000.</p> <p>You can view the variance between the actual and target balances. You can also drill into the bank balance details for each account.</p> <p>Workday automatically populates your total cash balance across all accounts for the selected company. To display your cash pools, you must select 1 or more cash pool overrides in the <b>Data Source</b> panel of the discovery board.</p> <p>The visualization uses the <b>Bank Statements</b> report data source.</p> <p><b>Note:</b> To use this visualization, you must first set up and create banking cash pools.</p>
<b>Cash Balances in last 90 days</b>	<p>Displays all your daily cash balances from prior day bank statements in the last 90 days. You can determine how your cash positions are trending by bank account, and by company or company hierarchy. You can also drill into the bank statement details for each account.</p> <p>The visualization uses the <b>Bank Statements</b> report data source.</p>
<b>Forecasted Activities by Percentage</b>	<p>Displays the projected closing cash balances using cash forecasting with Worksheets functionality. A bar chart displays the projected cash activity percentages across your specified timespan. You can also drill into the model worksheets to view the cash forecasting details.</p> <p>The visualization uses the <b>Cash Forecast Cells 2.0</b> report data source.</p>

Visualization	Description
	<p><b>Note:</b> To use this visualization, you must first create and generate a cash forecast using Worksheets.</p>
<b>Forecasted Activities in Reporting Currency</b>	<p>Displays the projected closing cash balances in reporting currency using cash forecasting with Worksheets functionality. A bar chart displays the projected cash activity total amounts across your specified timespan. You can also drill into the model worksheets to view the cash forecasting details.</p> <p>The visualization uses the <b>Cash Forecast Cells 2.0</b> report data source.</p> <p><b>Note:</b> To use this visualization, you must first create and generate a cash forecast using Worksheets.</p>
<b>Projected Closing Cash Balances in next 30 days</b>	<p>Displays the projected closing cash balances in the next 30 days using cash forecasting with Worksheets functionality. The visualization uses the forecasted data from your existing cash forecasting worksheet entry area.</p> <p>You can analyze your current cash position and projected availability of cash. You can also drill into the model worksheets to view the cash forecasting details.</p> <p>The visualization uses the <b>Cash Forecast Cells 2.0</b> report data source.</p> <p><b>Note:</b> To use this functionality, you must first create and generate a cash forecast using Worksheets.</p>
<b>Regional Cash Pools</b>	<p>Displays your total cash balance by cash pool translated into a single reporting currency by region. Visual indicators represent the status of your cash balance compared to a specified target balance. Example: A red diamond indicates when a current balance is less than your target balance of \$1,000,000.</p> <p>You can view the variance between the actual and target balances. You can also drill into the bank balance details for each account.</p> <p>Workday automatically populates your total cash balance across all accounts for the selected company. To display your cash pools, you must select 1 or more cash pool overrides in the <b>Data Source</b> panel of the discovery board.</p> <p>The visualization uses the <b>Bank Statements</b> report data source.</p>

Visualization	Description
	<b>Note:</b> To use this visualization, you must first set up and create banking cash pools.
<b>Total Cash (In Reporting Currency) by Currency</b>	<p>Displays your prior day closing bank balances in reporting currency across all bank accounts. You can quickly determine the amount of available cash in each currency. You can also drill into the details to view the individual bank account balances from your prior day bank statements.</p> <p>The visualization uses the <b>Bank Statements</b> report data source.</p>
<b>Total Cash (In Reporting Currency) by Financial Institution and Currency</b>	<p>Displays a heat map of your total cash balances in reporting currency for each financial institution. You can determine the order of highest to lowest cash balances. You can also drill into the details to view the individual bank account balances from your prior day bank statements.</p> <p>The visualization uses the <b>Bank Statements</b> report data source.</p>
<b>Total Prior Day Bank Statements</b>	<p>Displays the total number of prior day bank statements that you received in the last month by statement date. You can track when you record or upload all of your daily or monthly statements. You can also drill into the bank statement details for each account.</p> <p>The visualization uses the <b>Bank Statements</b> report data source.</p>

## Steps: Set Up Treasury Discovery Board

### Prerequisites

- Set up your tenant for Drive.
- Security: These domains in the System functional area:
  - *Discovery Boards: Administration*
  - *Discovery Boards: Create*
  - *Discovery Boards: Manage Curated Data Source Field List*
  - *Discovery Boards: Manage Delivered Discovery Boards*

## Context

You can copy the Treasury discovery board to Workday Drive to improve how you view and track cash positions and cash forecasts. You can configure and customize visualizations in an interactive workspace to analyze your cash balances and treasury operations.

## Steps

- [Edit Domain Security Policies.](#)

Grant users access to the underlying data source for each visualization. Configure these security domains:

- *Process: Bank Reconciliation*
- *Process: Bank Statement – Reporting*
- *Reports: Cash Forecast Reporting*

- [Copy Workday-Delivered Discovery Boards.](#)

Select **Treasury Discovery Board** from the list of discovery boards available in your tenant.

Make a copy and save it in your Drive.

- [Access your Drive.](#)

Open the copied version, and populate the prompt and date values on the **Data Source** panel for each sheet.

- [\(Optional\) Set Up Curated Field Lists.](#)

On the **Maintain Field Lists for Discovery Boards** report, configure the **Drill By** fields to drill into and view the details for each visualization. The fields are available on these business objects:

- **Bank Statement**
- **Bank Statement Balance(All)**

Then, enable your curated field list for discovery boards.

## Next Steps

- Customize your visualizations and report prompts.
- Share the discovery board with other users in your organization.

## Accounting Cash and Cash Pools

### Steps: Set Up Accounting Cash and Accounting Cash Pools

#### Context

You can define accounting cash and accounting cash pools using ledger accounts or ledger summaries to support cash balance check and claim-on-cash processes. You can configure overage options on individual balancing worktag or accounting cash pool levels to ensure you have enough cash available for settling payments or posting ad hoc bank transaction withdrawals.

## Steps

### 1. Set up worktag balancing.

Define:

- a) The primary balancing worktag types and worktags to use for balancing journals.
- b) (Optional) A cash balancing rule to balance cash accounting entries by primary balancing worktag for each bank account.

See [Steps: Configure Worktag Balancing for Journals](#) on page 359.

### 2. (Optional) Create balancing worktag hierarchies.

You can:

- [Create Fund Hierarchies](#).
- [Create Organization Hierarchies](#).

Group related primary balancing worktags into hierarchies to use for accounting cash pools. Workday supports multiple levels of hierarchies and cash pools. The worktag types can include Workday-delivered business dimensions such as fund, business unit, or cost center, or your own custom organization.

### 3. [Create Accounting Cash and Accounting Cash Pools](#) on page 2101.

### 4. (Optional) [Create Custom Labels](#).

Create a custom label to override the default *Accounting Cash* label with a term specific to your organization. Workday replaces all instances of *Accounting Cash* that display on the **Maintain Accounting Cash and Accounting Cash Pools** task.

Custom reports that you build using the Workday-delivered accounting cash report fields will only display the default label.

### 5. Configure advanced cash balance checking.

Configure the business processes and options used for assessing available ledger account cash prior to ad hoc bank transaction posts and payment settlement.

See [Steps: Configure Advanced Cash Balance Checking](#) on page 2123.

## Result

Your accounting cash definition and accounting cash pools are available for cash balance checks.

## Related Information

### Reference

[2023R2 What's New Post: Cash Balance Check for Ad Hoc Bank Transactions](#)

## Create Accounting Cash and Accounting Cash Pools

### Prerequisites

- Security: These domains in the Cash Management functional area:
  - *Reports: Accounting Cash and Accounting Cash Pool Reporting*
  - *Set Up: Accounting Cash and Accounting Cash Pool*
- Security: *Public Reporting Items* domain in the Tenant Non-Configurable functional area.
- Security: *View: Cash Balance Check* domain in the Banking and Settlement functional area.

### Context

You can define cash ledger accounts to use for calculating cash balances during cash balance checks. Workday applies the default accounting cash definition to all primary balancing worktags and companies in your tenant. You can also use primary balancing worktag hierarchies to pool your available cash for the cash balance checks.

Workday provides flexibility to override the default setup for specific primary balancing worktags in your definition.

## Steps

1. Access the **Maintain Accounting Cash and Accounting Cash Pools** task.
2. As you complete the **Accounting Cash Definition** tab, consider:

Option	Description
<b>Ledger and Ledger Summaries</b>	<p>Select the ledgers and ledger summaries that Workday uses to calculate the cash balances. Workday evaluates these ledger account balances at the balancing worktag level.</p> <p>Example: You make a payment that's associated with the Fund1 balancing worktag. When you enable cash balance checking for settlement, Workday checks the Fund1 balance in the Cash ledger before settling the payment.</p>
<b>Default Overage Option</b>	<p>Specify whether Workday can overdraw funds against the balancing worktags.</p> <p>Workday applies the default overage option to all primary balancing worktags in your tenant.</p>
<b>Balancing Worktag</b> <b>Override Overage Option</b>	<p>(Optional) Select to override the default accounting cash definition and overage option for specific primary balancing worktags. You can select a different ledger account, or a combination of a default and override cash ledger.</p> <p>Workday either rejects payments associated with the balancing worktags or overdraws funds from a specified account set and ledger balance.</p> <p>If you defined a cash balancing rule to use for claims on cash, you can also select primary balancing worktags that you associated to a bank account. Workday generates the interworktag entries at the time of settlement.</p>

3. (Optional) As you complete the **Accounting Cash Pool Definition** tab, consider:

Option	Description
<b>Top Level Pool Hierarchy</b>	<p>Select the top-level balancing worktag hierarchy to represent the cash pools. Workday treats all its subordinate hierarchies as individual cash pools.</p> <p>Before you can update the worktag hierarchy selection, you must clear any overrides from the <b>Override Default Overage Option</b> section.</p>
<b>Default Overage Option</b>	<p>Specify whether Workday can overdraw funds against the combination of primary balancing worktags in all cash pool hierarchies.</p>
<b>Select Hierarchy</b> <b>Pool Overage Option</b>	<p>(Optional) Select overage options for the top-level pool hierarchy by subordinate pool hierarchy.</p>

Option	Description
	Workday either rejects payments or overdraws funds at the subordinate pool hierarchy level.

## Result

During payment settlement or ad hoc bank transaction processing, Workday applies your accounting cash and accounting cash pool definition to cash balance checks and:

- Evaluates the cash ledger balances for each primary balancing worktag independently or as part of 1 or more cash pools.
- Calculates the ledger balances either by company or across all companies in your tenant according to your cash balance check settings.

## Next Steps

Review the **View Accounting Cash Definition** report to confirm your accounting cash definition.

To review cash balance check details for ad hoc bank transactions, build custom reports using these report fields:

- Cash Balance Checked:** Indicates whether or not an ad hoc bank transaction is cash balance checked.
- Cash Balance Check Status:** Displays the cash balance check status for an ad hoc bank transaction line. Example: Pass, Fail, or Not Checked.

## Related Information

### Tasks

[Steps: Configure Advanced Cash Balance Checking](#) on page 2123

[Define Cash Balancing Rules for Cash Transactions](#) on page 365

## Example: Set Up and Use Accounting Cash and Accounting Cash Pools

This example illustrates how to configure an accounting cash definition and accounting cash pool for cash balance checks.

### Context

You propose an amount of \$7000 to fund a research project and allocate \$5000 for Fund A and \$2000 for Fund B. In the next fiscal year, you expect to receive a federal grant for the total amount routed through your Treasury Fund. This intermediary fund assigned to the Treasury bank account pays and receives on behalf of other funds. As a result, Funds A and B have a claim on cash with the Treasury Fund.

To help manage the cash outflow for the project, you create an accounting cash definition and accounting cash pool. When you settle payments against the funds, Workday compares the fund activities against your available fund cash ledger balances.

### Prerequisites

- Use the **Create Bank Account** task to create the *Community Bank* account.
- Use the **Maintain Worktag Balancing Configuration** task to define the primary balancing worktag type *Fund*, as well as these fund worktags:
  - Fund A*
  - Fund B*
  - Treasury Fund*
- Use the **Create Worktag Balancing Transaction Rule Set** task to create a worktag balancing transaction rule set.

- Security: These domains in the Cash Management functional area:
  - Reports: Accounting Cash and Accounting Cash Pool Reporting
  - Set Up: Accounting Cash and Accounting Cash Pool
- Security: Public Reporting Items domain in the Tenant Non-Configurable functional area.
- Security: View: Cash Balance Check domain in the Banking and Settlement functional area.

## Steps

1. Create a cash balancing rule to map the *Treasury Fund* worktag to the Treasury bank account.

Workday uses the cash balancing rule to balance interworktag cash journal lines for the Treasury bank account.

Add the cash balancing rule to your worktag balancing transaction rule set.

See [Define Cash Balancing Rules for Cash Transactions](#) on page 365.

2. Define a *Fund Pool* worktag hierarchy that includes *Fund A* and *Fund B*.

Workday uses a top-level worktag hierarchy to pool the fund balances.

See [Create Fund Hierarchies](#).

3. Access the **Maintain Accounting Cash and Accounting Cash Pools** task.

4. In the **Default Cash Definition** and **Default Overage Option** sections, specify:

Account Set	Ledger and Ledger Summaries	Default Overage Option
<i>Education and Government</i>	<i>1000: Cash</i> <i>1001: Current Funds</i> <i>1002: Project Funds</i>	<i>Overage Disallowed</i>

5. In the **Override Default Cash Definition and Default Overage Option** section, specify:

Balancing Worktag	Override Overage Option	Account Set	Ledger and Ledger Summaries
<i>Fund A</i>	<i>Overage Disallowed</i>	<i>Education and Government</i>	<i>1000: Cash</i> <i>Claim on Cash</i>
<i>Fund B</i>	<i>Overage Allowed</i>	<i>Education and Government</i>	<i>1000: Cash</i> <i>Claim on Cash</i>

6. In the **Top Level Pool Hierarchy** and **Default Overage Option** sections, specify:

Top Level Pool Hierarchy	Default Overage Option
<i>Fund Pool</i>	<i>Overage Disallowed</i>

The accounting cash pool enables you to maintain liquidity and meet anticipated cash flow needs for the funds. The cash pool balance is \$7000 (\$5000 from Fund A and \$2000 from Fund B).

7. Click **OK**.

**8.** Configure advanced cash balance checking for settlement.

- Add the *Remove Cash Balance Check Exceptions* step to the *Cash Balance Check Event* business process.
- Select **Across Companies** for the evaluation option.
- Select **Descending** for the payment sort order option.

See [Steps: Configure Advanced Cash Balance Checking](#) on page 2123.

**9.** Create the customer invoice for the federal agency.

Workday uses the worktag balancing transaction rule to generate accrual accounting entries with the inherited *Fund A* and *Fund B* worktags:

Ledger Account	Debit	Credit	Worktag
Accounts Receivable	5000		<i>Fund A</i>
Revenue		5000	<i>Fund A</i>
Accounts Receivable	2000		<i>Fund B</i>
Revenue		2000	<i>Fund B</i>

**10.** When you receive the grant, record the customer payment and apply the payment to the agency invoice.

Workday generates the cash entry with the *Treasury Fund* worktag mapped to the Treasury bank account in the cash balancing rule. Workday also generates claim-on-cash (interworktag) entries between the *Treasury Fund* and *Fund* worktags:

Ledger Account	Debit	Credit	Worktag
1000: Cash	7000		<i>Treasury Bank Account</i> <i>Treasury Fund</i>
Accounts Receivable		5000	<i>Fund A</i>
Accounts Receivable		2000	<i>Fund B</i>
Claim on Cash		5000	<i>Treasury Fund</i>
Claim on Cash	5000		<i>Fund A</i>
Claim on Cash		2000	<i>Treasury Fund</i>
Claim on Cash	2000		<i>Fund B</i>

**11.** When you purchase research supplies, record a supplier invoice amount of \$5300 for Fund A and another supplier invoice amount of \$3500 for Fund B.

Workday uses the worktag balancing transaction rule to generate accrual accounting entries with the inherited *Fund A* and *Fund B* worktags:

**Supplier Invoice for Fund A**

Ledger Account	Debit	Credit	Worktag
Spend	5300		<i>Fund A</i>

Ledger Account	Debit	Credit	Worktag
Accounts Payable		5300	Fund A

### Supplier Invoice for Fund B

Ledger Account	Debit	Credit	Worktag
Spend	3500		Fund B
Accounts Payable		3500	Fund B

12. Settle the supplier invoices.

### Result

Workday initiates the *Cash Balance Check Event* business process during settlement that compares the net activities to the ledger balances and overage option for each fund:

- Fund A: The supplier payment amount of \$5300 exceeds the calculated cash ledger balance of \$5000. Workday removes this payment from the settlement run since the overage option is *Overage Disallowed*.
- Fund B: The supplier payment amount of \$3500 exceeds the calculated cash ledger balance of \$3000. Workday settles this payment since:
  - The overage option is *Overage Allowed*.
  - The cash pool balance is the initial \$7000.

Workday posts the payment journal entry to the ledger account and generates interworktag entries to balance between Treasury Fund and Fund B:

Ledger Account	Debit	Credit	Worktag	Interworktag Affiliate
Accounts Payable	3500		Fund B	
1000: Cash		3500	Treasury Bank Account Treasury Fund	
Claim on Cash		3500	Fund B	Treasury Fund
Claim on Cash	3500		Treasury Fund	Fund B

## Cash Management Dashboard and Reports

### Concept: Cash Management Dashboard

The Cash Management dashboard is a configurable workspace that contains visualizations and multidimensional reports to help you effectively manage your cash. The consolidated dashboard provides visibility into the daily cash positions and cash forecasts for your organization based on:

- Bank account and cash ledger account balances.
- Bank fees.
- Generated cash forecasts using Worksheets.
- Prior day and intraday bank statement information.

Workday automatically populates closing ledger balances in these formats:

- BAI2 – Type Code 015
- BTRS – Type Code 015
- ISO – Type Code CLBD
- MT940/942 – Type Code 62F

Workday delivers these report worklets available for use on the dashboard:

Worklet	Description
<b>Bank Fees by Financial Institution</b>	Displays your total bank fees grouped by financial institution. The graph automatically populates the last 3 months of bank fees.
<b>Book to Bank Summary</b>	<p>Compares bank statement balances against the ledger bank balances in a summarized, high-level format. Using key metrics, you can identify the root causes of discrepancies between the balances for a specified company or company hierarchy, period, and bank accounts.</p> <p>Graphical indicators on the report represent the status of your bank account balances. You can quickly distinguish which bank account balances have unexplained differences from those that are fully reconciled.</p>
<b>Cash Balances and Bank Accounts by Financial Institution</b>	<p>Compares your total cash balances and number of bank accounts for the top 5 financial institutions in order by bank account balance. All other financial institutions are grouped under <b>Other</b> in the graph.</p> <p>You can assess your banking relationships by comparing the number of accounts with the amount of fund exposure at each financial institution. This can help you determine where to consolidate your funds to maximize your benefits from the banking relationships.</p>
<b>Cash Forecast: Projected Cash Balance</b>	<p>Displays your forecasted cash balances based on a generated cash forecast and cash forecast outline rows that you select. You can specify the number of days and currency to use for displaying your cash forecast.</p> <p>To view both daily and monthly projected cash balances, you can configure the dashboard with multiple tabs. On the first tab, select a daily cash forecast as the source for this report. On the next tab, add another instance of the report with a monthly cash forecast.</p>
<b>Cash Forecast: Projected Cash Inflows</b>	Displays your forecasted cash receipts based on a generated cash forecast and cash receipt outline

Worklet	Description
	<p>rows that you select. You can specify the number of days and currency to use for displaying your cash forecast.</p> <p>To view both daily and monthly projected cash balances, you can configure the dashboard with multiple tabs. On the first tab, select a daily cash forecast as the source for this report. On the next tab, add another instance of the report with a monthly cash forecast.</p>
<b>Cash Forecast: Projected Cash Outflows</b>	<p>Displays your forecasted cash payments based on a generated cash forecast and cash payment outline rows that you select. You can specify the number of days and currency to use for displaying your cash forecast.</p> <p>To view both daily and monthly projected cash balances, you can configure the dashboard with multiple tabs. On the first tab, select a daily cash forecast as the source for this report. On the next tab, add another instance of the report with a monthly cash forecast.</p>
<b>Cash Forecast by Reporting Currency</b>	<p>Displays your daily total forecasted amounts based on a generated cash forecast and reporting currency that you select. You can drill down on the outline row summary amounts to view the sublevel amounts. You can also access the worksheet used to generate the cash forecast.</p>
<b>Intraday Balance by Bank Account</b>	<p>Displays your current day cash position in bank account currency using your intraday bank statements.</p>
<b>Intraday Balance Summary</b>	<p>Displays your current day cash position in reporting currency using your intraday bank statements.</p>
<b>Intraday Cash Pool Balance Summary</b>	<p>Displays the current day cash pool balances in reporting currency using your intraday bank statements. Workday converts the subaccount currencies to the master account currency based on your selected currency rate type. You can use this report to analyze your funding needs and take the appropriate actions.</p> <p>You can select the type codes used for calculating the balance summaries for the master and subaccounts.</p>
<b>Prior Day Balance by Bank Account</b>	<p>Displays your prior day cash position in bank account currency using the latest prior day bank statements. The bank statements have a status other than <i>Canceled</i>.</p>
<b>Prior Day Balance Summary</b>	<p>Displays your prior day cash position in reporting currency using the latest prior day bank statements.</p>

Worklet	Description
	The bank statements have a status other than <i>Canceled</i> .
<b>Prior Day Cash Pool Balance Summary</b>	<p>Displays the prior day cash pool balances in reporting currency using your prior day bank statements. Workday converts the subaccount currencies to the master account currency based on your selected currency rate type. You can use this report to analyze your funding needs and take the appropriate actions.</p> <p>You can select the type codes used for calculating the balance summaries for the master and subaccounts.</p>
<b>Prior Day Ending Balance by Bank Account</b>	Displays your prior day cash position in bank account currency using ending balances from the latest prior day bank statements. The bank statements have a status other than <i>Canceled</i> .
<b>Prior Day Ending Balance Summary</b>	Displays your prior day cash position in reporting currency using ending balances from the latest prior day bank statements. The bank statements have a status other than <i>Canceled</i> .
<b>Prior Day Statements by Date</b>	Displays the number of prior day bank statements by financial institution and date. Workday automatically populates bank statements from the last 5 days.
<b>Total Bank Fees by Company</b>	Displays your total bank fees grouped by company. Workday automatically populates bank fees from the last 3 months.
<b>Total Cash Balance by Company</b>	<p>Displays your total cash balances by company. You can view the cash balance for each company as a percentage of the total balance for all companies.</p> <p>You can select the type codes used for calculating the closing ledger and carry forward balances. To view the bank statements and balance summaries for each bank account, you can drill down on the cash balance values.</p>
<b>Total Cash Balance by Currency</b>	<p>Displays your total cash balances by currency. You can view the cash balance for each currency as a percentage of the total balance for all currencies.</p> <p>You can select the type codes used for calculating the closing ledger and carry forward balances. To view the bank statements and balance summaries for each bank account, you can drill down on the cash balance values.</p>
<b>Total Cash Balance by Financial Institution</b>	Displays your total cash balances by financial institution. You can view the cash balance for each financial institution as a percentage of the total balance for all financial institutions.

Worklet	Description
	You can select the type codes used for calculating the closing ledger and carry forward balances. To view the bank statements and balance summaries for each bank account, you can drill down on the cash balance values.
<b>Weekly Average Cash Balances</b>	Displays your weekly average cash balance for the last 12 weeks. Workday calculates a simple average of all bank statement ending balances for each week. You can drill down on the total average ending balance to view the bank statement details for each bank account.

Configure the Cash Management dashboard content using the **Maintain Dashboards** report (secured to the *Set Up: Tenant Setup - Worklets* domain in the System functional area). You can also add cash management tasks or reports that you frequently use to the dashboard. For quick access, you can add the dashboard as a worklet to the home page.

#### Related Information

**Concept: Cash Management Dashboard**

### Reference: Cash Management Reports

You can use these reports to help you manage cash management and other related activities:

Report	Description
<b>Bank Reconciliation</b>	<p>Displays the statement dates, cleared deposits and payments, statement end balances, and unreconciled transaction amounts. Use this report for a summary and to access the statement itself.</p> <p>This report only includes information from bank accounts and not petty cash accounts.</p>
<b>Find Bank Account Transfers</b>	<p>Displays all company bank account transfers. Details include the status, date, source and destination accounts, amount and reference ID.</p>
<b>Find Ad Hoc Bank Transactions</b>	<p>Displays all the company ad hoc bank transactions. Details include the status, date, memo, purpose, amount, and reference ID.</p>
<b>Find Bank Statements</b>	<p>Displays all the organization bank statements. Details include the account, status, statement date, beginning and ending balance, statement entry type, reconcile status, and unreconciled and total transaction counts.</p>
<b>View Account Register</b>	<p>Displays all transactions for a bank account. Details include transaction date, reference, transaction type, payee, payer, payment or deposit amount, and resulting balance.</p>

Report	Description
<b>View Check Register</b>	Displays some or all checks for a bank account. Details include check number, payment date, settlement run date, payee name, and payment amount.
<b>1099 Data Audit - Ad Hoc Payments with 1099 Payees and non-1099 Spend Categories</b>	Displays ad hoc payment lines for 1099 payees with non-1099 spend categories (USA). To include the payees and their applicable payments in year-end tax reports, map 1099 form categories to the spend categories and hierarchies.
<b>1099 Data Audit – Ad Hoc Payments with 1099 Spend Categories and non-1099 Payees</b>	Workday tracks and classifies all other 1099 payee payments as uncategorized.
	Displays ad hoc payment lines with 1099 spend categories for non-1099 payees. To include the ad hoc payments and their applicable payees in year-end tax reports, assign the 1099 MISC or 1099 NEC tax authority form type to the payees.

[Steps: Set Up 1099 Reporting](#) on page 711

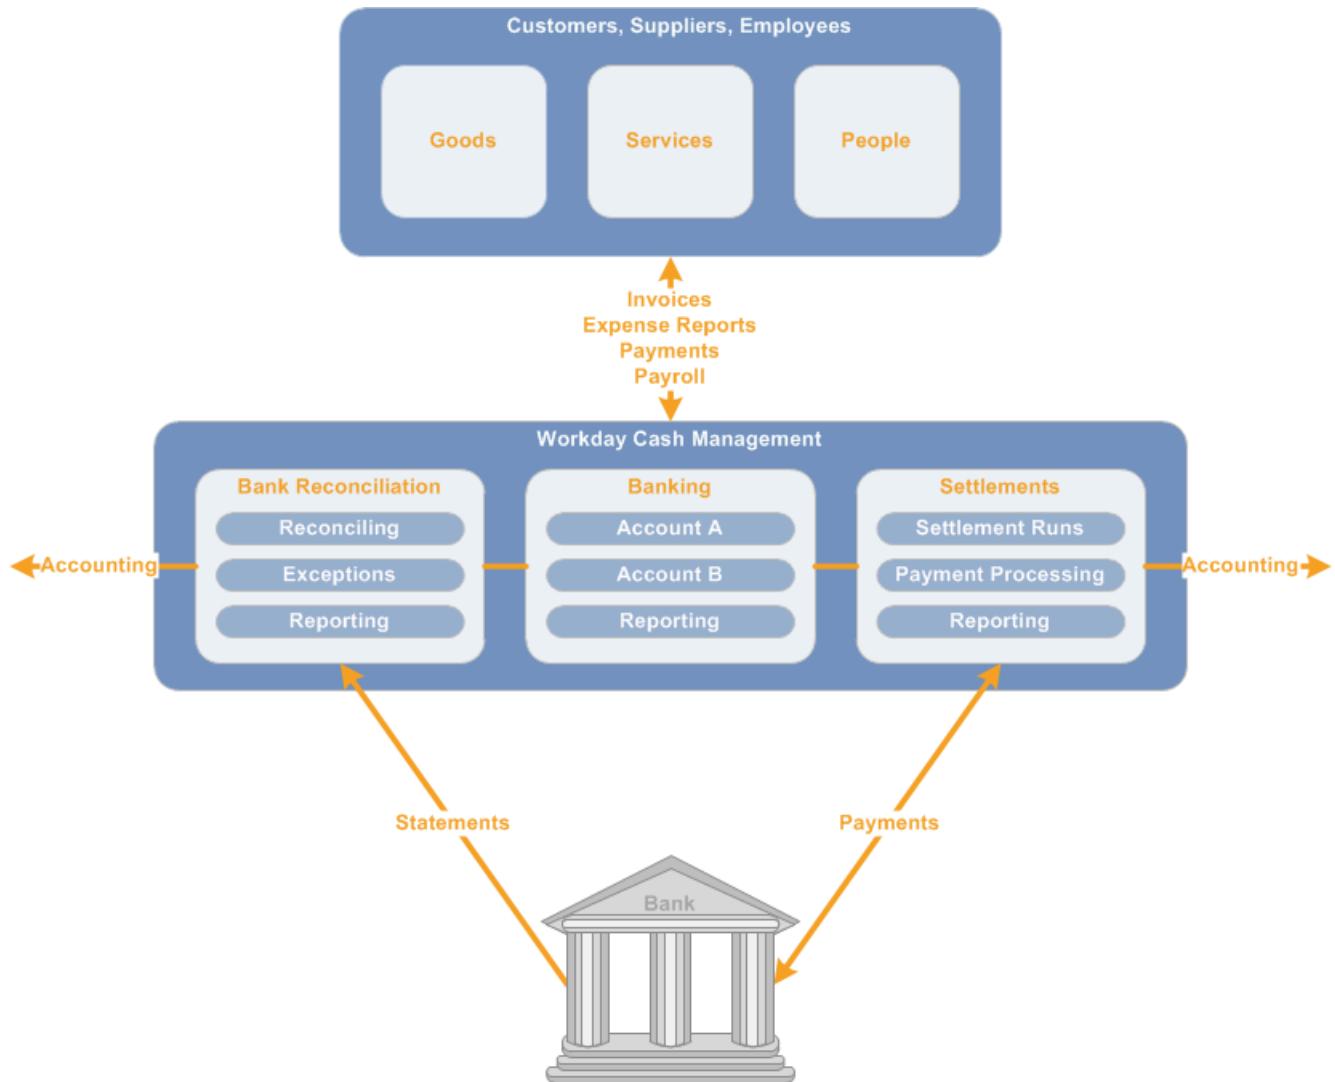

## Concept: Cash Management

---

The ultimate measure of a business is cash. Using Workday Cash Management, companies can automate the coordination and control of cash flow activity. Workday also automates administrative and control activities, such as bank statement reconciliation, while providing embedded business intelligence.

Workday Cash Management consists of banking, settlements, and bank reconciliation tools that enable you to manage and optimize the cash inflows and outflows for your organization.

This diagram illustrates the flow of cash in and out of Workday:

- Invoices, expense reports, payroll data, and payments flow in and out of Workday Cash Management for transactions involving goods, services, and people.  
You receive supplier invoices, expense reports, payroll data, and customer payments. You send out customer invoices, expense report reimbursements, payroll payments, and supplier payments. These transactions post to the bank accounts in your Workday banking system of record.
- You make payments for these transactions through settlement processing.  
Payments flow between the bank accounts at the financial institution and Workday settlement processing. For money owed, you can run check print processing, or you can use electronic or other forms of payment.
- You reconcile bank statement lines against account transactions through bank reconciliation processing.  
You can manually enter or upload (recommended) bank statements into Workday for reconciliation.
- Both settlements and bank reconciliation produce accounting data that Workday Cash Management passes to Workday Financial Accounting.
- To view and analyze your cash data, you can create reports within and across banking, settlement, and bank reconciliation tools at any time.

Workday Cash Management has multiple areas:

## Banking

With Workday banking tools, you create financial institutions, branches for those institutions, and the bank accounts that your company holds there. You can create both depository and source bank accounts. Account transfers, voided check recordings, and reporting give you further control of your cash.

For details, see [Banking](#).

## Settlements

Workday settlement processing enables you to pay different items together as a single unit: expense reports; supplier invoices; ad hoc payments; payroll; customer invoices, payments, and refunds; and intercompany items. Using the **Settlement** dashboard, you can quickly manage, analyze, and report on all of your recent settlement run activity. To perform settlements, you first create settlement runs to group payments and open items. Then you view, edit, and process the settlement run. You can set the processing to run automatically, or you can use a preview mode to view and then run manually. By using routing rules, you can define that payments made for certain transaction types draw from specific accounts. Payment types include direct deposit, cash, and check. Reports help you find invoices and payments, and view your check and account registers.

For details, see [Settlements](#).

## Bank Reconciliation

To reconcile bank statements against account transactions, use Workday bank reconciliation processing. You can manually enter the statements, upload them with a web service integration, or use a quick-entry method that creates a preliminary bank statement out of your records.

For bank statements that you enter or upload, you manually or automatically compare transactions to statement lines and reconcile differences. If you have many transactions to reconcile each period, the extra setup required to perform automatic reconciliation can save you time overall. Automatic reconciliation also provides suggested matches. You can then automatically create ad hoc transactions for first-notice items such as bank fees, where there are no corresponding transactions for the statement lines. Manual reconciliation enables you to reconcile statement lines and account records that have a one-to-many or many-to-one relationship.

For the quick-entry method, you match a preliminary bank statement based on your own records against the printed or electronic bank statement, and reconcile as you go. When you're done, reconciliation is complete and recorded in Workday. The only setup is to create your bank accounts. This method is efficient for small numbers of transactions.

Regardless of the reconciliation method you use, Workday provides additional capabilities. You can create ad hoc transactions to reconcile any bank statement lines that have no matching account transaction. Use the **Bank Statement Reconciliation** dashboard for quick access to recent bank reconciliations and analytics. Other reports give you further insight into bank statements, accounts, and reconciliation processing.

For details, see [Bank Reconciliation](#).

## Common Solutions

In addition to the cash management tools, you can set up common solutions where applicable:

- **Multicurrency** enables you to record and process business transactions that occur in currencies other than the base currency of the recording company.
- **Worktags** enable you to tag transactions to make their business purposes clear, establish their common relationships, and provide a multidimensional view of your business to facilitate reporting.

You can associate primary balancing worktags to bank accounts using a cash balancing rule. When you settle cash transactions, Workday generates worktag balancing entries to reflect accurate balances for cash balance checks or financial reports.

- *Bank Fee Analysis* enables you to gain global visibility over banking costs, identify pricing inaccuracies, and negotiate optimal service agreements with your financial institutions.
- *Cash Positioning* enables you to determine your daily cash position based on bank account balances and external cash flows.
- *Cash Forecasting with Worksheets* enables you to create cash flow forecasts for viewing in reports and dashboards. You can leverage Worksheets to model what-if scenarios using operational transactions, bank statement transactions, and external cash activities as cash forecast data. You can use the cash forecast reports to view your future cash activities for making projections and decisions on funding and investing needs.
- *Intercompany* accounting enables you to manage and report on business events involving related companies.
- *Integrations* help you to upload financial data from third parties into Workday, and to send data between systems.

## **Settlement**

---

### **Setup Considerations: Settlement**

You can use this topic to make configuration decisions for Workday Settlement. It explains:

- Why to set it up.
- How this feature fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### **What It Is**

Workday Settlement provides a comprehensive platform that enables you to process and manage your payments. Workday generates the associated accounting at the time of settlement and records the entries as your system of record.

#### **Business Benefits**

Workday Settlement enables you to manage all incoming and outgoing payments in 1 place across your entire business. This unified infrastructure:

- Controls the financial inflows and outflows of your enterprise.
- Gives you the analytic data you need to make informed decisions.

#### **Use Cases**

You can:

- Set up payments by managing your payment types and configuring your check printing options.
- Settle inbound electronic payments and outbound payments.

- Set up payment integrations to transmit payments to financial institutions and receive payment acknowledgments.
- Process payments after settlement by printing checks and canceling payments.

### Questions to Consider

Questions	Considerations
What bank accounts do you plan to use?	<p>You can integrate Workday with bank accounts for settlement processing and check printing. To generate payment files for settlement processing, you can:</p> <ul style="list-style-type: none"> <li>• Create 1 or more integration systems for each combination of bank and electronic payment type.</li> <li>• Assign multiple integration systems to a single bank account. Example: You want to process payments that are of the same type but in different categories or countries.</li> <li>• Use the same integration for each account in the same bank with the same payment type.</li> </ul>
What kinds of payments and functions do you want to use your bank accounts for?	<p>You can configure a bank account to use it for multiple payment types. You can also create a bank account for unique functions, such as an account that covers only payroll expenses.</p>
How do you want to route your payments?	<p>You can configure rules to determine which bank accounts the settlement process routes payments through. When a payment doesn't match any rule, Workday uses your default bank account.</p> <p>Bank routing rules only apply to payments involving standard accounts. A company can only have 1 bank routing rule.</p>
How do you want to process payments?	<p>You can assign:</p> <ul style="list-style-type: none"> <li>• A settlement specialist role responsible for processing all operational transactions.</li> <li>• Roles based on specific functional areas.</li> </ul> <p>Whether you centralize or decentralize your payment processing impacts how you:</p> <ul style="list-style-type: none"> <li>• Configure the <i>Settlement Run Event</i> business process.</li> <li>• Segregate your check and advice printing.</li> </ul>

### Recommendations

- To help prevent downstream integration errors, set up bank institution records in Workday. You can store detailed bank information, by country, that workers can select when they create worker and settlement bank accounts.
- Use settlement run filters to save time and fit your specific use case.
- Automate your recurring settlement and prenote runs to reduce manual effort.

## Requirements

No impact.

## Limitations

When you cancel a settlement run, you can no longer make changes to it.

## Tenant Setup

Use the **Edit Tenant Setup - Financials** task to view and configure tenant-wide options for Workday Settlement.

You can use the task to set ID sequence generators for:

- EFT payments.
- Settlement runs.
- Prenote runs.

You can use the **Settlement and Bank Account Options** section to:

- Enable multicurrency settlement runs.
- Enable bank account masking for payment elections.
- Enable dynamic supplier payment dates.
- Disable errors when you enter invalid bank identification codes on payment elections or settlement bank accounts.
- Enable payment purpose codes for ad hoc and supplier payments.

## Security

The *Process: Settlement* domain in the Banking and Settlement functional area enables users to settle and report on all payment types. To enable users to settle and report on specific payment types, secure them to these domains:

Domains	Considerations
<i>Process: Ad Hoc Payment Settlement</i> in the Banking and Settlement functional area.	Enables users to settle ad hoc payments and view related reporting.
<i>Process: Bank Account Transfer for Settlement/ Settlement</i> in the Banking and Settlement functional area.	Enables users to settle bank account transfers for settlement and view related reporting.
<i>Process: Customer Invoice Payment/ Settlement</i> in the Customer Accounts functional area.	Enables users to settle customer direct debit payments and view related reporting.
<i>Process: Customer Refund Settlement</i> in the Customer Accounts functional area.	Enables users to settle customer refund payments and view related reporting.
<i>Process: Expense Report Payment/ Settlement</i> in the Expenses functional area.	Enables users to settle expense payments and view related reporting.
<i>Process: Intercompany Payment/ Settlement</i> in the Financial Accounting functional area.	Enables users to settle intercompany items and view related reporting.
<i>Process: Miscellaneous Payment Request Settlement</i> in the Miscellaneous Payments functional area.	Enables users to settle miscellaneous payment requests and view related reporting.
<i>Process: Payroll Settlement</i> in the Core Payroll functional area.	Enables users to settle payroll payments and view related reporting.

Domains	Considerations
<i>Process: Pending Student Refund/Settlement</i> in the Student Financials functional area.	Enables users to settle student refunds and view related reporting.
<i>Process: Procurement Card Payment/Settlement</i> in the Procurement functional area.	Enables users to settle procurement card payments and view related reporting.
<i>Process: Schedule Settlement Run</i> in the Banking and Settlement functional area.	Enables users to schedule settlement runs and view related reporting.
<i>Process: Student Payment/Settlement</i> in the Student Financials functional area.	Enables users to settle student payments and view related reporting.
<i>Process: Student Sponsor Refund/Settlement</i> in the Student Financials functional area.	Enables users to settle student sponsor refunds and view related reporting.
<i>Process: Supplier Invoice Payment/Settlement</i> in the Supplier Accounts functional area.	Enables users to settle supplier invoices and view related reporting.

## Business Processes

Business Processes	Considerations
<i>Outsourced Payment Release Event</i>	Enables you to send checks to an outsourced check printing service.
<i>Payment Printing Event</i>	Enables you to generate positive pay files that correspond to printed checks.
<i>Payment Release Event</i>	Enables you to trigger the payment for electronic payment methods.
<i>Print Checks Task</i>	Enables you to print hard-copies of payslips and checks.
<i>Remittance Release Event</i>	Enables you to create and email remittance files.
<i>Settlement Run Event</i>	Enables you to settle payments. Workday delivers the default definition of this business process minimally configured. You can add steps, such as approvals.

## Reporting

Reports or Dashboards	Considerations
<b>Find Payments</b> report	Use this report to find payments for settlement.
<b>Find Settlement Runs</b> report	Use this report to find and report on settlement runs.
<b>Find Settlement Setup Rule</b> report	Use this report to find the settlement setup associated with a specified bank account or shared between multiple bank accounts.
<b>Settlement</b> dashboard	Use this dashboard to view and track information on end-to-end settlement processing. You can configure this dashboard with worklets to access tasks and reports for: <ul style="list-style-type: none"> <li>• Check and advice printing.</li> </ul>

Reports or Dashboards	Considerations
	<ul style="list-style-type: none"> <li>• Payment returns.</li> <li>• Prenote payments.</li> <li>• Settlement runs.</li> </ul>
<b>Settlement Work Area</b> report	Use this report to create, schedule, and find settlement runs.

These report data sources provide settlement data:

- **Bank Account Transfers for Settlement**
- **Open Items for Settlement**
- **Settlement Runs**

### Integrations

Workday provides many web services for common settlement inputs and configurations. Consider these web services when configuring Workday Settlement:

- *Cancel Payment Return*
- *Import Bank Institution Record Branches*
- *Get Bank Routing Rules*
- *Get Payment Purpose Code*
- *Put Bank Routing Rule*
- *Put Direct Debit Mandate*
- *Put Miscellaneous Payee*
- *Put Miscellaneous Payee Category*
- *Put Miscellaneous Payment Request Category*
- *Put Outsourced Bank Provider*
- *Put Payment Acknowledgement Message*
- *Put Payment Integration*
- *Put Payment Purpose Code*
- *Put Payment Type*
- *Put Settlement Run Custom Filter*
- *Submit Payment Return*

Workday supports integrations with these electronic payment service providers and protocols:

- Automated Clearing House (ACH)
- Bankers' Automated Clearing Services (BACS)
- ISO 20022
- Zengin

You can also create a Payment Connector integration that exports payment data from Workday to a bank or payment processor.

Workday recommends that you use enhanced performance integration templates when available.

### Connections and Touchpoints

Functional Areas	Considerations
Cash	Users secured to the associated domain can settle ad hoc payments.
Customer Accounts	Users secured to the associated domain can settle:

Functional Areas	Considerations
	<ul style="list-style-type: none"> <li>• Customer invoices.</li> <li>• Customer payments.</li> <li>• Customer refunds.</li> </ul> <p>The settlement process groups all eligible direct debit invoices and adjustments for the same company, payee, and payment type into a single payment. Grouping is also applicable to credit card invoices and adjustments.</p> <p>When you select the <b>Customer Invoices</b> check box on the <b>Overview &gt; Payment Details</b> profile group of the customer profile, the settlement process creates separate payments for invoices, except when you process:</p> <ul style="list-style-type: none"> <li>• A credit card invoice and 1 or more invoice credit adjustments.</li> <li>• A direct debit invoice and 1 or more invoice credit adjustments that have a printed direct debit mandate pre-notification.</li> </ul>
Expenses	<p>Users secured to the associated domain can settle:</p> <ul style="list-style-type: none"> <li>• Cash advances.</li> <li>• Expense credit card transactions.</li> <li>• Expense reports.</li> </ul>
Financial Accounting	<p>Users secured to the associated domain can settle intercompany items.</p> <p>When you complete a settlement run, Workday generates accounting entries and sends them to Workday Financial Accounting.</p>
Miscellaneous Payment Requests	<p>Users secured to the associated domain can settle miscellaneous payment requests.</p>
Payroll	<p>Users secured to the associated domain can settle:</p> <ul style="list-style-type: none"> <li>• Pay group exceptions.</li> <li>• Pay groups.</li> </ul> <p>You can configure check print layouts to manage paychecks and advices.</p> <p><b>Note:</b> To ensure accurate payroll payments, configure bank accounts with specific payroll usage types.</p>
Procurement	<p>Users secured to the associated domain can verify and settle procurement card transactions.</p>
Student	<p>Users secured to the associated domain can settle:</p> <ul style="list-style-type: none"> <li>• Student payments.</li> <li>• Student refunds.</li> <li>• Student sponsor refunds.</li> </ul>

Functional Areas	Considerations
Supplier Accounts	<p>Users secured to the associated domain can settle supplier invoices.</p> <p>The settlement process combines all invoices for a supplier into a single payment. If you select the <b>Always Separate Payments</b> check box when you define the supplier, the process settles the invoices for that supplier as separate payments.</p>

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

#### Related Information

##### Setup Considerations: Settlement

## Settlement Configuration

---

### Steps: Set Up Settlement

#### Prerequisites

Review setup considerations for Workday Settlement.

#### Context

You can set up how you want settlement runs to process and settle payments.

#### Steps

##### 1. Access the **Maintain Payment Types** task.

Define valid payment types, such as cash, check, or electronic transfer. Once you specify the payment type names, you map each payment type name to the corresponding payment method that Workday provides.

There's usually a 1-to-1 relationship between the types of payment you define and the methods of payment. You can assign more than 1 payment type to the same payment method.

Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.

##### 2. (Optional) Configure Workday to check cash balances before settling payments.

See [Steps: Configure Advanced Cash Balance Checking](#) on page 2123.

##### 3. To integrate Workday with bank accounts for settlement processing, create 1 or more integration systems for each combination of bank and payment type.

See [Steps: Set Up Bank Integrations for Settlement Processing](#).

##### 4. (Optional) Set up bank institution records in Workday.

See [Steps: Set Up Bank Institution Records](#) on page 2128.

##### 5. [Define Payee Bank Account Validations](#) on page 2128.

##### 6. [Define Bank Accounts](#) on page 1925.

##### 7. [Define Bank Routing Rules](#) on page 2129.

**8.** (Optional) Define filters to use for refining your payment selections in settlement runs.

You can:

- [Define Settlement Run Custom Filters on page 2135](#).
- Configure advanced filters for selecting open supplier invoices or miscellaneous payment requests using custom reporting capabilities.

See [Steps: Set Up Settlement Run Advanced Filters on page 2136](#).

**9.** Set up organization-level definitions for each business process associated with settlement runs.

See [Reference: Settlement Business Processes on page 2150](#).

**10.** Set up prenotes to validate electronic banking information.

See [Steps: Use Prenotes on page 2156](#).

**11.** Import payment acknowledgments into Workday to confirm the status of electronic payments when the settlement run completes.

See [Steps: Acknowledge Payments on page 2137](#).

**12.** (Optional) Set up remittance advices for your supplier invoice and payroll third-party payments using setup rules.

See [Steps: Set Up Remittance Advices Using Setup Rules](#).

**13.** (Optional) Configure Workday to print checks or advices for payroll payments and expense account reimbursements that have settled.

See [Steps: Set Up Checks and Advices for Printing on page 2193](#).

## Result

For a list of settlement-related reports, access [Workday Standard Reports](#) and select these report categories:

- [Set Up Settlement Infrastructure](#)
- [Settlements](#)

## Related Information Concepts

[Concept: Settlement Processing on page 2172](#)

[Concept: Cash Management on page 2111](#)

## Tasks

[Steps: Use Settlement on page 2155](#)

## Create Settlement Setup Rules

### Prerequisites

Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

### Context

You can use settlement setup rules to configure options by payment type and other dimensions that Workday uses during settlement. You can specify the integration system or outsourced provider Workday uses to route payments.

### Steps

1. Access the [Create Settlement Setup Rule](#) task.

**2.** As you complete the task, consider:

<b>Option</b>	<b>Description</b>
<b>Bank Account</b>	<p>You can select 1 or more bank accounts for the rule.</p> <p>If you select multiple bank accounts:</p> <ul style="list-style-type: none"> <li>• Any changes that you make impact every bank account associated with the rule.</li> <li>• The settlement setup rule must also contain those banks in order to appear on the <b>Settlement Setup Rule</b> report.</li> </ul>
<b>Integration System</b>	<p>For bank accounts with electronic fund transfer (EFT) payments, you can specify 1 or more integration systems to route differently based on:</p> <ul style="list-style-type: none"> <li>• <b>Payment Type</b></li> <li>• <b>Payment Category</b></li> <li>• <b>Country</b></li> </ul>
<b>Check Print Layout</b>	<p>If you're using an outsourced bank provider, leave this field blank.</p>
<b>Consolidate By</b>	<p>(Optional) , such as payment type, payment category, or currency.</p> <p>Example: You consolidate <i>EFT</i> payments by currency. Workday groups the payments into a single payment message (payment file) for delivery to your bank.</p> <p>This option enables you to reduce bank fees and administration costs associated with processing payment files.</p>
<b>Maximum Payments Per Group</b>	<p>Specify the maximum number of payments to include in a single <i>payment group</i> from this account. If a file exceeds this number, Workday automatically separates the payments into multiple groups.</p>
<b>Cut Off Time</b>	<p>(Optional) Indicate the cut-off time for including payments from this account in an electronic payment file.</p> <p>This field is informational only.</p>
<b>Receives Acknowledgment</b>	<p>Select if you want to track payments as pending until you receive an acknowledgment from your bank.</p>

### Next Steps

Create or schedule a settlement run that includes a settlement integration rule.

## Steps: Configure Advanced Cash Balance Checking

### Prerequisites

- Configure these business processes and security policies in the Banking and Settlement functional area:
  - Cash Balance Check Event*
  - Express Settlement Run Event*
  - Settlement Run Event*
- Configure the *Accounting Journal Event* business process and security policy in the Financial Accounting functional area.
- Security: View: *Cash Balance Check* domain in the Banking and Settlement functional area.

### Context

You can configure cash balance checking to prevent overspending of funds in accounting journals and settlement run payments. Workday checks for sufficient ledger account balances using primary balancing worktags and ledger accounts specified in your accounting cash and accounting cash pools configurations. Workday can also automatically remove payments that fail cash balance checking from the settlement run.

### Steps

- Create accounting cash and accounting cash pools.

Define ledger or ledger summaries and overage options that Workday uses to check the ledger account cash balances during settlement.

See [Steps: Set Up Accounting Cash and Accounting Cash Pools](#) on page 2100.

- Maintain Cash Balance Check Options
- Edit Business Processes.

Configure business processes for cash balance checking by adding:

- At least 1 of these action steps on the *Cash Balance Check Event* business process definition:

- Review Cash Balance Check Exceptions*
- Remove Cash Balance Check Exceptions*

- The *Check Cash Balance* action step from *Cash Balance Check Event* as a completion step on any of these business process definitions:

- Accounting Journal Event*
- Ad Hoc Bank Transaction Event*
- Express Settlement Run Event*
- Settlement Run Event*

### Result

Workday initiates the *Cash Balance Check Event* business process and:

- Calculates ledger debits minus credits for the primary balancing worktag, ledger accounts, and, if applicable, accounting cash pools.
- Compares the net activity to the ledger balances.

When the cash ledger balance has a debit balance, the business process completes and posts the journal entry to the ledger account. When there's a credit balance, Workday removes payments with exceptions from the settlement run if you configured the business process with this action step.

Workday also sends a task to the next reviewer's My Tasks to approve or deny the cash balance check exceptions. Example: When a transaction fails cash balance check, reviewers can:

- Approve the transaction even though there's a failure.

- Move funds to ensure there's sufficient fund balance for the transaction.
- Send the transaction back to the initiator to take further actions.

## Next Steps

When settlement completes, use these reports to view the results:

- **View Settlement Run:** Displays cash balance check exception details by balancing worktag or cash pool. You can view the payment categories that Workday removed from the settlement run due to the exceptions.
- **Open Items with Payment Exceptions:** Displays the items that aren't fully paid due to their payments failing cash balance check. Example: Expense reports or supplier invoices.

To verify the results for ad hoc bank transactions, create a custom report using these report fields:

- **Cash Balance Checked** on the **Ad Hoc Bank Transaction** business object.  
Indicates whether or not an ad hoc bank transaction is cash balance checked.
- **Cash Balance Check Status** on the **Ad Hoc Bank Transaction Line** business object.  
Displays the cash balance check status for an ad hoc bank transaction line. Example: Pass, Fail, or Not Checked.

Resettle unpaid open items or payments with exceptions in the next settlement run.

## Related Information

### Reference

[2023R2 What's New Post: Cash Balance Check for Ad Hoc Bank Transactions](#)

## Maintain Cash Balance Check Options

### Prerequisites

Security: Set Up: *Settlement* domain in the Banking and Settlement functional area.

### Context

You can configure options to provide a more accurate assessment of your available ledger account cash during cash balance check evaluations.

### Steps

1. Access the **Maintain Cash Balance Check Options** task.
2. As you complete the task, consider:

Option	Description
<b>Cash Balance Check Evaluation</b>	<p>When you select:</p> <ul style="list-style-type: none"> <li>• <b>Across Companies</b>, Workday aggregates ledger account balances across companies for cash balance check.</li> <li>• <b>By Company</b>, Workday groups ledger account balances by company for cash balance check.</li> </ul> <p>All companies in an aggregated grouping must use the same primary ledger currency for a cash balance check.</p>

Option	Description
<b>Book</b>	Select any book that includes transactions with the Blank book code. Workday posts the payment accounting to this book code.
<b>Payment Amount Sort Order</b>	<p>Select the sort order of payment amounts in a settlement run for cash balance check.</p> <p>Example: When settling payments in descending order, Workday first evaluates the highest amounts and their overage options against the ledger balances. Workday then evaluates the next amounts in order against the remaining ledger balances.</p>

## Steps: Configure Cash Balance Checking

### Prerequisites

Configure these business processes and security policies in the Banking and Settlement functional area:

- *Ad Hoc Bank Transaction Event*
- *Cash Balance Check Event*
- *Settlement Run Event*

### Context

**Note:** We plan to retire the old cash balance check functionality in a future update. Workday recommends that you use the advanced cash balance check functionality for a more streamlined cash balance check exception process.

You can configure cash balance checking to prevent overspending of funds in ad hoc bank transactions and settlement run payments. When you add this validation step to a business process, Workday checks for sufficient cash balances (in the ledger account and balancing worktag combination) before disbursing funds.

### Steps

#### 1. Access the **Create Cash Balance Check Treatment Rule** task.

Create treatment rules for the cash balance check exceptions, and assign them to your balancing worktags. Once configured, Workday performs the cash balance check on the balancing worktags and returns results based on these severity levels:

- Warning.
- Ignore (Business process completes without balance checking for the associated balancing worktag).
- Error.

Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.

#### 2. **Edit Business Processes**.

Add the *Check Cash Balance* action step to either the *Ad Hoc Bank Transaction Event* or *Settlement Run Event* business process to enable it for cash balance checking. You can include this step in the business process more than once, but you must add it as a completion step.

### Result

Workday initiates the *Cash Balance Check Event* business process that:

- Returns the net disbursement resulting from the payment transaction by company, balancing worktag, ledger account, and payment category combination.
- Calculates ledger debits minus credits for the funds and ledger accounts.
- Compares the net disbursement to the ledger balance. This comparison determines if the disbursement causes the fund or cash balance to become negative. If the balance is positive, the business process completes and posts the journal entry to the ledger account.
- Evaluates negative results against treatment rules to return the appropriate error.

Workday sends a task to the next reviewer's My Tasks to approve or deny the cash balance check results.

## **Next Steps**

Reviewers can access the cash balance check results to:

- Approve, send back for revision, or deny the results for warnings.
- Send back for revision, or deny the results for errors. If any journal lines are in error, Workday treats the cash balance check as an error.
- Drill down to see the financial details.

## **Related Information**

### **Tasks**

[Steps: Configure Advanced Cash Balance Checking](#) on page 2123

## **Setup Considerations: Bank Institution Records**

You can use this topic to help make decisions when planning your configuration and use of bank institution records. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## **What It Is**

Bank institution records in Workday are a configurable way to store detailed bank information, by country, that workers can select when they create worker and settlement bank accounts.

## **Business Benefits**

Bank institution records enable you to:

- Enter bank details accurately and consistently, reducing errors and payment delays.
- Manage the level of detail workers have to input when they select a record.
- Reduce integration errors caused by incorrect bank information.
- Improve efficiency by reducing time spent on manual data entry.

## **Use Cases**

You can use bank institution records to:

- Set up bank records that workers can select when they create worker and settlement bank accounts.
- Standardize bank institution information for each bank you do business with.

## Questions to Consider

Question	Considerations
How do bank institution records affect your existing bank account information?	When you edit existing bank accounts, you must update them to match your bank institution records.
How do you want to configure bank institution records?	Depending on the needs of the bank and your organization, you can control which bank institution information is standardized and which you must manually enter in Workday.

## Recommendations

When you have a significant number of bank institution records to set up or update, Workday recommends using the Enterprise Interface Builder (EIB) or an integration. They enable you to upload a batch of records at the same time. To set up or update a small number of records, you can use the **Create Bank Institution Record** task.

## Requirements

No impact.

## Limitations

You can't configure bank institution records for specific tasks. When you set up bank institution records, they become available on all tasks used to create worker and settlement bank accounts.

## Tenant Setup

No impact.

## Security

Users with security enabled for the *Set Up: Bank Institution Record* domain in the Banking and Settlement and Payroll Interface functional areas can set up bank institution records in Workday.

## Business Processes

No impact.

## Reporting

Reports or Dashboards	Considerations
<b>Bank Institution Record Import Summary</b>	You can use this report when uploading bank institution records to view: <ul style="list-style-type: none"> <li>The status of your upload.</li> <li>The number of bank branch details you've imported.</li> <li>Any errors and warnings.</li> </ul>
<b>Find Bank Institution Record: Branches</b>	You can use this report to view and edit bank institution records, by branch.
<b>Find Bank Institution Record: Institutions</b>	You can use this report to view and edit bank institution records, by institution.

You can use the **Bank Institution Records** report data source to create custom reports.

## Integrations

You can mass upload and maintain bank institution records using an EIB and these web services:

- *Import Bank Institution Record Branches*
- *Get Bank Institution Record Branches*

## Connections and Touchpoints

Bank institution records impact payroll payment elections when you create worker and settlement bank accounts.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Bank Institution Records

### Prerequisites

- Review setup considerations for bank institution records.
- Obtain bank institution records.

### Context

You can store your detailed bank institution information for your workers to select later when they create worker and settlement bank accounts. You can configure your records to control what bank institution information does and doesn't become standardized in Workday.

### Steps

1. Use the Enterprise Interface Builder (EIB) to upload bank institution records from a spreadsheet.  
Select the *Import Bank Institution Record Branches* web service from the **Web Service Operation** prompt on the **Create EIB** task.  
See [Steps: Set Up EIBs Using Templates from Web Service Operations](#).  
Security: *Set Up: Bank Institution Record* domain in the Banking and Settlement and Payroll Interface functional areas.
2. (Optional) Access the **Create Bank Institution Record** task.  
Enter bank institution records manually.  
Security: *Set Up: Bank Institution Record* domain in the Banking and Settlement and Payroll Interface functional areas.
3. [Define Payee Bank Account Validations](#) on page 2128.  
Select the **Enable Bank Institution Record Searching** check box to display the **Bank Institution Record Search Option** prompt where appropriate.

## Define Payee Bank Account Validations

### Prerequisites

Security:

- *Set Up: Settlement* domain in the Banking and Settlement functional area.
- *Setup: Bank Account Configuration* domain in the Banking and Settlement and Payroll Interface functional areas.
- *Set Up: Payment Election* domain in the Expenses functional area.

- *Set Up: Payroll (Payment Election Rules)* domain in the Core Payroll functional area.
- *Set Up: Payroll Interface* domain in the Payroll Interface functional area.
- *Manage: Address Information* domain in the System functional area.

### Context

You can set up how field attributes and validations display for payee and worker bank accounts. For bank account attributes, Workday enables you to:

- Control which attributes are mandatory and optional.
- Customize display labels and format validations by country.

Payee bank accounts also include customer bank accounts used for settling items such as direct debit invoices or customer refunds.

### Steps

1. Access the **Create Payee Bank Account Validation Override** task.
2. As you complete the task, consider:

Option	Description
<b>Enable Bank Institution Record Searching</b>	Select to display the <b>Bank Institution Record Search Option</b> prompt where appropriate.
<b>Bank Institution Record Search Option</b>	Set up bank institution records before you select <i>Prompt Search</i> . Workday populates the prompt using your stored bank institution information.

### Related Information

#### Tasks

## Define Bank Routing Rules

### Prerequisites

- Define the bank accounts the company uses to make or receive payments.  
To define a rule for settling intercompany payments, set up an intercompany profile. See [Define Intercompany Profiles](#) on page 36.
- Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.

### Context

You can configure rules to determine which bank accounts the settlement process routes payments through. When a payment doesn't match any rule, Workday uses your default bank account.

Bank routing rules only use these bank account types:

- Standard bank accounts.
- Outsourced bank accounts.

These routing rules don't apply to petty cash accounts. A company can only have 1 bank routing rule.

## Steps

1. Access the **Create Bank Routing Rule** task.
2. As you complete the task, consider:

Option	Description
<b>Default Bank Account</b>	<p>Select a bank account to use for all supported categories of payments where the settlement process finds no matching rule condition, or specified conditions. You can only select bank accounts that are associated with the company.</p> <p>Workday recommends that the default bank account includes all account usages in its definition.</p>
<b>Payment Type</b>	<p>Workday routes the payment types through the specified bank account during settlement.</p> <p>The payment types must match the types assigned to the bank account.</p>
<b>Location</b>	<p>Route payments based on the location of the worker.</p> <p>This option applies to payroll payments only.</p>
<b>Greater Than Amount</b>	<p>Expense account payments greater than the amount you enter require payment approval.</p>
<b>Run Calculation Criteria</b>	<p>When the calculation returns a value of <i>true</i>, the settlement process uses the designated source bank account. When you change the bank routing rule, rerun the calculation details.</p> <p>This option applies to payroll payments only.</p>
<b>Payee Settlement Bank Country</b>	<p>Route payments based on the country for the settlement bank account of the payee. Example: You can pay workers using source bank accounts located in their respective countries.</p> <p>This option only applies to these payment types:</p> <ul style="list-style-type: none"> <li>• Credit card.</li> <li>• Direct debit.</li> <li>• Direct deposit.</li> <li>• EFT.</li> <li>• Wire.</li> </ul>
<b>Currency</b>	<p>The currency is based on the transaction currency of the payment. The bank account you route to must accept this currency.</p>
<b>On Behalf of Company for the Payment</b>	<p>Define a rule for the settlement company to make payments from a specific bank account on behalf of its affiliate companies.</p>

## Next Steps

Settle payments.

## Related Information

### Concepts

[Concept: Multicurrency](#) on page 26

## Setup Considerations: Settlement Run Filters

You can use this topic to help make decisions when planning your configuration and use of settlement run filters. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday settlement run filters automatically add unpaid open items and pending payments that meet a specified criteria to a settlement run.

### Business Benefits

With Workday settlement run filters, you can:

- Reduce errors and manual effort.
- Identify specific unpaid open items and pending payments quickly and easily.

### Use Cases

Workday provides predefined filters for common settlement run scenarios, such as *All Available Ad Hoc Payments* and *Due in Next 7 Days*. If these predefined filters don't fit your use case, you can set up custom filters that do. Example: You create a custom filter that identifies all ad hoc payments with check as the payment type.

You can also set up advanced filters based on reports to search on supplier invoices or miscellaneous payment requests. You can use delivered and calculated report fields as additional search criteria for filtering on specific items. Example: You build a custom report for filtering on supplier invoices with a nonstandard payment term. You use a report field condition to define the term as a variable number of days depending on the length of each month.

### Questions to Consider

Questions	Considerations
What payment sources do you need filters for?	Workday delivers system filters for all payment sources.  You can create custom filters for any payment source. You can add 1 or more payment sources to a single custom filter.

Questions	Considerations
	Advanced filters support either the supplier invoice or miscellaneous payment request payment source.
What happens when you select multiple filters in a single settlement run?	<p>Workday retrieves data for each selected filter. The selected filters don't interact with one another.</p> <p>Example: You select 2 filters in a single settlement run, <i>All Available Ad Hoc Payments</i> and <i>Due in Next 7 Days</i>. As a result, Workday returns all available ad hoc payments as well as everything due in the next 7 days.</p>

## Recommendations

When you have recurring open items or pending payments to settle, Workday recommends automating this process by adding settlement run filters to scheduled settlement runs.

## Requirements

No impact.

## Limitations

You can't delete custom filters.

## Tenant Setup

No impact.

## Security

Domain	Considerations
<i>Process: Intercompany Payment/Settlement</i> in the Financial Accounting functional area.	Provides access to perform settlement for intercompany payments and view related reporting.
<i>Process: Miscellaneous Payment Request Settlement</i> in the Banking and Settlement functional area.	Provides access to miscellaneous payment request reporting.
<i>Process: Payroll Settlement</i> in the Core Payroll functional area.	Provides access to settle payroll payments, create checks, and print advices.
<i>Process: Settlement</i> in the Banking and Settlement functional area.	<p>Provides access to:</p> <ul style="list-style-type: none"> <li>• Create and edit custom and advanced filters.</li> <li>• Settlement filter reporting for intercompany payments, miscellaneous payment requests, payroll, and supplier invoices.</li> </ul>
<i>Process: Supplier Invoice Payment/Settlement</i> in the Banking and Settlement functional area.	Provides access to supplier invoice reporting.
<i>Set Up: Settlement</i> in the Banking and Settlement functional area.	Provides access to create and edit custom and advanced filters.

## Business Processes

No impact.

## Reporting

Report	Considerations
<b>All Available Intercompany Items for Settlement</b>	View all intercompany open items that are available for settlement.
<b>All Available Miscellaneous Payment Requests for Settlement</b>	<p>View all unpaid miscellaneous payment requests by company and currency that are available for settlement.</p> <p>The report displays miscellaneous payment request details, including the document date and payment status.</p>
<b>All Available Pay Group Exceptions for Settlement</b>	View all payroll payments with a payment category of <i>off-cycle</i> that are available for settlement.
<b>All Available Pay Groups for Settlement</b>	View all payroll payments with a payment category of <i>on-cycle</i> that are available for settlement.
<b>All Available Payroll Third-Party Payments</b>	<p>View all payroll third-party payable items available for settlement.</p> <p>For more information, see: <a href="#">Concept: Payroll Third-Party Payments</a>.</p>
<b>All Available Supplier Invoices for Settlement</b>	<p>View all unpaid supplier invoices by company and currency that are available for settlement.</p> <p>The report displays invoice details, including the invoice date and due date.</p>
<b>Supplier Invoices Due in Next 7 Days from Settlement Run Date</b>	<p>View all open supplier invoices that are due in the next 7 days from the specified settlement run date.</p> <p>The report displays invoice details, including the invoice date and due date.</p>

You can use these report data sources (RDS) and filters to build custom reports for advanced settlement run filtering:

Report Data Source and Filter	Considerations
<b>Open Intercompany Items for Settlement Run filter on the <b>Intercompany Transactions</b> RDS.</b>	Displays open intercompany items that are valid for payment.
<b>Open Miscellaneous Payment Requests for Settlement filter on the <b>Miscellaneous Payment Request</b> RDS.</b>	Displays all open miscellaneous payment requests that are valid for payment.
<b>Open Pay Group Exceptions for Settlement filter on the <b>Payments for Company</b> RDS.</b>	Displays off-cycle payroll payments that are valid for payment.
<b>Open Pay Groups for Settlement Run filter on the <b>Open Pay Groups for Settlement Run</b> RDS.</b>	Displays on-cycle payroll payments that are valid for payment.

Report Data Source and Filter	Considerations
<b>Open Supplier Invoices for Settlement</b> filter on the <b>Supplier Invoices</b> RDS.	Displays all open supplier invoices that are valid for payment.

## Integrations

You can use these web services to mass retrieve and upload custom filters through the Enterprise Interface Builder (EIB):

- *Get Settlement Run Custom Filter*
- *Put Settlement Run Custom Filter*

## Connections and Touchpoints

Features	Considerations
<b>Cash Advance</b> <b>Customer Invoice</b> <b>Customer Refund</b> <b>Expense Credit Card Transaction</b> <b>Expense Report</b> <b>Intercompany Item</b> <b>Miscellaneous Payment Request</b> <b>Procurement Card Transaction</b> <b>Student Payment</b> <b>Student Refund</b> <b>Student Sponsor Refund</b>	Workday creates and settles these payments. The payment date is the settlement date.
<b>Supplier Invoice</b>	Workday creates and settles these payments. By default, the payment date is the settlement date. You can enable dynamic supplier payment date to match supplier payment dates dynamically based on: <ul style="list-style-type: none"> <li>• Invoice discount date.</li> <li>• Invoice due date.</li> <li>• Settlement run date.</li> </ul>
<b>Ad Hoc Payment</b> <b>Bank Account Transfer for Settlement</b> <b>Customer Payment</b> <b>Customer Refund</b> <b>On-Cycle Payroll</b> <b>Pay Group Exception</b> <b>Pay On-Demand</b>	Workday settles the existing payments. The payment date derives from the transaction itself and the settlement date doesn't have any bearing.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Tasks

[Schedule Automatic Settlement Runs](#) on page 2164

### Reference

[Reference: Settlement Run Custom Filters](#) on page 2154

[2025R1 Feature Release Note: Additional Settlement Run Advanced Filters](#)

[2023R2 What's New Post: Advanced Settlement Filtering](#)

## Define Settlement Run Custom Filters

### Prerequisites

Depending on the payment source for a custom filter, set up:

- Suppliers, supplier categories, and supplier groups.
- Customers, customer categories, and customer groups.
- Payees and pay run groups.
- Intercompany affiliates.
- Corporate credit cards.
- Miscellaneous payment requests.

### Context

You can define custom filters to identify open payments that you want to capture in a settlement run. Custom filters provide additional search criteria than the predefined system filters available for common settlement run scenarios.

### Steps

1. Access the **Create Settlement Run Custom Filter** task.
  2. For **Payment Source**, select 1 or more types of payments to include in settlement runs that use this filter.  
If you select *Supplier Invoice*, you can use the **Reference Type** prompt to define international reference types for the custom filter.
  3. To identify the scope of open payments to include in the filter, specify additional **Attributes** for each of the selected payment sources.
- Note:** When you make intercompany payments, select companies that are in your intercompany profile on the **On Behalf of Company for the Payment** prompt.

### Next Steps

You can select your new report filter on the **Auto Select Filters** prompt when you:

- Create a settlement run manually using the **Create Settlement Run** task.  
The filter provides a starting point for the open payments to include in the run. You can add and remove payments as necessary.
- Schedule a settlement run using the **Schedule Settlement Run** task.  
The filter defines the open payments to include in the settlement run. To capture different payments, edit this filter.

## Related Information

### Tasks

[Create Manual Settlement Runs](#) on page 2160

[Steps: Set Up Settlement](#) on page 2120

[Schedule Automatic Settlement Runs](#) on page 2164

#### Reference

[Reference: Settlement Run Custom Filters](#) on page 2154

## Steps: Set Up Settlement Run Advanced Filters

### Prerequisites

Set up these payment sources:

- Miscellaneous payment requests
- Supplier invoices

### Context

You can create an advanced filter based on a custom report to use for selecting open supplier invoices or miscellaneous payment requests in settlement runs. Advanced filters enable you to use report fields and other reporting functionalities to filter payable documents with more granularity.

### Steps

1. [Copy Reports](#).

Copy 1 of these standard reports to build a custom report template:

Standard Report	Security Domains
<b>All Available Intercompany Items for Settlement</b>	<ul style="list-style-type: none"> <li>• <i>Process: Settlement</i> in the Banking and Settlement functional area.</li> <li>• <i>Process: Intercompany Payment/Settlement</i> in the Financial Accounting functional area.</li> </ul>
<b>All Available Miscellaneous Payment Requests for Settlement</b>	<ul style="list-style-type: none"> <li>• <i>Process: Settlement</i> in the Banking and Settlement functional area.</li> <li>• <i>Process: Miscellaneous Payment Request Settlement</i> in the Miscellaneous Payments functional area.</li> </ul>
<b>All Available Pay Group Exceptions for Settlement</b>	<ul style="list-style-type: none"> <li>• <i>Process: Payroll Settlement</i> in the Core Payroll functional area.</li> <li>• <i>Process: Settlement</i> in the Banking and Settlement functional area.</li> </ul>
<b>All Available Pay Groups for Settlement</b>	<ul style="list-style-type: none"> <li>• <i>Process: Payroll Settlement</i> in the Core Payroll functional area.</li> <li>• <i>Process: Settlement</i> in the Banking and Settlement functional area.</li> </ul>
<b>All Available Supplier Invoices for Settlement</b>	<ul style="list-style-type: none"> <li>• <i>Process: Supplier Invoice Payment/Settlement</i> in the Supplier Accounts functional area.</li> <li>• <i>Process: Settlement</i> in the Banking and Settlement functional area.</li> </ul>
<b>Supplier Invoices Due in Next 7 Days from Settlement Run Date</b>	<ul style="list-style-type: none"> <li>• <i>Process: Supplier Invoice Payment/Settlement</i> in the Supplier Accounts functional area.</li> </ul>

Standard Report	Security Domains
	<ul style="list-style-type: none"> <li>• <i>Process: Settlement</i> in the Banking and Settlement functional area.</li> </ul>

The report data source enables you to configure the report definition as a settlement run report filter.

## 2. Set Up Filter Options for Custom Reports.

Edit your custom report to configure filter conditions with delivered and calculated fields. The filter uses these conditions to return the open items that you want to select for settlement.

Example: You create a condition to evaluate the discount due dates for your supplier invoices against a date range. When you schedule a daily settlement run, this filter condition selects only the invoices with a discount due date that's 2 to 3 days from the payment date.

## 3. Access the **Create Settlement Run Report Filter** task.

Create a settlement run filter using 1 of the available reports for your selected payment source.

Security: These domains in the Banking and Settlement functional area:

- *Process: Settlement*
- *Set Up: Settlement*

## 4. (Optional) Run your custom report to preview the open items that Workday will select in the settlement run.

## Next Steps

You can select your new report filter on the **Auto Select Filters** prompt when you:

- Create a settlement run manually using the **Create Settlement Run** task.

The filter provides a starting point for the open payments to include in the run. You can add and remove payments as necessary.

- Schedule a settlement run using the **Schedule Settlement Run** task.

The filter defines the open payments to include in the settlement run. To capture different payments, edit this filter.

## Related Information

## Steps: Acknowledge Payments

### Context

You can load payment acknowledgement files from electronic-payment recipients into Workday. The files acknowledge whether the bank received, processed, or rejected your payments.

## Steps

1. Access the **Edit Bank Account** task.

Select the **Receives Acknowledgement** check box on the **Settlement Setup** grid. This option enables your bank account to receive payment acknowledgements.

Security: *Set Up: Bank Entity* domain in the Banking and Settlement functional area.

2. Import payment acknowledgements using 1 of these methods:

- A connector based on the *Import Payment Status Report* integration template.

You can use this integration with the ISO 20022 file format for payment acknowledgements.

See [Steps: Set Up Integration to Import Payment Status Reports](#).

- An Enterprise Interface Builder (EIB) based on the *Put Payment Acknowledgement Message* web service.

Select *Put Payment Acknowledgement Message* from the **Workday Web Service Operation** prompt for the delivery method.

See [Set Up Inbound EIB](#).

3. Upload payment acknowledgements.

See: [Launch EIB Spreadsheet Upload](#).

4. (Optional) [Manage Payment Acknowledgement Status Exceptions](#).

View and correct discrepancies between the payment status and *Rejected* payment acknowledgement status for reconciled electronic payments.

## Result

Workday automatically matches payment acknowledgements with corresponding payments and sets the applicable payment status.

## Next Steps

- For rejected payments, you can cancel or return the payment. You can also find and fix the problem and reprocess the payment.
- For unmatched payment acknowledgements, you can manually complete the payment.

## Related Information

### Tasks

[Cancel Payments](#) on page 2169

[Reprocess Multiple Electronic Payments](#) on page 2171

[Complete Electronic Payments](#) on page 2170

## Manage Payment Acknowledgement Status Exceptions

### Prerequisites

Security: *Process: Payment Status Mismatch* domain in the Banking and Settlement functional area.

### Context

When unreconciled electronic payments receive a *Rejected* payment acknowledgement, Workday updates the status of the payments from *Complete* to *Rejected*. You can use the *Find Payments* report to identify these unreconciled rejected payments.

To view electronic payments that the bank has rejected after reconciliation, you can use the payment acknowledgement status exceptions task and take the appropriate action.

## Steps

1. Access the **Manage Payment Acknowledgement Status Exceptions** task.

2. Select 1 or more reconciled payments with a payment status discrepancy.

These include *Complete* or *Received* payments that also have a *Rejected* payment acknowledgement status.

3. (Optional) Select to either:

- **Return Payments.**
- **Unreconcile and Cancel Payments.**

When you unreconcile and cancel payments that are in an electronic payment reconciliation group (EPRG), Workday unreconciles all other payments in the group. The unreconciled rejected payments in the group remain on the task until you take a corrective action.

## Result

Based on the action you've selected, Workday:

- Creates a payment return and generates accounting entries that reverse the original payment.
- Unreconciles and cancels the payment. Workday also cancels any related accounting entries.

## Example

You settle an EFT payment and your bank accepts and successfully processes the payment file. Workday updates the payment status to *Complete* based on the payment acknowledgement status from your bank. You reconcile the payment in the next bank reconciliation.

The payee bank rejects the payment since the payee bank account has closed. Your bank sends another payment acknowledgement with *Rejected* status. You use the **Manage Payment Acknowledgement Status Exceptions** task to confirm the *Rejected* status and return the payment.

## Related Information

### Reference

[Reference: Settlement Run and Payment Statuses](#) on page 2176

## Concept: Electronic Payment Acknowledgement

When a settlement run is complete, electronic payments have a status of *Awaiting Payment Acknowledgement*. The way Workday receives payment acknowledgements depends on the payment type:

- Workday automatically loads payment acknowledgements for credit cards through an integration with CyberSource.
- For other types of electronic payments, use these methods to upload payment acknowledgement files from your bank:
  - Enterprise Interface Builder (EIB)
  - *Import Payment Status Report* Connector

Workday matches acknowledgements to payments based on the payment ID and stores both high-level acknowledgement files and individual payment acknowledgements. These acknowledgements enable you to confirm when transactions have cleared or correct rejected transactions.

## Payment Acknowledgement Reports

Access these reports to view payment acknowledgements:

## Find Payment Acknowledgements

This report displays the original payment date, acknowledgement status, and matching customer payment.

To see payment-level details for a particular acknowledgement, click **[View Payment Acknowledgement](#)**. You can:

- Assign the acknowledgement to another worker for review.
- Cancel the payment, if it's not escheated or returned.
- Reprocess rejected payments.

## Find Payment Acknowledgement Messages

You can view file-level payment acknowledgements. The report displays:

- Acknowledgement count.
- File acknowledgement count.
- Message ID and date.
- Originating bank ID.

You can drill down on an acknowledgement message to view the individual payment acknowledgements associated with that message.

## Find Unmatched Payment Acknowledgements

You can filter the report by date, acknowledgement status, or payment ID.

### Acknowledgement Status

Payment acknowledgements can have these statuses:

#### Received

The financial institution received your payment, but hasn't fully processed it. The corresponding payment has a status of *Payment Received*.

#### Accepted

The financial institution accepted the payment. The payment has a status of *Complete*. If Workday can't match the payment acknowledgement to its corresponding payment, you can assign the acknowledgement to a worker for review.

#### Rejected

The financial institution rejected the payment. The payment has a status of *Rejected*. You can cancel or return the payment, or reprocess the payment once you correct the problem.

You can use the **[Manage Payment Acknowledgement Status Exceptions](#)** task to view and correct payment status discrepancies for reconciled electronic payments that were later rejected by the bank. See [Manage Payment Acknowledgement Status Exceptions](#).

## Mass Payment Update

You can use the **Mass Payment Update** task to complete, cancel, or reprocess payments in bulk. Example: Find payments that have unmatched acknowledgements, and complete or cancel the payments based on the acknowledgement status.

### Related Information

#### Tasks

[Steps: Acknowledge Payments](#) on page 2137

[Steps: Set Up Integration to Import Payment Status Reports](#)

[Reprocess Multiple Electronic Payments](#) on page 2171

[Steps: Use Settlement](#) on page 2155

## Concept: Electronic Payment Methods

Workday provides payment methods to which you can define configurable payment types using the **Maintain Payment Types** task. Some of the payment methods are electronic, which have additional processing considerations.

When you settle a payment that's associated with an electronic payment method, Workday sends an electronic payment file to the banks involved. For electronic payments using the digital disbursements payment method, payees can provide their mobile phone number or email address instead of bank account information. Digital disbursements is available as a payment method for miscellaneous payment requests.

However, when you use a third-party vendor to process payments outside of Workday, the third-party vendor sends electronic payment files to the banks. To prevent the banks from receiving duplicate electronic payment files, Workday recommends mapping payment types associated with third-party vendors to *Manual*. This recommendation doesn't apply to student payments because Workday doesn't settle student credit card payments. Workday recommends mapping student credit card payments to either *Credit Card* or *Manual*.

Payment Method	Electronic
Cash	No
Check	No
Credit Card	Yes
Digital Disbursements	Yes
Direct Debit	Yes
Direct Deposit	Yes
EFT	Yes
EFT with Reference	Yes
Manual	No
Wire	Yes

## Steps: Set Up Payment Purpose Codes

### Context

You can configure payment purpose codes by country to include on ad hoc payments and payments for supplier invoices. The payment purpose codes ensure your ad hoc and supplier payments comply with banks or local regulatory reporting requirements.

## Steps

1. Access the **Edit Tenant Setup - Financials** task.

Select the **Enable Payment Purpose Code** check box in the **Settlement and Bank Account Options** section.

**Security:** *Set Up: Settlement* domain in the Banking and Settlement functional area.

2. Configure payment purpose codes.

You can either:

- Manually define each purpose code.

See [Maintain Payment Purpose Codes](#) on page 2142.

- Upload purpose codes in bulk using the Enterprise Interface Builder (EIB).

Select the *Put Payment Purpose Code* web service from the **Web Service Operation** prompt on the **Create EIB** task.

See [Steps: Set Up EIBs Using Templates from Web Service Operations](#).

## Next Steps

As required by your banks, select a purpose code on:

- Ad hoc payments.
- Ad hoc payment templates.
- Supplier invoices.
- Supplier invoice adjustments.

## Maintain Payment Purpose Codes

### Prerequisites

**Security:** *Set Up: Settlement* domain in the Banking and Settlement functional area.

### Context

You can add, update, and delete codes that identify the purposes for ad hoc and supplier payments.

## Steps

1. Access the **Maintain Payment Purpose Codes** task.

2. As you complete the task, consider:

Option	Description
<b>Purpose Code</b>	The country-specific code to define the payment purpose, as required by banks or the local regulatory authorities.

Option	Description
<b>Country</b>	Select the country the payment purpose code applies to.
<b>Originating Country</b>	Select this option when the purpose code applies to a payment that originates from the country selected.
<b>Receiving Country</b>	Select this option when the purpose code applies to a payment received by the country selected.
<b>Inactive</b>	<p>Inactivates the payment purpose code so that it doesn't display in prompts for selecting purpose codes on payments.</p> <p>When you deactivate a payment purpose code, the deactivation isn't retroactive and won't apply to existing ad hoc payments, supplier invoices, and transactions in progress. The code will still display in existing ad hoc payments and supplier invoices.</p>

## Steps: Set Up Remittance Advices Using Setup Rules

### Prerequisites

- Security: These domains in the Banking and Settlement functional area:
  - *Process: Ad Hoc Payment Settlement*
  - *Process: Settlement*
- Security: *Process: Supplier Invoice Payment/Settlement* domain in the Supplier Accounts functional area.
- Security: *Process: Payroll Third-Party Payments Settlement* domain in the Core Payroll functional area.
- Configure these business processes and security policies in the Banking and Settlement functional area:
  - *Outsourced Payment Release Event*
  - *Payment Release Event*
  - *Print Checks Task*
  - *Remittance Issue Event*

### Context

You can configure the remittance advice framework to generate the supporting documentation for supplier invoices and payroll third-party payments in PDF or CSV format. You can maintain remittance template assignments and formats for suppliers and deduction recipients using setup rules for greater flexibility.

### Steps

1. Create remittance advices in either PDF or CSV file format.

See:

- [Steps: Create Remittance Advices in PDF Format](#).
- [Steps: Create Remittance Advices in CSV Format](#).

2. [Create Remittance Advice Setup Rules](#).

You can assign your remittance templates to the suppliers and deduction recipients that require remittance advices.

3. Settle supplier invoices or payroll third-party payable items.

You can:

- [Create Manual Settlement Runs](#).
- [Schedule Automatic Settlement Runs](#).

## Result

When the settlement run completes, Workday sends an email directly to the payees with either a PDF or CSV file attachment that lists the supplier invoices or third-party payments. The emails are issued to the addresses that you set up in the payee contact information.

## Next Steps

- On a completed settlement run, select the **Remittances** tab to view the generated remittance files grouped by remitting event. You can also view the generated remittance file on the payment.
- Use the **Reissue Remittance** task to manually resend the original remittance attachment to a payee at their request.

## Related Information

### Reference

[2024R1 What's New Post: Remittance Advices for Supplier Invoice and Payroll Third-Party Payments](#)

[PDF Remittance for Supplier and Payroll Third Party Payments](#)

## Steps: Create Remittance Advices in PDF Format

### Context

You can create remittance advice documents for your supplier invoice and payroll third-party payments in PDF format. The remittance advices list the invoices or payable items that are associated with your electronic payments or printed checks.

### Steps

1. [Set Up Remittance Issue Event Business Process](#).
2. From the related actions menu of these business processes, select **Business Process > Edit Definition**:
  - *Outsourced Payment Release Event*
  - *Payment Release Event*
  - *Print Checks Task*

Add the *Issue Remittance* service step to initiate a remittance PDF when you settle a payment or print checks.

3. [Create Custom Reports](#).

Create an advanced custom report to define the fields and condition rules available in the remittance print layout and the data to include in the generated PDF document. The custom report functions as the data source for your document layout.

Workday provides a **Payments for Remittance** report data source and report fields on the **Remittance Source** primary business object for your custom report. See [PDF Remittance for Supplier and Payroll Third Party Payments](#).

4. Create a document layout to format and display your PDF remittance advice.

Use Workday Docs for Layouts to create your document layout template based on your custom report.

See [Steps: Set Up Docs for Layouts](#).

5. Create a business form layout to associate the document layout with your custom report.  
See [Steps: Create a Business Form Layout](#).
6. Access the **Create Remittance Print Layout** task.  
Designate the custom business form layout as the layout to use for remittance transactions.  
Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.

## Steps: Create Remittance Advices in CSV Format

### Prerequisites

### Context

You can create remittance advice documents for your supplier invoice and payroll third-party payments in CSV file format. The remittance advices list the invoices or payable items that are associated with your electronic payments or printed checks.

### Steps

1. Set up the *Remittance Release Event* business process.  
See [Set Up Remittance Release Event for Suppliers](#).
2. From the related actions menu of these business processes you're using, select **Business Process > Edit Definition:**
  - *Outsourced Payment Release Event*
  - *Payment Release Event*
  - *Print Checks Task*
Add the *Remittance* service step to initiate a remittance CSV when you settle a payment or print checks.
3. [Create Integration System](#).

As you complete the task, consider:

Option	Description
<b>New using Template</b>	Select <i>WPN-Generic Remittance</i> .
<b>Enable All Services</b>	Select the check box.

4. Create an integration system user for remittances.  
See [Create Integration System User for Supplier Remittance](#).
5. [Set Up Integration Sequence Generators](#).  
You can use the *RemitAdvice\_[yyyy][MM][dd]\_[seq].csv* format to set up and test your integration quickly. You can change the format later to meet your business needs.
6. From the related actions menu of your integration system, select **Integration System > Configure Integration Attachment Service**.  
From the **Attachment** prompt, select an XSLT file or *Create Integration Service Attachment*.
7. For payroll third-party payments, update the web service version for the integration system.  
To update the version, select:
  - a) **Integration System > Configure Integration Attributes** from the related actions menu of your integration system.
  - b) **Version 31.0 and later** from the **Web Service Version** attribute prompt.

## Related Information

### Tasks

[Steps: Set Up Remittance Advices Using Setup Rules](#) on page 2143

## Set Up Remittance Issue Event Business Process

### Prerequisites

Configure the *Remittance Issue Event* business process and security policy in the Banking and Settlement functional area.

### Context

You can configure the *Remittance Issue Event* business process to generate and send remittance advices to payees in PDF format.

### Steps

1. Access the *Remittance Issue Event* business process definition.
2. From the related actions menu of the *Remittance Issue Event* business process, select **Business Process > Edit Definition**.

Add these business process steps:

- *Prepare Remittance Databatch* job
- *Print Remittance* service

3. From the related actions menu of the *Remittance Issue Event* business process, select **Business Process Policy > Edit**.

Select the **Allow Attachments within Emails** check box.

4. From the related actions menu of the *Remittance Issue Event* business process, select **Business Process > Add Notification**.

Configure a custom notification on the business process. The notifications send emails with the PDF attachment to the payees. Workday uses the email address marked as primary for the supplier or deduction recipient.

Select these values:

Option	Description
<b>Override Email Template</b>	<i>Notification Template (no link)</i> , or develop a new template based on your business requirements.
<b>Trigger on Status</b>	<i>Completed</i>
<b>Related Instances</b>	<i>Remittance Run</i>
<b>Recipients</b>	<i>Contactable</i>
<b>Attachments</b>	<ul style="list-style-type: none"> <li>• <i>PDF for Printing Run Business Process Notifications</i></li> <li>• <i>Netting Statements</i> (optional if using <b>Invoice Netting</b>)</li> </ul>

For more information, see:

- [Create Custom Notifications](#).
- [Test Email Notifications By Sending All Emails To Specified Addresses](#).

## Result

Workday launches the *Remittance Issue Event* business process when the payment release or print checks business process reaches *Completed* status during settlement.

## Create Remittance Advice Setup Rules

### Prerequisites

- For supplier invoice payments, review your current remittance integration assignments and configure the setup rules based on the supplier attributes.
- Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.
- Security: *Set Up: Supplier* domain in the Suppliers functional area.
- Security: *Set Up: Payroll (Payroll Third-Party Payments)* domain in the Core Payroll functional area.

### Context

You can configure rules to centrally manage remittance advice layout and integration assignments for payees by payment categories. Workday prioritizes any existing remittance integrations already configured for suppliers.

### Steps

- Access the **Maintain Remittance Setup Rule** task.
- As you complete the task, consider:

Option	Description
<b>Default Remittance Layout</b>	When you don't assign a remittance layout to the supplier or deduction recipient, the remittance process uses the default remittance layout template for PDFs.
<b>Default Integration System</b>	When you don't assign a remittance integration system to the supplier or deduction recipient, the remittance process uses the default CSV integration.
<b>Remittance Layout</b>	Select the remittance print layout to use when Workday generates PDF remittances for the payee.
<b>Integration System</b>	Select the integration system to use when Workday generates CSV remittance files for the payee.
<b>Exclude Remittance</b>	Select the check box to prevent Workday from generating remittance advices for the payee when you have an alternate process for managing remittance requirements.

### Result

Workday applies the remittance setup rules during payment settlement processing.

### Related Information

#### Tasks

[Steps: Set Up Remittance Advices Using Setup Rules](#) on page 2143

## Reference

[2024R1 What's New Post: Remittance Advices for Supplier Invoice and Payroll Third-Party Payments](#)  
[PDF Remittance for Supplier and Payroll Third Party Payments](#)

## Configure ISO Code Sets Across Multiple Dimensions

### Prerequisites

- Configure bank integrations for these ISO 20022 templates:
  - WPN - ISO 20022 V2 Direct Debit (Enhanced Performance)*
  - WPN - ISO 20022 V3 (Enhanced Performance)*
- See [Steps: Set Up Bank Integrations for Settlement Processing](#).
- Security: *Set Up: Payment Configuration* domain in the Banking and Settlement functional area.

### Context

You can define ISO 20022 code set values across multiple payment dimensions for these integration attributes:

- Category Purpose**
- Charge Bearer**
- Local Instrument**
- Payment Purpose**

This enables you to centralize payment configurations and reduce the number of integrations for outputting data into payment files.

**Note:** Edit your integration system to remove any existing configurations for the integration attributes so that they don't override the code set values.

### Steps

1. Access the **Create Payment Configuration** task.

2. As you complete the task, consider:

Option	Description
<b>Integration Attribute</b>	Select the attribute for the payment configuration.
<b>Integration Template</b>	Select the ISO 20022 template that's applicable for your configuration.
<b>Context</b>	Select to output the code assignments at the payment or payment message group level in the payment file.

3. As you complete the **Lines**, consider:

Option	Description
<b>Schema Location</b>	The XML tags in the payment file where Workday outputs the codes. Select: <ul style="list-style-type: none"> <li><b>Code</b> when you're using the ISO standard codes.</li> <li><b>Proprietary</b> when you're using any non-ISO standard code.</li> </ul>

Option	Description
<b>Return Data</b>	The integration attribute value that's output in the payment file when Workday evaluates the associated rules.
<b>Condition Rules</b>	The rules that you configure to output the return data.

4. Define each condition for the payment configuration rules:

Option	Description
<b>Source External Field or Condition Rule</b>	The source data for which you're defining a rule condition. You can select from delivered Workday sources, or condition rules and custom worktags that you've already defined.
<b>Relational Operator</b>	Select how you want to compare the source data to the next value in your condition. The options depend on the data type of the source.
<b>Comparison Type</b>	Specify whether the source is to be compared to another field or to a value that you enter in the <b>Comparison Value</b> column.
<b>Comparison Value</b>	Either select a comparison field or enter the value to be compared to the source.
<b>Order</b>	Workday evaluates conditions in the order that you specify.
( )	Use parentheses to group one or more conditions together. Example:, to say <b>(a and b) or c</b> use the opening parenthesis at the beginning of statement <b>a</b> , an <b>And</b> before statement <b>b</b> , a closing parenthesis at the end of statement <b>b</b> , and an <b>Or</b> at the beginning of statement <b>c</b> .

## Result

During settlement, Workday evaluates the dynamic rules you configured for the integration attributes and applies the values from the applicable rule to your payment files.

## Example

You set up a configuration to output charge bearer codes in 2 separate payment files that you're sending to banks in the U.S. and SEPA countries:

Return Data	Condition Rule
Charge Bearer / DEBT	DEBT-US
Charge Bearer / SHAR	SHAR-SEPA

You define these conditions for each rule:

Condition Rule	Source External Field or Condition Rule	Relational Operator	Comparison Type	Comparison Value
DEBT-US	<i>Payment to Country/Settlement Bank Account Country</i>	<i>in the selection list</i>	<i>Value specified in this filter</i>	U.S.
SHAR-SEPA	<i>Payment to Country/Settlement Bank Account Country</i>	<i>in the selection list</i>	<i>Value specified in this filter</i>	Austria Belgium Bulgaria Croatia Cyprus

You create a settlement run with supplier invoice payments to the U.S. and a SEPA bank location. When settlement processing completes, Workday generates 2 payment files and adds each of these charge bearer codes to the applicable file:

- DEBT for the U.S. payment
- SHAR for the SEPA payment

### Next Steps

To view your completed payment configurations, use the **View Payment Configurations** report. You can also use the report to add or maintain payment configurations.

### Reference: Settlement Business Processes

Business Process	Description
<i>Settlement Run Event</i>	<p>Initiates when you create a settlement run. Workday delivers the default definition of this business process minimally configured. You can add steps, such as approvals.</p> <p>When you deliver payment files to external parties, don't include an integration step on this business process. Workday recommends that you configure the integration step on the <i>Payment Release Event</i> or <i>Outsourced Payment Release Event</i> business process instead.</p>
<i>Cash Balance Check Event</i>	<p>Checks for overspending of funds in accounting journals and settlement run payments.</p> <p>To use this business process, add a <i>Check Cash Balance</i> action step to any of these business processes:</p>

Business Process	Description
	<ul style="list-style-type: none"> <li>• <i>Accounting Journal Event</i></li> <li>• <i>Ad Hoc Bank Transaction Event</i></li> <li>• <i>Express Settlement Run Event</i></li> <li>• <i>Settlement Run Event</i></li> </ul> <p>You can add this action step more than once, but 1 instance must be the completion step.</p>
<i>Cash Balance Check Event (Do Not Use)</i>	<p>Checks for overspending of funds in ad hoc bank transactions and settlement run payments.</p> <p>To use this business process, add a <i>Check Cash Balance (Do Not Use)</i> action step to the <i>Settlement Run Event</i> or <i>Ad Hoc Bank Transaction Event</i> business process.</p> <p>You can add this step more than once, but 1 instance must be the completion step.</p> <p><b>Note:</b> We plan to retire the <i>Cash Balance Check Event (Do Not Use)</i> business process with the old cash balance check functionality in a future update. Workday recommends that you use the <i>Cash Balance Check Event</i> business process with the advanced cash balance check functionality for a more streamlined cash balance check exception process.</p>
<i>Express Settlement Run Event</i>	<p>Initiates when the <i>Miscellaneous Payment Request Event</i> business process completes for a miscellaneous payment request that you route through an express settlement run.</p> <p>When you deliver payment files to external parties, don't include an integration step on this business process. Workday recommends that you configure the integration step on the <i>Payment Release Event</i> or <i>Outsourced Payment Release Event</i> business process instead.</p>
<i>Outsourced Payment Release Event</i>	<p>Initiates when the <i>Settlement Run Event</i> business process completes for payments that you're sending to an outsourced check printing service.</p> <p>On the business process definition:</p> <ul style="list-style-type: none"> <li>• Add an <i>Integration for Processing Outsource Payment Group</i> business process step for each integration, and select the <i>Outsourced Payment Group ID</i> integration criteria.</li> <li>• Configure the <i>Document Delivery</i> service step on each <i>Integration Process Event</i> to route payments.</li> <li>• Configure 1 of these remittance service steps to issue remittance advices to payees: <ul style="list-style-type: none"> <li>• <i>Issue Remittance(PDF format)</i></li> <li>• <i>Remittance (CSV format)</i></li> </ul> </li> </ul>

Business Process	Description
	<p>When you deliver all integration files to the same bank:</p> <ul style="list-style-type: none"> <li>Include a <i>Document Delivery</i> step on the <i>Outsourced Payment Release Event</i> business process.</li> <li>Remove the <i>Document Delivery</i> step from each <i>Integration Process Event</i>.</li> </ul> <p>When you add multiple integrations to the business process, they all initiate at once. When you add an integration step and select <i>Integration for Processing Outsource Payment Group</i>, Workday initiates a single integration conditionally. The integration that Workday initiates depends on the:</p> <ul style="list-style-type: none"> <li>Bank account</li> <li>Payment category</li> <li>Payment type</li> </ul>
<i>Payment Release Event</i>	<p>Initiates for each electronic payment included in a settlement run when the <i>Settlement Run Event</i> business process completes.</p> <p>On the business process definition:</p> <ul style="list-style-type: none"> <li>Add 1 <i>Integration Process Event</i> business process step for each bank account integration. Workday recommends that you configure the dynamic integration system.</li> <li>Configure the <i>Document Delivery</i> service step on each <i>Integration Process Event</i> to route payments.</li> <li>Configure 1 of these remittance service steps to send remittance advices to payees: <ul style="list-style-type: none"> <li><i>Issue Remittance</i>(PDF format)</li> <li><i>Remittance</i> (CSV format)</li> </ul> </li> </ul> <p>When you deliver all integration files to the same bank:</p> <ul style="list-style-type: none"> <li>Remove the <i>Document Delivery</i> step from each <i>Integration Process Event</i> business process.</li> <li>Add a <i>Document Delivery</i> step on the <i>Payment Release Event</i> business process.</li> </ul> <p>When you pay AMEX for expense credit card transactions, you can include the <i>Remittance</i> service step to produce remittance files that accompany payments.</p>
<i>Print Checks Task</i>	<p>When payments within a settlement run require checks, this business process automatically:</p> <ul style="list-style-type: none"> <li>Creates an event for printing checks.</li> <li>Sends a notification to the settlement specialist.</li> </ul>

Business Process	Description
	<p>To send remittance advices to payees, configure 1 of these remittance service steps on the business process definition:</p> <ul style="list-style-type: none"> <li>• <i>Issue Remittance</i>(PDF format)</li> <li>• <i>Remittance</i> (CSV format)</li> </ul>
<i>Payment Printing Event</i>	<p>Initiates to generate a positive pay file when the <i>Print Checks Task</i> business process completes.</p> <p>To generate positive pay files:</p> <ul style="list-style-type: none"> <li>• Select the <b>Enable Positive Pay</b> check box on the payment bank account.</li> <li>• Configure the positive pay file integration on the <i>Payment Printing Event</i> business process.</li> </ul>
<i>Remittance Issue Event</i>	<p>Initiates to generate a remittance advice PDF to payees when any of these business processes complete:</p> <ul style="list-style-type: none"> <li>• <i>Outsourced Payment Release Event</i></li> <li>• <i>Payment Release Event</i></li> <li>• <i>Print Checks Task</i></li> </ul> <p>See <a href="#">Set Up Remittance Issue Event Business Process</a>.</p>
<i>Remittance Release Event</i>	<p>To settle expense payments with AMEX for expense credit card transactions:</p> <ul style="list-style-type: none"> <li>• Create the integration event for AMEX remittance files.</li> <li>• Include the <i>Remittance</i> service step on the <i>Payment Release Event</i> business process.</li> </ul> <p>To attach netting statements to your supplier emails, add the <b>Netting Statements</b> report field to the attachment section of the <i>Remittance Release Event</i> business process.</p> <p>See <a href="#">Set Up Remittance Release Event for Suppliers</a>.</p>

## Reference: Settlement Run Custom Filters

You can use the **Create Settlement Run Custom Filter** task to create custom filters for settlement runs. You can edit these filters using the **Edit Settlement Run Custom Filter** task.

### Fields

Option	Description
<b>From Current Date In (Days)</b>	Includes everything between the current date and the number of days in the future that you enter in the field.
<b>Up to Current Date In (Days)</b>	Includes everything between the current date and the number of days in the past that you enter in the field.
<b>Invoices Due In (Days)</b>	When you enter a positive number in this field, Workday includes all invoices that are: <ul style="list-style-type: none"> <li>Past due up to the settlement run date.</li> <li>Past due up to the number of days in the future from the settlement run date. Example: If the settlement run date is 12/30/21 and <b>Invoices Due In (Days)</b> is 3, then the custom filter includes all invoices that are due up to 01/02/22.</li> </ul> When you enter a negative number in this field, Workday includes all supplier invoices that are due up to the number of days in the past from the settlement run date. Example: If the settlement run date is 12/30/21 and <b>Invoices Due In (Days)</b> is -3, then the custom filter includes all invoices that are due up to 12/27/21.
<b>Expense Report Approval Dates Before Current Date In (Days)</b>	Includes expense reports with approval dates that are a specific number of days in the past and older.

### Common Scenarios

Scenario	Steps
Pay all outstanding expense reports each week.	<ol style="list-style-type: none"> <li>Select <i>Expense Report</i> on the <b>Payment Source</b> prompt.</li> <li>On the <b>Expense Report Attributes</b> section, select the <b>All Open Expense Reports</b> check box.</li> </ol>
Pay outstanding expense credit card transactions on behalf of other companies.	<ol style="list-style-type: none"> <li>Select <i>Expense Credit Card Transaction</i> on the <b>Payment Source</b> prompt.</li> <li>On the <b>Expense Credit Card Transaction Attributes</b> section, select companies to include in the filter on the <b>On Behalf of Company for the Payment</b> prompt.</li> </ol>
Pay your tier 1 suppliers before your tier 2 suppliers.	Create separate custom filters for your tier 1 and tier 2 suppliers.

Scenario	Steps
	<ol style="list-style-type: none"> <li>1. Select <b>Supplier Invoice</b> on the <b>Payment Source</b> prompt.</li> <li>2. On the <b>Supplier Invoice Attributes</b> section, select attributes on these prompts: <ul style="list-style-type: none"> <li>• <b>Supplier</b></li> <li>• <b>Supplier Category</b></li> <li>• <b>Supplier Group</b></li> </ul> </li> </ol>
Automatically run the settlement process nightly to pay supplier invoices due in the next 3 days. Include all expense reports and credit card transactions.	<ol style="list-style-type: none"> <li>1. Select these payment sources on the <b>Payment Source</b> prompt: <ul style="list-style-type: none"> <li>• <b>Supplier Invoice</b></li> <li>• <b>Expense Credit Card Transaction</b></li> <li>• <b>Expense Report</b></li> </ul> </li> <li>2. On the <b>Supplier Invoice Attributes</b> section, enter 3 on the <b>Invoices Due in (Days)</b> field.</li> <li>3. On the <b>Expense Credit Card Transaction Attributes</b> section, select the <b>All Available Expense Credit Card Transactions</b> check box.</li> <li>4. On the <b>Expense Report Attributes</b> section, select the <b>All Open Expense Reports</b> check box.</li> </ol>
Pay quarterly bonuses to salaried employees and control who you include in the settlement run.	<p>Use this method if you've been experiencing time-outs when settling a high volume of off-cycle payments.</p> <ol style="list-style-type: none"> <li>1. Select <b>Pay Group Exception</b> on the <b>Payment Source</b> prompt.</li> <li>2. On the <b>Pay Group Exception Attributes</b> section, select <i>Quarterly U.S. Bonus Pay Run Group</i> on the <b>Pay Run Group Selection</b> prompt.</li> </ol>
Pay supplier invoices based on their reference types.	<ol style="list-style-type: none"> <li>1. Select <b>Supplier Invoice</b> on the <b>Payment Source</b> prompt.</li> <li>2. On the <b>Supplier Invoice Attributes</b> section, select reference types on the <b>Reference Type</b> prompt.</li> </ol>

#### Related Information

##### Concepts

[Setup Considerations: Settlement Run Filters](#) on page 2131

##### Tasks

[Define Settlement Run Custom Filters](#) on page 2135

## Steps: Use Settlement

---

### Prerequisites

Define the elements necessary to settle payments, such as payment types and bank accounts.

## Context

The single settlement engine in Workday enables you to manage all incoming and outgoing payments in 1 place across your entire business. This unified infrastructure:

- Controls the financial inflows and outflows of your enterprise.
- Gives you the analytic data you need to make informed decisions.

## Steps

1. Create the open items and pending payments to settle.

2. (Optional) Preauthorize bank accounts.

See [Steps: Use Prenotes on page 2156](#).

3. Settle payments.

See:

- [Create Manual Settlement Runs on page 2160](#).
- [Schedule Automatic Settlement Runs on page 2164](#).

4. (Optional) Upload payment acknowledgments.

See [Launch EIB Spreadsheet Upload](#).

5. (Optional) [Print Checks and Advices on page 2200](#).

## Related Information

### Tasks

[Steps: Set Up Settlement on page 2120](#)

[Setup Considerations: Bank Institution Records](#)

[Concept: Settlement Processing on page 2172](#)

[Reference: Edit Tenant Setup - Financials](#)

[Reference: Settlement Run Items and Payments on page 2174](#)

[Reference: Settlement Run and Payment Statuses on page 2176](#)

## Bank Account Preauthorization

---

### Steps: Use Prenotes

#### Prerequisites

Set up your bank accounts for electronic payments.

#### Context

You can reduce the number of Automated Clearing House (ACH) payment rejections by sending prenote transactions to validate electronic banking information.

#### Steps

1. Access the [Edit Tenant Setup - Financials](#) task.

Specify an ID generator for the prenote run.

[Security: Set Up: Tenant Setup - Financials](#) domain in the System functional area.

2. Add a *Batch/Job* step on the *Prenote Run Event* business process, specify *Prenotes Create (Job)*, and select users with appropriate security access.

See [Edit Business Processes](#).

3. (Optional) Configure the *Payment Election Enrollment Event* business process to issue prenotes when workers or students add or change bank accounts on payment elections.

Add a Service step before the completion step and specify *Prenote of Worker Bank Accounts if New or Changed*. To issue prenotes selectively, include an entry condition rule.

**Note:** To issue prenotes for worker or student bank accounts, you must configure this step.

See [Edit Business Processes](#).

4. [Define Bank Accounts](#) on page 1925.

- a) Add *Prenote Payment* to the primary or additional purposes in the **Bank Account Usage** section.
- b) Configure the payment type and payment category for your prenotes on the **Settlement Setup** tab to automate prenote payments from your company bank account. If you leave the **Payment Category** field blank, Workday applies the configurations to all payment categories for the payment type selected. Example: If you define settlement setup for ACH payment types and leave the **Payment Category** field blank, Workday applies the configurations to all ACH payments, including prenote payments.

If you don't configure the **Settlement Setup** tab for prenotes, you'll need to manually send the prenote payment files to your bank.

5. (Optional) [Maintain Payment Election Rules](#) on page 1729.

Configure override payment types for the bank accounts for workers or student refunds. Workday uses the override payment type when prenotes return with these statuses:

- *Error*
- *In Progress*
- *Pending*

When a prenote returns with the status of *Error*, the worker or student must update their payment elections. If you haven't selected an override payment type for errors, Workday rejects the payment, requiring you to process it manually.

6. (Optional) [Set Up Online Payment Options for Students](#).

Configure the **Blocked Prenote Statuses** field on the **Student Payment Settings** tab.

7. (Optional) Access the **Change Customer Banking** task to enable prenotes for customer payments.

Select **Requires Prenote** for the settlement bank account.

Configure the *Customer Banking Change Event* business process and security policy in the Customers functional area.

8. (Optional) Access the **Change Supplier Settlement Bank Account** task to enable prenotes for supplier payments.

Select the **Requires Prenote** check box for the settlement bank account.

Configure the *Supplier Settlement Bank Account Change Event* business process and security policy in the Suppliers functional area.

9. (Optional) Enable prenotes for any of these payee types:

- Ad hoc payees.
- Miscellaneous payees.
- Sponsors.
- Tax authorities.

Select the **Requires Prenote** check box for the settlement bank account on the **Settlement Bank Account** profile group.

**10.** Create or schedule a prenote run.

You can:

- [Create Pernote Runs](#) on page 2159.
- Access the **Schedule Pernote Run** task.

Security:

- *Process: Customer Invoice Payment/Settlement* in the Customer Accounts functional area.
- *Process: Customer Refund Settlement* in the Customer Accounts functional area.
- *Process: Expense Report Payment/Settlement* in the Expenses functional area.
- *Process: Payroll Settlement* in the Core Payroll functional area.
- *Process: Pending Student Refund/Settlement* in the Student Financials functional area.
- *Process: Settlement* in the Banking and Settlement functional area.
- *Process: Student Payment/Settlement* in the Student Financials functional area.
- *Process: Student Sponsor Refund/Settlement* in the Student Financials functional area.
- *Process: Supplier Invoice Payment/Settlement* in the Supplier Accounts functional area.

**11.**(Optional) Access the **Update Pnotes** task.

Update prenote payment statuses manually. Example: When the receiving bank returns exceptions, you can mark individual prenote payments as errors and cancel or reverse the accounting.

## Result

When you generate a prenote run, Workday:

- Generates the prenote payments as payment files separate from the settlement run.
- Sends the prenote payment to your bank based on the integration system set up in the **Settlement Setup** section of the company bank account.

## Next Steps

Use these reports to track information on your prenote runs:

- *Find Pernote Run*: View manually created prenote runs.
- *View Scheduled Runs*: View and edit scheduled prenote run instances.

## Create Prenote Runs

### Prerequisites

- Define valid bank accounts for electronic payments.
- Configure the *Prenote Run Event* business process and security policy in the Banking and Settlement or Core Payroll functional areas.

### Context

Prenote runs preauthorize bank accounts by verifying account and routing information for workers, suppliers, customers, and students. Workday handles a prenote transmission as a batch process and:

- Creates the prenote payments.
- Creates the prenote payment accounting when the amount is greater than zero.
- Sets the prenote status to *In Progress*.

### Steps

1. Access the **Create Prenote Run** task.
2. As you complete the task, consider:

Option	Description
<b>Company</b>	<p>To define a prenote run for suppliers or customers, select a company instead of a company hierarchy. When you select a company hierarchy, you must have previously tied the bank to that hierarchy.</p> <p>To define a prenote run for workers, ensure that the workers are associated with a company. When you select a company hierarchy and then select a worker, Workday associates a company with that worker. The associated company pays the prenote amount.</p> <p>To define a prenote run for students, ensure that they're associated with the company of the institution. The associated company pays the prenote amount.</p> <p><b>Note:</b> The currency for the selected company and bank account must be the same.</p>
<b>Prenote Amount</b>	<p>Enter an amount that's zero or more for each prenote payment.</p> <p>For student direct debit payments, the prenote payments must be a zero amount.</p>
<b>Optional Balancing Worktags</b>	<p>When you enable optional worktag balancing on the <b>Maintain Worktag Balancing Configuration</b> task, Workday fully balances journal lines by optional balancing worktags. Journal lines automatically:</p> <ul style="list-style-type: none"> <li>• Inherit optional balancing worktags based on the worktag types selected.</li> </ul>

Option	Description
	<ul style="list-style-type: none"> <li>Generate due to and due from entries to balance transactions.</li> </ul> <p>You can require optional balancing worktags for prenote runs using the <b>Maintain Worktag Usage</b> report.</p>

**Related Information****Tasks**[Configure Optional Worktag Balancing for the Tenant](#) on page 374[Define Bank Accounts](#) on page 1925**Reference**[2021R2 What's New Post: Prenote for Student Bank Accounts](#)**Reference: Prenote Run Statuses**

This table describes the different statuses for prenote runs.

Status	Description
<i>None</i>	<p>The bank account doesn't have prenotes enabled.</p> <p>For worker and student bank accounts, the worker or student didn't set the bank account for a payment election.</p> <p>For settlement bank accounts, you didn't edit the bank account to enable prenotes.</p>
<i>Pending</i>	The bank account has prenotes enabled and is waiting for a prenote run to process it.
<i>In Progress</i>	Workday is awaiting confirmation that the bank received the prenote payment.
<i>Complete</i>	The bank successfully received and processed the prenote transaction.
<i>Error</i>	<p>Either:</p> <ul style="list-style-type: none"> <li>You canceled the prenote payment.</li> <li>The bank rejected the prenote payment.</li> </ul>

**Payment Settlement****Create Manual Settlement Runs****Prerequisites**

- Create the unpaid open items and pending payments to settle.
- To settle customer refund payments, opt in to **Customer Refunds Optimization** on the **Maintain Feature Opt-Ins** report.
- Set up an intercompany profile in Workday for settling intercompany items.

- Security: *Process: Settlement* domain in the Banking and Settlement functional area or 1 or more of these domains:
  - *Process: Ad Hoc Payment Settlement* domain in the Banking and Settlement functional area.
  - *Process: Bank Account Transfer for Settlement/**Settlement* domain in the Banking and Settlement functional area.
  - *Process: Customer Invoice Payment/**Settlement* domain in the Customer Accounts functional area.
  - *Process: Customer Refund Settlement* domain in the Customer Accounts functional area.
  - *Process: Expense Report Payment/**Settlement* domain in the Expenses functional area.
  - *Process: Intercompany Payment/**Settlement* domain in the Financial Accounting functional area.
  - *Process: Miscellaneous Payment Request Settlement* domain in the Miscellaneous Payments functional area.
  - *Process: Payroll Settlement* domain in the Core Payroll functional area.
  - *Process: Payroll Third-Party Payments Settlement* domain in the Core Payroll functional area.
  - *Process: Pending Student Refund/**Settlement* domain in the Student Financials functional area.
  - *Process: Procurement Card Payment/**Settlement* domain in the Procurement functional area.
  - *Process: Student Payment/**Settlement* domain in the Student Financials functional area.
  - *Process: Student Sponsor Refund/**Settlement* domain in the Student Financials functional area.
  - *Process: Supplier Invoice Payment/**Settlement* domain in the Supplier Accounts functional area.

## Context

You can create, edit, preview, and process settlement runs to settle unpaid open items and pending payments. Workday interacts with banks to send outbound payments and receive inbound payments.

## Steps

1. Access the **Create Settlement Run** task.

As an alternative, you can settle a one-off payment from the related actions menu of an unpaid open item or pending payment. Workday creates a draft settlement run with the one-off payment.

2. As you complete the task, consider:

Option	Description
<b>Currency</b>	<p>This currency value can differ from the bank account currency, but the bank accounts in the bank routing rule must accept it.</p> <p>To select multiple or all currencies, you must enable multicurrency settlement runs in the <b>Edit Tenant Setup – Financials</b> task. You can select multiple currencies when searching for items or payments to add to the settlement run. Workday settles the payments using the currency of each transaction.</p>
<b>Display Currency</b>	<p>For single currency settlement runs, the display currency is the settlement run currency.</p> <p>Workday displays the settlement run inbound or outbound payment total in this currency for informational purposes, while settling payments using the currency of the transaction. You can change the default company currency to another currency that is associated with the company bank account.</p>

Option	Description
<b>Auto Select Filters</b>	<p>Workday includes all unpaid open items and pending payments that meet the settlement filter criteria for:</p> <ul style="list-style-type: none"> <li>• Organization</li> <li>• Currency</li> <li>• Run date</li> </ul> <p>You can add or remove selections from the settlement run as necessary before you process the run. For the United Kingdom, the settlement run date is the BACS processing date.</p>
<b>Include Payments on Behalf of Other Companies</b>	<p>Select to settle payment requests from other companies for these payments categories and make payments on behalf of other companies:</p> <ul style="list-style-type: none"> <li>• Cash advance payments</li> <li>• Expense credit card transactions</li> <li>• Expense reports</li> <li>• Miscellaneous payment requests</li> <li>• Supplier invoices</li> </ul> <p>Available companies are based on your intercompany profile. This option is unavailable if you're settling payments for a company hierarchy. If you specified on-behalf of other companies in a custom filter, select this check box as well.</p>
<b>Exclude Negative Payments</b>	<p>Select to exclude negative payments, such as unapplied credit adjustments, from processing in the settlement run.</p> <p>Workday groups all negative payments by company, payment category, and currency in a single row and marked as excluded in the <b>View Settlement Run</b> task.</p>
<b>Dynamic Supplier Payment Date</b>	<p>Select the supplier payment date that you want to use for the settlement run.</p> <ul style="list-style-type: none"> <li>• When the supplier invoice discount date is in the past, Workday uses the supplier invoice due date as the payment date.</li> <li>• When the supplier invoice due date is in the past, Workday uses the settlement run date as the payment date.</li> </ul> <p>A settlement run can have supplier payments with different payment dates. The bank executes supplier payments based on the payment date, not the date when you send the payment file.</p> <p>Workday also groups supplier credit adjustments based on the payment date value you selected. You can select the <b>Apply Supplier Credit Adjustments to First Payment Due</b> check box</p>

Option	Description
	on the <b>Edit Tenant Setup - Financials</b> task to automatically apply supplier invoice credit adjustments to the invoice payments during settlement. Workday nets pending credit memos against supplier invoices irrespective of their due dates.

Workday immediately creates a draft settlement run with an auto-generated ID based on your tenant setup.

3. Click **Add** to search for and select the unpaid open items and pending payments to include in the settlement run.

4. Preview the payments that you've included in the settlement run.

The **Summary** and other views display the payments to be generated. Workday combines payments for documents such as expense reports and supplier invoices, if applicable.

If necessary, edit the details of the payment:

- Click **Edit** to edit item details, such as the bank account, supplier payment dates, payment type, or to add a memo. You can remove open items from the payment.
- Click **Manage Payments** to edit payment details, or remove payments from the settlement run. You can't remove payroll payments from pay groups.
- Click **Manage Exceptions** to edit payments with exceptions such as a bank account that doesn't support a certain payment type. You can also remove payments with the exceptions.

5. To view the selected items, click **View Items**.

If your expense report payments include zero dollar expense reports, you can click **Manage Zero Reimbursement** to remove them from the settlement run.

6. To settle payments for the unpaid open items and pending payments included in the run, click **Process**.

## Result

Workday launches the *Settlement Run Event* business process and settles its unpaid open items and pending payments.

If you've configured remittance integration, Workday processes the file during the settlement run.

Once the settlement engine completes the payments, it generates the accounting entries associated with each payment and sends them to Workday financial accounting. If the ledger periods for the settlement run date are closed or in *Close in Progress* status, payments are posted to the first available open ledger period. If an open ledger period isn't available, the status for the payment journal changes to *Error*.

## Next Steps

After launching the settlement run, you can:

- Approve the settlement run event.
- For electronic payments:
  - Approve the payment release.
  - Complete and approve any additional *Payment Release Event* business process steps.
  - Upload payment acknowledgements for payments that have an *Awaiting Acknowledgement* payment status.
  - Verify that you delivered the payment integration files correctly.

- For payments by check:
  - Complete the print checks tasks in **My Tasks** to initiate check printing when ready.
  - Complete and approve any additional *Print Checks Task* and *Payment Printing Event* business process steps.

To edit a draft settlement run, use the **Find Settlement Runs** report. If necessary, change the **Settlement Run Name** or **Payment Date**. The payment date is the date of the settlement that displays on checks and advices for payments included in the run. For electronic payments, the payment date is the date that you process the settlement run.

## **Schedule Automatic Settlement Runs**

### **Prerequisites**

- Create the unpaid open items and pending payments that you need to settle.
- Set up an intercompany profile in Workday for settling intercompany payments.
- Security: 1 of these domains in the Banking and Settlement functional area:
  - *Process: Schedule Settlement Run*
  - *Process: Settlement*

### **Context**

You can define a schedule for Workday to create a settlement run and settle payments for unpaid open items and pending payments. If you schedule the creation of the settlement run only, you can review and edit it before processing.

### **Steps**

1. Access the **Schedule Settlement Run** task.
2. As you complete the task, consider:

<b>Option</b>	<b>Description</b>
<b>Currency</b>	<p>This currency can differ from the bank account currency, but the bank accounts in the bank routing rule must accept it.</p> <p>You can select multiple currencies when searching for items or payments to add to the settlement run. Workday settles the payments</p>

Option	Description
	using the currency of each transaction. To select multiple or all currencies, enable multicurrency settlement runs in the <b>Edit Tenant Setup – Financials</b> task.
<b>Display Currency</b>	<p>The settlement run currency for single currency settlement runs.</p> <p>For multicurrency settlement runs, Workday displays the settlement run inbound or outbound payment total in this currency, while settling payments using the currency of the transaction. You can change the default company currency to another currency that is associated with the company bank account.</p>
<b>Run Date From Current Date In (Days)</b>	To settle all payments created in the settlement run, enter a number of days from the date of today. Example: You can set a future settlement run date to allow more time to fund your source bank accounts before the banks execute supplier invoice payments.
<b>Auto Select Filters</b>	<p>Workday includes all unpaid open items and pending payments that meet the settlement filter criteria for:</p> <ul style="list-style-type: none"> <li>• Organization</li> <li>• Currency</li> <li>• Run date</li> </ul> <p>You can add or remove selections from the settlement run as necessary before you process the run. For the United Kingdom, the settlement run date is the BACS processing date.</p>
<b>Include Payments on Behalf of Other Companies</b>	<p>Select to settle payment requests from other companies for these payments categories and make payments on behalf of the other companies:</p> <ul style="list-style-type: none"> <li>• Cash advance payments</li> <li>• Expense credit card transactions</li> <li>• Expense reports</li> <li>• Miscellaneous payment requests</li> <li>• Supplier invoices</li> </ul> <p>Available companies are based on your intercompany profile. This option is unavailable if you're settling payments for a company hierarchy.</p> <p>If you're using a custom filter with specified criteria and companies, you must select this option.</p>
<b>Keep Settlement Run in Draft</b>	This option schedules the creation of the settlement run, but saves it as a draft. After the scheduled date and time, you can find the

Option	Description
	settlement run, review, make edits, and manually launch the process when ready.
<b>Exclude Negative Payments</b>	<p>Select to exclude negative payments, such as unapplied credit adjustments, from processing in the settlement run.</p> <p>Workday groups all negative payments by company, payment category, and currency in a single row and marked as excluded in the <b>View Settlement Run</b> task.</p>
<b>Dynamic Supplier Payment Date</b>	<p>Select the supplier payment date that you want to use for the settlement run.</p> <ul style="list-style-type: none"> <li>When the supplier invoice discount date is in the past, Workday uses the supplier invoice due date as the payment date.</li> <li>When the supplier invoice due date is in the past, Workday uses the settlement run date as the payment date.</li> </ul> <p>A settlement run can have supplier payments with different payment dates. The bank executes supplier payments based on the payment date, not the date when you send the payment file.</p> <p>Workday also groups supplier credit adjustments based on the payment date value you selected. You can select the <b>Apply Supplier Credit Adjustments to First Payment Due</b> check box on the <b>Edit Tenant Setup - Financials</b> task to automatically apply supplier invoice credit adjustments to the invoice payments during settlement. Workday nets pending credit memos against supplier invoices irrespective of their due dates.</p>

## Result

When the scheduled date and time arrive, Workday creates a settlement run based on your selection criteria and either:

- Saves the settlement run as draft.
- Launches the *Settlement Run Event* business process automatically and settles its unpaid open items and pending payments.

Once the settlement engine completes the payments, it generates the accounting entries associated with each payment and sends them to the financial accounting of Workday. If ledger periods for the settlement run date are closed or in *Close in Progress* status, payments are posted to the first available open ledger period. If an open ledger period isn't available, the status for the payment journal changes to *Error*.

## Next Steps

After launching the settlement run, you can:

- Approve the settlement run event.

- For electronic payments:
  - Approve the payment release.
  - Complete and approve any additional *Payment Release Event* business process steps.
  - Upload payment acknowledgements for payments that have an *Awaiting Acknowledgement* payment status.
  - Verify that you delivered the payment integration files correctly.
- For payments by check:
  - Complete the print checks tasks in **My Tasks** to initiate check printing when ready.
  - Complete and approve any additional *Print Checks Task* and *Payment Printing Event* business process steps.

To edit a draft settlement run, use the **Find Settlement Runs** report. If necessary, change the **Settlement Run Name** or **Payment Date**. The payment date is the date of the settlement that displays on checks and advices for payments included in the run. For electronic payments, the payment date is the date that you process the settlement run.

## **Verify Delivery of Electronic Payments**

#### **Prerequisites**

- Configure electronic payment integration to deliver payment files to the correct locations.
- Security: *My Reports* domain in the System functional area.

#### **Context**

You can verify that your electronic payment integration delivered payment files to the correct destination.

#### **Steps**

1. Access the **Process Monitor** report.
2. Select the **Integration** process type.
3. Click **Payment Router** to view the detail.
4. To verify that the payment file was successfully delivered to the destination, click the **Output Files** tab.
5. (Optional) Click the **Messages** tab to view the reasons for any failures.

#### **Next Steps**

If the delivery didn't work, review the process and update the configuration. To resend payment messages without creating new payments and settlement runs, access the **Find Electronic Payment Messages** report. From the related actions menu of a payment message, select **Payment Message > Resend**.

## Cancel Settlement Run

### Prerequisites

Security: Process: *Settlement* domain in the Banking and Settlement functional area or 1 or more of these domains:

- *Process: Ad Hoc Payment Settlement* domain in the Banking and Settlement functional area.
- *Process: Bank Account Transfer for Settlement/**Settlement* domain in the Banking and Settlement functional area.
- *Process: Customer Invoice Payment/**Settlement* domain in the Customer Accounts functional area.
- *Process: Customer Refund Settlement* domain in the Customer Accounts functional area.
- *Process: Expense Report Payment/**Settlement* domain in the Expenses functional area.
- *Process: Intercompany Payment/**Settlement* domain in the Financial Accounting functional area.
- *Process: Miscellaneous Payment Request Settlement* domain in the Miscellaneous Payments functional area.
- *Process: Payroll Settlement* domain in the Core Payroll functional area.
- *Process: Pending Student Refund/**Settlement* domain in the Student Financials functional area.
- *Process: Procurement Card Payment/**Settlement* domain in the Procurement functional area.
- *Process: Student Payment/**Settlement* domain in the Student Financials functional area.
- *Process: Student Sponsor Refund/**Settlement* domain in the Student Financials functional area.
- *Process: Supplier Invoice Payment/**Settlement* domain in the Supplier Accounts functional area.

### Context

You can cancel an entire settlement run in any status, unless:

- Billing is complete for cost reimbursable award transactions in the settlement run. These transactions include:
  - Payroll.
  - Expense reports.
  - Supplier invoices.
  - Fringe benefits.
- The settlement run has 1 or more payments that:
  - Generated intercompany items in another settlement run.
  - Have a status of *Escheated*, *Returned*, or *Stopped*.
  - You've reconciled.

When you cancel a settlement run that has already sent the payment file to the bank, contact the bank to stop the processing. Once Workday delivers the payment file to the bank, you can't automatically cancel it.

### Steps

1. Access the **Find Settlement Runs** task.
2. Select **Settlement Run > Cancel** from the related actions menu of the settlement run.
3. On the confirmation page, review the settlement run details to ensure that you have the correct settlement run.

**Note:** After you cancel, you can't make additional changes to the canceled settlement run.

### Result

- When you cancel a processed settlement run, you also cancel payments created by the settlement run. These payments can include supplier invoice payments, expense payments, and customer invoice payments. You can then select payable items again for payment.

- Payments and receivable transactions created outside the settlement run are set back to *Awaiting Settlement* status. These payments and receivable transactions, such as payroll and customer electronic payments, are available for settlement in a different settlement run.
- When you cancel a settlement run, you also:
  - Cancel deposit batches created by the settlement run.
  - Cancel or reverse journals.
  - Cancel or withdraw related *Payment Group* business processes, such as print checks and payment release.
- For reference, you can still view details from the **Find Settlement Run** report.

### **Related Information**

#### **Tasks**

[Steps: Set Up Settlement](#) on page 2120

[Create Manual Settlement Runs](#) on page 2160

## **Cancel Payments**

### **Prerequisites**

#### Security:

- *Process: Ad Hoc Payment Reporting* domain in the Banking and Settlement functional area.
- *Process: Bank Account Transfer for Settlement - Reporting* domain in the Banking and Settlement functional area.
- *Process: Customer Invoice Payment* domain in the Customer Accounts functional area.
- *Process: Customer Refund/Payment* domain in the Customer Accounts functional area.
- *Process: Intercompany* domain in the Financial Accounting functional area.
- *Process: Payroll Settlement* domain in the Core Payroll functional area.
- *Process: Settlement* domain in the Banking and Settlement functional area.
- *Reports: Expense Report Payment* domain in the Expenses functional area.
- *Reports: Pay Calculation Results for Worker (Results)* domain in the Core Payroll functional area.
- *Reports: Procurement Card Payments* domain in the Procurement functional area.
- *Reports: Supplier Payment* domain in the Supplier Accounts functional area.

### **Context**

You can cancel payments that you haven't reconciled. When you print checks or generate bank files for unreconciled payments, you can cancel the payments as long as you don't cash the checks. These payments include:

- Individual payments.
- Multiple electronic payments.

## Steps

- To cancel an individual payment:
  - a) Access the **Find Payments** report.
  - b) Search for the unreconciled payment to cancel.
  - c) Select **Cancel** from the related actions menu of the payment.
  - d) On the confirmation page, review the details of the payment you're canceling.
  - e) Void a related check, if necessary.

**Note:** When you have intercompany items of the customer refund payment settled or included in an uncancelled settlement run, to cancel a customer refund payment you first need to cancel its related items in this order:

- Intercompany receipt.
- Intercompany payment or its associated settlement run.
- To cancel electronic payments in mass:
  - a) Access the **Mass Payment Update** task.
  - b) Once you've filtered the payments, select the electronic payments to cancel in mass.
  - c) On the confirmation page, review the details of the electronic payments you're canceling.

## Result

Workday cancels the payments and any related accounting entries. When canceled:

- Pending payments are no longer available for settlement.
- Open items associated with a settlement run become available for selection in another settlement run.
- Workday no longer includes payments when you print checks or generate the bank file for completed settlement runs.

If you already printed the check or sent the bank file, this action stops payment. Void the check using the **Record Voided Checks** task.

- *Process: Student Payment/Settlement domain in the Student Financials functional area.*
- *Process: Student Sponsor Refund/Settlement domain in the Student Financials functional area.*
- *Process: Supplier Invoice Payment/Settlement domain in the Supplier Accounts functional area.*

## Context

You can complete in-progress electronic payments in bulk.

## Steps

1. Access the **Mass Payment Update** task.
2. Select the electronic payments and click **Complete Payments**.
3. On the confirmation, review the details of the electronic payments you're completing.

## Result

Workday:

- Settles these pending payments.
- Generates their accounting entries.
- Moves their balances from the pending payment column to the account balance column.

## Related Information

### Tasks

[Steps: Set Up Settlement](#) on page 2120

## Reprocess Multiple Electronic Payments

### Prerequisites

Security: *Process: Settlement domain in the Banking and Settlement functional area or 1 or more of these domains:*

- *Process: Ad Hoc Payment Settlement domain in the Banking and Settlement functional area.*
- *Process: Bank Account Transfer for Settlement/Settlement domain in the Banking and Settlement functional area.*
- *Process: Customer Invoice Payment/Settlement domain in the Customer Accounts functional area.*
- *Process: Customer Refund Settlement domain in the Customer Accounts functional area.*
- *Process: Expense Report Payment/Settlement domain in the Expenses functional area.*
- *Process: Intercompany Payment/Settlement domain in the Financial Accounting functional area.*
- *Process: Miscellaneous Payment Request Settlement domain in the Miscellaneous Payments functional area.*
- *Process: Payroll Settlement domain in the Core Payroll functional area.*
- *Process: Pending Student Refund/Settlement domain in the Student Financials functional area.*
- *Process: Procurement Card Payment/Settlement domain in the Procurement functional area.*
- *Process: Student Payment/Settlement domain in the Student Financials functional area.*
- *Process: Student Sponsor Refund/Settlement domain in the Student Financials functional area.*
- *Process: Supplier Invoice Payment/Settlement domain in the Supplier Accounts functional area.*

## Context

You can reprocess completed electronic payments in bulk.

## Steps

1. Access the **Mass Payment Update** task.
2. Select the electronic payments and click **Reprocess Payments**.
3. On the confirmation, review the details of the electronic payments that you're reprocessing.

## Result

Workday repackages these payments into new payment messages and sends them electronically to the bank or outsourced check provider.

## Example

- The bank server is down when you send the electronic payments message and you must resend it. You can recreate the electronic payments to send to the bank for the payments included in the *payment group*.
- Your bank rejects a group of payments because of an incorrect account number. You can edit the account number, then resubmit the payments.

## Next Steps

You can resend individual electronic payment messages from the **Find Electronic Payment Messages** report by selecting **Payment Message > Resend** from the related actions menu.

### Related Information

#### Tasks

[Steps: Set Up Settlement](#) on page 2120

[Cancel Payments](#) on page 2169

## Concept: Settlement Processing

You can create a settlement run to select and manage the unpaid open items and pending payments to settle. When you process a settlement run, Workday:

- Routes the settlement run for approvals through the business process event.
- Settles payments and generates the accounting associated with each payment.
- Integrates with financial institutions and outsource providers to send the payment files.

### Unpaid Open Items

For unpaid open items, Workday creates and settles the payment. The payment date is the settlement date. These items include:

- Cash advances.
- Customer invoices and adjustments.
- Expense credit card transactions.
- Expense reports.
- Intercompany items.
- Miscellaneous payment requests.
- Procurement card transactions.
- Supplier invoices and adjustments.
- Student payments and refunds.

### Pending Payments

For pending payments, the process settles the existing payments. The payment date derives from the transaction itself and the settlement date doesn't have any bearing. These payments include:

- Ad hoc payments.
- Bank account transfers for settlement.
- Customer payments and refunds.
- On-cycle and off-cycle payroll payments.

You can use the **Find Payments** report to find and view all inbound or outbound payments in 1 place.

## Payment Groups

The process automatically organizes the payments into *payment groups* according to criteria such as:

- Bank account
- Category (such as supplier invoice, expense report, payroll, and ad hoc payment)
- Company (for intercompany payments)
- Cost center
- Country
- Credit card type
- Currency
- Handling code (on supplier invoices)
- Reference type (on supplier invoices)
- Pay group (payroll)
- Payment type (such as check or EFT)
- Paycheck delivery method
- Maximum allowable payments in a file
- Integration system
- Supervisory organization

Settlement processes each miscellaneous payment request separately and not in payment groups.

You can review the settlement status for each payment group on the confirmation, which displays:

- How the settlement process grouped payments.
- The status of each payment group.
- Details and status of each business process and subprocess step.
- The people involved in the workflow.

## Subsequent Business Processes

When the *Settlement Run Event* business process reaches *Approved* status, Workday proceeds to subsequent business processes automatically:

- For electronic payments, Workday launches the *Payment Release Event* business process to release electronic payments in the settlement run. Electronic payments include credit card payments.

After releasing the payments, Workday checks to see what integration system is associated with each bank account. Workday uses the associated integration system to create and transfer electronic payment files to the bank.

- For payments by check, Workday launches the *Print Checks Task* business process. This process creates a Workday Inbox item for the settlement specialist.

When the business process completes, Workday launches the *Payment Printing Event* business process to generate a positive pay file.

- For outsourced payments, Workday launches the *Outsourced Payment Release Event* business process to send an integration file to an outsourced provider.

Once you approve and complete all applicable subprocesses that you've configured for the *Settlement Run Event*, Workday updates the settlement run status to *Complete*. The settlement process also generates the accounting entries associated with each payment and sends them to Workday financial accounting.

**Related Information****Tasks**[Steps: Use Settlement on page 2155](#)[Steps: Set Up Settlement on page 2120](#)**Reference**[Reference: Settlement Business Processes on page 2150](#)**Reference: Settlement Run Items and Payments**

You can add unpaid open items and pending payments to a settlement run. The payment categories include:

Option	Description
<b>Customer Invoices</b>	<p>The settlement process creates and settles these payments by charging the customer credit card or direct debit account.</p> <p>The settlement process groups all eligible invoices and adjustments for the same company, payee, and payment type into a single payment.</p> <p>When you select the <b>Customer Invoices</b> check box in the <b>Separate Payments</b> section on the <b>Overview &gt; Payment Details</b> profile group of the customer profile, the settlement process creates separate payments for invoices, except when you process:</p> <ul style="list-style-type: none"> <li>• A credit card invoice and 1 or more invoice credit adjustments.</li> <li>• A direct debit invoice and 1 or more invoice credit adjustments that have a printed direct debit mandate pre-notification.</li> </ul> <p>Invoices don't include payments the customer initiates, such as calling in to pay with a new credit card. You can:</p> <ul style="list-style-type: none"> <li>• Enter discount amounts by changing the <b>Discount Given</b>. The payment terms of the invoice or adjustment determine the initial discount.</li> <li>• Make partial payments by changing the <b>Amount to Pay</b>.</li> <li>• Collect a net amount for related invoices and adjustments. Example: The customer has an invoice for 100 USD for 3 items. The customer also has a 20 USD adjustment for a returned item. When you include both the invoice and the invoice adjustment in the same settlement run, you can collect the net 80 USD from the customer.</li> </ul>
<b>Customer Payments</b>	Select payments that the customer makes outside of a regularly scheduled billing cycle and that you manually record.

Option	Description
	When a customer makes an unscheduled payment by check, you don't need to settle the payment. Instead, select the <b>Create Deposit</b> check box on the <b>Record Customer Payment</b> task to record the payment deposited into your bank.
<b>Expense Reports</b>	The settlement process combines expense reports for the same person into a single payment.
<b>Intercompany Items</b>	The settlement process creates and settles these payments. The process combines intercompany items for the same company into a single payment. Your payment must be a positive amount because Workday doesn't generate negative payments.
<b>Pay Group Exceptions</b>	Includes all off-cycle payments and any on-cycle payments that you complete individually. The <b>Off-Cycle Payroll Payment Count</b> field displays how many pay group exceptions you have in Workday, off-cycle and on-cycle.
<b>Pay Groups</b>	Payments from standard, on-cycle runs that you batch process, such as monthly payroll. Workday displays only summarized information about the group of payments. To see individual payments, use payroll tasks and reports.
<b>Supplier Invoices</b>	<p>You can:</p> <ul style="list-style-type: none"> <li>Enter discount amounts by changing the <b>Discount Given</b>. The payment terms of the invoice or adjustment determine the initial discount.</li> <li>Make partial payments by changing the <b>Amount to Pay</b>.</li> <li>Collect a net amount for related invoices and adjustments. Example: You have an invoice for 1000 USD that consists of 10 items priced at 100 USD each. You also have a 200 USD adjustment because you returned 2 items. When you include both the invoice and the invoice adjustment in the same settlement run, you can pay the net 800 USD to the supplier.</li> </ul> <p>The settlement process creates and settles these payments. The process combines all invoices for a supplier into a single payment. If you select the <b>Always Separate Payments</b> check box when you define the supplier, the process settles the invoices for that supplier as separate payments.</p>

## Related Information Tasks

## Reference: Settlement Run and Payment Statuses

### Settlement Run Statuses

This table describes the different statuses for a settlement run.

Status	Description
<i>Draft</i>	You created the settlement run, but haven't processed it yet. You can: <ul style="list-style-type: none"> <li>• Add or remove unpaid open items or pending payments.</li> <li>• Preview payments.</li> <li>• Launch the <i>Settlement Run Event</i> business process to settle payments.</li> <li>• Cancel the run.</li> </ul>
<i>In Progress</i>	You launched the <i>Settlement Run Event</i> business process, but there are steps awaiting action, such as approval, or credit card payment integration.
<i>Approved</i>	Reviewers approved the settlement run and Workday has launched any subsequent business processes.
<i>Denied</i>	Someone denied the settlement run during the approval step of the <i>Settlement Run Event</i> business process. To pay these items, you must include them in a new settlement run.
<i>Complete</i>	You launched the <i>Settlement Run Event</i> business process and successfully completed all steps of this business process along with any subsequent business processes.
<i>Canceled</i>	You canceled the settlement run business process in draft status.

### Payment Statuses

This table describes the different statuses for a payment.

Status	Description
<i>Approved</i>	The payment is part of a settlement run that contains an approval step. You approved the settlement run and its payments, but the settlement run isn't complete yet. There are additional steps in the <i>Settlement Run Event</i> business process.
<i>Awaiting Payment Acknowledgement</i>	Workday sent the electronic payment to the bank or outsourced check provider and is awaiting payment acknowledgement.
<i>Awaiting Settlement</i>	You created the payment through a transaction, and it's awaiting settlement through a settlement run.

Status	Description
<i>Canceled</i>	You canceled the payment and its accounting entries.
<i>Complete</i>	You settled the payment and Workday created the corresponding accounting entries. If using payment acknowledgement, Workday receives a payment acknowledgement with a status of <i>Accepted</i> from the financial institution.
<i>Draft</i>	You saved the payment for later, but you haven't created it yet.
<i>Escheated</i>	You escheated the payment and Workday completed the <i>Escheatment Item Event</i> business process.
<i>In Progress</i>	The payment is part of a settlement run that has an incomplete approval step. The payment maintains this status until you approve the settlement.
<i>Payment Received</i>	Workday received payment acknowledgement with a status of <i>Received</i> from the financial institution. You're still waiting for the financial institution to accept or reject the payment.
<i>Rejected</i>	The bank rejected the electronic payment and returned it to Workday because of errors in the bank file.
<i>Returned</i>	The bank returned the electronic payment to Workday. Example: The payee bank information provided is invalid, or insufficient funds are in the bank account.

### Tasks

[Steps: Use Settlement](#) on page 2155

## Example: Settle Intercompany Transactions with Different Header and Line Companies

This example illustrates how to settle intercompany transactions with different header and line companies on the supplier invoices.

### Context

Your company, Global Modern Services (GMS), buys office supplies on behalf of Green Planet Solutions (GPS). You create a supplier invoice with GPS as the company on the invoice line. When the invoice is approved, Workday creates a corresponding intercompany transaction for GPS. You need to settle the supplier invoice to pay for the office supplies that you purchased for GPS.

### Prerequisites

- Set up intercompany profiles for both companies and select these options for GMS:
  - **Initiate Allowed**
  - **Record Intercompany Receipt**

- Create and approve a supplier invoice with:
  - GMS as the company initiating the invoice.
  - GPS as the company on the invoice line.
- Security: *Process: Settlement* domain in the Banking and Settlement functional area or 1 or more of these domains:
  - *Process: Ad Hoc Payment Settlement* domain in the Banking and Settlement functional area.
  - *Process: Bank Account Transfer for Settlement/**Settlement* domain in the Banking and Settlement functional area.
  - *Process: Customer Invoice Payment/**Settlement* domain in the Customer Accounts functional area.
  - *Process: Customer Refund Settlement* domain in the Customer Accounts functional area.
  - *Process: Expense Report Payment/**Settlement* domain in the Expenses functional area.
  - *Process: Intercompany Payment/**Settlement* domain in the Financial Accounting functional area.
  - *Process: Miscellaneous Payment Request Settlement* domain in the Miscellaneous Payments functional area.
  - *Process: Pending Student Refund/**Settlement* domain in the Student Financials functional area.
  - *Process: Procurement Card Payment/**Settlement* domain in the Procurement functional area.
  - *Process: Student Payment/**Settlement* domain in the Student Financials functional area.
  - *Process: Student Sponsor Refund/**Settlement* domain in the Student Financials functional area.
  - *Process: Supplier Invoice Payment/**Settlement* domain in the Supplier Accounts functional area.

## Steps

1. Access the **Create Settlement Run** task.
2. Select *Global Modern Services, Inc. (USA)* from the **Company** prompt.
3. Click **OK**.
4. Select *Supplier Invoices* from the **Add** prompt.
5. In the **View Results Option** section, select *Itemized View*.
6. Click **Search**.
7. In the **Selected Item Information** section, select the supplier invoice that you created.
8. Click **OK**.
9. Click **Process**.

## Example: Settle On-Behalf-of Intercompany Transactions

This example illustrates how to settle on-behalf-of intercompany transactions. Workday doesn't use on-behalf-of intercompany transactions in payroll processing.

### Context

Your company, Global Modern Services (GMS), is the parent company for Green Planet Solutions (GPS). GPS purchases office supplies and creates a supplier invoice. You need to settle the supplier invoice on behalf of GPS.

## Prerequisites

- Set up intercompany profiles for both companies and select:
  - **Initiate Allowed** for GMS.
  - **Record Intercompany Receipt** for GMS.
  - **Settle Only** for GPS.
- Create and approve a supplier invoice with GPS as both the initiating company and the company on the invoice line.
- Security: *Process: Settlement* domain in the Banking and Settlement functional area or 1 or more of these domains:
  - *Process: Ad Hoc Payment Settlement* domain in the Banking and Settlement functional area.
  - *Process: Bank Account Transfer for Settlement/**Settlement* domain in the Banking and Settlement functional area.
  - *Process: Customer Invoice Payment/**Settlement* domain in the Customer Accounts functional area.
  - *Process: Customer Refund Settlement* domain in the Customer Accounts functional area.
  - *Process: Expense Report Payment/**Settlement* domain in the Expenses functional area.
  - *Process: Intercompany Payment/**Settlement* domain in the Financial Accounting functional area.
  - *Process: Miscellaneous Payment Request Settlement* domain in the Miscellaneous Payments functional area.
  - *Process: Pending Student Refund/**Settlement* domain in the Student Financials functional area.
  - *Process: Procurement Card Payment/**Settlement* domain in the Procurement functional area.
  - *Process: Student Payment/**Settlement* domain in the Student Financials functional area.
  - *Process: Student Sponsor Refund/**Settlement* domain in the Student Financials functional area.
  - *Process: Supplier Invoice Payment/**Settlement* domain in the Supplier Accounts functional area.

## Steps

1. Access the **Create Settlement Run** task.
2. Enter these values:

Option	Select
<b>Company</b>	<i>Global Modern Services, Inc. (USA)</i>
<b>Include Payments on Behalf of Other Companies</b>	Select the check box.

3. Click **OK**.
4. Select *Supplier Invoices* from the **Add** prompt.
5. In the **Search Criteria** section, select *Green Planet Solutions, Inc. (USA)* from the **Company(s)** prompt.
6. In the **View Results Option** section, select *Itemized View*.
7. Click **Search**.
8. In the **Selected Item Information** section, select the GPS-approved supplier invoice.
9. Click **OK**.
10. Click **Process**.

## Example: Settle Direct Intercompany Transactions

This example illustrates how to settle direct intercompany transactions.

### Context

Your company, Green Planet Solutions (GPS), is a customer of another company in the same Workday tenant, Spectre. You purchase a desk from Spectre. To pay Spectre, you need to settle the intercompany item that Workday generates when you create the supplier invoice.

### Prerequisites

- Set up Spectre as a supplier and GPS as a customer.
- Set up intercompany profiles for both companies and select:
  - **Settle Only** for GPS.
  - **Record Intercompany Receipt** for Spectre.
- Create and approve a customer invoice with:
  - Spectre as the company initiating the invoice.
  - GPS as the bill-to customer.
- Create and approve a supplier invoice with:
  - GPS as the company initiating the invoice.
  - Spectre as the supplier.

## FAQ: Payment Settlement

- [How do I settle one-off payments?](#)
- [How can I prepare worker payments in the case of a failed BACS integration?](#)
- [When does Workday settle customer invoice payments associated with direct debit mandates?](#)
- [Can I settle payroll-related intercompany items with other transaction types?](#)
- [When can't I cancel a settlement run?](#)
- [When can't I cancel a payment?](#)
- [What payment categories can I add remittance data for when using the Get Payments web service?](#)
- [How do I ensure that the company bank account for payroll payments is correct after I change my bank routing rules? on page 2183](#)

### How do I settle one-off payments?

You can settle one-off payments from the related actions menu of an unpaid item or pending payment.

To settle a one-off payment:

1. Find the unpaid open item or pending payment.
2. As a related action, select to pay or settle it:
  - From an approved supplier invoice, select **Supplier Invoice > Pay Invoice**.
  - From an approved customer invoice with payment type of direct debit, select **Customer Invoice > Pay Via Direct Debit**.
  - From an approved ad hoc payment, select **Ad Hoc Payment > Settle**.
  - From an approved customer refund, select **Customer Refund > Settle**.
  - From the pay result of a worker for whom you complete payroll early (leaders), select **Pay Calculation > Settle**.
  - From the pay result of a worker for whom you complete payroll late (stragglers), select **Pay Calculation > Settle**.

For the United Kingdom, you usually need to change the settlement date to accommodate the standard 3-day BACS turnaround. To change the settlement date to the next working day (the effective earliest date), from the Settlement Run related action, select **Settlement Run > Edit**.

### How can I prepare worker payments in the case of a failed BACS integration?

Access the **View UK BACS Settlements** report (secured to the *Reports: Payroll (BACS) - UK* domain) after starting the settlement process. Note that the **View UK BACS Settlement** report only

**When does Workday settle customer invoice payments associated with direct debit mandates?**

displays data when the settlement process has failed, or not yet completed. In the case of a BACS integration failure, you can export the payment details to complete BACS payments outside of Workday.

Workday includes a customer invoice payment in a settlement run based on the minimum days for prenotification that you specify on the mandate. Workday settles the payment when the number of days between these dates meet the prenotification requirement:

- Prenotification date on the customer invoice.
- Settlement run date.

When you search for direct debit customer payments to add to a manual settlement run, Workday only returns payments that meet the prenotification requirement.

**Can I settle payroll-related intercompany items with other transaction types?**

Yes, but Workday recommends that you don't do so. If your payroll needs adjustments and you cancel the settlement run, you'll also cancel nonpayroll items and payments in the settlement run, if any.

**When can't I cancel a settlement run?**

You can't cancel a settlement run when:

- Billing is complete for cost reimbursable award transactions in the settlement run. These transactions include:
  - Payroll.
  - Expense reports.
  - Supplier invoices.
  - Fringe benefits.
- The settlement run has 1 or more payments that:
  - Generated intercompany items in another settlement run.
  - Have a status of *Escheated*, *Returned*, or *Stopped*.
  - You've reconciled.

**When can't I cancel a payment?**

You can't cancel a payment when:

- You've reconciled the payment. To cancel the payment, you must first unreconcile it.
- You've billed the supplier invoice to sponsors. To cancel the invoice, you must first cancel the associated customer invoice payment then the supplier invoice payment.
- The payment has intercompany activity. To cancel the payment, you must first cancel the associated intercompany receipt and intercompany items.

**What payment categories can I add remittance data for when using the Get Payments web service?**

- Expense Report
- Expense Credit Card Transaction
- Miscellaneous Payment Request
- Procurement Card Transaction
- Supplier Invoice

**How do I ensure that the company bank account for payroll payments is correct after I change my bank routing rules?**

After you change your bank routing rules, you must rerun payroll calculations for unsettled payroll payments before settling them. This process ensures that Workday uses the correct bank account during settlement.

## Payment Management

---

### Steps: Set Up Escheatment

#### Context

You can set up escheatment so that you can escheat unreconciled payments or update the payee notification dates for them.

#### Steps

1. Create *Escheatment Payable* and *Escheatment Expense* ledger accounts.

See [Steps: Create and Organize Ledger Accounts](#) on page 81.

2. [Set Up Account Posting Rules](#) on page 84.

Configure the *Escheatment Payable* account posting rule.

Add a row to the *Spend* account posting rule to map the *Escheatment Expense* spend category to the *Escheatment Expense* ledger account.

3. [Create Spend Categories](#).

Create an *Escheatment Expense* spend category.

#### Related Information

#### Tasks

[Escheat Payments](#) on page 2187

### Steps: Create Payment Returns

#### Prerequisites

- Configure the *Payment Return Event* business process and security policy in the Banking and Settlement functional area.

- Security:
  - *Process: Ad Hoc Payment Reporting* domain in the Banking and Settlement functional area.
  - *Process: Customer Invoice Payment* domain in the Customer Accounts functional area.
  - *Process: Customer Refund/Payment* domain in the Customer Accounts functional area.
  - *Process: Payment Return* domain in the Banking and Settlement functional area.
  - *Process: Settlement* domain in the Banking and Settlement functional area.
  - *Reports: Expense Report Payment* domain in the Expenses functional area.
  - *Reports: Miscellaneous Payment* domain in the Miscellaneous Payments functional area.
  - *Reports: Supplier Payment* domain in the Supplier Accounts functional area.

## Context

You can record individual payments that banks have returned for these payment categories:

- Ad hoc payments.
- Cash advance payments.
- Customer payments.
- Expense credit card payments.
- Expense report payments.
- Miscellaneous payments.
- Procurement card payments.
- Student payments.
- Student refunds.
- Supplier invoice payments.

You can reverse payment calculations to cancel these payroll payments:

- Unreconciled payments.
- Payments without payroll accounting adjustments.
- Payments that don't have in-progress escheatments or a status of *Escheated*.

You can cancel other payments individually.

## Steps

1. Access the **Find Payments** report.
2. Select **Return** from the related actions menu of the settled payment you want to return.  
You can create payment returns for:
  - Reconciled and unreconciled payments.
  - Unreconciled checks.
3. (Optional) Void a related check.
4. (Optional) Access the **Find Payment Returns** report.

When you haven't paid the original payments, you can cancel or unmatch unreconciled payment returns. From the related actions menu of a payment return, select **Cancel** or **Unmatch**.

Workday cancels any related accounting entries, and the payment status of the original payment changes to *Complete*.

## Result

The payment returns generate journal entries that reverse the original payments. Once you resolve the issues, you can settle the expense reports and supplier invoices with the payments. For returned ad hoc payments and bank account transfer payments, you must create new payments to settle.

## Next Steps

Access the:

- **Create Payment Return Statement** task to return more than 1 payment.
- **Find Payment Returns** report to view details of returned payments.

## Create Payment Return Statements

### Prerequisites

- Configure the *Payment Return Statement Event* business process and security policy in the Banking and Settlement functional area.
- Security: Process: *Payment Return* domain in the Banking and Settlement functional area.

### Context

You can create a payment return statement to record multiple electronic payments that the bank rejected or returned. Workday creates payment returns that you can reconcile against your bank statement.

### Steps

1. Access the **Create Payment Return Statement** task.
2. As you complete the task, consider:

Option	Description
<b>Originating Bank Account</b>	The bank account that initiated the transaction.
<b>Return Payment ID</b>	The identifier for the transaction. You can use this ID to match the payment return against the original transaction.
<b>Payment Return Date</b>	The transaction date for the payment return. Workday uses this date for tracking and reporting purposes.

3. Click **Add** to record additional transactions for the same originating bank account, or for a different bank account.  
The same payment return statement saves all of the transactions.
4. After you record your payments, select **Match Payment Return** to match each payment return against the original payment in Workday.  
You can select the original payment by payment category based on the operational transaction that created the payment.

## Result

Workday enables matched payment returns to generate journal entries that reverse the original payments. The status of the original payments changes to *Returned*, and expense reports and supplier invoices become available for selection in settlement runs. For returned ad hoc payments and bank account transfer payments, you must create new payments to settle.

## Record Stopped Payments

### Prerequisites

- Configure the *Stop Item Event* business process and security policy in the Banking and Settlement functional area.
- Security:
  - *Process: Ad Hoc Payment Reporting* domain in the Banking and Settlement functional area.
  - *Process: Bank Account Transfer for Settlement - Reporting* domain in the Banking and Settlement functional area.
  - *Process: Customer Invoice Payment* domain in the Customer Accounts functional area.
  - *Process: Customer Refund/Payment* domain in the Customer Accounts functional area.
  - *Process: Payroll Settlement* domain in the Core Payroll functional area.
  - *Process: Miscellaneous Payment Request Settlement* domain in the Miscellaneous Payments functional area.
  - *Process: Settlement* domain in the Banking and Settlement functional area.
  - *Reports: Expense Report Payment* domain in the Expenses functional area.
  - *Reports: Miscellaneous Payment* domain in the Banking and Settlement and Miscellaneous Payments function areas.
  - *Reports: Pay Calculation Results for Worker (Results)* domain in the Core Payroll functional area.
  - *Reports: Procurement Card Payments* domain in the Procurement functional area.
  - *Reports: Supplier Payment* domain in the Supplier Accounts functional area.

### Context

You can record stopped checks or manual payments that you want to track in Workday. You can record the stopped payments and supporting documents for the stop payment order before you issue replacement payments. Example: You want to log a check with an incorrect payment amount that you've requested the bank not to cash.

You can use the stop payment functionality for all outbound payment types in Workday except intercompany payments.

### Steps

1. Access the **Find Payments** report.

**2.** Search for the settled payments to stop.

You can only stop payments with a:

- Payment status of *Complete*.
- Reconciliation status of *Unreconciled*.

**3.** Select **Stop** from the related actions menu of the payment.

**4.** (Optional) Add any details about the original payment or the reasons for stopping the payment from processing. You can also attach supporting documents about the payment.

## Result

Workday initiates the *Stop Item Event* business process and sends a task to the next reviewer's My Tasks to approve or deny the stopped items. Once approved, Workday updates the payment status from *Complete* to *Stopped* to reflect that you placed a stop payment request.

For stopped payments, Workday:

- No longer makes pending payments available for settlement.
- No longer includes payments when you print checks or generate an electronic payment file for completed settlement runs. If you already printed the check, you can void it using the **Cancel Payment** task.

## Next Steps

Use the **Find Payments** report to identify payments with a *Stopped* payment status and review, resume, or cancel the payments. You can also escheat uncashed or unclaimed items that you've stopped.

### Related Information

#### Tasks

[Cancel Payments](#) on page 2169

## Escheat Payments

### Prerequisites

- Set up escheatment.
- Configure the *Escheatment Item Event* business process and security policy in the Banking and Settlement functional area.
- Security:
  - *Process: Ad Hoc Payment Escheatment* domain in the Banking and Settlement functional area.
  - *Process: Customer Refund Escheatment* domain in the Customer Accounts functional area.
  - *Process: Expense Report Payment Escheatment* domain in the Expenses functional area.
  - *Process: Miscellaneous Payment - Escheatment* domain in the Miscellaneous Payments functional area.
  - *Process: Payment Escheatment* domain in the Banking and Settlement functional area.
  - *Process: Payroll Payment Escheatment* domain in the Core Payroll functional area.
  - *Process: Procurement Card Payment Escheatment* domain in the Procurement functional area.
  - *Process: Student Refund Escheatment* domain in the Student Financials functional area.
  - *Process: Supplier Invoice Payment Escheatment* domain in the Supplier Accounts functional area.

### Context

You can escheat eligible unreconciled payments or update the payee notification dates for them. You can escheat manual or check payments that the payee hasn't cashed or claimed, except for intercompany items and inbound customer payments. Workday also gives you the option to void uncashed checks that are part of the escheatment process.

## Steps

1. Access the **Find Escheatable Payments** task.
2. As you complete the task, consider:

Field	Description
<b>Dormancy Period Greater Than or Equal To (Months)</b>	The number of months in the escheat period with no activity on the payments. Workday finds payments that you issued and unreconciled for at least this number of months.
<b>Dormancy End Date</b>	Leave blank to use the current date.
<b>Payment Reference</b>	(Optional) Enter the check number assigned to the payment.

3. (Optional) Create a filter name to save your prompt values. You can create filters so that you can search for escheatable payments based on different legal requirements.
4. (Optional) Click **Update Notification Date** to enter the date that you informed your payees of the uncashed payments.  
You can update the notification date later as needed.
5. (Optional) Click **Escheat Payment** to initiate the escheatment process.  
You can select **Void Checks** to void check payments so that payees can't cash them once they're escheated.

## Result

Workday initiates the *Escheatment Item Event* business process and sends a task to the next reviewer's My Tasks.

Workday creates new journal entries for approved escheatment items. Workday debits the corresponding cash ledger account, and credits the *Escheatment Payable* ledger account with the escheated payment amount. Workday also changes the payment status of the unreconciled payment to *Escheated*.

The payment status for settled items remains as *Paid*. Workday doesn't reverse the accounting entries of the unreconciled escheated payments.

## Next Steps

Use the **Find Escheatment Items** report to search for the escheated items to include in compliance reports that you submit to the government agency.

- *Process: Customer Refund Escheatment* domain in the Customer Accounts functional area.
- *Process: Expense Report Payment Escheatment* domain in the Expenses functional area.

- Process: *Miscellaneous Payment - Escheatment* domain in the Miscellaneous Payments functional area.
- Process: *Payroll Payment Escheatment* domain in the Core Payroll functional area.
- Process: *Procurement Card Payment Escheatment* domain in the Procurement functional area.
- Process: *Student Refund Escheatment* domain in the Student Financials functional area.
- Process: *Supplier Invoice Payment Escheatment* domain in the Supplier Accounts functional area.

## Context

You can update or cancel groups of escheated items at once. Example: After remitting escheated item amounts to the government agency, you can change the payment status of these items to *Paid* for tracking purposes.

## Steps

1. Access the **Mass Update Escheatment Items** task.
2. As you complete the task, consider:

Option	Description
<b>Payment Reference</b>	(Optional) Enter the check number assigned to the payment.
<b>Payment Status</b>	Select a payment status for the escheated items. You can only cancel the escheated items in <i>Unpaid</i> status.

3. (Optional) Create a filter name to save your prompt values. You can create filters so that you can search for escheated items based on different legal requirements.
4. (Optional) Click **Update Payment Status** to change the payment status of the selected escheated items.
5. (Optional) Click **Cancel Escheatment Item** to undo the escheated payment.

## Result

For canceled escheated items, Workday:

- Cancels the escheatment process and any related accounting entries.
- The payment status changes from *Escheated* to *Complete*.

## Next Steps

Use the **Find Escheatment Items** report to search for and view escheated items.

### Related Information

[Steps: Set Up Escheatment](#) on page 2183

## Check and Advice Printing

---

### Setup Considerations: Print Checks and Advices

You can use this topic to help make decisions when planning your configuration and use of check and advice printing. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.

- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

You can set up Workday to manage the printing requirements of your organization and print checks or advices for payments that you've already settled.

## Business Benefits

Workday enables you to:

- Print checks and advices.
- Note:** Workday Payroll for the UK doesn't support check printing.
- Provide a paper record of payments.
  - Customize check print layouts to include important information for your organization.
  - Split checks and advices into separate batch files for printing based on employee data.

## Use Cases

You can print:

- Physical paychecks for employees.
- Payroll advices for employees who receive payment by direct deposit.
- Advices for expense account payments made by electronic payment methods.
- Final checks for terminated employees.
- Checks for one-off payments to payees such as visitors or guest speakers.
- Checks for supplier payments.
- Checks for customer refunds.

## Questions to Consider

Question	Considerations
What are the laws surrounding check printing for your location and organization?	Review the legal requirements for check printing in your location and business area. Workday enables you to print checks and advices based on the needs of your organization.
Will you print checks and advices in-house or through an outsourced company?	When you print in-house, consider the layout requirements and data that you want to include for different payment methods.  When you print through an outsourced company, review the integrations available to export data to vendors.
What are the printing requirements for terminated employees in your organization?	When you have to pay employees immediately upon termination, Workday enables you to print a check on demand.  Configure the <b>Company Payroll Printing Options</b> task to print a paper copy of payslips during your next pay run for employees terminated before the period end date.

Question	Considerations
Do you want to use a default print layout for all checks and advices?	<p>Workday delivers default layouts for Payroll. For other payment types, you can configure your own default layouts.</p> <p>You can use the <b>Maintain Default Check Print Layout</b> task to select a default check print layout for all worker-related checks and advices.</p>
Do you want to include zero net pay checks in print runs?	<p>Workday automatically excludes zero net pay checks from print runs. You can include them by printing from the <b>Print Checks Work Area</b> report.</p>

## Recommendations

Use Report Designer when you want to:

- Customize check and advice print layouts.
- Print on blank check stock.

Use XSLT for payroll-related tasks that don't require customized print layouts.

## Requirements

- Enable the *Check* payment type when creating suppliers, customers, or payees.
- Define payment elections or expense account reimbursements for employees, and designate a preferred payment method such as check or direct deposit.

## Limitations

When you print paychecks for a group of employees, you can only print 1 check per employee regardless of the time period covered. Example: You configure a print run of paychecks for a group of employees for a 6-month period. Workday prints 1 check for each employee that covers all 6 months.

Workday Payroll for the UK doesn't support check printing.

## Tenant Setup

You can configure the **Edit Tenant Setup - Payroll** task to enable payslip printing options for users.

## Security

Domains	Considerations
<i>Custom Report Creation</i> in the System functional area	Users secured to this domain can create custom reports for check print layouts.
<i>Process: Payroll Settlement</i> in the Core Payroll functional area <i>Process: Settlement</i> in the Banking and Settlement functional area	Users secured to these domains can print and manage advices.
<i>Process: Expense Report Payment/Settlement</i> in the Expenses functional area <i>Process: Payroll Settlement</i> in the Core Payroll functional area	Users secured to these domains can: <ul style="list-style-type: none"> <li>• Reprint checks and advices.</li> <li>• Reassign check numbers.</li> </ul>

Domains	Considerations
<i>Process: Supplier Invoice Payment/Settlement</i> in the Supplier Accounts functional area	
<i>Set Up: Settlement</i> in the Banking and Settlement functional area	<p>Users secured to this domain can:</p> <ul style="list-style-type: none"> <li>Define split and sort options to separate checks and advices into batch files for printing.</li> <li>Configure the fields on their Report Designer payroll check.</li> </ul>
<i>Set Up: Tenant Setup - Payroll</i> in the System functional area	Users secured to this domain can access the <b>Edit Tenant Setup - Payroll</b> task.

## Business Processes

Business Process	Considerations
<i>Payment Printing Event</i>	Workday automatically launches this business process event to generate a positive pay file when you complete the <i>Print Checks Task</i> business process.
<i>Print Checks Task</i>	When payments in a settlement run require checks, Workday automatically creates an event for printing checks and sends a notification to the settlement specialist.

## Reporting

Reports or Dashboards	Considerations
<b>Print Advices Work Area</b> report <b>Print Checks Work Area</b> report	You can use these reports to view and edit pending and completed check and advice print runs.
Settlement dashboard	<p>You can configure these reports as worklets on your Settlement dashboard:</p> <ul style="list-style-type: none"> <li><b>Ready to Print</b></li> <li><b>Ready to Print Advices</b></li> <li><b>Ready to Print Checks</b></li> </ul>

## Integrations

Integration	Considerations
<i>ADP Check Print (Enhanced Performance)</i>	<p>You can configure this integration to export data to ADP for Full Service Direct Deposits and to print:</p> <ul style="list-style-type: none"> <li>Payroll checks.</li> <li>Payroll advices.</li> <li>Mail labels.</li> </ul>
<i>Core Connector: Payroll Check Printing (Enhanced Performance)</i>	You can configure this integration to export data to external check printing services for:
	<ul style="list-style-type: none"> <li>Payroll checks.</li> </ul>

Integration	Considerations
	<ul style="list-style-type: none"> <li>• Payroll advices.</li> <li>• Payments.</li> </ul>
WPN - Ceridian Check Printing	<p>You can configure this integration to export data to Ceridian Payroll Services for:</p> <ul style="list-style-type: none"> <li>• Payroll checks.</li> <li>• Payroll advices.</li> <li>• Payments.</li> </ul>

### Connections and Touchpoints

Features	Considerations
Cash	When you create a bank account in Workday, you can select a check print layout specific to the account.
Expenses	Workday payment elections enable you to set preferences for how employees receive reimbursement for expenses.
Staffing	You can manage check printing for terminated workers.
Payroll	<p>You can configure printing options for checks and payslips, generate payslips in bulk, and export payslips.</p> <p>Payment elections enable you to set preferences for how employees receive payment.</p>
Supplier Accounts Customer Accounts	You can configure options to print checks or advices for suppliers or customers.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Related Information

#### Tasks

[Print Checks and Advices](#) on page 2200

[Steps: Set Up Payslip Printing Options](#)

#### Reference

[Reference: Edit Tenant Setup - Payroll](#)

[The Next Level: Payslips and Paychecks](#)

## Steps: Set Up Checks and Advices for Printing

#### Prerequisites

- Review setup considerations for check and advice printing.
- Enable *Check* as the payment type when creating suppliers, customers, or ad hoc payments.
- Set up and run the settlement process.

## Context

You can configure Workday to print checks or advices for payroll payments and expense account reimbursements. When a settlement run completes, you can manually print any required checks or advices using different layouts based on your configuration.

**Note:** Workday Payroll for the UK doesn't support check printing.

## Steps

1. Create check and advice print layouts using Report Designer or XSLT.

See:

- [Steps: Create Check and Advice Print Layouts Using Report Designer on page 2195](#).
- [Create Check and Advice Print Layouts Using XSLT on page 2199](#).

2. (Optional) Access the **Maintain Default Check Print Layout** task.

Designate a default XSLT print layout for all checks and advices.

Security: *Set Up: Settlement* domain in Banking and Settlement functional area.

3. (Optional) Assign check print layouts (XSLT or Report Design) to specific bank accounts.

These layouts override the default print layout for the tenant. Example: Associate a payroll-specific layout with a bank account used to make payroll payments.

See [Define Bank Accounts](#) on page 1925.

4. Access the **Edit Check Sorting Setup** task.

Add rows to specify how Workday sorts checks and advices in the output.

Select the **Split Batch** check box for a row to split the output into separate files by that value.

Example: Split files by company, and sort checks within each file by employee ID, location, and ZIP code.

5. (Optional) Configure Workday to automatically create positive pay files when you print checks or outsourced checks.

See [Steps: Set Up Positive Pay Files](#) on page 2202.

## Result

When you print checks or advices, Workday replaces the business form layout XSL stylesheet with your configuration. Workday selects layouts in this order of preference:

1. The layout associated with the payment type.
2. The layout defined for the bank account.
3. The layout defined for your tenant.

## Next Steps

Print checks and advices.

## Related Information

[Steps: Use Settlement](#) on page 2155

[Steps: Set Up Payslip Printing Options](#)

[Define Payslips](#)

## Steps: Create Check and Advice Print Layouts Using Report Designer

### Prerequisites

If you're creating a custom layout, download and install Workday Studio, including Report Designer, from Workday Community.

### Context

With Workday Report Designer, you can create check print layouts to customize the default configuration of checks and advices. Examples of types of printouts include financial checks, payroll checks, and payslips.

### Steps

1. (Optional) [Configure Report Design Payroll Checks](#) on page 2196.

For your U.S. and Canada payroll checks that use the **Payroll Checks (Report Design)** layout, you can select, position, and format your fields.

2. (Optional) Download the Report Designer payroll check layout that you want to customize.

See [Workday Community: Payroll Payslip, Check, and Advice Configurations \(US/ CAN\)](#).

3. (Optional) [Create Report Design Files](#).

For other custom checks, create a custom report design file in Workday Studio that defines the layout of fields, a company logo, and signature on checks and advices.

4. (Optional) Access the **Copy Standard Report to Custom Report** task.

Copy and modify an existing report to use with check print layouts:

- **Payments to Print - Report Design** for financial checks.
- **Payroll Payments to Print - Report Design** for payroll checks or advices (U.S., UK, Canada).
- **Payslip to Print - FRA** for payroll checks or advices (France).

Security: *Custom Report Creation* in the System functional area.

5. (Optional) Create a business form layout to associate a custom report design file with a custom report.

See [Steps: Create a Business Form Layout](#).

Security: *Custom Report Creation* domain in the System functional area.

6. [Configure Check Print Layout with Report Design](#) on page 2198.

Create a check print layout for your printed checks and advices.

### Result

Workday maps the data elements from the custom report to your report design file or report design configuration, which formats the printable PDF layouts.

You can review the details for the new check print layout using the **View Check Print Layout with Report Design** report.

### Next Steps

You can now associate the check print layout with specific bank accounts.

To test your printouts, you can print sample checks or advices on your own paper and printers to verify. For custom layouts, you can:

- Make adjustments to the alignment or layout of the data elements.
- Edit the report design file in Workday Studio.
- Reassociate it with your custom report and complete the remaining steps.

For delivered layouts, you can use the **Edit Report Design Configuration** task to edit the field placements on your payroll checks.

### Related Information

#### Tasks

[Define Bank Accounts](#) on page 1925

## Configure Report Design Payroll Checks

### Prerequisites

Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.

### Context

You can configure your U.S. and Canada payroll checks within Workday when you use the **Payroll Checks (Report Design)** delivered business form layout. You can configure:

- The fields you want to include on your checks, such as bank name, address, or MICR.
- Where you want to position your fields within your checks.
- The formatting style of the fields.

Workday structures the payroll check configuration by rows and columns. Within 1 row, you can have multiple columns with different fields. For more configuration options, you can use Workday Studio to create custom payroll checks layout.

Workday uses these parameters for payroll checks:

Layout	Parameters
Margins for checks	<ul style="list-style-type: none"> <li>Top: 0.70 inches (in)</li> <li>Bottom: 0.12 in</li> <li>Left: 0.50 in</li> <li>Right: 0.00 in</li> </ul>
Minimum check height	3.00 in
Minimum payslip height without overflow	6.28 in
PDF size	8.5 x 11 in

### Steps

- Access the **Create Report Design Configuration** task.
- As you complete the **Row Details** section, consider:

Option	Description
<b>Order</b>	Use numeric or alphabetical ordering for positioning your rows on your checks. Workday recommends that you use alphabetical order if you plan to use more than 9 rows.
<b>Name</b>	Provide a name for the row.

- As you complete the **Column Details** section, consider:

Option	Description
<b>Order</b>	Use numeric or alphabetical ordering for positioning your columns on your checks.

Option	Description
	Workday recommends that you use alphabetical order if you plan to use more than 9 columns.
<b>Column Width</b>	<p>Workday recommends that you:</p> <ul style="list-style-type: none"> <li>Configure to the size of your checks.</li> <li>Ensure that percentages add up to 100%.</li> <li>Don't enter a value that exceeds 202 mm.</li> <li>Don't mix percentages and millimeters in the same row.</li> </ul>

4. The **Column Formatting Style** options apply to all fields within the column. As you complete the section, consider:

Option	Description
<b>Override Position</b>	You can enter values to position your field up, down, left, or right. To use <b>Position Right</b> , set the <b>Horizontal Alignment</b> to the <i>Right</i> .
<b>Override Alignment</b>	Select your field to align to the left, center, or right of the column.
<b>Override Font Size</b>	Set your font size for any text on the whole column.

5. As you complete the **Contents** section, consider:

Option	Description
<b>Field</b>	<p>Select the field you want to display in your current column.</p> <p>You can only select a field once per configuration.</p>
<b>Field Formatting Style</b>	<p>Field formatting styles supersede column formatting styles.</p> <p>Example: Column A has <b>Column Formatting Style</b> set to override font size to 12. Field 1 in column A has <b>Field Formatting Style</b> set to override font size to 9. Field 2 in column A has no field formatting style selected. In this case, field 1 will have font size 9 and field 2 will have font size 12.</p> <p>To use horizontal alignment for fields with <b>Display Inline selected</b>, select <b>Horizontal Alignment</b> on the <b>Column Formatting Style</b>.</p> <p>For images, select <b>Override Position</b> instead of <b>Override Alignment</b>.</p>

## Result

You can apply your configuration to your payroll checks using a Workday-delivered **Payroll Checks (Report Design)** business form layout.

## Next Steps

Add your report design configuration to the **Create Check Print Layout with Report Design** task.

**Related Information****Examples**

Example: [Configure Report Design Payroll Checks](#) on page 2206

## Configure Check Print Layout with Report Design

**Prerequisites**

Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.

**Context**

You can generate checks and advices with either a delivered or custom business form layout. You can attach a report design configuration with your own customized format and position of fields.

**Steps**

1. Access the **Create Check Print Layout with Report Design** task.
2. As you complete the task, consider:

Option	Description
<b>Check Print Layout Name</b>	Name your check print layout so you can find and attach it to a bank account.
<b>Business Form Layout</b>	For payroll checks using Report Design Configuration, select the <b>Payroll Checks (Report Design)</b> delivered business form layout.  If you created a custom report design file on Workday Studio, you need to create a new business form layout. The delivered layout might not be compatible with your custom report design file.
<b>Report Design Configuration</b>	For Payroll for the U.S. and Payroll for Canada, you can: <ul style="list-style-type: none"> <li>• Use the <b>Create Report Design Configuration</b> task to format and place the fields on your payroll check.</li> <li>• Attach your configuration to the <b>Payroll Checks (Report Design)</b> delivered business form layout.</li> </ul>

3. As you complete the **PDF Security Options** section, consider:

Option	Description
<b>Password Protected</b>	You can set a password on your check print layout.
<b>Allow Copy</b>	Enable other users access to copy this layout.
<b>Allow Edit</b>	Enable other users access to edit this layout.

4. For Payroll for the U.S. and Payroll for Canada, as you complete the **Payroll Check Options** section, consider:

Option	Description
<ul style="list-style-type: none"> <li>• Print Check At Top</li> <li>• Print Check At Bottom</li> </ul>	You can print your check on top or on the bottom of the page. If you print your check on the bottom, you can't enable overflow.
<b>Enable Overflow</b>	You can enable your payroll checks to exceed the minimum check height that is 3.0 inches.
<b>Fill Amount as Text To The End</b>	Add asterisks to the back of the amount as text until it reaches the end of the page.
<b>Check Message</b>	Add a message to your check. Example: Void after 180 days.
<b>Show Second Signature Image When Amount Is Over</b>	Displays the second signature image based on the net amount of the check.

### Result

Workday uses the layout definition to generate and print checks and advices.

### Next Steps

Apply your check print layout to a bank account, run settlements, and print your checks.

#### Related Information

##### Tasks

[Define Bank Accounts](#) on page 1925

## Create Check and Advice Print Layouts Using XSLT

### Prerequisites

Security: *Set Up: Settlement* domain in the Banking and Settlement functional area.

### Context

Create XSLT print layouts to configure placement of information on checks and advices. You can also configure additional fields when you plan to use blank check stock.

### Steps

1. Access the **Create Check Print Layout (XSLT)** task.
2. As you complete the task, consider:

Option	Description
<b>Check Options</b>	Specify field positions using the top and left margins in relation to the placement of the check on the page.
<b>Blank Check Options</b>	To exclude fields from printing, define the top and left margins in zero positions. Example: 0,0. You can:

Option	Description
	<ul style="list-style-type: none"> <li>Override the standard Workday magnetic ink character recognition (MICR) format on the <b>Create Bank Account</b> and <b>Update Bank Account</b> tasks.</li> <li>Use the same blank check stock across multiple companies and bank accounts.</li> </ul> <p>To produce fully negotiable checks on plain check stock, use:</p> <ul style="list-style-type: none"> <li>Check stock with built-in security features, such as microprinting and watermarks.</li> <li>Magnetic ink or toner so that checks are machine readable.</li> </ul>
<b>Margin Adjustment</b>	XSL stylesheets for the payroll check and payslip forms have preset margins. The financial check form has no preset margins.

## Next Steps

- Print a test check to confirm that your layout aligns with check stock, envelope windows, and so on.
- Verify with a bank that checks are machine readable.

## Related Information

### Tasks

[Define Bank Accounts](#) on page 1925

### Reference

[Reference: Sample Check \(XSLT\)](#) on page 2205

[Reference: Magnetic Ink Character Formats](#) on page 1934

## Print Checks and Advices

### Prerequisites

- Approve and complete the settlement run that contains the payments.
- Set up checks and advices for printing.

### Context

You can:

- Manually print a sequence of checks or advices for payroll payments and expense account reimbursements that you've settled.
- Generate payroll advices (payslips) for employees that want a paper record of funds deposited into their bank accounts.

Workday generates advices for expense account payments made by electronic payment methods when:

- The payee is configured to receive paper copies.
- The bank account is for a person.

### Steps

- Access the **Print Checks Work Area** report.

2. To print checks or advices for a *payment group*, click:

- **Print Checks** on the **Checks** tab.
- **Print Advices** on the **Advices** tab.

3. As you complete the task, consider:

Option	Description
<b>Next Check Number in Printer</b>	You can change the starting check number to match the first check in your preprinted check stock.
<b>Include 0.00 Net Pay Checks</b>	Includes payments with a net pay amount of zero, such as garnishments, in the print run. Displays only when applicable.
<b>Print Checks</b>	Prints all checks or advices in the payment group.
<b>Print Advices</b>	
<b>Select Checks to be Printed</b>	Prints a subset of checks or advices from the payment group.
<b>Select Advices to be Printed</b>	

Workday:

- Prints to PDF in the preferred language of your user account.
- Splits the print run into separate PDFs based on your configuration on the **Edit Check Sorting Setup** task.

4. When the print run completes, review the output in the **PDF File** field.

5. Print the PDFs.

Ensure that page scaling isn't active as it causes problems with blank check stock. Check scanners can't read resized magnetic ink character recognition (MICR) numbers.

## Next Steps

You can:

- Retrieve the generated PDFs from **My Reports** to review the checks or advices. When you delete a PDF from **My Reports**, Workday removes the PDF from the payment printing run.
- Create a positive pay file for verification from your financial institution that includes information about the checks in the printing run.

## Related Information

### Concepts

[Concept: My Reports](#)

## Reprint Checks and Advices and Reassign Check Numbers

### Prerequisites

Print a check or advice.

## Context

When you set up a bank account, you enter the last used check number. Workday updates the check number as it generates checks through normal settlement processing. When the check number in Workday and the number on your check stock are out of sync, you can reassign check numbers and reprint checks and advices.

## Steps

1. Access the **Print Checks Work Area** report.
2. On the **Printing Runs** tab, click:
  - **Reassign Check Number and Reprint** for checks.
  - **Reprint** for advices.
3. As you complete the task, consider:

Option	Description
<b>Manually Enter Check Numbers</b>	You can assign a new number to each check, enabling you to have breaks in the check numbering sequence.
<b>Manually Enter Range of Check Numbers</b>	Workday displays each check in a range that you specify. You can assign a new number to each check and reprint.

4. Print the check or advice PDFs.

## Steps: Set Up Positive Pay Files

### Context

You can configure Workday to create positive pay files automatically when you print:

- Checks.
- Outsourced checks.

You can send positive pay files to your financial institution for fraud prevention purposes. These electronic files contain details of checks issued from your account.

## Steps

1. Access the **Edit Bank Account** task.  
Enable positive pay for a company bank account.  
See [Define Bank Accounts](#) on page 1925.
2. Configure the *Payment Printing Event* business process and security policy in the Banking and Settlement and Core Payroll functional areas.  
Add an *Integration* step and configure the *Positive Pay Banking File (EIB)* integration. Workday automatically triggers the *Payment Printing Event* event when the *Print Checks Task* business process event completes.  
See [Steps: Configure Business Process Definitions](#).
3. (Optional) Configure the *Outsourced Payment Release Event* business process and security policy in the Banking and Settlement and Core Payroll functional areas.  
Add a *Batch/Job* step and specify *Create Positive Pay File for Outsourced Checks*.  
See [Steps: Configure Business Process Definitions](#).
4. (Optional) To create positive pay files manually, access the **Create Positive Pay File** task.

## Result

When you print checks, Workday creates a positive pay file and releases it to your financial institution.

[Reference: Settlement Business Processes](#) on page 2150

## Concept: Paycheck Cashing Out Address (USA)

For compliance, some states in the U.S. require displaying a business address on the paycheck where a worker can cash out without a transaction fee.

To configure the required address for a specific state, you can access the **Maintain Payroll Check Cash Out Address** task secured by the *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area. Select an **Effective Date** and enter the required:

- **Business Name**
- **Address Line 1**
- **City**
- **Postal Code**

Workday:

- Validates only the **Postal Code** for the state.
- Displays the address on the paycheck based on the payroll payment date.
- Uses only 1 effective address per state.
- Uses this precedence to display the appropriate address on the paycheck:

Compliance	Non-Compliance
For workers taxed or primary work location in compliant states: <ol style="list-style-type: none"> <li>1. Worker processing position location or state withholding in a compliant state.</li> <li>2. Worker processing position location.</li> <li>3. Maximum withholding amount.</li> <li>4. State alphabetical order.</li> </ol>	For workers not taxed nor primary work location in compliant states: <ol style="list-style-type: none"> <li>1. State withholding.</li> <li>2. Worker position location.</li> <li>3. Maximum withholding amount.</li> <li>4. State alphabetical order.</li> </ol>

These examples illustrate how Workday uses the precedence to display the appropriate address on a paycheck when a worker has multiple positions with different cash out addresses:

### Example 1: Compliance Precedence

Mike has 3 positions at Global Retail (USA):

Employee Taxes	Withholding Amount	Position	Compliance
State Tax - FL	-	Floor Manager (Processing)	Yes
State Tax - AZ	\$200	Trainer	No

Employee Taxes	Withholding Amount	Position	Compliance
State Tax - CA	\$50	Trainer	Yes

Payroll Administrator configures 3 different cash out addresses using the **Maintain Payroll Check Cash Out Address** task:

Effective Date	State	Address
1/1/2015	Arizona	Global Inc, 987 Hope St., Phoenix, AZ - 85001
1/1/2015	California	Global Inc, 123 Mission St., Los Angeles, CA, 90001
1/1/2015	Florida	Global Inc, 567 Peach St., Miami, FL -33101

**Result:**

Workday displays Florida address on the paycheck. California and Florida both are compliant states but Florida takes the precedence as it's also the worker's processing position location.

**Example 2: Non-Compliance Precedence**

David has 3 positions at Global Retail (USA):

Employee Taxes	Withholding Amount	Position	Compliance
State Tax - MN	\$100	Floor Manager (Processing)	No
State Tax - WI	\$200	Trainer	No
State Tax - ND	\$50	Trainer	No

Payroll Administrator configures 2 different cash out addresses using the **Maintain Payroll Check Cash Out Address** task:

Effective Date	State	Address
1/1/2015	North Dakota	Global Inc, 987 Hope St., Bismark, ND - 58501

Effective Date	State	Address
1/1/2015	Wisconsin	Global Inc, 123 Mission St., Madison, WI - 53558

**Result:**

Workday displays Wisconsin address on the paycheck. The processing position in Minnesota has no cash out address configured. Wisconsin and North Dakota both have cash out addresses configured. Wisconsin takes the precedence because it has a higher withholding amount than North Dakota.

**Related Information****Tasks**

[Steps: Set Up Checks and Advices for Printing](#) on page 2193

[Print Checks and Advices](#) on page 2200

**Reference: Sample Check (XSLT)**

Workday provides sample XSLT-based check layouts in your setup tenant. Default field positions vary by country.

You can configure the check print layout to include the **Payee** field. Workday doesn't automatically include it.

For both financials and payroll, the **Payee Address** field includes the name and address.

Sample positions for **Check Options**:

Field	Position (Top, Left)
Date	18, 178
Payee	30, 32
Amount	30, 178
Amount as Text	40, 15
Payee Address	50, 30
Memo / Sort Order	71, 25

Sample positions for **Blank Check Options**:

Field	Position (Top, Left)
Company Name	5, 10
Company Address	10, 10
Bank Name	5, 110
Bank Address	10, 110
Check Number	5, 185
Pay To Label	30, 10

Field	Position (Top, Left)
Currency Symbol	30, 175
Currency Name	35, 190
Signature Label	70, 135
Memo Label	71, 10
MICR	80, 50

## Example: Configure Report Design Payroll Checks

This example illustrates 1 way to configure fields on your U.S. and Canada payroll check.

### Context

You want to position and style the fields on a payroll check for:

- Company Logo
- Payee Information
- Payment Date
- Payment Amount
- Signature

### Prerequisites

- Security: Set Up: *Settlement* domain in the Banking and Settlement functional area.
- Add your company logo and signatures on the **Configure Business Form Layout** task.

### Steps

1. Access the **Create Report Design Configuration** task.
2. Enter Company Payroll Checks Configuration in the **Name** field.
3. Add these 4 rows:

Row Details - Order	Row Details - Name	Column Details - Order	Column Details - Column Width	Column Details - Column Precision	Column Details - Column Formatting Style	Column Details - Contents	Column Details - Field Formatting Style
1	Logo and Payment Date	A	170	mm		Company Logo	
		B	30	mm	Override Position: Selected Position Top: 10 Position Right: 10	Payment Date	

Row Details - Order	Row Details - Name	Column Details - Order	Column Details - Column Width	Column Details - Column Precision	Column Details - Column Formatting Style	Column Details - Contents	Column Details - Field Formatting Style
					<b>Override Alignment:</b> <i>Right</i>		
2	Payment Amount	A	202	mm	<b>Override Position:</b> Selected <b>Position Top:</b> 5 <b>Position Right:</b> 10 <b>Override Alignment:</b> <i>Right</i>	<i>Currency Symbol Ellipsis Payment Amount</i>	<b>Display Inline:</b> Selected for both fields.
3	Amount as Text	A	202	mm	<b>Override Position:</b> Selected <b>Position Top:</b> 5 <b>Position Left:</b> 15 <b>Override Alignment:</b> <i>Right</i>	<i>Amount as Text</i>	
4	Payee Info	A	202	mm	<b>Override Position:</b> Selected <b>Position Top:</b> 5 <b>Position Left:</b> 15	<i>Remit To Addressee Name Remit To Addressee</i>	
5	Signatures	A	202	mm	<b>Override Position:</b> Selected <b>Position Right:</b> 135	<i>Signature Image</i>	<b>Override Image Size:</b> Selected <b>Image Width:</b> 125 <b>Image Height:</b> 50

## Result

You can apply this payroll check configuration to your checks.

## Next Steps

Test your configuration by creating a check print layout and assigning it to a bank account.

## FAQ: Check and Advice Printing

### How do I record voided checks?

You can create and maintain a record of voided checks using the **Record Voided Checks** task. Be sure to search for and cancel any existing payments before recording voided checks on those payments.

Security: These domains in the Banking and Settlement functional area:

- *Process: Void Check*
- *Process: Settlement*
- *Process: Ad Hoc Payment Settlement*

### Does Workday translate Canadian checks?

Workday translates:

Payment	Description
Payroll Direct Deposit	Workday translates earnings statements and direct deposit slips into the preferred language of the employee.
Payroll Checks	Workday translates earnings statements into the preferred language of the employee. Check is English only.
Financial Checks	English only.

### Related Information Tasks

[Print Checks and Advices](#) on page 2200

## Concept: Settlement Dashboard

The **Settlement** dashboard (secured to the *Management Dashboard: Settlement* domain in the Banking and Settlement functional area) is a configurable workspace that provides up-to-date, graphical reports on the settlement activities in your organization. You can view and track information that's important to making operational decisions or taking action on settlement processing.

Workday delivers these reports as worklets that you can add to the **Settlement** dashboard:

- **Actionable Settlement Runs**
- **Count of Payroll Open Items**
- **Most Recent Settlement Runs**

- Open Items for Settlement
- Payment Counts by Status
- Payment Returns by Month
- Ready to Print
- Ready to Print Advices
- Ready to Print Checks
- Settlement Run Actions Pending
- Settlement Run Integrations
- Settlement Run Integrations - Last x Days
- Uncashed Payments
- Unsettled Payroll Payments by Amount

If you rerun an unsuccessful integration event on the **Settlement Run Integrations** worklet, Workday creates a new event that's no longer associated with the settlement run. The successful integration status doesn't update.

Configure the **Settlement** dashboard content using the **Maintain Dashboards** report. You can add settlement tasks or reports that you frequently use to the dashboard. For quick access, you can add the dashboard as a worklet to the **Home** page.

## Optimize Financial Management Performance

---

### Reference: Financial Management Tenant Configuration Guidelines

This table includes tenant configuration guidelines that Workday recommends for:

- Allocations
- Account Certifications
- Average Daily Balances
- Budgets
- Consolidation Data Capture
- Intercompany Supplier Invoices
- Intercompany Transactions
- Journal Sources and Mapping
- Project Management & Core Setup
- Project Resource Management
- Requisitions
- Retained Earnings
- Settlement Runs
- Supplier Accounts
- Supplier Integration
- Supplier Invoices

Component	Issues and Causes	Configuration Guidelines
Allocations	<p><b>Issue:</b> Slow performance or failure when processing allocations.</p> <p><b>Cause:</b> You've assigned a large number of worktags to the target and offset of allocations.</p>	<p>Removing unnecessary worktags from the process, especially if you're mapping worktags from source, will help speed up allocation calculations and can significantly reduce journal line output.</p> <p>Security: <i>Set Up: Allocations</i> domain in the Financial Accounting functional area.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Create Allocation Definition</b> task.</li> <li>2. In the <b>Target</b> and <b>Offset</b> sections, remove unnecessary worktags from the <b>Worktag Mapping</b> grid.</li> </ol> <p>See also, <a href="#">Improving Expense Allocation Processing Time</a>.</p>
	<p><b>Issue:</b> Unable to select any ledger period for a new fiscal year on the Allocation Work Area report.</p> <p><b>Cause:</b> You haven't opened the new fiscal year and the ledger periods in the new fiscal year.</p> <p><b>Note:</b> The new fiscal year has a <i>Created</i> status and not an <i>Open</i> status.</p>	<p>Open the fiscal year and the ledger periods.</p> <p>Security: <i>Process: Period End</i> in the Common Financial Management functional area.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Mass Update Ledger Period Status</b> task.</li> <li>2. Select the new fiscal year you want to open.</li> <li>3. Select <b>All Periods</b> to open all ledger periods for the fiscal year.</li> <li>4. Click <b>OK</b>.</li> </ol>
Account Certifications	<p><b>Issue:</b> Account certification business process is auto approving journals with activity and where the account balance is not zero.</p> <p><b>Cause:</b> You may have configured the Account Certification with an incorrect worktag hierarchy.</p> <p>When you configure Worktag values, which may include hierarchies, on the Account Certification, all Worktag values on the journal lines and the account certification must match, otherwise the business process will not submit the certification for approval.</p>	<p>Ensure you have configured the Account Certification with the correct Worktag values, which may include hierarchies.</p>

Component	Issues and Causes	Configuration Guidelines
	<p><b>Issue:</b> Service Representative who is assigned as an Account Certifications Reviewer and Account Certifications Preparer is unable to view an Account Certification Workbook.</p> <p><b>Cause:</b> The service representative may not have a company role assigned.</p>	<p>Assign a company role to the service representative.</p> <ol style="list-style-type: none"> <li>Access the company to which you want to assign the service representative a role.</li> <li>From the related actions of the company, select <b>Role &gt; Assign Roles</b>.</li> <li>Select an effective date and click <b>OK</b>.</li> <li>Perform 1 of these actions: <ul style="list-style-type: none"> <li>Assign any role to the service representative.</li> <li>Create a new company role and assign the new role to the service representative.</li> </ul> </li> </ol> <p>This assigns a company role to the service representative.</p>
Average Daily Balances	<p><b>Issue:</b> Average Daily Balance processing is slow to complete.</p> <p><b>Cause:</b> You're using average daily balance (ADB) 2.0.</p>	<p>Adopt Average Daily Balance (ADB) version 3.0.</p> <p>For detailed information on how to opt-in to ADB 3.0, see the What's New Post on Community: <a href="#">Performance Enhancements for Average Daily Balance</a>.</p>

Component	Issues and Causes	Configuration Guidelines
Budgets	<p><b>Issue:</b> Unable to submit a plan for a period using the <b>Submit Plan</b> task.</p> <p><b>Cause:</b> You may have a critical validation that is preventing you from submitting the plan.</p> <p><b>Note:</b> Deleting the critical validation is not enough. You need to also update the Budget Entry Line to submit the plan.</p>	<ol style="list-style-type: none"> <li>1. Remove the critical validation on the Budget Entry Line.</li> <li>2. Create a new custom validation of <i>Warning</i> to replace the critical validation.             <ol style="list-style-type: none"> <li>a. Access the <b>Maintain Custom Validations</b> report. Security: <i>Set Up: Custom Validations</i> in the Common Financial Management System functional area.</li> <li>b. For <b>Budget Line</b>, add a validation of <i>Warning</i> that will ignore the critical error you had. The <i>Warning</i> validation will display a warning but will not prevent you from submitting your plan.</li> <li>c. Access the period for which you were unable to submit the plan.</li> <li>d. From the related actions of the <b>Plan Period</b>, select <b>Plan Period &gt; Maintain Budget</b>.</li> <li>e. Enter the necessary Ledger <b>Account/Summary</b> and <b>Worktags</b> and click <b>OK</b>.</li> <li>f. Confirm the Plan Line values and click <b>OK</b>. Workday validates the Budget Line with the new <i>Warning</i> validation that you previously created.</li> <li>g. Once the validation is complete, you can submit the plan.</li> <li>h. After the plan is successfully submitted, remove the <i>Warning</i> validation you created.</li> </ol> </li> </ol>

Component	Issues and Causes	Configuration Guidelines
Consolidation Data Capture	<p><b>Issue:</b> User is unable to view a diagnostic audit file generated from a Consolidated Data Capture run.</p> <p><b>Cause:</b> User may not have access to the audit file.</p>	<p>Assign user access to the audit file.</p> <ol style="list-style-type: none"> <li>1. Access the <b>View Domain</b> report.</li> <li>2. Depending on your configuration needs, select 1 or both of these domains: <ul style="list-style-type: none"> <li>• Integration Process</li> <li>• Integration Event</li> </ul> </li> <li>3. From the related actions of the domain, select <b>Domain &gt; Edit Security Policy Permissions</b>.</li> <li>4. Ensure the user is a member of the security group configured/defined within the security policy.</li> <li>5. If the user is not a member of the security group, add the user to the security group.</li> <li>6. Access the <b>Activate Pending Security Policy Changes</b> task.</li> <li>7. Enter a comment and click <b>OK</b>.</li> <li>8. Select <b>Confirm</b> and click <b>OK</b>.</li> </ol>
Intercompany Supplier Invoices	<p><b>Issue:</b> A number of Direct Intercompany supplier invoices are not showing as available for selection in Settlement Run.</p> <p><b>Cause:</b> You've removed the supplier from the <b>Operates as Supplier</b> field on the <b>Maintain Companies as Customers or Suppliers</b> task after you created an intercompany invoice and before running the settlement.</p>	<p>Access the <b>Maintain Companies as Customers or Suppliers</b> task and confirm the supplier company is setup as a supplier.</p> <p><b>Note:</b> Direct intercompany invoices that you create while the Direct Intercompany configuration is in place won't be available for settlement if you change the intercompany configuration before settlement.</p>

Component	Issues and Causes	Configuration Guidelines
Intercompany Transactions	<p><b>Issue:</b> Intercompany transactions are not balancing.</p> <p><b>Cause:</b> You have incorrectly created an operational direct intercompany transaction between 2 companies, where the intercompany affiliate from the billing company is being displayed on the supplier invoice. This has resulted in the same company being entered on the journal Header and Lines. This may occur when you didn't enable the <b>Default Affiliate</b> option, for the 2 companies on the <b>Maintain Companies as Customers or Suppliers</b> task.</p>	<p>Ensure that you have the <b>Default Affiliate</b> option enabled for the billing and supplier companies.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Maintain Companies as Customers or Suppliers</b> task. <i>Security: Set Up: Company Accounting domain in the Common Financial Management</i></li> <li>2. Ensure the <b>Default Affiliate</b> option is enabled for both the companies with the intercompany operational transaction.</li> </ol>
Journal Sources and Mapping	<p><b>Issue:</b> Missing journal sources on operational journals can cause potential reporting or downstream transaction impacts.</p> <p><b>Cause:</b> There is a blank field in the <b>Maintain Journal Source Mapping to Operational Transactions</b> task.</p>	<p>Ensure you have all fields filled out in the <b>Maintain Journal Source Mapping to Operational Transactions</b> task.</p>

Component	Issues and Causes	Configuration Guidelines
Project Management & Core Setup	<p><b>Issue:</b> There are two projects with the same project ID. This project ID is also listed in the sequence generator for projects.</p> <p><b>Cause:</b> There may be a number of causes that create this issue. Each cause has a different configuration guideline.</p> <ul style="list-style-type: none"> <li>#1: Your configured sequence generator for projects has ran out of sequence numbers.</li> <li>#2: Your time-based reset settings are causing duplicate sequence numbers upon reset.</li> <li>#3: Your users are manually entering a project ID for a sequence number that has already been used.</li> <li>#4: Your users are manually entered project IDs for a future number that the sequence generator is likely to create. Eventually the sequence number generator will create a duplicate with this project ID.</li> </ul>	<p>Follow each guideline sequentially to diagnose and solve the issue. If your issue isn't solved, continue to the next cause and configuration guideline.</p> <p><b>#1:</b> Configure the <b>Sequence ID Overflow Behavior</b> field. See Step 6 in <b>Create ID Definitions and Sequence Generators</b>.</p> <p><b>#2:</b></p> <ol style="list-style-type: none"> <li>1. Access 1 of these sequence generator tasks that you use: <ul style="list-style-type: none"> <li>• <b>Create ID Definition / Sequence Generator</b></li> <li>• <b>Create ID Definition / Gapless Sequence Generator</b></li> </ul> </li> <li>2. In the <b>Sequence ID Format</b> field, if you've set the restart frequency interval, ensure that the generated sequence number is unique by including the specific time period in the format. Example: If the <b>Restart Frequency</b> time period is <i>Month</i>, include [month] and [year] in the format. Make sure that the padding value is large enough that the sequence generator doesn't encounter an overflow condition during the time period.</li> </ol> <p>Note: The <b>Restart Frequency</b> field isn't available for gapless sequence generators.</p> <p><b>#3:</b> Ensure the user is not entering a duplicate project ID that already exists, as the sequence generator will propose a project ID based on the sequence.</p> <p><b>#4:</b></p> <ol style="list-style-type: none"> <li>1. Run the <b>View Reference ID</b> report and sort the <b>Reference ID</b> values. Today's past tense and Confidential Reference ID for the</li> </ol>

Component	Issues and Causes	Configuration Guidelines
Project Resource Management	<p><b>Issue:</b> Time Entry submitted doesn't contain the Required Project Role.</p> <p><b>Cause:</b> You performed 1 of these actions:</p> <ul style="list-style-type: none"> <li>• Didn't select the Require Project Role for Time Entry check box on Time Entry Template.</li> <li>• Removed the worker from the project talent pool before Time Entry was approved.</li> </ul>	<p>Ensure:</p> <ul style="list-style-type: none"> <li>• To select the <b>Require Project Role for Time Entry</b> check box.</li> <li>• The worker is in the project talent pool.</li> </ul> <p>See: <a href="#">Steps: Set Up Project Time Entry</a>.</p>
Requisitions	<p><b>Issue:</b> Delay in processing requisitions.</p> <p><b>Cause:</b> You've assigned a security group with a large number of users to a print-related business process step.</p>	<p>You can experience slow performance when you assign a security group with multiple users to a report step on these print-related business processes:</p> <ul style="list-style-type: none"> <li>• Goods Delivery Run</li> <li>• Inventory Count Event</li> <li>• Inventory Pick List Event</li> <li>• Inventory Shipment Event</li> <li>• Inventory Par Count Event</li> </ul> <p>The business processes generate separate print jobs for each user instead of a single job.</p> <p>Workday therefore recommends you assign a security group with smaller number of users. Example: Integration User group.</p> <p>See:</p> <ul style="list-style-type: none"> <li>• <a href="#">Concept: Security Groups</a>.</li> <li>• <a href="#">Create User-Based Security Groups</a>.</li> </ul>

Component	Issues and Causes	Configuration Guidelines
Retained Earnings	<p><b>Issue:</b> Worktags types that you removed from the <b>Retained Earnings</b> field continue to display on journals when you roll forward retained earnings.</p> <p><b>Cause:</b> The tenant-level worktag configuration only impacts activity balances and doesn't affect balances that you roll forward from prior years.</p>	<ol style="list-style-type: none"> <li>1. Identify the beginning balance journal lines from prior years from which to remove worktag types during roll forward.</li> <li>2. Create a summarized reversal manual journal that includes all of worktag types for the journal.</li> <li>3. Create a second summarized reversal manual journal and exclude the worktag types you don't want to roll forward.</li> <li>4. Roll forward the second new journal.</li> </ol> <p>See <a href="#">Roll Year-End Balances Forward</a> on page 304.</p>
	<p><b>Issue:</b> The Adaptive Journal integration fails after moving to the new Retained Earnings Framework.</p> <p><b>Cause:</b> You performed a Retained Earnings Uptake and didn't update your adaptive integrations.</p>	To update your Adaptive Integrations, reach out to <a href="#">Expert Assist</a> .
Settlement Runs	<p><b>Issue:</b> Scheduled settlement runs are not running.</p> <p><b>Cause:</b> Worker who created the scheduled run does not have the security domain required to view the bank accounts in that run.</p>	Ensure that the worker has access to the security domain required to view the bank account. Re-add the worker to the correct security domain.  See <a href="#">Edit Domain Security Policies</a> .

Component	Issues and Causes	Configuration Guidelines
Supplier Accounts	<p><b>Issue:</b> You're noticing that the Spend Obligation Journals generated by a Purchase Order are not being posted to the respective ledger accounts.</p> <p><b>Cause:</b> While editing an invoice, you may have deleted the original splits on the invoice line and created new splits.</p> <p>When you delete the original splits which are associated to the Purchase Order line splits, the link between the invoice line splits and the related Purchase Order line splits are broken.</p> <p>Since the new splits are no longer linked to the original Purchase Order line splits, the Obligation journals can't locate the ledger accounts to post to.</p>	<p>When you edit supplier invoice, ensure you do not delete the splits on the invoice line as they are linked to the Purchase Order line splits.</p> <p>To accurately link invoice line splits to the Purchase Order lines and splits, you can cancel the invoice, and recreate the invoice correctly against the purchase order.</p>
Supplier Integration	<p><b>Issue:</b> New suppliers are not being assigned on the Supplier Event Business Process.</p> <p><b>Cause:</b> You may have configured the Supplier Event Business Process incorrectly.</p>	<p>Add additional security group as user-based or unconstrained role-based to the Supplier Event Business Process.</p> <p>See:</p> <ul style="list-style-type: none"> <li>• <a href="#">Create User-Based Security Groups</a></li> <li>• <a href="#">Create Role-Based Security Groups</a></li> </ul>
Supplier Invoices	<p><b>Issue:</b> Missing sequence numbers for supplier invoices when you close your ledger year period.</p> <p><b>Cause:</b> You ran 2 concurrent jobs to open the same period for 2 different company hierarchies that have a common company included in both hierarchies.</p>	<p>When you open a ledger period for company hierarchies, we recommend that you include a company in just 1 hierarchy or schedule jobs to run at a different day or time.</p> <p>See <a href="#">Change the Status of Ledger Periods</a> on page 299.</p>

Component	Issues and Causes	Configuration Guidelines
	<p><b>Issue:</b> Unable to specify the Tax Point Date Type on the <i>Submit Supplier Invoice Adjustment</i> web service when creating an adjustment against existing invoices.</p> <p><b>Cause:</b> You have not enabled the <b>Enable Tax Point Date Configuration for Transaction Taxes</b> option on the <b>Edit Tenant Setup-Financials</b> task.</p>	<p>Security: <i>Set Up: Tenant Setup – Financials</i> in the System domain.</p> <ol style="list-style-type: none"> <li>Access the <b>Edit Tenant Setup – Financials</b> task and under the <b>Tax Options</b> section, select <b>Enable Tax Point Date Configuration for Transaction Taxes</b>.</li> <li>Run the <i>Submit Invoice Adjustment</i> web service and enter <b>Tax_Point_Date_Type_ID</b> under both these nodes: <ul style="list-style-type: none"> <li><b>Tax_Data</b></li> <li><b>Tax_Rate_Data</b></li> </ul> </li> </ol>

## Reference: Tenant Configuration Guidelines for Assets

This table includes tenant configuration guidelines that Workday recommends for business assets.

Issue	Cause	Configuration Guidelines
<p>For assets that you don't want to track at first review, Workday doesn't:</p> <ul style="list-style-type: none"> <li>Review trackable lines for all subsequent invoices or receipts created from the same line.</li> <li>Create assets.</li> </ul>	<p>You've not enabled <b>Always Go to Review Trackable Lines for Trackable Spend Category</b> on the <b>Edit Tenant Setup-Financials</b> task.</p>	<ol style="list-style-type: none"> <li>Access the <b>Edit Tenant Setup – Financials</b> task.</li> </ol> <p>Security: <i>Set Up: Tenant Setup- Financials</i> in the System functional area.</p> <ol style="list-style-type: none"> <li>Under <b>Business Assets Options</b>, enable <b>Always Go to Review Trackable Lines for Trackable Spend Category</b>.</li> </ol> <p>When you enable the <b>Always Go to Review Trackable Lines for Trackable Spend Category</b> option, Workday always prompt you to review and edit trackable lines on a receipt or supplier invoice before registering assets.</p> <p>See <a href="#">Review Trackable Lines for Assets</a> on page 1535.</p>

Issue	Cause	Configuration Guidelines
<p>For assets that you don't want to track at first review, Workday always prompts to review trackable lines for partial invoices or receipts created from the same line.</p>	<p>You've enabled <b>Always Go to Review Trackable Lines for Trackable Spend Category</b> on the <b>Edit Tenant Setup- Financials</b> task.</p>	<ol style="list-style-type: none"> <li>Access the <b>Edit Tenant Setup - Financials</b> task. Security: <i>Set Up: Tenant Setup- Financials</i> in the System functional area.</li> <li>Under <b>Business Assets Options</b>, disable <b>Always Go to Review Trackable Lines for Trackable Spend Category</b>.</li> </ol> <p>When you don't select the option, and also determine that you don't want to track an asset during the first review of a trackable line, Workday saves you time by not reviewing trackable lines for all subsequent invoices or receipts created from the same line. To assign a default accounting treatment to assets, Workday uses:</p> <ul style="list-style-type: none"> <li>The asset book rules for the first review.</li> <li>The accounting treatment from the first review for subsequent reviews.</li> </ul> <p>See <a href="#">Review Trackable Lines for Assets</a> on page 1535.</p>
<p>You are unable to create multiple assets from a single purchase order service line.</p>	<p>You've not enabled <b>Create Multiple Assets from Purchase Order Service Line</b> on the <b>Edit Tenant Setup- Financials</b> task.</p>	<ol style="list-style-type: none"> <li>Access the <b>Edit Tenant Setup – Financials</b> task. Security: <i>Set Up: Tenant Setup- Financials</i> in the System functional area.</li> <li>Under <b>Business Assets Options</b>, enable <b>Create Multiple Assets from Purchase Order Service Line</b>.</li> </ol> <p>When you select this option, Workday will initiate an asset registration event for every partial receipt or supplier invoice you create from a single purchase order service line with a trackable spend category.</p> <p><b>Note:</b> Workday creates assets for receipts or supplier invoices</p>

Issue	Cause	Configuration Guidelines
		on the same service line, but not for both.
You are unable to create a single asset from a single purchase order service line.	You've enabled <b>Create Multiple Assets from Purchase Order Service Line</b> on the <b>Edit Tenant Setup - Financials</b> task.	<p>1. Access the <b>Edit Tenant Setup – Financials</b> task. Security: <i>Set Up: Tenant Setup- Financials</i> in the System functional area.</p> <p>2. Under <b>Business Assets Options</b>, disable <b>Create Multiple Assets from Purchase Order Service Line</b>.</p> <p>When you disable this option, Workday creates only 1 asset for the first receipt or supplier invoice you create from a purchase order service line with a trackable spend category.</p>
You can't manually enter asset information during asset registration.	You've configured a business process that automatically assigns asset information during asset registration.	No action needed as asset has been registered.
Assets that are created from supplier invoices or receipts are still being displayed when you cancel the supplier invoices or receipts.	Workday doesn't remove the asset when you cancel the supplier invoice or receipt.	<p>You must remove the assets manually.</p> <p>See <a href="#">Dispose of Assets</a> on page 1504.</p>
Unable to approve the Asset Intercompany Transfer In Event business process for transferring an intercompany asset.	You may have not entered the depreciation start date for the secondary (Tax) book.	<ul style="list-style-type: none"> <li>• Cancel the <i>Asset Intercompany Transfer In Event</i> business process.</li> <li>• Access the asset that you were transferring.</li> <li>• Click the <b>Books</b> tab.</li> <li>• From the related actions of the secondary (Tax) Book, select <b>Asset Book Configuration &gt; Change</b>.</li> <li>• In the <b>Date Placed in Service</b> field, enter the date you placed the asset in service.</li> </ul> <p>Workday sets the depreciation start date on the book.</p>
You are unable to reconcile the <b>Asset to Ledger Reconciliation – Cost</b> report because Assets is missing the Spend Category.	You may have added the Asset book rules after registering the asset.	<ol style="list-style-type: none"> <li>1. Remove the asset.</li> <li>2. Add the asset book rules.</li> <li>3. Register the asset again.</li> </ol> <p>See</p>

Issue	Cause	Configuration Guidelines
		<ul style="list-style-type: none"> <li>• <a href="#">Dispose of Assets</a> on page 1504</li> <li>• <a href="#">Define Asset Book Rules</a> on page 1492</li> <li>• <a href="#">Register Assets</a> on page 1469</li> </ul>
After transferring an asset the <b>Asset Transfer Comment</b> field on the <b>Assets Custodial Activities</b> report is blank.	You may not have defined the asset book.	<ol style="list-style-type: none"> <li>1. Remove the asset.</li> <li>2. Add the asset book.</li> <li>3. Register the asset again.</li> </ol> <p>See</p> <ul style="list-style-type: none"> <li>• <a href="#">Dispose of Assets</a> on page 1504</li> <li>• <a href="#">Setup Considerations: Asset Books</a> on page 1483</li> <li>• <a href="#">Register Assets</a> on page 1469</li> </ul>

## Reference: Tenant Configuration Guidelines for Custom Reporting

This table includes tenant configuration guidelines that Workday recommends for custom reporting.

Issues	Causes	Configuration Guidelines
You're noticing poor performance when creating custom reports using the <b>Last Updated Moment</b> report field with these filters: <ul style="list-style-type: none"> <li>• Greater Than</li> <li>• Greater Than or Equal to</li> <li>• Lesser Than</li> <li>• Lesser Than or Equal to</li> <li>• Equal to</li> </ul>	You're using 1 of these report data sources and filters combinations: <ul style="list-style-type: none"> <li>• <b>Journal Lines for Financial Reporting</b> report data source with <i>Journal Lines for Company and Reporting Time Period</i> data source filter.</li> <li>• <b>Journals</b> data source with <i>Journal Filter</i> data source filter.</li> </ul>	When creating custom reports: <ul style="list-style-type: none"> <li>• Replace the data source with <b>Journal Lines</b> report data source.</li> <li>• Replace the data source filter with <i>Journal Line Filter with Last Updated in Date Range</i> data source filter.</li> </ul> <p>See <a href="#">Create Custom Reports</a>.</p>
You're noticing poor performance when creating custom reports.	You may be using non-indexed report fields.	Ensure you are using the available indexed report fields for the custom reports.
A custom report that you've created to review accounting adjustments and prepaid amortizations on invoices is not displaying these fields: <ul style="list-style-type: none"> <li>• Amortization Schedule</li> <li>• Prepayments Amortized</li> </ul>	You're using the <b>Prepaid Amortization Installment Lines</b> report field.	Use the <b>Prepaid Amortization Installment Lines on Supplier Invoice</b> or the <b>Accounting Adjustment Line</b> report field.
You're getting an incorrect balance when running a trial	You may be running a composite trial balance by selecting	Instead of using the Repeating Column Group, copy the columns for the report and hard code the

Issues	Causes	Configuration Guidelines
balance for more than a single reporting period.	<p>Repeating Column Group as period.</p> <p><b>Note:</b> Workday doesn't support using Repeating Column Group for period mapping over multiple fiscal years.</p>	<p>year on the sub report prompt to have the time period equal to the previous or prior year.</p> <p>Example: You want to create trial balances for 3 years using the Time Period prompt. Create the layout of the report and copy each column on the report 2 times. For each year that you copy, change the Beginning Balance time period to <b>Last Year – Current Period</b>.</p>

## Reference: Tenant Configuration Guidelines for Journals

This table includes tenant configuration guidelines that Workday recommends for processing journals.

Issues	Causes	Configuration Guidelines
Errors when importing journals using the Accounting Journal Connector.	You don't have a suspense account and associated account posting rules.	<p>Removing unnecessary worktags from the process, especially if you're mapping worktags from source, will help speed up allocation calculations and can significantly reduce journal line output.</p> <p>Security: Set Up: Allocations domain in the Financial Accounting functional area.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Create Allocation Definition</b> task.</li> <li>2. In the <b>Target</b> and <b>Offset</b> sections, remove unnecessary worktags from the <b>Worktag Mapping</b> grid.</li> </ol> <p>See also, <a href="#">Improving Expense Allocation Processing Time</a>.</p>
Poor performance when processing high-volume journals.	<p>You have selected several worktags when configuring <b>Include Worktag Types</b> in the <b>Retained Earnings</b> section of <b>Edit Tenant Setup – Financials</b> task and haven't yet adopted the Redesigned Retained Earnings Reporting framework.</p> <p>For information on adopting the Redesigned Retained Earnings Reporting framework, see</p>	<p>When you include several worktags on the <b>Retained Earnings</b> section, Workday groups retained journal lines in many different combinations. This can affect performance for high-volume journals.</p> <p>Security: Set Up: Tenant Setup – Financials in the System functional area.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Edit Tenant Setup – Financials</b> task.</li> </ol>

Issues	Causes	Configuration Guidelines
	<a href="#">Redesigned Retained Earnings Reporting.</a>	<p><b>2.</b> Configure no more than 3 different worktag types for the <b>Retained Earnings</b> section.</p> <p>See <a href="#">Reference: Edit Tenant Setup - Financials</a>.</p>
Missing interworktag payables or receivables accounts in journals with worktag balancing.	You haven't configured default ledger accounts for interworktag payables and receivables account posting types.	<p>If you've enabled worktag balancing, configure the default accounting posting rule for the Interworktag Payables and Interworktag Receivables accounts.</p> <p>Security: <i>Set Up: Accounting Rules</i> in the Common Financial Management functional area.</p> <p><b>1.</b> Access the <b>View Account Posting Rule Set</b> report.</p> <p><b>2.</b> Click <b>Edit Default Ledger Accounts</b>.</p> <p><b>3.</b> Select default posting rules from the <b>Default Ledger Account</b> prompt for InterWorktag Payables and InterWorktag Receivables.</p> <p>See <a href="#">Set Up Account Posting Rules</a> on page 84.</p>
Poor performance when importing high-volume journals using a web service.	You might be importing journals with a high volume of journal lines using the <i>Submit Accounting Journal</i> web service.	Use the <i>Import Accounting Journal</i> web service to import journals with a high volume of journal lines.
Unable to import journals using the Accounting Journal Connector.	<p>You haven't specified values for all required fields, including these in your input file for the Accounting Journal Connector:</p> <ul style="list-style-type: none"> <li>• Ledger Type</li> <li>• Journal Source</li> </ul>	<p>Confirm that you have specified values for all required fields in the Workday-defined XML or Comma-Separated Value (CSV) input file for the Accounting Journal Connector.</p> <p>See:</p> <ul style="list-style-type: none"> <li>• <a href="#">Reference: Accounting Journal Connector CSV File Format</a>.</li> <li>• <a href="#">Reference: Accounting Journal Connector XML Schema</a>.</li> </ul>
Unable to submit a journal for review.	You may have incorrectly configured your business process security policy for the <i>Review</i> action, where only the Initiator was enabled for the <i>Action</i> step, wherein multiple groups,	Ensure all groups who can create a journal are also enabled on the <i>Review</i> action step in the business process security policy.

Issues	Causes	Configuration Guidelines
	like Accountant, Accounting Managers were enabled to create journals.	
Unable to load journals that contain an Alternate Account set using the <i>Import Accounting Journal</i> web service.	<p>You are importing journals that may contain incorrect alternate ledger mappings using these options:</p> <ul style="list-style-type: none"> <li>• <i>Create Journal with Errors = N</i></li> <li>• <i>Submit = Y</i></li> </ul>	<p>Import journals using these options instead:</p> <ul style="list-style-type: none"> <li>• <i>Create Journal with Errors = Y</i></li> <li>• <i>Submit = N</i></li> </ul> <p>If alternate ledger accounts are properly mapped, Workday will create the journals with a <i>Created</i> status. You can then post the journals later.</p> <p>If any of the alternate ledger accounts are not mapped properly, Workday will still generate the journal with a <i>Created</i> status but you won't be able to post them. You can then review the journals and correct or cancel them.</p>
Operational journals are erroring out.	You haven't configured a default ledger account for each account posting rule type.	<p>Ensure you have selected the default ledger account for all account posting rule types.</p> <p>Security: <i>Set Up: Accounting Rules</i> in the Common Financial Management functional area.</p> <ol style="list-style-type: none"> <li>1. Access the <b>View Account Posting Rule Set</b> report.</li> <li>2. Click <b>Edit Default Ledger Accounts</b>.</li> <li>3. Select a default ledger account for any or all account posting types.</li> </ol> <p>See <a href="#">Set Up Account Posting Rules</a> on page 84.</p>
Poor performance when adding attachments to journals.	You are using the related action of <b>Journal &gt; Edit</b> to attach documents to the journal.	Workday recommends that you use the related action of <b>Journal &gt; Add/Change Attachments</b> to attach documents to a journal.
Unable to close the ledger period because the journals are not being posted and remain in Created status.	<p>You are using the <i>Check Budget (Financial)</i> business process and have configured the Batch/Job step for Budget Check with the <b>Don't wait for this step to complete, move immediately to the next step</b> option enabled.</p> <p>When you enable this option on the Batch/Job, the process to</p>	Ensure that the Batch/Job step for Budget Check has the <b>Don't wait for this step to complete, move immediately to the next step</b> unchecked. This will ensure the journals are created and complete budget check with the correct status.

Issues	Causes	Configuration Guidelines
	create journals and complete budget check evaluation are not complete before moving on to the next step.	

## Reference: Tenant Configuration Guidelines for Customer Payments

This table includes tenant configuration guidelines that Workday recommends for processing customer payments.

Issue	Cause	Configuration Guidelines
Auto-apply customer payment jobs are taking a long time to process.	You've scheduled a large number of periodic auto apply jobs to run in a short period of time.  When you schedule a large number of auto apply jobs to run in a short period, Workday will start queuing the jobs if it's unable to complete an auto apply job before the next scheduled job starts. This can impact tenant performance.	Schedule a longer interval between periodic auto apply jobs. Example: hourly or daily where possible.  See <a href="#">Auto-Apply Customer Payments</a> on page 848.
Fields in the payment file used in Bankers Automated Clearing Services (BACS) are returning a null value.	You are setting up bank integrations for processing settlements using the WPN - BACS Standard 19 Payment (Enhanced Performance) integration template with the <b>Conversion Service (Enable only if instructed by support)</b> integration service enabled.	You should only enable the <b>Conversion Service (Enable only if instructed by support)</b> integration service when instructed by support.
Out bound payment integration is failing when you are using the WPN - MT101 Request For Transfer (Enhanced Performance) template.	You've enabled <b>Override Beneficiary name with Name on Account</b> on the <b>Integration Attributes</b> tab of the Integration System but the supplier doesn't require a different name in the <b>Name On Account</b> field on the <b>Settlement Bank Accounts</b> tab.	For suppliers that require a different name in the <b>Name On Account</b> field, enable the <b>Override Beneficiary name with Name on Account</b> in the Integration System and enter a name in the <b>Name On Account</b> field.  <ol style="list-style-type: none"> <li>1. Access the <b>WPN-MT101 Request for Transfer</b> integration system.</li> <li>2. From the related actions of the integration system select <b>Integration System &gt; Configure Integration Attributes</b>.</li> <li>3. Under <b>Integration Attributes</b>, enable <b>Override Beneficiary</b></li> </ol>

Issue	Cause	Configuration Guidelines
		<p><b>name with Name on Account.</b></p> <ol style="list-style-type: none"> <li>4. Click <b>OK</b>.</li> <li>5. Access the <b>Find Suppliers</b> report.</li> <li>6. Access your supplier.</li> <li>7. From the related actions of your supplier, select <b>Supplier &gt; Change Supplier Settlement Bank Account</b>.</li> <li>8. In the <b>Account Details</b> column, select the country.</li> <li>9. (Optional) If the <b>Name On Account</b> field is displayed, enter the name on the account.</li> <li>10. Click <b>Submit</b>.</li> </ol> <p>For suppliers that don't require a name on account, create a separate Integration System and leave the <b>Override Beneficiary name with Name on Account</b> on the <b>Integration Attributes</b> unchecked.</p>
Auto-apply payments are taking a long time to process.	<p>You are incorrectly using the <b>Customer Invoice for Customer Invoice Adjustment</b> report field on the Invoice Adjustment Matches Invoice condition rule.</p> <p>The <b>Customer Invoice for Customer Invoice Adjustment</b> report field returns any customer invoices that already had the adjustment applied.</p>	<p>Use the <b>Invoice for Customer Adjustment</b> report field to return an invoice that is related to the adjustment.</p>

## Reference: Tenant Configuration Guidelines for Payroll Journals

This table includes tenant configuration guidelines that Workday recommends for processing payroll journals.

Issue	Causes	Configuration Guidelines
Missing worktags on payroll summary journals when you've enabled payroll journal summarization.	When you enabled summarization for payroll journals, you didn't configure the required worktags as optional summary dimensions.	<p>Security: <i>Set Up: Payroll-Company Specific (Accounting)</i> in the Core Payroll functional area.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Maintain Payroll Journal Options</b> task.</li> <li>2. From the <b>Optional Summary Dimensions</b> prompt, select the worktags you want to</li> </ol>

Issue	Causes	Configuration Guidelines
		<p>display on summarized payroll journals.</p> <p>See <a href="#">Steps: Set Up Payroll Accounting</a>.</p>
Changes in payroll results don't display when you amend an effort certification.	You haven't enabled payroll tax authority worktags on the effort certification	<p>If you don't enable the worktags and make changes to the Effort Certification result, Workday won't be able to identify and adjust the appropriate payroll.</p> <p>Security: <i>Set Up: Enable Worktags</i> in the Common Financial Management and Worktags functional areas.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Maintain Worktag Usage</b> report.</li> <li>2. In the <b>Effort Certification Dimension</b> category, click <b>Edit Worktag Usage</b>.</li> <li>3. Add these worktag types:           <ol style="list-style-type: none"> <li>a. Payroll City Authority</li> <li>b. Payroll County Authority</li> <li>c. Payroll School District Authority</li> <li>d. Payroll State Authority</li> </ol> </li> </ol>
Intercompany payroll results not displaying when you run intercompany payroll journals.	You haven't configured intercompany profiles for payroll companies.	<p>Security: <i>Set Up: Tenant Setup</i> in the System functional area.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Edit Tenant Setup - Payroll</b> task.</li> <li>2. If you've enabled the <b>Intercompany Payroll Accounting</b> option, confirm you've also configured the intercompany profiles between the applicable payroll companies.</li> </ol> <p>See <a href="#">Define Intercompany Profiles</a> on page 36.</p>
Resulting worktags on payroll account posting rules don't display on payroll summary journals.	You've not selected the necessary worktags in the <b>Optional Summary Dimensions</b> field on the <b>Maintain Payroll Journal Options</b> task.	<p>Ensure that the Resulting Worktags that you configured for the Payroll Account Posting Rules are selected on the <b>Maintain Payroll Journal Options</b> task.</p> <p>Security: <i>Set Up: Payroll-Company Specific (Accounting)</i> in the Core Payroll functional area.</p> <ol style="list-style-type: none"> <li>1. Access the <b>Maintain Payroll Journal Options</b> task.</li> </ol>

Issue	Causes	Configuration Guidelines
		<p>2. Select the <b>Summarize Payroll Journals</b> check box.</p> <p>3. If you've enabled the <b>Summarize Payroll Journals</b> option on the task, select the configured resulting worktag types from the <b>Optional Summary Dimensions</b> field.</p> <p>See <a href="#">Steps: Set Up Payroll Accounting</a>.</p>
Payroll run errors out due to missing company currency.	<p>You've used the <i>Get Companies Without Financials Dependencies</i> web service to load company information for a Human Capital Management (HCM) implementation only.</p> <p>The <i>Get Companies Without Financials Dependencies</i> web service allows you to load a company without a company currency.</p> <p>When you later decided to implement and run Payroll, the payroll run errors out as the company is missing a currency.</p>	<p>For companies without a currency, enter the company currency before running payroll.</p> <p>1. To locate companies without a currency, create a custom report using the report data source (RDS) of <b>Companies</b> and add <b>Company Currency</b> as a column.</p> <p>2. Access the <b>Edit Company Accounting Details</b> task and in the <b>Currency</b> field. Add a currency for each company that is missing a currency.</p> <p>3. Run Payroll.</p> <p>See <a href="#">Create Custom Reports</a>.</p>
Poor performance when creating Payroll summary journals.	<p>You've configured too many optional summary dimensions on the <b>Maintain Payroll Journal Options</b> task.</p>	<p>A large number of summary dimensions can adversely affect payroll journal summarization performance.</p> <p>Security: <i>Set Up: Payroll-Company Specific (Accounting)</i> in the Core Payroll functional area.</p> <p>1. Access the <b>Maintain Payroll Journal Options</b> task.</p> <p>2. If you've enabled the <b>Summarize Payroll Journals</b> option on the task, ensure that there aren't more than 10 dimensions in the <b>Optional Summary Dimensions</b> field.</p> <p>See <a href="#">Steps: Set Up Payroll Accounting</a>.</p>
Effort certifications are being routed to unauthorized users for approvals.	<p>You may have incorrectly configured your role-based security group access rights.</p>	<p>Ensure you have granted correct access to users based on their constrained role-based security groups.</p>

Issue	Causes	Configuration Guidelines
		See <a href="#">../../authentication-and-security/configurable-security/security-groups/role-based-security-groups/hng1574190254311.dita</a> .

[Was this helpful?](#)

#### A

##### Academic Date Range

The period of time associated with a student recruiting cycle.

##### Academic Level

The level of an educational objective that a student can pursue at an institution, such as:

- Undergraduate, Graduate, or Professional at a university.
- Associates or Baccalaureate at a community college.

##### Academic Unit

A Workday organization type that represents a school, college, university, or other unit of your institution. These units can recruit prospective students, admit students, offer programs of study or courses, or administer financial aid. Academic units are also used with academic appointments in Workday.

##### Academic Unit Hierarchy

A hierarchical grouping of academic units primarily used for roll-up reporting.

##### Accounting Cash

A group of cash ledger accounts that you can use to check cash balances against during settlement.

##### Accounting Cash Pool

One or more primary balancing worktag hierarchies that you can use to pool cash ledger balances for cash balance checks during settlement.

##### Active Candidate

A person with an application for a specific job requisition. Candidates must be linked to a job requisition for Workday to initiate a job application event.

<b>All Ledgers Journal</b>	An accounting journal that's not configured as a single ledger for the given company and is posted to both primary and alternate ledgers.
<b>Applicant Pool</b>	A subset of applications in an application grouping. Applicant pools enable you to control and adjust workload for application reviewers.
<b>Application Grouping</b>	A grouping of applications for the same admitting level of an academic unit and the same anticipated start date. Groupings can have 1 or more application pools, with an admissions counselor assigned to each pool.
<b>Auto-fill</b>	A time entry option that copies time blocks from a worker's schedule or from a previous week when entering time.
<b>Award</b>	A contract agreement with your sponsor in the form of funding to perform an activity for a public purpose. It defines how to capture direct and facilities and administration costs, recognize revenue, and bill your sponsor.
<b>Award Costs Processing (ACP)</b>	Processing facilities and administration costs and revenue recognition related to spend transactions on awards.
<b>Award Credits</b>	Percentage of award or award lines you allocate to specific worktags for reporting purposes.
<b>Aggregation Security Group</b>	A security group that grants access rights to members of an included set of security groups. Revokes access of members of any excluded security groups.
<b>Approve</b>	An action in a business process that designated participants select to progress the event to the next step.
<b>Assignable Roles</b>	Positions you can assign to organization roles.
<a href="#">Back to Top</a>	
<b>B</b>	
<b>Basis Limit</b>	The maximum amount of direct costs you can use to calculate facilities and administration costs.
<b>Base Pay Element</b>	The compensation components that are included in the calculation of base pay for the purposes of determining the compa-ratio and target penetration.  Example: Include both base pay and bonuses in the base pay calculation for compa-ratio.
<b>Benefit Credit Bundle</b>	A defined group of benefit credits that you can award together.

<b>Benefit Defaulting Rule</b>	A rule that identifies the benefit plans, coverage targets, and coverage amounts that employees receive by default when they do not complete an enrollment event.
<b>Benefit Event Rules</b>	These rules specify coverage increase limits, EOI requirements, waiting periods, and other rules and conditions of enrollment for benefits enrollment events.
<b>Benefit Event Type</b>	Identifies the events that trigger benefit enrollment, such as open enrollment, new hires, or the birth of a child. It also identifies the coverage types to make available to employees for when an event of this type occurs.
<b>Benefit Group</b>	A group of employees who qualify for benefits based on eligibility rules. Employees must be included in a benefit group to enroll in a benefit plan.
<b>Business Object</b>	Objects used to store data in Workday (such as organizations or workers). A business object has <i>fields</i> and <i>instances</i> , which are analogous to rows and columns in a spreadsheet. Workday links related business objects: a worker is associated with a position, the position to a job profile, and so on.
<b>Business Process Definition</b>	The tasks that compose a business process, the order in which they must be done, and who can do them.
<b>Business Process Instance</b>	A business process that the initiator has started. The <i>Hire Employee for Organization X</i> business process definition becomes an instance when the initiator uses it to hire an employee.
<b>Business Process Security Policy</b>	A business process security policy secures the steps and process-wide actions including view, rescind, cancel and correct. It specifies which security groups have access to each action.

[Back to Top](#)

## C

<b>Calculated Time</b>	Result of applying time calculations to a worker's reported time. Automates application of company or regulatory rules.
<b>Calendar-Based Time Entry</b>	A time entry method that uses the time entry calendar as the focal point for entering, editing, and submitting time.
<b>Cancel (business process)</b>	Canceling a business process stops the workflow in progress and reverses changes made to data. You can't cancel a completed business process; you must rescind it. A securable action in a business process security policy.

<b>Candidate</b>	Candidates include both prospects and active candidates.
<b>Candidate Pipeline</b>	All active candidates.
<b>Candidate Pool</b>	Candidates grouped together based on specific criteria.
<b>Cascading Leave</b>	A sequence of related leave types that are linked together. When an employee meets the conditions defined for ending a leave, Workday generates a return from leave request and a separate request for the next leave.
<b>Company</b>	Companies are organizations within Workday that represent the internal business entities within your enterprise. In Workday Financial Management, companies are the primary organization for all business processes. A Company is considered the level at which one holds a balanced set of books and should reflect Legal Entities where possible.
<b>Company Hierarchy</b>	Defines a parent-child or reporting relationship between Companies in your organizations. The way that you structure your hierarchies influences many important Workday functions, especially role assignments, planning, and reporting.
<b>Compensation Basis</b>	A grouping of compensation components, such as salary, commission, and allowance plans, that define estimated earnings for an employee population.
<b>Compensation Component</b>	The umbrella term for compensation packages, grades, grade profiles, and plans that can be associated with compensation eligibility rules.
<b>Compensation Defaulting Rule</b>	A rule that establishes the criteria for how compensation components default to worker compensation during staffing transactions (such as hire or job change).
<b>Compensation Element</b>	Compensation elements link Compensation to Payroll. When a compensation element is attached to a plan that is assigned to an employee, Workday can determine which earnings to use to pay the employee.
<b>Compensation Package</b>	A grouping of compensation guidelines (grades, grade profiles, and their associated steps) and plans that you can assign to workers as a set. Packages provide a quick view of the eligible plans for a particular job or group of employees.
<b>Compensation Rule</b>	Guidelines for determining which workers are eligible for which components of compensation.
<b>Compensation Step</b>	A specific monetary amount within a grade or grade profile.
<b>Compensation Target Rule</b>	A rule used to segment your employee population for assignment of compensation plans.

<b>Conditional Calculation</b>	Time calculation that tags time blocks that meet certain conditions.
<b>Conditions</b>	Conditions are one or more logical matches that are resolved to True or False and used to decide if some action should be taken. You can add conditions to steps in a business process to determine if the step should run.
<b>Connection Map</b>	A tool on a customer profile that enables you to establish and manage the relationships between business entities and ship-to addresses.
<b>Connector</b>	A set of 1 or more integration templates that provide a framework for building integrations in a particular functional area. The integration can support a specific type of data, or can support a specific endpoint (example: Salesforce.com or Okta).
<b>Consolidated Billing Schedule</b>	A billing schedule type that allows you to combine all charges for multiple projects or services within a specific billing period into one invoice.
<b>Contextual Custom Report</b>	A custom report created from the related actions menu of a Workday object by selecting <b>Reporting &gt; Create Custom Report from Here</b> . Simplifies choices of data and fields to those related to the context of the object.
<b>Contract Rate Sheet</b>	A document that outlines the contract billing hourly rates for roles such as the engineer, manager, or consultant, with the option to add billing rules for specific contract considerations.
<b>Conversation Tag</b>	A descriptor, such as Dietary Restrictions or Special Needs that you can assign to an engagement conversation to identify its topic. You can search for conversations by conversation tag.
<b>Conversation Topic</b>	A conversation tag or recruiting event name that you can associate with an engagement conversation to make conversations easier to find.
<b>Correct (business process)</b>	Correcting a business process changes a specification or data in the workflow while in progress. A securable action in a business process security policy.
<b>Cost Reimbursable Spend</b>	A billing item that Workday creates to help you bill your sponsor for award-related spending. The cost reimbursable spend amount includes both the original spend amount and any overhead costs Workday calculates based on your award costs configurations.
<b>Coverage Target</b>	Defines whether a specific health care plan or insurance plan applies only to the employee or also to the dependents, spouse, family, and so on.
<b>Cross Plan Dependency</b>	Limits the coverage options available to workers during an enrollment event based on their choice of other benefit plans and coverage amounts.

<b>Custom Report</b>	Example: You can limit coverage in a specific plan to a percentage of the total coverage in 1 or more other benefit plans.
<b>Customer Payment Matching</b>	Reports not delivered by Workday and built using the Workday Report Writer. Can be created new or by copying another standard or custom report.
<b>Customer Refund Payments in Settlement Runs</b>	A feature that uses historical payment applications to suggest customer invoices and adjustments that match customer payments with insufficient remittance advice.
<b>Back to Top</b>	A refund payment generated by the settlement run with a payment date that reflects the date you settle the refund.
<b>D</b>	
<b>Dashboard (landing pages)</b>	A specialized landing page containing a set of pre-configured worklets for a functional area that you can copy or modify. You can add additional custom worklets to dashboards using the report writer.
<b>Data Source</b>	A data source defines a set of business object instances for reporting purposes. Allows reporting access to all business objects related to those in the data source.
<b>Day Breaker</b>	The time of day on which a worker's work day and work week begins. Defines the 24-hour period over which daily time calculations execute and the 168-hour period over which weekly time calculations execute. Unless otherwise specified, the default day breaker is 12am.
<b>Deny (business process)</b>	When you deny a business process, the business process is terminated and all Workday data is restored to its state before the business process started. To restart the business process, you need to submit the process again, and redo all previously completed steps.
<b>Depreciation Profile</b>	A configuration that determines how Workday depreciates assets by defining a depreciation method, convention, and useful life.
<b>Designation</b>	An attribute, such as Community Learning Partner, Honors, or STEM, that you can associate with educational institutions and external associations to make them easy to find and report on.
<b>Discrete Composite Asset</b>	A combination of related but distinct assets for which you can individually track cost, depreciation, and lifecycle events.
<b>Disposition</b>	Status of candidates that have been rejected for hire or declined a job during the job application event.

<b>Domain</b>	A collection of related securable items such as actions, reports, report data, report data sources, or custom report fields. Each domain is secured by a domain security policy.
<b>Domain Security Policy</b>	A collection of related securable elements of different types and user-specified security groups that have access to elements of each type.
<b>Dynamic Period</b>	A date that identifies the anticipated start date for a student of online education or other asynchronous learning.

[Back to Top](#)

## E

<b>Educational Taxonomy</b>	A taxonomy scheme and set of codes you can assign to programs of study and their concentrations to meet state, local, or other classification requirements.
<b>Eligible Investigator</b>	A type of role that you can use to assign individuals to awards, grants, and grant hierarchies, so that the role assignments remain intact even when the person's position or organization changes.
<b>Engagement Action Item</b>	Defines a requirement that must be met for an application for admission to be considered complete. Example: Submit transcripts.
<b>Engagement Item</b>	An engagement email or printed engagement item. You can include engagement items in engagement plans and use them to support student recruiting events.
<b>Enrollment Event Rule</b>	A rule that defines coverage start and end dates, waiting periods, coverage increase limits, Evidence of Insurability requirements, and other coverage rules and conditions. Rules ensure that the benefits process presents only the options that each employee is eligible for based on the event type.
<b>Enterprise Interface Builder (EIB)</b>	An integration tool that enables you to create simple, secure, and customizable integrations with Workday. Alternately, an EIB is a simple integration created by the integration tool. An EIB consists of an integration system, an integration data source, an integration transformation, and an integration transport protocol.
<b>Estimate at Completion (EAC)</b>	Includes all the hours logged and approved for the project, as well as the future hours the worker expects to complete.
<b>Estimate to Completion (ETC)</b>	Includes the future hours the worker expects to complete.
<b>Event</b>	A business process transaction that occurs within your organization, such as hiring or terminating an employee.

**External Association** A nonprofit, community-based, or other noneducational organization that you can associate with student prospects or identify as a location for recruiting events.

**External Engagement Item** Used to send and track third-party engagement items for recruiting events, communication plans, or ad hoc communications.

[Back to Top](#)

## F

**Fast Path** A streamlined approach to moving applications for admission from submission to matriculation as quickly as possible.

**Field Overrides** A tool that lets you customize integration systems that are based on a connector template. Field overrides are managed through an integration service. They use calculated fields or report fields to supply values to an integration system. Example: member IDs in benefit provider integrations.

**Financial Aid Period Record** A record containing data such as academic unit, academic level, and program of study for a student that Workday uses to process financial aid for an academic period.

**Functional Area** A collection of domain or business process security policies that are related to the same set of product features, for example, Benefits or Compensation.

[Back to Top](#)

## G

**Grade Profile** A breakdown of a compensation grade by functional task, geographical region, or other categorization your business requires. A profile enables you to assign more granular compensation ranges to workers.

**Grant** A worktag that you can use to capture award-related expenses.

[Back to Top](#)

## H

**Headcount Plan** Provides visibility into the number of workers necessary to achieve your business goals within a specified period of time.

[Back to Top](#)

## I

**Individual Target** An individual bonus or merit target for a worker during a compensation review process that

<b>Integration Attribute</b>	overrides the target defined on the compensation plan.
<b>Integration Data Source</b>	An integration component that specifies the tenanted value of a data element in Workday. Example: Plan Sponsor Name is a type of attribute in benefit provider integrations.
<b>Integration Event</b>	Indicates the type of data that Workday receives from or exports to an external system and its location.
<b>Integration Map</b>	The record of an integration process. Every integration—current or past, involving the import or export of data, successful or not—gets recorded as an integration event. The integration event contains all the information about the integration process, including its status.
<b>Integration Service</b>	An integration component that specifies how values in Workday map to values in an external system. Example: Pay Rate Frequency is a type of map in third-party payroll integrations.
<b>Integration System</b>	A group of related integration attributes, maps, and XSLT that provides a framework to transform Workday data into the format required by an external system.
<b>Integration Template</b>	A tenanted definition of an integration between Workday and an external system based on a template that provides the methodology for communicating data.
<b>Integration Transformation</b>	A collection of integration services that enables communication between Workday and an external system. Workday provides integration templates in categories such as Benefits, Financials, HCM, Payroll, Payroll Interface, Procurement, Recruiting, Security, and Settlement. Many of the delivered templates contain default values for attributes, as well as prompt values for attributes and maps, to define the integration further.
<b>Integration Transport Protocol</b>	Converts data into a format that Workday or a receiving external system can understand. Workday provides some delivered transformations, and you can also create custom transformations.
<b>Intersection Security Group</b>	Controls how Workday exports data to an external endpoint or service or imports the data from an external endpoint or service. Workday supports several types of transport protocols, including email, FTP and SFTP, HTTP/SSL, Workday attachments, and Workday Web Services.
	A security group whose members are other security groups. Members associated with all included security groups are granted access through an intersection security group.

**Initiation Step**

The first step of a business process.

[Back to Top](#)

**J****Job-Based Security Group**

A security group that includes one or more job-related attributes or objects including job profile, job family, job category, management level, or exempt/non-exempt status.

**Job Management Staffing Model**

A structure that defines 1 set of hiring restrictions for all jobs in a supervisory organization, with no specific limits on the number of jobs that can be filled.

**Job Profile**

The generic features and characteristics of a job or position, such as management level, pay rate type, compensation, skills, and other qualifications.

[Back to Top](#)

**K****Knowledge Article**

An article that is accessible to workers in your organization based on the assigned article audience. You can use these articles to document, share, and manage HR information specific to your organization.

**Knowledge Article Audience**

A group of employees that can view designated Knowledge articles. Their access to articles is determined by condition rules assigned to the audience.

[Back to Top](#)

**L****Landing Page**

Landing pages display a collection of worklets. Landing pages may have different display formats (grid or bubble) and support different functions. The Home landing page is intended for common worklets, such as self-service worklets.

**Leave Family**

A set of similar leave of absence types. Example: A company-specific family includes disability leave and bereavement leave, while a separate regulatory family includes jury duty and family medical leave.

**Leave of Absence Rule**

A rule that defines worker eligibility for leaves of absence.

**Line Tax Rate Application (LTRA)**

A collection of tax amounts that apply to a given transaction line or supplier invoice line split on a taxable document.

**Linked Customer Contracts**

Child customer contracts that you associate with a parent customer contract for revenue allocation purposes.

**Linked Leave**

A leave type that shares an entitlement with other leave types or time offs. Eligibility rules, validation rules, and supporting data reference the combined balance of the associated leave types and time offs. Also known as coordinated leaves and time off.

**Location Membership Security Group**

A security group whose members are any workers assigned to that location.

[Back to Top](#)

**M****Match and Merge**

A process that helps eliminate duplicate student prospect information in Workday.

**Micro-edit**

The ability to edit existing time blocks or add time blocks directly to a day by clicking the time entry calendar.

**Multiplier-Based Coverage**

Insurance coverage based on multiples of salary, such as 1x, 2x, or 3x salary.

[Back to Top](#)

**N****Nonbillable**

A nonbillable project is an internal project that you don't invoice customers for.

[Back to Top](#)

**O****Object Class**

The spend categories that award sponsors agree to reimburse award recipients for maintaining their projects.

**On-Account Document**

A document that's generated when you place a payment amount on an existing customer account. You can apply on-account documents to future payments.

**Organization Security Group**

A security group whose members are any workers assigned to that organization.

[Back to Top](#)

**P****Parent Customer Contract**

A customer contract that you associate with a child customer contract so you can add contract lines across contracts to the same schedule. When you view the parent customer contract, Workday displays the child customer contracts as linked contracts.

**Passive Event**

Events that result from the passage of time rather than from a specific change to employee data.

<b>Payment Group</b>	The payments that result from a settlement run.
<b>Payment Tax Rate Application (PTRA)</b>	A collection of tax amounts that apply to a given payment on a taxable document.
<b>Position Management Staffing Model</b>	A structure that defines different staffing rules and restrictions for each position in an organization.
<b>Position Restrictions</b>	The attributes and conditions that apply to an unfilled position in a supervisory organization that uses the position management staffing model. Example: Job profile, location, qualifications, and worker type.
<b>Pre-Hire</b>	In Staffing, an individual you're tracking before employment. In Recruiting, a candidate who is in the <i>Offer</i> , <i>Employment Agreement</i> , <i>Background Check</i> , or <i>Ready for Hire</i> stage.
<b>Procurement Contract</b>	Contracts enable your organization to define preferred suppliers, analyze spend for better control, and standardization. They also allow your organization to implement contractual spend to better negotiate and enforce discounts and other supplier terms.
<b>Procurement Contract Type</b>	A procurement contract in Workday is always associated with a Contract Type that dictates how the contract can be used across the procure-to-pay chain. Example: when a Contract Type has the <b>Scheduled Purchase Orders</b> option set, Workday can use the contract to automatically create purchase orders based on a predefined schedule.
<b>Project Advanced Labor Costing</b>	Prorating project labor costs using standard or fully burdened costing.
<b>Project Asset</b>	A container that captures separate, ongoing costs of a capital project in progress. You can associate multiple projects assets with a project to track costs over the life of a project.
<b>Project Billing Rate Sheet</b>	A document that outlines the hourly or daily rates charged per project role, with the option to be more specific based on defined categories such as Region, Skill Level, and Project Size.
<b>Project Plan Phase</b>	A phase in the project plan that represents a stage in the project work. Example: Plan and Strategize. A project plan organizes projects into sequenced phases and tasks. A project phase is generally project agnostic, but when you add that phase into a project plan, it becomes a project plan phase.
<b>Project Plan Task</b>	The work details in a project plan phase. Example: Define Project Objectives.
<b>Project Transaction Source</b>	The source of project billing transactions. Example: Supplier Invoice, Expense, or Time.

**Prospect**

Someone you are interested in tracking who isn't associated with a specific job. You can use tags, prospect types, and prospect statuses to help track these individuals.

[Back to Top](#)

**Q****Quick Add**

A time entry option that enables you to create a time block and copy it to multiple days in a week.

[Back to Top](#)

**R****Recipient Threshold**

The maximum number of prospects to whom you can send an engagement item at the same time without requiring approval.

**Recruiting Cycle**

A recruiting period for 1 or more academic levels of an academic unit. You associate recruiting cycles with campaigns to measure the effectiveness of each campaign per recruiting cycle.

**Reference ID**

A unique identifier used to look up data for integration purposes.

**Reference Pay Range**

A range of pay established for a compensation grade or grade profile.

**Related Customer Contract**

A customer contract that you associate with another customer contract for reporting purposes. When you create a customer contract, you can associate 1 related customer contract with it. The related customer contract must share the same company and sold-to customer.

**Reported Time**

A worker's time that has been entered, but has not had any time calculations applied.

**Revenue Category**

An attribute in customer contracts and billing used to search for and report on goods and services you sell. Also a dimension in account posting rule types for customer contracts, billing, and accounts receivable that drives accounting behavior.

**Risk Insight**

Provides the reason why Workday identifies an expense report with a High or Medium risk level. Reasons may include 1 or more of these: Amount Anomaly, Duplicate Expense, and Incorrect Expense Item.

**Risk Level**

The value (Low, Medium, and High) that Workday provides from risk evaluation. Workday provides default risk levels, which can also be configured based on Risk Score.

**Risk Score**

The numerical value (0 to 100) that Workday provides from risk evaluation. The score helps identify anomalous expense reports.

[Back to Top](#)

## S

<b>Single Ledger Journal</b>	An accounting journal that's a single primary or alternate ledger currency for the given company.
<b>Source</b>	The duplicate record that you want to merge in the Duplicate Management Framework.
<b>Spend Category</b>	A logical grouping to search and report on acquired items and services. Also a dimension in account posting rules for procurement and spend that drives accounting behavior.
<b>Staffing Model</b>	A structure that defines how jobs and positions are created and filled in a supervisory organization. Workday supports 2 kinds of staffing models: <ul style="list-style-type: none"> <li>• Job management.</li> <li>• Position Management.</li> </ul>
<b>Staffing Organization</b>	An organization category that includes supervisory organizations, matrix organizations, or retiree organizations.
<b>Stage</b>	A value, such as Lead, Inquirer, or Applicant, that identifies where a student prospect is in the recruitment or admissions process.
<b>Student Financials Period Record</b>	A record containing data such as academic unit, academic level, and program of study for a student that Workday uses to process student financials transactions for an academic period.
<b>Student Prospect Profile</b>	A worklet that displays information for a prospective student, including contact information and recruitment details.
<b>Student Prospect Type</b>	A value, such as First Year or Adult Returning, that you can assign to prospective students and use to match student prospects to admissions counselors automatically.
<b>Student Recruiting Region</b>	Workday term for recruiting territory. A recruiting region can represent a geographical area, 1 or more schools, or schools in selected school districts.
<b>Student Tags</b>	An attribute, such as Veteran, Athlete, or Scholarship Recipient, that you can assign to student prospects. You can use tags to match student prospects to recruiters automatically, find prospects, and use as criteria for associating engagement plans with prospects.
<b>Supplier Contract</b>	Contracts enable your organization to define preferred suppliers, analyze spend for better control, and standardization. They also allow your organization to implement contractual spend to better negotiate and enforce discounts and other supplier terms.

**Supplier Contract Type**

A supplier contract in Workday is always associated with a Contract Type that dictates how the contract can be used across the procure-to-pay chain. Example: when a Contract Type has the **Scheduled Purchase Orders** option set, Workday can use the contract to automatically create purchase orders based on a predefined schedule.

**System User**

An account associated with and required to launch a Connector or Studio integration. Workday delivered integrations and custom integrations require a system user account for authentication and web service calls. A system user account is not associated with a person in Workday.

**Staffing Organization**

An organization category that includes supervisory organizations, matrix organizations, or retiree organizations.

[Back to Top](#)

**T****Target**

The record into which you want to merge the source in the Duplicate Management Framework.

**Tax Code**

A combination of tax rates that you select on transaction lines.

**Tax Rate Application (TRA)**

A collection of tax amounts across all lines on a taxable document with the same tax applicability, tax code, tax option, tax point date, tax rate, and tax recoverability.

**Tax Recovery Pro Rata Factor Percentage**

A company-specific percentage that modifies the tax recoverabilities that you configure for the tenant.

**Termination Adjustment**

A time off adjustment that automatically sets the remaining balance of a worker's time off plan to zero upon the worker's termination.

**Time Block**

A time block carries information about a portion of time, such as the number of hours worked or in/out times. Time blocks can be reported or calculated, but only calculated time blocks are pulled into Workday Payroll.

**Time Calculation**

A set of rules to apply time calculation tags to calculated time blocks for Payroll or other purposes. Example: You could create a time calculation to convert regular hours into overtime hours automatically if a worker works more than 40 hours in a week.

**Time Calculation Tag**

Workday applies calculation tags to time blocks during time calculations. The tags map to payroll earnings to drive how time blocks are paid and can be included in time off and accrual calculations. You can also use them to display time and time off totals on the time entry calendar.

**Time Clock Event**

A time clock event describes a worker's actions, such as a check-in or check-out, on the web time clock or an external time clock. Workday matches time clock events to form time blocks, which workers can edit and submit.

**Time Code Group**

The primary use of a time code group is to determine which time entry codes a worker is eligible for. Time code groups are assigned to a worker or to a position through eligibility rules.

**Time Entry Calendar**

A set of self-service pages that workers use to enter, edit, and submit time, when using calendar-based time entry. When using high volume time entry, workers can view and submit time from the time entry calendar.

**Time Entry Code**

A time entry code describes the type of time a worker enters, such as worked time or meal allowance. To use time entry codes, you must attach them to time code groups, except for the default time entry code assigned to a time entry template.

**Time Entry Template**

A template defines how a worker's time entry calendar is configured. Workers are matched to time entry templates through eligibility rules.

**Time Entry Validation**

Errors or warnings that prevent users from entering invalid time. Critical validations prevent a user from submitting time. Warnings display when entering time but don't prevent the worker from submitting time.

**Time Off**

The rules that apply to a specific type of time off, including eligibility rules, whether adjustments are allowed, and limits that differ from the time off plan.

**Time Off Plan**

The rules for entering and tracking 1 or more related time offs. Identifies the unit of time, eligibility requirements, whether to track balances, and if time offs are position-based or worker-based.

**Time Period Schedule**

A time period schedule defines which dates are available for entry at a given time and defines which dates are paid in which pay periods. They can line up with pay periods, or, in more complex scenarios, they can be paid on a lag.

**Time Proration Rule**

A rule that prorates employees' target compensation in a bonus or merit increase compensation event according to time-based criteria, such as leave of absence or time since hire.

**Time Shift**

A grouping of consecutive time blocks that you can use in standard overtime calculations, time block conditional calculations, and validations.

[Back to Top](#)

**U****Unbillable**

An unbillable transaction is a billing transaction that has an issue preventing it from being billed. You can't take action on the transaction until you resolve the issue.

**Unnamed Resources**

Placeholders for project resources that you can use to assign tasks and perform resource forecasting without specific resource assignments.

[Back to Top](#)

**V****Value-Based Project**

A customer contract line type that you use when your project billing installment values are not known at the time of contract creation.

[Back to Top](#)

**W****Wave Picking**

Enables you to group picking lists together in groups to better organize and prioritize your inventory picking process

**Week Breaker**

The day of the week on which a worker's work week begins. Defines the 7-day period over which weekly time calculations execute. Unless otherwise specified, the default week breaker is Sunday at 12am.

**Work Schedule Calendar**

A calendar that defines the days and hours that a worker is scheduled to work. In Time Tracking, work schedule calendars affect time entry options, calendar displays, and time calculations.

**Workday Studio**

An Eclipse-based development environment that enables you to build more complex integrations with Workday.

**Workday Web Services**

Workday's public API. Based on open standards, Workday Web Services (WWS) provide the core method for integration with Workday.

**Worker**

An employee or a contingent worker.

**Worklets**

Mini applications represented by clickable icons in Workday, providing quick and easy access to tasks and data that you access regularly. Example: the Inventory or Time Off worklets, or a worklet based on a report.

[Back to Top](#)

**X****No Entries**

[Back to Top](#)

**Y****No Entries**[Back to Top](#)**Z****Zone Picking**

A method of picking for orders from different zones at an inventory site. In Workday, you can split a stock request into multiple zone picking lists for more efficient picking and shipping. You can then ship the zone picking lists separately or merge them before shipment.
